The greatest Part of the Marriages in *Muscovy* are brought about by third Persons, and without much Solemnity. Five or six of the young Woman's Friends who is to be married, examine her stark naked before she is further engaged, to see if she has any bodily Infirmity; and if they find any, they do what they can to cure it: As for the young Man, he never sees her, perhaps till he meets her in the Chamber where the Marriage is to be consummated. The Nuptial Ceremonies are not very great, a few Persons of both Sexes wait on the Bride about three o'Clock in the Afternoon to Church. When the Priest has done his Office, the Panama, or Sexton, throws Hops on her, and wishes that she may be as fruitful as that Plant; another Officer of the Church, cloathed in Goat-Skin, the Wool outwards, accompanies her Home, praying all the Way, that she may have as many Children as there are Hairs on his Habit. Young Men lead the Bridegroom home, and old Women the Bride, who is veiled so that nothing of her Person is to be seen. The Parish Priest carries the Cross before her to her Husband's House.

The new married Couple sit down at the Table together; sometimes they have Bread and Salt laid before them; but they don't eat a Bit. In the mean time, a Chorus of Boys and Girls sing an *Epithalamium*, or Wedding Song, so lewd and impudent, that it is a Shame to repeat it. When this Ceremony is over, an old

Woman and a Priest conducts the Bride and Bridegroom to their Chamber, where the old Woman advises the Bride to be loving and obedient to her Husband, and the Bridegroom to be kind to his Wife; the Bridegroom in one of his Buskins has a Whip, and in the other a Jewel, or Purse of Money; he commands the Bride to pull them off, and if it happens she lights upon that Buskin first where the Jewel or Purse of Money is, he gives it to her, which is looked on as a happy Omen for the Wife; but it is reckoned unlucky for her to pull off that Buskin first in which the Whip is; and the Bridegroom gives her a Lash with it to punish her for it, as a Token of the Treatment she is like to meet with. When this is done, they are shut up in a Chamber for two Hours; then the old Woman goes in and examines if the Signs of Virginity are apparent, and in such Case she ties up her Hair in Tresses that before hung loose about her Shoulders, and goes to her Parents to demand the *Albricia*, or Marriage-Portion.

13. To keep the Chambers warm in *Russia*, they are covered with Earth two Feet deep; but when a Couple is newly married the Earth is taken away from the Place where the Marriage is consummated; for Earth being an Image of Mortality the *Muscovites* think it is not proper for the Man or Woman to have it in their Thoughts at that Time. The Children of the *Russians*, young Men or Maids, dare not refuse Husbands or Wives proposed to them by their Parents; nor those that depend on any great Man, those designed for them by their Superiors. *Boaris Juanowitz Moriso*, the second Person in the Empire, having resolved to marry one of his Friends to a rich Widow, a *Dutch* Woman born, who had embraced the *Russian* Religion, the Widow went to *Boaris's* Wife, Sister to the Empress, threw herself at her Feet, and prayed her to prevail with her Husband not to put such a Constraint upon her Inclination, nor oblige her to break a Vow she had made never to marry again. All her Prayers and Tears were ineffectual. *Boaris's* Wife replied, What would you *Bescheat*; as much as to say, dishonour my Husband so far as to refuse one that he offers you, and make him worse than his Word to his Friend.

The Manner of the *Russians* using their Wives is very severe and inhumane, though it is much less so now than formerly: Four or five Years after my Friend came to *Muscovy*, a Tradesman in *Moscow*, after having beaten his Wife unmercifully, forced her to put on a Smock dipped in Brandy, to which he set fire and burnt her to Death. What is more strange even than his Barbarity is, that no-body prosecuted him for his Wife's Murder. It seems there is no Law in *Russia* to punish a Man for killing his Wife if it was in Correction. Some of these *Barbarians* tie up their Wives by the Hair of the Head, strip them stark naked, and whip them till they are almost dead: It is true, they never chastise them so severely unless it be for Adultery or Drunkenness, and indeed it is very seldom now that they deal so by them at all. The Fathers of young Women who are married, now take the necessary Precautions to prevent their Daughters being so ill used; they oblige their Husbands to Marriage Articles to treat them according to their Quality, to maintain them with good Victuals and good Drink; not to whip them, nor scratch, nor kick them.

That Woman who kills her Husband is buried alive all but her Head, and so left to expire in that miserable Condition. There is seldom any Marriage celebrated in *Muscovy*, especially among Persons of Rank, without some conjuring, and using Charms: The Friars and Nuns are accused as the most guilty of this wicked Practice, which, it is said, they study in their Solitude. My Friend writes, that he has seen a Man come out of the Wedding-chamber like a mad Man, tearing his Hair and crying, he was undone and bewitched. The Cure in these Cases is to apply to some, commonly called, *white Magicians*, who for a small Matter of Money dissolves the Charm, and unties the Knot that others had tied. This Man was so served, so distempered, and so cured, as my Papers report; but Credulity perhaps infects even Strangers in *Russia*. The *Muscovite* Canon forbids any Man

Man to have conjugal Commerce with his Wife, three Days in the Week, as *Monday, Wednesday, and Friday*. Those who break this Law, must bathe themselves before they enter the Church Door. No Man is admitted into the Church that has had two Wives; every such Person must stay in the Porch; and he who marries a third Time, is excommunicated.

If a Woman is barren, a Man may do what he can to persuade her to retire into a Convent willingly, and if she will not, he may beat her till she gives her Consent to it. It is reported that the last Empress would have been shut up in a Monastery, had she not at last brought forth the *Czarowitz*, or Prince Royal, who was born nine Years ago, on the 2d of *June, 1661*. The Empress had several Daughters, but that would not have excused her, unless she had had a Son and Heir. When the Czar of *Muscovy* is willing to marry, there are several young and beautiful Ladies presented to him, out of which he generally chuses one to be his Wife.

The last Czar on this Occasion made Choice of a young Lady who was not at all liked by *Boaris Juanowitz*, the reigning Favourite and Minister. This Lord would fain have had his Master accept of a Wife of his chusing, and endeavoured to set him against the Lady he had himself chosen. He proposed to him the Daughter of *Eliab Danelowitz*, a Man of obscure Birth, who had got into some Credit, by Means of a good Estate left him by his Uncle, one *Gramatin*, Secretary of the Ambassador's Office. The young Gentlewoman's Name was *Mary*, she was not extraordinary handsome, but witty and cunning, modest and devout, at least in Appearance. *Boaris* thought if she was advanced to the Emperor's Bed, by his Procurement, she would be governed by him; and his Favour with the Czar made his Hopes the more probable. He intended to marry the younger Sister himself, to strengthen his Interest by that Alliance. The Proposal he made to the Emperor, was not, at first, approved of. He was very much troubled at it, but thought it would be his safest Way to dissemble his Discontent; and knowing the Emperor's Inclination for the young Lady he had chosen was too powerful for him to resist openly, and that it might, perhaps, irritate him, if he discovered his Aversion for the Match; he resolved to break it off by Treachery, to prevent any Suspicion of his Designs. He bribed the Women that were, according to Custom, to present her with the Crown, and they tied the young Lady's Hair so hard, that she fell down into a Swoon; the Women gave out that she had the falling Sickness; her Father, who brought her, was seized, accused of Treason, whipt, and banished into *Siberia*.

The Gentlewoman, when she came to herself, found she was a vast Distance from the Throne, to which a few Minutes before she was so near: However, she valued herself so much on the Emperor's Choice of her, that she would never afterwards marry, though several beneficial Matches were offered her. She was not troubled with the falling Sickness any more. The Ring and a Pocket Handkerchief which the Czar gave her, she always kept as Tokens of her Preference in his Favour, though of so short Duration. When the Emperor understood it was only an Accident occasioned by the tying her Hair too strait, he was very much troubled at it, and assigned her a considerable Pension to make amends for the Loss of a Crown, and the ill Usage her Father had suffered on her Account. *Boaris* prevailed with him to marry *Danelowitz's* Daughter, to which he was the rather induced, because he was afraid of being bewitched if he refused; and the Favourite married *Anne* the *Czarina's* Sister, as he intended to do, if the Czar consented to marry *Mary* the eldest Sister.

Though he got several Advantages by this Marriage, he lost one that was more valuable than all the rest, which was his Quiet. He was old and jealous. His Wife handsome and young. They quarrelled in a short Time; and he caused Mr. *William Barnsley*, an *Englishman* of *Worcestershire*, to be banished to *Siberia*, because he suspected that he was too familiar with her. *Barnsley* lived twenty Years in Exile, and afterwards was recalled;

he turned from the Protestant Religion to the *Russian*, married a great Fortune, and lived at *Moscow* in Splendour. *Eliab*, the Emperor's Father-in-law, durst not say that the Empress was his Daughter, nor any of the Family, that they were related to her, even not her Uncle, *John Paolowitz Martischa*, who was preferred to several Posts, one after another. When the *Czarowitz*, or Prince Royal, is fifteen Years old, he is carried to the Market Place, and shewn on Mens Shoulders, that he may be known; thereby to prevent any Imposture, there having been many Cheats imposed on the *Muscovites* for real Princes. Till he arrives at that Age nobody sees him, but those who are intrusted with his Education, and some of the Chief of his Domestics.

Even the ordinary Sort of People, in *Muscovy*, hide their Children from every body, but their intimate Friends, and nearest Relations; they having a Superstition among them, that Strangers have certain Looks that are unlucky. Their Children are strong and robust; they never suck above a Month, or two Months at the most; after which they give them a Horn, or a Sort of Silver Cup, made like a Horn, with a dry Dug of a Cow tied to the End of it, for them to suck.

At two Years old they make them observe Fasts, which are very strict. They have four general ones in a Year. In Lent they fast three Days in a Week; *Wednesdays, Fridays, and Saturdays*. On which Days they don't so much as eat Fish, living on Cabbage, Cucumbers, and Rye-bread. They then drink nothing but *Quassi*, a Sort of Beverage, weaker than Small-beer. They won't drink after a Man who has eat Flesh; and when they are sick, they will take no Physic in the Compound, of which there is either *Cor Cervi*, or *Pil. Lepor*; so scrupulous are they in the Observation of their Fasts.

Their usual Penances are, to bend their Bodies crooked; to strike their Heads against an Image; sometimes to eat nothing but Bread, Salt, and Cucumbers, and to drink only fair Water. They never eat any thing that they call *Pagano*, i. e. impure; as Horse-flesh, Hares, Rabbits, Elks, or Mares-milk, Asses-milk, &c. in which they observe the Mosaic Law in some Measure. The Emperor's Magazines being burnt lately, no less than six thousand Fitches of Bacon were burnt with them. By which we may see there is some Difference between their Religion, and that of the Tartars, who abhor all Manner of Swine's Flesh. Veal is reckoned impure, yet Lamb is not. Venice Treacle is also not allowed by them, because there is Viper's Flesh in the Composition of it; nor will they eat any thing, if there is the least Musk, Civet, or Castor Flesh in it; though the Barbarians feed on it in the North very frequently. Sugar, and Sugarcandy, are *Scarmunas*, i. e. forbidden on Fast Days; and a Knife that has cut Flesh, must not be used for twenty-four Hours after.

The Regularity that the *Muscovites* observe in their Fasts is of great Advantage to them; they would not, without it, have Meat enough to serve their Occasions; because they are forced all the Winter long to shut up their Cattle in Houses, for five or six Months together; and the Peasants, who are perfect Slaves, don't much care to trouble themselves about encreasing their Stock of Cattle, for fear their Lord should come and take them away from them, which is very common for them to do.

14. The Patriarch is Chief of all the Ecclesiastics. The Person who executes that Office at present left the Court two or three Years ago, on some Disgust he took at the Ministers. It was said he began to make Innovations, and that he did not love Pictures; to which the *Muscovites* have a great deal of Respect. The patriarchal See has been ever since vacant. But the Metropolitan, or Bishop, or rather Coadjutor, performs all the Duties of this Office. And the Czar dares not fill the patriarchal Chair, so long as the abdicated Prelate lives; so highly is his Person revered in *Russia*. Of all the *Muscovite* Ceremonies, that of *Palm Sunday* is the most extraordinary. A hundred Men are ordered to clean the Streets, for the magnificent Procession.

The Emperor marches afoot, richly dressed in Cloth of Gold; the Train of his Robe born up by Princes, and

all the Court waiting on him. The first that goes before him, is the Officer that carries his Handkerchief, lying on another embroidered all over, which hangs on his Arm. The Servants of his Household going before him. In this order they proceed to the Church, called *Jerusalem*, but they stop by the Way, at a Place built of Free-Stone, in the Manner of a Platform, where he says his Prayers, bends his Body almost double, turning towards the East; and then he enters the Church of *Jerusalem*, which is not far off. He stays there an Hour, and then returns back to his Palace; holding on his Arm the Bridle of the Patriarch's Horse, caparisoned with white Linnen, on which the Prelate rides aside, carrying a Cross in his Hand, and giving his Benediction to the People. The Reins of his Bridle are three Ells long, supported by three Gentlemen; marching behind the Emperor. Instead of a Mitre, the Patriarch wears, at that Time, a flat Cap on his Head, adorned with Diamonds and Gold Loops, edged round with Ermines. A Band of young Men carry several pieces of Stuff, of three or four Ells long, before him; some red, some blue, some green, some yellow, and some of other Colours. The *Metropolitans*, the *Protopopes*, and the *Popes*, have all of them Chasubles, or a Sort of Caps used by the Popish Priests, when they say Mass. The Gentlemen and Lawyers have Boughs of Willow; instead of Branches of Palm, in their Hands.

The Czar's Guards, who are pretty numerous, prostrate themselves flat on the Ground, and a triumphal Arch is born along with a Tree on it, from which several Boys, in the Machine, strive to reach the Apples. When the Ceremony is over, the Patriarch sends the Emperor a Purse, with a hundred Rubles in it. The Bells in the Church, called *Jerusalem*, are said to be the biggest in the World. There is one of them that weighs thirty Ton; and when it is rung, it almost deafens all that stand near it. The Czar delights mightily in hearing them. There is a Niche in the Church, where the Patriarch stands to give the People his Blessing; after which he says these Words: *Go and eat nothing these three Days*. As for him himself he lies prostrate on the Ground all Night, and continues in Prayer till *Easter Day*. The Gentleman of *Lorrain*, from whose Memoirs this Account is taken, told me a Story of an Accident that happened to an *English* Merchant's Servant on this Occasion.

The Servant was a *Russian* by Birth, but born far in the Country; and having never seen such a Ceremony before, when he went to Church, he came back so very melancholy, that his Master took notice of it, and asked him the Reason of it: The *Russian* told him the Orders that were given by the Patriarch, that no-body should eat any thing in three Days Time, and was afraid, in the mean Time, that he should die of Hunger. He fasted two or three Days, and was ready to eat himself, not being used to such Penance: However, he held out, and then swore he would never go to Church to hear the Patriarch's Blessing again. On *Easter Day* the *Muscovite* Men and Women salute one another with a Kiss, give a red Egg, and cry, *Christos vas Chreshch, God blefs you*.

In *Easter Week* all the Emperor's Gentlemen and Domestics kiss the Patriarch's Hand, and he presents them with red Eggs, or those that are gilt. Those of the highest Quality have three; those of the Middle Rank two; and those of the lowest one. The Patriarch's Palace joins to that of the Emperor's; but it is built of Stone, and, for its Largeness, is very stately; but else it is a mean Building. The greatest Sign of Joy in the *Russians*, on their Festivals, is their drinking; and their most solemn Days are those in which they make the most Debauches. It is no great Shame among them, for Men, Women, Priests, and Lawyers, to be seen reeling in the Streets. When the Women of Quality have a merry meeting together, she who makes the Entertainment, sends to all of them, the next Day, to know how they got home, and how they past the Night? The common Answer to this Compliment is, I thank your Mistress for our good Cheer, I was so

merry last Night, I can't tell how I found our House out.

The Burials of the *Russians* are very particular. As soon as a Man has given up the Ghost, all the Windows in the Chamber, in which he died, are set open. A Basin of Holy Water is brought for him to bathe his Soul in; a Piece of Bread is put on the Crown of his Head, that he may not die of Hunger, in the long Journey he has to take. They put a Pair of black Shoes on his Feet; some Copeaks, or Pieces of Money in his Mouth; and, in his Hand, a Certificate, signed by the Metropolitane of the Place, to inform *St. Nicholas* of his Life and Conversation. When that is done his Body is carried to Church, where it is kept a very little while before it is interred. The Wife of the Deceased is obliged to shew an inconsolable Affliction, and to hire other Women to mourn with her. The most pompous Funerals are those at which a great Number of these mercenary Mourners assist.

These Women have several mournful Questions which they ask of the Deceased, in a dismal Tone, as, *Ah my Dear! why have you left us? did not your Wife do every thing you would have her? did she not take Care of your House? did she not bring you several pretty Children? did you want any thing?* Or else they ask him, *Why did you die? had you not a handsome Wife, lovely Children, and as much Brandy as you could drink?* For it seems Brandy is so divine a Liquor with them, they fancy it will make them immortal. When a Man dies without having confessed himself, or received the extreme Unction, he must not have Christian Burial.

Such as have been killed, or are starved to Death with Cold, are removed to a Place, where the *Zemsky pre-caus* is; there they lie exposed for three or four Days; those that own them in that Time are permitted to bury them, or else they are sent to *Boske*, or *Bogzi Dome*, that is, the House of God; where, in a vaulted Cave, may sometimes be seen three or four hundred Carcases at a Time, which the Priests bury, one after another, in *St. John's* Church-yard. They read a Psalm over their Graves every Day for a Month after they are buried; during all that Time the Dirt is not thrown in upon them, but their Graves are covered with a thick Mat, to keep out the Rain. All the *Carnival* Time the *Muscovites* abandon themselves to all Manner of Debauchery, and drink so excessively the last Week before Lent, that one would think they ought to drink no more as long as they lived. There is a Sort of Brandy drank among them, so strong, and so subtle, that it will take Fire in their Mouths; from whence I have been told, that sometimes Flame will issue out, and the Country People fancy it would kill them presently, if they had not Milk ready at Hand to extinguish it. Many of them, after a Debauch, in the Time of *Carnival*, going home, fall down on the Snow, and would freeze to Death, if others, somewhat more sober, did not meet with them.

It is a very melancholy Sight, at that Time, to see ten or twelve dead Men drawn along on a Sledge, one having a Shoulder eaten off by Dogs, another his Face, and some nothing but Bones left. There seldom passes a *Carnival* without two or three hundred such terrible Accidents. If a *Russian* finds any one of his Acquaintance in Danger of Death, he will not assist him to get out of it; because if he dies in his Hands, he must pass Examination by the Judge of the *Zemsky pre-caus*, who always takes Care to make him pay severely before he acquits him.

The *Muscovite* Images, while they had any, were like the ancient *Greeks*, only they were more ugly and coarse. My Friend asking them, *Why they represented their Gods under such deformed Figures?* they replied, *Their Gods were not proud*. When the Painting of any Images was worn out, it was carried to a Place, called *Goas Market*, where those that bought it had another given them in Exchange, for which they paid some Money. If the Man who made the Image was not satisfied with it, he gave the Persons that would exchange the Image a Push on the Back, which was a Token that he did

not

not like the Sun, and the Persons gave him more, till he was content. This Traffic was carried on without any Words, to save Decencies, for they would not have it thought they sold their Gods. It was a great Crime for any one to say he bought an Image; he only called it exchanging. Those Images that were done with were thrown into the River, with a Piece of Silver. Those that flung them in, making the Sign of the Cross, and saying, *Prosti*; in *English*, *Adieu Brother*; or else, *Prosti Grandi*, that is, *God be with you my Brother*. When there happens a Fire any where, the first Care of the Inhabitants was to save their Images; and if by Chance they were burnt, they did not say they were burnt, but vanished on high. When a Church is burnt, they do not call it burning, but ascending; as that, *Such a Church is ascended*. They give to their *Nicholas's*, so their Images were named, because, generally, they were that of *St. Nicholas*, their most precious Treasures. A Woman who had dressed up her *Nicholas* very rich with Pearls and Diamonds, being fallen to decay, went to Church to beg him to lend her something, representing the Necessity she was in.

The *Nicholas* made her never a Word of Answer. She took his Silence for Consent, and presumed upon it to take away a Ruby or two. The Priests watching her narrowly, saw her take it off, seized her, and carried her before a Magistrate, who condemned the poor Woman to have both her Hands cut off; which Sentence was executed accordingly. As for the Images that were in private Houses, they put Jewels upon them, and took them away as they thought fit; and when they were frightened in their Affairs, they sometimes strip them to their very Shirts. When one is convicted of Heresy, he is put upon the Top of a low House, whence he is to be thrown down headlong into a Fire, and there consumed to Ashes. The Rules of the *Muscovite* Monks and Nuns are not very strict. The Monks are great dealers in Wheat, Barley, Hops, Horses, and every thing they can get a Penny by. The Nuns take a great deal of Liberty; they go out of their Nunneries when they please, visit their Friends, and commonly live with more Licence than becomes their Sex, as well as their Profession.

The *Russian* Music is very bad, notwithstanding they have several Schools where their Children are taught to sing and play upon musical Instruments, with Care and severe Discipline. They borrowed their Notes, either from the *Greeks* or *Sclavonians*; their Gamot is not at all varied; instead of *Sol fa la*, they sing, *Ga ga ge*. Their Cadences are the most extravagant of any in the World; and nothing can be more ridiculous, or rather monstrous, than their awkward Imitation of the *Italian Recitativo*. The last Patriarch having forbidden the making musical Instruments, and it being thought by some of the *Russian* Ministers, that the Use of them was prejudicial to the good of the State; they have very few Instruments, of any Sort, left among them: However, they still reserve the Bag-pipe, which is in great Reputation there. They have some Violins, the Bellies of which are made like a Lute; but they can't play above four or five Notes upon them.

Eliab, the Emperor's Father-in-law, being sent Ambassador to the *Hague*, the *Dutch*, who were willing to gain his good Graces, prepared an Entertainment for him; at which their best Musicians, and best Voices, performed their utmost to divert him. Some Gentlemen, asking him, *How he liked the Music and Singing?* he answered, *Very well; for the Beggars in his Country asked Alms after the same Manner*; meaning the Beggars there always sing when they beg, as they really do in *Muscovy*. The warlike Music of the *Muscovites*, is the Kettle Drum, whose dull Sound agrees with the melancholy Genius of the Nation. They have some Trumpets which they sound very ill, and hunting Horns made of Brass. I have seen some Anthems of theirs set by the Patriarch of one of their Choirs, for so the chief Musician is called. The *Russians* do not know how to dance; they imagine it does not suit well with their Gravity. Their chief Dancers are their *Tartarian* and

Polish Slaves, whom they call in to divert them at their Debauches with rude Dances.

15. The *Circassians* inhabit Part of *Tartary*. They are barbarous in their Manners, and swarthy in their Complexions. The *Circassian* Women are fat, and extremely given to drinking; they sometimes get drunk at a Feast, before they set down to Table; grow sober with eating; get drunk a second Time, as soon as their Meal is over; and a second Time grow sober, either with dancing, or some other Exercise. They are all, in general, so much in Love with dancing, that he who has not a Fiddle in his House, is looked upon as a very pitiful Fellow. Their Government is entirely an Anarchy. The People, in an Insurrection they made, destroyed all the Nobility; and they are now governed by Chiefs or Colonels, chosen among themselves, with whom the Vulgar are as familiar as they please. Though their Religion is the same, they don't like the *Russians*, forbid all the Strangers to enter their Church-doors; on the contrary, they are open to all Nations, and they receive every body with all possible Demonstrations of Good-nature and Hospitality.

Their Soldiers are called *Cossacs*, in the Language of the Country; from whence some Persons have imagined, that the *Cossacs* are a Nation of themselves, whereas they are only the Militia of the *Circassians*. The Soil of *Russia* is not so fruitful and warm as that of *Circassia*. Witchcraft is very common among them, and the Women of the highest Rank, study what they esteem so. The Government of *Muscovy* is an absolute Monarchy. There are several Courts of Justice, called *Precauces*; and the Judgments they pronounce are decisive. The *Russians* have few written Laws; and their Judges, when not biassed with Bribes, which have more Power over them than Right and Precedents, govern themselves in all Causes by Custom. Their Clerks write always kneeling, notwithstanding they have Tables before them. They leave a great Space between each Line, to waste Paper, of which prodigious Quantities are consumed amongst them, and thus pick their Clients Pockets. *Podiack* is a Name given to the Clerks, or Secretaries of their Courts; and their principal is called *Diack*.

All their Business at Law runs in the Nature of Petitions. They are rolled up in Rolls. The Advocate presents them to the Judge, over whom there is commonly a Boyar set, to observe his Actions, and to interpose his superior Authority, when he thinks fit. If the Boyar sits in Person, all Petitions are presented to him, who gives it to the Secretary, if he does not incline to return an Answer presently; and the Secretary will not put him in Mind of it, unless the Advocate bribes him. They have two and forty Characters in their Alphabet, and most of them *Greek*.

The Czar now reigning, *Anno* 1670, was born in the Year 1630. He descended, by his Mother's Side, from *John Basilowitz*, and had an elder Brother that died young, who was a Prince of great Hopes, only he shewed too much Inclination to Cruelty. He took Delight in plucking out Pidgeon's Eyes, calling them Rebels and Traitors, and sometimes to pull off their Heads; saying, they had betrayed his Father, and himself, and deserved to be so used. The present Czar is six Feet high; his Mien is lofty and majestic; he is fat, and of a sanguine Complexion. His Hair is of a light-brown Colour; he never shaves his Beard. When he is angry he is very cruel, but otherwise good-natured. Being one Day pressed very hard by the Officers of his Army to condemn a Deserter, he answered, *It was not reasonable to do it, for God hath not given Courage alike to all Men*. He loves his Wife tenderly, and is given to no Manner of Debauchery; he is very kind to his Children and Sisters. He has an excellent Memory; is very devout; and never misses to go to Morning and Evening Prayer. If he is not well, he has divine Service performed in his Bed-chamber; but if his Health permits him, he constantly goes to Chapel at Prayer Hours, to be present at the public Worship.

In general Faſts he always aſſiſts at the Midnight Devotions, and ſtands upright two or three Hours together; on ſome Occaſions proſtrates himſelf to the Ground a thouſand times; and on others more ſolemn, fifteen hundred times: He never makes any ſet Meal during the general Faſts, except on *Sundays, Tueſdays, and Saturdays*; on the other Days he eats only a Bit of brown Bread and Salt, ſome Cucumbers and pickled Muſhrooms, and drinks only a little ſmall Beer; in Lent he never eats Fiſh above twice; he obſerves an exact Faſt for the ſeven Weeks; during which time he lives on Eggs and Milk; beſides the great Faſts, and ſome little ones particular to the *Ruſſians*, every *Monday, Wedneſday, and Friday*, throughout the Year, he wont touch a Bit of any thing that comes from Fleſh Meat; ſo that of the twelve Months he faſts eight: In public Proceſſions he walks with his Head bare in dry Weather. Though he is thus a great Bigot to his own Religion, nevertheleſs he will not ſuffer his Subjects, when they die, to bequeath large Legacies to his Church; nay, in time of War, and ſometimes under the Pretence of Borrowing, he takes away the Church Plate, and never returns it; if he did not ſo, his Revenues would not answer his Expence, the Church being in Poſſeſſion of two Thirds of the Riches of his Empire.

There is an Hoſpital for old Men in his Palace, in which ſome have lived to be one hundred and twenty Years old; he takes a Pleaſure in viſiting them, and talking with them of Events that happened in the Reigns of his Anceſtors. On *Good Friday*, at Night, he viſits all the Priſons, pays ſome of the Priſoners Debts, pardons ſome Criminals according to their ſeveral Deſerts, or the Smallneſs of their Offences, and gives Alms to all that are in Want. All the Eccleſiaſtical Benefices in the Empire are in his Gift; but he was ſo angry with the laſt Patriarch, that he would not nominate another to ſucceed him; wherefore he ordered, that the Pretenders to the Patriarchate ſhould caſt Lots; which Cuſtom is ſince abrogated. In ſhort, the Emperor has a great many good Qualities, and was it not that he has abundance of ill Counſellors about him, who turn him from the good Way he would otherwiſe chuſe to walk in, he might be reckoned amongſt the greateſt and wiſeſt Princes of his Age.

His Father's Inclinations tended to Peace, his own to War; he has had ſeveral Quarrels with the *Tartars, Swedes, and Poles*; by which his Dominions have been ſo impoveriſhed and depopulated, in ten Years time, that they will not recover their Loſs in forty, nor be in the flouriſhing Condition they were in at his coming to the Crown. The laſt Plague in *Muſcovy* carried off, in ſix Years time, ſeven or eight hundred thouſand Men, Women, and Children: The Cham of *Tartary*, in four or five Years, led above four hundred thouſand into Captivity, who never will return to *Muſcovy* more; and three hundred thouſand at leaſt were killed in the Wars. The beſt Lands in *Ruſſia* are worn out, and the worſt cannot be cultivated for want of Labourers. Thoſe who ſail up the *Volga*, all the Way meet with ſix Women to one Man. The Price of all Commodities are riſen to ſix times the Value before thoſe Troubles; and Copper Money, which formerly uſed to paſs current among them, is now in no Credit, the *Engliſh* and *Dutch* reſuſing to take it in all Payments.

16. The *Ruſſians* were freed from the Slavery of the *Tartars* in the Year 1479, by John Duke of *Volodimir*, who at firſt had only the Sovereignty of that Duchy; but at laſt he extended his Conqueſts, ſeized the City of *Moscow*, the Capital of the *Ruſſian* Empire, and expelled the *Tartars* out of his Territories. His Succeſſor, John Baſilowitz rendered the *Ruſſian* Name, which had for ſeveral Ages been the Contempt of the North, formidable to their Neighbours. He was cruel, and therefore was called *the Tyrant*, however, that Cruelty was exerciſed moſtly on the Enemies of his Empire, whom he ſubdued, and made way for its future Growth. He was brave, but of a very whimſical Humour: One Day he went to his Diack, or Secretary of State, and preſented him with a Petition drawn up in form in his own Name, and addreſſed to the Diack; wherein he prayed him to

furniſh him, by ſuch a Time, with an Army of two hundred thouſand Men; which would extremely oblige him, and engage him to mind him always in his Prayers.

The Diack, who knew his Humour, received the Petition, and ſaid it ſhould be answered. He raiſed the Men with extreme Diligence; and it was with this Army he conquered *Cazan* and *Aſtracan*, and made himſelf Maſter of *Siberia*. The *Muſcovites* loved him for his Valour and Familiarity with them. He affected to be as kind to the Populace as he was ſevere to the *Boyars*; he always held a Stick in his Hand, with an Iron-ſpike in it, the Point of which was very ſharp; and often, as he talked with them, he would prick them in the Legs. If they endured the Pain with Conſtancy, he ever after took them into his Favour, and ever after had a great Eſteem for them. Complaint being made to him, that a *Wayvod*, or the Governor of a Province, had received the Preſent of a Goofe full of Ducats, he ſent for him to Court, making as if he knew nothing of the Bribe: When he came there, he took him to a Place where Criminals were commonly executed, and commanded the Hangman to cut off his Arms and Legs, and at every Blow he aſked him, *how he liked Goofe-Fleſh?*

Hearing the Inhabitants of *Bologda* cheated their Customers by ſhort Meaſure, he ſent Orders to his Officers there to get them a certain Yard or Meaſure, to ſee whether it was ſo long as it ſhould be, and finding it fall ſhort of the lawful Length, he fined them ſeverely. Some *Engliſh* and *Scots* Men laughing at ſome of his Freaks, he commanded they ſhould be brought before him ſtripped naked, and in that Condition he forced them to pick up five or ſix Buſhels of Peaſe one by one, which he had thrown about his Chamber on Purpoſe. When they had done he let them go, having firſt made them drink, and admoniſhed them not to laugh at him another time: He ordered a Perſon of the Province of *Caſſan*, whoſe Name was *Plebafve*, or Baldpate, to be ſent for: His Secretary miſtook him; for inſtead of writing to the *Wayvod* of the Province to ſend up *Plebafve*, he wrote for one hundred and fifty baldpated Men. The *Wayvod* could find but fourſcore, which he ſent to the Secretary with a Letter of Excuse, that he could not complete the Number he required of him. The Emperor reading the Letter was amazed at it, and could not imagine what he meant by ſo many Baldpates. At laſt the Secretary's Oversight was found out, and the Czar was ſo far from being angry at it, that he made them drink; and ſo diſmiſſed them.

He had ſuch an Eſteem and Friendſhip for *Q. Elizabeth*, that he took hold of all Opportunities to ſhew it. It was thought by ſome Perſons of thoſe Times, who pretended to be very good Politicians, that he deſired to marry her, though we ſuppoſe they had very little Grounds for their Conjectures; nor was it likely, that the greateſt and moſt polite Princeſs of *Europe*, would marry a *Barbarian*; however it was ſaid, when his Affairs were in a bad Condition, and he was obliged to fly with his Treasures to *Wologda*, which City he fortified, that he deſigned to make his Escape to *England*, in caſe he had been forced to quit *Muſcovy*, of which he was not without Fear, in a Tumult of the People, and an Incurſion of the *Tartars*; but he triumphed over all his Enemies. It was this Prince who ordered a foreign Embaſſador's Hat to be nailed to his Head, for daring to wear it in his Preſence. Notwithſtanding which Sir *Jeremy Bows*, the Queen of *England*'s Embaſſador coming to *Moscow* ſoon after, not only put on his Hat before him, but cocked it boldly: The Emperor aſked him, *if he had not heard how another Embaſſador had been uſed for the like, or leſs Preſumption?* Sir *Jeremy* replied, *Yes, Sir; but I am the Embaſſador of Queen Elizabeth of England, who neither takes off her Bonnet, nor ſtands bare-headed to any Prince whatſoever: Her Perſon I repreſent, and ſhe will revenge to the utmoſt whatever Affront is put on her Miniſters.* Upon this the Emperor turned about to his Courtiers, and ſaid: *Here's a brave Man for you, that dares talk and act thus for the Honour and Intereſt of his Miſtreſs: Which of you would do as much for me?*

Sir *Jeremy Bows* was envied by the *Boyars* on this Account,

Account, and those of them who had the Czar's Ear most, persuaded him to give the Knight a wild Horse to back, hoping he would break his Neck in attempting it. *Bowes* undertook the Task, and managed the Beast with such Address, that he mounted him, rode him, and so tired him, that he lay down under him, lost his Mettle, and did not long survive the Experiment. After which the Czar highly honoured Sir *Jeremy*, and gave him several particular Marks of his Esteem.

John Basflowitz making a Progress through several Provinces of his Empire, divers *Boyars*, and some other Persons, presented him with such Gifts as they thought would be most acceptable to him. Among the rest, a Shoe-maker consulted with his Wife what Present he should make his Majesty; a Pair of *Lopkies*, or Shoes, she thought was too little by itself, and she advised him to root up a great Turnip they had in the Garden, and carry it with the *Lopkies* to the Czar. The Emperor was so well pleased with the Present, that he ordered all his Attendants to buy Shoes of him, and to give him for them, twice as much as they were worth: He bought a Pair of them for himself. By this Means the Shoemaker got into a Condition to drive a better Trade, and growing rich in a short time left off his Shop. His Children, who inherited his Estate, became Gentlemen, and are known to this Day by the Name of the *Loposkies*. There is a Tree near the Place where the House stood, which, when any one comes by, he throws off his old Shoes, in Remembrance of the Shoemaker: A Gentleman who understood how well it had fared with this honest Man, thought if he presented the Emperor with something considerable he might have a proportionable Recompence; so he gave him a very fine Horse; and the Czar, in return, made him a Present of the Turnip the Shoemaker had given him.

This Emperor disguising himself one Day, rambled into the Country near *Moscow*; and coming to a Village enquired at it for a Lodging: Every body refused to take him in, except a poor Man whose Wife was crying-out, and was delivered in the Presence of the Emperor. He returned to *Moscow* early the next Morning; promising his Landlord to bring him some God-fathers and Godmothers the next Day: He was as good as his Word; he went to his House attended by his whole Court, made him several rich Presents, and set fire to all the Houses in the Village, except his, only warning the Inhabitants to be more charitable for the future, telling them that the best Way to teach them how to treat Strangers hereafter was, for them to experience themselves how pleasant it was to be driven to Necessity and lie out in the Air in Winter.

He often took delight in associating himself with Robbers. He advised them once to rob the Emperor's Treasury, assuring them he knew how it was to be done: How? says one of the Thieves, giving him a Box on the Ear, You Rascal, you, Would you rob the Emperor, who is so good and generous a Prince. Had we not better fall upon one of the rich *Boyars*, who cheat and plunder him every Day? The Czar was so well pleased with his Answer, that he changed Caps with him, and bad him meet him the next Day at *Duretz*, a Place by which he used to go frequently; he told the Thief they would be very merry, and drink a Cup of Brandy and Metheglin together. The Robber came at the Time appointed; the Czar seeing him, called him to him, and advised him to change his Course of Life; gave him a Place at Court; and made use of him to discover and punish the other Rogues of his Gang.

17. The Word *Czar* is so like that of *Cesar*, that it is apparently derived from it, and signifies *Emperor* in the *Muscovite* Tongue: The *Russians* say it means a Title above a King: They called *David Czar*, and the other King of *Europe*, *Kyrlos*, which seems to come from *Carolus Quintus*, whose History they have among them. The Name of the Czar now reigning is *Alexis Michaelowitz Romanow*, i. e. *Alexis* the Son of *Michael* the Roman. He has several Titles; those in the Great-Seal run thus: We *Alexis Michaelowitz*, by the Grace of God, Great

Lord, Czar, Duke of *Great, Little, and White Russia*, Sovereign of *Moscow, Kiovia, Uladomir, and Novogorod*, &c. Czar of *Casan*, Czar of *Astracan*, Czar of *Siberia*, Lord of *Plascow*, Great Duke of *Smolensko, Tweresko, Ugosko, Perinsko, Vealsko, Bolgariko*; Lord and Great Duke of *Novogorod*, of the Provinces of *Charnigora, Resan, Rostore, Yaraslave, Belouzer, Odouria, Obderia, and Condinea*; Lord of all the Countries lying to the North; Lord of the Land of *Taveria*, of all the Duchies of *Cartileran, of Grenzintan*, and of several other Countries and Sovereignties East, West, and North, which we inherit of our Lord and Monarchs our Predecessors, our Father and Grandfather.

The Czar's Arms are the same with the *German Emperor's*, viz. a *Spread Eagle*; but the *Russian Spread Eagle* has a *St. George* on Horseback on its Breast, and a Mitre with a Crown on it between the two Heads. Some Persons pretend *John Basflowitz* added the *George* to his Coat, on Account of the Order of the *Garter*, which he received from Queen *Elizabeth* of *England*. The Czar never marries a Woman out of his own Dominions; he chuses one to his Liking, generally among the Nobility, sometimes among the Gentry and Commonality: *Eliab*, the Emperor's Father-in-law, kept a Tavern twenty Years ago, and his Daughter, the Empress, sold Mushrooms in the Market. As soon as the Czar's Wife is dead, all her Family lose their Credit, and all their Hopes die with her. The Emperor never shews himself to his People but on certain Days of public rejoicing: When he appears it is always with Pomp; he is very magnificently dressed, his Robes glittering with Gold and Jewels; and his Attendants are numerous, all of them handsomely apparelled: It is very seldom that he dines in public; when he does, his Nobles dine in his Presence; his Guards are posted all round his Palace; they stand like so many Statues, not daring to stir or speak, for fear of making a Noise. One would think, by the profound Silence that is always there, that the Place was a Desert; no-body enters the Inner-court, but his Domestic, and some Lords, whose Offices require their personal Attendance in the imperial Palace.

He is very sober, drinks little or nothing, and sometimes puts Oil of Cinnamon or Cinnamon-water into his small Beer, to make it the more pleasant; for Cinnamon-water is as much used by Persons of Quality, in *Russia*, as Rose-water is elsewhere. The Smell of Ambergrease, or Musk, is not much valued by them; they have a Drink called *Brague*, which he commonly drinks; it is what in *England* is called *Oat-Ale*. His Bread is all made of Rye, which the *Russians* imagine to be more nourishing than Wheat. When he has a Mind to treat his Domestic, he commands them to sit round about him, and plies them with a Sort of strong Water double and treble distilled. Those that are not used to it are apt to be very sick with it. He will often put a little Opium in it, and takes Pleasure in making them drunk. At each Meal he sends a Dish from his Table to his Favourites. On *Easter-day* all the Courtiers, and the Nobility and Gentry in and about *Moscow*, wait upon him, kiss his Hands, and he gives them Eggs. He never paid a Visit to any one of his Subjects except his Governor, and he being sick he went once to see him.

When he goes out of Town, the eastern Gate of the outer Wall is shut, and so remains till he comes back again; he generally goes out at that Gate, unless upon an extraordinary Occasion, as happened a few Years ago, when the Wall fell down on that Side, and so he was forced to go another Way: He lies in his Shirt and Drawers, under a rich Quilt made of Marten-Skins; he has but one Sheet under or over him. His greatest Recreation is in Hunting Fallow-Deer; he does not mind killing of them, provided he can but hunt them down: He loves Fowling, has three hundred Faulconers, and the best Ger-Faulcons in the World; they are brought out of *Siberia*. He hunts wild Ducks with them. The Son of the Emperor is called *Czarowitz*, and so are all his Children. When the Empress is brought to-bed, the People, to shew their Joy, present the Czar with something or other; which he commonly returns. If he likes any Present,

and keeps it, he pays a great deal more for it than it is worth.

18. As the Czar's Dominions are very large, so likewise are his Revenues. In the first Place, he is Master of the Estates and Goods of all his Subjects. No Heir can enter upon his Father's Lands, on his Death, without the Emperor's Consent; to obtain which, he must present a Petition to a Court erected for that Purpose, to give Possession to the Children of such as die, and have made their Wills; and to seize the Estates of such as die intestate, or without Heirs, or are convicted of any Crime, by which their Estates become forfeited to the Czar. Secondly, His Customs on all Goods exported, or imported, are very considerable. Thirdly, The Cabucks, or Shops where Brandy is sold, as also those of Strong-beer, belong to him, and he lets them at what Rent he pleases. Some pay one thousand Pistoles, and others two thousand, a Year, according to their Abilities and Trade. Fourthly, His Baths and Stoves bring him in a good deal; because the *Muscovites*, both Men, Women, and Children, are obliged to bathe often, out of a Principle of Religion. When the Water of the Bath is too hot, they throw cold Water upon those that are in it. And some of them, before they enter the Stove-Chamber, rowl themselves in Snow. Fifthly, The Emperor is the chief Merchant in his Territories. Sixthly, The Trade of *Siberia*, in Marten and Sable-Skins raises prodigious Sums; those that are sent to get them, are either Slaves or Criminals. In short, there is a Tax almost upon every thing in *Russia*; that on the *Caviare* of *Asracan* only, of which I shall say more hereafter, is enough to maintain the Expence of his House. All that hold Lands immediately of the Emperor, are obliged to furnish him with Provisions. He ingrosses all the Merchandize that is brought to *Moscow*, by the *Greeks* and *Persians*. He sends vast Quantities of Furs to *Archangel*; as also Pot-ashes, Hemp, and Flax, which he barter for Silk, Sables, Velvets, and Cloths of Gold, Satin, broad Cloth and Damask; which Commodities he wants most, because he makes all his Presents of those things. All the Servants of his Household, have each a Portion of Meal, Oats, Honey, Fish, Nut-Oil, Beer, and Metheglin, delivered out to them.

The *Strelficks* and *Lanlarics*, who are regular Troops, have nothing but Corn and dried Fish, of which the Czar has very large Stores; they have very little Money given them, because they trade and have great Privileges allowed them. The imperial Palace is very large, and all built of Stone and Brick, except the Czar's Winter-Lodgings, which are three Stories high; these are built with Timber, because boarded Floors are reckoned, with them, more wholesome in cold Weather, than others; filthy Damps being apt to ascend from the Vaults of those Stoves, where the Walls are Stone. The whole Palace is encompassed with a Brick-Wall, in the Circuit of which there are fourscore Churches and Chapels, the greatest Part of which have Cupolas and gilt Crosses upon them. The Princes and prime Ministers have also their Palaces within this Wall; as, *Jacob*, a *Circassian* Prince; *Boaris Juanowitz Morolos*, who was the Emperor's Governor, during his Minority; *Knez Alexis*, Master of the Fur-Office; *Trebotzky*, General of the Czar's Army; *Eliab Danelowitz*, the Empress's Father; *Knez Juan Vassilowitz*, a Prince of the Blood, and others of the first Rank. There, are five Monasteries, two or three Nunneries, the greatest Part of the Precauces or Courts of Justice, and the Magazine of Arms and Ammunition for War. The Tower called *Velichy*, stands by itself; it is built of Brick and Free-stone; *John Bassilowitz* began it, and his Successor finished it, as it is at this Day; there is a very fine gilt Cupola upon it, and a Ring of Bells in it; it is as high as *St. Mark's* Tower at *Venice*.

The Czar, as well as other Princes, has his Ministers of State, but they are not so much respected as in other Places. The Gentlemen of his Bedchamber never enter it; they wait two or three Rooms off, and further when he is at Dinner. The City of *Moscow* takes up a great

deal of Ground; it is encompassed with three Walls, besides that about the imperial Palace. The first, and that which is nearest the Heart of the Town, is of red Brick; the next to it is of white, and the third of Earth, supported by Planks and Boards of Fir; it is fifteen or sixteen Miles about, and was built in four Days, on Report of the Approach of the Cham of *Crim Tartary*. Since the Czar's Journeys that he has lately made to *Poland*, where he saw the Manners and Houses of the *Polish* Princes and great Lords, his Court is grown a little more magnificent; his Apartments are hung with Tapestries, very rich and beautiful; and he has several Country Houses and Palaces. There is no Prince in the World has more Jewels than he; it is true, most of them have Flaws in them, but the *Russians* don't mind that, provided they are large.

All the Difference between the Czar's Cloaths, and those of his Nobles, is, that the Emperor's is a little richer; it is the same with the Empress, and other Women of Quality; her Head-dress is only a little higher than that of other Ladies, and her Shift-Sleeves a little longer. They are about six or seven Ells in Length; and her Gown, and the Gowns of her Ladies of Honour, are made like our Judges. The Empress generally travels in a Chariot, and by Night, attended by most of her Ladies of Honour, her Women of the Bedchamber, her Embroiderers, and all her Women Attendants, that are necessary to her Person. Lately they rid on Horse-back, very much a Custom, mightily used formerly amongst them, but was a long Time disused upon the bringing in of Chariots into *Russia*. The present Empress has revived it: She and her Train ride as Men do, astride, when they hunt; which is very rarely: They then wear a white Hat on their Head, and a Skain of Silk about their Necks. Men or Women, rich or poor, dress after one Manner. There is but one Language, and one Religion, throughout all that vast Empire. They differ from all other Nations, even in the least Actions, and are no more like the other Northern Kingdoms, than they are to the Southern or Western.

19. They wear their Shirts above their Drawers, tied round about their Middles, a little above the Navel. They believe a Girdle makes them strong, and that if they did not wear one, they should be unlucky. When they spit, one would think they sneeze. Their Language and their Accent are quite different from other People's. They whistle with their Teeth, and not with their Lips. They shake their Heads, when they shew a Sign of Admiration. It is a great Sin in them, as they fancy, not to wash their Hands after making Water. Even in their necessary Occasions, they do not do like other Men; they make no use of Paper, but have little Spatula's of Tin, well smoothed, to supply the Place of other Conveniencies used elsewhere. As the Hands of our Clocks turn round, in theirs, the Hours turn about the Hand. They imagine it a very sinful thing, for a *Muscovite* to lie with an *English* or *Dutch* Woman; but they believe a *Russian* Woman may lie with any Strangers, without committing a Crime worth taking notice of, because the Children she has by them, are born and bred up in the *Russian* Religion.

They love Rye better than Wheat, for the Reason I have already mentioned; and stale Fish better than fresh. They count their thousand by so many four-scores and tens, and not by so many hundreds. The first of *September* is their New-Years-Day. Their *Æra* from the Creation amounts to seven thousand and sixty odd Years. They are very credulous, and any thing will go down with them, let it be never so incredible; things that are probable and reasonable, do not find so easy Belief among them. When they kiss a Woman they do it on the right Cheek. Lands that have not been above twenty Years in a Family, fall to the younger Children, proportionably with the eldest. When they sow, they thrust the Needle in with the Fore-finger. They eat Carrots without scraping, and Pease without shelling. They don't gather them as we do, but tear them up Roots and all, and so sell them in the Market. To say that a Man has an inconstant Wife, they say he lies on a Bank of

of Sand. A Man's bare Word that has got a Beard, is more valued among them, than an Oath of one that has none.

Their finest Pieces of Painting are not better than what is commonly done on *Dutch* Chimneys with red Oker and *Spanish* white. They are as careful to keep their Teeth black, as we are to whiten ours; they have an Art of painting them, as also their Eye-balls. They reckon long Eyes, and little Foreheads, handsome. The *Russian* Women hide Part of theirs in their Coifs. Little Feet, and a slender Shape, are Deformity with them. They do their utmost to grow fat; for which purpose they eat excessively, and will lie in Bed whole Days together; that they may increase in Bulk, by much eating and much sleeping. Brandy, which one would imagine should rather waste than plump them, is thought to be a great Fatner by them. There is so much Confusion in the Ways of Proceeding of the *Russian* Judicature, that it is almost impossible to give a clear Account of it.

There is a *Precauce*, or Court of Justice, in each Province, in which a *Boyar*, or Lord, presides, to represent the Emperor's Person. He has under him a Chancellor, a *Dyack*, or Secretary; several Sub-secretaries and Clerks. If a Plaintiff brings a Suit before the Judge, and he is not corrupted by the Defendant, the former is almost sure to carry the Cause; for that it is supposed the Right commonly lies on his Side. Criminals are seldom condemned to Death in *Russia*; they are severely whipt; and, besides, there is a Sort of Punishment worse than Death. A Murder may be bought off with Money. If one Man kills another, and no-body prosecutes him, the Magistracy takes no Notice of it. If there be a thousand Witnesses against a Man accused of a Capital Crime, he cannot be convicted, unless he confesses himself. It is true, to extort that Confession from him, he is exposed to the most cruel Torture that can be inflicted on the Body of Man. They first give him the Strapado. If he confesses nothing he is whipt, and the Hangman does it so terribly, that he can kill the Criminal with six or seven Lashes. Sometimes they pierce his Sides with red hot Irons, or else they slit his Bones, salt them, and put them, hanging to his Body, on the Fire to broil. If he says nothing still, they cure him as well as they can; and twenty Days after, if he survives the Torment, they renew it again. Sometimes they will half flea them, and if they endure all with Resolution, which rarely happens, they pour boiling Lead, Drop by Drop, on the Crown of his Head, close shaven, which is the last Trial of his Constancy.

The Punishment of Coiners, is to melt some of the Metal of which their false Money was made, and force them to swallow it. A young Man shooting an Owl in the Court of the imperial Palace, had his left Leg and his right Hand cut off; because some of the Shot glanced into the Emperor's Chamber. If a Conspiracy against the Government be detected, the Conspirators are severely tortured; after which they are sent to *Siberia*, and are either suffered to starve to Death with Cold on the Way; or else have their Eyes plucked out, or their Ears cut off; and are left in that dismal Province fifteen hundred Miles from *Moscow*. It is but lately that the *Russians* have hanged their Criminals; the Reason why they would not permit any such Execution before, was out of a foolish Fancy, that when the Man was strangled, his Soul departed downwards, and that defiled it. The Criminal ties the Rope about his own Neck, and flings himself off from the Ladder, when the Executioner bids him. The Hangman's Place is hereditary, and he is careful to instruct his Children in his Trade; which, however, is not so reputable as in some Parts of *France*, where the Executioner pretends to be a Gentleman by his Office. The common People in *Muscovy* are very ignorant, and much given to Idolatry. Those that live in the Northern Provinces, about *Archangel*, *Cola*, &c. know no other God but *St. Nicholas*, who, they believe, governs the World. They affirm he sailed upon a Mill-Stone, from *Italy* to a Place near *Archangel*, now called *St. Nicholas's* Port; and if a *Russian* seemed but to suspect the Truth of this Story, he would be in no small Danger of his Life. They

celebrate the Festivals of their own Saints with more Devotion than those of the Apostles. *St. Nicholas*, they say, is *Nasba Bradt*, i. e. one of their Brethren, who, being of their own Country, has more Kindness for them than either *St. Peter* or *St. Paul*, who never knew them. Those who have made Inroads on other Nations, or plundered Strangers, think they expiate all their Offences, by building a Church, furnishing it with a good Ring of Bells, and Store of *St. Nicholas's*, adorned and set off with Jewels. The greatest Part of the *Russians* are rude and barbarous, except some of them, who are civilized by their Commerce with Foreigners, or who have travelled to *Poland* and seen that Court.

20. The *Poles* are less barbarous than the *Muscovites*. Some of them improve their Minds by Study; and Arts with the *Russians*, Enemies to the Sciences, are never encouraged. The Gentlemen of *Poland* are at Liberty to travel wherever they please. The *Muscovites* cannot go out of their own Country without Leave of the Emperor, which is not easily obtained. However, with all those Advantages, the *Poles* are not so refined a People as other Nations. They are proud, insolent, self-conceited, and have high Opinions of themselves, and their own Country, which they fancy excels all others. They are whimsical in their Drefs, vain, prodigal, and very ostentatious. Their Horses are fine, and their Furniture magnificent. They affect this, because it is what is most seen. They are civil to Strangers, and entertain them very handsomely, for two or three Days, till they have seen all they have to shew them, and have made them drunk for four or five times. They drink harder than the *Russians*, and are so quarrelsome over their Liquor, that there is scarce a Gentleman, in the whole Kingdom, but one time or other has been wounded in a Debauch. Their Laws are barbarous to the last Degree. Murder is only punished by a pecuniary Mulct.

They pay no more than four or five Crowns for killing a Clown; the Price rising higher according to the Distinction of the Person murdered. Their Kings are, in Truth, but Shadows of Monarchs. *Henry III.* was King of *Poland* before he reigned in *France*. He had Reason to be weary of their Crown, and would not, by any Persuasions they made use of, be prevailed upon to keep it. A thing of the highest Consequence, when debated in their general Diet, may be stopped by one Senator's Vote, who has Power to protest against it, without giving his Reasons for it. The Ceremony is, he sets his Hand to his Scymitar, and that signifies he is ready to oppose that Proposition, in dispute, to Death; which damns it for that Session; and though, perhaps, the next Day the protesting Senator changes his Opinion, yet he cannot revoke his Protestation. The Pox is very common and dangerous in *Poland*.

The *Muscovites* got it of the *Polish* Women, at the Time they conquered *Vilna*, and some other Towns and Provinces on the Frontiers of *Poland*; before which Expedition the *Russians* did not know what that Disease was. The Scurf, or Plica, is still more common than the Pox. The Cause of it is, that most of their Springs are poisoned by Mines of Arsenic, very frequent in those Parts; by which it is almost impossible to travel thither and not have it. When once it gets into a Family, it goes round it, no-body escapes the Infection. It is the filthiest and loathsomest Distemper in the World. A Man cannot look upon some *Polanders*, who have it in Extremity, without turning his Stomach. Besides that, the Symptoms of this Distemper are terrible to the Eyes, the Stench of it is abominable; there is no old Wound or Ulcer smells so intolerably. I have seen some Monks, whose Heads have been all over Scurf, and their Hair clotted together, than which there can be nothing more beastly and shocking to the Sight; nevertheless it is taken no Notice of in *Poland*; the *Poles*, thinking it a Sign of Health; and Gentlemen being most troubled with it, it is also taken for a Token of their Quality. Those Horses that have it, whose Manes are matted, and whole Tails are glewed together with it, are esteemed the more bold, and the most fit for Service; and if never so little of this Scurf is cut off, the Beasts die, or run mad, immediately, or else

else fall lame or blind. It is said the *Poles* were the first who brought up the Fashion of powdering Hair to hide their Plica, which is the more probable, as Starch is the Manufacture of *Poland*. They are more faithful in observing their Treaties than the *Russians*, the Latter making no Scruple to break the most solemn Alliances, when it is for their Interests: And yet in their private Negotiations, the *Muscovites* are very exact in making good what they swear to, and careful how they take a false Oath, or indeed how they take any.

The *Polish* and *Russian* Languages differ one from the other, as the *English* does from the *Scots*. The *Polish* Tongue passes for the more copious and polite; and yet the Pronunciation is not softer, nor the Orthography less rude than the *Russian* Language. In some of their Words there are six Consonants for one Vowel; they can hardly speak without sputtering in the Faces of those to whom they speak. They are stately in their Salutations, and do not bow so low, as the *Russians*. The *Tartars* salute their Superiors by embracing their Knees. The Common People salute one another, by putting the Fore-finger on the Mouth of the Person saluted, and shaking the Head a little. The Manner of the *Circassians* in this Case, is odder still; they ask the Man whom they would salute, if his Servants, his Cows, his Sheep, his Horses, his Goats, his Hogs, his Cocks, his Hens, and his Turkeys, are all safe and well.

21. I shall not pretend to write a complete History of the House of *Romanzow* now reigning in *Muscovy*, what is said here historically, being a sort of Digression; but believing the Reader will be diverted with a short Account of the present Czar's Family, I thought fit to give it, and some other entertaining Occurrences which I met in the Memoirs so often mentioned before. It would be too tedious to give, as the Gentleman who wrote them has done, a long Etymology of the Word *Czar*, and how the first *Romanzow* was advanced to the Title, or how *Basilowitz*, having reduced all the petty Dukes that had Sovereignities in *Muscovy*, erected a Monarchy on their Ruins. *John Basilowitz*, his Son, followed his Steps, was successful, and subdued the Kings of *Casan*, *Astracan*, and *Siberia*. To write all these Events, would make a long History of itself, *Basilowitz* reigning many Years. And though he was the greatest Tyrant in the Word, he was also one of the most happy Monarchs, if Victory alone can make a Prince happy.

The Czar *Michael*, Father to the present Czar (Anno 1670) was a very merciful, religious and good Prince, courteous to Strangers, and one who delighted in maintaining a friendly Correspondence with all Christian Potentates. Count *Wolmer*, the last King of *Denmark*'s natural Son, would have married his Daughter, but the Clergy of *Russia* opposed it, saying, *Wolmer* was a Heretic, and therefore the Princess could not lawfully marry him. The *Danish* Prince resenting that the *Russian* Priests should oppose his Match, challenged them to dispute with his Chaplains, whose Religion was the truest, his or theirs. The *Russians* refused his Challenge. The Czar was highly enraged against them for it, demanding, *what Sort of Faith they professed, that they could not defend it by Reason and Argument*: Some Days after, as he was going to Bed, he was taken with a Vomiting, and died the next Morning, not without Suspicion of being poisoned, the Priests apprehending he would make Innovations in their Religion. The Czarina or Empress, did not long survive him, and Count *Wolmer* thereupon gave over all Thoughts of the Marriage.

This Emperor often recommended to his Son *Alexis Michaelowitz* to follow the Advice of *Boaris Juanowitz* his Governor. There is an odd Story of the Fate of this *Boaris*'s Father, being a Widower, and the Emperor *Basilowitz*'s Favourite. He desired him to bestow one of his Concubines upon him in Marriage. *Basilowitz* granted his Request, without naming any of them in particular. The Favourite having a Licence at large, took the handsomest of them all. At which *Basilowitz* fell into a violent Passion; and hearing they were retired together to one of his Stove-Chambers or Hummums, to enjoy themselves with the greater Liberty, as they thought they

might lawfully do, having the Emperor and the Priest's Consent; the Czar commanded a Bear to be let loose upon them; which was done; and the two Lovers were immediately devoured by him. *Boaris* and *Cleab*, the unhappy Favourite's two Sons, were bred up with the Emperor *Michael*: And *Boaris* gained such an Influence over him, by a long Familiarity, that he governed all things as he thought fit, and was more absolute than his Master. He lessened the Czar's Officers; and those he kept in their Posts were glad to serve for half Pay; even the very Ambassador's Pensions were retrenched: He imposed new Taxes, and sent those Dukes, who having been Sovereigns formerly were most dangerous, to distant Governments, as to *Pripnin*, to *Bolgorod*, to *Coratbin*, and to *Casan*: In short, he was so severe in his Ministry, that the Nobility hated him as much as they envied him; and he, despising their Intrigues to depose him from his exalted Station of chief Favourite and Minister, depressed them to raise his own Creatures.

The People murmured at the new Impositions; there was an Insurrection upon it; they required Justice, and that the Emperor should deliver *Boaris* over to them to be made an Example on for his Mal-Administration. The Czar was surprized at their Demands, not expecting any such Insolence from his Slaves, for so his Favourite had represented all his Subjects. He endeavoured to mollify those of them who were most outrageous. And to gain time, and save his Favourite's Life, he swore he would banish him from Court for ever. This Compliance appeased them; *Boaris* was ordered to retire, and the Nobility were restored to the Czar's Favour, which they managed as little to the People's Satisfaction as *Boaris* had done, who being a cunning Statesman, observed their Discontents, and improved them to his Advantage, by encouraging the Clamour against the Nobility, who oppressed the People so much, that those who were lately most for banishing the Favourite, were now hottest for recalling him. They found it no difficult Matter to succeed in their Enterprize; the Czar, on their Petition, did readily what they would have him do; sent for *Boaris* to Court: And he was afterwards very kind to those that had been instrumental in his Restoration. Ever after, he caressed the People on all Occasions, and favoured them to the utmost of his Power: He undertook to protect all Foreigners, and was equally beloved by Natives and Strangers. He died about sixteen Years since, *i. e.* in 1650, in a very old Age, beloved by his Prince, and regretted by his People. He had the Character of an able Politician, whose Councils were successful. He died lamented by every body but the ancient Nobility, whose ambitious Designs he always thwarted.

It was he that made *Eliab Danelowitz* General of the Czar's Army; who, before he had a Fit of the Apoplexy, was reckoned a Man of great Worth and Capacity. He was bold, daring, and vigilant: His Memory was so good, that he knew every one's Business in all the Employments Civil and Military. He could distinctly tell the several Quarters of an Army of fourscore thousand Men: He could tell the Names and Characters of all his Officers; but the Accident that happened, as we have already said, weakened him extremely both in Body and Mind: And his Memory is now so bad, that he hardly remembers those Persons with whom he was most familiar. He was Treasurer, and held five or six more great Offices, which he managed with equal Skill and Success. 'Tis true, he plundered a great deal, and the Emperor, who feared more than he loved him, winked at it more willingly, because whatever *Eliab* scrap'd up, would fall to him in right of his Wife, *Eliab*'s Daughter. Nevertheless, after the Death of *Danelowitz*'s Wife, observing that he was too kind to some *Tartarian* and *Polish* Women, he ordered him either to marry or leave the Court. On which Occasion, I cannot help remarking, that Marriages are in high Esteem in *Russia*, either out of Policy to encourage what helps to people the Country, or to prevent the *Russians* abandoning themselves to Boys and Beasts, to which they are not a little inclined; nor is that Crime punished with Death there, as in other Countries.

It is called *Ne Misheay*, and it got that Name by this Means: A young Rascal which was surprized committing an abominable Action with a Cow, cryed out to the Person that spied him, *Ne Misheay, Do not disturb me.* This was done about eight Years ago; and ever since, that horrid Sin has been so called.

Eliab's Misfortune would have been regretted more, had not *Nashokin* succeeded him in the Administration of Public Affairs: This Lord is one of the wisest Ministers in *Europe*; he is a Man of Temper and Integrity; he is indefatigable in the Discharge of his Offices committed to his Management, and a hearty Asserter of monarchical Government; he is Chancellor of the Office of Embassadors, and Governor of *Russia Minor*; and has several other Employments, which his Predecessor *Eliab* held before him. It was *Nashokin* that concluded the Peace with *Poland*, very honourable to his Master. He also formed the *Swedish* Alliance, and erected the Silk Manufacture throughout all *Russia*; and by his Means *Russia* is made the Mart of the Silk Trade; most of that Commodity either from *Persia* or the *Indies* being brought thither, and sent from thence into other Parts of *Europe*; but this Commerce did not last long.

His next Work was to reform the Emperor's Household, and the Laws of the Empire. He contrived it so, that no Suit should be long depending; and every Governor of a Province, assisted by his Council, had a Power given him of Life or Death. Before that Order, Criminals of all sorts were brought to *Moscow* to be tried, which was very troublesome and inconvenient for the Czar. The last Summer a *Jew*, who had turned *Turk*, and was Interpreter to the *Persian* Merchants, accused *Nashokin* on their Behalf, before the Emperor, for doing them some Injustice in the Precauce, or Court of Embassadors, of which he was Chancellor: The Emperor answered, That *Nashokin* had the Management of all Affairs relating to Trade; that he referred them to him; and if he was unjustly accused, their Interpreter should pay dear for it. The Czar was as good as his Word; the Accusation being found to be groundless; and the Renegado *Jew* had thirty Lashes with a Whip, which threw him into a miserable Condition. *Nashokin* has often told my Author, That it was the Czar's Interest to keep up a friendly Correspondence with the King of *England*, more than with any other Prince in *Christendom*; and it will not be improper in this Place to mention something relating to him. Some *English* Merchants petitioned *Nashokin*, that they might land some Goods which were on board the Ships lately arrived from *England*:

"He told them, he had a Paper printed, giving an Account of the Plague in *London*; that probably this Merchandize might come out of Houses that were infected, and they knew very well a Spark might set a whole City on Fire; that he thought their way of publishing their Infirmities was very strange; adding, that if the poor and miserable expose their Misery and Poverty, it is to excite Compassion, and get something by it; but the *English*, spread it about every where, that the Plague laid their Country waste, and gave the World a fair Warning not to have any thing to do with them; as Lanthorns or Light-houses near the Coasts warn the Pilots not to come near them for fear of being shipwrecked." He said one Day, "He wondered any Princes should send Letters of Recommendation in Favour of their Subjects, demanding Justice in their Behalf, as if the Czar did not know how to deal justly by Strangers as well as by his own Subjects. Sure such must be very cheap in *Denmark*, continued he, because I receive more from thence than from any other Kingdom. I do not know what they might cost in *England*, but I am very well satisfied they are all to no Purpose. The *Muscovites* do not govern themselves like the *English*, by the Custom of their Countries; and if the *Russian* Dress becomes them, theirs will never become the *Russians*." Being once discoursing on the Affairs of *England*, and particularly on the Succours sent by the Kings of *France* and *Denmark* to the *Dutch* against the King of *England*, he declared, "He could not penetrate into the Politics of those Monarchs, who in other

"things were discreet, in doing so preposterous an Action; that in his Opinion, the best thing for them had been to have joined with the King of *England*, and other Princes of *Europe*, to form an Alliance for the rooting up all Republics, which are good for nothing, but to serve for an Asylum to Rebels and Heretics."

There have lately been a great many *Jews* admitted into the Czar's Court, by means of a *Jewish* Surgeon, who pretends to be a *Lutheran*. He was bred up in *Poland*, and advanced himself in the Court of *Muscovy*, by furnishing *Bogdan Matfeig*, high Steward of the Emperor's Household, with *Polish* Girls, of whom he is very fond. This Minister was the Companion of the Czar's Youth, and has insinuated himself so far into his good Graces, that for some Time he has been the reigning Favourite, and managed all the Concerns of the Household as he pleased. His Wife observing his Intrigues, and understanding that he met *Polish* Girls, and other handsome young Women, Slaves, as well as those that were free, was so jealous of him, that her Ill-humour became insupportable to him, and he poisoned her to get rid of it. The People murmured at the Murder, and the Czar commanded *Matfeig*, either to quit his Post or marry, and leave his Mistresses. It is said he intended to take one of his Concubines to be his Wife. He cannot agree with *Nashokin*, and does not love the *English*, because the *Dutch* have drawn him to their Interest by rich Presents.

22. The Czar has lately built a Work-house, about a League from *Moscow*, where the Poor are employed in Manufactures of Hemp and Flax. The House is beautiful, large, and so well contrived, that all the Beggars in his Empire may be employed there; for whose Maintainance the Emperor has settled Lands upon it, to a considerable Value. The *Czaritza*, or *Czarina*, manages the Woman's Work, and employs them for her own Benefit. The Czar is every Day busy in contriving the Increase of Manufactures, how to invent new ones, or improve the old. His Workmen cost little or nothing for their Subsistence; he rather gets than loses by them; So that he saves his Revenues arising by the Cabacks, the Bagnio's, and Stove-Chambers, Pitch, Hemp, Flax, Honey, Wax, Caviare, Sturgeons, and the salted and dried Fish that comes from *Astracan*, *Casan*, the Lake of *Belsire*, and several other Lakes and Rivers in his Dominions, particularly in *Siberia*, where there are abundance of them, and yield plentifully.

The Czar goes every Year, about the End of *May*, to a Country House about three Miles from *Moscow*, called *Obrasanksky*, or the Transfiguration, to which it is dedicated in Obedience to what is said by the *Evangelist St. Luke*, Chap. ix. 13. *Master, it is good for us to be here, let us make three Tabernacles, one for thee, one for Moses, and one for Elias, &c.* The Emperor ordered several magnificent Tents to be set up; his own was of Cloth of Gold, lined with Sables; that of the *Czarina* of Cloth of Silver, lined with Ermine; and those of the Princes and chief Lords, of other Stuff, and other Linings, according to their several Ranks. The Czar, and *Czarina's* Tents, those of their Children, ten in Number, and their five Sisters, were round; in the Middle stands one which serves for a Church, and, all together, make one of the finest Sight in the World. Guards are posted round about them, at a Musket-shot Distance.

There are Pallisadoes placed to keep off the People. None durst pass beyond these Bounds; for the Czar will not suffer his Recreations to be prophaned by vulgar Eyes. When the Emperor goes into the Country for his Pleasure, no Man is permitted to present any Petition unto him. A Captain of *White Russia*, when *Peter Sel-ticoro*, Governor of the Province, refused his Pay for above three Years, not knowing how to have Justice, thought his best Way was to address himself immediately to the Emperor. He came up to him where he was in the Country, and approaching too near his Coach to give him his Petition, the Czar mistrusting he had some ill Design, perhaps that it was to assassinate him, thrust him to the Heart, with a Cane that had an Iron Spike at the End of it. He fell down dead on the Spot,

and the Emperor ordering him to be searched, to see what Arms he had about him; there was nothing to be found but the Petition. The Emperor having read it, snote his Breast, and appeared mightily concerned that he had murdered an innocent Person, saying, "His Blood shall lie at *Selticoro's* Door, who was the real Cause of his Death." He sent for him, and not being satisfied with giving him a severe Reprimand, banished him the Court, turned him out of all his Places, which he gave to *Nashokin*, with an Express command to enquire out *Selticoro's* Misdemeanours.

This Accident happened not long ago, and yet is not much talked of. For it is Death to tell what is said or done in the Czar's Court. The Author going once to view the Workhouse, built for those that were to manufacture Hemp and Flax, just as it was finished; and asking the Workmen, what Use it was designed for, not one of them durst make any Answer, though they knew what was the Design well enough? All that he could get out of them was, *That God and the Czar only knew*. The Czar used every Night to visit the Chancellor's Registers, to examine what Decrees had past, and what Causes were depending. Such poor Gentlemen as have nothing to maintain them, but what he gives them, are his Spies, of whom he has many in all Places. In his Armies, at all wedding Feasts, in all Embassadors Houses, in all public or private Assemblies, they tell him what they hear or see, and he governs himself accordingly. The Czar's Children are served by other Children, who are bred up with them, and are well educated in all Sorts of Knowledge, suitable to their Birth.

Trade is now very low in *Muscovy*; two fifths of all the Inhabitants having perished in the late War; besides the new Impositions laid on all Merchandize, the Custom-house Officers take away Merchants Goods by Force, and compel them to sell them for Copper Money, which has sunk the Price of several Commodities, and raised others as much, and put a Stop to the Currency of Commerce in general. Several great Traders were undone by it; some of them fell so in Despair upon it, that they hanged themselves; and others spent what they had, in Cabacks and Brandy-shops, to drive away Care; which not being used to before, their Debaucheries soon put an End to their Lives. *English* Cloth is not so good a Commodity in *Russia*, as that of *Holland*; and though the Latter shrinks above a sixteenth Part when 'tis wet, yet the *Russians* prefer it to the former, because they are of Opinion that it is only new Cloth which shrinks. The *English* are to blame to give way to their Fancy, and to carry on a Trade with them, which the *Hollanders* manage so much more to their Interest; their ordinary Cloth and Trifles turning to better Account than the best Commodity the *English* can bring them, by the wrong Judgment of the *Russians*. If the Trade for Silks to *Persia* and the *Indies* should increase, the *English* will find it a hard Matter to recover their former Privileges and Immunities in *Russia*; for the *Russians* are grown sharper, and corrupted by the *Dutch* corresponding so long with them. They are more numerous in *Muscovy*, and richer than the *English*. They spare for nothing to ruin the Trade of *England* in *Russia*, and succeed in it more than some imagine. They bribe the Nobility, by Presents, to defend and protect them, and render the *English* contemptible and ridiculous, by scandalous Libels and abusive Pictures.

They looked upon the *English*, a few Years ago, as a lost and undone People. They are such perfect Slaves, that they have a mean Opinion of all those who are free. The *Dutch* would fare no better, did not they pay dearly for the Friendship of the Favourites and Ministers in *Muscovy*. They represent the *English* Nation by a Lion without a Tail, with three Crowns on his Head, turned upside down, or by Mastiffs, with their Ears and Tails cut off. These foolish droll Pieces were done at a Time when they had no Reason to speak very well of the *English*, who had begun a War with them for the least Provocation in the World. The only Way for the *English* to recover their Reputation and Trade in *Russia*, and to lessen the Credit and Commerce of the *Dutch*, would

be for them to suffer no-body to deal there, but such as could trade with ready Money, and not upon Trust, as their Merchants have done for this twenty Years; and to send an Embassy to the Czar, to inform him of the flourishing Condition of the *English* Dominions; of their Strength, Greatness, Revenues, and their Colonies in both the *Indies*; to shew him Maps of all their Territories over the whole Earth, and Plans of their Forts and Cities. They ought also to undeceive *Affanasty Nashokin*, to whom their Nation has been vilely misrepresented by the *Hollanders*, and to present *Cogden Matseig* with some Curiosities that he loves. The first would make it a Point of Policy to encourage them, when he understood the true Nature of the Case; and the other would procure them the Emperor's Favour, of which he is always sure. The Author's Arguments on this Subject are of no Weight now; the Figure the *English* Nation has made abroad since the Revolution, needs no Embassy to found its Fame. The Ends of the Earth have heard of it with Wonder, and the Czar, as the Queen of *Sheba* did to *Jerusalem*, came in Person to be a Witness of its Glory.

23. *Siberia* is a large Province, the greatest Part of which is *Terra Incognita*, which reaches to the Walls of *Cathay*. Besides what Account of it I had from the Gentleman of *Lorrain*, I met with several Persons in my Travels in these Parts, who had been over a great Part of *Siberia*, and on whose Relations I can depend. One of them in particular, had travelled so far, that he traded with the *Chinese*; and the other, who was more ignorant, though not less faithful, assured me that he went so far, that he saw a Sea with Ships, and Men aboard them, who wore no Hair but on their upper Lips, who were richly dressed, and covered all over with Gold and Jewels. Their Garments being quite different from those of the *Russians*, by the Description he gave of them, in all Probability, they must be *Chinese* Merchants; for the Sea could be no other than that of the *Kaimochites*, on the North-east Part of *Great Tartary*, or that of the Gulph of *Nankin* in *China*. The latter brought some *Chay* and *Bourdian* out of *Siberia* with him. The former is what we call *Tea*, the latter, *Anisum Indicum Stellatum*, a physical Drug.

The *Chinese* Merchants have taught those of *Siberia* to drink the *Chay* with Sugar as we do; and they take it to be an excellent Remedy for all such as are troubled with any Disease of the Lungs, with Hypochondriacal Flatus's, and ill Disposition of Stomach. They bring it to them in Papers, containing each a Pound, the Weight and Name being written on each Paper, in *Chinese* Characters. Those that would travel through *Siberia*, are six Years on their Journey, occasioned by the extraordinary Heat and Cold of the Climate, which obliges them to lodge all the Winter in certain Places, and all the Summer in others. *Tumbut*, or as others say, *Siber*, is the Capital of this vast Province; here the chief Wayvod, or Viceroy, resides. Furs, Marten-Skins especially, which are to be had nowhere else, are the principal Commodities of this Country. They eat dried Fish instead of Bread, which is not to be seen in all the Province, unless the Traveller carries it along with him. There is plenty of all Manner of Fish in their Lakes and Rivers, in which they abound. They feed their Dogs with it, and even their Cows in cold Weather, which is excessive in *Siberia*, by which means their Milk, generally speaking, has a fishy Taste.

There is abundance of Filbert-trees of a prodigious Bigness, and the Kernel of the Nut is of a Size answerable to that of the Tree that bears it. They go a hunting in Troops, for six or seven Weeks together, covered over with three or four Skins, and drawn along in a Sledge, by thirty or forty huge Dogs. They lie in the open Fields all Night, in the midst of Winter; but they make good Fires about them to warm themselves, and broil their Fish. Their Dogs are very expert in finding out Martens; and when they have found them, they never miss taking them. When once the *Siberians* have shot them, which they do with a Cuss, so dextrously, that they always wound them in the Nose, that they may not prejudice the Skin. Besides, if they do not hit them in that Part, it is rare that they catch them;

them; for it is a robust Animal, and will escape them, sometimes, though he be shot quite through the Body. The River *Ob* runs through this Province; it is very broad, and falls into the *Mare Glaciale*; it is stored with Sturgeons and Belugas. The latter is a Fish, twelve or fifteen Feet long, resembles a Sturgeon, but is not so pleasant, tasted when it is salted, as the former. The Meat is whiter than Veal, and as delicious as Marrow, while it is fresh.

The *Volga* is stored with that Fish, and with Sturgeon, most of all the Rivers in the North. When the Flood comes down the Mountains, by the melting of the Snow, and the Stream grows the more rapid, these Fish swallow great Stones to make them the heavier, that they may stem the Torrent the better. They throw them up again when the Waters abate, and the Current is not so strong. It is out of the soft Roes of these Beluga's and Sturgeons, mingled together, that the People of *Astracan* make Caviare, in this Manner: They put their Roes in a heap of Salt, and when they have fermented a little, they squeeze them, and barrel them up. There are some who will not squeeze them at all. That Caviare is the most delicious, but will not keep so long as the other. The Turks make it with the Eggs of the Sturgeon, which are black and clammy. This the *Russians* call *Fekra*. There is another Sort, which is nothing but the Roe of a Beluga. The *Armenians*, who I believe first made Caviare, do it after another Manner. They begin with cleaning the Roe, and throwing away all that is useless in them, then salt and lay them on crooked Planks, that the fat oily Parts may be drained off; after which they pack them up in Barrels, and beat them down till they are hard. The Beluga has one hundred and fifty Roes, and two hundred weight of Eggs, which the *Armenians* call *Arminsko Fekra*.

The Northern Part of *Siberia* is called *Samojedia*, or *Tasambeida*, which signifies Canibals or Men-eaters, because the Inhabitants are said to eat all the Prisoners they take in War. They live in round Tents, covered with Mats and Stags-Skins. They make their Fires in the Middle, and lie about them. There is but one Hole to a Tent, besides the Door, and that is on the Top, to let out the Smoak. In Summer-time they remove to the Banks of Rivers, for the Conveniency of fishing. They live altogether upon Fish, which they often eat raw. In Summer they dry it, to keep for their Winter store. Young Dogs are accounted one of their nicest Dishes. Their Customs, Language, and Religion, are entirely barbarous. They worship the Sun and Moon. Both Men and Women are dressed in Cloaths made of Stags-Skins, the Hair outwards, which they fancy is the warmest Way of wearing it. The Men have no Beards. The Women are abominably ugly, and so hard-favoured, that they can scarce be distinguished from the Men, the one being often taken for the other by Strangers. Yet as deformed as they are, they do well enough for the Canibals, who like them better than those we think handsome. The Riches of the *Samojedas* consist in Stags. There are some of them so tame, that they graze in Troops, stand still to be harnessed, and draw Sledges fourscore Miles a Day, so incredible swift are those Creatures.

Before the Inhabitants go a hunting of Stags, they consult a Priest, who tells them the Place where they shall find their Game; and it is rare that they are out in their Guesses. Young Girls are a considerable Part of their Father's Wealth; they are never seen till they are betrothed in Marriage, and that is frequently done when they are six or seven Years old; for at that Age, somebody or other will buy them for a certain Number of Stags, that they may be sure to have their Maidenheads. Husbands are there so jealous of their Wives, that they lock them up closer than they do in *Italy*; and when they go a hunting, they have a Device to secure them from making them Cuckolds in their Absence. The Emperor does not think these People worthy of living under his Government; they are liable to no Imposts; what they pay is voluntary, and generally is in Stags; which from Time to Time they deliver to the Czar's Officers on the Frontiers. No-body understands their

Language, nor their Laws, which they execute with great Severity. When they sell a Stag to a Foreigner, they preserve the Entrails and eat them, even the filthiest Part of them, after they have squeezed out the Excrement. Those who understand Magic, are the most honourable Persons among them. They are very dextrous in that fallacious Art, and exercise it very commonly towards Strangers; but they dare not play the *Russians* any Tricks for fear of being severely punished. An *English* Merchant inviting some of them to Dinner, one of them got so drunk that he could not stand, speak, nor sit; and his Drunkenness continued so, till an old Woman touched his Forehead, and muttered some Words in his Ear; after which, if we may give Credit to Eye-witnesses, from whom I had it, he grew as sober as ever he was in his Life.

24. In the South Part of *Siberia* there is a Forest, or, as called by them, a *Step* about six or seven hundred Wrefts long, where there are few Rivers; and yet the Soil is extremely fertile. One may ride there several Days Journey in vast Fields full of Cherry-Trees not above two or three Feet high; not that they won't grow taller, but they were hindered by the Negligence of Travellers, who having made Fires in the Middle of the Fields, go their ways without thinking of putting of them out, and the Grass of the Forest being very long and very dry, catches Fire, and burns up every thing that lies in its way. It is no uncommon thing to see a Fire burn for thirty or forty Wrefts together, and pursue Travellers so nimbly that often they have not time to save themselves. These Cherry-Trees bear red Cherries fair to look to, but four. The Fruit of some of these Trees that have been transplanted has been very good. I have talked with several Persons who have seen Tulips, red Roses, Roses like Damask-Roses, Asparagus larger and finer than ours, Onions, Marjoram, Thyme, Succory, Sage, Endive or white Succory, and other Flowers, Herbs, and Roots in the Forest, which we with a great deal of Care raise in our Gardens. The Turnip is very frequently met with there; they have good Carrots and Parsnips in *Samojedia*, and the Merchants of other Nations export a great deal of Nitre and Sal-Gemet from thence. Elks are larger there than any where else. There is a little Animal called *Zouricks*, and another whose Name is *Perivoshicks*, which are pretty Creatures.

The *Zourick* is something shaped like a Badger, but different in the Face; his Skin is of an agreeable Colour; it is black, sleek, and spotted a little, and his Legs short, his Back almost a Foot long; they live like Coneys in Burrows under Ground. The *Russians* tell a great many Stories of the Wars of these Animals, one with another, of their Dexterity in taking Prisoners, and sending the Enemy away into Captivity; that they force their Slaves to fetch in Hay and Oats for them to lay up against Winter: It is said their Burrows are very clean, neat, and artfully contrived; and if one of them dies the others carry out his Body and bury it elsewhere. Colonel *Crawford's* Regiment quartering near the Place where they are to be found, these Creatures met one Day, to a prodigious Number, and made such a frightful Noise as terrified the Soldiers and their Horses so much that they ran away from their Pasture near the Place ten Miles, without stopping. The *Perivoshicks* Skin is brown inclining to yellow, being a Mixture of white and black: The *Russians* make Coats of them, but they are not much valued because the Fur is not long, nor the Skin warm. I have heard, they take a great deal of Pleasure to carry Squirrels and Ermines from one Side of the River to the other, on their Backs; from whence they derive their Name *Perivoshicks*, i. e. to carry a Thing from Place to Place. Several Persons have assured me, that the Squirrels in *Siberia*, when they can get nothing to eat on one Side the Water, will pass over to the other on a little Piece of Wood, and make use of their Tails instead of a Sail. If the Wind sets fair, they get over sometimes; but if it changes they are infallibly drowned. There are many more Reports as extravagant, which have been averred to be true, relating to *Siberia*; but I will not impose farther on the Faith of the Reader.

There

There is a Bird in the Neighbourhood of *Casan* and *Astracan*, about the Bigness of a Woodcock, whose Beak and Legs are like a Snipe's, and his Neck like a Cock's both for Feathers and Size: They fight like the Game-Cocks in *England*; they stand on their Guard when they put their Beaks to the Ground, and when they can do it to Advantage they leap at the Enemy with Vigour, and attack him as violently as the *English* Cocks of the Game do. They are better to eat than Quails. Sometimes one may catch this Bird near *Archangel*; where is also to be found a Bird as big as a Blackbird resembling a Hawk; like him he flies after little Birds, takes them, pulls them, cleanses them, and then eats them. There is another Sort of Fowl as tall as a Swan, which is brought from *Astracan*; his Body and Feet resembles those of a Swan, his Neck is short, thick, and so wide, that he will swallow a Fish six Inches broad.

Some Travellers make mention of a Plant in those Parts called the *Lamb*; which destroys all the Herbs that grow near it, and then dies; but as this Quality agrees very ill with its Name of a Lamb, so the Story is accounted fabulous by Persons of Judgment. This deserves to be more particularly considered, and therefore we shall take the Liberty of adding somewhat to the Author's Remarks upon this Subject: This vegetative Animal is called *Borometz*, or *Barannetz*; the latter is the true Name, the Word *Baran* signifying, in the *Sclavonian* Tongue, a Sheep, and the Word *netz* being a Diminutive makes it signifies a little Sheep or Lamb: The Baron *de Heberstein* describes it thus: He says, That it is of the Figure of a Lamb, grows to be very large, with a very soft Down, and destroys all the Grass round it. We have Relations of the same Kind in other Travels, which are to the full as strong, and some of them are pretended to come from Eye-Witnesses. We shall perhaps have Occasion hereafter to mention some of these Accounts in speaking of the Countries to which they belong; but at present it may be sufficient to clear up this Wonder, with which so many Naturalists have been puzzled, and some very ingenious and well-meaning Travellers abused.

The Truth then of the Matter is this: Some People in these Countries, for the Sake of Gain, have had Recourse to a most wicked and barbarous Practice: They have opened their Sheep when at the very Point of Yeanning, and then taking out the Lamb they flea it, cleanse the Wool; and while the Skin is wet extend it gently, and on all Sides, as fast as they are able to stretch it upon the Grass; and then, by the Assistance of Dew and sour Milk, with which they sprinkle it as it grows dry, bleach it in the Sun-shine till it is as white as Snow itself. By these Contrivances they obtain a Lamb-skin wonderfully thin, smooth and soft, and extremely fit for lining the under Garments of the Great and Wealthy. But as in all *Mohammedan* Countries, they look upon the Skins of Beasts as an impure kind of Cloathing, and therefore abstain from them on the Score of Religion, the People who take all this Pains have been forced to invent this Story of a vegetative Lamb, a Kind of Plant-Animal. And Travellers seeing the Skins, and hearing the Tale roundly affirmed, have suffered themselves to be so far imposed upon as to lend their Authorities to impose this Cheat upon Mankind, than which, without doubt, there never was a greater or more groundless; which is the Reason that we have taken the Pains to expose it; as we shall not fail to do whatever occurs of the like kind in any of the Voyages or Travels that we publish; for Credulity and Incredulity are alike dangerous, and without a cautious and judicious Enquiry not easy to be distinguished. As in the present Case it would be equally wrong to believe, that no such Skins as Travellers speak of were ever seen or met with, as on the other hand it would be to swallow the whole Story upon the Credit of such Skins having been seen.

25. The City of *Crim*, from whence the Prince of *Tartary* is stiled the Grand Cham of *Crim*, the Capital of his Empire, is situated on the *Tartarian* Sea, built of Stone and Brick, and encompassed with strong Walls. The *Tartars* are tributary to the *Turks*; and it is not long

since that the Czar of *Muscovy* paid the Cham of *Tartary* Homage, as being obliged by Oath to feed his Horse with Oats out of his Cap. The City of *Moscow* also paid the *Tartarian* a Tribute of ten thousand Coats made of Stags-Skins. The *Muscovites* have for ten Years past refused paying it, alledging, that the *Tartars* made void the Treaty by Inroads into *Russia*, and Robberies on their Borders. Indeed they are very troublesome Neighbours; if they are routed they vanish in a Moment, and disperse; notwithstanding which they meet again at Night at the Place of Rendezvous, and the next Day renew their Incursions with as much Violence as ever: They will march fourscore Miles a Day, in which time they change Horses thrice, each of them having three or four Horses. If any one of their Cattle dies, either of Fatigue or Sickness, they cut the Flesh out in Pieces and distribute it amongst their Comrades, who eat it with as much Appetite as we do Beef or Mutton; they often devour it raw, but their common Way of cooking it is to put it between the Saddle and the Back of the Horse, on which the *Tartar* rides, and that soddens the Flesh enough for them to feast upon.

Those Horses that are in the Fields are very difficult to be caught, because it is almost impossible to take them from their Company. If a *Tartar* falls sick, they give him Mares-Milk, and the Blood of a Horse, whose Veins they open on purpose. The reason why they eat no Bread nor Salt, is that they believe Bread to be coarse Feeding, which renders such as eat it heavy and unactive; and that Salt is bad for the Eyes. It is certain their Sight is better than any Peoples in the World; they can see forty or fifty Miles when the Prospect will admit it, and can discern a single Man at the same Distance where the *Russians* could not discern a Troop of *Tartars*. They are excellent Horsemen; they ride with a loose Rein; lift themselves up in their Stirrups, and shoot backwards on their Enemies that pursue them. The *Colmuck Tartars*, among whom *Tamerlane* was born, have a large Extent of Territory: They dwell in Tents, and live in their Pastures: They are bigger and more swarthy than the *Crim Tartars*, and are not at all like them in the Face: Some Part of their Country is subject to the Emperor of *Russia*: Their Women are as fit for War, and accustomed to it as well as their Men: Lately an Army of them defeated the *Crim Tartars*, who had carried away some of their Children into Captivity.

The *Crim Tartars* are flat-nosed; their Eyes are little and sunk into their Heads; their Foreheads are narrow; their Shoulders low and broad; they are middle-sized; as to their Shapes and their Make, they are every way so singular, that it is easy to discover a *Tartar* at first Sight among an hundred other Men. They flat the Noses of their Children as soon as they are born, thinking it to be a Piece of Folly to let their Noses stand in their Light: They are all *Mohammedans*; they laugh at the Worship the *Muscovites* pay their *St. Nicholas*; and maintain that they had better adore the Sun, who is a glorious Body, the Life and Light of the World, than fall down before wooden Images. "See, say they, what your Gods come to. When the Painting is worn out, you throw them into the River with a Coptack or two, and a little Bit of Olibanus; thus they sail down the *Volga* to the *Caspian Sea*; there we take them up, dry them, and burn them to roast our Horse-flesh by the Fire. Are not they very fine Gods that serve us instead of Fag-gots, and that cannot resist those that destroy them?" Before I have done with my Relation of *Russia*, I will say a Word or two of several sorts of Mushrooms that grow there and no where else in that Form. There are seven which are most remarkable in their Figures and Qualities. The sort called *Rizbiees*, are a little black and red, and spring up in a Night in the Marshes. The *Smitzskies* or Honey Mushrooms, which *Gerrard* calls *Fungi farinosi*, reckoning them among Poisons, are excellent, and very dear in *Russia*; it is the most delicate Dish that is brought to the Tables of Persons of the highest Quality; they put it in Soups and Pies. They come up before the other sorts in *April* and *May*.

The *Gribbeys* are of a brown Colour, or rather of a black Yellow; the Tail of one is like a Pilaster, and swells

swells out in the Middle; they come up before the *Somtzskies*. The *Volnitzies* are brown and black, mixed with red, and grow sharp at top. The *Grouzhdys* are the biggest sort of all of them, as hollow as a Honey-comb, and whiter than a Tulip when they are dead: Before they are boiled they are full of Juice, so tart and bitter, that it will blister the Mouth of those that taste it. I thought I should have died after I had put a little of it within my Lips. The *Mastamicks* are so called from *Masta*, which signifies Butter, Oil, Sewet, or any thing that is fat and oily. *Masta Conova* is Milk or Butter. *Denavanna masta* is Oil of Olives, or rather the Oil of a Tree; for *Denavanna* is in *English* a Tree. There are so many sorts of Mushrooms besides, and so many of those I have mentioned, that I have been told, a thousand Waggon Loads a Year are brought to *Moscow*: The Poor live upon them, and the Rich make them a second Course. Almost all the *Russian* Mushrooms are good to eat, and there are very few of those kinds which the Botanists call venomous. But to return to our Voyage.

26. We took our Leaves of these unhappy Exiles with reciprocal Tears, and mounting our Sledges, travelled on three Hours before we met with any Habitation: We then discovered five or six Huts together, in which were about a dozen Persons: We asked by our Interpreter, if they had any thing to truck for our Money or Brandy? They brought us out what Skins they had, and we dealt with them for them. We followed the Course of the River *Petzora*, which gives the Name to the Town; and near the Banks of it came to small Villages pretty often; in some of which we found Inhabitants, in some others none. Where we met with any body to trade with us, we bought their Furs with Money of some, but more with Brandy. They would not part with their Sables for fear of being detected by the Governor of *Papinogorod*, whither we were going, who always searches whatever Merchandize is brought thither, to see if there are no Sables among it. We crossed the Mountains which divide *Borandia* from *Siberia*. That was one of the worst Journeys we had in all our Undertaking; those Mountains being difficult to pass, and so barren, that no Creature, Man or Beast, can live upon them: Besides, they are almost always covered with Snow; and towards the Ascent and Descent, there are such vast Numbers of Bears and white Wolves, that we were afraid of our Lives, expecting every Minute when they would have fallen upon us; though, perhaps, we needed not to have been in so much Fear, for those Animals were, probably, as much terrified at us, as we at them.

They fled before us, some on one hand, and some on the other, mistaking us by the glittering of our Arms to be Hunters, and not Merchants. We were twelve Hours in crossing the Mountains, and our Cattle had much ado to draw us over them. At last we reached the Descent, and arrived in a Village in *Siberia*, where the Inhabitants were all cloathed in Bears-Skins, with the Hair outwards, having Linnen Shirts on and close Buskins, by which we perceived we were come among People that were not so barbarous as those we had parted from: They, in Effect, received us more civilly, asked whence we came, and whither we were going. We eat and drank together of the best we and they had; ours was Rice-cake and Brandy; theirs, dried Wolfs and Bears Flesh, Ginger-bread and Spirits. We bought all their Furs, except their Sables, with ready Money.

We rested in their Houses, which were built after the manner of the *Laplanders*. We slept on Bears-Skins, after having drank each of us a Cup of Brandy. When we awaked, we got upon our Sledges, and travelled without any further Delay for about twenty hours together, till we came to *Papinogorod*. The Governor of the Place, hearing of our Arrival, ordered us to come to his Castle to examine for what, and from whence, we came. We waited upon him as we were commanded, and entered the Castle; he saluted us in a very friendly manner; and our Accountant, who understood the *Muscovite* Language, gave a satisfactory Answer to all the Questions he demanded of him. When he knew that we were *Danes*, and Dealers, whose Business it was to buy Furs, he entertained us as handsomely as he could; and to shew us

that he had a great Kindness for, and Confidence in, us, he sent for his Wife to come and see us; which she did, bringing in one Hand a Bottle of Brandy, and in the other a Silver Cup, according to the *Muscovite* Fashion; as also a Plate of Ginger-bread, which a Maid brought after her. We saluted her, as is the Custom of the Country, by bowing our Heads. She presently untied the Knot of her Smock-Sleeve, and let it fall to the Ground: Our Supercargo presently took it up, and kissed it; and our Accountant did the like, and so did I; then she furled it up again with the left hand; and taking the Bottle and Cup, which she had set down to pay this Ceremony, gave to each of us a Brimmer of Brandy, and a Piece of Ginger-bread, herself standing at the End of the Table, by the Side of her Husband. She then returned to her own Chamber, and the Governor afterwards regaled us with good Cheer.

When we had done Supper, we were conducted to our Lodgings prepared for us in the Castle, and, considering the Country, lay in very good Beds. We slept about seven Hours, and then rose; which the Governor having Notice of by one of his Servants, he got up, and came to see us, and brought also a Bottle of Brandy with him; one of his Domestics held another in his Hand, and filled us out a great Cup for our Morning's Draught. We each of us drank one; after that, we fell to Business. The Governor demanded if we would buy his Skins? our Supercargo said he would, if he liked them, and could agree on the Price. His Furs were extraordinary well chosen, and though they were the dearest we met with in all our Travels, yet they were the best worth our Money. Having seen them bought and paid for them, he ordered one of his Men to call in some of the Inhabitants who had Skins to dispose of; but he would not suffer them to sell one single Skin till he had driven his Bargain. While our Supercargo was dealing with the Governor and his Neighbours, I walked up and down the Town.

It is situated in a very fine commodious Place, in a little Plain, the Country about it fruitful, surrounded with high Mountains, and near it runs a large River, well stocked with Fish; the Houses are built very poorly, they are low, and the Walls are of Wood or Mud, caulked between the Beams with Moss. The Town is paved with Pieces of Timber laid close together. The People of Fashion in *Papinogorod* are dressed in Breeches and Stockings of Cloth, and a long Robe over them of the same, which comes down to their Toes. Their Sleeves are made as close as possible, some of one Colour, some another: Their Shoes are like the *Polanders*, they are rather Boots than Shoes, buttoned a-top, and the Leather is dyed, some of it blue, some red, and some yellow: Upon their Heads they wear Cloth-Caps, lined and bordered, some with black Fox-Skin Fur, some with Ermines, and some with Sables. As for the Women, they are beautiful, fair, and fat; their Hairs are of a light Chestnut Colour, and their Mien gallant for *Muscovites*; their Robe or Upper-Garment, like the Mens, comes down to the Toes; it is also made of Cloth, either red, blue, or Violet Colour; the Shape of it resembles our long Wastecoats; it is lined with white Fox-Skin or Sable; they have long Sleeves pinned to it, for they cannot put their Arms into them, because their Smock-Sleeves are of such a prodigious length; some of them are five Ells long; they are made of fine Calico, and plaited up from their Wrists to their Shoulders; their Head-dress is an oval Cap, their Hair hangs a long way down their Backs; their Shoes are made of *Russia* Leather, and they have a Girdle of Pearl, pretty large, round their Waists. Those that are Natives of *Siberia*, differ as to their manner or way of Living from the *Samojedas*, *Borandians*, and other Natives of the *North*. All the *Muscovites* are *Nicholations* by Religion.

They are grave, robust, swift, and dextrous at shooting with the Cross-Bow. There are no Pettyfoggers in *Russia*; no Villains who rob the Poor, under Pretence of recovering their Right; who ruin the Fatherless by feigned Attempts to save their Inheritance, and enrich their own Families with the Spoils of their Neighbours. The *Muscovite* Law is all Equity, and all Courts of Justice are Courts of Chancery; but there is such Care taken to expedite

Causes, that there is no Occasion of Complaint given, as in some Countries more polite. False Witnesses are severely punished, so are Traitors and Robbers; and the Friends of the Deceased prosecute Murderers. The *Russians*, especially in *Siberia*, are ignorant, self-interested, Drunkards, churlish, and so jealous, that their Wives are almost always locked up in their Chambers; nor dare they to stir out when they are more at Liberty, unless they are commanded by their Husbands: They are afraid to shew the least kind Look or Action to Strangers; and if their Husbands do not beat them, it is so customary to do it, that they believe they do not love them. When we had bought up all the Furs we liked at *Papinogorod*, consisting of white Wolf-Skins, white Fox-Skins, black of the same, Lynxes, and Sables (for some we had of the Governor by Stealth) Ermines and grey Squirrels, we packed up; and with what we bought at *Petzora*, had enough to load one Sledge, and almost half another. We had still some Tobacco, and about five thousand Ducats left; wherefore our Supercargo resolved to go farther to get more Furs, and to return to our Ships through *Samojeda*.

Our Brandy falling short, we bought the best the Governor, our Host, had, and bargained with him for Provisions sufficient to last twelve Days, and for Rain-Deer to carry us to our Journey's End. When we had quite done dealing, and paid our Money, we must have a drunken Bout at parting; without which, there is no getting away from a House in *Russia*. We eat and drank for ten Hours together, and then lay down to rest eight more, when we got up and harnessed our Rain-Deer, baled and loaded our Merchandize and Provisions, we mounted our Sledges, took our Leaves of our Host, and departed. We ran seventeen Hours; and all the way we went bought up what Furs we could light on of the *Siberians*. We then crossed the *Riphaean* Mountains in six Hours more, after which we entered *Samojeda*, a desolate mountainous Country, full of Juniper Trees, Pine Trees, and Firs. It abounds in Moss as well as Snow, Wolves, Bears, and Foxes, all white, we met every Moment, to our no small Terror. When we ascended the Mountain *Stolpboen*, out of which rises the River of *Borsagatz*, we came to eight or nine Houses, where we stopt, as well to bait our Cattle as to rest ourselves. We trucked with the Inhabitants Brandy for white and black Wolf and Fox-Skins, Castor and Otter-Skins; they had several Dozen of Ermines, which they would not sell us upon any Terms, notwithstanding our *Borandian* Guide assured them with a thousand Protestations, that there was no manner of Danger, we being Traders that were going to our Ships, and could not be searched before we got to the Coasts, because we were not to pass through any Place where there were any Officers to search for prohibited Goods. They would not hearken to us till we had drank them all down; and when the Liquor was gotten up into their Heads, they grew bold, brought out their Sables, and sold us the best and most that we picked up in our whole Journey.

We staid to rest ourselves in one of the chief Huts of the Village; the Master of the House, his Wife, and Children, lay all together, without Distinction, and we among them, on Bear-Skins. After we had slept four or five Hours, I awoke at a Noise our Host made to raise his Family. They all rose and went out; I had the Curiosity to observe them; I followed them at a little Distance, and perceived they all fell down on their Knees behind the Cottage, lifting up their Hands and Eyes to Heaven to adore the Sun, whom they believe to be God. The *Samojedas* are shorter and thicker than either the *Laplanders* or *Borandians*; their Heads are big, their Faces flat, as also their Noses; they have scarce any Hair at all, and are as swarthy as the Ground itself; their Dress is a round Cap, furred like a Lamb-Skin, a Pair of Breeches, and a white Bear-Skin Coat that comes down no farther than their Knees; they wear about their Middle a Girdle four Inches broad; their Shoes and Stockings are made of the same sort of Skin, with the Hair outwards; under their Shoes they wear a sort of Skates two-foot long, made like a Gondola, with which they slide prodigiously fast on the Snow, that lies almost always on the Moun-

tains; instead of a Cloak, they hang a Bears-Skin with black Hair upon it over their Shoulders, the Feet dangling down at the four Corners; it hangs more on the left Side than on the right, to leave their Hands at Liberty for the Management of their Bows. Upon this Skin they tie their Quivers.

The *Samojedian* Women are uglier than the Men; they will endure a great deal of Hardship, and take care to breed up their Children well in the handling of their Bows; at which they teach them to be very dextrous; they are dressed like Men, only their Upper-Garment is a little longer; their Caps are the same with the Mens; and all the Difference in their Head-dress is, that the Women have a Lock of Hair twisted, which hangs down on their Shoulders; at the End there is a Knot of Ribbons made of the Rind of a Tree, and that reaches down to their Heels. This is all their Finery; they hunt as well as the Men, and are armed with Bows and Arrows, as they are; the Husbands are true to their Wives, and the Wives to their Husbands. If any one among them is found guilty of Adultery, either Man or Woman, the Criminal is immediately stoned to death.

27. Having traversed *Samojeda*, bartered all our Wares, and loaded ourselves with Skins, we returned, and met with no Adventures worth remarking. We made what haste we could, and reached the Coasts of *Borandia*. In twelve Days after our Departure from *Papinogorod*, our Ships rendezvoused at a Place on that Shore, where we had appointed them to meet us. We loaded all our Merchandize aboard them, paid off our *Borandian* Guide, and embarked. We weighed Anchor two Hours after, and sailed with a fair Wind for *Zembla*, where we arrived the next Day in the Afternoon. We cast Anchor in a convenient Place, near which we spied, upon the Shore, a Company of about thirty Persons, with Quivers at their Backs; on their Knees, worshipping the Sun that was then setting. Our Master and Supercargo consulted together, what Course they should take to come at the Speech of them. They thought them to be more wild than any they had yet seen, and that it would be difficult to get them to deal with us. They resolved to send out three Long-boats, with ten Men, well armed, in each, to defend themselves in case they were attacked. I was commanded to make one among them. We rowed to Shore; when we came about a quarter of a Mile off Land, all the Savages, who were still on their Knees, got up, let fly at us; after which they ran away, like so many Stags before Hunters. They shot at us when we were at too great a Distance from them to receive any Hurt by their Arrows.

We landed, and pursued them to the Place whither we thought they were fled, in Hopes that we might be able to catch one or two of them, which, however, was not to be done. We lost Sight of them, and could not tell which Way they were gone; yet we followed them till we came near some Mountains covered with Snow. We advanced farther into the Country, where, on a small Hillock, we perceived a Piece of Wood cut out in the Figure of a Man, but very wretchedly. Before it were two *Zemblians* on their Knees, their Arms lying by them. They were worshipping this Idol, as the others on the Shore were adoring the Sun. They fled from us, and it growing Night, we did not care to pursue them very far; they ran into a Fir-wood, and we thought it would be in vain to go after them. We therefore concluded our best Way was to return to our Ships, and make a Report of what we had seen and done. This Idol is called *Fetizo*; one of our Masters had been there before, and seemed to believe that the Devil entered the Idol sometimes, and from it pronounced his infernal Oracles.

Seven or eight Hours after I was got aboard again, I was taken with a violent Pain in my Head, and a Vomiting, which lasted three Hours; after that I had a sore Throat, insomuch that I could scarce swallow any thing. The Glands were swoln to a high Degree. I felt a great Ebullition of Blood, and an Itching over all my Body; my Gums swelled, and bled mightily; my Teeth shook; and I was so faint, that I could scarce keep upon my Legs. I lost my Stomach, and eat nothing; became

became extreme weak, and had a Fever almost always upon me. My Breath was short and offensive. I was very dry, and to quench my Thirst I often drank Water and Vinegar. Perceiving my Distemper continued the two following Days, and considering that it was caused partly by excessive Cold, and partly by eating salt Meats, which had inflamed my pituitous Glands in such a Manner, that my Phlegm had infected my other Humours, instead of Oxycrate, or Water and Vinegar, I resolved to take some Brandy and Syrup of Liquorish, of which I drank a Spoonful every Hour. I eat no salt Fish, all my Food was fresh. I gargled my Mouth sometimes with Brandy, and sometimes with Vinegar, to strengthen my Gums, and rubbed my Teeth with *Mel Rosat*. The greatest Part of our Ship's Crew was taken with the same Disease as well as myself. I prescribed the same Remedy; and in fifteen Day's Time I cured them and myself too. Our other Ship's Crew were as much troubled with it as our own; their Surgeons did whatever their Art suggested to them, by way of bleeding and purging to cure them; but those Remedies rather increased than helped the Disease; two of their Sailors died of it, and one of their Accountants was likely to die of it, as also several other Mariners, upon which I was sent for to a Consultation. I advised them to do as I had done, and to give over purging and bleeding, which are mortal in that Case.

It was observed, in a very hard Winter, in *France*, that in this Distemper, which some took for the Plague, and was occasioned by the Rigour of the Season, that several Persons, died immediately upon bleeding, which is of no Use in Cacochemical Distempers. Bleeding and purging in such Cases, are good for nothing but to weaken the Sight, to injure the Nerves, to consume the radical Moisture, to diminish the natural Heat; and, in short, to dislodge Mens Souls from their Bodies, sooner than they ought to go; and to fill the Church-yards. However, I would not be understood to speak against bleeding; in some Distempers it is good, as in all hot and plethoric Cases, provided it is not used above twice or thrice. Being once at *Algiers*, several of our Crew were taken with this Disease, which I call the Scurvy; their Glands were so swollen, that one would have thought that they had had a Piece of Flesh in their Throats. They had the same Symptoms as I had on the Coasts of *Zembla*; their Phlegm was sharp and corrosive, it affected their other Humours, and especially the Mass of Blood, as the Pox does, which is a Species of it; and I was forced to deal with my Patients as if they had really been poxed, not with Mercury, which by its cold, moist, and venomous Quality, exasperates the Humours of the Body, and infects the Ventricles of the Brain, instead of cleansing them, causing a Flux at the Mouth, by which, without Danger, one may cure the Itch, but not the Pox; the latter being caused by a cold, moist, venomous Humour, opposite to the Nature of Mercury; and this the Mercurialists cannot deny.

This Scurvy, with which sea-faring Men are so troubled, proceeds from gross Vapours which come from the bad Water they drink, the bad Bread, and the bad Victuals they eat; the melancholy, close, and foul Air which they breathe: And the Infection of Scorbuticks is only to be remedied by Cordials. I could not forbear making this Reflection, which, as it relates to the Distempers incident to such as go the Northern Voyage, I hope it will meet with a favourable Reception.

We staid sixteen Days on that Part of the Coast of *Zembla*, where we at first cast Anchor; where our Crews were all cured, except three or four, who were on the mending hand. Our Masters seeing there was a fair and fresh Gale, resolved to sail to *Weygatz* to fish for Walrus, the Fish by us called a *Sea Horse*. We sailed about six Leagues, then cruised up and down for the Convenience of our fishing. We kept near Shore, and put out our Long-boats, and sent our Harponiers and Fishers in them, eight in each, without reckoning the Rowers. We were three Days a fishing, without catching any thing; at last we spied two large Fish approaching us; one of them had a Horn in his Forehead, that was of

a good Length; our Fishers prepared to seize him; they came within a Stone's Cast of him; our Harponiers threw their Harping-Irons at him, some on one Side, and some on the other, letting loose the Ropes by which they were fastened, and then they got off as nimbly as they could, for fear of the Monster. When our Harponiers and Fishers saw that the Harping-Irons stuck in the Fish, they made towards our Ship's Sides, being sure they had him fast, because he swam above Water, which is a Sign of his Weakness; they drew him nearer and nearer, by the Ropes that were fastened to the Harping-Irons. The Monster endured all without struggling; he had lost so much Blood, he had no Strength left.

The Fishers doing their Office, cut off his Head, which we kept, and flung the Body into the Sea, it being neither good to eat, nor for Oil. People fish for the Sea-Horse, purely for the sake of his Teeth, which are as good as Ivory, and somewhat in a Pound dearer, being whiter than Elephants Teeth, and not so apt to turn yellow as Ivory is. The Horn of the Sea-Horse we took, was ten Feet long, very heavy, winding, and as big as a Man's Arm near the Shoulder; very small and sharp a-top, growing bigger and bigger downwards to the Root. One of our Boats coming too close to the other Fish, thinking to make sure of him, the Monster, as soon as he felt the Iron in his Sides, struck his Tail against the Boat with such Violence, in struggling to free himself, that he over-set the Boat; and the other Boats were so far off, that before they could get thither to take up the Men, two of them were drowned; for whose Deaths we were troubled, the Prize being by no means a Recompence to us for the Loss. The Fish was taken and his Head cut off, as the other was. I saw it had no Horn, but, to make amends, his Teeth were whiter and larger than that of the former.

We cruised up and down four Days before we spied any more Fish, wherefore it was resolved to change our Station. As we were preparing to depart, we saw four of the same Fish, which seemed to be bigger than those we had caught; so we furled our Sails, and made our Harponiers go out in our Long-boats, with the other Fellows that were employed in the Fishery. We took three of them; one escaped us; that which our Fishers brought aboard the Ship I belonged to, had no Horn; neither had the other two any. Twelve Hours after we discovered five Fish more. Our Harponiers and Fishermen got presently into their Boats, to endeavour to take them, especially one of them, which had a Horn in his Head. But though the Fellows did whatever Men could do to catch them, three of them made their Escapes; among which was the horned Fish; and the other two were taken, and had their Heads cut off. Two Hours after we spied three more; our Fishers went out after them; they took one, whose Head was brought aboard us, and was so big, that each of his great Teeth weighed twenty-nine Pounds.

Two Days after we saw seven or eight more of these Fish, and a horned one among them. We put out all our Boats, and our Fishers were so fortunate as to catch five of them, of which one was the horned Fish; it was our Lot to have him; his Horn was like that of the first Fish we caught, but not so heavy or so large, it being scarce seven Feet long. We staid there five Days longer, and seeing nothing all that while, took Advantage of a North-north-east Wind, which sprung up, and sailed towards *Weygatz*, in Hopes to pass those Streights. We kept our Course pretty well for thirty-six Leagues, but then we could go no farther, because of the huge Pieces of Ice that opposed our Passage, and the Mountains of Ice covered with Snow, called *Pater Nosters*, which lie at the Mouth of the *Mare glaciale* (the frozen Sea) and the great Sea of *Tartary*. If a Ship could pass through those dreadful Streights, a Passage to the *East-Indies* would not be above a Quarter so long as it is now, through the *Atlantic Ocean*. For this Reason the Strait is called *Weygatz*, as much as to say, in *English*, a Place one cannot pass through.

28. We came to an Anchor in those Streights, near the

the Shore, on the Eastern Coast of *Zembla*; one of our Seamen landing there, and going about his necessary Occasions, a Bear came behind him, and struck him down with his Paw, and would have certainly destroyed him, had we not perceived it. We immediately fired a Fuzee, and by good Fortune shot him dead, otherwise the poor Sailor would not so easily have got out of his Clutches; he was not so soon eased of his Fears, and the rest of his Comrades were so terrified by his Example, that they durst not venture ashore. A little while after there came three Bears to our Ship-Sides, and strove to come aboard. We cut off the Paws of one of them, with our Hatchets, and shot the other with a Musket. While we were dispatching these two, the third mounted the Side of our Ship, and entered it; a Sailor who stood near him, cried out as if he were about to be devoured; and well he might, for the Bear was at his Heels. We all took up Oars and Pieces of Timber, with which we knocked him down, others shot at him, and two more that were swimming towards us, and killed them. We thought this Destruction would hinder any more from coming towards us, but we were mistaken; for four or five Hours afterwards we discovered eight or ten more upon the Ice, and taking the Water they swam towards us, which obliged us to handle our Arms, and fire at them. We aimed so well that not one of them escaped us. More and more still approaching from the high Mountains, as if they had declared War with us, we resolved to retreat before such a terrible Enemy.

We weighed Anchor, and returned to the Place where we first anchored, on the Western Shore of *Zembla*. After fifteen Hours sail, we got out of the Streight, by favour of an Easterly Wind. We had much ado to avoid running against Rocks of Ice that lay in our Way. At the Mouth of the Streight there is an Island which looks very green, covered with Fir and Juniper-Trees. Some of our Crew went ashore, and saw a sort of Birds there so big they could hardly fly. They came and told us what they had seen; upon which I desired Leave to go ashore, with about forty Men detached from the Crews, to hunt those Birds, and make Discoveries. We killed about sixty of them, some we shot, and some we knocked down with Clubs; their Carcasses were carried aboard with us. The Master of our Ship, called these Birds *Penguins*. They are not much higher than Swans, but a great deal bigger. They are sharp-beaked, of a brown Colour; their Feet are webbed like those of a Goose, and at their Gullet there hangs something like a Bag, about a Foot long; it begins just under their Beaks, and comes down to their Breast, widening as it lengthens; it is not unlike an Urinal, only it is bigger. In this Bag they put their Victuals, and take it out of it when they have a Mind to eat. We were forced to skin them before we could eat them; their Skin being very tough, and we had much ado to pull them and dress them. The Flesh was extraordinary good, it tastes like that of wild Duck, only it is fatter. We eat heartily of it, and had not had such a Feast in all our Voyage. We staid at Anchor off of the Island, where we caught the Penguins two Days, and then a South-east Wind springing up, we weighed again, and held on our Course North-north-west; in a few Hours we got out of the Streight, then the Wind varied, and we coasted it along to a high Cape, where we arrived in about thirty Hours. That Cape is not far from the Place where we saw the *Zemblians* adoring the Sun.

His *Danish* Majesty having commanded our Captains and Officers to bring off some *Zemblians*, if they could possibly, that he might learn of them what was the Growth and Riches of their Country, they dropped Anchor, and resolved to do the utmost to obey the King's Command. As soon as we were ready, some of us went ashore, in our Long-boats, to see what we could discover; there were thirty Persons in all, of whom I made one. We had scarce got over the Ship's Side before we discovered a *Zemblian* in his Canoe, about half a League off Land; who, seeing us make towards him, rowed so nimbly, that it was impossible for us to get up with him; as soon as he set foot ashore, he took up

his Canoe and ran away with it on his Shoulder, so swiftly, that we perceived it would be a difficult Matter for us to overtake him. He held his Dart in his Hand all the while, and yet did not seem to be incumbered in his Flight. We landed, and pursued him towards a Hill which we saw him mount, but he was nimbler than we, and it was in vain for us to follow him, when we had once lost Sight of him. We therefore gave over all Thoughts of taking him, and returned to our Ships, very sorry that we had missed our Prize. As we were sailing back to our Ships we saw two *Zemblians* in a Canoe out at Sea, they spying us rowed toward the Promontories and Rocks, on the Coasts, to hide themselves; but we took to our Oars so briskly, that we came up with them as they were rowing, with all their Might, towards a Rock. We surrounded them, being in four Boats; and when they found they could not escape us, they set up a hideous Howling, the most horrid Noise that ever I heard in my Life. We carried the Men aboard with us, towed the Canoe along, having fastened it to one of our Boats. It was like a Gondola in Form, fifteen or sixteen Feet in Length, and two and an half in Breadth. It was made of the Rib-bones of Fish, very artificially; the Sides were of Fish-Skins sewed together, it all looked like a huge Purse, from one End of the Canoe to the other; the Bottom was of the same Materials with the Sides. The *Zemblians* are shut up in it as high as their Waistes; a drop of Water cannot get into it; and they expose themselves in the foulest Weather, without Fear of foundering. We perceived one of the *Zemblians* we had taken was a Man, and the other a Woman. We made all the friendly Signs we could to them, and caressed them, to find out where their Habitations were, but we could learn nothing.

Upon this thirty of us landed again, took several Days Provisions with us, and went in two Troops, well armed, at about an hundred Yards Distance one from another, to try if we could meet with any more of the Inhabitants. We hid ourselves in Caverns under the Rocks, posting Sentinels near Trees, in open Places, proper for discovering, if any of the *Zemblians* came that Way; where we intended to seize them, and force them to shew us their Habitations. We were two Days before we could hear of any thing to our Purpose; at last our Sentinels gave us Notice that they spied two coming down a Hill, towards the Sea-side. Six of our Company staid in the Cavern; five more, and myself, removed to one a little farther off; and a quarter of an Hour after, these two *Zemblians* passed by our Caverns without perceiving us; one of our Companions shot off a Fuzee, to give Notice to those in the other Cavern, that they were hemmed in between us and them; when they came near their Cavern, they sallied out, and we did the like from ours. The *Savages* being thus trapped, saw it was in vain to fly, so we easily took them. Their Garments were of Penguins-Skins, the Feathers outwards; they had each a Pair of strait Breeches on, which came down no farther than their Knees; a Wastecoath of the same; the Sleeves no longer than to the Elbows. The rest of their Arms was naked; their Wastecoats were picked before and behind; their Caps were in the Form of a Sugar-loaf; their Stockings of the Skin of a Sea-Calf, the Hair outwards. Though their Dress was the same, yet we soon perceived which was the Man, and which the Woman. The Man seemed to be about twenty-four Years of Age, his Face like the rest of those *Savages*, was very broad, his Complexion swarthy, his Nose flat; he had neither Beard on his Chin, or Hair on his Head. At his Back hung a Quiver full of Arrows, and on his Shoulder he carried an Axe; in his other Hand he held a Bow. The Woman was about twenty Years old, her Hair hung down on each Shoulder, twisted in two Locks. She had blew Streaks on her Chin, and four or five on her Forehead; her Ears and Nostrils had Holes bored in them, in which some blue Stones, or Rings of Fish-bone, were hung. Those in her Ears were as big as a Filberd, and those in her Nose as a Pea. She held a Dart in her Hand.

We tried all the Ways we could think of to oblige them

them to shew us where they dwelt, but they would not give us the least Token to direct us; they were as stubborn as those we had taken in the Canoe, and we were forced to carry them on board without making any further Discoveries: When we brought them to their Fellow-Prisoners, we perceived they knew one another, though their Garments were quite different: Those we took in the Canoe being dressed in Sea-Calf Skin Cloaths; and these in *Penguins* Skins. The Hair of the Sea-Calf Skin was put outwards; the Waistcoats of these *Zemblians* were made of two Skins joined together, the Tails dangling, the one before and the other behind, almost as low as their Knees; their Drawers were very strait: The oldest was about fifty Years of Age; he had a round Beard of a Chestnut Colour; he had no Hair on his Head. The Woman that was with him, seemed to be about thirty Years old; her Ears and Nose were bored, as the other Woman's were, and blue Stones hung in them; her Hair was twisted, and dangled like the Country Woman's: They were both extreme ugly, and the Man and Woman shorter and squatter, than either the *Laplanders*, *Samojeds*, *Borandians*, or *Siberians*: They had squeaking Voices, and stinking Breaths, which latter was caused by eating of Flesh without Salt, or Fish dipped in Fish-Oil. They drank nothing but Water. We could never make them eat any Bread, salt Meat, or Fish, nor drink any Beer; they sipped Brandy now-and-then, but hated the Smell of Tobacco: Their Needles, the Points of their Darts and Arrows, and all their other Instruments were made of Fish-bones: The Wood-work of their Bows and Darts was very heavy, of a red-brown Colour; that of their Arrows is much lighter and whiter. When they go, they waddle along like a Duck, and are the most despicable Creatures I ever saw of the Race of Men.

29. The Summer Season being very far advanced, for it was now the latter End of *August*, and the Days growing shorter, we having half an Hour's more Night than we had; the Cold also increasing, and all our Companions longing to see their own Country again, we weighed Anchor, the Wind at North-north-east, and held our Course South-west. We sailed before the Wind several Hours, and then veered to the South-south-east, which obliged us to make our Way northward, to endeavour to reach some Shore. We coasted along with a South-south-east Gale till we came to *Greenland*, where the Wind shifted again to West-south-west, and forced us to drop Anchor near a Fleet of *French* and *Dutch* Ships that were come thither a fishing; the Whale-fishery being the Trade of that Place. The Ships did not lie far off Shore, for the Whale, as well as the Sea-horse, is caught near Land; they are taken after the same manner as we took the Sea-horses, and when they are caught they are cut to Pieces, and the Grease taken out of them; which is put into an huge Kettle, and melted to Oil; near some Huts which the Fishermen built for their Conveniency along the Sea Shore. It was very well for our *Zemblians*, that we came where there was some Whale-oil to be had: They had lost their Stomachs, and could eat nothing for want of it; they could get nothing down unless it was soaked in that Oil; and all our Store was out.

I saw a Whale dressed that had no less than three hundred and fifty Pound-weight of Bone in her fit for Bodice-makers, besides the Oil that came out of her Grease. We staid but two Days in *Greenland*. The Wind springing up North-easterly we weighed Anchor, and proceeded on our Voyage homewards. We had a fair Gale all that Day and the following Night till five o'Clock the next Morning, when we saw three Suns in the Heavens one above the other; these Meteors were so like the Sun in Brightness that we could not distinguish the one from the other; we also perceived foul Weather gathering from the southward, and soon after we were overtaken by a violent Storm, which obliged us to furl most of our Sails, and fire a Gun, for a Signal to our Company of the Danger we were in, thereby warning them to do as we had done. We gave ourselves over for lost, and entirely submitted to the Will of Heaven; three Hours after it blew terribly South-south-east; it thundered with louder Claps than ever I heard it before.

VOL. II. NUMB. CIII.

The Sea was so rough, and our Ship so tossed that we could only carry our Mizzen-sail; the Yard lowered almost to the Ship's Deck; two Sailors were forced to tug at the Oar with Ropes, we having much to do to manage the Ship. We sailed thus all that Day, and the next Night the Wind continuing as stiff as at first, our Captain commanded one of the Men to get upon the Main-top, to see if he could spy Land, and discover whereabouts we were: The Sailor looking round him, cried out he saw a great Fire; our Master said it was *Mount Hæcla* in *Iceland*, a Mountain that burns like *Ætna* and *Vesuvius*. The Weather being still foul, we resolved to make Land as fast as we could, though we had nothing to do there; we were afraid to keep out to Sea, our Ships having suffered much by the Storm. We arrived near the Shore about Night, and as we lay by, heard dreadful Noises at Land; they were like the Fire of several Cannons, after which we saw Flames issue out of *Mount Hæcla* in abundance. We found so many Rocks on the Coast of this Isle, and the Sea was so rough, that we did not care to venture nearer the Land than a League; but our Pilot assuring us he understood the Coasts well, we made into *Cape Heri*, where by the Skill and Care of the Pilot we anchored in Safety. One of our Company broke her Beakhead against a Rock, and had like to have split; the other received no more Damage than we did. We immediately went ashore; our Master, Supercargo, myself, and fifteen of our Crew, the Master and Merchants of the other Ships accompanying us.

We landed at a Village called *Heri*, and hence we went to *Kirkebar*, a little City or large Town of *Iceland*, where we met eight or nine *Danish* Merchants; who were surprized to see us there. They entertained us very cordially, and told us, that the Day before the whole Island shook so violently that they thought they should be all swallowed up. They gave us good Wine, good Bread, and good fresh Meat. There is Plenty of all Sorts of Cattle in this Island, which abounds in rich Pastures; and the Beasts that feed on them delight so much in *Caitophe* Herb, that the Inhabitants are forced to stint them to such a Measure, or they would eat till they burst; which they would certainly do if they were suffered to eat their Fill, as in other Countries.

30. Our Captain, Supercargo, and the others of our Company, gave the chief Merchant at *Kirkebar* an Intimation, that they would fain see what was to be seen in the Island that was rare. The Merchant presently ordered Horses to be got ready for all of us that were willing to go far into the Country: I said I would make one, and we mounted eight in all; the rest, not having so much Curiosity as we, chose rather to stay and drink at this Merchant's. The Merchant sent one of his Servants and two Islanders along with us, to be our Guides, and furnished us with a Horse-load of Provisions. We travelled two Days together in Bye-ways very difficult to pass, rugged, and unfrequented: At last we came near *Mount Hæcla*; five Miles off it we found the Ground strewn with Ashes and Pumice-stones; over which we passed, by the Foot of the Mountain. The Weather was very serene and calm, and we saw neither Fire nor Flames come out of the Mountain: Upon this we resolved to go up to the Top; but our Guides informed us that, if we went farther, we should be apt to fall into Pits of fiery Fumes, and it was impossible to pull us out. Thus all our Company except myself declared against proceeding. I told them if they would stay for me, I would go up myself: They promised they would; so I alighted, and prepared to ascend the Mountain. One of the *Danish* Merchants whom we met at *Kirkebar*, and who accompanied us out of Curiosity, said he would go along with me.

We gave our Horses to our Guides, who staid behind with the others who came out with us: We footed it over Ashes and Pumice-stones, and sometimes we were up to the Calves of our Legs in Ashes, and yet we still went forward, as we resolved to reach the Top of *Hæcla*. We had not gone far before we espied a Flight of Crows and Vultures, that had their Nests in the Top of the Mountain: We ascended half a League, and then felt the Ground

Ground shake under us; we also heard such a terrible Noise in the Bowels of the Earth, that it seemed as if it would burst open: At the same time there appeared, on all Sides, Chinks; out of which there issued bluish Flames, which smelt like the Stench of burning Brimstone. This Sight made us turn back, for fear of being consumed to Ashes by them. We had scarce got down thirty Yards, before a black, smoky Cloud ascended out of the Mountain, so that it darkened the Light of the Sun, and covered us so that we could not see one another; our Fears grew upon us every Step we took; for behind us came Flames of Fire, Showers of Ashes, and Pumice-stones, which fell as thick as Hail; and this dreadful Storm was attended with horrible Noises, which made us cry out in a frightful Manner, fancying that the infernal Furies were coming out of the Mountain to devour us; besides, we expected every Moment that the Earth should open, and swallow us up, which added Wings to our Flight, and we ran as fast as we could, to escape the Danger, to which our idle and ridiculous Curiosity had exposed us.

Fear made us so nimble, that in a Quarter of an Hour we descended so much of the Mountain as we were a full Hour in ascending. When our Companions perceived us come down so fast upon them, they burst out a laughing at us, and their Laughter grew louder when they saw us in such a Pickle, as black as if we had been plunged in Soot; but their Mirth abated as soon as we came nearer them and dropped down dead, for so they thought us, we being neither able to stir nor speak. They rubbed our Temples, Nostrils, and Hands with Vinegar, and did what they could to bring us to our Senses again: It was not long before we came to ourselves; they gave us a good Cup of Canary; and when we recovered Strength, we told them what had happened to us; and they rejoiced that we came off so well. We all left the Foot of the Mountain, to go to see two Fountains ten or twelve Miles off; the one is always boiling, and the other always so cold that it turned every Thing that was put into it to Iron. About a hundred Yards off the Foot of the Mountain we found a Pumice-Stone as big as a Wine-Hogshead, which had lately been cast out of *Hæcla*. Our Guides seeing that we were astonished at the Bigness of the Stone, said, they had seen several much bigger than that, which ten Men could not stir; and that instead of Flames, Ashes, and Pumice-Stones, there sometimes issued out Floods of Water, as out of Spouts; sometimes nothing but Flames, sometimes nothing but Ashes, and sometimes nothing but Stones. After three Hours riding we drew near to the Fountains; they are about thirty Yards Distance from each other: We came to the cold one first, and put in a little Cane I had in my Hand, when I took it out again I was surprized to see the End of it which had touched the Bottom, metamorphosed into Iron, and weighing as heavy as that Metal.

From thence we went to the boiling Fountain. At ten Yards Distance from it we saw a Parcel of Animals as big as Ducks, most of them red, which were frisking about and playing together. We stood looking on them awhile, pleased with the Novelty of the Sight; when we came nearer to the Place we saw nothing, and when we were gone they appeared playing and frisking, as before. They do so when they see no-body, but if any body appears they plunge down to the Bottom of the Fountain, which, as our Guides informed us, is sixty Fathoms deep. From the boiling Fountain we travelled towards the Seaside, and arriving within half a League of it, we heard Noises like the Voices of Persons complaining. Our ignorant Guides, Natives of the County, would fain have persuaded us that these Noises were the Lamentations of the Damned whom the Devil tormented, and that when he had roasted them in the Flames of *Hæcla*, he cooled them in the Ice of the Coasts. Though we did not give much Credit to this *Iceland* Tradition, we resolved to see those Seas of Ice which bound that Part of the Island and no other. When we arrived at the Coast, I found that those imaginary Complaints were occasioned only by the Agitation of the Wind and Water, the Ice beating against it, and the Ice against the Rocks. This Ice, say

our Guides, comes on their Coasts in *June*, and goes away the fifteenth of *September*.

It was the thirteenth when we were there; and having seen all that was worth seeing, we returned to *Kirkebar*, where we arrived three Days after; we staid a few Hours in Town, and then went aboard; where we found the Governor of the Isle accompanied by the Bishop of *Sceltbolt*, who came to see our Ships, and discourse with us, understanding we had been at *Zembla*. The Islanders for the most part dwell in Caverns cut out of Rocks, the rest live in Huts built after the Manner of those in *Lapland*, some with Fish-bones, and others with Wood covered with Turf: They and their Cattle lie under the same Roof: They are all ugly, both Men and Women; they are swarthy, and dressed like the *Norwegians*; their Shifts and Smocks are made of Packing-Cloth, or Sarplier; and some few wear Coats made of Sea-Calf-Skins, with the Hair outward. They live very plainly, as do all the Nations of the North; they lie on Hay or Straw in their Cloaths with Skins upon them, and make but one Bed for the whole Family. All their Work is fishing; they are nasty and brutal; they are almost all of them Wizards or Witches. They worship the Devil by the Name of *Kobald*: It is said he often appears to them under a human Figure. They have also a Sort of Household God or Idol cut out of a Piece of Wood with a Knife, very hideous to look on, which they adore privately, and hide for fear of the *Lutheran* Priests, who teach them as they can, the Christian Faith, and endeavour to deliver them from the Bondage of Satan: But these *Barbarians* were fonder of their diabolical Idol, and more constant to him than some Christians to the Profession of their most holy Religion. Though the Fields in *Iceland* look fair, and there is Plenty of Pasture, no Wheat grows there, nor any other Grain fit to make Bread with; the Cold is so extreme it kills the Seed, or green Corn, by a North-east Wind; which is very violent in those Parts.

31. Three Days after our Return from our Journey to *Mount Hæcla*, and that we were a Ship-board, we took the Opportunity of a North Wind which stood fair for us, weighed Anchor and set sail, holding our Course South-south-east. We sailed before the Wind several Days, and then it blowing a very stiff Gale, it drove us on the Coast of *Norway*, where we made the Promontory of *Talso*, a little City built on an Eminence four Leagues from the Sea, there is a fine Castle in it; and we rejoiced that we were so near Land, hoping that we should soon see an End of our Voyage. We coasted along Shore about twelve Hours, and then the Wind changed with the Moon, which obliged us to keep out to Sea, for fear of being driven back; notwithstanding our Caution, it blew so hard that we were forced to drive before the Wind forty Leagues backward.

Then the Weather grew a little more calm; soon after that, we had not Wind enough in our Sails to stir us. Nothing is so tedious to a Sailor as a Calm, especially upon a long Voyage, when he has been out a considerable Time, and is impatient to reach home; a Storm would be more welcome to him: He cannot tell how to employ his Time, all his Thoughts run upon his Country, made dearer to him by many Months Absence; and his Impatience to see it, torments him more under the Delay of a Calm, than the Fear of Shipwreck in a Tempest. In about two Hours we had a Water-Cloud to the South-west; our Mariners were presently struck with a dreadful Consternation, apprehending it would fall upon us. We were obliged to furl all our Sails, and lower our Yards down a Port, fearing it would pour upon us; but it did not come nearer than two Leagues; we saw it fall at about that Distance. These Clouds are in Form like a black Column or Pillar, which appears in the Heavens over the Sea; and if by Chance they fall on Ships, they sink them to the Bottom, with the Flood of Water, which pours down from them like Cataracts, especially if it chance to fall perpendicularly. The Wind springing North-north-east, we proceeded on our Voyage, so happily, that in ten Days Time we arrived at *Copenhagen*; where, having saluted the Castle, we dropped Anchor, put out our Boat, and went to Shore.

When

When we entered the City, his Majesty being informed that we had brought some *Zemblians* with us, he commanded us to bring them to Court; which we did, every body gazing at them as if they had been born in another World. The King himself admired the Oddness of their Drefs, and the Strangeness of their Figures. He ordered the Steward of his Household to give Directions that they might be carefully kept and provided for, and be taught the *Danish* Language, hoping he might then get something out of them, relating to their Country, that would be beneficial to his own. He commanded us to give him an Account of the several Places we had been at; of the Manners of the People, and their Way of living. We gave his Majesty full Satisfaction in all his Demands, and went then to wait upon our Owners, to inform them what Markets we had met with, and what Returns we had brought them home; which proved mightily to their Advantage and Content. Our Ships were ordered up to *Christian Haven*, to be unladen, which was done in two Days time. One of the chief Merchants of the Company trading to the North, presented the King in the Name of the rest, with the two Sea Horns, which we brought home with us. He received them as Rarities, that were of inestimable Price, believing they were really Unicorns-Horns, of which abundance of Authors have written, and pretended there is a great Virtue in them. The King commanded they should be deposited in the Treasury Chamber, and promised to grant the Company, in return, as many Privileges as it was in the Power of his Prerogative to bestow on them. The Merchant who presented the Horns, was rewarded with a Chain of Gold, with his Majesty's Picture hanging to it; and had a Licence to trade, Custom-free, for a certain Term of Years.

32. As I have mentioned the Unicorn, whose Horn is so much spoken of, and valued for the Virtues that are attributed to it, I shall take this Occasion to speak my Thoughts of this Matter, after I have given the Reader an Account of the Sentiments of others. It is very difficult to decide what Creature it is which is properly the Unicorn. There are several Animals, called by the *Greeks*, *Monoceros*, and by the *Latins*, *Unicornu*. Among the four-footed Beasts, several wild Asses, and wild Bulls, particularly the Bull of *Florida*. Among Serpents, it is the horned Asp, and the red Salamander. Among Fish, the Sea-horse, and many more, whose Names are unknown to *Europeans*. There are some Fowl, and even some Insects, that have been thought to be Unicorns; such as the *Flemish* and *English* Beetle, both which are frequently mentioned by Naturalists; and besides these, other Animals of different kinds in the *Indies* have been, by some, fancied to be the Creature, called by the *Latins*, *Unicornu*. Some Authors will have it to be a Land-beast; others a Water-Animal; and some again an amphibious Creature, that lives either on Land or in Water.

Pliny says, the Unicorn is like a Bull, speckled with white Spots; her Hoof hard, and closed like a Horse's. *Munster* writes, that it resembles a Colt of three Years old, of the Colour of a Weazel; her Head like a Stag's; her Legs and Feet little, and her Horn growing out in the Middle of her Forehead, about two Cubits long. *Marco Paulo*, the *Venetian*, says, she resembles an Elephant, only she is something less; that her Colour is the same, and also her Shape or Form, excepting her Tail, which is like a Bull's; and her Head like a Hog's, but so heavy, that she cannot hold it up; this evidently is the *Rinoceros*. *Philostorgius* writes, that her Head is like a Dragon's; that in the Midst of her Forehead, her Horn grows out of an indifferent Size, resembling that of a Snail; that she has a Beard like a Goat; a long Neck; her Feet like those of a Lion, and the rest of her Body much like that of a Stag, excepting her Skin, which is like a Snake's. *Heliodorus* adds, that she is so nimble a Beast, the Hunters can never come at her. *Louis Paris* will have it, that sometimes she is taken, and that her Food, afterwards, is Pease, Lentils, and Beans; that she is not much bigger than a large Greyhound, but is not of so slender a make; her Skin, in Colour, like a

Castor's, only sleek; her Neck small, but long; and her Feet cloven, like a Stag's; her Tail short; her Muzzle like a Cow's; her Eyes great; her Ears little; and between them grows her Horn, about a Foot long.

Thevet affirms, that the Unicorn is as big as a Bull-Calf six Months old, that her Legs and Feet resemble those of an Ass; her Ears like a Rain-Deer's, and that her Horn grows up strait on the Top of her Head. *Louis de Bartheme* imagines the Unicorn is like a Bay Horse, cloven footed; and that her Horn grows in the middle of her Forehead. Some say, that the *Rinoceros* is the Unicorn; *Kircher*, that it is the Sea-Horse, which he also calls *Lamia*; wherein he is very much mistaken; for the *Lamia* is another Sort of Fish, called by the *English* *Rahen*, of which the Inhabitants of *Martinico*, *Guardaloupe*, *St. Christophers*, and the other *American* Islands, stand in great fear; for they are in danger of being devoured by them, as often as they bathe in the Sea.

Authors differ widely about the Size and Shape of this Horn. *Albertus* says, that at the Bottom, or Root, it is as broad as one's Hand; that from thence it rises taper to a Point, and that it is ten Foot long. *Munster* will have it only three Cubits in length, which is only four Feet and a half. *Marco Paulo* shortens it to less than two Foot. *Paradis* reduces it to a Foot and a half. *Nicolaus Venetus* brings it down to a Foot: And the famous *Jerom Cardan* will have it the length but of three Inches. We find as great or greater Differences as to Colour. *Pliny* is very clear that the Unicorn's Horn is black. *Solinus* says it is of a purple Colour. *Paradis* says it is red, or of a reddish yellow. *Albertus Magnus* thinks it may be like a Stag's Horn: But other Writers are very positive that it is much whiter than any Ivory. We are likewise assured, by some, that it is quite strait and smooth; others persuade us, that it is finely wreathed, and shines as if it was polished; neither are there Authorities wanting to prove, that some are very finely spotted with brown and black, but they do not tell us where. When I reflect on the several Opinions of those who have written of the Unicorn, and how they differ from one another, I sometimes believe that each of them spoke after his own Invention, to raise the Admiration of the Reader.

As for the imaginary Virtues of the Unicorn's Horn, they are consequently fictitious; but supposing that what has been pretended to be the true Horn was really such, I will venture to affirm, there is no more Virtue in it than in that of a Stag, a Goat, or Elephant's Tooth, which is made use of to stop the spitting of Blood and a Bloody-flux, which is done by the astringent Quality of these Horns, and that cannot so properly be called a Virtue as a Malignity. The Unicorn's Horn, or what has been said to be so, has neither Smell nor Taste, and of course can have nothing in it of such cordial Virtue as is pretended.

Since my Voyage to the North I have looked over several Charts drawn by the most celebrated Geographers, and I wonder to see they placed *Zembla* no farther to the East-north-east of *Lapland*. It is more to the Northward than they make it. They are also in the wrong to divide it from the Continent, and to place it twelve hundred Leagues from *Greenland*, as many of them do; for indeed it is contiguous with it. The Coasts of *Greenland* join to those of *Zembla*; and were it not for the prodigious Snows that fall there, and the Rigour of the Season, which render the Place uninhabitable, one might easily go from *Greenland* to *Zembla* by Land, and from *Zembla* passing the *Pater Nosters*, a Ridge of vast Mountains, enter *Samojeda*, and thence either into the *Great Tartary* or *Muscovy*.

I admired also, that they did not make the Streights, called *Weygatz*, above ten *French* Leagues long; whereas they are five and thirty *German* Leagues in length. They shew by their Charts that Ships may by that Streight enter the great Sea of *Tartary*; which, whatever they pretend to, is not to be done. Some have said, that in the Days of Prince *Maurice* a Ship passed the Streights of *Weygatz*, and sailed into the *Tartarian* Sea, which is a plain

plain Falsity, as I shall make appear. This Streight, as I have said, is bounded by the *Pater Noster* Mountains, the least of which is half a League high; and it is agreed, on all Hands, that they are of Ice which never melts. I am of the same Opinion, having been in the Streights near those Mountains in the Dog-Days, the hottest Season of the whole Year, and was as cold then as ever I was in *France* in the coldest Winter; which Season lasts there all the Year.

33. The many curious Particulars contained in these Voyages and Travels may very well atone for some Deficiencies and Mistakes in them. It appears from hence, that there are no Countries in the World through which Men travel with more Expedition than in those frozen Climates, where one would imagine that Men could scarce travel at all; and this induces one to wonder, that they have not been more thoroughly and effectually examined, especially considering with how great Ease this might be done, if the Court of *Russia* interested itself in the Matter. Our Author appears to be a Man of great Sincerity, and relates every thing he saw distinctly; and at the same time tells us his Sentiments of the Matter. The Account he has given us of *Russia* is prior in Point of Time to the Reign of *Peter the Great*; who, in some measure, changed the Nature of his Subjects: But, however, as this has been done very slowly, there is good reason to believe, that with respect to the Bulk of the People in the distant Provinces of the *Russian* Empire, they are not much altered from what they were. It is not easy to guess what part of *Circassia* he means, when he speaks of the Inhabitants of it in the manner he does; and for my own Part, I am apt to think he calls the People of the *Ukrain*, *Circassians*; and my Reason for thinking so is, that both in their Language and in that of the *Poles*, the Word *Cossack* signifies a regular Soldier, a Man trained to War, and in constant Pay. It is very true, that we now consider the *Cossacks* as a Nation, and not as a Militia; and this with Propriety enough, because the *Poles* having given that Country to their Soldiers, they still retain the Name of *Cossacks*. Though they are no longer regular Troops.

By the way, it may not be amiss to observe, that it was breaking through their military Tenures, and endeavouring to make these People pay a rack Rent for their Lands, that induced them to rebel against the *Poles*, and to put themselves under the Protection of the Czar. His Account of *Siberia* is very entertaining and curious, and the *Tinquises* he speaks of are the Inhabitants of the very Extremity of *Asia*, towards the Sea of *Japon*, a very brave, though a very barbarous Nation, with whom the *Muscovites* have been long at War, but whom hitherto they could never subdue. The manner in which the Exiles live in that dreadful Country, is also very well and very truly described. The Mines that have been since discovered there, have indeed furnished another and

more laborious kind of Employment. But the shooting wild Beasts and collecting their Furs, still continues to be the principal Business of the unhappy Persons who are banished thither; and these are not only Men of as great Rank as any this Gentleman mentions, but some also of much superior Quality; such as Prince *Menzicoff*, the Duke of *Courland*, the High Chancellor *Osterman*, whom we remember sent into those Desarts as Victims of State rather than Criminals.

The Account he gives us of *Nova Zembla* is very curious and circumstantial; and what he says about the Errors in the Maps published before his time may be very just, but we have had better since that. I cannot, by any Means agree, that this Country is contiguous with that of *Spitzbergen* or *Greenland*, though it may be true, that it extends itself farther to the North than is generally imagined: Neither do I think that the Seas beyond this Country, are always choaked up with Ice; but if a Passage is to be sought this way, my Opinion is, that instead of searching the Coasts of *Zembla*, the shorter and better Method would be to make the South Point of *Greenland*, and then to steer North-east, into as high a Latitude as should be judged convenient; Experience having shewn that the Weather is not more rigorous, or the Ice more troublesome, the farther People sail towards the Pole.

What he says concerning Unicorns and their Horns, seems rather calculated to display his Learning than for any other Purpose; since it is now universally agreed, that the Horns which are shewn in *Europe* under this Title are the very Horns he speaks of, and are taken from the Heads of Fish called Sea-Unicorns; but which, in reality, are a kind of Sword-Fish. The Shape of their Body is like a Seal, but the under Fins and the Tail resemble those of a Whale. They swim in Shoals, and generally carry their Horns out of Water, but then they swim so swiftly, that they are very seldom taken; there is another kind of Sword-Fish, which may be also stiled a Unicorn, but is generally called a Saw-Fish, because the Bone is filled with Teeth or Pegs from the Root to the Top. It was formerly thought that these Horns had great Virtue; but Experience has shewn, that they are of no farther Use in Physic than as Absorbents; and in this respect Oyster-shells or Crabs-eyes do as well. There is one Observation more that may be made on this Section worth Notice, and that is, the Possibility of making such Voyages for Discovery, they bearing their own Expences, as this plainly did; and a great deal of public Spirit there would be in sending a Ship or two now and then to trade in this way, which sooner or later, would produce us more Advantages than we are able to foresee: Of this, at least, we are certain, that by Voyages of this kind we established a Trade to *Archangel*, which was the Foundation of our *Russia* Company; but it is now time to proceed to Countries better known, and into Climates more agreeable than those of which hitherto we have been speaking.

SECTION II.

A succinct and impartial Account of the Kingdom of SWEDEN, with respect to its Climate, Soil and Produce ; as also of the Temper, Genius, Customs, Policy, Form of Government, Force, and Trade of its Inhabitants.

Collected from the Writings of an *English* Minister residing there.

1. *A short but necessary Introduction to the subsequent Section.* 2. *A clear and comprehensive View of the Kingdom of Sweden and Duchy of Finland ; the Soil, Climate, Woods, Lake, Rivers, Produce, Birds, Beasts and Fish found therein.* 3. *An Account of the Mines in Sweden, their Value, Methods of working them ; as also of the Weather and Seasons of the Year in Sweden.* 4. *A more particular Account of the several Provinces and Cities of this Kingdom, especially that of Stockholm.* 5. *A distinct and copious Detail of the Courts of Justice, Laws, and Domestic Government, as administered in the Time of Charles XI.* 6. *The Temper, Genius, Manners, Customs and way of living of the People in that Country.* 7. *A succinct View of the Ecclesiastical State of Sweden ; the Archbishoprics, Bishoprics, Deaneries, Parochial Benefices, Number and Maintenance of the Clergy.* 8. *The Constitution, Government and Revenues of the Kingdom.* 9. *A curious and circumstantial Relation of the Military Establishment and Force of the Kingdom of Sweden, the only Country in which a large standing Army is kept up, without any Danger to the Liberties of the People.* 10. *Of their Trade more particularly with England, its Advantages and Disadvantages, and some particular Grievances to which Merchants are subject in that Country.* 11. *A few additional Observations and Remarks upon the foregoing Section, and on the Alterations which have since happened in the Government of that Country, and the Condition of its Inhabitants.*

1. **T**HE short Stay that Travellers make in Countries through which they pass, very seldom affords them an Opportunity of looking into the Temper, Genius and Customs, much less into the Religion, Laws and Government of the People with whom they converse ; which is the Reason that in most Books of Travels there are a kind of Blanks left for these important Passages ; or if they are filled up, it is done at random, according to the good or bad Impressions of the Author, received from the particular Usage he met with, or from hearsay : So that if either our Traveller has a bad Taste, or has the ill Luck to keep indifferent Company ; we, who are his Readers, are sure to feel the Effects of it, and to have all Things imposed upon us, under the fair and specious Pretence of a clear and candid Relation of the naked Truth.

But to prevent the bad Effects of this, and to provide against both Evils ; that is to say, the want of those Informations, which a judicious Peruser would be most desirous of finding ; and to secure him from meeting with hasty or false Representations in their Stead, we have thought it our Duty in respect of the northern Kingdoms ; the Constitutions of which are best worth our Knowledge, and yet are very superficially treated in most Books of Travels, to have recourse to Authors of known Veracity and Experience, who have had Leisure and Opportunity to consider the Subjects of which they wrote, and a sincere Intention to treat them as they ought to be treated. By this means the Defects will be supplied which occur in the subsequent Travels ; and the Reader will be enabled to judge, with critical Exactness, of the Truth or Falsity of the Remarks and Observations those Writers make ; a farther Advantage, because these Countries lie at too great a Distance to be frequently visited, and yet near enough for us to be considerably affected by whatever Revolutions happen in them, with respect either to their Systems of Politics or Government. We will begin with *Sweden*, a Country always famous for the Bravery of its Inhabitants, and perhaps by a natural Consequence, no less famous for its Conquests Abroad and Changes at Home, than which no Nation of its natural Force has either atchieved or suffered greater.

The following Remarks were made by a Minister of our own, who resided there on the Part of King *William* in the Reign of *Charles XI.* a Man in all Respects qualified for his Ministry in that Country, as having a solid Understanding, great Uprightness of Heart, and a hearty

Desire to serve both Nations. In order to this, he thought no Method so proper, as that of inquiring strictly, and forming an impartial Notion of the Manners, Laws and Policy of the People amongst whom he resided. It was with this View that he undertook the composing that Work, the most curious and useful Parts of which we have digested into this Section ; and as the Nation, to whom it relates, are very steady in their Tempers, and are not much affected in their Customs by their Commerce with other Nations ; it is like to preserve its Character for Truth, as long as they preserve theirs as a People. Thus much by way of Introduction ; let us now proceed to this worthy Person's Account, for the most part in his own Words.

2. The Kingdom of *Sweden* and Dukedom of *Finland* have the *Baltic Sea* on the South, the unpassable Mountains of *Norway* on the West, *Lapland* on the North, and *Muscovy* on the East ; being extended from 56 to 69 Degrees of northern Latitude, and from 32 to 55 Degrees in Longitude, and consequently are more than twice as big as the Kingdom of *France* ; but the Abatements that must be made for several Seas and many great Lakes, some whereof are above eighty *English* Miles long and twenty broad ; as also for Rocks, Woods, Heaths, and Morasses that cover much of these Countries, will reduce the habitable Part to a very small Portion comparatively to the Extent of the Whole. The Soil, in Places capable of cultivating, is tolerably fruitful ; though seldom above half a Foot deep, and therefore more easily ploughed, as it frequently is by one Maid and an Ox, and is generally best where there is least of it, that is, in the little Spaces betwixt the Rocks ; and frequently the barren Lands are enriched with Ashes of Trees growing on the Places, which are burnt, and the Seeds baked amongst the Ashes produce a plentiful Crop without further Cultivation.

This Practice is so antient, that their Writers derive the Name of *Sweden* from a Word in their Language that expresses it ; but the Danger of destroying the Woods has of late occasioned some Laws to limit that Custom. If the Inhabitants were industrious above what Necessity forces them to, they might at least have Corn sufficient of their own ; but as Things are managed, they cannot subsist without great Importations of all sorts of Grain from the Country of *Leifland*, and other Parts of *Germany* adjacent to the *Baltic Sea*. And notwithstanding these Supplies, the poorest Sort, in many Places remote from Traffic, are forced to grind the Bark of Trees to mix with their Corn, and make Bread, of which they have not always plenty.

The Cattle, as in all other northern Countries, are generally of a very small Size; neither can the Breed be bettered by bringing in larger from Abroad, which soon degenerate; because in Summer the Grass is less nourishing than in the Places from whence they come, and in Winter they are half starved for want of Fodder of all Kinds, which often falls so very short that they are forced to unthatch their Houses, to keep a Part of their Cattle alive. Their Sheep bear a very coarse Wool, only fit to make cloathing for the Peasants. The Horses, especially the finest, though small, are hardy, vigorous, strong, sure-footed, and nimble Trotters; which is of great Use to them, because of the Length of their Winters, and their Fitness for Sleds, which is the only Carriage in that Season; and the Soldiers pretend, that in War they are not only able to resist, but to break a Body of the best *German* Horse. Of wild Beasts, which are very plentiful in those Parts, Elks, Deer, and Hares, are hunted for their Flesh; as also together with Wolves, Foxes, wild Cats, &c. for their Furs and Hides.

They hunt with less Ceremony than elsewhere is used, taking all Advantages to shoot their Game, at which they are generally dextrous: Parks there are but few, and meanly stocked, the Charge of feeding Deer all Winter exceeding the Profit, and abating the Pleasure of them. There are no Rabbits in these Countries but what are brought in for Curiosity, and kept tame. In Winter Foxes and Squirrels somewhat change Colour, and become greyish; but Hares turn white as Snow. Fowl, both wild and tame, are very plentiful, and good in their Kind, except Sea-Fowl, which feed and taste of Fish; the most common are the Orras and Keders, the former of the Bigness of a Hen, the other of a Turkey: As also Partridges, and a Bird somewhat resembling them, called *Yerpers*. There are taken in Winter great Numbers of small Birds, as Thrushes, Blackbirds, and Sydensewans, the last of the Bigness of Fieldfares, but better Meat; supposed to come from *Lapland* or yet farther North, and have their Name from the Beautifullness of their Feathers, some of which are tipped at the Point with Scarlet: Pigeons there are, those of the Woods very scarce, because of the Hawks; and of the House Pigeons none but what are kept tame, because their Food is scarce, and the Danger of the Hawks very great if they go abroad. Eagles, Hawks, and other rapacious Fowl, abound most in the northern and desert Parts, whither Nature seems to call them, as may be gathered from a Story credibly related of a large Hawk shot some Years ago in the northern Parts of *Finland*, which had on one Leg a small Piece of Gold with this Inscription *Je suis au Roy*, on the other, one of Silver, with these Words, *Duc de Chevereuse me garde*.

The chiefest Lakes in *Sweden* are, the *Vetter*, the *Wenner*, and *Waster*; the first in *Ostrogothia*, remarkable for its foretelling of Storms by a continual thundering Noise the Day before in that Quarter whence they arise; as also for sudden breaking of the Ice on it, which sometimes surprises Travellers, and in half an Hour becomes navigable; for its great Depth, in some Places above three Hundred Fathom, though no Part of the *Baltic Sea* exceeds fifty; it supplies the *Motala*, which runs through *Norcopingb*, where it has a Fall of about 30 Foot; and some Winters is so choaked up with Ice, that for many Hours no Water passes. The second is in *Westrogothia*, from which issues the River *Elve*, that falling down a Rock near sixty Foot, passes by *Gottenburgh*. The third empties itself near *Stockholm*, furnishing one Side of the Town with fresh Water, as the Sea does the other with salt. There are abundance of other Lakes, whereof many, like Ponds, have no Vents, and are called *In-Seas*; are not ill stored with Variety of Fish; Salmon, Pike, Tench, Perch, Eels, and many other Sorts unknown elsewhere, of which the most plentiful is the Streamling, a Fish less than a Pilcher, taken in great Quantities, and salted in Barrels, and distributed over all the Country.

Besides the North Bottom or Bay that separates *Sweden* and *Finland*, abounds with Seals, of which a considerable Quantity of Train-Oil is made and exported; and in the Lakes in *Finland* are vast Quantities of Pikes, which be-

ing taken are salted, dried, and sold at very cheap Rates. These Lakes are of great Use for the Conveyance of Carriages, both in Summer by Boats, and by Sleds in Winter; and among them, and on the Sea-Coasts, are almost innumerable Islands of different Sizes; whereof there are, in *Sweden*, above six thousand that are inhabited; the rest are either bare Rocks, or covered with Wood; *Gotland*, *Oland*, and *Aland*, are Isles of large Extent, one being sixty Miles long, and the other two little less: Their Woods and vast Forests, overspread much of the Country, and are for the most part of Pines, Fir, Beech, Birch, Alder, Juniper, and some Oak, especially in the Province of *Bleking*, the Trees growing in most Places so close together, and lying to rot where they fall, that the Woods are scarce passable: These afford a plentiful and cheap Firing, and being generally very strait and tall are easily convertible into Timber fit for all Uses. In the Parts near the Mines, the Woods are much destroyed; but that Want is so well supplied from distant Places, by the Convenience of Rivers and Winter Carriages, that they have Charcoal above six times as cheap as in *England*, though indeed from the manner of making, it is not so good.

3. Of Mines in *Sweden*: There is one of Silver, into which Workmen are let down in Baskets to the first Floor, which is one hundred and fifty Fathoms under Ground. The Roof there is as high as a Church, supported by vast Arches of Ore. The next Descent is by Ladders and Baskets to the lowest Mine, above forty Fathoms, where they now work. They have no Records so antient as the first Discovery either of this, or the Copper Mines, which must needs have been the Work of many Ages. The Ore seldom yields above four *per Cent*. and requires great Pains to refine it. They are also at the Charge of a Water-mill to drain the Mine, and have the Benefit of another that draws up the Ore. It yearly produces about twenty thousand Crowns of fine Silver, of which the King has the Pre-emption, paying only one fourth less than the real Value.

The Copper Mine is about eighty Fathom deep, of great Extent, but subject to Damage by the Falling in of the Roof; yet that is sometimes recompensed by the Abundance of Ore that the ruined Pillars yield, though most commonly the Loss in that Case is very great: The Occasion of which Falls is attributed to the throwing the Earth and Stones brought out upon the Ground over the Mine, by which the Pillars become overcharged, and give way; and the Reason of this is said to be, that the Profit arising to those that are concerned is so little that they are not able to carry it off as they ought; and unless the King abates a considerable Part of the Profit arising to the Crown from this Mine, it is believed it will, in a few Years, be at a Stand, especially if the Designs of making Copper, that are on foot elsewhere should take any tolerable Effect.

The Copper yearly made out of this Mine amounts to the Value of about two hundred thousand Pounds, of which the King has a fourth Part, not by way of Pre-emption, but in Kind; besides that, upon the Remainder he has a Custom of twenty-five *per Cent*. when it is exported unwrought. Lately a Gentleman of *Italy* came to *Sweden*, with Proposals to make Copper a shorter and cheaper Way than has hitherto been practised, as to make that in four Days which before required three Weeks, and with one fifth Part of the Charge, and with fewer Hands. The Bargain was made, and his Reward agreed to be a hundred thousand Crowns; and the first Proof he made succeeded to Admiration: But when he came to work in earnest, and had got his new-invented Ovens made to his Mind, the Miners, as he complained, picked out the very worst Ore, and were otherwise so envious and untractable that he failed of Success, and lost his Reward, and not without Difficulty obtained Leave to buy Ore, and practise his Invention at his own Charge, as he now does. Iron Mines and Forges are in great Numbers, especially towards the mountainous Parts, where they have the Convenience of Waterfalls to turn their Mills. From these, besides supplying the Country, there is yearly exported Iron, to the Value of near three hundred thousand Pounds; but of late Years the Number of those Forges has been so much increased, that

that each endeavouring to undersell others, the Price has been much lowered; and since the Prohibition of Foreign Manufactures, in exchanging of which Iron was plentifully taken off, it is grown so cheap that it is found necessary to lessen the Number of Forges. Neither has that Contrivance had the Effect intended; but, on the contrary, many more are like to fall of themselves, because they cannot work but to Loss, in which Case many Thousands of poor People whose Livelihoods depend upon these Forges and Mines will be reduced to a starving Condition.

The Seasons of the Year, though regular in themselves, do not altogether answer those of other Climates. As a *French* Ambassador observed, who, in raillery said, there were in *Sweden* only nine Months Winter, and all the rest was Summer; for as Winter commonly begins very soon, so Summer immediately succeeds it, and leaves little or no Space to be called Spring. The Productions of the Earth, therefore ought to be, as they are, more speedy in their Growth than in other Parts. The reason of which seems to be, that the Oil and Sulphur in the Earth (as it appears by the Trees and Minerals it produces) being bound up all the Winter, are then of a sudden actuated by the Heat of a warm Sun, which almost continually shines, and thereby makes amends for its short Stay, and brings to Maturity the Fruits proper for the Climate; yet withal, its Heat is so intense, that it often sets the Woods on Fire, which sometimes spreads itself many Leagues, and can scarce be stopt, till it comes at some Lake or very large Plain. In the Summer-season the Fields are clothed with Variety of Flowers, and the whole Country overspread with Strawberries, Raspberries, Currants, and the like, which grow upon every Rock.

In their Gardens Melons are brought to good Perfection in dry Years, but Apricocks, Peaches, and other Wall-Fruits are almost as rare as Oranges. They have Cherries of several Sorts, and some tolerably good; which cannot be said of their Apples, Pears and Plumbs, that are neither common nor well tasted. All Kinds of Roots are in Plenty, and contribute much to the Nourishment of the poor People. The Sun at highest is above the Horizon of *Stockholm*, eighteen Hours and an half, and for some Weeks makes a continual Day. In Winter the Days are proportionably shorter: The Sun being up but five Hours and an half, which Defect is so well supplied as to Lights by the Moon, and the Whiteness of the Snow, and the Clearness of the Sky, that travelling by Night is as usual as by Day, and Journeys begun in the Evening are as frequent as in the Morning. The want of the Sun's Heat is repaired by Stoves within Doors, and warm Furs abroad. Instead of which, the meaner Sort use Sheep-skins, and other the like Defences, and are generally better provided with Cloathing befitting their Condition, and the Climate they live in, than the common People of any Part of *Europe*; though, where any Neglect or Failure happens it usually proves fatal, and occasions the Loss of Noses, or other Members, and sometimes the Loss of Life; unless the usual Remedy to expel the Frost, when it has seized any Part, be early applied, which is to remain in the Cold, and rub the Part afflicted with the Snow 'till the Blood return to it again.

4. This Country is divided into twenty-five Provinces; each of which is governed by an Officer called *Landshofding*, whose Authority comprehends that of Lord Lieutenant and Sheriff together, except where there is a general Governor, as in *Finland* or upon the Borders of *Denmark* and *Norway*, to whom the Governor of each Province is subordinate, and has thereby a more restrained Authority. These Officers are placed by the King, and take an Oath to keep the Province for his Majesty and his Heirs, to govern according to the Laws of *Sweden*, and such Instructions as they shall receive from his Majesty, and to quit the Province whenever he shall call them thence. To them and their subordinate Officers (who are all of the King's chusing) the Execution of judicial Sentences, the Collection of the King's Revenues, the Care of Forests, Parks, and other Crown Lands, &c. is committed.

Of Cities, those of *Stockholm*, *Gottenburgh*, *Calmar*, and two or three more may deserve that Name; the other Corporations, which, in all, make not an hundred, scarce exceed some Villages in *England*. They are all governed by Burgomasters and Counsellors, chosen by the King out of their own Body, or at least such as are of the Quality of Burghers; no Gentleman accepting of those Employments. Their Offices and Salaries are for Life, or rather during their good Behaviour. The Privilege of Cities are derived from the King, and for the most Part are owing to the Wisdom of *Gustavus Adolphus*, the Author of their best and most regular Constitutions at Home, and as well as of their Glory Abroad.

The City of *Stockholm* lies in 59 Deg. 20 Min. N. Lat. and about 41 Longitude. About three hundred Years ago it was only a bare Island with two or three Cottages for Fishers; but upon the building of a Castle there, to stop the Inroads of the *Russians*, and the Translation of the Court thither, it grew, by Degrees, to surpass the other more antient Cities, and is at present the Metropolis of this Kingdom, and supposed to be as populous as *Bristol*. The Castle here, which is covered with Copper, is a Place of no Strength or Beauty, but of great Use, being a spacious Building, that besides entertaining the Court, furnishes Room for most of the great Offices; the national Court of Justice, Colleges of War, Chancery, Treasury, Reduction, Liquidation, Commerce, Execution; as also an Armory, Chapel, Library, Archives, &c. It lodges very few of the inferior Officers and Servants of the Court; they, together with the Foot-Guards, being quartered upon the Burghers at their Landlord's Charge, for Lodging, Fire and Candle. In this City there are seven large Churches built of Brick and covered with Copper, besides two more now in building, and three or four wooden Chapels. The Palace of the Nobility, which is the Place of their Assembly at the Convention of Estates, and the Depository of their Privileges, Titles, and such other Records as concern their Body, is a very stately Pile; as is also the Bank, built at the City's Charge; which, together with several magnificent Houses of the Nobility are covered with Copper, and make a handsome Prospect. Most of the Burghers Houses are built of Brick, except in the Suburbs, where they are of Wood, and therefore exposed to the Danger of Fire; which commonly, when it gets to a head, destroys all before it in the Quarter where it happens: To repair which Misfortune they sometimes send the Dimensions of the House they intend to *Finland*; where the Walls and several Separations are built of Pieces of Timber laid one upon another, and joined at the Corners, and afterwards marked, taken down, and sent by Water to *Stockholm*, there to be set up and finished; and when they are kept in good Repair will last thirty or forty Years, and are warmer, cleaner, and more healthful than those of either Brick or Stone.

To prevent the Danger of Fire the City is divided into twelve Wards; and in each of these is a Master and four Assistants, who upon Notice of any Fire are immediately to repair to it, as also all Porters and Labourers, and to range themselves under the Master of their respective Wards. There is also a Fire-Watch by Night, who walk about only for that Purpose; and in each Church-Steeple Watch is kept, and a Bell tolled upon the first Appearance of any Fire. The Government of this City is in the Hands of the great Stadtholder, who is also a Privy Counsellor. He sits once a Week in the Town-house, and presides also in the College-house of *Execution*, assisted by an under Stadtholder and the Bailiff of the Castle. Next to him are the four Burgomasters, one for Justice, another for Trade, the third for the Policy of the City, and the fourth has the Inspection over all public and private Buildings, and determines such Cases as arise on that Account. With them the Counsellors of the City always sit and give their Votes, the Majority of which concludes. Their Number is uncertain, but usually about twenty, most Merchants and Shopkeepers, or such as have served the King in some inferior Employments; and besides their Salary they have an Immunity from such

such Impositions as are laid on the Inhabitants to support the Government of the City, which pays all its Officers and Servants, and maintains a Guard of 300 Men, and defrays the Charge of all public Buildings and Repairs.

To support this Expence, besides a Duty belonging to the City upon Goods imported and exported (which is above four *per Cent.* of the Customs paid the King, and amounts to about four thousand Pounds *per Ann.*) the Magistrates impose a yearly Tax on the Burghers, in which they are assisted by a Common Council of forty-eight (which chuses its own Members every Spring) to proportion the Payments for the ensuing Year. On the richer Traders they usually impose forty, fifty or sixty Pounds Sterling; and upon others of a meaner Condition, as Shoemakers, Taylors, &c. five or six Pounds, and no Housekeeper less than fifteen Shillings, besides quartering the Guards, inferior Officers, and Servants of the Court with other less Charges, which all together would be thought a great Burthen, even in richer Countries; neither is it otherwise esteemed by the Inhabitants of this City, who can scarce be kept in Heart, by the Privileges they enjoy, as well in Customs as the Trade of the Place which must needs pass through their Hands. The Natives of other Parts of the Kingdom as well as Foreigners being obliged to deal only with the Burghers, except those of the Gentry that make Iron, who have a Privilege to sell it immediately to Strangers. This City is in a manner the Staple of *Sweden*, to which most of the Goods of their own Growth, *viz.* Iron, Copper, Wire, Pitch, Tar, Masts, Deals, &c. are brought to be exported. The greatest Part of the Commodities imported from Abroad come to this Port, where there is a Haven capable of receiving a thousand Ships, and has a Bridge or Key near an *English* Mile long, to which the greater Vessels may lie with their Broadfides. The only Inconvenience is, that it is ten Miles from the Sea, and the River very crooked, and no Tides.

5. The Laws of *Sweden* were antiently as various as the Provinces were numerous; each of which had Statutes and Customs peculiar to itself, enacted, as Occasion required by the Laghman or Governor of the Province; who was chosen by the People, and invested with great Authority, especially while the King was elective; his Suffrage concluding the Province he governed. This Variety was necessarily attended with great Confusion; for Remedy whereof, about fourscore Years ago one Body of Laws was compiled for the Direction of the whole Kingdom: Yet this Collection is but an imperfect Piece, and the Laws so few, and conceived in such general Terms, that in most Cases they need the Assistance of the Civil Law; and after all, the final Determination depends much upon the Inclinations of the Bench; which in a poor Country, where Salaries are small, is often filled with such as are of weak Parts, and subject to Corruption on very small Temptations.

The Effects of this would be more visible, if each superior Court did not keep a Check upon the Lower, and the King's Court of Revision over-awe them all; to which all Civil Causes, exceeding the Sum of seventy Pounds, are appealable; and very few end before they have been brought thither. In this Court the President of the Chancery and two or three other Privy Counsellors also sit, so does the Chancellor of the Court (an Officer next in Degree to the Privy Counsellor) who is President of the under Revision, where he and two Secretaries put Business into a Method fit to be brought before the King. The Courts of Justice inferior to this are of three Degrees; of the lowest Degree, or first Instance, there is one in each Corporation (besides *Stockholm*, in which there are three) as also in each District or Territory, whereof every Province contains several, some above twenty. In the former (Cities) an Alderman or Counsellor presides, and has some of his Brethren for Assistants; in the latter the Governor of the Territory with a standing Jury; his Courts being ambulatory are usually near or upon the Spot where the Fact or Trespass was committed. In these Courts Examinations are taken, and Matters not exceeding forty Shillings are determined, the rest transmitted to the next superior Court; of which

in every Corporation the President thereof retains the Name of Laghman, without other Authority than that of a Judge. From these all Causes of Blood must be transmitted to the respective national Courts, where they are determined without farther Appeal; and thither also all Civil Actions, not exceeding twenty Pounds, may be appealed.

Of these national Courts there are three, one for the Kingdom of *Sweden*, held at *Stockholm*, another for the Kingdom of *Gothia*, kept at *Jencopingh*, and a Third for the Dukedom of *Finland*; in each of these a Privy Counsellor is President, and above half the Assessors are to be Gentlemen. All these Courts sit continually, or at most have but short Vacations, and not being pestered with too much Formality, give Causes a speedy Dispatch, unless they be retarded by some underhand Engagements. Actions relating to the Sea are tried in the ordinary Courts, according to their Sea Laws founded upon those antient Ones of *Wisby* in *Gothland*, which have formerly been as famous in the *Baltic Sea* as the Laws of *Rhodes* and *Oleron* in other Places. The Court of Admiralty has not any peculiar Jurisdiction in the Administration of these Laws, but only in such Matters as directly concern the King's Fleet, and in some Places that belong immediately to the Admiralty.

For Causes Ecclesiastical there is a Consistory in each Diocese, of which the respective Bishop is President; where Causes of Bastardy, Contracts of Marriage, and other Causes of that Nature are tried, and Church Censures of Penance, Divorce, &c. inflicted. These Courts have no Power to administer an Oath, nor to inflict any corporal Punishment; from them there lies an Appeal to the respective national Court; and in some Cases to the King, as is in all other Matters.

For Matters relating to the Mines, besides inferior Courts and Officers settled in the respective Parts of the Country, a general Court, called the College of the Mines, sits at *Stockholm*, of which most commonly the President of the Treasury is Chief, with a Vice-President and other Assessors. The Laws, in this Regard, are more strict and particular than in other Matters, and for the most Part Justice is very carefully administered. The Power of executing all judicial Sentences is lodged in the Governors of Provinces, the Stadtholders of *Stockholm*, and other Places, and from them derived to inferior Officers, who are accountable to the national Courts, whither they may be convented and punished upon plain Proof of Default; but the Proof being difficult, and Ministers of Justice apt to favour one another, they take great Liberty to delay Execution, or to arbitrate and put their own Sense upon Sentences; so that their Part of Justice is administered the worst of all others, and has an Influence not only at Home, but lessens the Credit of the *Swedish* Subjects Abroad, against whom Justice cannot be obtained without great Difficulty.

The ordinary Charges of Law Suits are no where more moderate than in *Sweden*; the greatest Burthen arising from a late Constitution, that all Declarations, Acts and Sentences must be written upon sealed Paper, of different Prices, from Two-pence to Seven Shillings a Sheet, according to the Quality of the Cause; the Benefit of which accrues to the King, and is computed to bring in about 3000 *l.* a Year. Other Charges are very few, every Man being permitted (in criminal Actions compelled) to plead his own Cause. Accordingly the Practice of the Law is below a Gentleman, and rather the Refuge than the Choice of meaner Persons, who are very few in Number, and for the most Part very poor. The Custom of a Jury of twelve Men is so antient in *Sweden*, that their Writers pretend it had its Original among them, and was thence derived to other Nations; but at present it is disused every where, except only in the lower Courts in the Country, and there the Jurymen are for Life, and have Salaries. They have this peculiar to themselves; that among them there must be an unanimous Concurrence to determine a Cause, which in other Courts is done by a Majority of Voices. Titles to Estates are rendered more secure, and less subject to Conteſts, by the Registers that are kept of all Sales and Alienations, as well as of other Engagements of them,

the Purchaser running the Hazard of having an after-Bargain take Place of his. If he omit the recording of his Transaction in the proper Court in criminal Matters where the Fact is not very evident, or where the Judges are not very favourable, the Defendant is admitted to purge himself by Oath, to which is oftentimes added the Oath of six or twelve Men, who are all Vouchers of his Integrity. Treason, Murder, double Adulteries, Burning of Houses, Witchcraft, and the like heinous Crimes, are punished with Death, which is executed by hanging of Men, and beheading of Women. To which burning alive or dead, quartering and hanging in Chains, is sometimes added, according to the Nature of the Crime. Criminals of the Nobility and Gentry are generally shot to Death.

The Punishment of Stealing is of late, instead of Death, changed into a perpetual Slavery; the guilty Party being condemned to work all his Life for the King in making Fortifications or other Drudgery, and always has a Collar of Iron about his Neck, with a Bow coming over his Head, to which a Bell is fastened, that rings as he goes along. Duels between Gentlemen, if the one Party be killed, are punished by the Survivor's Death, and a Note of Infamy upon the Memory of both; if neither be killed, they are both condemned to a Prison with Bread and Water for two Years; to which is added, a Fine of one thousand Crowns, or one Year's Imprisonment, and two thousand Crowns. Reparation of Honour, in Case of an Affront, is referred to the respective national Courts, where Recantation and public begging of Pardon is usually inflicted. Estates, as well acquired as inherited, descend to the Children in equal Portions, of which a Son has two and a Daughter one; nor is it in the Power of the Parents to alter this Proportion, without the Intervention of a Judicial Sentence. In Case of their Childrens Disobedience only, they may bequeath a tenth of their acquired Possessions to such Child or other as they will favour: Where an Estate descends incumbered with Debts, the Heir usually takes two or three Months Time, as the Law allows, to search into the Condition of the Deceased's Estate, and then either accepts the Inheritance or leaves it to the Law, which in that Case administers.

6. The Nature of the Climate, which is very healthful and dry, as well as sharp, disposes the Natives to a very vigorous Constitution; and that confirmed by a hardy Education, coarse Fare, and hard Lodging, qualifies them to endure whatever uneasy Circumstance befalls them, better than those that are born in a milder Climate, and more indulgently bred. But, on the other Side, it seems as if the Severity of the Clime does, in a manner, cramp the Faculties of their Minds, which seldom are found endued with any eminent Pregnancy of Wit; yet, by Industry, Experience and Travelling, not a few of them arrive at a mature and solid Judgment, being led by their Genius to serious Things, in which such as have Patience to go through with the Studies they apply themselves to become excellent, and merit the Title of great and able Men: But this seems not to be the Talent of this Nation, for they are more apt to sit down with superficial Acquisitions than to pursue their Studies to the utmost Extent.

These Dispositions of Body and Mind, qualify them more for a Life of Labour and Fatigue, than of Art and Curiosity; and the Effect of it is visible in all Orders of Men amongst them. The Nobility mostly apply themselves to a Military Life, in which they are more distinguished for Courage, and enduring Hardships, than for Stratagems and Intrigues. They that are employed in the Administration of Civil Affairs, though they are indeed laborious and indefatigable in their Business, yet they seldom raise their Speculations above what the Necessity of their Employments require, their Abilities proceeding not so much from Study as Experience in the Course of Business.

In Point of Learning, they, like their Neighbours the Germans, are more given to transcribe and make Collections, than to digest their own Thoughts; and commonly proportion their Studies to their Occasions. In

Matters of Trade they rather undergo the Drudgery, than dive into the Mystery either of Commerce or Manufactures, in which they generally set up for Masters before half taught; so that in all such Things as require Ingenuity, Neatness, or Dexterity, they are forced to be served by Strangers. Their common Soldiers are allowed to endure Cold and Hunger, long Marches, and hard Labour, to Admiration; but they learn their Duty very slowly, and are serviceable more by Obedience to command, and standing their Ground, than by any great Forwardness to attack their Enemy; or Address, in executing their Orders; and so their Peasants are tolerably laborious when Need compels them, but have little Regard to Neatness in their Work, and are hardly brought to quit their old slow Methods for such new Inventions as are more dextrous and easy. The Dispositions peculiar to the several Degrees of these People are: That the Nobility and Gentry are naturally Men of Courage and of a warlike Temper; have a graceful Deportment, incline to value themselves at a high Rate, and make the best Appearance they can, that they may gain the Respect of others; and are therefore more excessive in the Number of their Attendants, sumptuous Buildings, and rich Apparel, than in the Plentifulness of their Tables, or other less observed Occasions. They never descend to any Employments in the Church. The Practice of Law, or Physic, or the Exercise of any Trade; and though to gain Experience in maritime Affairs they submit to the lowest Offices in other Counties; yet, at home, there is but one Example known of a Gentleman that accepted the Command of a Merchant Ship.

The Clergy are but moderately learned, and little acquainted with Disputes about Religion, as having no Adversaries to oppose. They affect Gravity and long Beards, are esteemed for their Hospitality, and have great Authority among the common People. The Burghers are not intelligent in Trade, nor able to do their Business without Credit from abroad; inclined to impose upon those they can over-reach, rather than follow their Calling in a fair Way. The Peasants, when sober, are more obsequious and respectful; but Drink makes them mad, and ungovernable: Most of them live in a very poor Condition, and are taught by Necessity to practise several Arts in a rude Manner, as the making their Shoes, Cloaths, &c. and the several Instruments of Husbandry, and other Necessaries, they cannot spare Money to buy. And to keep them to this, as also to favour the Cities, it is not permitted for more than one Taylor, or other Artisan, to dwell in the same Parish, though it be never so large, as many of them are above twenty Miles in Compass. In general, it may be said of the whole Nation, that they are a People very religious in their Way, and Frequenters of the Church, eminently loyal and affected to Monarchy; grave even to Formality, sober more out of Necessity than Temperance; apt to entertain Suspicions, and envy each other as well as Strangers; more inclined to pilfering, and such secret Frauds, than to open Violence, or robbing on Highways; Crimes as rarely committed in this, as in any Country whatever.

7. The Christian Faith was received in Sweden about the Beginning of the ninth Century, and in Finland about three hundred Years after; and first preached, or at least first established, by English Divines, of whom the chiefest was St. Sigisfrid; who, as their Histories relate, quitted the Archbishopric of York to become the Apostle of the Goths. With him three of his Nephews that he brought were martyred by the Heathen Goths; so also was St. Eskill and other English by the Swedes: And about the Year 1150, St. Henry, an English Bishop, accompanied St. Erick, King of Sweden, in his Expedition into Finland, which the King conquered, and the Bishop converted. He also was martyred by the Infidels, and lies buried at Abo, the Metropolis of that Country. The Reformation there, as in Denmark and Norway, began soon after the neighbouring Parts of Germany had embraced Luther's Tenets, and was established according to his Platform. The Tyranny of King Christiern the Second, gave an Opportunity to Gustavus, the Founder of the present Royal Family, to alter Religion,

and advance himself to the Regal Dignity, which till that Time was elective, but was made hereditary to his Family, in which it has since continued.

As the *Lutheran* Religion has also been, never but once, disturbed from Abroad, and since that Disturbance never distracted at Home with Non-conformity; so it becomes the Business of their Preachers rather to persuade the Practice of Piety than oppose the Doctrine of others, or defend their own. The Church is governed by an Archbishop, and ten Bishops, whose Studies are confined to their own Employments, being never called to Council but at the Assembly of the States, nor troubled with the Administration of secular Affairs. Their Revenues are very moderate. The Archbishopric of *Upsall* is not worth 400 *l.* a Year, and their Bishoprics are in Proportion. Under them are seven or eight Superintendants, who have all the Power of Bishops. And over each ten Churches is a Provost or rural Dean, with some Authority over the inferior Clergy, of whom the Total may be computed by the Number of Churches, which in *Sweden* and *Finland* are about two thousand; to which the Addition of Chaplains and Curates will increase the Clergy to near two thousand five hundred Persons. They are all the Sons of Peasants or Burghers, and can therefore content themselves with their small Income, which, besides more inconsiderable Dues, arise from Glebe Lands, and one third of the Tithes, of which the other two Thirds are annexed to the Crown, to be employed in pious Uses: However, the Clergy have generally wherewithal to exercise Hospitality, and are the constant Refuge of poor Travellers, especially Strangers, who go from Priest to Priest, as elsewhere from Constable to Constable.

The Clergy of each Diocese, upon the Death of their Bishops, propose three Persons to the King, who chuses one of them, or some other to succeed in that Office, which is also practised in the Choice of Superintendants. In the Choice of an Archbishop all the Chapters vote, but the Determination is in the King's Breast. His Majesty hath also the Patronage of most Churches; some few being in the Disposal of the Nobility. Many of their Churches are adorned with Variety of Sculptures, Painting, Gilding, &c. all of them are kept clean and in good Repair, furnished as well in the Country as City, with rich Altar-cloths, Copes, and other Vestments. For the regular Government of the Church, it has been found necessary to cause the antient Ecclesiastical Laws and Canons to be revised by a Committee of the several Bodies, and the Estates having spent some Years in that matter, at last presented the King with a new System of Church Laws, wherein his Majesty having caused such Alterations to be made as he thought fit, approved, and published them. By this means, the Church-Affairs of *Sweden* have been so well and so effectually regulated, that in a long Course of Years they have gone on peaceably and quietly, beyond any thing of the same Nature in any other Country, if we except *Denmark*; which, as it resembles *Sweden*, in the Nature of its Church Government, so the like Consequences have followed there.

8. As to the Government and Revenue of *Sweden* they are like those of other Places, subject to so many and so great Changes that one would imagine our Author's Account should, at this Distance of Time, be almost out of Date; but there is one Advantage attends whatever has the Appearance of a Parliament, which is, that how much soever it may sink and be depressed by Fraud, or Force, under certain Conjunctions, it has nevertheless Strength to rise again, in more favourable Seasons, and even to recover all that it has lost. In our Author's time the States of *Sweden* were but Instruments of the King's Authority, and only met to sanctify such Acts of Power as the Crown did not care to take upon itself. At this Day things have quite changed their Face; the Kings of *Sweden* have wholly lost their absolute Power, which remains where it ought to remain, in the Representatives of the Nobility, Clergy, and People of the Kingdom. The usual Time of assembling the States is once in three Years, or oftner, if Affairs require it. The Letters for calling them together are sent to the Go-

vernors of Provinces, who thereupon write to each Nobleman and Gentleman, and to the Bishops, who cause the same to be published in all Churches.

The Body of the Nobility and Gentry are represented by one in each Family, of which there are about a thousand in *Sweden*, and with them the Colonel, Lieutenant Colonel, Major, and one Captain of each Regiment sit and vote. For the Clergy, besides the Bishops and Superintendants in each rural Deanery, or ten Parishes, one is chosen and maintained at the Charge of his Electors. These make a Body of about five hundred. The Representatives of the Burghers are chosen by the Magistrates and Common Council of each Corporation, of which *Stockholm* sends four, others two, and some one; who make about one hundred and fifty. The Peasants of each District choose one of their own Quality to appear for them, whose Charges they bear; and give him Instructions, in such Matters, as they think need Redress; they are about two hundred and fifty. The first Meeting, when at *Stockholm*, is in a large Room in the Castle, called *The Hall of the Kingdom*; where his Majesty being seated on the Throne, and the Privy Counsellors sitting at some Distance, the President of the Chancery makes them a Compliment in the King's Name, and then a Secretary reads the King's Proposals to them; in which they are acquainted with the State of Affairs since their Recess, and the present Occasion of their Advice and Assistance. To which, first the Marshal of the Nobility, who is chosen by the King, returns an Answer, and kisses the King's Hand, and after him the Archbishop in the Name of the Clergy; the first Burgomaster of *Stockholm* in the Name of the Burghers; and one of the Peasants for his Brethren. They then separate into four different Houses, and chuse a Secret Committee, composed of an equal Number of each Body, who receive from the King's Ministers such further Informations of his Majesty's Pleasure, as are not thought fit to be communicated in Public; and thereupon prepare such Matters as are to be proposed to the several Bodies. In each House Matters are concluded by Majority of Voices, and if one or more of these Bodies differ in Opinion from the rest, they are either brought over by Persuasions, or the Point remains unconcluded.

When the Affairs proposed by the King are finished, they then insinuate their Grievances. Each Body severally. To which the King returns such Answers as he thinks fit; and to each Member of the three inferior Bodies an authentic Copy is delivered, as well of the general Conclusion made by the whole States, as of the King's Answer to the Grievances of his respective Body, which he carries Home to his Electors.

The standing Revenues of *Sweden* arise from Crown Lands, Customs, Poll-Money, Tithes, Copper and Silver Mines, Proceedings at Law, and other less considerable Particulars, which are calculated in all to near a Million a Year; of which the Lands make above one Third, and the Customs almost a Fourth. The Poll-Money is paid only by the Peasants, each of which above Sixteen and under Sixty pays above twelve Pounds a Year. In the Treasury-Chamber a President, with four Chancellors, and other Officers, sit and act as a Court of Justice, in such Matters as relate to the King's Revenue, or rather that of the State.

As for the Administration of the Government, at the Time when the Dyet is not sitting, it is invested in the King, assisted by the Senate, without whose Consent he cannot legally do any thing of great Importance. As to the Number of Senators; we know, by Experience, that the States of the Kingdom think themselves at Liberty to augment or diminish it at Pleasure; but, at present, it is fixed to fourteen. These Senators are not only at Liberty to give their Sentiments upon all Affairs that are brought before them, but are intrusted also with the entire Management of public Concerns, in case of the Indisposition or Absence of the Prince. A Senator presides in each of the great Courts of Justice in the Kingdom, and are usually placed at the Head of all particular Commissions, Civil and Military. Their Salaries, as Senators, amount to about three hundred Pounds a Year; but their being generally possessed of the most beneficial

beneficial Employments, enables them sufficiently to support their Dignity with becoming Magnificence.

The King is not at Liberty to fill up the Number, upon a Vacancy, but must wait till the Dyet assembles; when the Secret Committee proposes to his Majesty the Names of three Persons for each Vacancy, one of which he appoints. The Order of Peasants was formerly excluded from the Secret Committee, which they thought very hard, and made frequent Struggles in order to gain Admittance; in which, till within these few Years, they were always unsuccessful. But the last War with *Russia* enabled them to carry their Point, and to gain Entrance for their Deputies; the other Orders, however, attempted to exclude them again in the present Dyet, but miscarried; so that in all Probability they will be constantly admitted for the future.

9. The Conquests made by *Sweden* in the last Age, were not so much owing to its native Strength, as to the foreign Assistance of *Germans, French, English*, and especially *Scots*, of whom they have used great Numbers in all their Wars with *Muscovy, Poland, Germany, and Denmark*; and by them the Art of War and Military Discipline has been by Degrees introduced into this Nation, that in former Times had only the Advantage of Courage and Numbers: For though the original Constitution of the Country, and its Division into Hundreds and other large Portions, that still retain Military Names, seems to have been the Work of Armies, and the frequent Expeditions of the *Goths*, and other Inhabitants, of those Parts, shew that in all Ages they were addicted to War and Violence, yet it was in a tumultuous manner, their Infantry always consisting of unexperienced Peasants raised for the Occasion, and disbanded as soon as it was over.

The Feudal Laws indeed provided for a competent Number of Cavalry; all Estates of the Nobility and Gentry being held by Knights-Service: And while the Kingdom was elective, the Kings were bound to maintain some Horse out of the Revenue of the Crown. But this Establishment had been in a great measure corrupted, and the Kingdom so shattered by domestic Broils, that it made a very inconsiderable Figure, and was little known in *Europe* till the Crown became hereditary, and the Interest of the Royal Family consisted in the Strength and Prosperity of the Nation. Since that Time the standing Forces of the Kingdom have been augmented, yet not so effectually established as its Necessities required; for it generally happened that the Nobility and Gentry were so backward in fitting out their Horse, and the Levies of Foot not being to be made without the Consent of the Peasants in the Assembly of the States, it was so hardly obtained, that the Regiments were very thin, and Recruits extreme difficult; nor were the Officers Salaries so punctually paid as to enable them to be in Readiness on all Occasions.

To remedy these Inconveniences, *Charles* the XIth, on whom the States had conferred an absolute Power to put the Militia into such a Method as he should think fit, made such Regulations in all the Particulars relating to this Matter, as were required to bring it to Perfection. The new Injunctions he made about the Cavalry that the Nobility and Gentry furnished, are so exact, that it is not in their Power to put either the Men or the Horse, that are once listed, to other Employments than what are there specified; but must have them in a continual Readiness whenever they are called upon, with such Arms and Equipage as his Majesty hath directed; in default of which, severe Penalties are inflicted, and the Estates they hold by that Service, subject to Confiscation.

For the Infantry the King has taken the like Care; and whereas formerly Levies could not be made but by Consent of the States, and that but by small Parcels at a time, and with such Disturbance, that on these Occasions it was usual for half the Peasants to run into the Woods and other hiding Places, to escape being Soldiers: This has been remedied by the King's Commissioners, who have distributed the Infantry of each Province proportionably to the Number of Farms, each of which of the Value of above sixty or seventy Pounds a Year (not being appropriated to the Officers or other peculiar Services) is

charged with one Foot Soldier, who receives from the Farmer, Diet, Lodging, ordinary Cloths, and about twenty Shillings a Year in Money; or else a little wooden House is built for him at the Farmer's Charge, who must also furnish him with as much Hay as will keep a Cow in Winter, and Pasture in Summer, and plough and sow for him such a Parcel of Ground as will afford him Bread: They that are married generally accept this latter Condition. The unmarried Soldiers usually lodge with the Farmer; but are not bound to do him any Service without Wages. When they have once taken the Farmer's Money, and are listed into the King's Service, they can never quit it so long as they are able to serve; and if they desert are punished with Death.

The first Institution of this Method was very burdensome to the Peasants, who were at great Charge to hire their Men, which cost fourteen, and sometimes twenty Pounds apiece; and the same whenever their Soldiers died. This in peaceable Times will not be so chargeable as it is in Times of War, when Men are unwilling to serve, and Recruits more frequently needed. As all the common Soldiers are thus provided for at the Country's Expence, so all Officers both of Horse and Foot, are maintained by the King, who hath appointed so much of the Lands lately reunited, or formerly belonging to the Crown, to that Purpose: So that every Officer hath a convenient House and competent Portion of Land to live upon, situate in that part of the Country where the Regiment he belongs to is quartered; as also the Rent of so many other Farms as make up his Pay eighteen Pounds, though it be somewhat less than formerly; yet, being punctually paid either in Money, Corn, or other Commodities, they find it more profitable than when they were to solicit for it at the Treasury: A Colonel of Foot has of these Lands the yearly Rent of about three hundred Pounds, and the rest proportionably; which amounts to about two thousand five hundred Pounds a Year for all the Officers of one Foot Regiment; and there being in *Sweden, Finland, and Leifland*, twenty Regiments of Foot under this Establishment, the Maintenance of all the Officers belonging to them costs the King about fifty thousand Pounds a Year. What Charge the Cloathing of the common Soldiers once in two or three Years, their Arms and other Necessaries may put the King to, cannot be so easily computed.

The Officers of Horse are provided for after the same manner, with such larger Allowance as is requisite: There are fifteen Regiments of Horse thus established, and the Maintenance of their Officers is computed to be about eighty thousand Pounds a Year; all which arises from the Rents of Crown-Lands, as do also the Wages of Civil Officers in the Country, who have Farms annexed to their Employments in the same Manner as the Militia. The Laws the King has made for maintaining this Constitution are very exact, and provide with great Caution, that neither the Peasants shall be oppressed, nor the Lands and Houses ruined; to which End all such Lands are yearly visited, and the Possessor compelled to make such Repairs as are found needful: And as every Officer upon his first coming to such an Estate, subscribes an Inventory of it, so upon Advancement he cannot take Possession of another Charge till he hath put the Estate into as good a Condition as he found it; and in Case of Death, his Heirs cannot inherit till that be done.

In Times of Peace, all Trespasses committed by the Soldiery fall ordinarily under the Cognizance of a Civil Magistrate, who has the same Authority over them, as over the rest of the King's Subjects, except when they are encamped, or in Garrison, or any way under flying Colours; in all which Cases, as also in Matters that relate solely to their Profession, their Officers have Jurisdiction over them, without whose Leave a private Soldier is not permitted to lodge out of his Quarters, or be out a Day from the Parish he belongs to.

The inferior Officers cannot be absent from their Charge but by the Colonel's Permission; nor Captains, nor those above them, without the King's Leave; and the good Effect of the Officers constant Residence upon their respective Charges, appears in the quiet and peaceable Behaviour

haviour of the Soldiers, who have not hitherto broke out into any Enormities, nor given the common People any great Occasion of Complaint. To keep them in Discipline, each Company meets, and is exercised once a Month, and every Regiment once or twice a Year; at which time only they wear the King's Cloaths, which, at their Return, are carefully laid up in the Churches. For their Government in Time of War, the King hath lately caused the Articles of War to be reviewed and printed, together with a new Establishment of Courts Martial, and Instructions for the Auditors, Governors, and other Officers concerned in the Ministration of Justice; and for his Majesty's Information on all Occasions, a Book hath been lately made, specifying the Names of every Military Officer in the King's Army, the Time when they first came into the Service, and by what Steps they have risen; by which Means, at one View, his Majesty knows the Merit and Service of any Officer. The whole Body of the King of Sweden's Forces, according to the best and most exact Accounts are as follow:

*The established Militia in Sweden, Finland, and
Liefland or Livonia, are*

	Men
Cavalry, fifteen Regiments, is - - - - -	17,000
Infantry, twenty-eight Regiments, is - - - - -	35,000
Foot-Guards, one Regiment, is - - - - -	2,000
Forces in <i>Pomoren</i> and <i>Bremen</i> , six Regim. (now lost)	6,000
In all fifty Regiments, is - - - - -	60,000

10. Sweden has in all Times furnished Europe with those Commodities it abounds with, yet either the Warlike Temper, Idleness, or Ignorance of the Inhabitants formerly, kept them from being much concerned in Trade, and gave Strangers the Management and Advantage of it; which for a long time the Hanse-Towns situate on the *Baltic* Sea monopolized, till the seven Provinces of the *Netherlands* were erected into a Republic, and became Sharers with them. Before that Time very little Iron was made in Sweden; but the Ore being run into Pigs, was carried into *Dantzick*, and other Parts of *Prussia*, and there forged into Bars; for which Reason the Country Smiths, in *England*, call foreign Iron *Dantzick* or *Spruce* Iron. This Nation owes the greatest Improvements it has made in Trade, to the Art and Industry of some ingenious Mechanics that the Cruelty of the Duke of *Alva* drove into those Parts. Their Success invited great Numbers of reformed *Walloons* to transplant themselves thither, whose Language and Religion remain in the Places they settled in; where they erected Forges and other Conveniencies for making of Iron Guns, Wire, and all other Manufactures of Copper, Brass, and Iron; which for the most part are still carried on by their Posterity.

The *Swedish* Navigation was very inconsiderable till Queen *Christiana*, at the Conclusion of the Wars in 1644, obtained from *Denmark* a Freedom from Customs for all Ships and Goods belonging to *Swedish* Subjects in their Passage through the *Sound*, and established in her own Dominions that Difference in Customs that still subsists between *Swedish* and foreign Ships, and is in Proportion of four, five, six; the first called Whole Free; the second, Half; and the last, Unfree: So that where a Whole Free *Swedish* Ship pays four hundred Crowns, Half Free pays five hundred, and a foreign Vessel six hundred. But as great as this Advantage was it had but little Effect, till the *English* Act of Navigation bridled the *Hollanders*, and opened the Intercourse between *England* and *Sweden*. Since that Time, their Commerce has been much augmented as well as ours, that Way; and Goods transported by both, or either Party, according to the various Junctures of Affairs.

When *Sweden* has been engaged in a War, the *English* Ships have had the whole Employ; but in Times of Peace, the Advantage is so great on the *Swedish* Side, and Merchants so much encouraged by Freedom in Customs to employ their Ships, that *English* Bottoms cannot be used in that Trade, but while *Sweden* is unprovided with a Number of Ships sufficient for the Trans-

portation of their own Commodities. The chief Commodities of *Sweden* are Copper, Iron, Pitch, Tar, Masts, Deals, and wooden Ware, to the Value of about seven hundred thousand Pounds a Year. In Return of which they receive from Abroad, Salt, Wines, and Brandy, Cloths, Shifts, Tobacco, Sugar, Spices, Paper, Linnen, and several other Sorts of Goods; which are supposed commonly to balance their Importations, and sometimes exceed them. Their Trade to *Portugal* for Salt is accounted most necessary, as without great Quantities of which they cannot subsist. That with *England* is more beneficial, because it takes off almost half their own Commodities, and brings in near two thirds of Money for one of Goods. The worst is their *French* Trade, as it rather supplies their Vanities than their Necessities, and gives little or no Vent to the Commodities of the Country.

The general Direction of their Trade belongs to the College of Commerce; which consists of the President of the Treasury, and four Counsellors, who hear Causes of that Nature, and redress any Disorders that happen. The Bank at *Stockholm* is of great Benefit to Trade, as well in regard that the King's Customs for that City are paid in there; as also that the Merchants ordinarily make Payments to each other by Bills drawn upon it, which eases them of a great deal of Trouble in transporting their Money from Place to Place, that would otherwise be very difficult and chargeable. The Management of the Trade of *Sweden* has always been in the Hands of Strangers, most of the Natives wanting either Capacity or Application, and all of them Stocks to drive it: For without Credit from Abroad, they are not able to keep their Iron Works going; and therefore at the beginning of Winter they usually made Contracts with the *English*, and other Foreigners, who then advance considerable Sums, and receive Iron in Summer.

Were it not for this Necessity foreign Merchants would have but little Encouragement, or scarce Permission, to live and trade amongst them; and even, as the Case stands, the Treatment of them is as rigorous as in any Country, occasioned chiefly by the Burghers; who cannot, with any Patience, see a Stranger live amongst them. This is the less sensible to the *Dutch* and others, who some become Burghers, and the rest by their near way of Living are less subject to Envy; but is more especially the Case of the *English* Merchants, who find it not their Interest to become Burghers, and usually live somewhat too high. The Interest of *England* in the Trade of *Sweden*, may be computed by the Necessaries to us, and the Vent of ours there: Their Copper, Iron, Tar, Pitch, Masts, &c. cannot be had elsewhere, except from *America*, whence it has been supposed such Supplies were furnished; and, if so, this Consideration ought in reason to have an Influence on the *Swedish* Councils, and engage them to make the *English* Trade with them as easy as possible, that the Merchants be not driven upon new Designs. As to our Importations thither, it has already been said that they scarce amount to one third of what we export from thence, and consist chiefly of Cloth, Stuffs, and other woollen Manufactures, of which there have been formerly vended yearly there, to the Value of about fifty thousand Pounds. Besides those, Tobacco, *Newcastle* Coals, Pewter, Lead, Tin, Fruits, and Sugar, with several other of our Commodities, are sold at the Market; as also good Quantities of Herrings from *Scotland*, with other of their Wares: That in all, we are supposed to vend Goods to about one hundred thousand Pounds a Year. If any more than Half be paid for it is looked on as very extraordinary.

But the making of Cloth in *Sweden* to supply the Army, &c. which has been formerly endeavoured without Success, being now encouraged and assisted by the Public, and undertaken, has of late, and does now, prove a great Hindrance to the Vent of our Cloth there. And to favour this Undertaking, *English* Cloth now (unless it be such finer Cloths as cannot be made there) is clogged with such excessive Duties as render the Importation impracticable. These Undertakers have got Workmen from *Germany*, and some from *England*; and besides the *German* Wool they use, they receive great Quantities from *Scotland*.

Scotland, (supposed to be purchased out of *England*) without which they cannot work; yet, as at present, the *English* Trade in *Sweden* is of the Importance above-mentioned, notwithstanding the Abatements aforesaid. It is, however, considerable, and will be so while their Commodities continue to be necessary, and those that are concerned in it will deserve, as they need, Protection and Encouragement.

The last Treaty of Commerce between the two Nations, expired several Years ago, and that of an older, neither suits the present State of Things, nor has been thought by the *Swedes* to subsist; tho' now, for their own Interest, they insist upon the contrary: Accordingly their Treatment of the *English* only, in reference to their own Convenience; and as the Subject of former Complaint still remains, so new Burdens are frequently imposed upon them. Sometimes they have demanded of Merchants that were leaving the Country, a sixth Part of their Estates they had got in it, and arrested their Effects upon that Account. And besides others, that more directly concerns their Trade, the quartering of Soldiers, and paying of Contributions, have been enacted for some Years, and sometimes the *English* are forced to submit to it. In the Year 1687, they petitioned the King, for Redress of these Impositions, which were then very high; upon some above fifty Pounds, upon others forty, thirty, &c. Besides that, such of them as kept House had Soldiers quartered upon them, some three, six, or eight. In answer to their Petition, a Placart was published, declaring, that they should be exempt from these Payments, but withal, that no foreign Merchant should continue to trade in *Sweden* above two Months in a Year, unless he would become a Burgher.

In pursuance of which Resolution, their Warehouses were shut up for some time, and the *Swedes* seem resolved to proceed to Extremity, but have not put that Resolution generally in Execution, though they seem to wait for an Opportunity, and now and then they try it upon particular Persons, to see how foreign Princes will take it. The Law that exacts the third Part of such foreign Merchants Estates as die in *Sweden*, has not in effect been so beneficial to the *Swedes*, as frightful to the Merchants, who for that and other Reasons, never think of marrying and settling there so long as their Affairs are in good Order, and they in a Condition to return home with a competent Estate, and Credit too; from which Account *England* seems to be less concerned to endeavour the Repeal of that Law, it being more useful to have

Sweden a Nursery for young Merchants, than a Place of Settlement for those that have got Estates.

11. These Observations and Remarks upon the Kingdom of *Sweden* were written about fifty Years ago, and yet I judged it proper to insert them here with very few Alterations; and this the rather, because having taken some Pains to make myself Master of the Subject, I have been from thence led to judge, that it is not easy to obtain any thing relating thereto more perfect in its kind. The Judgment of its Author shines through the whole Piece, and shews that he was a very sensible, intelligent, and capable Person; one who understood both Mankind and Government perfectly well, who had many more Opportunities to make, as well as much more Leisure to digest, his Inquiries than ordinary Travellers can be presumed to have, and therefore his Accounts are more to be depended on, and his Reflections deserve greater Regard than those that occur in common Books of Travels.

It must be allowed that great Alterations have happened in *Sweden* since his Time. Upon the Death of the late King *Charles XII.* the *Swedish* Nation very wisely laid hold of that Opportunity to recover their ancient Constitution, to restrain the Power of the Crown within just Bounds, to restore that of the States, and of the Senate; and they have made the best Use that could be of this Alteration, by electing a Prince of the Royal Family to be the Successor of the present King, and making the Crown hereditary in his Family; but in such a Manner as is consistent with their Freedom. They have likewise taken very just and prudent Precautions for preserving, increasing, and extending the Commerce of their Country, which, though at present less considerable than it formerly was, is, however, in such Circumstances as seem to promise the Recovery of its former interior Strength, which must be attended sooner or later with the Restoration of its ancient Grandeur, since both Reason and Experience teach us, that when due Care is taken for securing the Peace, the Freedom, and Prosperity of any People at home, they certainly become respected by their Neighbours, and consequently as considerable abroad, as it is consistent with their own Interest and those of their Neighbours that they should be. After thus presenting the Reader with a fair Idea of the State and Condition of *Sweden*, it is requisite that we should proceed to that of the next northern Crown, of which we shall speak as clearly and as succinctly as may be, without adhering to any particular Author, that we may take in a great Variety of Observations, and bring these within the narrower Compass.

SECTION III.

The present State of the Dominions of the Crown of DENMARK, and of its Subjects, in respect to their Manners, Customs, Laws, Forces, Revenues, Commodities, and Commerce; with occasional Observations and Remarks.

Collected from the Writings of Mr. *Molesworth*, and other Authors of Credit.

1. An Introduction, shewing the Nature and Importance of this Section; and the Authorities upon which it is founded.
2. The Climate of the several Parts of the Danish Dominions, the Seas by which they are bounded, and the Nature of the Toll which the Danes exact in the Sound.
3. The Soil and Produce of the several Countries and Islands belonging to the Crown of Denmark.
4. Of the Commodities and Commerce of this Country.
5. Of the Forces of the Danes by Sea and Land.
6. Of the King's Revenues, and the Manner of Living and the Amount of them.
7. The Temper, Genius, Manners and Customs of the Danes.
8. The Laws in this Country, with respect to Civil, Ecclesiastical, and Commercial Affairs.
9. The present State of Religion, and of their Clergy; with other Matters of the like Nature.
10. The Nature of the Tenures in Denmark, and the Manner in which Estates are held there; with other Particulars relative to that Subject.
11. Observations and Remarks upon the foregoing Section; with some Conjectures as to the future State of this Country and its Inhabitants.

1. **T**HERE is scarce any Country in *Europe*, or at least in the North, with which we ought to be better acquainted than with *Denmark*, considering that the Inhabitants of it were once Masters of a great Part of this Island, that our Princes have frequently intermarried with the Families of the *Danish* Kings, and that we have still as great Connection with this Kingdom and Court as with any of the Northern Powers. But notwithstanding this it so happens that we are very far from being generally well informed as to this Nation and its Concerns. It is true that Mr. *Molesworth*, who resided at *Copenhagen* in the Reign of the late King *William*, has written a valuable and much esteemed Treatise upon this Subject; in which he very fully explains the Causes of, and the Manner in which, that great Revolution happened, whereby the Kings of *Denmark* from being elective and limited became hereditary and absolute in 1660. And by the Way it may not be amiss to observe, that this is the only legal absolute Monarchy, perhaps, in the World; the King being declared so by the States of the Kingdom, who had that Power by the Constitution.

It is indeed true that there was a Force put upon the Nobility; but it was a Force put upon them by the People, who knew that they made a very bad Use of the Authority they enjoyed in virtue of their old Constitution; and therefore made it their Choice to live under an absolute King, rather than under a tyrannical Aristocracy. We may learn, from hence, several Things worthy of our Observation; and, among them, these: That when, in a mixed or limited Government, any Part of it gains such a Superiority over the rest as is destructive of the End of such a Government, which is the Good of the Whole, it cannot long subsist; but must infallibly be dissolved, either by the Usurpers of such Power being in a Condition to preserve it, or by the joining of the oppressed Parts of the Government, as in this Case, to raise up another Power capable of controlling such an Usurpation. That as a Democracy, or popular State, is, of all others, soonest corrupted; so an Aristocracy, or Government by a few, is, when corrupted, the least to be borne, especially in States which have a visible Head; and that, in such Revolutions, the Change is seldom, if ever, from a tyrannical to a mixed Government; but from one despotic Power to another. But though the Book before-mentioned states those Points very clearly, and, for the Time in which it was written, is certainly as good a one as can be wished; yet it is now, in some Measure, out of Date: And, therefore, in order to have a tolerable Idea of the present State of this Country, we must have recourse to other and later Observations.

The Dominions of the Crown of *Denmark* consist of the great Kingdom of *Norway*, of which some Account has been given in the former Section, and therefore we shall say but little of it here; of the Peninsula of *Jutland*, which, from the Frontiers of *Germany* to its utmost northern Bounds, is about two hundred and seventy Miles in Length, and of different Breadths; of the Duchy of *Holstein*, which the King of *Denmark* holds jointly with the Duke of that Title; of the *Danish* Islands, the Chief of which are *Zealand*, *Funen*, and *Iceland*; and of several Countries in *Germany*, such as *Oldenbourg*, *Delmenhorst*, and other Places, partly the hereditary Dominions of the Royal Family, and partly obtained by Conquest. We may easily discern, from hence, that this Crown must always have a considerable Share in the general System of Things in *Europe*, as well as in the particular Distribution of Power in the North; and consequently, though its Dominions lie a little out of the way, and we do not very frequently hear of the Effects either of the Power or Policy of the Kings of *Denmark*, yet the Nature of their Dominions, and the Temper of their Subjects, is very well worth the knowing. For such is the Nature of Things in this World, and such the constant Fluctuation of Interest and Power, that we can never rely, with any Certainty, on the present System; nor can we easily foresee what Turns or Changes may happen, so as to judge, with any Degree of Accuracy, which of the Powers, at present great, shall decline; or which of those, that are now low, shall rise, and become considerable, unless we look into their respective Conditions narrowly, and thereby gain some tolerable Notion of the

Chances they have of changing their present Situations, either for the better or the worse. After shewing, as we have done, the Use and Importance of the present Section, let us now proceed to the proper Business of it, with as much Clearness and Brevity as possible.

2. The Air of *Denmark* is not good, especially near *Copenhagen*, which is supposed to proceed from its low Situation, and the frequent Fogs there. The Air of *Sleswick* and *Holstein* is better than that in the northern Parts, and the Country more desirable upon many Accounts, as will appear hereafter. The same Observations are made as to the Seasons in *Denmark* as in *Sweden*, viz. That the Year is divided into Winter and Summer; that they have no Spring, and very seldom any Autumn; but they proceed immediately from an extreme Cold to an Extremity of Heat; and, in the latter-end of the Year, from violent hot Weather to an Extremity of Cold. During the Months of *June*, *July*, and *August*, the Heat is more intense than in *England*, and the Nights not near so cool as with us, though they are so many Degrees to the Northward; nor do they enjoy a clear Sunshine during those Heats, but thick Vapours all the time between them and the Sun: And indeed it is a general Observation, that the Heaven is much brighter and more serene far within the Continent, than it is near the Sea-coast; nor is the Air less clear and pleasant at Sea, a great Distance from Land, than it is in the Middle of the Continent. But this Observation holds more true within the Tropics, than it does either in the Northern or the Southern Latitudes. The Air of *Norway* is excessive cold; but especially within the Polar Circle, which is inhabited by the *Laplanders*. The more Southerly Part of the Country differs but little from *Sweden*, from which it is separated only by the *Doffrine* Hills.

The Seas bordering on the *Danish* Dominions are the *German* Ocean, the *Baltic*, in which is that famous Streight or Passage into the *East-Sea*, called the *Ore Sound*, or generally the *Sound* of the *Baltic*. It hath been observed, that there are no Tides in it, and that its Waters are fresher than the Ocean, supposed to be occasioned by the Rivers that run into it. The *Sound* is about four Miles over, having the Island of *Zealand* on the West, and the Continent of *Schonen* on the East. In the narrowest Part of the Streight, on *Zealand*, or *Denmark* Side, stands the Town of *Elseneur*, and the strong Castle of *Cronenbourg*, before which there is a tolerable Road for Shipping. On the Side of *Schonen*, in the Possession of the *Swedes*, is the Town of *Helsingbourg*, and a small Battery of Guns, which serve only to salute the Ships which pass by it. Between those two Places sail all the Shipping bound to the *Baltic*. The *Danes*, however, only receive the Toll of all Merchantmen who pass by it; though the *Swedes* are Masters of the opposite Shore, by virtue of the Treaty concluded when they yielded up *Schonen* to them. But the *Swedes* themselves were exempted from paying any Duties, till the last Peace in the Year 1721, when the Affairs of the *Swedes* were in a very desperate Condition, and then they condescended to pay a Toll to *Denmark*, as other Nations did, on their passing the *Sound*.

This Duty is supposed to have arisen from the mutual Consent of the Merchants trading to the East Country, who at first contributed a small Sum towards maintaining of Light-houses on the Coast for their own Security; and thereupon this Passage of the *Sound* came to be more used than that of either *Belt* to the Westward of the Isle of *Zealand*, which, in other Respects, seem as commodious as this. From some such Beginnings the *Danes* proceeded to demand large Sums, and that as their undoubted Right, being Masters of both Shores. The Emperor *Charles V.*, in behalf of his Subjects of the seventeen Provinces of the *Low Countries*, came to an Agreement with the *Danes*, That every Ship of two hundred Tons and under, passing the *Sound*, should pay two Rix Nobles going and coming from the *Baltic*; and every Ship above that Burden, three Nobles; which Agreement remained in force until the United Provinces set up for independent States; after which the *Danes* obliged the *Dutch* to pay extravagant Rates.

But the *Hollanders* and *Lubeckers* opposing these Exactions

actions about the Year 1600, obliged the *Danes* to accept of more moderate Duties. The first solemn Treaty the *Dutch* made with the *Danes* concerning this Toll was in the Year 1647, wherein they agreed to pay about twenty-five Pounds for every Ship of two hundred Tons passing the Streights for forty Years, at the Expiration of which, the first Agreement with the Emperor was to be in force. And the *English*, in their Treaties with *Denmark*, agreed to pay Toll as the *Dutch* and other Nations in friendship with them did. As to the free States of *England* and *Holland*, they ask no Permission of the *Danes* to pass the *Sound*; for the Castles on the Shores are at too great a Distance to prevent it, and, if they had not a Squadron of Men of War ready to compel the Merchant to pay the Toll, he might pass by unhurt. Besides, the Passage called the *Great Belt*, between the Islands of *Zealand* and *Funen* is much wider; and that of the *Lesser Belt*, between *Funen* and the Continent of *Jutland* is not at all impracticable.

3. The Nature of the Soil, in Dominions so far extended, and so much disjointed, as those of *Denmark* are, must be various. The Island of *Zealand*, wherein the capital City of *Copenhagen* stands, produces no Corn, but Rye, of which most of their Bread is made. Of this they have enough for the Subsistence of the Inhabitants, but not to export. There is not much Meadow or Pasture Ground in the Island; but what they have is short and sweet. One fourth Part of the Country is Forest, and reserved for the King's Game, such as Stags, wild Boars, &c. which no Subject dares meddle with, though he finds whole Herds of them devouring his Corn, and the Farmers are generally great Sufferers by them. In a wet Season they have the greatest Plenty of Grain in *Zealand*. Their Cattle are small, and lean in the Winter, kept within Doors for seven or eight Months of the Year, and fed with Grains, Roots, Weeds, and such Stuff as their Owners can provide; but, in Summer, when there is Grass to be had, their Beef is pretty good. Near *Copenhagen* the Sea is not stored with Fish, which is supposed to proceed from the Water not being so salt as that in other Seas. The Island of *Funen* produces Corn and Wood sufficient for the Natives, and they have Cattle for their Use; but it affords nothing for Exportation, except a few Horses. *Laland* is a plentiful Island, and produces all Sorts of Corn in Abundance, particularly Wheat, with which it supplies *Copenhagen*, and all other Parts of *Denmark*, in small Quantities; for Wheat is a great Rarity among them.

The Islands of *Falstria*, *Langland*, and *Mona*, are reckoned tolerably fruitful; *Arroe* and *Alsen* produce Anniseeds, which they mix with their Bread, and use it in seasoning their Meat. *Jutland* hath Corn enough for the Natives, and abounds in Cattle. The Horses and Hogs of this Country are reckoned very good, and black Cattle are transported lean from hence to *Holland*, where they grow fat in a short time, of which the *Dutch* make a considerable Profit. The Country of *Sleswick* hath a sufficient quantity of Corn, Cattle, and Horses, with which they furnish their Neighbours. *Holstein* is a pleasant, fruitful Country, said to resemble *England* in its Variety of Hills, Woods, Rivers, Meadows, and Corn Fields. *Stormar* and *Ditmarch* lie down near the *Elb*, being a rich Soil, compared to *Holland* for Fertility and Improvement of its Lands, which are sometimes overflowed, however, by the neighbouring Ocean. *Oldenbourg* also is a flat Country, much exposed to Inundations; but abounds in Cattle, and hath a Breed of Horses esteemed for being of a white or cream Colour; tho' they have generally tender Feet, and last but a little while. *Delmenhorst* is a more hilly Country than *Oldenbourg*, and pretty well wooded. *Norway* and *Lapland* having been largely described in the first Section of this Chapter, there is no Need of dwelling upon them here.

The Islands of *Iceland*, *Fero*, and *Schetland* are almost as barren as *Norway*; Corn will scarce grow in any of them; but they abound in Cattle. The Natives of *Iceland* feed on the Flesh of Bears, Wolves, and Foxes, and Bread made of dried Fish beat to Powder. They barter their dried Fish, Tallow, and Sulphur for such other Commodities as they want. There are not, either

in the Islands of *Iceland* or *Fero*; any Trees, except Juniper-shrubs, Birch, and Willows; but they have Roots, and other Garden-stuff, which, with their Fish, are their greatest Support. They have good Pasture, and a tolerable Breed of Black Cattle, small-sized Horses, and some Flocks of Sheep, and almost all manner of Roots and Herbs which grow in other Kitchen-gardens; and are pretty well stocked with Fish and Fowl. But the Cold is very severe in all these Islands, and their Winter is dark, as may easily be gathered from their Situation.

4. As to the Manufactures of *Denmark* and *Norway*, there are none, except that of Iron; which is not very considerable. *Holstein* and *Sleswick* seem to be extremely well situated for foreign Trade, lying both upon the *Baltic* and the Ocean; but reap little Advantage from their Situation at present. *Hamburg* on one Side, and *Lubeck* on the other, which border upon *Holstein*, are indeed Towns of great Trade, and the *Dane* sometimes pretends to the Sovereignty of *Hamburg*; but, by the Countenance of the neighbouring Powers, that City hath hitherto preserved her Liberties. *Jutland* and *Holstein* export nothing but Horses and Cattle. From *Norway*, indeed, there are great Quantities of Fir-timber, for Masts, Yards, and Planks exported, with Pitch, Tar, Stock-fish, Oil, and Iron, for which they receive ready Money chiefly of the *English*; but, of the *French*, Wine, Brandy, Alamodes, and other Trifles.

The *Danes* have some inconsiderable Factories in the *West-Indies*, and on the Coast of *Guinea*; and in the *East-Indies*, they are Masters of the City and Fort of *Tranguebar*, one of the most considerable Towns on the East-side of the Continent; and from hence are sent home, some Years, two or three Ships. The *Dutch* have, for many Years, been endeavouring to undermine the *Danes* in the *East-Indies*, and make themselves Masters of the Town of *Tranguebar*, inciting the Natives to lay siege to it; and the *Danes* were in great Danger of losing it about five-and-twenty Years ago; but were generously supported by Mr. Pitt, the Governor of *Fort St. George*, as we have shewn at large in our former Volume. The *Danes* are reckoned to have more Shipping than the *Swedes*, the Reason whereof may be, that *Norway* furnishes a considerable Number of hardy Seamen, who are used to those boisterous Seas; and the *Dutch* also maintain great Numbers of *Norwegians* in their Fleets, where they live better than on their own barren Coasts, which makes these People apply themselves more to the Sea-service than any other Subjects of *Denmark*; and there is always a considerable Number of them ready to man the royal Navy: Which brings us to enquire into the Strength and Forces of the *Danes* by Sea and Land.

5. We cannot enter upon this Head without making the same Reflections that Mr. Moleworth does. It is certain that the levying Taxes here is not more grievous to the People, than the Reason for which they are levied; the Maintenance of a great standing Army. The People are made Contributors to their own Misery, and their Purfes drained in order to maintain their Slavery. The *French* King has taught the Princes of *Europe* that pernicious Secret of making one Part of the People bridle and scourge the other; which, in time, must needs end in a general Desolation. The King of *Denmark* hath even endeavoured to exceed his Original, in raising more Men than his Country will maintain; and, at present, the Northern and German Princes estimate their Wealth not by the Fertility or Extent of their Territory, by the Trade or Industry of the People, but by the Numbers of Horse and Foot in their Service; for the Subsistence of which, after they have eaten up their own Subjects, they make use of an hundred cruel and unjust Pretences to ruin and encroach on their Neighbours; and, when they cannot accomplish such Projects, foment Quarrels among other Princes, that they may have an Opportunity of letting out their Troops for Hire; and have found the Art of receiving Pay, without interesting themselves in the Quarrel; which hath been the constant Practice of the *Danes*, and some neighbouring Princes, for many Years past. Those Practices, however, have been very pernicious to *Denmark*.

Nor have the *Danes* succeeded in any of their Attempts against

against the City of *Hamburg*; but, in the last War, taking Advantage of the Distress the *Swedes* were reduced to by a potent Confederacy, the *Dane* made himself Master of *Bremen* and *Verden*, which he afterwards conveyed to the Sovereign of *Hanover*; and seized also on the late Duke of *Holstein's* Territories, in his Minority, which he still keeps. It is computed that *Denmark*, *Holstein*, and *Oldenbourg* maintain five thousand four hundred and fifty Horse, fifteen hundred Dragoons, and seventeen thousand Foot. *Norway* maintains twelve hundred and thirty-six Horse and Dragoons, and fourteen thousand three hundred Foot, making in all a Body of near forty thousand Men. The Foot-Soldiers, both Officers and private Men, are generally Foreigners, of all Countries, *Poles*, *Germans*, *Swedes*, *Scots*, &c. There are more Reasons than one for not employing too many of the Natives; but the principal, lest they should shew too much Affection to their own Country, and not so readily obey the arbitrary Commands of their Princes. Officers of Horse receive no more Pay, in time of Peace, than those of the Foot. The Horse are usually Natives, and maintained every one by a Free-holder or Farmer, who is obliged to provide him and his Horse Meat, and six Shillings a Month in Money, half of which the Colonel takes towards his Mounting; and in *Holstein* they have something better Pay than in *Denmark*. In *Norway* little Money is expended in paying the Forces; the private Soldiers being quartered by the Boors, and, which is an heavy Burthen, subsisted by them.

For the Sea-Service three thousand Mariners are constantly maintained at *Copenhagen*, as well in Peace as War; having a weekly Allowance of Salt, Flesh, Stock-Fish, or Meal, Grout, &c. for themselves and their Families, and about eighty Rix-Dollars a Year in Money. And there are several Streets of little Houses, or Barracks, near the Walls where they live, and where their Wives and Children reside while they are at Sea. Their Business, in time of Peace, is to work in the King's Yards and Docks, which are over-against the Palace in *Copenhagen*, where they take it by Turns to serve in all laborious Works relating to the Shipping; and once a Year it is usual to equip a small Squadron of Men of War, and sail with them two or three Months for exercising the Sailors. All the Officers in the Fleet are in constant Pay, as well in Peace as War; and the *Danes* compute, that they can rig out thirty Sail of Men of War and upwards at a very short Warning.

6. The King's Revenues arise from the Duties paid by his own Subjects, the Customs paid by Foreigners, the Crown Lands, Fines, and Confiscations. The Taxes paid by his Subjects are either fixed or variable; that is, the Prince, in some Cases, chuses to follow a certain Rule, established by himself; which, he may, however alter, if he sees fit, and in others he frequently varies. Of the first Sort are the Duties of Import and Export, and the Excise commonly called Consumption laid upon every thing that is eat or drank in the Kingdom. There are also Duties paid for Marriage Licences, Duties on Stamp-Paper; on which all Bargains, Contracts, Proceedings at Law, &c. are written; some of these Duties amounting to several Rix-Dollars *per* Sheet. Duties are also laid upon Brewing and Malt, and Corn that is ground on Mills. These Duties are certain, or seldom altered. The uncertain Duties are the Taxes on Land, which are not assessed by the Acre, but according to the annual Value of the Farm. Poll-Money imposed upon every one according to the personal Estate he is supposed to have, which is sometimes levied twice a Year. Money levied for erecting or repairing the Fortifications.

An occasional Tax, raised only when a Daughter of *Denmark* is to be married, whose Portion is usually an hundred thousand Crowns. A Tax laid upon every Tradesman for the Liberty of exercising his Calling, and the Gain he is supposed to make by it, who is obliged also to quarter Soldiers. The Ground-Rents, in all Cities and Towns, which the King taxes, according to the Value of the House or the Ability of the Possessor. In *Holstein* the Lands are taxed according to the Ploughs, each Plough paying a certain Sum every Month. Not many Years

since an Estimate was made of all the Houses in the Cities and Towns in the King's Dominions; and all the Lands were measured, that the Crown might the better understand their Value; and the Ground-Tax, in the Cities and Towns, was assessed at Four *per Cent.* of the whole Value the Ground was rated at, if it was to be purchased; and the like Proportion was observed towards others, in regard to their Houses and Professions. The most moderate Assessment of their Poll-Tax is according to the following Proportion, *viz.* A Citizen worth eight or ten thousand Rix-Dollars pays four Rix-Dollars for himself, four for his Wife, two for every Child, and one for each Servant, and for every Horse a Rix-Dollar. An Alehouse-keeper pays one Rix-Dollar for himself, another for his Wife, twenty-four Stivers for every Child, and sixteen for every Servant. The Fortification Tax is usually high. A Merchant worth six or eight thousand Rix-Dollars, hath sometimes paid sixty-eight Dollars, an ordinary Citizen Eight or Ten, and others in Proportion.

A late Writer hath computed the Revenues of the Crown of *Denmark*, as follows: The Toll of the Sound at 65,000 Rix-Dollars *per Ann.* The rest of the Toll of *Denmark* farmed at 165,000 Rix-Dollars. The Consumption or Excise of *Copenhagen*, farmed at 140,000 Rix-Dollars. The Consumption of the rest of *Denmark* at 140,000 Rix-Dollars. The smaller Taxes of *Denmark* at 100,000 Rix-Dollars. Poll-Tax, Fortification-Tax, Ground-Rents and Land-Tax, at 100,000 Rix-Dollars. The whole Revenue of *Norway* at 700,000 Rix-Dollars. The Crown-Lands, Confiscations, &c. at 200,000 Rix-Dollars. The Revenue of *Iceland* farmed at 27,000 Rix-Dollars. *Oldenbourg* and *Delmenborst* 8000 Rix-Dollars; and the Toll upon the *Wefer* 5000 Rix-Dollars: So that the whole Revenue of *Denmark* amounts to 2,622,000 Rix-Dollars *per Ann.* But as the Gentleman, who makes this Calculation, observes, that the Poll-Tax and Fortification-Tax are never raised the same Year; we must, upon that Account, deduct 400,000 Rix-Dollars out of the Sum total, and the whole Revenue will then amount to two Millions two hundred twenty-two thousand Rix-Dollars, or about five hundred thousand Pounds of our Money, which in that part of the World will go near as far as three Times the Sum with us, considering the Cheapness of Provision and Labour in *Denmark* and *Norway*.

7. As to the Persons of the *Danes* they are generally tall, and strong limbed; their Complexion good; their Hair fair, yellow, or red; and as few of the Men wear Wigs, they take a great deal of Pains in curling their yellow Locks; neither Men nor Women are ashamed of red Hair, or endeavour to change the Colour. They have bad Shapes, and their Mien is not to be admired. When we see the *Danish* Women sitting in a Coach or Chair, some of them appear exquisitely beautiful; but if they rise and attempt to walk they spoil all. Both Ladies and Gentlemen in Summer affect to imitate the *French* Dress; but in Winter wrap themselves up in Furs or Wool, like the rest of the Northern People. They are neat in their Linnen, changing it often, and affect too much Magnificence. It is observed that *Denmark* seldom produces a great Genius; they are not good at Invention or Imitation, and are neither deeply learned, nor exquisite Mechanics. Polite Learning they are perfect Strangers to, and few Books are found amongst them, except those of controversial Religion.

Mr. *Molesworth*, in summing up their Character, says, he never knew a Country where the Minds of People were more upon a Level. As we find none of extraordinary Parts or Qualifications, or excellent in particular Studies or Arts, so we see no Enthusiasts, Madmen, natural Fools, or whimsical People; but a certain Equality of Understanding reigns among them; every one plods on in the ordinary Track of Common-sense, without deviating to the right or left. The common People, however, in general, write and read, and their Clergy usually talk Latin, but not in the greatest Purity. The Vices the Gentry are most addicted to, are Gluttony and Drunkenness. When they sit down to eat and drink, they never know when to rise, but the Debauch sometimes

times continues whole Days and Nights. The first Thing a Friend is presented with at his coming into the House is a Dram of Brandy; and they are no sooner set down to Dinner, but every Man and Woman hath also a Glass set by their Plate, and on the proposing a Health take off their Glasses together, and by that means make a quick Dispatch. The Women indeed retire after Dinner; but the Men sit it out 'till they have lost (which is not soon done) their little Sense.

The Liquors drank by People of Condition are Rhenish-Wines, Cherry-Brandy, and all Sorts of French-Wines. The Men are fond of them, and the fair Sex do not refuse them. The poor People indulge in bad Beer and Spirits extracted from Malt or Barley. Nor do the *Norwegians* who can afford it come behind the *Danes*; 'tis the Custom of the Country; and both among the Gentry and common People, Lewdness and Intemperance pass for Wit and ingenious Conversation. As to their Eating, the Tables of People of Condition are covered with a Variety of Dishes; but the Flesh, except Beef and Veal, is generally lean and ill tasted; their tame Fowls and wild Ducks are scarce eatable. There are no fallow Deer, Woodcocks, Pheasants or Rabbits; and red Deer are the King's Game, and not to be purchased. Their Hares and their Bacon are excellent, as are their fresh-water Fish, particularly the Carp, Perch, and Craw-fish; but Sea-fish is scarce and ill tasted; and in general their Cookery is not agreeable to an *English* Palate. The common People in Town and Country live upon coarse Rye Bread, lean Salt Fish, Stock-Fish, Roots, and very bad Cheese, seldom tasting fresh Fish, and hardly ever Flesh. As to the Character of the common People, they are poor, and mean-spirited, far from the warlike Temper of their Ancestors, inclined to cheating, and intolerably jealous and suspicious that others have a Design upon them; which may be observed to be the Case of most Men of limited Understandings. In our Age, says *Puffendorf*, the *Danes* have lost much of their ancient Glory, because the present Nobility and Gentry are rather for enjoying their Revenues in Ease and Luxury, than for undergoing the Fatigues of War; and the Commonality have followed their Example.

The *Norwegians* undergo all kinds of Hardships with more Courage and Vigour, to which they are inured by the Climate they live in; but the *Danes*, ever since they have been Masters of *Norway*, have endeavoured to depress and keep that People under, by taking from them all the Opportunities of exerting themselves; and there are now very few of the ancient Nobility left in *Norway*. The *Danes* travel either in Waggons, on Horseback, or in Sledges; and there is an Officer who regulates the Prices of Carriage, and punishes those who extort more than their Due. If any Gentleman can procure a Warrant from the Court, when he is about to undertake a Journey, the Peasants or Farmers are obliged to furnish him with Horses and Carriage, in every Country, through which he passes, without being allowed any thing, as they do for the King and Court whenever they travel. The *Danes* have their Playhouse for their Diversion; they take their Pleasure also in their Sleds upon the Ice in Winter. But downright Drinking is their favourite Recreation; the most serious Affairs submit to this, the great Business of the Day and Night. Nor do the *Danes* indulge more in Eating and Drinking than in their Lodging; for as there is no Place where there is greater Plenty of good Feather-beds, they lay one under, another over them, all the Winter Season. But Lodgings for Strangers are procured with Difficulty in private Houses, and in Public-Houses they are obliged to eat and sleep, in common, no Man being allowed a Room to himself, except his Quality be very high indeed.

8. The King of *Denmark* is the great Interpreter of his Laws, and can change them at Pleasure. He is the supreme Judge and President of the High Court of Justice, when he pleases to sit there, which is not often: However, whether present or absent, the Advocates always address themselves to the King. The Princes of the Blood, and the Nobility, and Gentry, are commonly tried in this High Court; and the Superintendants, or Bishops, have

the same Privilege, if charged with Heresy, or any other notorious Crime. Where any Person calumniates the Government, or the Administration, he is declared infamous, and his Goods confiscated; but if such Discourses tend to a Sedition, they are to be punished with the utmost Severity. As to those who endeavour to defame a Magistrate, either Civil or Ecclesiastical, or injure the Reputation of a Person of Honour, by Writing, or otherwise, they are to pay eighty Rix-Dollars to the Party grieved, and a Fine of three Marks to the Crown; and in Default of Payment are condemned to the Pillory, and to carry Stones for the Repair of the Fortifications and public Buildings. If any Person refuses to take up Arms, and serve the Government, either by Sea or Land, in Case of an Invasion, when he is summoned to attend the Royal Standard, he is to be declared infamous, and to forfeit his Estate.

A Person guilty of Theft is not only sentenced to be whipped, and to hard Labour in the public Works, but to restore double the Value of the Goods stolen to the Owner. Coining is punished with the Loss of Life and Honour, and Confiscation of the Estate of the Offender, and the same Punishment is inflicted on him who removes an ancient Landmark. He who counterfeits the Hand and Seal of another, or forges a Writing, is sentenced to have his Head cut off; his Goods confiscated and declared infamous. The Torture is seldom used in *Denmark*, but in Cases of High Treason; and then only upon Persons already convicted of the same Crime, in order to make them discover their Accomplices. Duels, and even the challenging another to fight is punished with the Loss of Life and Estate, and Seconds, who do not endeavour to prevent it, are punished in like manner. He who is killed in a Duel is not suffered to be buried in consecrated Ground; whoever reflects upon another for refusing a Challenge, is punishable, and declared infamous by a *Danish* Law. In Cases of Shipwrecks, the *Danish* Subjects are required to give all imaginable Assistance to those in Distress, and to preserve the Goods for the Owner's Use.

The Ships which guard the Coasts are directed to save what Effects they can, for which they have a moderate Reward; and the Owners are permitted to sell them in the Country, or embark them on board other Vessels. If a Ship or Goods be driven on the Coast, and no body appears to claim them, the King's Officers, or the Lord of the Manor takes care to preserve them; or if they are perishable Goods they sell them to the best Advantage, and restore them to the Owner; but if they are not reclaimed within a Year and a Day, they become the Property of the King, or the Lord of the Place. If the Master of any Ship finds Goods floating on the Sea, he is to take Care of, and deliver them to the next Magistrate, who must keep them a Year and a Day, to see if any one can claim them; and if no body owns them they belong to the King, and if any conceal or embezzle such wrecked Goods, he is to be punished as a Felon, and the Law is much the same where a Person finds Goods or Cattle upon the Road; for he is obliged to publish them in the Court of the District, and can have no Property in the Goods till a Year and a Day be past, where no body comes in to reclaim them.

There being but one University in *Denmark*, a Divinity Reader is appointed to reside in every Cathedral, to expound the Scriptures to the People; and these Divinity Readers, as well as the Masters of Colleges, are examined by the Professors of the Royal Academy of *Copenhagen* before they are admitted to officiate; private Schools are expressly prohibited by the Laws of *Denmark*, and none allowed but those established by public Authority in the Cities and great Towns; and they have two or three Masters belonging to each School, who have taken their Degree of Masters of Art at least, as well as the Rector. The first Master, or Rector, is chosen by the Superintendent, or Bishop, having passed an Examination before him and the Minister of the Parish. The Under-Masters are appointed by the Rector, with the Approbation of the Minister of the Place. The lesser Schools, where only Writing and Accompts are taught, are appointed by the

Magistrate ; the Teacher having been first examined by the Priest of the Parish, who is also to take Care that they are instructed in the *Lutheran* Doctrine.

No Person is at Liberty to send a Tutor to travel with his Son, who hath not been first examined by the Superintendant of the Diocese, and found to be Orthodox in Religion ; and the same is required where one takes a Tutor into his House, who also ought to be a Student of the University of *Copenhagen*. As no other Method of Teaching is allowed, than that prescribed by the Government ; so no other Books may be read, but such as are approved by Authority, which are composed by the Professors of their University. The Importation of Books is also prohibited, especially those which treat of any other Sort of Religion, than that established amongst them. No other Calendars or Almanacks are allowed to be published than those made by the Order of the Rector and Senate of the University, on Pain of Confiscation of Goods ; they are prohibited also, to insert in them Predictions relating to War, Plague, or Famine, or any other Calamities.

9. The Clergy of this Kingdom are divided into three Classes, *viz.* Super-intendants or Bishops, Intendants, which some compare to our Arch-deacons, and Curates or Parish Priests. The Super-intendant is obliged to visit his Diocese once every Year, and to lie in the Person's House, when he comes to any Place ; who is to entertain him, Servants and four Horses, *gratis*. The Super-intendants are consecrated by the Bishop or Super-intendant of *Zealand*, assisted by five or six Priests ; but are all nominated by the King. The Peasants, who pay Tithes of all their Corn, Cattle, Poultry, and Bees, pay one Third thereof to the Crown, another to the Bishop and other Uses of the Church, and the remaining Third to their Parish Clerk. But of Grass and Fruits which grow spontaneously no Tithes are paid ; there are some other Dues also payable to the Clergy by the Peasants, for Confession, Burials, Marriages, &c.

The Super-intendant holds a kind of Synod twice a Year, consisting of the Intendants in his Diocese, where the Governor of the Province presides for the King. The Overseers are chosen by the Parish Priests of each County or District, in Conjunction with the Super-intendant ; and he is obliged to visit all the Parishes under his Inspection once a Year, at least, and hath a Power of censuring the Lives and Conversations of the Priests in their respective Divisions. They see that the Churches are kept in repair, and that their Revenues are not alienated or misapplied. No Person can be admitted into Priests Orders until he hath a Cure provided for him. He must have a Certificate also from the Divinity-Professor of the University, concerning the Progress he hath made in his Studies, and his Qualifications for the Pulpit ; and if he do not come immediately from the University, he must have them from the Overseer and Parish Priest, where he resides ; and if the Superintendant approves of the Clerk, he is instituted and inducted as with us. But their Law requires, that none be admitted into Priests Orders who are under five and twenty Years of Age ; and the giving any Money, or Consideration, either for Orders or the Presentment to a Living, is forbidden. And they are obliged to perform Divine Service according to the established Form or Ritual, observed at *St. Mary's* in *Copenhagen*.

They are obliged to pray for the King and Magistracy, and for the Propagation of the Gospel ; and are prohibited to admit any to the Sacrament, who have not first been at Confession. But the Penitent, it is said, need not give an Account of every particular Sin. A general Confession, according to the Order the Commands stand in, intitles him to Absolution. The Priest is also forbid to take any Money, which the *Lutheran* Ministers frequently do notwithstanding. The Priest may not divulge the Confession of any one, where it is particular ; unless in Cases of High Treason, or for the Prevention of some great Mischief by such Discovery, on Pain of Deprivation ; and in this Case the Name of the Penitent ought to be concealed as long as possible. The *Danes* look upon all who have any Service appointed them in

the Church as Ecclesiastics ; and they are accordingly taken from among the Students, whether they be Clerks, Sextons, or Singingmen, and wholly depend on the Priest or Curate of the Parish. The Lands of every Person convicted of turning Papist are forfeited to the next Heir, unless he disposes of them before he changes his Religion, and such Apostate is banished the *Danish* Dominions. Whoever hath received his Education from the Jesuits is disabled to have any Employment, Ecclesiastical or Civil, and Popish Priests are prohibited to enter the *Danish* Dominions, on Pain of Death ; nor is their Law less severe against those they denominate Heretics. *Jews* are forbid to come into the Kingdom without a Royal Licence ; and whosoever discovers a *Jew* is entitled to a Reward of fifty Crowns. Their Laws also are pretty severe against Gypsies and Fortune-tellers, who pretend to foretell future Events, and to be acquainted with the Stars ; Banishment being the Pain of the first Offence, and the second Capital. Blasphemers of God and Religion are sentenced, first, to have their Tongues cut out, and afterwards to lose their Heads ; and if a Priest or Ecclesiastic is guilty of profaning the Name of God ; or of any other notorious Vice, his Punishment is heavier than that of a Layman.

Their Laws concerning Marriage, require that the Consent of the Relations be had as well as the Woman's. And if she marries without the Consent of the Guardian, he shall receive the Profit of her Fortune during his Life ; but if a Guardian neglect to marry his Ward till she is past eighteen Years of Age, the Magistrate is impowered to relieve her. Their Marriages are dissolvable, and a Divorce may be obtained in *Denmark* for Adultery ; on a voluntary and malicious Elopement ; and for Impotence ; but in case of Adultery the Crime must be well proved by Witnesses, or Circumstances, the Confession of the offending Party not being sufficient, since many have falsely accused themselves, in order to obtain a Separation : The *Danish* Law also requires, that the Party who brings the Accusation be innocent ; for otherwise no Divorce can be obtained ; unless it appear, that the ill Usage of the Husband hath occasioned the Wife to offend ; and if the Husband, after he has discovered his Wife to be guilty of Adultery, shall cohabit with her afterwards, a Separation will not be granted. Where a Woman is divorced for Adultery, she may marry again after three Years are elapsed, with a Royal Licence, provided she has lived chastly during that Time ; but she may not marry, or reside within the same Town, or District, where her former Husband lived ; and the like where the former Husband is divorced for Adultery, committed by him ; but the innocent Party is at Liberty to marry so soon as the Sentence of Divorce is pronounced. What they term a malicious Elopement, is where one of the Parties absents him, or her self, from his, or her Spouse, by the Space of three Years ; but if the Party deserted hath cohabited with another in the mean time, a Divorce cannot be obtained on this Account.

10. A Man is not to sell or alienate his Lands before he is five and twenty Years of Age, without the Consent of his nearest Relation ; and a Woman, whether she be Maid or Widow, can never part with her Lands, but must leave them to descend as the Law directs. An uninterrupted Possession of twenty Years is held to make a good Title, and they are not permitted to run farther back in a Tryal of the Right. All Obligations also, and personal Debts are held to be void if not renewed within twenty Years ; for Notes, and Bills of Exchange, are of equal Force with an Obligation ; but the Law allows eight Days for all kinds of Payments to be made beyond the Time prefixed, and if that Time be elapsed four and twenty Hours, the Creditor may protest it, and have Processes thereon against the Original Debtor or Acceptor. No Person is obliged to pay any Money lost at Gaming.

The Tenure of Villainage still prevails in many Parts of *Denmark* ; and their Vassals, or Tenants, who hold by this base Tenure, are purchased, and descend with the Lands they live upon, like Fish in the Waters, or Deer in a Park ; nor can these Peasants leave the Lands they belong to, and retire elsewhere ; if they do, the Lord of the

the Soil may reclaim them, with their Goods; nor can any Town or Place receive them, unless they produce a Licence from their Lord, and a Certificate from the Minister of the Parish where they last inhabited: And if a Peasant of this Class endeavours to conceal himself, his Lord may seize him, and put him in Prison, or remove him to any other Tenement or Farm, by way of Punishment. And if the Wife of one of these Peasants be brought to-bed on the Lands of another Lord, the Child shall, however, belong to the Lord where the Father lives. Although the Lord has a Power to enfranchise his Peasant, or sell him with the Land, yet he cannot sell him singly or separate from the Manor or Estate. The Children of the Ecclesiastics of the Peasants Race are free, and so are all Students in the liberal Arts.

A Peasant cannot have the Freedom of any Town till he is first enfranchised by the Lord; but if he hath resided ten Years in any City unreclaimed, and becomes a Tradesman, or Artificer, or applies himself to the Sea, he is free. A Peasant also who hath lived twenty Years in a foreign Village out of the Lord's Land, thereby procures his Freedom; or if he goes into the Army and obtains a Commission, this gives him his Freedom. As to Game Laws, every Freeholder may hunt, and fish in his own Grounds; and the Nobility and Gentry have the Privilege of hunting in common or waste Grounds within ten Miles of their Seats, except in the King's Parks; and they may fish in Lakes and Ponds which are not the King's; but if any Lord hunt, shoot, or fish, in any Place belonging to his Majesty, he forfeits for every Stag one thousand Rix-Dollars, for a fallow Deer eight hundred, for a Hare four hundred; and for every Swan, Goose, Duck, Partridge, or other Fowl two hundred. And whoever is convicted of hunting in another's Lands, forfeits an hundred Ounces of Silver for every Offence.

The People in this Country being pretty much addicted to drinking, all Business is prohibited to be transacted in Taverns, and the sitting in public Houses very much discouraged; if they will drink, it must be at home: And the Reason of it is supposed to be, lest the People in their Cups should be too free with the Government. It is observed also, that the Subjects usually endeavour to imitate the Court: If it happens to be a sober Reign, the People are less given to Excess; and where they have luxurious Princes and Ministers, the lower Part of Mankind do not fail to follow the lewd Example their Superiors set them; which is also practised in other Places. If any Person sends his Effects or Money out of the Kingdom, to be lodged in foreign Banks, the King claims a sixth Part, and he is obliged to pay a tenth to the Magistrates of the Town, or the Lord of the Soil where he resides; even foreign Merchants have been obliged to submit to these Exactions in their returning home, notwithstanding their respective Sovereigns have insisted upon an Exemption.

11. The great Alteration that has happened in *Denmark*, from the changing the Monarchy from elective to hereditary, and from being the most limited, into the most absolute of any in *Europe*, has had a very strong Effect upon all Ranks and Degrees of People in that Country; and may be said, in some measure, to have made a total Change in their Temper, and in the Nation. The Nobility of *Denmark* who were formerly as remarkable for their military Virtues as any in *Europe*, are now very seldom mentioned; and those of *Norway* are in a manner extinguished. The *Danes* have a better Army it is true, than they had formerly, but it is an Army entirely in the Disposition of the King, and not, as before, sufficient to make any great Conquests. The naval Force of *Denmark* is more considerable; but yet it does not appear capable of striking any great Terror into its Neighbours; whence we may conclude, and that too very justly, that the Crown of *Denmark* is far from being so formidable as it was in former Times; yet, with respect to its own Security, it seems to be as well or better provided than ever; for whereas the *Swedes* in the last Age, were more than once on the very Point of destroying this Kingdom, there is not now the least Danger either of their under-

taking or effecting any such Design; because the Neighbours of *Denmark*, and the maritime Powers are bound, both by their Treaties and their Interests, to support this Crown if it should be attacked. It is indeed true, that if the House of *Holstein* should succeed to the full and peaceable Possession of the *Russian* Dominions, *Denmark* might be in great Danger from thence, as well on Account of the superior Forces of that Empire, as because the House of *Holstein* have very considerable Claims upon *Denmark*, which are hitherto unadjusted. But on the other Side, it is to be considered, that as yet that Succession has not taken place, and that in all probability it will be found more for the Interest of the *Russian* Empire to adjust those Disputes amicably, before that Succession takes place, than to run the Hazard of a War about them; which might, and indeed must, be attended with many dangerous Consequences, considering how many Powers are interested in the Support of *Denmark*, even with Regard to these very Claims of the House of *Holstein* upon her.

According therefore to the best Maxims of Policy, we may very fairly conclude, that in case the Kings of *Denmark* act with the same Prudence and Caution that they have done for many Years past, they will be in a Condition to preserve what they at present enjoy, and be also at Liberty to promote and improve the domestic Prosperity of their Subjects. By this I mean, their Application to Manufactures and Commerce, which have been greatly encouraged of late Years, and this Encouragement has been likewise attended with all the Success they could reasonably expect. We have shewn, in speaking of *Groenland*, that the Subjects of *Denmark* have established considerable Colonies there, and are in Possession of a very beneficial Trade upon those Coasts. We may say the same thing with respect to *Iceland*, the Trade of which is entirely in their Possession, and that of *Norway* also is much improved and extended: But besides all this, as we have shewn in a former Volume, an *East-India* Company has been long settled at *Copenhagen*, and is now in a flourishing Condition. We are also to observe, that within these few Years the *Danes* have opened a Trade to the *Mediterranean*; and as the present Monarch seems to follow closely the Examples of his Predecessors, in avoiding as much as possible entering in any Degree into the Troubles and Disputes that for several Years have kept *Europe* in a Flame, with a View not only to preserve the Quiet of his Subjects, but to cultivate also the Arts of Peace; we have Reason therefore to conclude, that in the Space of a few Years, the good Effects of this wise Conduct will appear, and the People become much richer than formerly. It is also very likely, that when these happy Consequences of a growing and flourishing Trade become more conspicuous, the Government will find it expedient and even necessary, to relax some of those severe Laws which are most likely to bear hard upon Persons engaged in Traffic; for without such Indulgences it is impossible that the Schemes the *Danish* Monarchs seem of late to have so much at heart, should be ever brought to perfection.

We may add to all this, that the Benefits immediately resulting to the Crown from the Increase of the Commerce and Navigation of its Subjects, will so fully compensate for such Diminutions of Power, that it is impossible any just and good Prince, or any wise and able Ministry should doubt, as to the Propriety of such reasonable and moderate Changes. By these Methods the interior Strength of the Kingdom will be daily augmenting; the Shipping, and consequently the naval Force, of *Denmark* continually increasing, and though these Advantages may be slow in their Nature, yet they are at the same time so very certain, and of such high Importance, that I make no Scruple of affirming they will, if steadily prosecuted, change the whole Face of Affairs in this Country; and before the Close of the present Century, restore the antient Lustre of the Crown of *Denmark*, and perhaps raise its Sovereigns to a higher Rank, than hitherto they have ever held amongst the *European* Powers.

SECTION IV.

A comprehensive Account of the Kingdom of POLAND, the Situation, Extent, Climate, Soil, Produce, and Commerce of that Country, together with the Laws, Customs, Manners, Form of Government, and Genius of the Inhabitants; the Privileges of their Nobility, and Power of their Kings.

Collected chiefly from the Writings of Dr. Bernard Conner, who resided in that Kingdom in Quality of Physician to King John Sobieski.

1. *The Situation, Extent, and Limits of the Polish Dominions, including the grand Duchy of Lithuania and that Part of Prussia which belongs to Poland.*
2. *The Soil, Climate, Produce, Commodities, &c. of the Country.*
3. *The Nature of its Domestic Trade and Foreign Commerce, and the Reason why the latter is so inconsiderable.*
4. *An Account of the Dyet of Poland, the Persons who compose it, and the Reason why Poland is called a Republic.*
5. *The legal Powers, Prerogative, and State of the King of Poland.*
6. *A farther Account of the same Subject, and of the Revenues of this Monarch; from whence it appears that he is far from being so weak, or so restrained, as is generally imagined.*
7. *The Rights, Immunities, Privileges, extensive Power and Authority of the Nobility or Gentry of Poland; with the Reason of their declining Titles; and particular Instances of the vast Power and large Estates of some of the Grandees of Poland.*
8. *An Account of the Condition of the Peasants, and of the Services they owe their Lords; with Remarks on the Patience and Submission of those unhappy People.*
9. *The natural Temper, Disposition, Customs, Manner of Living, &c. of the Polish Nobility and Commons.*
10. *This Subject continued, particularly with regard to the Ladies, and some Remarks on the Ceremonies at Marriages, Funerals, and other such like Occasions.*
11. *Of the State of Learning and the Sciences in this Kingdom; and of the Diseases common in Poland.*
12. *A succinct History of the Changes that have happened in the Government of Poland, and in the Power and Succession of their Kings.*
13. *Observations and Remarks upon the foregoing Section.*

1. **T**HE great Kingdom of Poland next demands our Consideration, as being naturally, both with respect to the Situation and Produce of the Country, and the Force of the Inhabitants, none of the least considerable; though it is very far from being the best known in Europe. It is thought to extend in Length from East to West, about seven hundred Miles; and in Breadth, from North to South, about six hundred. On the North it has Livonia and other Provinces of the Muscovite Empire. On the East it is also bounded by the Russian Dominions and Lesser Tartary. On the South by Moldavia, Transylvania, and Hungary; and on the West by Pomerania, Brandenburg, Silesia, and Moravia. By this Description, it appears, that the Inhabitants of Poland, have, for their Neighbours the Russians, Turks, Tartars, Hungarians, and other Subjects of the House of Austria, and those of the King of Prussia. The Air of this Country is in general temperate and healthful, but exceeding serene, and more settled both in Winter and Summer, than in those Countries, which border on the Ocean. The only Sea which washes any Part of Poland is the Baltic, which lies to the Northward of it; but it is well watered, however, by Lakes and Rivers.

Their Lakes lie chiefly in the Greater Poland, Cujavia, and the Territory of Lublin; and both Lakes and Rivers abound with Fish. Their principal Rivers are the Weiscl, or Vistula, which rises in the Crapatch or Carpathian Mountains, which divide Hungary from Poland; its Courses are partly to the Eastward, but generally it runs from South to North, watering many great Cities, particularly Cracow, Lublin, Warsaw, Thorn, Marienburgh, and Dantzick, after which it discharges itself into the Baltic Sea. The Warta or Varta, which rises in the Lesser Poland, and running towards the North-west, passes by Kalisch, Posen, and several other great Towns, after which it falls into Oder. The Nieper or Boristhenes, which dividing the Dominions of Muscovy from those of Poland, in several Places, falls at length into the Black Sea, near Oczakow. The Neister or Tyra, which rises in Red Russia, and running to the South-east through Podolia, passes on to Bender in Turkey, and falls into the Black Sea, about sixty Miles to the Northward of the Mouth of the Danube.

The Dwina, which divides Livonia from Courland,

and falls into the Baltic near Riga. The Bog which rises from a Lake in Podolia, and bending its Course to the South-east, unites its Waters with the Nieper, a little before that River falls into the Black Sea. Near the Mouth of these two united Rivers stands the Fortrefs of Kassicarmen, which the late Czar of Muscovy took from the Turks; and by that means, is opened a Communication with the Black Sea; but he was obliged to restore this Place as well as Asoph to the Grand Seignior, upon the Defeat he met with on the Banks of the Pruth. Niemen or Russe rises in the Palatinate of Novogrodeck, and taking its Course to the North-west passes by Grodno, and at length falls into the Baltic.

2. The Dominions of Poland are usually divided into eight large Provinces, viz. Proper Poland, the great Dukedom of Lithuania, Prussia, Samogitia and Courland, Warsawia, or Mussovia, Polackia and Polesia, Red or Little Russia, Podolia, and Volhinia, and the Ukrain. The Soil for the most Part is champain and open; but towards the Borders of Hungary mountainous and woody; so that the Places furthest distant from Hungary are most fruitful. There is only one great Mountain in the Middle of Lesser Poland, called Mons Calvus. It has a Monastery on the Top; famous, as they pretend, for the real Cross of CHRIST; what other Hills one meets with here, are rather rising Grounds than Mountains; the Eastern Parts of the Kingdom are full of Woods, Forests, Lakes, Marshes, and Rivers, which afford a delightful Prospect to that open Country; almost all of it, is said to have been overgrown with Wood, but now being cultivated by the Inhabitants is very fertile, and produces every where all kind of Fruit, Corn, and Herbs. A great Part of the Corn made use of in Holland comes from this Country by way of Denmark.

They have a good Breed of Horses, so that their Cavalry is numerous, and well mounted. Their Pastures are good, and feed a great many Cattle, which they export to foreign Countries; the Forests abound with wild Beasts, and also with Bees, that afford vast Quantities of Honey and Wax. They have also abundance of Flax and Hemp, and Vines in many Places, whose Grapes are grateful to the Taste, especially if the Summer and Harvest be favourable; but the Wine is generally very sharp when drawn off. In the Mountain there are Mines of Lead,

Lead, Silver, Copper, and Iron, with other kinds of Minerals, as Quicksilver at *Tustan* in *Red Russia*, and Vitriol near *Biecz* in the Palatinate of *Cracovia*; but the most considerable of all are the Salt Mines at *Bochnia* and *Velisca* in *Lesser Poland*, which are the chief Riches of the Country. They work in those Mines as we do in our Coal-Pits; the Salt is generally of a bluish Colour, but some of it white and transparent, like Crystal; when it is new dug it has a brackish Taste, but when exposed to the Air becomes brittle, and more sweet; they have also some Veins of *Sal Gemmae*. The Woods are well stored with Hares, Coneys, Squirrels, Deer, Foxes, Bears, Wolves, and Boars. The *Masovian* Forests have Plenty of Elks, wild Asses, Buffaloes, and Bisonets, which in Shape and Horns resemble an Ox; have Mains like Horses, Beards on their lower Jaws, Tongues rough like a File, and very hard, a Bunch on their Backs, and their Hair smells like Musk. They are incredible strong; the *Polish* Nobility hunt them, and esteem their Flesh when powdered a great Dainty. The *Urus*, called by the *Polanders* *Thur*, is a kind of wild Ox; bigger, stronger, and swifter than the tame; he has a short black Beard, a Bush of Hair upon his Forehead, and Horns very wide and large: *Pliny* says, the *Romans* made Lanthorns of them. The Elk, called by the *Poles* *Los*, by the *Germans* *Elland*, which signifies miserable, because of the Falling-Sickness, is about the Size of a large Horse, bodied like a Stag, but broader, its Legs longer, and its Feet cloven and large; their Hoofs are reckoned a Specific against the Falling-Sickness.

In the Deserts near the *Nieper*, there is a Sort of wild Sheep, called *Solback*, shaped like a Goat, but with shorter Legs, and Horns growing straiter up. They are exceeding swift, and leap very high. They have a Sort of wild Horses in the *Ukrain*, called by them *Dzikie-konil*, which their Nobles eat for a great Rarity. In *Lithuania* and *Muscovy* there is a voracious unserviceable Beast not found elsewhere, called *Rossomoko*, with the Body and Tail of a Wolf, and the Face of a Cat; it feeds on dead Carcasses, and eats till its Belly is swelled to the utmost Stretch, then it squeezes itself betwixt two Trees, forces the Load from its Stomach, and returns to its Prey, devouring and disgorging successively till all is consumed.

3. The western Parts of this Kingdom produce a great deal of Corn, of all Sorts, which is exported from *Dantzick*; as also Honey, Wax, Amber, Hides, tanned Leather, *Muscovite* and *Polish* Furs, Oak, Wainscot, Masts, Planks, Fir, Deal, Pitch, Tallow, Salt, Hops, Hemp, Flax, Salt-petre, Pot-ashes, Opium, *Prussian* Wool, for coarse Manufactures; Vitriol, Lapis Lazuli, Vermilion, Brasses, Lead, Iron, Copper, Glass, and Earthen-ware, Oxen, Sheep, Hogs, &c. to different Parts of *Europe*. They import Stuffs, Silk, and Worsted; *English* Cloths, Tapestry, Jewels, Sables, Salt-Fish, Tin, Steel, Martens, &c. Iron-ware, *Rhenish*, *French*, *Spanish*, and *Hungarian* Wines, Spirits, Aqua Vitæ, Brandy, Spice, of which they make great Consumption. They might be much richer, if they were industrious and frugal, and applied themselves to Manufactures; but the *Poles* are little inclined to either; for the Gentry are absolutely forbid to follow Trade, of any Kind, on Pain of forfeiting their Honour; and the Commonality commonly want Funds, so that all the Trade there is chiefly carried on by foreign Merchants; besides, such of the *Poles* as have any Fortunes, spend too much of their Revenues in costly Habits and Luxury, to be able to undertake any considerable Traffic. Nor have they any good Ports, except *Dantzick*, which is not enough to improve the Trade of so large a Country. It is to this want of Commerce with other Nations, that the *Poles* owe most of their Defects in their Government; for if they were once convinced of them, there is not a Nation in *Europe* more capable of correcting them, as we may gather from a very familiar Instance: One of their Monarchs being in *Germany*, and not having it in his Power to converse with Strangers in *Latin*; he was so sensible of the Defect, that upon his Return to *Poland*, he

caused a Grammar-School to be erected in every Town throughout the Kingdom; so that now there is not a Country in *Europe* where *Latin* is so generally understood as it is here.

4. From the Time of *Lechus*, the Kings of *Poland* have been elected to the Crown in a regular Descent, though not by an hereditary Title. They have really been absolute, and their Will went for Law; for they made Peace and War when they pleased, levied Troops as they thought fit, punished or pardoned at Pleasure; and all the Administration, either of public or private Affairs, was so wholly lodged in the King's Hands, that the *Poles* themselves say, That *Sigismund II.* the last King of the *Jagellon* Family, was, to the full, as absolute as either the King of *France* or *Denmark* is now. Whilst the Kings of *Poland* thus maintained a supreme Power over their Subjects, they exceedingly enlarged their Dominions, were feared Abroad and beloved at Home, commanded numerous Armies, executed Enterprizes speedily, and were always sure of Success; and this, because, they did not then, as now, depend upon the lingering and tedious Conclusions of a turbulent Dyet. But the Family of *Jagello* being once extinct by the Death of *Sigismund II.* who had resigned his Kingdom to the Senate and *Polish* Gentry, and given them full Power and Authority, to dispose thereof as they thought fit; the Crown of *Poland* was declared once more elective; to the End, that all the Princes of *Christendom*, who had due Merits and Qualifications, might have a Right to aspire thereunto.

This has given Occasion to most of the Princes of *Europe* ever since to court the *Polish* Nobility, either to get the Election determined in their own Favour, or else to have some of their Friends advanced to that great Dignity; but this commonly, with regard to their own private Interests, rather than out of any Respect to the Person they desired to promote. The Gentry of *Poland* therefore observing, that several Princes always aspired to their Crown; and considering that none of them had more Right than the rest, and that it lay altogether in their own Power to choose whom they pleased, resolved unanimously to elect none but such as could condescend, nay swear, to observe the Terms and Conditions they proposed. By this means, the *Poles* have clipped and limited the antient Power of their Kings, and have reduced them to the Bounds we now find them, that is, barely to a third Part of the Dyet. For the *Poles* knew that no Prince would be so imprudent as to scruple submitting to any Conditions, to become Master of so considerable a Kingdom, to which he had no Right, either by Birth or any other Claim; and more especially, since these Conditions are neither rigorous nor dishonourable, but such as are consistent enough with the regal Character he is to be invested with.

Thus the *Polish* Gentry, of an absolute monarchical Government, have in time made a perfect Republic, consisting of three Orders. The King, Senate, and Nobility. The *Polish* Nation is divided into two Sorts of People. The Nobility, Gentry, or Free-born Subjects, who are hardly a tenth Part of the Kingdom; and their Vassals, who are no better than Slaves; for they have no Benefit of the Laws, can buy no Estates, nor enjoy any Property; and this, because, some Ages since, the common People revolting against their Lords, and having driven them out of the Nation, the Gentry came with a foreign Power, and reduced them to greater Subjection than before, in which they have been kept ever since: So that the Government of *Poland*, at present, comprehends only the King and the Nobility. By a Gentleman, or Nobleman of *Poland*, is understood, a Person, who himself, or his Family, has Possessions in Land, for they never intermarry with the common People. All the Gentry, from the King's Sons to those that are Masters of an Acre, are equally noble, both by their Birth and the Constitution of the Kingdom; for nobody is born either a Palatine, Senator, or Lord, but their Titles are always annexed to Employments, which the King gives to Persons advanced in Age, and recommended by their Merit.

The Dyet of *Poland* is composed of two Houses; the House of Senators, answerable to our House of Lords; and the House of Nuncios, not unlike our House of Commons; the Senators are the Bishops, Palatinates, *Castellans*, and the ten great Officers of the Crown; in all about one hundred and forty-two. In the Upper-house the Senators sit, not by any Writ of Summons, or Letters Patent, as in *England*; but only by Virtue of the great Preferments in the King's Gift, which they enjoy for Life; so that the King constitutes the whole Upper-house, but the Lower, are the Representatives of the Gentry, elected by them alone in their respective Provinces, without the Concurrence of the common People, who have no Privilege in their Election; insomuch that nine Parts in ten of the People in *Poland* are excluded from any Share in the Government.

The grand Dyet of *Poland* is nothing else but the King, Senators, and Deputies, assembled in any Part of the Kingdom his Majesty commands. Without this great Assembly of the States, the King can neither make nor repeal Laws, declare War, conclude a Peace, make Alliance with any foreign Prince, raise Troops, impose Taxes, or coin Money; in a Word, determine no Matter of any Importance, without the unanimous Concurrence of this Parliament, which they style the free States of *Poland*. Several Motives have inclined the *Poles* to establish this Kind of mixt Government; which they take to be a just Temperament, of whatever is to be found most excellent in the several Monarchies, Aristocracies, and Democracies that have been in the World. It has however appeared from Experience, that their Endeavours in this respect have not been very successful, since there is hardly a Constitution in the World, or at least in *Europe*, that answers the Ends of Government worse than theirs; which is very often the Case where People aim at such a Degree of Perfection as is not to be attained in human Affairs.

5. The Republic is divided into two States, the Kingdom of *Poland*, and the great Duchy of *Lithuania*; both which are but as one Body, having the same King, the same Dyet, the same Laws, the same Privileges, the same Religion, and, as the natural Result of all these, the same Interest: These two States are so very well united, that a King cannot be elected, a Law made, or any thing of consequence done, without the mutual Consent of both. The *Poles* are too proud to agree to despotic Power: And therefore those pernicious Maxims of Tyrants, *Si lubet licet, oderint dum metuant*, and the like, would be but ill received among People that have all along secured their Liberties by their Valour. As for the Kings of *Poland*, they may rest in Security in the Bosom of their Country, either without or within their Dominions, since they have always their Subjects for their Guards, through indispensable Inclinations; for what contributes chiefly to the Happiness of these Princes, is the loyal Obedience and voluntary Obedience paid to them even by those that are at liberty to do the contrary.

Monsieur de *Polignac*, the French Embassador, used to say at *Warsaw*, That he thought a King of *Poland* more happy in his Person and Condition than a King of *France*; nevertheless, this Authority of the King of *Poland* is so limited by the Laws of the Land, that it does not exact more from the Nobles or Gentry than they think he deserves; for though their Behaviour be generally observant, yet do they tacitly seem to call in question his Power. The *Polish* Nobility make no Difference between the King's Right and those of the Senate and Deputies, affirming that since three Members compose but one Body, they ought equally to share in the same. The small Authority therefore of their Kings, and the Impossibility of their acting, have exposed *Poland* to the Insults of their Neighbours, and the Rage of their own People; as may be seen in the Civil Wars of the *Cossacks*, and the Treachery and Sedition of the Confederates; which could never have arrived at so great a Height if the King had had sufficient Power to suppress them. Also the great Marshal of the Crown, *Luberskin*, would never have had the Boldness to have opposed King *Casimir's* Designs so openly, and to have formed so many Factions against the Court, had he

not had Assurance of remaining unpunished. We have divers Instances of the *Poles* Love for their Kings, and particularly their long enforcing the Right of *Sigismund III.* to the Kingdom of *Sweden* in an obstinate War, which they revived several times; as likewise the supporting afterwards the Pretences of *Uladislaus VII.* to *Muscovy*; to omit divers others of a more antient Date.

This Respect of theirs obliges them to come and spend their Estates at Court, to augment their Prince's Grandeur by their Prodigality and Magnificence. This appears by a Mistake made by a King of *Bohemia*, at the Interview between him and *Casimir the Great*, at *Glogau* (which Place the former had demanded to bound the Limits of *Silesia*) when he saluted a private Gentleman, splendidly cloathed, for the King of *Poland*: The Inclination of the *Poles* towards honouring their Prince is so strong, that all they are able, even to the hazard of their Lives and Fortunes, they are willing to lavish in his Service, without expecting any greater Recompence than the Glory of waiting on his Majesty's Person. A King of *Poland*, when he is just, liberal, and religious; one, who observes the Laws and Constitutions, and, in a word, who has no other Interest but the Good and Safety of his Subjects, is as much respected, and as faithfully obeyed in times of Peace and War, as most Princes in *Europe*. As to what relates to War, no Monarch has greater Advantages; for he is neither at the Trouble of raising Forces, or Expence in maintaining them; his Business being only to convene the Dyet, and they do all these Things. After War declared, he can continue the same either by himself or his Generals, can regulate his Troops, and see his Army paid out of the Treasury of the Republic; he has great Reason to hope for Success in his Expeditions, because he not having undertaken them on his own Account, those that engaged him will infallibly support him in them, and the rather, by reason that what was done was done with their Consent. This has proved the Cause of almost never failing Success to the *Polish* Army till of late Days, when the King and his Subjects have not been in so good Intelligence with each other as formerly.

6. When the King is in the Army he has the supreme Authority, gives battle when he pleases, and besieges Towns as he thinks fit, and commands absolutely all the Gentry to follow him into the Field on Horseback at ever so little Warning. At Home he has the Nomination of all ecclesiastical Benefices, and of all secular Employments, as well Military as Civil, through the whole Extent of his Dominions, with a great Number of royal Demesnes; which together with the State Dignities, he confers on those that have deserved them. He can bestow as considerable Preferments as any Prince in *Europe*, and oblige and raise the Fortunes of whom he pleases. He has a Right in naming Cardinals as well as other Roman Catholic Kings. He can send and receive Embassadors privately, in Matters relating to himself; but as to what concerns the Republic, the Senate must have their Share in it. He can call, prorogue, and dissolve the Dyet at pleasure: In a word, the *Poles* term him the Protector of their Laws and Privileges, the chief Distributer of Honours, the Head of their Republic, and supreme General of their Forces.

The *Poles* attend his Person uncovered. The chief Senators generally serve him at Table; first tasting of the Cup before they present him with it. His Subjects never sit before him, nor cover their Heads any where but in the Dyet, and there too the Senators are only allowed that Liberty, for the Deputies stand behind with their furred Caps in their Hands. All Sorts of Gold, Silver, or Brass Coin, are stamped with his Image. All Justice is administered in his Name; and at Church they pray for the King and Royal Family. When he is crowned, the Dyet allows him a Pension of about 140,000 *l.* per Ann. which, together with his Patrimonial Estate, maintains him a very splendid Court. He has his *Polish*, *German*, and *Hungarian* Guards, and has the same Officers of his Household, as other Kings have. While the Queen-Dowager lives, the Queen-Consort maintains her Court at the King's Charge. But after the Queen Dowager's Death, or Marriage, or the King's Death, she has a Revenue

venue assigned for that Purpose, over and above the Pension, which the Dyet settles upon the King and Queen; which, in that cheap Country, serves to maintain them as high as our Kings live here.

The King of *Poland* has great Incomes of his own; for the *Poles* never care to elect a poor Prince, for fear his Children may come to be a Charge to them after his Death. He gets besides vast Sums of Money for Nominations to Employments; which the late King did not scruple to sell, though directly contrary to the Constitutions of the Kingdom; nay, the Ecclesiastical Benefices, which are very considerable, are also put under Contribution by some cunning Artifice or other; thus the Promotion of the Bishop of *Cracow*, whose Bishopric is worth eight thousand Pounds Sterling *per Annum*, which will go further than twenty thousand Pounds in *England*; was, in the Reign of King *John Sobieski* procured, by laying a Wager with the Queen of fifty thousand Crowns, that he did not obtain that Preferment, which as soon as the King knew he bestowed upon him, and so the Queen won her Wager. The Crown Revenues arise from Customs and Excises, from Part of the Duties of the Port of *Dantzick*, from the heavy Tax laid upon the *Jews*, and from the Salt Mines, which all together bring in rather more than less than three hundred thousand Pounds of our Money annually. But the King's Power in bestowing Preferments does not extend to Foreigners; neither can he take away any Post that he bestows, or lessen its Revenues or Privileges. His eldest Son has the Title of Prince of *Poland* while his Father lives, but he loses it upon the Accession of a new King, and is stiled Prince, by the Name of his Family; and such Precautions are taken, that it is very difficult for a King of *Poland* to make the Crown hereditary in his own Family.

7. We come now to speak of the Nobility of *Poland*, which comprehends all the Gentry in that Country, and even all those whom in *England* we stile only Freeholders. Of these every Gentleman or Nobleman has his Coat of Arms granted by the Republic; but then he, or some of his Family, must have an Estate in Land. They are capable of the greatest Offices in the Kingdom, and may buy Lands where they please, and have a Right to be elected King, if their Credit and Interest can procure it. Every Gentleman is a sovereign Prince in his own Lands, and has Power of Life and Death over his Tenants, who have no Laws nor Privileges to protect them. They dare not leave his Lands to go to others, on Pain of Death, unless he sells them; and if he do his Tenants pass with his Lands. But if their Lords ravish their Wives, or Daughters, the Tenants may leave his Service.

If one Lord kills another's Servant he is not punished for it, but only obliged to give him another in his room, or as much Money as will buy one, and to maintain the Family of him that is killed. If he kills one of his own Slaves he only pays a Fine; nay, if one Gentleman kills another, he cannot be apprehended or imprisoned, unless convicted by a Court of Justice, which gives him Time enough to escape, and when condemned he cannot be executed without the King's Consent. No Soldiers can be quartered upon the Gentry; if any Officer does it, the Dyet either sentences him to die, or declares him infamous. The Houses of the Nobility are Sanctuaries, so that no Delinquent can be taken there by force, though he has been arrested. If a Nobleman will swear that his Goods were not bought, but are the Product of his Lands, he may send them any where out of the Kingdom, and without Custom; and after he has sworn, his Certificate suffices, to exempt the Purchaser from the Duty. In *Prussia* the Nobles are not only free from Customs, but likewise all other Inhabitants by the *Magna Charta* of *Culm*. The *Polish* Noblemen have also the Privilege of Pre-emption. All the Gentry of *Poland* are equal by Birth, and therefore they don't value Titles of Honour; but think that of a noble *Pole*, or Gentleman of *Poland*, the greatest they can have. Neither the King nor the Republic bestow the Title of Prince, which belongs only to the Sons of the Royal Family; for though some are made Princes of the Empire, and as such enjoy

the Title of Prince; they have no Precedency upon that Account. Nor have they any Dukes, Marquisses, Counts, Viscounts, or Barons, but what have foreign Titles, which the rest generally despise; for they do not value any borrowed Character, or external Denomination; but say, that it is intrinsic Worth and Service done to their Country, that deserves Preferment. King *Sigismund III.* established an Order of Knighthood of the immaculate Conception, created several Knights, and allowed them Privileges and Superiority above others, but they were so much undervalued and despised by the rest of the Gentlemen, that the Order (in spite of the royal Protection) soon came to nothing.

Those great Privileges make the *Polish* Gentry powerful; many of them have large Territories, with a despotic Power over their Tenants, whom they call their Subjects; some of them have Estates of five, some fifteen, some twenty, and some thirty Leagues in extent. But the poor Gentry have their Votes in the Dyet as well the richest. Some of them are hereditary Sovereigns of Cities, with which the King has nothing to do. *Lubomirski* possesses above four thousand Towns and Villages; some of them can raise five, six, eight, and ten thousand Men, and maintain them at their own Charge. The Gentry of Note have Horse and Foot Guards, which keep Centry Night and Day at their Gates. They make an extraordinary Figure when they come to the Dyet; some of them have five thousand Guards, some had formerly ten thousand. They esteem themselves, especially the Senators, above any Prince in *Germany*, and want nothing of sovereign Power, but the Liberty of coining Money, which is reserved to the Republic. Foreign Embassadors are obliged to make a great Figure here, otherwise the Gentry despise them. When great Men have Suits at Law, the Dyet, or other Tribunals decide them; yet the Execution of the Sentence must be left to the longest Sword; for the Justice of the Kingdom is commonly too weak for the Grandees. Sometimes they raise five or six thousand Men of a Side, plunder and burn one another's Cities, and besiege Castles and Forts; for they think it below them to submit to the Sentence of Judges without a Field Battle; yet formerly, their Noblemen were little better than Slaves. *Cromercus* says, that they were obliged to keep the King's Dog. The first Rise is ascribed to the Privileges granted by *Boleslaus the Chaste* to the Clergy, and afterwards when *Poland* was harassed by Civil Wars; the Gentry obtained many Privileges from their Kings, which they have since taken Care to get augmented at every new Election.

The most flourishing Families in *Poland* are those of *Radzivil*, which has the Title of Prince; the Dukes of *Wisniowec* and *Zbaraw*, one of which Family was elected King of *Poland* in 1664; the Prince of *Lubomirsky*, whose Family are Princes of the Empire; the Princes of *Czartorisky*; the Princes of *Sapieta*, great Governors of *Lithuania*, the Family of *Lezeinski*; the Family of *Jablenowski*; the Family of *Priemski*; and that of *Lipski*. Those that are not noble by Birth, may be created Noblemen. This was formerly at the King's Pleasure, but of late is at the Disposal of the Senate or Dyet. All the little Dyets of the Republic must give their Consent; and this must afterwards be approved by the great Dyet, before they have their Patent. A *Jew* is made a Gentleman by marrying a Christian, and by signaling himself in the Wars; but the King must propose it, and the Dyet approve it. The new made Nobility are liable to several Impositions and Inconveniencies, from which others are exempted; if any one be a Magistrate in *Cracow* or *Vilna*, he and his Posterity are noble. Nobility is forfeited here three Ways; by some heinous Crime; for Instance, when a Nobleman permits one that is ignoble to usurp his Coat of Arms; by exercising any Trade or Merchandize; sometimes Posterity are restored, when Parents have quitted their Title through Poverty, and by bearing Office in any City that is not privileged. All the Nobility love to make a Shew, and to be splendidly clad.

They formerly delighted in foreign Fashions; when they had Wars against the *Muscovites* they followed theirs,

theirs, and when with the *Turks* they took up their Habits. Their present Garb is a Vest, that reaches to the Middle of their Legs, with a long Robe lined with Fur, and tied about their Middle with a Sash, little Boots, with Iron Heels, Fur Caps, and a Sabre by their Side. When they ride they have a short Cloak, like an *Irish* Mantle, furred within and without. The better Sort have rich Furs from *Muscovy*, but the poorer Gentry content themselves with the Skins of Tygers, Leopards, Panthers, and a kind of grey Furs. The finest of their Fur-suits cost above a thousand Crowns, are worn only at Dyers, and descend from Father to Son. Some of the *Polish* Gentry imitate the *French* Fashion, and wear Linnen, Lace, Perukes, and Swords. The ordinary Sort of Gentry put Chaff into their Boots. Some of their Nobles have fifty Suits of Cloaths, all as rich as possible, and they love to have their Servants as well apparelled almost as themselves.

8. As to the Peasants they are born Slaves, have no Notion of Liberty, but live well satisfied without it; in *Courland* they are as subject to their Landlords as in *Poland*, and in both Countries almost adore them. They love their Landlords, fight for them, and all they have is absolutely at their Devotion. When they debauch their Wives, or Daughters, those poor Wretches do not think their Women the worse, or that they themselves are dishonoured by it. They have scarce any Religion, but like Brutes, work on *Sundays* for their own Subsistence, being obliged to work three or four Days in a Week for their Masters, without Meat or Wages. Each of them earns his Master, at least, ten Pounds *per Annum*. They have no Property, nor can they be made free, except they go into some Convent, and are ordained Priests, or their Masters ravish their Wives, or Daughters. When a Lord lets any Ground to a Peasant, he orders his other Peasants, at their Charge, to build him a House, to give him a Cow, Hens, Geese, and as much Rye as will keep him a Year. A Slave cannot send his Son to the University without Liberty from his Lord. They reap their Master's Corn, and have rigid Task-masters over them, who punish them severely, if they do not do as much as is required of them. Their Masters commonly boast of their Clemency, and say, that though they have an absolute Power over them, they seldom make use of it any more than other Christians do over their Horses and Dogs.

Doctor *Connor* informs us, he asked some *Polish* Noblemen, why they so inhumanly treated and undervalued their Boors; who answered, that formerly all the Boors revolted from their Landlords, and conspired to extirpate them, and murdered so many, that the rest were obliged to hide themselves, or to leave the Kingdom. But, at last, the Gentry getting together from all Parts, and being assisted by their Neighbours, quelled the Peasants, who intended to have set up a Commonwealth of their own, and brought them to such Extremities, that ever since they have been contented to live like Slaves. In Winter they wear a Sheep-skin with the Wool inwards, and in Summer a close-bodied Coat of coarse Stuff, of a Colour much like our Chimney-sweepers, with sorry Caps; their Boots are the Rinds of Trees wrapped about their Legs, with the thicker Parts to guard the Soles of their Feet against the Stones; they cut their Hair close, like Monks, and shave all from their Faces but a large Whisker. They walk gravely with a Pole-Axe in their Hand, and a Sabre by their Side, which they never put off till they go to Bed; it hangs by a Strap of Leather, to which there is fastened a Handkerchief, Knife, and Sheath, and a small Stone to whet their Knives.

In *Lithuania* the Boors Shoes are of the Barks of Trees, and their Stockings of thinner Bark, which they wrap about the Calves of their Legs. Before they enter any Town, they always take care to put on fresh Shoes; they also wear a Sort of ash-coloured Habit, with Sleeves, woven all of a Piece. The Boors here are more miserable than in *Poland*; for Gentlemen commonly go into Boors Houses, though not their own, take all they have, and beat and wound them, because they are not

able to bribe such as have Power to do them Justice. The *Prussian* Gentry are not so gaudy in their Habits as those of the more southern Parts of *Poland*; their Peasants differ also in Habits from those of *Poland*, and wear sometimes long strait Coats of Leather.

9. The *Poles* never live above Stairs, and their Apartments are not united; the Kitchen is on one Side, the Stable on another, the Dwelling-house on the Third, and the Gate in the Front. Their Houses are for most part of Wood, but they have some of Brick and Stone. Their Rooms are generally hung with Tapestry, or Arras, but towards *Tartary* they keep no extraordinary Furniture, because of the Incursions of that barbarous People. They content themselves with a few small Beds, with Taffaty Curtains; and if any one lodge at their Houses they must carry their Bedding with them. The Moveables of the Peasants are a few earthen and wooden Dishes, a hard Bed, and a wretched Coverlid; their Children are not allowed Beds till they marry, but lie upon Boards by the Fire; they have no Chimnies, but little Holes in the Tops of their Houses. The Peasants Children go naked till they are four or five Years old, and frequently eat in the same Trough with the Pigs. They crawl on their Hands and Feet till they are strong enough to walk, and when they are dirty the Mother washes them in cold Water, which makes them exceeding hardy.

The Peasants of *Lithuania* and *Samogitia*, build their Houses round, narrow, and open at top to let out the Smoke and Stink; they are generally covered with Boards, Straws, Bark of Trees, and live with the Family and Cattle under the same Roof. The *Polish* Gentry have seldom any Gardens or Orchards, though their Country be very proper for it, and might, by making Cyder and Perry, save a great deal of Corn which they consume in Beer. Their ordinary Meat is Beef and Veal; for they leave the Mutton to their Servants. They have Store of grey but no red Partridges; many Hares, but no Rabbits, than which they say they would rather eat Cats; but they breed white Rabbits for the sake of their Furs; they have many Roebucks, but few Stags; Plenty of wild Oxen, wild Boars, Hogs, Poultry, Pidgeons, &c. There are many Heathcocks and Pheasants in *Lithuania*, and Bustards in *Prussia*. The *Baltic* Sea has scarce any Fish; but that Defect is supplied by great Plenty of fresh Water Fish, from Lakes and Rivers. The *Poles* have a peculiar Way of preserving Cabbage; they chop it small, put it into a Tub between Lays of Salt, press it very hard, and afterwards pour warm Water upon it, which makes it ferment and serves them for Pickle: This they preserve all Winter, and sometimes the whole Year; though it smells strong even at a Distance, yet they think it a great Rarity.

Their usual Drink is Beer, which in *Prussia* is made only of Malt; but in the rest of *Poland*, of Wheat ground small and boiled with Hops. Sometimes they mix it with Oats and Spelt, a Kind of Wheat which grows in *Italy* and *Flanders*; in *Lithuania*, *Russia*, and *Ukraine*, they make both a red and a white Liquor with Honey, which they call Mead; at *Warsaw* they mix it with Spice, and Juice of Cherries and Blackberries. The *Lithuanians* and *Poles* have Wine from *Hungary*, *Italy*, *France*, and *Germany*; that of *Hungary* exceeds *Spanish* Wine in Strength, is brought to *Cracow* over the *Carpathian* Mountains in large Casks drawn by Oxen, and sold at twenty Shillings the *Polish* Pot, which is about three Quarts; the *Italian* Wine is also brought over Land, and on that Account is dearer than the other. In the Morning, both Men and Women generally drink Ginger, Yolks of Eggs, and Sugar, boiled in Beer; they are immoderate Lovers of rusty Bacon and Pease; they eat all manner of Mushrooms, and preserve them for Pickles; they eat great Quantities of Poppy-seed, drink the Milk of them, and make it into several Dishes and Sauces; they make likewise abundance of Oil of the Seeds of Hemp and Flax, which they eat on Fastdays; they use Spice to that Excess, that some great Men spend twenty-five hundred Pounds *per Annum* in that single Commodity: They use Spice and Pickles in all their Sauces, which differ much from ours; some of them are yellow, made with Saffron; others white, made with Cream, some grey, made of Onions;

Onions, and others black, made of the Juice of Plumbs. They have Choice of all Sorts of Pot-herbs, and some that were found nowhere else; they have also Sweetmeats of several Kinds, and make much Use of Pistachio Nuts.

They generally eat a great deal of Meat to a little Bread, though they have Plenty of Corn, especially Rye, which is much better than in other Countries. They are great Admirers of Roots, have a Dish called Crakat, made of coarse Flower of Wheat, Barley, Millet, or Oats, and sometimes of a small Grain they call Manna; on Flesh-days they eat it with Milk and Butter, and on Fast-days with Oil. When the Boors want Bread, they make it of Acorns dried and ground. Near the Mountains of *Hungary* there are wild Goats, which they admire as very good Meat: They also make a Dish of Beavers-Tails; Bears-Paws pickled they reckon a great Dainty. When they kill Elks, they do not gut them for fourteen or fifteen Days, and in Winter, not in a Month. When the Grandees come to the Dyet, they bring them in their Skins and Guts, and hang them at their Windows by five or six at a time, till they grow rank, then they roast some, and dress others like Beef A-la-mode; and none but great Men have this Dish at their Tables. The *Poles* are generally courteous and hospitable to Strangers, invite them to their Houses, converse with them freely, and endeavour to imitate them. The Slavery of their Boors is so much the more tolerable to them, because they seldom want Victuals and Drink; they have generally three or four Sorts of Things at a Meal, one Dish of Pease with sliced Bacon, another of Crakat, and two more of several Sorts of strengthening Roots, which they have in great Plenty in *Lithuania*; their Bread is coarse and black, made of Rye, smutty Wheat and Barley, all ground together.

They have abundance of Flesh, Fish and Fowl; and Cattle, or Poultry, they think they cannot keep in Winter, they kill in Harvest. They are good Marks-Men, and maintain their Families, in a great measure, by Fowling. Every House has four or five Hand-mills to grind their Corn. The Peasants of *Samogitia* are not so laborious as those of *Lithuania*, and consequently have not such Plenty; instead of Bread they eat a Sort of Turnips as big as one's Head, which grow of themselves, without Cultivation. They quench many red hot Stones one after another, in their Beer, Metheglin, and Mead, after they have boiled it a whole Night, in order to make their Bellies soluble; this Liquor they put in Vessels made of the Barks of Trees. They reward the stoutest Drinkers at Feasts with a Shirt, Handkerchief, Frock, or the like. They live longer here than in *Lithuania*, and many of them reach a hundred and twenty Years. Formerly the *Prussians* dwelt in Waggon or Huts made of Boughs, and the Peasants are not yet much improved in Architecture, for they generally live in Hovels built of Stakes, Roof and all, twisted over with Rods, without any Covering; their Furniture is not much better, for the old *Prussians* slept on the Ground, or on the Skins of Beasts, and these lie upon the Straw: They are content with spare Diet, and more addicted to Sloth than Gluttony, yet, like the *Poles* and *Lithuanians* they drink hard, especially at Feasts; their former Drink was Water, or Mares Milk mixed sometimes with Blood; but now it is Mead and Beer. Their ordinary Food is Fish; they knew not the Use of Roots till the Knights of the *Teutonic* Order came among them; but now the Peasants make them their chief Dainties.

When the Gentry make a Feast, they never supply their Guests with Spoons, Knives, or Forks; they must bring them with them: They have a broad Piece of starched Linnen sewed round, the Table-cloth, for Napkins; the Reason they give for it is, to prevent their Servants stealing. Their Servants have their Meat reached them by their Masters, which they eat behind their Backs: They bring twice as much Wine as their Masters need, and drink the Remainder themselves; they seize on what is left after Dinner, and their Ladies each of them carry a Napkin for dried Sweat-meats or Fruits. Their Feasts are made by Friends and Neighbours by Turns; Brimmers are much in use among the *Poles*; they will scarce excuse a Man

except he pledges them. This Vice reigns equally in Feasts and Taverns; and Saints-days are not excepted out of their Drunkards Calendar. These Disorders are tolerated because of the great Excise they bring to the State. The Master of the Feast is esteemed a Niggard that does not allow his Guests as much as will fuddle them.

The Inns in this Country are long Stables built up with Boards, and covered with Straw, without Furniture or Windows; there is a Chamber at one End, but none can lodge there; because of Flies, Fleas, and noisome Smells; so that Strangers chuse rather to lodge among the Horses, where there is also an intolerable Smell of rotten Cabbages, which these People keep always by them. Travellers are obliged to carry Provisions with them; and when Foreigners want, they apply themselves to the Lord of the Village, who forthwith supplies them. *Poland* being for most part a champaign Country, a Calash and two Horses will rid a good deal of Ground there in a Day. Travellers ought to take more than ordinary Care as they pass Bridges in this Country, because they are generally very bad, and seldom repaired. When they go a hunting for Bears they catch those of the biggest Size with Nets, and when they have hampered him, all the Hunters ride about him, and having pinned down his Head and his Feet with great wooden Forks, they bind him so about with strong hempen Cords that he is not able to stir; then they rowl him into a great wooden Chest; the Knots of the Cords are so contrived, that with one pull they may be untied. The Bear is kept thus, till they have a mind to hunt him, and then they let him out at a Trap-door made on Purpose.

They surround wild Bulls with a great Number of Horsemen, when each of them rides up and darts an Arrow at him; upon this the Ox pursues his Enemy, then another darts him behind, and as he turns about to pursue him, they dart him so by turns, till the Beast being tired with pursuing so many Assailants, falls down, and is easily taken or killed. They have another way of hunting, by making the Boors fell a great Number of Trees; each Hunter secures his Post assigned him, at which they throw Darts, and as the Bull runs towards his Enemy, the Hunters from behind give him his Death's Wound; but if he breaks through the Inclosure, the next Hunter holds out a Piece of red Cloth, against which the Beast having an Antipathy, he immediately leaves that Person and runs at another, who being provided for him, commonly kills him.

10. The *Polish* Ladies are generally very modest, and not very apt to abuse the great Liberty allowed them. They seldom stir out of Doors without a Coach and Six to Church, or to visit a near Neighbour, and are always attended by a great Number of Servants. When they go abroad at Night, they have twenty-four or more Flambeaux carried before their Coach. Their Train is borne up by He or She-Dwarfs; and they have always an old Woman to attend them, whom they call Governante, and an old Gentleman for their Usher. Notwithstanding all these Honours, they are entirely managed by their Husbands, and dispose of no Money without his leave. When they want any thing they must ask him for it, kneeling, embrace his Knees, and call him their Benefactor: But some few Trifles are allowed them of Course. The Fashion of the Womens Cloaths comes nearer to that of the Men than in most other Countries. They formerly wore Garlands on their Heads, composed of Gold, Jewels, Flowers, Silk, and the like; but now they wear Silk Caps, lined with Fur, like the Men; in King *John III's* Time they imitated the *French* Mode, because the Queen was of that Nation.

The Peasants Daughters are so extremely reserved, that they will draw a Knife at any Man that offers to kiss them; besides, their Mothers have a watchful Eye over them, and make them wear little Bells before and behind, to give Notice where they are, and what they are doing; but these Precautions do not always secure them. The Countrywomen are habited as in other Countries; but their Petticoats are very short; those in *Red Russia* go generally in Summer with an Apron before them that reaches lower than ordinary. The

wedding Feasts of the Gentry last commonly three Days. If a Lady marry any of her Waiting-Maids, she costs her almost as much as one of her Daughters. On the second Day all the Guests present the Bride with something new, which makes a good Part of her Portion. The Princess of *Poland*, when married to the Elector of *Bavaria*, had above one hundred thousand Crowns presented her.

Among the Boors a Maid never marries till she be twenty-four or thirty Years of Age, and has wrought, with her own Hands, several Baskets full of Cloths, of different Sorts; which, at the time of her Espousals, she is to distribute among the Guests that her Husband brings with him. She must also have served her Mother for a certain time. The same Right is observed with respect to their Sons; it is also observable, that those employed to make up the Match, always enquire more strictly into the Manners and Behaviour of the Persons, than as to their Stock of Corn and Cattle. Their Godfathers and Godmothers are always accounted Relations, though they be nothing a-kin, and they cannot marry such Kindred without a Dispensation from the Bishop.

The Burials of those of Quality are celebrated with such Pomp and Magnificence that they are more like Triumphs. The Corpse is carried in a Hearse, or Chariot, with six Horses, all covered with black; the Coffin has a large black Velvet Pall over it, with a Cross of red Sattin in the Middle, and six long black Silk Tassels, supported by as many of the deceased domestic Servants in close Mourning; several Priests, Monks, and others, march before the Hearse; each of which carries a white Wax Torch in his Hand. Immediately before the Hearse come three Men on Horseback, who carry the Arms of the Deceased; one his Sword, another his Lance, and a third his Dart. After the Burial Service is over, those who carry the Armour enter the Church on Horseback, and riding furiously to the Coffin, break the Arms of the Deceased upon it, after which the Body is interred. Then there is a Feast, where the Lay-Guests not only drink to excess, but likewise force the Clergy to follow their Example. When the King dies he is laid on a Bed of State; and a certain Number of Senators, Ecclesiastical and Temporal, are appointed to attend his Corpse. The Republic defrays the Expences out of the Revenues of the Crown. The deceased Queen has the same Ceremonies and Honours allowed her. When Women of Quality mourn they wear a coarse black Stuff, and their Linnen is not much finer than Canvas; and the greater their Quality their mourning Weeds are the coarser. All Senators, Deputies, and others, that appear at the Diet for electing the new King must be in black.

11. The Language of the *Poles* is the *Sclavonian*; but there are so many different Dialects of it spoken in the several Parts of this Kingdom, that one Part of the People scarce understand the other; they all agree, however, in multiplying Consonants; and if they did not sound more Vowels when they speak, than are contained in the Words they write, it would be impossible to utter them. The *Latin* is almost as universally spoken as the *Sclavonian*, there being a School in every Village for the teaching it; and the Girls learn it in the Nunneries. Their Terms of Art are chiefly *German*, and indeed there are whole Towns and Villages in *Prussia* which are of *German* Extract, and still speak the *German* or *High Dutch* Tongue. The *Armenian*, *Persian*, and *Tartarian* Languages, are also spoken upon their Frontiers; and the *Jews* have introduced the *Hebrew* in some Places; but with all these Languages, it is observed, that their Learning is but superficial.

As to their Divines, their Learning, it is said, consists in adapting *Aristotle's* Logic and Metaphysics to their School-Divinity; and they value themselves more on being versed in the Signification of logical Terms, than in the Nature of the Things they reason about. They enquire but little into Church-History, or the Practice of the Primitive Times, but seem to have an implicit Faith, and to be entirely governed by the Decisions of the Church of *Rome*; nor will they suffer any

Person to enquire into the Reasonableness of their Tenets.

There are few native *Poles* that study Physic. The Physicians are generally *Germans*, *French*, or *Italians*. An illiterate Quack of this Kingdom, Doctor *Connor* mentions, however, who lived in a Wood about six Miles from *Warsaw*, undertook to cure the Venereal Disease in seven or eight Days by Bathing and Sweating. In the Water the Bath was made of, he boiled several Plants, which the Man made a Secret of; but the Doctor says, as well as he could discover, the chief of them were Hellebore, Aster, and the Capillus Veneris or Maiden-hair. That he bathed his Patients in a hot Decoction of these Herbs for four Days together, and made them drink of it while they were in the Bath frequently; that for four Days afterwards he laid them over the Tub to receive the hot Steams, covering them with Blankets, and making them drink of the Decoction as before. And thus by sweating, bathing, and drinking, he was assured he had done many wonderful Cures in venereal Cases; and for the whole Cure demanded but two Rix-Dollars, which is less than ten Shillings *English*. They seldom use Salivation in this Country, though venereal Distempers are very common.

The Disease peculiar to the *Poles*, is that called the Plica, in which the Hair of the Head is matted together, and grows so long, that it sometimes reaches down to the Middle, covering their Backs, but generally it hangs in twisted Ropes; others have their Hair only matted close to their Heads, without growing to any length; and the Hair will be thus intangled and matted together in one Night's time, though never so much Care is taken to prevent it; if the Hair be cut off it occasions a Dimness in the Sight, and sometimes a total Blindness; it also occasions Pain in the Head and Limbs, and Pustules to come out all over the Body; the Foreigners that have been infected with this Disease, relate, that they have cut off their Hair without any Inconveniency attending it. The Bishop of *Posen* acquainted Doctor *Connor* that he was afflicted with this Distemper in his Youth, and that cutting off his Hair, unknown to his Friends, he felt a thousand racking Pains, which left him as his Hair grew again, but then the Distemper returned. He observed also, that on the cutting off his Hair he could sensibly perceive a volatile Matter pass in great Abundance through the Tubes of his Hair, which twisted and contracted the Locks, that when he put a Cap on his Head, it occasioned an intolerable Pain and Heat, which he supposed proceeded from the Pressure, by which the Humours were repelled, and forced back upon the Head. As to other Diseases, it seems, the *Poles* are very little troubled with them. The Scurvy, or malignant Fevers, and Pleurisies, are seldom of such ill Consequence in *Poland* as in other Countries.

By the Laws of *Poland* the Estate of the Father is equally divided among his Children, except any of them go into a Monastery, and then their Parts are equally divided among the rest; and the young Children here, as in other *Popish* Countries, are encouraged by their Parents to take the Vow upon them, that their Estates may be preserved entire to the eldest Son, which would otherwise dwindle away to nothing, where there happens to be a numerous Issue.

12. We are so apt to be biased in our Sentiments, by what happens in our own Times, and as it were under our own Eyes, that we can scarce bring ourselves to think things ever were otherwise than as we now perceive them. But it is certain, that as restless and turbulent as the *Poles* now are, they were formerly of a different Disposition, and very much attached to the Persons and Families of their Princes: Thus for several Ages they obeyed the Family of *Piastus*, who was raised to the Throne by his Merit; and upon the Death of *Lewis*, King of *Poland* and *Hungary*, the last Male-Heir of his Family, they chose his Daughter, and resolved to bestow their Crown upon her Husband, who was *Jagello*, Duke of *Lithuania*, who took upon him the Name of *Uladislaus*, by whose Posterity they were governed till

till the Death of *Sigismund II*, who was the last of that Family, and died in 1574, when they chose *Henry de Bourbon*, afterwards *Henry III*, of *France*, for their King; upon a Promise, that he would marry the Princess *Anne*, Sister to their late Monarch.

When he abdicated they made choice of *Stephen Batori*, Prince of *Transylvania*, who actually married the Princess before-mentioned, but had no Issue by her. Upon his Death in 1586, they made choice of *Sigismund de Vasa*, Prince of *Sweden*, because he was the Nephew of *Sigismund II*, and consequently by the Mother's Side of the Race of their antient Kings. The last of his Race was *Casimir*, who abdicated the Government and retired to *France*; and in 1670 they chose *Michael Wiesnowiski*, whose Successor was *John Sobieski*; upon whose Decease in 1696, the *Poles*, contrary to their usual Custom, rejected his Family, and made choice of *Augustus*, Elector of *Saxony*, the Father of the present King *Augustus III*. The Factions that have long reigned in *Poland*, have hindered these last Monarchs from making that Figure in *Europe*, which their Predecessors had done; but it does not follow, from hence, that the *Poles* will always continue uneasy and discontented.

On the contrary, they seem now to have a just Sense of the ill Consequences of their Divisions; and are endeavouring to put an End to them by deciding as fast as possible the Quarrels amongst their Grandees, which is the surest way of restoring the public Tranquility: And whenever this shall be effectually brought about, there is no Question to be made, that the antient Glory of the *Polish* Nation will revive; for they are still possessed of very large Territories, capable of great Improvements, and are very able to raise a Force sufficient to defend themselves against the Incroachments of any of their Neighbours, and even to render themselves as formidable as any of the northern Powers. It is indeed true, that in their last Election they were awed by the *Russians*; but this did not so much proceed from the superior Power of that Empire, as from the want of Union among the *Poles*; and perhaps before their Throne again becomes vacant, they may be in a Condition to repair their past Errors, and to make a free Choice of some Prince, capable of governing them, according to their Constitution, and thereby extinguishing those Feuds and Jealousies, which have rendered them so inconsiderable since the Days of *John Sobieski*, the last of their Monarchs under whom they made any Figure; and whose Covetousness, which proceeded from the Desire of fixing the Crown in his Family, was the chief Reason that Design of his did not take Place.

The unfortunate *Stanislaus Leszinski* who still wears the Title of King of *Poland*, was endowed with all the Qualities requisite to make his People happy, brave, generous, pious, just, and affable to all Ranks of People; he was only unhappy in being the Instrument of *Sweden* first, and afterwards of *France*; which rendered him very justly suspected to a great Part of his Countrymen; so that we may reckon it an Happiness to *Poland* that he has no Male Issue, and that his Daughter, the *French* Queen, has but one Son; since this might otherwise prove a new Source of Trouble, not to this Country only, but to all

its Neighbours; for though in Time of Peace *Poland* has been little regarded, yet the Disturbances there have proved more than once the Cause of Wars in many other Parts of *Europe*.

13. We will close this Section with observing, that nothing shews more clearly the Folly of that kind of modern Policy, which consists in weakening and distressing our Neighbours, than the present State of *Poland*. This Country, as well by its Situation as from the natural Genius and Disposition of its Inhabitants, is the proper Bulwark of Christendom against the *Turks*, whom they have resisted with as much Success, and over whom they have gained greater Victories, than almost any other Nation. If we consider them in this Light, it is very easy to see that it can never be the true and natural Interest either of the House of *Austria*, or of the *Russians*, to promote Troubles in this Kingdom, because the more powerful and formidable the *Poles* were, the less able the *Turks* would be to alarm either of these Potentates. The Grand Signior indeed has shewn a true Spirit of Policy, in never attempting to disturb this Nation even in its lowest Circumstances; but contented himself with the Security that he reaps from their Confusions; since, if he had ever attacked *Poland*, it would probably have put an End to them; and though at first he might have made great Conquests, yet when the Spirit of the Nation was once roused, he would have been quickly driven out of them, as he knew, from the Experience of former Times.

If the *Poles* could once so settle their Affairs as to have time to consider the Advantages that might result to their Country by the extending their Commerce, it is not at all impossible they should succeed therein, though they have neglected it so long. I have been led to this Remark by the Knowledge I have of a Project that was formed by the late King *Augustus*, for opening a Trade with *Asia* by the Help of the *Crim Tartars*, and transporting the Commodities that are brought from the *Black Sea* by the *Niester* and the *Bog*. He had other great Views with Regard to *Russia*, and though at present they seem to have died with him, the Time may come when they shall revive again, and be carried into Execution by some *Polish* Monarch, either of his or some other Family.

That Luxury and Wantonness, which are the natural Effects of Plenty, as that generally springs from Trade, commonly produce such a Spirit of Idleness and Profusion, as is inconsistent with the Preservation of Manufactures and Commerce; and this occasions those Changes in these Blessings, which appear absolutely unaccountable to the unthinking Part of Mankind. The Country of *Poland* abounds with natural Commodities, if the Inhabitants knew how to make use of them; and with a numerous and laborious Race of People, who would soon become rich if they were properly employed. We have reason to expect therefore, that some time or other, awakened by their own Necessities, or provoked by the Example of their Neighbours, they will think of improving their Lands, working up their Commodities, and vending them in different Parts of *Europe*; which, whenever they do, will infallibly make them a rich and happy Nation.

SECTION V.

A short Account of the UKRAIN, and of its Inhabitants the COSSACKS.

Collected from the Writings of Mr. Beauplan, and others.

1. *An Account of the Etymology of the Name and Origin of the People called Cossacks, with the regular Detail of their History to the Time of their being dispersed, and obliged to put themselves under the Protection of the Muscovites, Turks, and Tartars.*
2. *A short Description of the Ukrain, and of the principal Places therein; the Nature and Extent of the Country, and the Manner in which it was settled, and inhabited by the Cossacks, while they acknowledged themselves Subjects to the Crown of Poland.*
3. *The Temper and Genius of the People; their singular Customs, and odd Way of Living; as also of the Rarities and Remarkables in their Country.*
4. *The Manner of their making War both by Sea and Land, the Terror spread by them through the whole Turkish Empire, and even through Constantinople itself, and the dextrous Method they use for marching through a flat Country, in Sight of superior Bodies of Horse.*
5. *Of the present State and Condition of the Cossacks; with Remarks and Observations upon the foregoing Section.*

According to some Authors, the Word *Cossack*, in the Russian Tongue, signifies Free-booter or Banditti; others derive it from *Cosa*, signifying a Goat, because of their Nimbleness. Some say, that *Cosa*, in the Slavonian Language, signifies a Scythe, their ordinary Weapon. They are thought to have come first from the Islands of the *Boristhenes*, near the Mouth of that River, and were called *Zaporowski*, or *Zaporienteses*, from the *Porowis*, or Cataracts and Rocks in the *Nieper*. The Turks usually call them *Russians*. They dwell in a Part of Red Russia in Poland, and in *Basserabia*, betwixt the Rivers *Boristhenes* and the *Niester*. They are terrible to the Turks, because of their Invasions by the way of the *Black Sea*. In 1548, in the Time of *Sigismund I*, King of Poland, these *Cossacks* were only Volunteers of the Frontiers of Russia, *Volbinia*, *Podolia*, and the other Provinces of Poland. Who assembled together partly to defend themselves from the *Tartars*, by securing the Passes of the *Nieper*, and attacking them, as they returned with their Prey; and partly to rob upon the *Black Sea*, where getting rich Booty, they drew more into their Association. Sometimes they made Descents upon *Natolia*, and plundered the great Towns, as *Trebisond* and *Sinope*; at other Times they have advanced within two Miles of *Constantinople*, and brought off Booty and Prisoners.

At first they were about six thousand, under *Eustachius Doscovitus*, their General; but their Numbers were quickly increased by their Neighbours, because of the Gain they made by their Piracies, Part of which they laid up in their Magazine, and the rest they brought Home to their Houses. About the End of the Season, these Adventurers separate, and agree upon the Time and Place of Rendezvous next Spring in the Isles and Rocks of the *Nieper*, whence they return to their Piracy. *Stephen Batori*, King of Poland, who began his Reign in 1576, considering the Service that might be made of those Thieves, for guarding the Country and Frontiers against the Inroads of the *Tartars*, formed them into a regular Body; and they served him as Foot-Soldiers; for the Polish Army consists chiefly of Horse. He gave them the Town and Territories of *Tetchtimorow*, about eighty Miles in length, in the Palatinate of *Kiow*, upon the *Boristhenes*; which Town they made their Magazine, and the Residence of their Governor-General, whom they named, and gave him Power to chuse Subalterns. *Stephen Batori* also joined two thousand Horse to this *Cossack* Infantry, to whose Maintenance he assigned the fourth Part of his Royal Revenues, whence they are called *Quartani*. These Forces so well secured the Frontier, that the Country beyond *Breslaw*, *Bar*, and *Kiow*, betwixt the *Niester* and *Nieper* was re-peopled, the Towns rebuilt, and Colonies planted there from the neighbouring Places.

The *Cossacks* being thus brought into good Discipline, did considerable Service to the Crown of Poland, but have since done the Republic much Mischief by their frequent Rebellions; for the *Cossacks* knowing their own

Strength, and of what Importance they were to the *Poles*, began to set up for themselves, and would not obey the Orders of their Superiors, and acknowledge the Power of the *Poles* over them. Their first Rebellion was in 1587, under their General *John Podkowa*, who was taken, and his Head struck off. In 1596, *Sigismund III*, upon the Complaints and Threats of the Grand Signior, forbade them to pillage any more upon the *Black Sea*. They obeyed his Orders for a while, but then turned their Force against Russia and Lithuania, under the Command of their General *Nalevackio*; and having had some Advantages over the Polish Army, commanded by General *Zolskiowski*, they looked upon themselves as invincible; yet that noble Warrior found means to block them up so close, that he forced them to deliver him their General, who was beheaded.

In 1637 was laid the Ground of a new War with the *Cossacks*, their Numbers being greatly increased by the Multitude of Boors, who frequently went over to them, to share their Privileges. Some great Men in Poland who had got Estates in the Places appointed for the Quarters of the *Cossacks*, were of Opinion, that their Revenues would be considerably increased, if the Liberties of the *Cossacks* were abridged. Whereupon they advised the King to restrain them, and began to use the same Severity to the *Cossacks* as to the Polish Boors, who are obliged to work three Days in a Week with Man and Horse for their Lords, and to pay so much Corn, Poultry, &c. to carry Home their Master's Wood, to pay him so much Money, and the Tenth of their Possessions. The Polish Lords being absolute at Home, and not punished for killing their Slaves, they represented, That the *Cossacks* deprived them of all Advantages they could expect from their Lands in the *Ukrain*; for when the Boors were disobliged they went to them. Therefore they resolved to build a Fort at *Kudac*, at a Point where the River *Zivamer* falls into the *Nieper* or *Boristhenes*, and therefore very convenient to bridle the *Cossacks*; who understanding the Design, cut in Pieces two hundred Men, that guarded the Building; but being attacked by the Polish General *Potoski*, and divided among themselves; they were routed at *Korsun*, and forced to deliver up their General, and four more of their chief Officers, who were put to Death at *Warsaw*, though *Potoski* had promised them their Lives. After this, all their former Privileges were taken from them, with their Fortrefs *Tetchtimorow*, and in their Stead a new Body of Militia was settled there. This enraged the *Cossacks*, who again tried their Fortune with *Potoski*, but were worsted, though they fought with great Bravery. Then they fortified themselves upon the River *Mareza*, beyond the *Boristhenes*. After this, the *Poles* having lost so many Men, by endeavouring to suppress them, they were forced to promise that their ancient Privileges should be restored, and that their Militia of six thousand Men, should be re-established under a General appointed by

by the King. The *Cossacks* returned to their Homes, and laying down their Arms upon the Faith of their Treaty, were killed or plundered by the *Polish* Soldiers, and another Militia set up, excluding the true *Cossacks*, and among other oppressive Methods the *Poles* took from them some of their *Greek Churches*.

But the *Tartars* afterwards ruining a great Part of the *Ukrain*, convinced the *Poles* of the Necessity of restoring the *Cossacks*. *Uladislaus IV.* making War upon the *Tartars*, was very careful to see it done, and gave them for their General *Theodore Chimielski*, and granted him a Privilege to build some Mills; but a *Polish* Gentleman, named *Jarinski*, burnt them, ravished his Wife, and afterwards killed both her and her Son. The *Cossacks* were also provoked by their Landlords, who farmed out their Lands to the *Jews*, who monopolized all the Trade of the Country, and got so much Power that they would not suffer them to marry, or baptize, but upon their own Terms. *Theodore* and his *Cossacks* obtaining no Redress, or Satisfaction, for those Injuries, raised an Army of above twenty thousand Men, burnt, plundered, and ravaged the Country, and did what Mischief they could to the *Polish* Nobility. Upon which the Senators desired the King to march against them; who answered, that they ought not to have burnt their Mills. King *John Casimir* favoured them underhand, and designed to make use of them for the Conquest of *Crim Tartary*, at which the *Poles*, being dissatisfied, levied an Army of fifty thousand Men, whom the *Cossacks* defeated, killed ten thousand upon the Spot, and took the City of *Kiow*. To revenge this Affront, the *Poles* summoned the seventh Man throughout the Kingdom, and marched against the *Cossacks*, without the Consent of the King, and were again defeated by them.

But while *Chimielski* was celebrating the Nuptials of his Son, with the Daughter of the Prince of *Walachia*, at *Kiow*, the *Poles* surprized the *Cossacks*, plundered the City, and took the *Grecian* Patriarch Prisoner. The *Cossacks* sent to the King to know whether this had been done by his Authority? He answered, no; and that it was done by the Nobility out of Revenge. Upon this *Chimielski* called in the *Crim Tartar* with one hundred thousand Horse, against whom the King went in Person, at the Head of the Nobility, and totally routed them, though they were three to one stronger than the *Poles*. *Chimielski* gathered up the Remains of his scattered Army, and continually harrassed the Country, so that the King was obliged to make an Agreement with them; but the Nobility were discontented at it, and alledged, the King had granted too much: This Peace was made in 1649. *Chimielski* fearing the *Poles* would not observe that Treaty, made an Alliance with the Grand Signior and the Prince of *Moldavia*, and at a Dyet he proposed such Terms as shewed he intended to make himself an absolute Prince, under the Protection of the *Turks*.

Thus a new War broke out in 1651, when the *Cossacks*, and their Confederates, besieged *Smolensko*, took it next Year, and ravaged *Lithuania*; they took *Wilna*, and some other Cities, where they committed great Barbarities: It was chiefly owing to them that the *Muscovites* got Possession of the Provinces of *Smolensko* and *Siberia*, and the greatest Part of the Palatinate of *Kiowia*, which were confirmed to them by the Treaty of *Oliva*, in 1666. They have since those Days suffered many Changes of Fortune, as well as Diminution in Numbers; but at this time however they are tolerably free, some under the Protection of the *Turk*, others under the *Poles*; but the greatest Part of them own themselves Subjects to *Russia*. After giving their History, which is singular enough, and very well deserves the Reader's Attention, we will next consider the Country in which they live, and which from the Flatness of it, has been supposed, not without great Probability, to have been left partly by the Sea, and partly by the great Rivers that run through it, in the same manner as the Antients report of *Lower Egypt*, and as we know that Tract of Country was certainly left, which is called *Marshland*, in the County of *Norfolk*.

2. The Word *Ukrain* signifies a frontier Country, and lies betwixt 48 and 52 Degrees of North Latitude, the

VOL. II. NUMB. 104.

Niester is their western, and the *Nieper* their eastern, Boundary. According to some Authors *Kiow* is the chief Town, and belongs to the *Muscovites*, being taken from the *Poles* in 1633, by the Confederate Army of the *Muscovites* and *Cossacks*. This City gives Name to the Palatinate of *Kiow*, which had Princes of its own till it was reduced to a Province by *Casimir III.*, who began his Reign in the Year 1333. The Ruins of the Walls shew it to have been eight Miles in Compass: Here are to be seen still the Ruins of many Arches, high Walls, Churches, and the Sepulchres of many Kings, with *Greek* Inscriptions. The Church of *St. Sophia*, whose Walls are lined with Mosaic Work; and that of *St. Michael*, remarkable for its gilded Roof, are still in a tolerable Condition.

Betwixt this Town and the *Nieper* lies *New Kiow* along the Banks of the *Nieper*, which has about six thousand Inhabitants. The *Papists* have four Churches, and the *Greeks* ten, with a sort of an University. The second Town of note is *Perejlaw*, on the East-side of the *Nieper*, upon the River *Trubicz*, which falls into the *Nieper* two Miles below it: It lies ten *German* Leagues South-east from *Kiow*; is a strong Town, and contains six thousand Families. Here the *Cossacks* have a Regiment, and another at *Kaniow*, a little lower on the East-bank of the *Nieper*: On the same side is *Cirkacse*, the Center of all their Retreats; which was burnt by the *Polanders* in 1637.

On the same Side lies *Krilow*, and below that *Cremierczow*, the lowest Town upon the River, all the Country below it being desert. Further down the River there are many Isles, most of them uninhabited, because overflowed in the Spring; but much frequented by Fishermen. Several other Rivers increase the *Nieper* at *Romonow*, but chiefly *Samar*, which supplies the Country not only with Fish, but with other Commodities, as Honey, Wax, Venison, and especially Timber: The *Cossacks* call this River the *Holy River*: In the Spring they catch Sturgeons and Herring here.

A little below this, the *Poles* in 1635, built a Fort at *Kuda*, which is the first of the *Porouki*, *Constantinow* on the River *Sliez*, which runs into the *Nieper*. *Porowi* or *Porouki*, in the *Russian* Language, signifies a Rock: Of these there are thirteen Chains that cross the *Nieper*, and render the Navigation from the *Ukrain* to the *Black Sea* impracticable; so that though the *Ukrain* be fruitful in Corn, yet the Inhabitants not being able to export it, suffer much of it to lie untilld. Of these Rocks, some are under Water, some above, as big as Houses, very near to one another, and stop the Course of the River; so that when it is low they make Cataracts sometimes of fifteen Feet high; but in the Spring, when the melted Snow swells the River, all the Rocks are covered with Water, except the Seventh, which still hinders the River from being navigable; near the lowest *Porouki* the River is not above a hundred and fifty Paces broad, and therefore is the best Passage for the *Tartars*.

Below, there lies *Tomakouka*, the Place where the *Cossacks* rendezvous, but their principal Retreat is below the *Czertomelick*, upon an Island surrounded with a vast Number of small ones; some of them dry, and others overflowed in the Spring; some of them are Morasses, but all of them covered over with Reeds and Canes as big as Pikes, which hides the Passages between the Islands, and makes it a Labyrinth, known only to the *Cossacks*, who call it *Scarbniza-Woyskowa*, or the Treasury of the Army. Here they lay up their Money and Ordnance: The *Turks* have lost many Gallies among these Islands, which not being able to disentangle themselves, fell into the Hands of the *Cossacks*. From these *Porouki* the *Cossacks* are called *Zaperouski*, which is, the great Body of the Nation; and none can be listed among their Number, till he has passed in his little Boat all the *Porouki's*, and from thence, by the Mouth of the *Nieper*, to the *Black Sea*.

The River there is three Miles broad; yet both the *Cossacks*, and others, pass it in this manner: They furnish themselves with flat-bottom Boats, at the Stern of which they fasten cross Poles of a good Length, to which they tie the Heads of their Horses, as many on the one Side as on the other, to balance them; and putting their Baggage in the Boat, they row over, their Horses swimming after them.

The *Ukrain* is a very fertile Country, though the third Part of it is scarcely cultivated; it produces such a vast Quantity of Grain of all Sorts, that the Inhabitants are at a Loss how to consume it; they cannot export any of it, because their Rivers are not navigable. They abound in Honey, Wax, Wood, Cattle, Fowl, and Fish. *Hungary*, *Transylvania*, *Wallachia*, and *Moldavia*, supply them with Wine; they also make good Beer, and *Aqua Vitæ*, out of their Corn; they have much Mead; the Salt-pits near *Cracow* furnish them with Salt; they have also some out of the Country of *Pokutia*, on the Borders of *Moldavia* and *Transylvania*, where there are Salt-springs: Their Houses are of Wood, and their Fortifications of Earth and Wood, which they account better against Cannon, than Brick Walls; but they are soon set on Fire.

The Rivers of note here are the *Boristhenes* or *Nieper*, the *Bog*, *Tyras* or *Neister*, the common Border betwixt them and *Wallachia*, the *Dezna*, the *Ross*, the *Horin*, the *Stouez*, and the *Ster*, near which was fought the last Battle between the *Poles* and *Cossacks*, in 1651; which obliged the *Cossacks* to seek Protection among the *Muscovites* and *Turks*. The Language of the *Cossacks* is a Dialect of the *Polish* Tongue, as the *Polish* is of the *Sclavonian*; but that of the *Cossacks* is much more smooth, and full of Diminutives, which makes it very agreeable.

3. The common People are of the *Greek Church*: Their Worship is the same with that of the *Russians*; their Metropolitan resides at *Kiow*, is consecrated by the Patriarch of *Constantinople*, and subject to him; the whole almost of their Religion consists in Feasts and Holy-days; but the greater Part of the Gentry are Papists, and a few Protestants. It is very common in this Country for Maids to woo the Men; if a young Woman be in love with a young Man, she is not ashamed to go to his Father's House, and reveal her Passion in the most tender Expressions, and promises all Obedience if he please to accept of her in Marriage: If she be rejected by the young Man because he is too young, or not disposed to marry, or the like, she tells him that she is resolved never to go out of the House till he consent, and accordingly takes up her Lodgings there: To force her out, would be to provoke all her Kindred; nor would the Church suffer them to use any Violence to her without inflicting heavy Penance, and branding the House with Infamy; so that after two or three Weeks the Parents, or the young Man himself, being moved with the Constancy of the Woman, accommodate Matters as well as they can, and make up the Match.

Their Manners are like those of Soldiers, not solicitous for what is to come, but spend freely what they have among their Companions, and leave Futurity to shift for itself; they are very inconstant, mutinous, and pursue their present Advantage rather than their Faith and Promise; they are great Drinkers, but by reason of their Labour and Hardships, they have so much Health that Physicians are of little Use among them: They are of a good Stature, strong, nimble, great Lovers of Liberty, uneasy under any Yoke, and indefatigable: They are much given to fishing and hunting. None know better the way of preparing Saltpetre, and making Gunpowder, their Country abounds with it, and several Parts of *Europe* are furnished from thence. This Territory was almost a Desert till improved by the Industry of the *Cossacks*, and other Colonies; the many Rivers which run through it add much to its Fruitfulness.

They have some Animals peculiar to their Country, such as a Beast called *Bobac*, not unlike a *Guiney Pig*; it makes Holes in the Earth, which it enters in *October*, and never comes abroad till *April*; within these Holes there are many little Apartments for their Provisions, Lodgings, and Dead; eight or nine Herds of those Beasts live together in such Caves. They are easily tamed, and are very diverting. When they go out for Provisions, they place a Sentinel, who as soon as he spies any Body gives a Signal, and they all run to their Caves. The *Jounaky* is a Kind of Goat, remarkable for his beautiful Fur, resembling Sattin, and a white Skin and smooth Horns; he has no Horn in his Nose, as some report, but as he

feeds goes backwards. They have many wild Horses, of no Value but for their Flesh, which they sell in their Markets, and think it better than Beef or Veal: When those Horses come to be old, their Hoofs, never pared, so contract their Feet that they cannot go; in Summer they are mightily incommoded with Flies and Grasshoppers, in such vast Numbers, that they form a Cloud of five or six Leagues long, and three or four broad, darken the Air in the clearest Day, and destroy all the Corn they light on in less than two Hours time.

4. When they rendezvous upon the Islands of *Scarb-niza-Waskowa*, the first thing they do is to chuse their General for that Expedition; and to make their Boats, which they call *Colna*, of about sixty Foot long, twelve Foot deep, and as many wide. They are built very light, one Plank pinned on the Edge of another, and widening upwards. They have a Stern at each End, and about twelve or fifteen Oars of a Side. They have no Deck; but to prevent their Sinking, though full of Water, they compass them round with a Border of Reeds, as big as a Barrel, tied together, and fastened to their Boats with Ropes; they have a sorry Mast and Sail, but seldom use them, except in very fair Weather. Their Provision is a Ton of Bisket, which they take out of the Bung as they use it; a Barrel of boiled Millet, and another of Paste, made with Water, which they eat with their Millet; every Boat carries about sixty Persons; every Man having two Guns, and each Boat five or six Falconets or small Pieces of Cannon. They set out about the Beginning of *June*, and return about the first of *August*.

They wait for a dark Night, that they may pass undiscovered by the *Turks* Gallies, which lie at *Oczakow* to intercept them. With these Boats they cruize over all the *Black Sea*. If they spy a Galley, they keep at a Distance till Night, observe the Course of the Vessel, and when it is dark come up and board it; they take out all the Cannon, Money, and Merchandize, and then sink the Ship, because they have neither Skill nor Opportunity to use it. No sooner have the *Turks* Intelligence that the *Cossacks* are at Sea but the Alarm is taken immediately, which reaches quickly to *Constantinople*; from thence Couriers are dispatched to the Coasts of *Natolia*, *Romelia*, and *Bulgaria*, to bid them be upon their Guard; but the *Cossacks* are generally too nimble for them, and are forty Hours on the Coasts before them. If a Galley spy them in the Day-time (which is very uncommon; for their Vessels are not above two Foot and a half above Water) they avoid fighting, by rowing away from her, or retiring to Shallows among Reeds, where the Gallies cannot follow them.

This was their way of living till the Grand Signior obliged *Sigismund*, King of *Poland*, to prohibit those Piracies. It was bad Policy in the *Poles* to let them chuse their own General; for this General being absolutely their own Creature, is forced to comply with their Methods. They handle their Guns very dextrously, and have Scythes set long-ways upon Poles, with which they fight very fiercely, and at the same time skilfully; so that regular Troops are often beat by them. They are very indifferent Horsemen, but excellent Soldiers on Foot. They are inured to all manner of Fatigues and Hardships, obedient to their Commanders, active, and dextrous in intrenching themselves, not only in the ordinary way, but also by making a Fence of their Baggage Waggons, which cover them as they march. These moving Intrenchments are absolutely necessary for them, when they march without Horse in open Plains in the Deserts of the *Tartars*, against whom they are forced to stand wherever they meet them. There have been several Instances, that one thousand *Cossack* Foot marching betwixt their Chariots and Waggons, have, in a Plain, repulsed five or six thousand *Tartars* on Horseback. Their Horses, though swift, are but weak, and stopped by the least Barricade. But, however, this way of marching, in the midst of their Baggage and Ammunition Waggons, would scarcely be practicable in any other Country but *Poland* and the Deserts of *Tartary*, which lie upon a level.

5. It is easy, from these Accounts, to form a just Notion of the original and ancient State of the *Cossacks*; but some farther Explanations will be necessary, in order to have a just Idea of the Condition of this People at this Day. We will begin with what is requisite to be said of their Country. In its utmost Extent, it may be considered as three hundred Miles long, and in some Places above a hundred broad; but then this comprehends the Territory, inhabited by all the *Cossacks*; for they are, at present, distinguished into various Nations. When we reflect on the Manners of the *Muscovites*, *Poles*, *Turks*, and *Tartars*, and remember that their Dominions border upon each other, we shall very easily conceive, that the Frontiers could not afford very safe or pleasant Habitations, and shall not be surprized to hear that they were desert. Hence it was, that this otherwise large and considerable Tract of Country, came to be stiled *the Ukrain*, which, in our Language, properly signifies *the Marches*. The People who first settled on the Rocks in the *Nieper* were Vagabonds from all Countries, who built their Huts in the most inaccessible Places, and were from thence called *Cossacks* or *Goats*, because, like them, they dwelt out of reach.

But, by Degrees, as these People became numerous, they began to plant and improve their Country, which is naturally one of the richest and finest in *Europe*; but from its very Situation, so liable to be ransacked and eat up, whenever any Wars break out among the neighbouring Nations, which are none of them polite, or well governed, that we cannot expect it should ever be brought into any tolerable Condition. Besides, the *Cossacks*, like the Buccaneers in *America*, were Planters only by Accident; they looked upon living at Home as a Hardship, unless in the Time they wanted Winter-Quarters; for their proper Business was War, and they grew rich, not by Industry but Plunder. They were from hence regarded as Barbarians, and in that Sense very justly; because, to live by spoiling others is the highest Barbarity; inasmuch as it is that Sort of Life most repugnant to Reason and the Laws of Nature. But there is another Signification of the Word *barbarous*, which implies Stupidity and Ignorance; and this cannot, with any Degree of Justice, be charged upon the *Cossacks*, who have made as great Improvements in the Art of War as any Nation in the World. It is very true, that with respect to us, and our manner of making War, these very Improvements appear barbarous, but that is for want of Consideration in us; for, if we reflect upon the Situation of their Affairs, and on the Contrivances made use of by the *Cossacks* for their own Security, we cannot but perceive the greatest Ingenuity in them; and I think a little Time will not be ill bestowed to set this matter in a clear Light.

It has been before laid down that War was their Business; and this was of two Kinds, defensive by Land, and offensive by Sea. In respect to the former, the Country round about them was flat, and the Enemies they had to deal with were *Poles* and *Tartars*, who brought great Bodies of Horse into the Field; to oppose these with inferior Bodies of light-armed Foot, the *Cossacks* invented the *Tabor*, or Waggon, in these they carried their Baggage, Ammunition, and Provisions upon a March; and when they encamped, they took Care to have a River in Front, and a Morass in the Rear; covering their Flanks with an Intrenchment of Waggon; and by the Help of this Discipline, they have defeated Troops, that would have appeared terrible, even to the most regular Armies; nay, to such a Degree, they carried this Art of fortifying with Waggon, that Field-Marshal *Munich*, who was an Officer of great Skill and Experience, thought fit to adopt their Method in his last War against the *Turks*; and that with such Success, as enabled him to come off with Honour and Victory, when attacked by the most numerous Armies the *Ottoman* Power could bring into the Field. This shewed great Skill and military Prudence in that Officer, who also brought several Regiments of *Cossacks* into the *Russian* Service: I will not say as regular, but I may say as settled and established Troops, and they have been

found very serviceable. We must, however, distinguish between the *Cossacks* in the Pay of *Russia* and the *Cossacks* under the Protection of *Russia*; the former are a Body of Troops of between ten and twelve thousand Men, that may be marched any where, as Occasion shall require; but the latter are a great People, capable of bringing fifty or sixty thousand Men into the Field, for the Service of the *Russians*, against the *Turks* or *Tartars*, but as soon as the War is over they will expect to return Home.

In their offensive Wars, which, as we have shewn, the *Cossacks* carry on by Sea, the Invention of their Boats is admirable; for, in the first Place, they are very light, so that they may be transported from Rock to Rock with great Ease. In the next Place, they are capacious, so as to hold a great Number of Men, which gives them such a Power in boarding and attacking Places on the Sea Coasts, as it is hardly possible to resist. Their Method of Building without Keels, and Sheathing with Reeds, defends them from sinking, even if full of Water. Besides this, it makes their Boats, when filled with Men, lie so deep in the Water, that they are not to be seen at any great Distance, and yet they go at a prodigious Rate, so as to be in no Danger, when pursued by any kind of Shipping in use among the *Turks*.

If indeed we take these Bark Boats out of the Water, and consider them independent of the *Cossacks*, who use them, and of the Uses they make of them, they will appear very poor and despicable Things, and we may say the same of their Waggon; but notwithstanding this, when all Circumstances are duly weighed, when we remember that these People are poor, weak, and defenceless, in Comparison of their Neighbours, have very few Fortresses, and those composed only of Wood and Earth; and that notwithstanding these Advantages, they have made a Shift to cover their Country so well, and defended themselves so obstinately, as to make the *Poles* and *Tartars* weary of their Wars with them; we must allow them some Merit, with respect to military Skill; on the other Hand, when we call to mind, that they have no Trade, no Vessels, no Ports to receive them, if they had any; no Yards, little Timber, no Docks, Carpenters, or Seamen, we cannot help owning that the naval Exploits of such People, are in a great Measure astonishing.

Their Government is entirely military, insomuch that in Time of Peace they have hardly any Magistrates or Laws; but when the Nation, by whom they are protected (and at present some of them are under the *Poles*, some under the *Turks*, but the far greatest Part of them under the *Russians*) propose they should rise and take the Field; the first Step is to give them leave to elect a General, who in their Language is called HETMAN or HATMAN, which some modern Writers have mistaken for a proper Name; whereas, in reality, it is the Stile of Office, and answers to that of *Imperator* amongst the ancient *Romans*; and he has the absolute Command so long as the War continues; neither is it easy to depose him afterwards; for in this, as well as in all other Countries, Power has in it something so pleasing, that no small Difficulty is found in reducing him, who has been once a Prince to the Rank of a private Man.

In the Histories of the Wars in the North, from the Beginning of the present Century to the Death of *Peter the Great*, Emperor of *Russia*, the HATMAN of the *Cossacks* is often mentioned, and some of them made a great Figure; but of late, and indeed in all Times of Peace, we hear of no such Person; but when the Circumstances of Things shall alter (and nobody knows how soon this may happen) it is very probable we shall hear of them again; as the *Croats*, *Pandours*, and *Talpatches*, with many other barbarous Nations, lay hid in their Dens and Marshes, till the present War called them Abroad, and shewed more civilized Nations the dreadful Appearance of these terrible Militia. But it is right to enquire after, and have some tolerable Knowledge, even of the most obscure Nations, that when those Accidents, which are always in the Womb

of

of Time, bring them upon the Stage; we may not be amazed at their Names, or in Doubt about their Force.

It was the Praise of *Ulysses*, the wisest Man in his Day in *Greece*, That he had seen and was acquainted with the Laws and Customs, the Manners and Modes, of different Places and People. And this was a great Commendation, worthy the Pen and Pains of the immortal *Homer*, who has justly celebrated the Labours and Travels of that excellent Man: But it is the Felicity of modern Times, that every Man may be an *Ulysses* in his Closet; may sail over the Ocean in his Elbow-chair, and travel all the World over in his Study. Neither is this a Flight of Oratory, a lively or extravagant Picture; but a plain, certain, and undeniable Truth: Books and Maps will do the Work effectually; and a small Degree of Application, and that only for a few Months, will enable us to acquire more real and useful Knowledge than it was possible for any of the Ancients to become Master of in the Course of his Life; and therefore if we do not excel them, is not more their Glory than our Fault: *He who has never travelled*, say the *Turks*; *he who has never read*, may we say, *thinks all the World like his Father's House*; that is, has such narrow and confined Notions, as are unworthy of the human Mind, and subject him to Wonder and Amaze, the most shameful Marks of Ignorance and Folly, upon every new Event; for to him all Changes are strange, and every Incident, because unlooked for, is surprizing.

It was proper to throw together these Reflections at the Close of this Section, because it is the last in which we shall have Occasion to treat this Subject; for we are now to look Abroad into more civilized Countries, where every thing has a softer Air, and the Inhabitants are learned and polite. It is true, that the visiting Countries, like these, seems to be most expedient for modern Travellers, who are sent abroad to acquire a genteel Manner and a correct Taste; but for such as travel at home, though it is certainly more delightful and entertaining, to read the Descriptions of fair and fruitful Countries, thoroughly planted and carefully cultivated, abounding with rich Cities, great Towns, and pleasant Villages, adorned in all Quarters with elegant Structures, and affording every where pleasing Objects to the wandering Eye of the inquisitive Beholders, yet to those whose Studies tend to higher Purposes, this will seem no more than an Amusement; for to them the Variation of Power, the Change of Circumstances, the rising and falling of Nations in the Balance of sound Policy, seems to be the great, if not the only rational, End of such Enquiries. An Instance will render my Meaning in this Respect perfectly clear. The Beauties of *Italy* are very far from declining, her Artists are as famous as ever, and her *Virtuosi* more so; but it unluckily falls out, that while the *Italians* grow more polite, they sink more and more in their Power. There was a Time when the *Italian* Liberty was talked of, and before that there was a Time when it existed, but now the Discourse of it is as little heard as the Thing itself is seen. The great Topic now, is the Balance of Power; which is no other than a Contrivance to render Slavery lighter, or at least make it appear so, by dividing it into several Hands. The Expedient is necessary and therefore proper enough, since a foreign Yoke cannot be thrown off, or the antient Freedom of the *Italian* States restored. But this is not the Case in the North, and amongst Nations of whom most People are content to know but little: It is to combat these Notions that we venture upon these Remarks, in order to inspire our Countrymen with an Inclination to examine into Matters of more real Importance, and which will very soon, perhaps while the present Generation subsists, more nearly concern us.

The Power of *Russia* is not yet of fifty Years standing; but, in that time, it has made a prodigious Progress; and, at this Day, appears with formidable Greatness. From being insulted by the *Poles*, trampled on by the *Swedes*, and over-run by the *Tartars*, it has not only

grown strong enough to keep all these Nations in awe, but has likewise made considerable Conquests upon *Persia*, given a Check to the *Turkish* Power, alarmed the *Chinese* Empire, and spread the Terror of its Arms among the *Japoneze*, who have scarce heard the Names of other *European* Powers. It is worth while, therefore, to enquire into the State and Forces of this Empire, and to learn something of that Policy, by which thirty Millions of People are kept in Subjection. We shall take a proper time to examine this. It is indeed true, that the Power of *Sweden* is very much decreased, but we cannot say the same thing of their Trade. They have lately opened a Passage to the *East-Indies*; and their Dyets are very intent upon promoting every Branch of their Commerce; nor is there any Reason to suspect, that their Pains will be thrown away. The same Spirit exerts itself, with at least equal Vigour, in *Denmark*; and when once the present War is over, and the Power of *Prussia* thoroughly established by a general Peace, I dare prophesy, that some Attempts, of the same Kind, will be made on that Side. By Methods like these, the whole Face of the North will be changed, Industry and Navigation will become the Business of People that heretofore knew nothing of either, and in the Space of a few Years, that Emulation which appears so strongly among those Princes, must necessarily produce great Effects. All the old Ports in the North will be opened and improved, and new will be heard of, that at present want Names. Every Creek will be rendered advantageous, and every fishing Town will become a Place of Trade; new Commodities will be raised, new Manufactures set on Foot, and new Schemes formed, to render these beneficial to the Subjects of these States, under whose Protection they rise.

I do not pretend to say, that such Changes, or Alterations, will prove detrimental to *Great-Britain*; I hope they will not. I am far from suggesting, that they should become Grounds to us of Jealousy, or Envy; but what I aim at, is to prove, that they are Objects that demand our Attention. While Designs, like these, are in their Infancy, they may be bent, and turned, by a superior maritime Power, to its Advantage. We may perhaps be Gainers by the Variation, that will be occasioned thereby in the State of Commercial Affairs, and the Rise of these new trading Countries may be made very profitable to our own: But, in order to this, their Views must be considered in time, and must be considered with great Coolness and Deliberation; that we not attempt to oppose what may turn to our Interest, or to be drawn in to promote Projects beneficial to others and detrimental to ourselves. These are Motives, that should incline us, to look very circumspectly into the Condition of the North. We gained a great Part of the Trade we have at present, by doing this, in the Reign of Queen *Elizabeth*; and we lost a Part of our Trade, by that Negligence; which, among other mischievous Consequences, attended our fatal Civil War. It imports us now to provide against any new Misfortunes of the same Kind; which can be only done by a provident Application to our own Interests, and using, in due Time, the most effectual Means to prevent the Current of Trade from running too strongly into the North; a thing that must be attended with extraordinary Consequences, which it will be for the Reputation of our Governors to foresee; and in respect of which it is their Duty to provide. That these Hints may prove some way useful to so great and salutary a Purpose, and prevent that Spirit from being extinguished here, which begins to be so conspicuous amongst our Neighbours, is the sole View of their Author; who, since he can be no otherwise useful to his Country, thinks it incumbent upon him to express his good Will towards it, by furnishing Remarks worthy the Notice of those, who have more in their Power, and to whom he most ardently wishes Prudence, Diligence, and Success.

CHAPTER III.

Comprehending TRAVELS through the middle Parts of *Europe*, particularly, the *United Provinces*, the *Austrian Low Countries*, *Germany*, *Italy*, *Switzerland*, *Savoy*, and the Territories of the Republick of *Genoa*.

SECTION I.

The TRAVELS of Mr. MAXIMILIAN MISSON, through Part of Holland, the Spanish Low Countries, Germany, Tyrol, and the Bishoprick of Trent, in his Way to Italy, containing a distinct Account of whatever appear'd to him remarkable in the Places through which he pass'd; together with Political, Historical, and Critical Remarks upon Persons and Things, as he has Occasion to mention them.

1. *A short Introduction, containing some Account of the Author, the Occasion of his Travels, the Nature and Design of his Work, the several Editions it has gone through, and what is to be expected from this Abridgment.*
2. *A Description of the Country of Holland, the Neatness of the Cities and great Towns, the Conveniences of Travelling, together with some Account of the two great Cities of Amsterdam and Rotterdam.*
3. *A Prosecution of the same Subject, including a Description of the Town of Delft, the celebrated Village of the Hague, the University of Leyden and its Curiosities, and the Town of Haerlem.*
4. *A more particular Description of the great City of Amsterdam, the publick and private Buildings there; an Account of an Order of Nuns called Beguines, and other Things worthy of Observation.*
5. *The Author's Journey from Amsterdam to Utrecht, Description of the Places upon the Road, and Remarks on the Harmony which subsists in Germany between Persons of different Religions.*
6. *A circumstantial Description of the great City of Cologne, the Capital of the Archbishoprick and Electorate of that Name, the publick Edifices therein, with some judicious Remarks upon popish Superstition.*
7. *The Author's Passage on the Rhine from Cologne to Mentz, Description of the Country and Villages on both Sides that River, with a Correction of a vulgar Mistake about the Tomb of Drusus at Mentz.*
8. *His Passage on the Maine from Mentz to Franckfort, Description of this City; a very curious Account of the Golden Bull, the Original of which is kept there, and other Particulars.*
9. *His Journey from Franckfort to Worms; a large Account of the last mentioned Place, as also of Frankendal, Manheim, and Heidelberg.*
10. *His Passage from the last mentioned City, through a very pleasant and agreeable Country, to Nurembergh; a Description of that Place, and of the Diadem of Charlemagne kept there; of a Book printed by Faustus in 1446, and another in 1449; with some Remarks on the Invention of Gunpowder, and other Curiosities.*
11. *A Description of Ingolstadt, Neubourgh, and a very particular Account of the Imperial City of Augsbourgh, the publick Edifices therein, the Dress, Customs and Manners of its Inhabitants.*
12. *An Account of the Country of Bavaria; of the Capital City of Munich, the Electoral Palace there, and other Curiosities.*
13. *A Description of the Country of Tyrol, of the City of Inspruch, of the House there the Porch of which is said to be covered with Gold, the Country Palace of the Archdukes at Amras.*
14. *A View of the remaining Part of the Country of Tyrol, and of the Bishoprick of Trent, with a Description of the City of that Name, and of whatever is therein remarkable.*
15. *Remarks and Observations upon the foregoing Section.*

1.  HERE are very few Books of Travels, that have maintained their Credit so well as these of which we propose in this and the following Sections to give a succinct Abridgment. Mr. Misson was a Gentleman of great Reading and general Knowledge, which recommended him to the Favour and Protection of the old Duke of Ormond, who committed to his Care his Grandson, the present Earl of Arran. He travelled also with several other Noblemen and Gentlemen, which gave him an Opportunity of examining very attentively, the Places through which he pass'd, and of which he has given us

a Description. His Work was originally small to what it now appears, but as it was very well received, he reviewed it more than once, and made large Additions from Time to Time to the several Editions of it that were printed in *French*; all of which are preserved in the last *English* Translation, in which we find a Multitude of Passages corrected, or render'd more clear and explicit, than in any of the former, and therefore we have taken Care, in reviewing this Abridgment, to compare it therewith, so as to render it as compleat as it is possible, as well as to free it from the numerous Mistakes that had crept into the former Extract of it published by Dr. Harris.

The Author divided his Work in the Original into Letters, which are dated from several Places; but to render it more agreeable to the Form of this Work, we have digested it in the same Manner with the other Parts of it; which, we flatter ourselves, will render it more easy and intelligible to our Readers. The great Number of Inscriptions, literary Dissertations, historical and critical Discussions, with which the Author, from time to time, augmented his original Performance, swelled it to four Volumes; and though many of these are very curious and useful, yet as they did not suit either the Design of our Work, or the Bounds within which we are obliged to confine it, we have contracted them as far as it was necessary, to bring the whole into a reasonable Compass, with as little Prejudice as might be to the Sentiments of the Author.

It is requisite farther to observe, that these Travels were made in 1687, and 1688; so that the Reader will make the proper Allowances for the Alterations that have happened, in respect both to Persons and Things since that Time. The Rout he took has been esteemed, by the ablest Judges, one of the best, for making what is called the *Grand Tour*, in order to give young Travellers a View of the most remarkable Parts of *Europe*, and the Method he has taken in describing the Countries and Cities through which he passed, has been looked upon as equally instructive and entertaining; so that hitherto nothing of the same Kind has appeared, either so extensive in its Design, or so well executed in the several Parts of it. Our Author was a very zealous as well as learned Protestant, and he has left us great Marks of both in this Performance, which stirred up some Persons abroad to criticise various Passages in his Travels; but he was, generally speaking, so much in the Right, and in the Discourses before-mentioned, which may be still found in the last *English* Translation of his Book, he has defended himself so well, that his Adversaries have had no great Occasion to triumph. These Particulars, which were necessary for the Reader's Satisfaction, being dispatch'd, there is no Necessity for enlarging any farther this Introduction, and therefore we shall proceed, as near as may be, in the Author's own Words, after putting the Reader in Mind, that the Plainness and Familiarity of the Style is such as may be expected, and has been always allowed to Epistolary Writings.

2. *Holland* being a flat Country, like a continued Meadow, as we approach'd the Shore, the Pinacles of the Steeples and the Trees appear'd as rising out of the Water. The whole Country is cut into Canals and Ditches with incredible Labour, without which the Grounds would be so soak'd with Water, as would render it not habitable; whereas now, by the Industry of its Inhabitants, it is the richest and best peopled in the World, in Proportion to its Extent: Some make their Number amount to Two millions five hundred thousand Souls, in the single Province of *Holland*; some account only Two millions in all the Seven Provinces.

The Cities of *Holland* are generally very neat and beautiful, their Inhabitants sparing no Pains or Cost for that Purpose, as appears by their constantly washing them; and having the Insides of their Houses curiously painted; and their Windows, generally of Glass, as clear as Crystal: Their Cleanliness extends even to their Shops and Stables, which are kept neater here, than the best Apartments are in some Countries. Their Streets are so clean, that you see the Women walk almost constantly in Slippers; and the Canals being on both Sides planted with Trees, afford a most delightful shady Passage through all the chief Streets of the Cities, and of some of the Towns and Villages also. They reckon in the United Provinces one City (*Amsterdam*) of the first Rank, about twenty of the second, upwards of thirty of the third, two hundred large Towns, and eight hundred Villages. But to return to their Canals.

These are very convenient for travelling, which is generally perform'd in large Boats cover'd against the Injuries of the Air, and drawn by Horses, which go off and bring you to your Journey's End exactly at certain

Hours; they serve for the Transportation of Commodities from one Place to another: And some of these Canals afford tolerable Store of several Kinds of Fish.

Notwithstanding all these Advantages, there are many Things wanting in *Holland*, their Supplies of Wines, nay, even of Corn, and most other Things necessary for the Sustenance of Life, are derived from foreign Countries, which occasions their having such a prodigious Number of Ships, so that some have computed them equal to all the rest that *Europe* can produce. But as on one Side they are chiefly oblig'd to the Sea for their Riches, so on the other Hand it proves the Occasion of almost irreparable Desolations; for though they take all possible Precautions to maintain their Dams and Mills for the emptying of the Water, yet sometimes the Impetuosity of this Element breaks through all these Fences, which has cost at several Times the Lives of some Millions of People. Thus, *April* 17, 1429, a Hundred thousand People were drown'd about *Dort*. In 1446, there were fifteen Parishes overflowed in the Village of *Scheveling*, 121 Houses were carried away, and the Church, now close by the Sea-side, stood in the Middle of the Place.

Another Inconveniency is, the sudden Change of the Weather from Heat to Cold, a Thing not agreeable to those who are not used to it. Their Impositions are also very heavy, which consequently occasions a Dearness of all Sorts of Victuals; but their Plenty of Trade seems to make them a sufficient Amends for this and every other Inconveniency.

We were not a little surpriz'd with the first Sight of *Rotterdam*, for its Canals being, for the most Part, so deep and broad, that they are capable of receiving Vessels of a great Bulk; this affords the most agreeable Prospect of a Mixture of Trees, Tops of lofty Houses and Malts, which at a Distance appear wonderfully beautiful.

The City of *Rotterdam* has not always been in the same flourishing Condition, which makes it now challenge a Place among the Cities of the second Rank, its Port being both large and commodious, the City rich, populous, pleasant, and extremely flourishing; their Storehouses for the Navy, the Townhouse, and the Bank, are beautiful Structures; their Glass-house (famous through all the Seven Provinces) manufactures abundance of little enamel'd Bowls, and such-like Bawbles, curiously done, which are sold to prodigious Profit to the Savages in the *Indies*.

There are two *French* Churches here: The Statue of Brass of *Erasmus* is fix'd on a Pedestal of Marble in the Place called the *Great Bridge*, surrounded with Iron Rails. *Erasmus* is dress'd in his Doctor's Robe, with a Book in his Hand; and near it you see the following Distich, wrote over the Door of a little House where he was born, *Octob.* 27, 1467. but died at *Basil*, *June* 12, 1536.

*Ædibus hic ortus, mundum decoravit Erasmus
Artibus ingenuis, Religione, Fide.*

There has been due Care express'd in this Respect, for the first Statue was erected 1540, of Wood; after that another of Stone, 1657; and this of Brass, 1622.

We made a little Journey from hence to a small Village called *Leckerkeck*, about three Leagues from the City, upon the River *Leck*, where the Lord of the Manor told us, that the Salmon-fishing (the fifth Part whereof belongs to him) used formerly to produce Twenty thousand Livres *per Annum* for his Share, but of late Years the Salmon having left that River, the Fishing (which they are forced to continue only to maintain their Right) does not defray the Charges.

At the same Place they shewed us a Woman, who was the Year before, *i. e.* 1686, brought to Bed of six Sons at one Birth, four of them were baptiz'd, and the eldest lived four Months after.

At the Lord of the Manor's House, we saw also a Servant-maid, named *la Bonte*, who under that Name was muster'd, and serv'd no less than seven Years in the Quality of a Musqueteer.

We

We were credibly inform'd, that a few Years before there died in this Place one *Gerard Bastianfon*, a Fisherman, who was full eight Foot high, and though a very lean Person, weigh'd five hundred Weight: The Doors of his House, and his Clothes, which were shewn, sufficiently confirm'd what they told us of his Size.

The Tower of the great Church here is very remarkable. It leaned formerly on the Nave of the Building; that is, bent towards the North-East three Feet and a half, but by opening the Foundation, they have found Means to set it up quite streight, as appears by a prose Inscription in *Dutch*; which also acquaints us the Ground was opened September the 25th, 1651, and was closed again April the 22d, 1655. The Architect who performed this singular Piece of Work, was one *Nicholas Jeremy Persons*. *Dion Cassius*, under the Reign of *Tiberius*, mentions something of the same Sort done, and that the Artist was but ill rewarded.

3. The ordinary Passage-boat carried us in two Hours to *Delft*, a City that holds the third Rank in the Assembly of the States of *Holland*. One of the chief Curiosities they shew you in this City is, the Tomb of *William Prince of Orange*, assassinated here by *Balthasar Gerard*, 1584. The Arsenal, the Townhouse, the *Stadtholder's* Palace, the Grand Place, and the great Hospital, with its Gardens, are well worth the Sight of a Traveller. The Canal betwixt this City and the *Hague* is not above a League in Length, in Sight of *Reswyck* and *Voerburch*, two pleasant Villages, and adorn'd on both Sides with most delightful Summer Villa's, fine Walks, and noble Gardens.

The *Hague*, being without Gates or Walls, is reckon'd among the Villages, notwithstanding which, as it enjoys the Privilege of a City, so its Grandeur and Beauty seems to deserve that Name, being besides this the Residence of the Princes of *Orange* when *Stadtholders*, of all the foreign Ministers, and the Place of Assembly of the *States General*; besides that, the great Concourse of Foreigners of all Sorts, renders the People more obliging and sociable than in any other Place of *Holland*. Add to this, that the Air is very good, the Wood near the Town extremely delightful, and the Walk from thence to the Village of *Scheveling*, near the Sea-side, very diverting. Here they shew a Chariot furnish'd both with Wheels and Sails, which is carried along by the Wind upon the Sea-shore, very pleasant to walk on, it being both hard and level.

Its Situation is certainly the most pleasant of any Place in *Holland*, having the before-mentioned Wood to the North, very fertile Meadows to the South, good arable Lands to the East, and the Sea to the West.

The Princes of *Orange* keep their Residence in the Palace of the ancient Earls of *Holland*; but that called the *Old Court*, where they formerly lodg'd, is by much the more regular Structure; the Houses of Pleasure about the *Hague* are generally very beautiful.

We took, among other Things, a View of the Church of the Village of *Losdun*, so famous for the two Basons of Brass preserved there, in Memory of the Three hundred sixty five Children of the Countess of *Hennebergh*, Daughter to *Florent IV.* Earl of *Holland*, that were baptiz'd in them. The Story goes, that the said Countess having reproach'd a Beggar-woman with having too many Children, the poor Wretch, by way of Imprecation, wish'd her as many as there were Days in the Year; which being fulfill'd, they were all christened, (the Boys by the Name of *John*, the Girls *Elizabeth*) and buried in the Church of *Losdun*. The whole History is painted at large in the said Church, on both Ends of which Picture the two Basons are fix'd. The Truth of it is attested by *Erasmus*, *Vives*, *Guicciardine*, and others.

From the *Hague* we went forward to *Leyden*, a Place not so much frequented by Courtiers and Officers, nor so much disturbed with Business and Traffick as the *Hague* and *Rotterdam*, but exceeding charming by its intrinsick Beauty and Quiet, so that you seem to enjoy the Benefit of a Country Life in the Midst of a great City: Its chief Trade consists in the Woollen Manufactory, which, together with the University, makes it

one of the most considerable Cities in *Holland*. There are commonly about 1500 Students.

In the *Anatomy-Hall* they shew you a great many Skeletons both of Men and Beasts, abundance of Plants, Fruits, Animals, Arms, Habits, Pictures, Mummies, Urns, Images, &c. and among the rest, the Picture of a *Prussian* Peasant, who having swallowed a large Knife, the same (as they tell you) was cut out again of his Stomach, and he lived eight Years after.

In the Gallery of the Physick-Garden, and the adjoining Cabinet, called the *Indian Cabinet*, we saw divers natural Curiosities, among the rest a wing'd Cat and Ape; the Hand of a Mermaid; a vegetable *Priapus*, a most curious Plant; a Monster produced from a Hen's Egg; a Piece of Money of Paper, made during the Siege of *Leyden* by the *Spaniards* in 1574, with this Inscription on one Side, *Hæc libertatis ergo*; on the other, *Pugno pro Patria*: An *East-India* Serpent, on whose Skin are to be seen, as some fancy, several natural Figures resembling *Arabick* Characters; besides a great Number of Animals, Insects, and other Things, preserved in Vials fill'd with Spirit of Wine.

Before I take my Leave of *Leyden*, I must not forget to give you an Account of the *Rhine*, which is lost near its Mouth, where most other Rivers are at the largest; for the *Rhine* dividing itself into two Branches near *Schenkerschontz*; one of them takes the Name of *Wakle*, the other a little above *Arnheim*, that of *Yffel*; and continuing its Course about seven or eight Leagues below that City, as far as *Duarstadt*, is there again subdivided into two other small Channels, the chiefest whereof takes the Name of the *Leck*; and the other Rivulet, which turns more to the Right, retains the Name of the *Rhine*; till coming to *Utrecht*, it emits another Branch, which taking its Course to the North, is known by the Name of the *Vecht*; and the other continuing its Course, by the Name of the *Rhine*, to *Wor-den*, it at last loses itself in two or three Canals at *Leyden*. The Cause of this odd Fate of the *Rhine*, is attributed to an Earthquake, which throwing Part of the *Downs* into the Mouth of this River, shut it ever since, the Waters were driven back, and consequently enlarg'd and deepened the Channel of the *Leck* as you see it now.

They shew you here the Shopboard belonging to that noted Taylor called *John* of *Leyden*, (where he was born) the chief of the *Anabaptists*. His true Name was *John Bucold*.

From hence to *Harlem* is five Hours travelling by the Passage-boat, the Canal being lined with a great Number of Country-seats and Summer-houses.

Harlem is a large and pleasant City, and, for its agreeable Situation, may challenge the Preference before *Leyden*, most of its Canals being mix'd with the little River *Sparm*. This City is chiefly famous for the Linnen Manufactory, and that of Tape, though of late Years they have made also great Quantities of Silk-stuffs. The great Church (the largest in all the Seven Provinces) and the Town-house, are stately Structures; and the Wood without the City is a great Addition to its pleasant Situation; for which it is deservedly admired.

Lawrence Coster, who challenges the first Invention of Printing, was a Native of this City; though *John Guttenbergh* of *Strasburgh*, and *Conrade* and *Arnold*, two Brothers of *Mayence*, challenge that Honour before him. However, those of *Harlem*, in respect to their Townsman, keep in their Townhouse the first Book that ever was printed, in a Silver Case wrapt in Silk, the Keeping whereof is committed to the Care of several of the Magistrates; and the Statue of *Lawrence Coster* is to be view'd in the same Place. This Inscription is to be seen in golden Letters over the Door of the House where the said *Lawrence Coster* lived.

MEMORIÆ SACRUM,
Typographia ars artium omnium Conservatrix, hic primum
inventâ circa annum 1440.

Meyer

Meyer assures us, that in 1403. a Mermaid was cast ashore by a Tempest near *Harlem*, who was brought to feed upon Bread and Milk, taught to spin, and lived for many Years. *John Gerard* of *Leyden* adds, that she would frequently pull off her Clothes, and run towards the Water, and that her Speech was so confused a Noise, as not to be understood by any body: She was buried in the Church-yard, because she had learnt to make the Sign of the Cross. He speaks this upon the Credit of several Persons that had seen her.

4. As it would require a long Continuance in the City of *Amsterdam* to learn every Thing that belongs to it, and a large Volume to describe it all, I will content myself with giving rather a Scheme than a Description of a Place, which is, beyond all Dispute, one of the most beautiful and considerable Cities in the World; however, for its Extent it is in no wise to be compared to *London*, there being, according to a good Calculation, in *London* about Seven hundred thousand Souls, but in *Amsterdam* not above Two hundred thousand; but for Riches and Trade it may vie with any City in the World, witness their *East-India Company*, which was founded in 1594, and has waged Wars against very potent Princes, without any considerable Interruption of their Trade.

This City is built upon Piles fix'd in the Marshes on the South Side of the River *Ye* or *Tye*, which is a Branch of the *Zuyder-Zee*. Its Fortifications are very considerable, consisting of many Bastions faced with Brick, surrounded with a Ditch eighty Paces broad, fill'd with running Water, which, together with the Sluices, whereby they can lay all the adjacent Country under Water, renders it almost impregnable; besides the ordinary Garrison, the Militia or Train'd Bands of the City consist of sixty Companies of a hundred and fifty Men each, commanded by Citizens.

The Town-house, which is reported to have cost three Millions, is a spacious and most magnificent Structure, of hewn Stone; its Length is a hundred and ten Paces, and its Breadth twenty four: It is highly esteem'd for its regular Architecture, many are of Opinion, that the Foundation cost as much as the Fabrick above Ground; however, the Doors which give Entrance to this great and splendid Palace seem to be too small, in Proportion to the Whole, and the Square or Space before it is not either neat or regular.

The principal Church of the City was formerly dedicated to *St. Catherine*, but is now called *The New Church*: It is not so large as either of the great Churches at *Leyden* or *Harlem*; for as *Amsterdam* was no more than a poor Village within these five hundred Years, and its Condition, even in our Age, was not comparable to what you see it now, this Church was built answerable to its State at that Time. They affirm, that the Pulpit, made of Wood of *Gotbick* Carving, with its Canopy, cost Two hundred thousand Crowns; and the Organs (which are extraordinary fine) at least a hundred thousand Crowns; the Steeple intended to be erected remains imperfect. On the Glass Windows is painted the History of the Emperor *Maximilian V.* who bestow'd the Imperial Crown upon the Arms of this City. The Tomb of the famous Admiral *de Ruyter*, in this Church, is a fine Piece. The Synagogue of the *Portuguese Jews* is a stately Fabrick; but that of the *High-Dutch* is but very indifferent. It is observable, that notwithstanding the Inquisition of *Spain* and *Portugal*, the Agents from both these Crowns at *Amsterdam* were *Jews* in 1687.

One of their Houses of Correction, called the *Rasphuis*, is for the young Debauchees, where they are kept to their Tasks, under the Penalty of Whipping. There is another such a one for the Whores, stiled the *Spinhuys*, who are not treated with the same Severity. But there are enough of them also at Liberty here as well as in other great Cities.

The *Roman Catholics* enjoy Liberty of Conscience as in other Parts of the Seven Provinces, tho' their Number is not so considerable as some have endeavour'd to persuade us; for I have been inform'd by Persons of

Knowledge and Credit, that the *Roman Catholics*, and all other Sectaries together, do not make a fourth Part of the Inhabitants of *Amsterdam*.

In this City remains still a Convent of certain Nuns call'd *Beguines*, an Order erected *A. D.* 1207, composed of Maidens and Widows, who have no Children, and who need no other Qualifications to be admitted into this Society, than a Testimonial of their good Behaviour, and a Competency to live upon, either by themselves or in Conjunction with one or more of the Sisters, as they find it most suitable to their Purpose. Their Convent (which contains about a hundred and thirty Sisters) is built like a little City with a Wall and Ditch about it, within which stands a Church, where they are obliged to perform their Devotions at certain Hours. They wear an odd looking black Habit, receive and pay Visits, and quit the Convent when they please.

The Houses of *Amsterdam* being founded upon wooden Piles, this is the Reason they will not allow any Coaches here, except to Physicians and to some Strangers of Note; instead whereof, they make Use of a Kind of Sleds made like Coaches; but this Carriage being but slow and uneasy, is not generally in Fashion.

We saw at *Amsterdam* a *French Opera*, but in Want both of good Machines and Actors; so that we were not much delighted with it.

The Musick-houses of *Amsterdam*, so much talk'd of, are publick Houses or Taverns, where young Fellows of the Dregs of the People, come under Pretence of Dancing, but in Effect to pick up lewd Women, who resort thither in great Numbers, and carry them to other convenient Lodgings, these being intended only for their meeting Places. They are generally visited by Strangers, out of Curiosity; and you must either drink what they offer, or pay as if you did.

The Exchange of *Amsterdam* is two hundred Foot long, and a hundred and twenty broad: The Galleries above are supported by forty six Pillars, but are not so spacious, nor are the Shops so many, as those over the *London Exchange*.

The Academy, stiled the *Illustrious School*, is also an elegant Structure, divided into several Schools for Divinity, Philosophy, History, Law and Physick.

There are five high Towers in this City, which have each a great Clock, and are placed at such a convenient Distance, as that the Hours of the Day are shown all over the Town.

I took another Turn to *Loosdun*, where I observed, that the Inscription in the Church of this Village differs from the Passage, relating to this Matter, found in the Annals, where the Bishop that baptized the three hundred sixty five Children is call'd *Guido*, Suffragan of *Utrecht*; whereas in the Annals he is stiled *William*, Suffragan of *Treves*; but this might be occasioned by the Carelessness of the Transcribers.

5. We pass'd seven Hours upon the Canal betwixt *Amsterdam* and *Utrecht* very pleasantly; leaving on the Right Hand the old Castle of *Abeow*, and the Village of the same Name, the Boundary of the Province of *Holland* on that Side, about three Leagues from *Amsterdam*: We no sooner came to *Utrecht*, but we found it to fall very much short of that extream Neatness we observed in the Province of *Holland*, and yet it retains a sufficient Share of it too.

This City is famous for its Antiquity, its University, and the Union made here in 1579, which was the Foundation of the whole *Dutch Republick*. The Steeple of the Cathedral is very high, and the Church contains many Relicks highly valued by the *Roman Catholics*.

The Mall, and the Walks about it, without the Gates of the City, are infinitely pleasant, being upon that Score spared by the *French King's* express Command, when his Troops ravaged all the Country round about. A certain Gentleman of *Utrecht* told me, that there were no less than forty eight Towns within the Reach of a Day's Journey from this City, and among them thirty three to which you may go, and come back the same Day. The Country about *Utrecht* has a far different

ferent Face from what you see in *Holland*, their Fields being for the most part plough'd Lands enclosed with strong Hedges.

Two Hours from *Utrecht* we pass'd in Sight of *Zeist*, and of the Castle on the Right Hand: It is a very handsom Structure, enclosed with a Ditch full of running Water, adorn'd with Labyrinths, Gardens, Statues, Fountains, and other Ornaments, being built not many Years ago by one of the richest Lords of this Country. The Fields betwixt *Rhenen* and *Arnheim* are for the most part planted with Tobacco, propp'd by Stakes; and at *Rhincom*, a Village three Hours on this Side of *Rhenen*, you see a Stone, which is the Boundary betwixt the Lordship of *Utrecht* and the Province of *Guelders*.

Arnheim has nothing remarkable but its Fortifications. Two Hours and a half beyond it we pass'd the *Yssel*, divided into three Branches near each other; and afterwards continuing our Journey through *Doesburgh*, (a little City on that River, in the Province of *Zutphen*) we dined in a poor Village, if Milk with Biscuit may be call'd a Dinner; but the worst is, that our Fare was no better at Night, when we lodg'd at *Ysselburgh*, a small dismantled Town upon the Borders of *Cleves*.

Between this last Place and the City of *Wesel* the Country is sandy, and full of Woods: Its Fortifications are but indifferent, but they were then busy in erecting a Citadel betwixt this City and the Fort of *Lippe* upon the Bank of the *Rhine*. It is under the Jurisdiction of the Elector of *Brandenburgh*, who, by vertue of a Treaty made with the Duke of *Newburgh*, (now Elector *Palatine*) grants Liberty of Conscience to the *Roman Catholics*, the same being allow'd reciprocally to the *Protestants* in the Dutchies of *Juliers* and *Berg*, under the Elector *Palatine's* Jurisdiction. The *Calvinists* have two Churches, the *Lutherans* and *Roman Catholics* each of them one, for the Exercise of their Divine Worship. The *Jews* have likewise a little Synagogue there.

About half an Hour beyond *Wesel* we pass'd the River *Lippe*, which joins its Waters with the *Rhine*, and arrived before Night at *Duisburgh*, a City of the same Bigness with *Wesel*, but without any Fortifications: It has however an University, but no great Concourse of Scholars. The great Church belongs to the *Protestants*, but the *Roman Catholics* enjoy also the same Exercise of their Religion, and have even the Liberty of carrying the Host in publick Procession, though they refrain from doing it, for Fear of giving Occasion of Disturbance.

Not above half a League beyond *Duisburgh* we entered the Country of *Berg*, and in two Hours after pass'd through the little City of *Keyserwaert*, seated upon the *Rhine*, and very well fortified.

Hence we continued our Journey to *Dusseldorp*, the Residence of the Electoral Prince *Palatine*. It is much larger and better peopled than *Duisburgh*, and its Fortifications in a very good State, but has no Suburbs, any more than *Keyserwaert*.

6. The City of *Cologne* affords a most agreeable Prospect at a Distance, by its Situation in a plain and level Country, and the vast Number of Steeples, which make a most glorious Shew. Though it be of prodigious Extent, yet is it surrounded with a Wall, Towers, Bastions, and a dry Ditch. It has twenty four Gates, thirteen to the Land, and eleven on the *Rhine*. It is an Imperial City, govern'd by its own Magistrates, though the Archbishop and Elector of that Name has some Share both in the Civil and Criminal Jurisdiction, and a Prerogative of pardoning Criminals. The Oath, which the Citizens take to this Prince, seems to be a Kind of Homage, conceived in these Terms:

We the free Citizens of Cologne do this Day, for now and for ever, promise to A. B. Archbishop of Cologne, to be faithful and favourable to him, as long as he shall preserve, in our Rights and Honour, and in our ancient Privileges, Us, our Wives, our Children, and our City of Cologne. So God and his Saints help us.

VOL. II. NUMB. 105.

The Answer of the Archbishop is as follows:

We A. B. by the Grace of God, Archbishop of the holy Church of Cologne, and Arch-Chancellor of the Empire in Italy, to the End that an amicable Confederacy, entire Confidence, and sincere and lasting Peace, may be cultivated betwixt Us and our dear Burgeses of the City of Cologne, do make known by these Presents, and promise and declare sincerely, without Fraud, that we do confirm all their Rights and Privileges, written or not written, old or new, within or without the City of Cologne, which have been granted to it by the Popes, Emperors, Kings, and Archbishops of Cologne, without ever doing any Thing to violate the same. In Testimony whereof, &c.

The whole Chapter of *Cologne* is composed of sixty Canons, who must be Princes or Counts, but the twenty four eldest are the Capitularies. According to the *Golden Bull*, the Electors of *Cologne* used to crown the Emperor; but these Archbishops not having been Priests for a considerable Time, those of *Mentz* have perform'd the same in their Stead, and since that challenge it as a Right.

There are a considerable Number of *Protestants* in this City, who have a Church not far thence, in the Territories of the Duke of *Newburgh*, they stile them *Gueux* or Beggars to this Day, by the same Name that was given at *Brussels* to the first Authors of the Agreement by the Count *de Barlemont*.

The Townhouse is a vast Fabrick, after the *Gothick* Manner: Here they shew whole Rooms full of Bows, Arrows, Cross-bows, Bucklers, and such Sort of antick Arms. One of these Cross-bows was of Whalebone, and twelve Foot long, eight Inches broad, and four Inches thick. From the Tower of this House there is a most delightful Prospect of the whole City and of the adjacent Country. That Part which lies opposite to the City, on the other Side of the River, is chiefly inhabited by the *Jews*, and belongs to the Territories of *Newburgh*. The Cathedral Church (or rather its Beginning) is so fine, that it is a thousand Pities it should not be brought to Perfection. Here lies entomb'd, as is pretended, the three Kings of the East, that came to worship our Saviour, being transferr'd hither from *Milan*, A. D. 1162. at the Time when *Frederick Barbarossa* laid that City desolate. They report here abundance of Miracles wrought by them; and among the rest, that an excessive Dearth having been occasioned by a great Drought in *Hungary*, abundance of that Country came hither to implore the Assistance of these three Kings, who promised them Rain, which following soon after in great Plenty the *Hungarians*, in Remembrance of this Miracle, come every seven Years in Pilgrimage to *Cologne*, where they are entertained by the Magistrates for a Fortnight, in a handsome House built for that Purpose.

In the vaulted Roof of this Church, almost over the Chapel that contains these precious Relicks, is a Hole of three or four Foot wide, round the Opening of which you see these Words; *Anno 1404. 30 Oct. Ventus de nocte flat ingens, grandem per tectum lapidem pellit; i. e. On the 30th of October, 1404, the Wind blew very hard in the Night, and forc'd a great Stone through the Roof*: The Stone is still to be seen upon the Floor near this Chapel; they call it the *Devil's Stone*, because they were of Opinion that the Devil threw it out of Malice. Over one of the Doors of the same Church we saw thirty six gilt Staves about three Foot long each, with this Distich under them:

*Quot pendere vides Baculos tot Episcopus Annos
Huic Agrippinae praeuit Ecclesiae.*

Upon Enquiry we found, that the present Elector was then in the thirty seventh Year of his Reign, but could not learn either the true Original or Use of this Custom.

In the Church of *St. Ursula* they shew you the Tombs of the eleven thousand Virgins that were massacred by the *Huns* at *Cologne*, in the Year 238, together with this Saint, unto whose Memory is dedicated this Church.

Church. They tell you, that the Earth will not admit of any other dead Corps; for Instance of which, they shew the Tomb of a Daughter of a certain Duke of *Brabant*, who being interr'd there, rais'd up herself, and remaining thus in the Air, they were forc'd to put her in this Tomb, fix'd upon Iron Supporters, two or three Foot from the Ground, against one of the Pillars of the Church. In a great Chapel on one Side of the same Church, you see the Bones of these Saints hung up in as decent a Manner as you see the Swords and Pistols ranged in the Guard-chamber of *St. James*, or in any other Armoury; these Bones have no Ornaments except the Heads, some of which are kept in Cases of Silver, others are cover'd with Stuffs of Gold, and some have Bonnets or Caps of Cloth of Gold, Velvet, rich Silks, &c. Hence it is that the City of *Cologne* challenges the Title of *Cologne the holy*; and its Arms are, *Argent eleven Flames Gules, with a Chef of the Second, charg'd with three Crowns Or*; the eleven Flames intimating the eleven thousand Virgins, and the three Crowns the three Kings. But this idle Story, which was grounded on the ignorant Mistake of the following Inscription, *SS. URSULA et UNDECIMILLA, V. M.* which means no more than the *Saints Ursula and Undecimilla Virgins and Martyrs*; for *Sancta Ursula & undecim millia Virginum Martyrum*, that is, *St. Ursula and eleven thousand Virgins and Martyrs*; has been so fully refuted by Archbishop *Usher*, and other learned Men, that no body now pays any Regard to it.

In the Church of the *Maccabees* is a Crucifix, with an everlasting and miraculous Perriwig on its Head; for though the *Hungarian* Pilgrims, at their coming to *Cologne*, each cut a Lock of Hair off, yet has it not been diminish'd hitherto, by all this Polling.

At the Entrance of the Church of the *Twelve Apostles*, is to be seen a Picture, which is remarkable chiefly for the Story it represents: They relate, that a Burgher-master's Wife of this City, being, in 1571, buried in this Church, with a Ring of great Value on her Hand, the Sexton made bold to visit the Grave afterwards for the Ring's Sake, but was not a little amaz'd, when he found the supposed dead Lady grasp him by the Hand, which made him retreat very speedily. However, the Lady having made hard shift to get out of the Sepulchre, went to her own House, where knocking at the Door, she call'd to a Servant, and related unto him the whole Adventure; but the Servant taking her for a Ghost, ran in a Fright to recount unto his Master what had happened; who told him, that he would as soon believe his Horses in the Garret: He had no sooner said these Words, but a great Noise being heard in the Garret, the Servant went up, and, to his great Amazement, found six Coach-horses there: By this Time the Woman had made Shift to get in, and by the Care of her Servants was so well recovered, that there was no great Likelihood of her returning to the Grave for that Time; and the Horses were the next Day let down out of the Garret by certain Machines. They shew you to this Day, in the same Garret, several wooden Horses, said to be covered with the Skins of those that were seen there; and in the Church of the *Twelve Apostles*, there is a great Piece of Linnen-cloth, which, they say, was of this Woman's spinning after her Release from the Grave, which she survived seven Years. We find some authentick Testimonies of the Truth of this memorable Story, but in them the Episode of the Horses is entirely left out, as being an evident and very absurd Fiction.

There are some Families now in *Cologne*, who deduce their Genealogies from the *Roman* Race, that settled a Colony here the first Time.

7. The Roads betwixt *Cologne* and *Mentz* being extremely bad, we chose to embark upon the *Rhine*: The first Town we came to was *Bonn*, a small inconsiderable Place, the Fortifications whereof lie neglected, and the Electoral Palace of *Cologne* made but a very indifferent Appearance.

As we came nearer to *Andernach*, at which, as well as at *Keyserwaert*, they receive a Toll; a Burgher-master of that Place told us, that there were certain Gen-

tlemen belonging to that City, who have the Title of *Free Knights*, and enjoy peculiar Privileges.

Coming to *Coblentz*, we observed its Situation upon a Neck of Land made by the *Moselle*, where it joins its Current with the *Rhine*, by which it is render'd very agreeable. We were told, that it is very well fortified on the Land-side, but near the Water-side we saw only a single Wall. The Castle of *Ehrenbreitstein*, i. e. the *Rock of Honour*, built just over against it, upon a rising Ground on the other Side of the River, is very strong both by Art and Nature, its Foundations being laid upon the Ruins of the old Fort of *Hermanstein*, the Remains whereof are seen on one Corner only of the Rock on which the Windmill stands. It is always well provided with a good Garrison, and Ammunition in Proportion. The Palace (where the Elector of *Cologne* commonly resides) is at the Foot of the Hill, upon the very Bank of the *Rhine*, just under the Castle.

About half a League on this Side of *Baccharach*, directly overagainst *Coblentz*, (a Town under the Jurisdiction of the Elector *Palatine*) stands an old Castle in the Middle of the *Rhine*, called *Pfaltz*, whence some, but improperly, have derived the Titles of the *Pfaltz Graves*, or *Counts Palatines*.

Baccharach is a small City belonging to the Elector *Palatine*, built on the Side of a Hill, chiefly famous for its excellent Wines that grow thereabouts. We dined with one of the Ministers of the Place, who would needs frame the Etymology of *Baccharach* from *Bachi ara*, or the *Altar of Bacchus*; and for a Confirmation of his Opinion, told us, that in the same Neighbourhood there were four other ancient Towns which ow'd their Name to *Bacchus*, viz. *Steegbach*, which lying on a Hillock, signifies as much as *Scala Bacchi*, or the *Ladder of Bacchus*; *Diabach*, i. e. *Digitus Bacchi*, or the *Finger of Bacchus*; *Handbach*, or *Mannersbach*, i. e. *Mannus Bacchi*, the *Hand of Bacchus*; and *Lorch*, i. e. *Laurea Bacchi*, or the *Bays of Bacchus*.

Soon after we were pass'd *Baccharach*, a furious Tempest oblig'd us to seek Shelter a-shore, a little on this Side *Rudelsheim*. In our Way we pass'd by an old ruin'd Castle or square Tower, known by the Name of the *Tower of Rats*, whither, they say, a certain Archbishop of *Mentz* retreated (its Situation being on a little Isle in the *Rhine*) to avoid the Rats, that devour'd him at last. Some look upon it as a Fable, because the old Chronicles of the Country mention different Names and Times when this Accident happened; but others, who consider it as a Truth, (as it is generally taken for such hereabouts) alledge in Behalf of their Opinion, several Histories of this Nature related by Authors of unquestionable Authority.

From *Bonn*, as far as *Binghen*, three Leagues on this Side *Mentz*, the *Rhine* carries its Current through the Mountains, at the Foot of which you see all the Country on both Sides cover'd with Vineyards, interspers'd with a great Number of small Cities, good large Villages and Castles, of the last of which I counted forty since I parted from *Cologne*, built, for the most Part, upon the Ascents of the Mountains, and some on the very Points of the Rocks. The Country People, in these Parts, but especially the Women, appear in a very odd Dress; on their Heads they wear little Caps of some colour'd Stuff, border'd with an Edging of a different Colour, their Hair hanging in Tresses quite down their Backs. Their Waistes appear very short, half a Foot below which they gird themselves with a broad Leather Girdle, and underneath it is a thick Roll, which bears up their Petticoats almost as high as their Knees.

From *Binghen* to *Mentz* the *Rhine* is very broad: Here you go over a Bridge of Boats, and as soon as you enter the City, the Electoral Palace presents itself to View, a Fabrick of a reddish Stone, embellish'd with divers Ornaments, wanting neither Regularity nor Magnificence, though built after the old *German* Fashion. They told us, that in the Middle of the Citadel was to be seen the Ruins of a Tower called commonly the *Tomb of Drusus*: 'Tis true, *Drusus Germanicus*, the Brother of *Tiberius*, died in *Germany*, but

but not near the *Rhine*, and he was buried in the *Campo Martio* at *Rome*; so that in all likelihood this was one of the Statues or triumphal Arches erected near the Banks of the *Rhine* to his Memory, after the Senate had bestowed upon him the Surname of *Germanicus*.

The Church Ornaments in which the Elector says Mass, are remarkable for their Riches; and the Canopy under which the Host is carried, upon certain Festivals, in Procession, is all cover'd with Pearls.

Every one of the Electors of *Mentz* bears the Arms of his own Family, but he quarters *Gules a Wheel Argent*, which are the Arms of the Electorate, the Original of which they deduce from the first Elector, who was the Son of a Wheelwright.

In the Cathedral you see a great many magnificent Tombs of the Electors interr'd here. The Chapter consists of forty two Gentlemen, twenty four of which only are Capitularies. The Protestants are allowed Habitations at *Mentz*, but not the Exercise of their Religion. The City is sufficiently large, but indifferently peopled, neither is the University in any great Esteem now: However, its Situation is very pleasant, in a most excellent Country. The Elector of *Mentz* is the first among the Ecclesiastical Electors, Chancellor of the Empire, and Dean of the Electoral College; in Right of which he presides in the Diets, and at Imperial Elections.

8. After having cross'd the *Rhine* at *Mentz*, we embark'd on the River *Maine* in the ordinary Passage-boat, which carried us in one Day to *Frankfort*, a City much exceeding *Mentz* in Beauty, Riches, Bigness, Number of Inhabitants, and Strength, being fortified with eleven Bastions, which though they have some Defects, yet they are in some Measure repaired by its Situation in a flat Country: The Houses are generally built of the same red Stone I mentioned before, or else of Wood, or Plaster cover'd with Slates. The *Maine*, a considerable large River, leaves it on the Right, and a Stone Bridge of four hundred Paces in Length joins it with *Sakerhausen*. The Territories of this City are of no great Extent: The Senate, as well as the greatest Part of the Inhabitants, are *Lutherans*, though the *Roman Catholics* are possess'd of the Cathedral Church, where the Ceremony of anointing the Emperor is perform'd; however, they are not allow'd to make any publick Processions. The *Calvinists* inhabiting here, have a Church at *Bochenheim*, a small Hour's Walk from thence, in the Country of *Hanaw*, but are obliged to marry and to christen their Children in the *Lutheran* Churches.

In the Townhouse is the Apartment where the Solemnity of the Election of the Emperor is perform'd, and where one of the Originals of the *Golden Bull* is preserv'd. It is hung only with Tapestry, and furnish'd with some Elbow Chairs of black Velvet, and a large Table cover'd with a green Carpet. On one Side of this Apartment is a Hall, where certain Ceremonies are perform'd immediately after the Election, which being over, the Emperor goes from thence to the Church, where he is crown'd.

The *Golden Bull* is a Book in *Quarto*, of twenty four Leaves in Parchment stitch'd together, and covered with a Piece of Vellum, without any further Ornament. The Seal, which is about two Inches and a half broad, and cover'd with Gold, is fastened to it by a String of twisted Silk of divers Colours; upon this Seal, which appears not unlike a Medal, you see the Effigies of the Emperor *Charles IV.* seated and crown'd, with a Scepter in his Right Hand, and the Globe in the Left, having the Shield of the Empire on his Right, and that of *Bohemia* on his Left, with this Inscription round it.

Carolus Quartus Divinâ favente Clementiâ Romanorum Imperator semper Augustus.

And on each Side near the two Scutcheons, *Et Bohemæ Rex*. On the Reverse is a Gate of a Castle betwixt two Towers, which denotes *Rome*, as is apparent by the following Inscription about it.

Roma Caput Mundi regit Orbis fræna rotundi.

And upon the Gate betwixt these two Towers,

Roma Aurea.

This Bull, intended to be the Foundation of the Constitution of the Empire, was made at *Nuremburgh* by *Charles IV.* with the general Consent of the States, in 1356, and contains the Manner of the Election of the Emperor, and of the King of the *Romans*, as also many Things relating to the Rank, Assemblies, Rights, Immunities and Successions of the Electors, and in what Manner every one of them is to perform his Function. *Frankfort* is by this Bull appointed for the Election of the Emperor; notwithstanding which, *Henry II.* was elected at *Mentz*, and *Henry III.* at *Aix la Chapelle*; some others have been chosen at *Cologne*, *Augsburgh*, and *Ratisbon*, not to mention several other Innovations introduc'd since that Time, especially by the Treaties of *Westphalia*.

At *Dr. Peter's*, who makes the famous Treacle of *Frankfort*, we saw many Curiosities, and among the rest, a Stone taken out of a human Body, of the Bigness of a Man's Head, which he bought for Sixteen hundred Crowns.

There are abundance of *Jews* at *Frankfort*, but they are not near so rich as those of *Amsterdam*, being used in a Manner like Slaves here, viz. to fetch the Water when any Fire happens to break out in the City; for the rest, their chief Employment is to go from one Inn to another to sell their Commodities to Foreigners, and so pick up a poor Living.

I need not tell you, that the three annual Fairs of *Frankfort* contribute not a little to its Fame and Riches.

The University acknowledges for its Founders, *Joachim* and *Albert* of *Brandenburgh*, in 1506.

9. As we were taking Coach to leave *Frankfort*, we observed the Coachman to put some Salt upon each of his Horses, which he told us was a never-failing Antidote against Witchcraft, and other unlucky Accidents.

Having passed the *Rhine* at *Gernsheim*, we entred a Wood, where the Roads prov'd very bad; but after that, for two Leagues, till we came to *Worms*, exceeding good.

The City of *Worms* is seated about three or four hundred Paces from the *Rhine*, on the Left, in a most fruitful Country, having no other Fortifications but a double Wall: It was formerly an Archbishoprick, till the See was removed to *Mentz* by Pope *Zachary*, but still remains a Bishop's See, and that Prelate has great Authority there though it is an Imperial City. It is not inferior in Bigness to *Frankfort*, but ill peopled and poor. I saw a House that was sold for a thousand Crowns, which had yielded formerly as much annual Rent; and there are so many void Spaces within the Compass of the Place, that the Vines planted there are computed to produce every Year fifteen hundred Fuders of Wine, a Fuder being a Cask that holds no less than two hundred and fifty *English* Gallons. This Wine is in such high Esteem in those Parts, that they have turn'd it into a Proverb, and say, *It is sweeter than the Virgin's Milk*; whence questionless is also arisen the Custom of presenting it to Persons of Note that travel that Way, with some Fish, &c. and this is stiled Wine of Honour. Besides that, the *Lutherans* have one Church for their own Use here; they preach by Turns with the *Romanists* in the *Dominican* Church, all the rest being in the Possession of the *Roman Catholics*, who don't carry the Host in publick, nor make any Procession, except on the Day after *Easter*. The *Calvinists* have a Church at *Newhausen* in the Palatinate, about half a League from *Worms*, where the *Lutherans* now and then christen their Children, quite contrary to what is practis'd by the *Lutherans* at *Frankfort*.

The Church of *St. Paul*, as well as that of *St. John*, are very ancient Structures, the best of the two being built of vast square Stones, in a very irregular Mannner, with narrow Windows, and Galleries all round the Outside just under the Roof; the Walls are twelve

Foot

Foot thick, and seem as if they were not at first designed for a Church, but rather for a Fortrefs. The Cathedral is both very long and lofty, adorn'd with a Tower on each of the four Corners; it is a strong Fabrick with some Ornaments after the *Gothick* Way. Over one Door of this Church they shew you the Figure of a strange Animal of the Bigness of an Ass, with four Heads, one the Head of a Man, the second of an Ox, the third of an Eagle, and the fourth of a Lyon; the two first stand upright, and the two others hang downwards; the right Fore-foot is of a Man, the left of an Ox, and the two hinder of an Eagle and a Lyon; a Woman sits on the Back of it. The People here tell you very odd Stories concerning it, but we may suppose it to be an Hieroglyphick compos'd of the four Beasts in the Vision of *Ezekiel*, and the Woman to represent the Gospel. Over the Altar of one of the Chapels of the same Church I observed a Picture, in which the Virgin received Christ as he was descending from the Cross, whilst the Angels were carrying the Instruments of his Crucifixion to Heaven. But the Picture at the Entrance of *St. Martin's* Church, just over a moveable Altar, is of any here most worth the peculiar Observation of a Traveller; it is about five Foot square, and in it God the Father is represented on the very Top of one Corner, from whence he seems to address himself to the Virgin *Mary*, who is on her Knees in the Midst of the Picture, holding the Infant Christ by the Feet, and putting his Head into the Hopper of a Mill, which is turn'd by the twelve Apostles Hands by the Help of a Wheel, assisted by the four Beasts of *Ezekiel*, who give a helping Hand on the other Side. Hard by the Pope is painted upon his Knees, receiving the Hosts, which fall ready made from the Mill into a golden Chalice or Cup, one of which he presents to a Cardinal, who gives it to a Bishop, the Bishop to a Priest, and the Priest to a Layman. There are two publick Edifices in this City, one intended for the Senate, where they meet twice a Week about Matters of State, the other for the Courts of Justice. It was in the first that *Luther* made his solemn Appeal, concerning which they tell you, that the Doctor being much heated with the Eagerness of the Dispute, as also by a Fire that was near him, he desired a Glass of Wine; which being brought, he forgot to drink it, but being still eager in the Pursuit of his Discourse, set it down upon a Bench, where soon after it broke without being touch'd by any body, which made it pass for current, that there was some Poison mix'd with the Wine, of which the *Lutherans* were so fully persuaded, that they broke the Bench on which the Glass stood into Shivers, and kept some Pieces of it, which are still preserved in Memory of *Luther's* Deliverance. We also took a View of the House call'd the *Mint*, where, among other Curiosities, they shew'd us a square Piece of Parchment in a Frame, upon which there are twelve Sorts of Hands written with divers Miniatures and Draughts excellently done with a Pen, by one *Thomas Schuweiker*, only with his Feet, he being born without Arms, as the following Inscription testifies:

*Mira vides, pedibus Juvenis facit omnia recta
Cui pariens Mater brachia nulla dedit.*

In a spacious Portico belonging to this House you see a vast Number of Bones and Horns hanging betwixt the Arches: The first, they say, are the Remnants of Giants, and the last of the Oxen which drew the Stones with which the Cathedral was built. The Outside of the House was adorn'd with Variety of Pictures, and among the rest with many arm'd Giants, which, in the Inscription underneath, are call'd *Vangiones*: That this Part of the *Rhine* was inhabited by a Race of People call'd *Vangiones*, is evident from *Tacitus* and others; but how they became Giants, I am not able to tell. Proceeding on our Journey, we pass'd by *Frankendal*, the Fortifications of which Place would not be despiseable, if they were faced with Brick; whereas now they are slop'd too much, by reason of the Softness of

the Earth, which could not be supported otherwise, but would sink into a Heap.

The same Defect, but in a higher Degree, is evident in the Fortifications of *Manheim*, both which belong to the Elector *Palatine*, and are not above two Hours distant from each other; but the last has a considerable Advantage by its Situation in a flat Country, and its being almost inclosed by the *Neckar* and the *Rhine*. The most remarkable Piece in *Manheim* is the *Temple of Concord*, founded by the Elector *Charles Lewis*, Father of *Charles*, the last of that Race, who being a Person of no harsh Disposition, especially in Matters of Religion, order'd, that the *Lutherans* and *Calvinists* should by Turns exercise their Divine Worship in this Church; and the present Elector *Palatine*, who is a *Roman Catholick*, has thought fit to join the *Romanists* with the others; since which Time, the Ministers of three different Religions perform, each in their Turn, their Religious Service in the *Church of Concord*; so that in three successive *Sundays*, each of the three Ministers has the Privilege of beginning first. The Church is not very large, but exceeding neat; the Pulpit common to all three. The *Roman Catholicks*, after they have said Mass, draw a Curtain, and so hide the Altar, at which they have perform'd it.

Manheim was about forty Years ago no more than a Village, and owes its Increase to *Frederick* the Father of *Charles Lewis*, who at the same Time built and fortified it: The Streets are very streight and regular, and some of them planted with Trees, as in *Holland*. After having pass'd the *Neckar* at *Manheim*, over a Bridge of Boats, we travel'd for three Hours thro' a fertile Plain, extending to the Foot of the Mountains of *Heidelburgh*, which, by a continued Ridge, seem'd to intercept our Passage; but that the *Neckar* passes thro' an Opening, and shews you a direct Way to *Heidelburgh*, by a cover'd Bridge which brings you to the other Side, where this City is seated very pleasantly among the Trees and Rocks. But as to its interior Beauties, we cannot boast, for the City is neither fine nor well built, most of their Houses being of Wood, tho' they dwell among the Rocks: The Electoral Palace is of hewn Stone, some Parts whereof are of good Architecture, but none of them quite finished. They have made divers fine Gardens among the Rocks, but at the best they are irregular.

Not long before the Dutches of *Orleans*, Sister to the last Elector, and Heiress to Part of his personal Estate, had taken the Furniture of this Palace away, at the same Time they sold every Thing, even to the Wine of the famous Tun of *Heidelburgh*. This so much celebrated Tun is thirty one Foot long, and twenty one high, unto which you ascend by a Pair of Stairs of fifty Steps, to a Kind of Platform or Balcony of twenty Foot long, inclosed with Rails: The Elector's Arms are placed on the Front of the Tun, and *Bacchus* on the Top, attended by Satyrs, Drunkards, and such-like. Vines, Grapes, Glasses and Leather Jacks make a great Part of the Ornaments of this Tun, in *basso relievo*. Abundance of Jest and Apothegms, relating to the same Subject, are to be seen, in *High Dutch*, on divers Parts of this enormous Tun.

The various Chances of War have reduced this Country to a poor Condition, tho' naturally very good. All Religions are tolerated, but the Magistrates are generally *Protestants*, as in other Parts of the *Palatinate*. The great Church of this City contains many magnificent Tombs of the *Counts Palatines*, and among the rest that of *Robert King* of the *Romans*, the Founder of the University of *Heidelburgh*. You know by what ill Fate this City lost its famous Library, which, in 1622, was transported thence to the *Vatican*.

9. We were scarce two Hours riding from *Heidelburgh*, but we met with nothing but whole Forests of Fir-trees, and a Country so poor, that about *Wiseloth* and *Sintzheim*, you might buy a wheaten Loaf of eight Pounds for two Pence; and in four Days Journey we did not so much as get Sight of one considerable Town: The best of them is *Winsheim*, an Imperial City, as well as *Wimphen*,

Wimphen, both inhabited by *Lutherans*. What diverted us most in all this Journey was, a Meeting of the Magistrates of the little City of *Palemburgh*, which happening to be in the same Inn where we dined, we were well diverted with the Sight of twelve or fifteen Peasants with high-crown'd Hats, cover'd with green and yellow Ribbon, with red or blue Vests, Ruffs of black Taffata, their Hair cut round close just below their Ears, and their Beards like those of the *Capuchins*: In this Habit we saw them sitting together, with their Elbows resting on a Table, and explaining the Law (after their Manner) each with a good Glass of Wine in his Hand, every one striving to get the better of another more by Strength of Voice than of Argument.

It is not to be wonder'd, that Drinking should be so common in this Country, considering the Temptations they lie under here, for you buy four great Pots of Wine for a Penny; and if a Passenger happens to ask for a Cup of Wine, they bring him a large Jack, scarce knowing what a little Measure is. As you travel from the mountainous Country into the Plains that lead to *Nurembergh*, the Tobacco and Hops succeed by Degrees the Vineyards: We had a fair Prospect of this beautiful City at a considerable Distance, as we were travelling along the Banks of the River *Pegnitz*, which runs from it, but serves only to turn some Mills, whereas without any great Difficulty it might be made navigable, and consequently much increase the Grandeur of this City, so that the Cost of making it so would be amply repaid.

However, this Defect does not hinder *Nurembergh* from being a Place of great Trade, great Riches, and well peopled; and for its Bigness it is reputed to be twice as large as *Frankfort* upon the *Meine*, and contains under its Jurisdiction seven other Cities, and four hundred and eighty Boroughs and Villages: It has six Gates, two hundred twenty eight large Streets, and one hundred and eighteen Fountains and Wells: Fortifications after the ancient Manner, which are of no great Consideration, its Situation in the very Heart of *Germany* being its chief Security, and indeed this little Republick generally enjoys Peace. *Nurembergh* is a very handsome City, its Houses being generally lofty and strong, of hewn Stone, and many adorn'd with Pictures on the Outside, after the *Gothick* Manner, and consequently not very regular: Besides this, it has many good brass Fountains, one whereof we saw at the Artificer's House, the Statues of which alone cost seventy thousand Crowns. The Streets are broad, clean, and well paved, but not streight. One of the Towers of the Castle bears the Name of *Nero's Tower*, whence some would look for the Original of this City as far as *Nero*, whereas 'tis more probable, that *Noriberga*, or *Mons Noricorum*, as it is called in *Latin*, has its Etymology from the *Norici*, the old Inhabitants of the Country, and *Berg*, i. e. a Mountain. The Castle is seated on a high Rock, though all the rest of the City be very flat; it is irregular, being built according to the unequal Shape of the Rock. They shew'd us a Well, which they affirm'd to be sixteen hundred Foot deep, and that the Chian of the Bucket weigh'd three thousand Pounds, but we did not believe them.

In one of the Halls of this Castle are to be seen four *Corinthian* Pillars forty five Foot high, which were brought (say they) from *Rome* by the Devil, upon a Challenge which a Monk made him. On the Stones of the Parapet of the Castle, they shew the Print of a Horse's Shoe, where they say a Conjuror leap'd over the Ditch. The Ornaments used at the anointing of the Emperors are preserved in the Church of the Hospital; the Diadem of *Charlemagne* (called the *Insula*) is of pure Gold, weighing fourteen Pounds, and covered with precious Stones, being not closed on the Top, as the Imperial Crowns are generally represented, but suppose, instead of the Fleurets on Ducal Coronets, you see Plates rounded on the Top, which, being joined by the Sides, make the Compass of the Bonnet; of these there are seven, that before exceeding the rest in the Lustre of the precious Stones; on the Top of all is a Cross, and a Semicircle, supported by the two Head-plates behind, raised above the Bonnet, and join-

ed to the Top of the Cross. The Scepter and Globe are of Gold, and the Sword is said to have been brought from Heaven. The Robe of *Charlemagne* is of a Violet Colour, embroider'd with Pearls, and the Imperial Cloak edged with the same, and strewed with Eagles of Gold, and a great Number of precious Stones. Here are also the Cope, the Stole, the Breeches embroider'd with Stones, the Stockins and the Buskins cover'd with Plates of Gold.

Amongst divers other Relicks, they keep in this Church the Iron Head of St. *Longinus's* Lance; and because they are not ignorant that the same is shewn in above ten other Places in the World, they say all these are Counterfeits, and that theirs was found by St. *Andrew*, and brought from *Antioch* to this City.

Their Arsenal is one of the most renowned in *Germany*; in the two great Halls (each two hundred and fifty Paces long) we saw three hundred Pieces of Cannon, and among them many of a very large Bore, the Biggest whereof carried a Ball of three hundred Pounds; but to speak the Truth, the rest, being Arms of more Antiquity than Use, serve only for a Shew. The publick Library is in a Cloyster formerly belonging to the *Dominicans*, and contains, as they say, twenty thousand Volumes: The most ancient Manuscript is of nine hundred Years, being a Copy of the Gospels, with the Prayers and Hymns formerly used in the *Greek Church*; the Characters are very different from what is used now: They also shew'd us a Book printed at *Spires* 1446, but it seems as if there had been an Error in the Cyphers; for at the same Time we were shewn another of the Impression of *Faustus* at *Mentz* in 1459, which had, by way of Advertisement, annexed to it, *That this Book was not written by the Hand, but was printed by an admirable Secret newly invented*. They keep in this Library many Rarities, but the Cabinet of Mr. *Viani* exceeds them, it being almost impossible to conceive how a Man of a private Fortune could heap together so many Things brought from all Parts of the World. There is one great Apartment fill'd with the divers Arms of all Countries; from whence you go into another stored with excellent Pictures, Medals, curious Works both ancient and modern, Idols, Shells, Plants, Minerals, and other natural Productions. He shew'd us a Wind-Gun, wherewith considerable Mischief may be done at a Distance without any Noise.

The Town-house is a spacious Fabrick, with a beautiful well-proportion'd Front, but no Court before it. And from hence we were carried to the publick Cellar, which is two hundred and fifty Paces long, and contains twenty thousand middle-siz'd Tuns (they call them *Auns*) of Wine, a Provision the *Germans* always take extraordinary Care of; for it must be confess'd, that the *Germans* are the most civil and obliging People in the World, but excessive Drinkers. You scarce enter a House to make a Visit, but before you can speak three Words, you are saluted with a savoury Collation, and large Jacks of Wine: To refuse a Health, or to leave a Drop in your Glass, is a capital Fault; by which Means the Cup never stands still. This made the Duke of *Rhoan* say pleasantly of the *Germans*, *That they had found out the Perpetual Motion in their Cups, which puzzled all the Mathematicians in the World*: Hence it is that Glasses of all Sizes are in so high an Esteem with them, that they are ranged in good Order in some of their best Apartments, and make a Part of their ornamental Furniture.

In the Evening we had the Opportunity of seeing Part of the Celebration of a Wedding: The Bridegroom, attended by his Friends and Kindred, march'd first on Foot from a House to the Church, which was not above two hundred Paces distant, his future Spouse following soon after, with her Friends, from the same House. Being come into the Church, the Bridegroom sat down with his Relations on one Side, and the Bride on the other opposite to him; over each of their Heads against the Wall, being painted the Figure of Death: From thence they both approach'd to the Minister, who stood in the Midst of the Choir, who had no sooner perform'd the Ceremony, but four or

five Trumpets sounded from the Top of the Steeple; and so the new-married Couple return'd in the same Manner and to the same Place from whence they came. The Bridegroom appear'd all in black, with a Cloak trim'd with Lace, a great Ruff, and a little Crown of Gold Plate-Lace upon his Perriwig; but the Bride's Dress is not so easy to be described; the best Way to give you an Idea of it, is, to fancy a Head-tire compos'd of Plate-Wire gilt, like a Bob-perriwig, half a Foot higher than the Forehead, and frizled out on the Sides; these Threads or Wires are so close together, that there is no more Distance between them than is just sufficient to fasten to them an infinite Number of very small thin Plates of Gold, round, polish'd and bright, which hanging both within and without, wave with the least Motion, and, in the Opinions of these People, are very ornamental. Her Habit was a Kind of black Vest with long Skirts, resembling the *Hongrelines* used not long ago in *France*; and the Body of this Cassock, which was cut very short, was cover'd with Gold Lace all over the Seams, as the Skirts were with little close Knots of black Satin Ribbon, and the freight Cuffs reach down below the Wrists. Over this she wore a Neckband of very fine antique Lace, shap'd before like a Man's Band, but ending behind in a Point, which reach'd down to the Middle of her Back: About her Shoulders she had a Gold Chain like the Collar of some Order; and such another Chain instead of a Girdle. The Petticoat was pretty short, trimm'd towards the Bottom with Gold Fringe and black Bone Lace. We saw this Bride dance at the Wedding with one of the Senators in a great Ruff; and, to tell you the plain Truth, the Customs I observed at this Feast were so very different from ours, that I rather fancied myself in *China* than in *Europe*. It would be an endless Piece of Work, if I should describe to you all the other Habits I saw here; but I will only tell you, that as odd and fantastical as they appear at first Sight, they are not unbecoming, as indeed what are? on agreeable Persons.

Nurenbergh can boast of better Artisans and greater Numbers than perhaps any City in *Europe*: Some have attributed to them the Invention of Fire-arms, and of Gunpowder, by *Bertold Swartz* a Monk; tho' others would have the same to owe its Origin to the City of *Chioggia* in the *Venetian State*, and others to *Denmark*. But the curious Works of *Nurenbergh* of Wood, Ivory, Alabaster, nay, of Paper and Starch, are famous over all *Europe*. Their Houses are both spacious and neat, and I never saw one Ceiling in all the City, but what had some Undersetting of curious Joiners-work. They have here a peculiar Respect for Horns, for with them they adorn even their best Apartments and Chambers. All the Way betwixt *Heidelburgh* and *Nurenbergh* we met with very poor Entertainment, but the Inns of *Nurenbergh* made us an ample Amends for it, where, among other Things, we had every Day a Desert of late Fruit, and Plenty of very good Fish, at very reasonable Rates. In the Church of *St. Sebald* you see a wooden Crucifix, which is esteemed a great Master-piece; but the Church of *St. Lawrence* exceeds all the rest in Bigness. They are both built after the *Gottick* Manner, but the last has eight Doors. The great Church-yard is worth the Observation of a Traveller, for it has above three thousand Tombs with Epitaphs and Coats of Arms wrought in Brass. The *Jews* are restrained to a Village near the City, from whence they may come daily into the Town for a small Piece of Money, but must return before Night. The few *Roman Catholics* that inhabit here have the Privilege of performing their Religious Service in one of the *Lutheran Churches*, at certain Hours when their Service is over. The *Calvinists* have their Church a League from the City, in the Marquisate of *Anspach*, and baptize their Children in the *Lutheran Churches*, as at *Frankfort*.

10. From *Nurenbergh* the Roads are very bad and woody till you come towards *Ingolstadt*, where you meet with a well-cultivated champaign Country. *Ingolstadt* (under the Jurisdiction of the Elector of *Bavaria*) stands upon the *Danube*, of an indifferent Bigness and Strength,

with broad, freight, and well-pav'd Streets, and pleasantly situated, but poor and ill peopled; the Houses are on the Outside, for the most part, painted white. They told us Wonders of their Arsenal, but as they were very unwilling to shew it, I suppose its Fame surpass'd its Worth, it being generally observable, that Things of this Nature are seldom kept from the Sight of Strangers, unless not worth their seeing. I took Notice at *Ingolstadt* (as in many other Cities of *Germany*) of certain Vessels of Wood or Brass mounted upon four Wheels, near the Fountains, which are kept to carry Water when any Fire breaks out, and for that Purpose are very convenient.

From *Ingolstadt* we travel'd to *Newburgh*, a little City without any Strength, seated on the right Bank of the *Danube*, where this River begins to be pretty broad and rapid: We pass'd it over a Bridge, which brought us into the City, where, at our first Entry, we took a View of the Castle, built on a Rock, the Apartments whereof, especially on the Ground-floor, are very handsome and convenient, tho' all the Furniture had been lately removed from thence to the Castle of *Heidelburgh*, there remaining only a Cabinet full of rare Pictures and other Curiosities; among the rest I observed a round hard Stone, which weigh'd four Pounds, and was found in the Body of a Horse. This, in my Judgment, might be called Bezoar. The Church of the *Jesuits* is the handsomest in the City, tho' that of *St. Peter* has of late Years render'd itself famous by a pretended Miracle that happened to the *Capuchin*, *Mark de Avilano*, who made himself so much talk'd of during the *Hungarian War*. This Father coming some Years ago to *Newburgh*, and perceiving an old *Nostre dame* of Wood in one Corner of the Church of *St. Peter*, that was all cover'd with Dust, the good Father prostrated himself before it, and whilst he was offering his fervent Prayers, he cried out on a sudden, *A Miracle!* protesting that the good Lady had lifted up her Eyes towards him: The Story, back'd by the Reputation of the Father, soon got such universal Credit among the Inhabitants, that they went in Procession to *St. Peter's Church*, whence they took the Statue, and having clean'd and dress'd it in a sumptuous Habit, placed her on the high Altar, where she is visited by a great Number of Pilgrims from all Parts, and is famous by the Title of *Our Lady of Newburgh*.

The Country betwixt *Newburgh* and *Augsburgh* is very fruitful and pleasant, except that near the last, the Grounds are boggy and barren; notwithstanding which, the *Augsburghers* boast their City to be the fairest in all *Germany*, and that in Bigness it exceeds *Nurenbergh* itself, tho' they own it not so well peopled; besides, tho' their Streets are broader and freighter, their Houses are not near so handsome, few of them being built with hewn Stones, but for the most Part plaister'd only, and whiten'd without, and sometimes adorn'd with Pictures; however, the Floors of their Apartments are for the most Part paved with a Kind of yellowish Marble, brought thither from *Tyrol*; and their Ceilings are either of curious Joiners-work divided into Compartments, or of a certain Cement well polish'd, which is very durable: The worst of their Buildings is, that their Chambers have no regular Figure, the Stairs which lead to them taking away all their Uniformity.

Augsburgh is the Metropolis of *Swabia*: *Augustus* sent thither a Colony, and gave it the Name of *Augusta Vindelicorum*, from the *Vindelici*, a People inhabiting about the Rivers *Vindo* and *Licus*, called at this Day the *Werda* and *Leck*, between which also the City of *Augsburgh* is seated, to distinguish it from *Augusta Trevirorum*, *Taurinorum*, &c. but this City having been so often pillaged, (especially by *Attila*) there are scarce any Remains of Antiquity to be found here. However, not long since there was dug out here a Pillar of five or six Foot high, with the Figure of a Pine-apple on the Top of it: They also found certain Medals of *Augustus* with such a Pillar on the Reverse: It is very probable that this Pillar was intended to mark out the Boundary of the Empire on that Side: For it being

being a constant Custom among the *Romans* to distinguish the Limits of a new-conquer'd Country by some Mark or other distinct from the rest, and by something relating more peculiarly to that Country; it is likely that they chose the Pine-apple for this Pillar, because this Part of *Germany* abounds in Firr and Pine-trees; and it is perhaps for the same Reason that *Augsburgh* bears the Pine-apple in its Arms.

Tho' the Fortifications of this City are not very considerable, the Inhabitants of this City have endured divers Sieges with a great deal of Bravery. The Senate here is compos'd of Half *Lutherans* and Half *Roman Catholics*, tho' the Bishop has also a considerable Sway, who has a Palace in the City, (but he resides generally at *Dillengen*) and is Master of the greatest Part of the Territories belonging to this City. The *Roman Catholics* make publick Processions here, and carry the Host thro' the Streets, which the *Lutherans* salute by pulling off their Hats; for as they live in a good Correspondence with each other, so they avoid all Opportunities of giving Scandal, the Poor of both Religions being maintain'd in one Hospital. The *Jews* are confined to a separate Place, and for every Hour they stay in the City are obliged to pay a Florin, which amounts to three of our Shillings.

The Town-house is a lofty and spacious square Fabrick, of very fine hewn Stones; the Portal is of Marble, and almost all the Rooms wainscotted and ceiled with *Polish Ash*, which looks very fine. The great Hall makes a very noble Appearance, being a hundred and ten Foot long, fifty eight broad, and fifty two high, with a fine Jasper Floor. The Walls are adorn'd with Paintings intermix'd, according to the *German* Custom, with Emblems and Devices relating to the Government; but the Roof exceeds all the rest for its singular Beauty, being compos'd of regular Compartments, the Squares and Panels whereof are enrich'd with Sculptures richly gilt, and beautified with curious Pictures and other Ornaments. The Arsenal is also a very large Structure; the two Halls below are full of Cannon, most of which are of Brass; but among the rest, there is a Culverine, a six Pounder, of Leather, twenty six Foot long; the other Arms are kept above Stairs. During the Wars of this last Age, the *Augsburghers* used to keep frequently their Gates shut, for Fear of a Surprise, but at last, for the Conveniency of admitting Strangers and others without Danger into the City, they contriv'd a secret Gate, which remains still, with all its Locks and Engines, the Design of which is very nicely and well contriv'd, but too tedious and difficult to describe.

Augsburgh was formerly a City of great Traffick, whilst all the Merchandize from the *Mediterranean* was landed at *Venice*, and from thence, by the Way of *Augsburgh*, dispers'd thro' all *Germany*: But since *Holland* has almost engross'd all that Trade, *Augsburgh* bears its Share in the general Loss, as well as *Venice*, *Milan*, *Antwerp*, and many other Cities, that were formerly famous for Commerce. In the Bishop's Palace they shew you the Apartment where the Confession of *Augsburgh* was presented to the Emperor *Charles V.* in 1540, by *Luther* and *Melancthon*. The Cathedral here has a Gate of Brass, over which are represented several historical Passages of the Holy Scripture in *basso relievo*. In the History of the Creation the Virgin *Mary* is represented framing *Eve* out of one of *Adam's* Ribs; which passes here for a great Elegance.

The Artisans of *Augsburgh* are not inferior to those of *Nuremberg*; nay, they even excel them in Clocks, Goldsmiths Work, and in Ivory. They shew'd us here several Clocks valued at fifteen or twenty thousand Crowns a-piece; but the worst is, they are so very nice, that they are not durable. Their Ivory Work is no less admirable, and among the rest certain Cups hollow'd and well shap'd, with a Ring made of the same Piece in turning, which plays betwixt the Foot and the Bowl of the Cup, without Possibility of coming off. Of these there are an hundred, with their Rings in a Pepper-corn of an ordinary Size: I have some of them. Upon Examination I observed distinctly the

Traces of the Tool wherewith they are turn'd, which shews it a pure Work of the Eyes and Hand, and no Artifice. They have another curious Bauble, viz. Fleas fastened about the Neck with Chains of Steel, so finely wrought, that though they are a Span long, they are so light, that a Flea will lift it up when it leaps. They sell one of these Fleas, with Chain and all, for ten Pence.

The Singularity and Variety of Habits is still more conspicuous at *Augsburgh* than at *Nuremberg*, that Affair being so exactly regulated here by the Magistrates, that the Difference of Religion, and Quality of People, is for the most Part seen by their Clothes. As for Instance, I saw a *Roman Catholick* Merchant's Widow in Mourning for her Husband; she had a Kercher well whited and starch'd, with Wings and Cornets belonging to this Dress; a black Petticoat, and black Cloak, made like that of a Man, reaching down to her Knees; a great white Veil behind, hanging at the Tail of the Kercher down to her Heels, enlarging itself by Degrees; a Piece of the same Linnen with the Kercher, four Foot long, and at least two broad, which is very much starch'd and stretch'd on a square Wire Thread, fastened just below the Hips, and covers all the Fore-part of the Body.

They have found Means to turn a Branch of the River *Leck* into the City, the Waters whereof are exceeding clear and good. Upon this Channel stand four or five Towers, on the Tops of which are certain Cisterns, which are fill'd by the Help of several Pumps mov'd by Mills, from whence the Water is convey'd into all Parts of the City. A Thing not to be admir'd only, but imitated. I must not forget to tell you, that *Augsburgh* has many Fountains, some of which are not inferior to the magnificent Fountain of *Nuremberg*, which I formerly described.

11. As we were leaving *Augsburgh*, we took Notice upon the Road, that they cover the Vines and Fig-trees hereabouts with Straw or Mats against the Cold, which is sharper than in *England*, though they do not lie so far to the North. The Country is all upon a Level betwixt *Augsburgh* and *Munich*, but none of the best, being full of Woods of Fir-trees.

Munich is a beautiful City, built *A. D.* 965, but very indifferently fortified, scarce half so big as *Augsburgh*, and of no Trade, the chief thing it has to boast of being the Residence of their Prince, and his magnificent Palace. The first Thing we did, was to visit the *Jesuits* Library, of which we had heard Wonders, but found it far below our Expectation; and the Library-keeper, or his Deputy, who was order'd to shew it us, was so prodigious a Blockhead, that we could scarce imagine there could be so much Ignorance found among those of that Order. However, both their Convent and Church are exceeding fine, and the last very large, light, and lofty; the Vestry is very rich, and among their Relicks they shew a Joint as big as that of an Elephant, which, they told us, was one of *St. Christopher's* Joints of the Back-bone. In the *Austins* Church they have many excellent Pictures; and that of the *Cajetans* is an handsome Structure. The City of *Munich* bears a Monk in its Arms, which seems to confirm the common Opinion, that it got the *Latin* Name of *Monacum* or *Monachium*, from a Monastery that stood formerly on the Place where it was built.

In the Church of *Nostre Dame* is the magnificent Tomb of the Emperor *Lewis IV.* beautified with many marble and brass Figures. About ten or twelve Steps from the Entrance of the great Door of the Church, one of the Stones of the Pavement is mark'd with a double Cross; and if you stand upright upon this Stone, you find the Pillars of the Church so placed, that you can't see one of the Windows of the Church. The Outside of the Electoral Palace is no way answerable to the Beauty of its Inside, tho', at the same time, most of its Apartments are not very regular; for this vast Structure being not built by one Person, nor at the same Time, it differs according to the various Fancies of the Persons that had the Management of its Fronts; notwithstanding all which, it is, on the whole, a very beautiful Fabrick. The great Hall of the Elector's Apartment

Apartment is an hundred and eighteen Foot long, and fifty two broad; it is truly magnificent, especially in respect of its curious Pictures, which are all *Histories*, the sacred on one Side, and the profane on the other, every *History* having a *Latin* Inscription in Verse, one of the best of which is the Distich annex'd to that of *Susannah*.

*Casta Susanna placet; Lucretia cede Susannæ,
Tu post, Illa mori maluit, ante scelus.*

In the little Chapel belonging to the Apartment of the Electores, you see Nothing almost but Gold, Pearls and Gems. Among the Relicks they shew you a Piece of Gold Mohair, which they pretend to be Part of the Virgin's Robes. The Parlour of Perspectives is extremely fine; but the Hall of Antiquities, that were brought hither from *Rome*, exceeds all the rest; we counted no less than one hundred ninety two Busts, and four hundred other Pieces here, all highly esteem'd for their exquisite Workmanship and Antiquity. The Furniture of this Palace is rich beyond what can be imagined, and they told us, that besides the Tapestry in Use, there were laid up in the Wardrobe to the Value of eight Millions of Crowns; but here, I am afraid, they overshoot the Mark. The Treasury contains whole Services of Gold, and many other precious Vessels, vast Quantity of Pearls, Diamonds, Rubies, and other precious Stones, besides an infinite Number of rare Pictures, curious Works, Medals, and valuable Rarities; among the rest is a Cherry-stone, upon which you see distinctly engraven one hundred and forty Heads; and a Gondola of Palm-tree Wood turn'd into Stone, with this Inscription:

*Palma fui, cæpi lapidescere, cymbula nunc sum,
Si non Neptunus, Navita Bacchus erit.*

Where-ever you turn your Eyes in this Palace, you see nothing but Marble, though, to unravel the Secret, it is to be told, that this is only a certain Composition, which they know how to harden and polish so artificially, that it appears like and lasts as well as Marble. They have divers subterraneous Walks or Galleries, leading from the Palace to all the Churches and Convents of the City. The Arsenal was at that Time almost unfurnished, most of the best Arms and Cannon being carried from thence into *Hungary*. They shew'd us here the Grand Vizier's Tent, taken in the last Battle, which was more remarkable for its Bigness than its Beauty; the Materials were only of painted Calico, with fine Sattin Strings, cover'd with Silk Braid, and the Lozenges of the same, interwoven betwixt the Strings. This Country produces no Wine, and as they know no other Religion but the *Roman*, so they look upon those of another Persuasion as Monsters rather than Men.

12. After we had travel'd for some Time along the Banks of the River *Iser*, (upon which *Munich* is seated) we pass'd through a Forest, and immediately on our coming out from thence, discover'd the snowy Tops of the *Alps*, which at a Distance appear'd like the foaming Waves of a raging Sea: We came the same Day to a Village call'd *Legrem*, seated near a small Lake of fresh Water at the Foot of the Mountains; we eat here some Fish of a Kind which we had never seen before. We coasted along the Mountains for two Hours, and by Degrees got within the Rocks cover'd with Fir-trees and Snow, being a most desolate Place, and destitute of Inhabitants, except that near two or three Lakes you meet with a few Fishers Huts, made of the Roots of Fir-trees well joined together, their Boats being made of the same Trees hollow'd out, like *Indian* Canoes. At the Village of *Mittenwald*, three Leagues within the Mountains, seated in a pleasant Valley surrounded with Rocks, they treated us with some Goats Flesh and Salmon Trouts. Our Host shewed us a certain Kind of round Stones of the Bigness of a Hen's Egg, which he assured us were found in the Stomach of their Goats, and resembled a soft, imperfect *Bezoar*; he ask'd ten Crowns a-piece for them.

We were not gone far from this Village, but we met a Troop of Beggars acting the *History of the Fall*, for they had planted a Tree laden with red Fruit in the Way, climbing up against which, was a little Devil in the Shape of a Crocodile, whilst a Girl with long dishevel'd Hair approach'd towards it, and an old Fellow clad in Black, with a young Boy clad in White, holding a Sword in his Hand, stood at a little Distance, and upon our Approach the Play began. The little Boy with the Dagger represented *Michael the Archangel*; I need not say in what Character the OLD MAN appeared, tho' he told me in very plain Terms. The Reader will easily judge what terrible Effects, in regard to true Religion, such Follies must produce.

Within a Quarter of an Hour after, we pass'd by the Fort *Chernitz*, built betwixt two inaccessible Rocks, being the common Boundary of *Tyrol*, and the Bishoprick of *Freisingen*, the first whereof belongs to the Emperor, the last is Part of the Country of *Bavaria*. At Night we came to the Village of *Leefeld*, where is a Convent of *Austin* Fryars: In their Church they shew you two or three pretended Miracles, and among the rest, a chew'd and bloody Host, in a Repository of Glas: They tell you, that a Gentleman named *Milser*, Lord of the Castle of *Schlesburgh*, being so vain as to oblige them to give him the great Host, which is only for the Use of the Clergy, he had no sooner put it into his Mouth, but it cast out a Flood of Blood, and at the same Time his Legs sunk into the Pavement up to his Knees; they shew you the Hole to this Day in the Pavement near the Altar, and the Print of his Hand on one of the Stones of the same Altar, where he would have supported himself. His Repentance however saved him, and left these Vestiges to deter others from attempting the like mighty Crime in the Sight of the Priests. This Host also works Miracles, amongst which we may very well reckon the Inhabitants believing implicitly every Word of this Story.

About two Leagues beyond *Seefeld* we began to descend into a Valley, at least a Mile in Breadth, sprinkled with divers pretty little Villages, water'd by the River *Ihn*: We pass'd only on the right Side of it, along the Foot of the Mountain, where, after we had travel'd a League further, they shew'd us a streight and craggy Rock, called the *Emperor's Rock*, above a hundred Fathoms high, (as they assured us) at about three Quarters of the Height of which we could observe a Nich dug, in which stood a Crucifix, with a Statue on each Side: They tell you, that the Emperor *Maximilian* I. being in Chase of a wild Goat, pursued her to this Place, where alighting from his Horse, he durst not remount it, but was forc'd to be brought down by the Help of Engines. There is indeed another Account of this Matter, which has received the Sanction of many great Names, particularly, of *Stephen Piggbius*, who relates, that the Archduke *Maximilian*, after remaining two Days and two Nights in the Sight of Multitudes of People, in the Place where this Crucifix now stands, was at length conducted safely back by a Person unknown, and therefore supposed to have been an Angel, in Memory of which these Monuments are placed. Our Author added this Story in his later Editions, and brought some Instances to support it, yet to many Readers, no doubt, his first Account will appear the most satisfactory.

Inspruck, a City seated upon the River *Ihn*, about two Hours beyond the Middle of the before-mention'd Valley: Before you enter the City, you pass that River over a Bridge, whence it received the Name of *Inspruck*, i. e. *The Bridge of the Ihn*, and *Enipons* or *Enipontum* in *Latin*. The Houses of *Inspruck* are very fine, but their Roofs are built after an odd Manner, being flat on the Top, and the Rafters, instead of rising to a Point, are revers'd, so that the Rain settles always in the Middle of the Roof. The Palace of *Inspruck*, where the Duke of *Lorrain* resided as Governor, is both convenient and large, but neither beautiful nor regular, having been built at different Times. There is one Thing particular here, of which I will endeavour to give you the best Account I can: There stands in the Middle of the City a House, call'd the *Chancery*, the Roof of the

the Porch of which, they tell you, was cover'd with Plates of Gold, by Archduke *Frederick*, after he return'd from his Exile. I made the best Observation I could concerning the Truth of this Story, and found that Plates of Brass were fastened to the Timber instead of Tiles, and that each of these Tiles was cover'd with another thin one of another Metal, which, if they be not Gold, I am sure they are gilded; the Roof being about fifteen Foot square, it could not by Calculation amount, supposing them to be Gold, to above two hundred thousand Crowns. The twenty eight magnificent Brass Statues in the Church of the *Cordeliers*, were the Gift of the same *Frederick*: They are bigger than the Life, and represent Emperors, Archdukes, Dukes of *Burgundy*, two Empresses, and two Princesses; the Names of whom they are not able to tell you, as much as they reverence that Family.

About half an Hour from *Innsbruck*, at the Foot of a Mountain, stands *Anras*, called in *Latin*, *Arx Ambrosiana*, a Country Seat of the Archdukes, being remarkable only for its Situation and the Curiosities they shew to Strangers. There is a large Hall fill'd with all Sorts of Arms, which were more curious than useful; and among other Things, a Lance used by Archduke *Ferdinand* in Turnaments. They tell you most surprizing Things of the Strength of this Prince; as for Instance, That he could stop a Coach with six Horses, by taking hold of a Spoke of the Wheel; and would break two Crown Pieces joined together. In an adjacent Gallery we saw the Effigies of many Princes mounted on their Horses in Armour, with all the Ornaments used in Turnaments; and the Skin of a Serpent fifteen Foot long, taken near *Ulm*, upon the Banks of the *Danube*. At the End of this Gallery is an Apartment fill'd with the Spoils and Arms taken from the *Turks*. Here you see a *Bassa* and an *Aga* of the *Janizaries* represented on Horseback, in the same magnificent Habits and Harnesses, embellish'd with Gold, Silver, and precious Stones, they had when they were taken Prisoners.

In another Gallery they shew'd us a double Rank of Cupboards, join'd by the Backs and Sides, extended all along the Middle of the Gallery, there being but a little Room left to walk on both Sides: The three first were full of curious Works of all Sorts, as Alabaster, Glass, Coral, and Mother of Pearl; the fourth contain'd Medals, and Gold and Silver Coins; the fifth, Vessels of Porcelain and seal'd Earth; in the sixth were many rare little Cabinets richly inlaid, the Drawers whereof were fill'd with Medals and little Curiosities of *Agate* and *Ambergrise*. Besides these, you see here seven large Volumes, bound in black Velvet, with Edges and Clasps of Silver, which, instead of Leaves, contain'd small Boxes fill'd with a great Number of Medals. The seventh Cupboard has many very ancient Arms curiously wrought; and amongst the rest, a Cross-bow with thirty four lesser Bows within its Compass, discharging as many Arrows at a Time. The eighth is fill'd with Animals, Plants, and such-like natural Curiosities; here you see a Horn of an Ox of six Inches Diameter. The three following Cupboards are furnish'd with Works of Ivory, of Wood, and of the Pen; the twelfth with Manuscripts and rare Books; the thirteenth with Works of Steel, and particularly Padlocks, and other Locks of a rare Invention: In the fourteenth they shew'd us Stones representing Trees, Fruits, Shells and Animals, all the pure Productions of Nature: In the fifteenth and sixteenth, all Sorts of Clock-work and musical Instruments. The seventeenth contains a considerable Quantity of precious Stones unpolish'd, and of metallick and mineral Oars. The eighteenth, a good Number of small Vessels of precious Materials, and of the rarest Shells in the World. The nineteenth surpasses all the rest in Riches, being fill'd with Vessels of Gold, Crystal, *Agate*, *Chalcedony*, *Onyx*, *Cornelian*, *Lapis Lazuli*, and other precious Stones, enrich'd with Gold and Diamonds in *basso relievo*, and other rare Workmanship. The twentieth and last contains Antiquities of all Sorts, Sepulchral Lamps, Urns, Idols, &c. and among the rest a Piece of a Rope about the Length of a Hand, which, they

tell you, is Part of the same wherewith *Judas* hang'd himself. On the Walls and Ceiling you see an infinite Number of other Curiosities, among which the Bow of *Noah* is an admirable Piece of Painting, for which, they affirm, the Great Duke of *Tuscany* offer'd an hundred thousand Crowns; and in a great Chest you see a whole Cart-load of Medals laid up together; a sure Sign they are not valuable. From hence they carried us into the Library, which we found much out of Order; and from thence into another Gallery full of Statues, Busts, and other Pieces of Antiquity; besides a great many other Apartments adorn'd with Pictures of a great Value. At our Inn (the *Golden Hart*) we saw a middle aged Clown, who would lay his Arm stretch'd upon the Ground, upon which a lusty Fellow standing with both his Feet, he lifted him up with the same Hand only, and carried him cross the Room.

13. About a League beyond *Innsbruck* we re-enter'd the Mountains, and by a troublesome and tedious Ascent of seven Hours, came late at Night to a little Village (not quite at the Top of the Mountain) call'd *Gruss*, i. e. *Salutation*, having acquired its Name from the Meeting of the two illustrious Brothers near it, viz. *Charles V.* and his Brother *Ferdinand*, the whole Account whereof you find engraven on a Marble Stone two hundred Paces from the Village, the exact Place where they first saluted each other. They treated us at Night with several Sorts of Wild Fowl and Venison; all the Hares, Foxes and Bears are white here, as well as most of their Partridges: They abound also in Heath Cocks and Hens, Pheasants, and another Kind of large Wild Fowl, call'd by them *Schneehahn* or *Snow-goose*. All these Sorts of Wild Fowl have their Feet velveted about the Claws, with a Kind of Furr which is neither Hair nor Feathers, but so thick, that the Snow cannot penetrate it, a Point of natural History that very well deserves Notice.

This Mountain is call'd the *Brennerberg*, i. e. the *Burning Hill*, by reason of the piercing and burning Winds, which (together with both Thunder and Lightning) reign frequently there in the Summer Season. These Winds forcing their Passage thro' the Hollowness of the neighbouring Mountains, as it were thro' Pipes, raise such furious Hurricanes, as sometimes overthrow both Trees and Rocks. Having travel'd about two Hours the next Day, we came to the Top of the Mountain, where we discover'd a remarkable Spring, which discharging itself upon a Rock, there separates into two Currents, which soon after become considerable Rivers, one turning to the South, and joining with the *Ibn* near *Innsbruck*, the other to the North, after it has passed *Brixen* and *Bolsano*, discharges itself into the *Adige* a little above *Trent*. We dined at *Steerzingen*, where we eat the Flesh of a certain Creature call'd by them *Steinbocks* or *Rock-Goats*, (*Rupæ Capræ*) Creatures betwixt a He-goat and a Doe, which were most excellent Meat.

From hence, the direct Way to *Trent* being very rough, we took that over *Brixen*, which is less dangerous: We met this Day above a hundred Waggon drawn by Oxen, the cloven Feet whereof were shod with Iron; they came from the Fair of *Bolsano*. We saw also, in these Mountains, Abundance of small Carts with two Wheels, which the Peasants draw themselves, and chiefly make Use of to fetch Salt from *Hall*, a little City in the Valley of *Innsbruck*: It is made of Water boil'd into Salt. The Habits of these Mountaineers are very odd, some wearing green, others yellow, and others blue Hats, and that with such little Difference in their Garments, that the Women are scarce to be distinguished from the Men. *Brixen* is a very small City in the Country of *Tyrol*, though it is the Residence of the Bishop. They keep their best Apartments here in the highest Stories, but for what Reason I know not.

From hence to *Bolsano* is only seven Hours travelling; but as the Road lies betwixt the River and the high Mountains, if a sudden Thaw happens to melt the Snow, it rows down from the Precipices with such Violence, that it swallows up both Man and Beast; whence it is, that on the Road you see so many small Monuments, fill'd with the Histories of such as have

either escaped narrowly, or perish'd by these Accidents ; and hence also it is, that the Churches hereabouts, and especially our Lady of *Newburgh's*, are almost overladen with Presents. We were not a little surprized when we found the Valley of *Bolsano*, in the Middle of the Winter, cover'd with green Willows, Roses and Mulberry-trees, the Reason whereof may be attributed to the Situation of the Valley, which on all Sides is shelter'd from the Winds.

The City of *Bolsano* belongs also to the Bishoprick of *Trent*, but is of very little Compass ; its chief Traffick arises from four Fairs a Year, each of which lasts fifteen Days, in which they exchange the Commodities brought thither from *Germany* and *Italy*. They shew'd us a round Hole of three Foot diameter in the Roof of the Church, surrounded with a Garland of Ribbons of different Colours, on which hang a great Number of large Wafers : They told us, That an Opera being acted in that Church on *Ascension-Day*, the Person that represented Christ was taken up into Heaven thro' this Hole. The Valley of *Bolsano* is full of Vineyards, which produce a Wine much esteemed thereabouts, but is not so pleasing to Strangers, by reason of its fulsome Sweetness. The Road betwixt *Bolsano* and *Trent* (just a Day's Journey) is planted all along the Valley with Vines, where you see, at certain Distances, little Straw Hutts, supported by three high Firr-poles, like a Trevet, from whence they kill the Bears with Fusils, that come from the Mountains to eat the Grapes.

Trent is much of the same Bigness as *Bolsano*, and seated after the same Manner, on a flat Rock of a Kind of red and white Marble, which also furnishes the Materials for their Houses. This City is subject to most dangerous Inundations, not only from the Overflowing of the River, but also from the Brooks of *Levis* and *Fersena*, which sometimes disgorge themselves with such Impetuosity from the adjacent Mountains, that they force great Rocks along with them even into the Town. *Trent* is fortified only with a single Wall, wash'd by the River *Adige*. The Bridge and Bishop's Palace are much boasted of by the Country People, tho' the last is low and but indifferently large. The Bishop is both a Temporal and Spiritual Lord, and his Territories are of a considerable Extent. Some place this Country in *Germany*, others in *Italy*, because the Bishop is a Prince of the Empire ; but the common Language of *Trent* is *Italian*, and the Inhabitants of the Country reckon it Part of *Italy*, in which, however, they are not follow'd by their Neighbours. In one of the Chapels of the Cathedral they shew a Crucifix as big as the Life, which, they very gravely say, bow'd its Head at the Time of the Councils being sworn and proclaimed under it, to shew its Approbation of the Veracity of their Decrees. They add, That no body knows the Materials of which it is compos'd ; and for that Reason would have you believe it was made without Hands. They are building a most magnificent Chapel, where it is to be plac'd, this being somewhat dark : They call it the *Holy Crucifix*.

The Church of *St. Mary major*, where this Council sat, is a little Church, built of a kind of base Marble. The Organs here are worth taking Notice of, for they not only play'd to us many new Airs, but also counterfeited the Cries of divers Beasts, the Beat of Drums, and several other Things of this Nature, which seem'd to us inconsistent with the Gravity of such a Council, the History whereof is painted near it.

In the Church of *St. Peter* they shew the Chapel of the little Saint *Simonin*. They tell you, that in 1276. the *Jews* stole their *Simonin*, (or little *Simon*) a Shoemaker's Son, in the 28th Month of his Age, and after having kill'd the Child in a most cruel Manner, to drink the Blood at one of their Feasts, threw his Carcass into a Water-pipe, (which now passes to the House where the Thing was committed, and where their Synagogue was at that time) which being thence carried into the River, and found by some Fishermen, the whole Business was discovered, the *Jews* convicted, Thirty nine of them executed, and the rest for ever banish'd the City. Pope *Sixtus IV.* canoniz'd the

Child, who being embalm'd, is now to be seen in a Case upon the Altar of a Chapel dedicated to his Memory, with a Knife, Pincers, and four great Iron Needles they made Use of in tormenting him, and two Silver Goblets, in which they drank the Blood. The same Story is painted at *Frankfort* on the *Main*, under the Bridge Gate. In the later Editions of our Author's Book there are many Histories of the same Nature mentioned, to shew, that this is not altogether incredible.

15. The Additions and Alterations that our Author has made in the Course of numerous Editions through which his Book has pass'd, renders it extremely difficult to make such an Abridgment of it as was requisite for our Purpose ; since in order to this, we are oblig'd to run through all his Volumes, that we may bring together and unite the many different Passages in them that relate to the same Place ; yet after all this is done, there remain some Things still to be mention'd for the Satisfaction of a judicious Reader. As for Instance, at the End of his second Volume, our Author has added a distinct Treatise under the Title of, *Instructions to a Traveller*, which at the Time he wrote it, was certainly one of the most useful and entertaining Parts of his Work ; but we know by Experience, that the Length of Time has hurt it extremely.

He tells us therein, what Carriages a Traveller should make use of, the Times when they set out and come in, and their Expence ; but we know with Certainty that Things are much altered since, and that in this Respect, the wisest Thing a Traveller can do, is to provide himself with a *Dutch Almanack* for the Year in which he travels, where he will find every thing set down of that Nature as it stands at present. We may say the same Thing with respect to the best Inns at every Place, and the Houses where they speak *French* and *English*, which alter so frequently, that they would be of little or no Use in a Collection of this Nature. He suggests likewise the Enquiries a Traveller ought to make, which is quite beside our Purpose, and are also subject to many Variations.

We the rather mention these Particulars, that it may appear we consider'd well what we were doing, and that we have left nothing untouch'd from Haste or Inadvertency. There are also some long Dissertations of his upon various Subjects, founded only upon Hints that he met with in his Travels ; such, for Example, as the History of the Art of *Printing*, in which there are many Things curious and useful, but the taking in these would swell our Work far beyond its proper Bounds, or would oblige us to exclude other Things that the Publick have more Reason to expect from us, and after all, they would not answer very well the Intention for which they are introduced, since they really require much more Room than he has allowed them. But it may not be amiss to observe, that what has been lately published to the World as a new Invention in this useful Art, under the Title of *Block Printing*, is in reality no more than what was first practis'd by *Coster* and *Faustus*, and which was justly laid aside upon *Mentel's* inventing the Art of casting separate Letters. For according to the ancient Method, which is still in Use in *China*, the Letters were cut in Blocks of Wood or of Metal, from which the Sheets were wrought ; but then it was necessary to cut Plates for every Page of a Book, which were of no Use but for the printing of that Book ; and besides their being very expensive, took up a vast deal of Room, and after all, could never be brought to furnish such neat, beautiful, and correct Impressions, as we have from the Method that is now practis'd.

In regard to the Alterations that have happen'd in the Places through which he pass'd, with respect to their Change of Masters or Forms of Government, it would be equally needless and endless to aim at Corrections, because we must then write the History of every City and Territory, which would require many Volumes. All that in this respect could be done, was to retrench such Passages as are no longer either useful or entertaining upon account of such Changes, and preserving only those that are and will be instructive and pleasant

pleasant as long as the Places remain to which they refer.

These Observations and Remarks are placed at the End of this Section, that the Reader may the better judge of the Reasons upon which they are founded, as well as to spare ourselves and him the Trouble of repeating the same Things, where those Reasons have made the same Conduct necessary in the remaining Part of his Work, of which it is but Justice to say, that most of its Imperfections are such as no Performance of

the same Kind can be exempted from, and that most of his Superfluities are owing to his Endeavours to render his Book complete; which from the Nature of Things, neither it nor any of its Kind ever can be; for while Things are subject to perpetual Alterations, it is impossible to frame any Descriptions of them that will last for any considerable Length of Time; this therefore we hope, will be a sufficient Apology both for him and for us, and shall, for that Reason, insist upon this Subject no longer, but return again to our Author's Travels.

SECTION II.

The TRAVELS of Mr. MAXIMILIAN MISSON, through a great Part of Italy, with a distinct Detail of whatever is curious or worthy of Observation in the Places he visited, and many judicious and important Remarks on the Manners, Customs, &c. of the Inhabitants.

1. *A Description of what is remarkable in the Road to Verona; of that City and of the chief Edifices, and other Things that are remarkable therein.* 2. *An Account of his Journey from thence to Vicenza; a Description of that City, and of Padua, with abundance of Remarks upon the ancient and modern State of that famous University.* 3. *The Author's Passage from thence to Venice; a very large Account of that famous City, and of all the publick Buildings, and other Places of Note therein.* 4. *This Subject continued, with various Remarks upon a Multitude of curious and entertaining Topicks.* 5. *The Conclusion of this Subject, interspers'd with Observations upon the Government of the Republick, and the History of the several Dukes of Venice.* 6. *A Description of Rovigo, Ferrara, Ravenna, Rimini, Pesaro, and Fano, with an Account of what is remarkable in each of them, and in the Country about them.* 7. *A very copious and circumstantial Description of Loretto, of the holy House there, with many curious and entertaining Reflections.* 8. *The Author's Journey from Loretto to Rome, with a Description of all the Places of Note he pass'd through in his Way, with Observations upon their Situation, Produce, ancient and modern Condition, &c.* 9. *An Account of whatever is remarkable in the Way between Rome and Naples; a Description of the Roman High-ways, and some Account of the City of Naples.* 10. *That Subject continued, together with a particular and most entertaining Relation of the Author's Journey to Mount Vesuvius, and other remarkable Places in the Neighbourhood of that City.* 11. *A very large and useful Collection of Remarks and Observations on the City and Republick of Venice, occasioned by a long Letter written to the Author during his Stay in Italy, in which are contained a Multitude of very important Particulars, and wherein many vulgar Errors are enumerated and refuted.*

1. **F**ROM hence we travel'd on to Roveredo, a little City famous for its Trade in Silk, and so on to Borguetto, the last Village in the Territory of Trent, and to Offenigo, the first belonging to the Venetians, a little wooden Cross being the Mark that shews the Boundary of these two States. On this Side of the first mentioned City, you travel thro' the Wood of Roveredo, as they call it, tho' there is scarce a Shrub to be seen all the Way, the Ground being cover'd with Rocks, that lie scatter'd up and down, at some Distance from one another. It is a dangerous Passage for Travellers, as well as the Forest of Vergnara, between Offenigo and the Fort of Guardara, by Reason of the Multitude of Robbers that frequent these desert Places. It being too late to reach the Fort Schluse, we were forced to lodge in the little Village of Seraino. The Fort is seated at the Foot of a high Rock, the Way leading to it being cut out of the craggy Rock, which is a Precipice on the Back-side, at the Bottom whereof the Adige runs with a swift Current.

After we had pass'd the Fort, and had coasted for some Time the Banks of the said River, which here glides along among the Rocks, we came at last into a vast Plain, which is stony and barren in divers Places, tho' in others you see it well planted with Olive and white Mulberry-trees for Silk-worms, as well as with Vines, the last of which are planted at the Foot of Cherry-trees and young Elms, and join themselves from Tree to Tree, forming thereby a very agreeable Prospect. Having pass'd the Adige in a Ferry-boat two Leagues from Seraino, we discover'd soon after the City of Verona, where we arrived the same Day.

On that Side where we entred the Gates, we found a great many void Spaces, and the Grass growing in the Streets, which were scarce half paved; and tho' the rest is something better, yet, generally speaking, it is a poor Place, and very indifferently peopled. The Houses are commonly low and unequal, the Balconies for the most part of Wood, and the Streets dirty and generally very narrow; however, its Situation is infinitely pleasing, and the Air very good. The Adige divides it in two Parts, which are joined again by four Stone Bridges. The Castle of St. Peter being seated upon a rising Ground, affords a most admirable Prospect of the adjacent Country. The Fort of St. Felix is behind that of St. Peter, and both together command the City; the rest of the Fortifications are both irregular, and much out of Repair.

The Amphitheatre of Verona is all destroy'd as to the Front or outward Wall, but the Benches have been kept in tolerable Repair: There are forty four of them, the Circumference of the highest I found five hundred and thirty Paces, and of the lowest two hundred and fifty; each Step is a Foot and a half high, and twenty six Inches broad. At each End of the Arena, betwixt the Benches, is a Portal of twenty five Feet high, by which you may enter out of the Street into the Arena; and above each of these Portals, a Balcony of twenty Foot long and ten broad, surrounded with Marble Rails.

In the Cathedral, which is a little dark Building, you see the Tomb of Pope Lucius III. with this Inscription only:

Offa Lucii III. Roma pulsus invidia. i. e.

The Remains of Lucius III. enviously driven from Rome.

The Church of St. Zeno at *Verona* acknowledges *Pepin* the Son of *Charlemagne* for its Founder; it has most wretched Carving on the Frontispiece. On the Portal I took Notice of two Birds that, I suppose, were made for Cocks, holding between them a Creature with a long Tail, intended perhaps for a Fox, by which, some believe, is represented *Pepin* and *Charlemagne*, (two *Frenchmen*) who dispossess'd *Didier* King of the *Lombards*. On the same Portal is another Hieroglyphick, viz. a Man on Horseback in *basso relievo*, over whom the following three Verses are engraved, in half *Roman* and half *Gothick* Characters :

*O Regem stultum, petit infernale tributum,
Moxque paratur equus, quem mist Dæmon iniquus.
Exit aquæ nudus, petit infera non rediturus.*

But though we guess'd at the *Rebus* of the Cocks and Fox, yet I must own I could not meet with any Body that could give me an Interpretation of this Devil's Horse. Near the Church of St. Mary the Old you see many magnificent Tombs of the *Scaligers*, who were Princes of *Verona* before this City was forc'd to submit to the *Venetians*, and from whom the learned *Julius* and *Joseph Scaligers* pretended to derive themselves.

The Cabinet of Count *Mascardo*, consisting of a Gallery and six Chambers full of Pictures, Books, Rings, Animals, Plants, Metals, monstrous or extravagant Productions of Nature, and the most exquisite Pieces of Art, is so admirable, and their Number so great, that even a Catalogue of them would fill a good Volume; however, I can't forbear to mention some of them, not spoken of before: It has many Instruments and Utensils used in the *Pagan* Sacrifices, and divers Figures of Brass, which they used to hang up in their Temples in Remembrance of some signal Deliverance; divers Pieces of Workmanship out of the Stone *Amiantos*, or the *Asbestos*, spun into Thread like Cotton. Here I observ'd also many of those Parts of Trees used among the Ancients before the inventing of Paper; two Trees of black Coral three Foot high each; a Hen's Egg of this Figure (—); a Circumcision Knife, used by the *Jews* to those Children that died before the eighth Day.

We saw a very singular Funeral at *Verona*, the Body being dress'd all in Black, with a white Linen Cloak, a fine Perriwig upon the Head, and a Hat adorn'd with a Garland of Flowers, was thus laid upon a Quilt, with a Counterpane of flower'd Silk yellow and red, and a Pillow of the same Stuff. It was carried thus open by four Men thro' the Streets, the Company following two by two, and such as were never married wearing Garlands, in Imitation of the Ancients, who had their *Corona Pudicitie*, or *Garland of Chastity*. One Mr. *Montel*, a *French* Merchant living at *Verona*, and since in *London*, gave me an Account of a Procession he had often seen, which I can't but give you; the Story runs thus.

Jesus Christ having a Compassion for the *As*s he made his Entrance upon into *Jerusalem*, gave her a Key to the Fields, where she was to feed quietly all her Life-time after; but the *As*s, it seems, being tired with her own Country Pasture, had a Mind to try those of foreign Countries, and coming to the Sea, the Waves became smooth and solid, so that with little trouble she visited the Isles of *Cyprus*, *Rhodes*, *Candia*, *Malta* and *Sicily*, and thence coming to the Gulph of *Venice*, staid for some Time in the same Place where *Venice* was built since; but finding the Air not very healthy, and the Marshy Pastures not sweet enough for her Palate, she march'd up the River *Adige* to *Verona*, where she liv'd and ended her Days. This you observe is the Legend; now for the Procession.

To preserve the Memory of this renown'd *As*s, they have put his Relicks into the Belly of an artificial *As*s, which is kept in the Church of *Nostre Dame* of the *Organs*, and which is carried two or three Times every

Year, by four of the strongest Monks of the Convent, in Pontifical Habits, in Procession round the City. This I believe is more than was ever done in *Arcadia*, where they had a singular Veneration for this Animal, and may be justly stiled the Procession of *Asses*.

I have just now made a second Visit to the Cabin of the Count *Mascardo*; and the obliging Person who received me was pleas'd with my Curiosity, instead of looking upon it as a Trouble. He assur'd me that he never thought any Part of his Time so agreeably employ'd, as that which he spent in shewing his Curiosities to those who love them, and that he was extremely pleas'd he could entertain me alone without being disturb'd by the Crowd, which for several Reasons he said, made him always very uneasy. We began immediately to take another View of many Rarities and Curiosities, and I found him more communicative than the first time I saw him, for he talk'd very much, all he said shewing a great Deal of Knowledge and Literature. We fell upon Drawers of precious Stones, and he shew'd me very fine Amethysts, and quoted several Authors, who affirm that *Joseph* presented one set in a Ring to the Virgin, when he espous'd her; and when I was looking upon the Sapphires, he cited a Passage of St. *Epiphanius*, who believed that God; wrote the Decalogue upon a Sapphire. The Virtues that are ascribed to those and other Stones, furnish'd us with Matter for a new Conversation. He has a considerable Number of the Stones which he calls *Sætte*, *Fulmini*, *Pietre cerane*, and Thunderbolts. This is a Matter of Fact, that if true, deserves to be examin'd, and perhaps I may another Time give you a more positive Account relating to this Subject.

But at present I must make haste to finish my Letter. I took Notice of some Mirrors of mix'd Metal that were dug up near *Verona*, and are probably very ancient. The Use of Mirrors made of Glass, is an Invention that one may reckon amongst those that are new; but those that have written, without any Manner of Distinction, that Mirrors in general were unknown to the Ancients, are fallen into a gross Mistake, for both sacred and profane Books make frequent Mention of them. Among the great Variety of Coins that are to be seen in the Cabinet, there are some of Leather, but so disfigur'd, that I could not make any certain Judgment of them. I remember the obliging and learned Mr. *Hearne*, one of the Keepers of the famous *Bodleian* Library at *Oxford*, has shewn me one which was better preserv'd in the Cabinet of the *Schola Academica*, of which Cabinet he has the Care and Management. No Man is ignorant of the Use that has been made of this Sort of Money at several Times, and on different Occasions.

2. As we travel'd from *Verona* to *Vicenza*, we found the Country very fertile, well cultivat'd, and generally level: Their Trees they plant here Lozenge-wise, on which they raise their Vines. We dined at the little Village *La Torre*, the Boundary betwixt the *Veronese* and *Vicentin* Territories: Their Wines are fulsome and sweet; their Bread, tho' made of excellent and very white Flower, is as heavy as a Lump of Earth, for Want of good Management; and the rest of our Dinner was only a Dish of grey Pease fry'd in Oil, a Thing surprizing enough in so plentiful a Country, when we had better Fare among the Mountains.

Vicenza is scarce half so big as *Verona*, and but slenderly fortified with an old Wall. There are four Rivulets meet near it, but none are navigable. Among their Churches, the *Coronata* is finely paved and wainscotted; and that of the Religious of St. *Catherine* is remarkable for three very fine Altars, as the Cathedral is for divers good Pictures. Their Town-house, though much boast'd of by the *Italians*, is but an indifferent Structure, as indeed are many others, which pass among them for mighty magnificent Buildings, there being nothing more natural to the *Italians*, than to be lavish in their Titles, whence they give frequently the Name of a Palace to those Structures that would scarce pass for a handsome Seat in other Parts; as they often stile that a Chamber of Audience, which in *England* they call

a large *Parlour*. Among other Fabricks, we saw a little Country Seat belonging to the Marquis of *Capra*, about half a League from the City: It is a square Building, in the Midst whereof is the Hall, under a small Dome, having at each Angle of the Square two Chambers and a Closet: It has some good Pictures, and its Situation on an Ascent makes it very pleasant.

In our Return we look'd upon the Church of our Lady of *Montberic*; the Prior gravely told us, that this Image of our Lady came out of the Earth, in the same Place where she now stands, and from whence she is not to be removed; for if you will believe him, ten thousand Men have been employ'd to carry her to *Vicenza*, but could not perform that Task. The Picture by the Hand of *Paul* of *Verona*, in the Dining-Room, representing St. *Gregory* at Dinner with some Pilgrims, is a most excellent Piece. The Ruins of the old Amphitheatre at *Vicenza* are hid under other Buildings. The Theatre, which is in the Academy of the *Olympicks*, is the Work of the great Architect *Palladio*; as is the Triumphal Arch without the Gates that lead into the Plain call'd the *Field of Mars*, in Imitation of the Ancients.

The Garden of the Count *Valmanara* is a Thing much boasted of among the *Vicentins*: It is, indeed, true, it has a handsome Canal, curious Divisions, Knots, and Closets, and a most delightful Alley of Oranges and Citrons; but, after all, it wants much of being an accomplish'd Piece, suitable to the Inscription over the Garden Gate, which begins (and is continued) in the following pompous Strain.

Stop, dear Traveller, thou who searchest for rare Things and enchanted Places, for here thou maist find Satisfaction: Enter into this delicious Garden, and take a full Taste of all Sorts of Pleasures; the Count de Valmanara gives thee Leave, &c.

The Road betwixt *Vicenza* and *Padua* is much the same as betwixt *Verona* and *Vicenza*. We passed the *Tezenza* about an Hour after we left *Vicenza*, and the *Brenta* an Hour on this Side of *Padua*, call'd, on Account of its University, *the Learned*, a large and yet a very poor City, seated in the Midst of a most fruitful Country, having many void Places without Houses, and many Houses without Inhabitants; which is also the Case of some other neighbouring Places. This City fell into the Hands of the *Venetians* in 1406, and in 1519, they included the Suburbs within the Fortifications, which are now ready to fall. The Streets of this City are lined on both Sides with Portico's or Piazza's, which, tho' they afford a convenient Shelter against the Rains and Sun-beams, make them narrow and dark, and give Opportunity to many Murthers, Robberies, and other Insolencies committed by the Scholars, known by the Name of the *Qui-va-li* of *Padua*.

These Scholars had a Custom of going abroad arm'd in the Night-time in whole Troops, and lurking between the Pillars of these *Piazza's*, assault such as happen to pass by that Way; for whilst one asks the Question, *Qui-va-li*? Another immediately cries, *Qui-va-la*? And so, without giving Time to the Passenger to recollect himself, knock him down, and sometimes break an Arm or a Leg, or perhaps give him a Passport to the other World. Some understanding Persons in these Parts are of Opinion, that *Padua* was formerly a Sea-port, by reason of its ancient Grandeur and Riches, and that now they sometimes dig Masts and Anchors out of the Ground; but these may perhaps be the Remnants of Ships left in a Canal leading to that City.

The *Paduans* boast of *Antenor* as their first Founder; but not to insist upon the Improbability of this Assertion, or enquire whether *Padua* be the *Patavium* of *Antenor*, I will only tell you, that their pretended Tomb of *Antenor* is a meer Imposition upon the World; for, about four hundred Years ago, as they were laying the Foundation of an Hospital, they happened to dig up a leaden Coffin, near which lay a Sword; the Coffin was without any Inscription, but the Sword had some Verses

in barbarous *Latin*, having but very little Relation to what was used in *Antenor's* Days: Notwithstanding which, the *Paduans* in general, but especially one *Lupatus*, a Man of some Learning, and who was one of their Magistrates, were so much prepossess'd with the Conceit of their pretended Founder, that they would needs erect this Monument at the Entrance of St. *Lawrence's* Street, and bestow the Title of *Antenor's* Tomb upon it, with the following Inscription in *Gothick* Characters:

C. *Inclutus. Antenor. patriam vox nisa quietem,
Transtulit hic Enetum Dardanidumque fugas
Expulit Euganeos, Patavinam condidit Urbem
Quem tenet hic humili, marmore cesa domus.*

Several Criticisms have been made upon this Inscription, but among all the rest, nobody has been able to find out yet the Intention of the C. at the Beginning of these Verses. The Tomb of *Lupatus* stands just by that of his dear *Antenor*, to whom he gave a Name, tho' not a Being.

The Church of St. *Anthony* of *Lisbon*, otherwise call'd St. *Anthony* of *Padua*, is both very large and exceeding magnificent in Carving and Painting, and many very sumptuous Tombs; among the last are that of *Alexander Contarini*, the *Venetian* Admiral, and of Count *Horatio Sicco*, kill'd at the last Siege of *Vienna*. The Picture in *Fresco* in the Chapel of St. *Felix*, done by the famous *Giotto*, is a most admirable Piece: But the most considerable Piece of all in this City, is, the Chapel of St. *Anthony*, which is forty Foot long, and twenty five broad; his Body lies entomb'd under the Altar, which is very magnificent and rich: They pretend that his Bones send forth an odoriferous Scent, for which Reason there is kept a Place behind the Altar, which being not well joined, it is no difficult Matter to put some Balsam into the Opening. The Chapel is cover'd all over with a *Basso relievo* Work of white Marble, representing the Miracles wrought by this Saint, the Works of *Tullius Lombardus* and *Sansovin*. Before the Altar hang thirty six great Silver Lamps, which burn Night and Day, to the Honour of this Saint.

The Church of St. *Justina* is both very large and very magnificent, tho' not brought yet to its full Perfection; the Pavement is compos'd of red, black, and white Marble Squares; and the Roof of the great Church hath seven Domes, which afford it both Light and Ornament, and two more on each Arm of the Cross: In it there are twenty four fine Marble Altars, all of a different Colour, besides the great Altar, which is a most magnificent Work: They suffer no Monuments to be erected in this Church. The *Basso relievo* of the Benches of the Choir, representing the Prophecies of the *Old Testament* concerning Christ, with their Accomplishment in the *New*, is almost surprizing: It was not finished in less Time than twenty two Years. The History of the Martyrdom of St. *Justina* over the great Altar, is of the excellent Hand of *Paul* of *Verona*. The Monastery is a vast Pile of Building, having no less than six Cloysters, and as many Courts and Gardens: I will not trouble you with the Story of the Image of the Virgin, which flew from *Constantinople* when the *Turks* became Masters of that City, no more than with an Account of the other Saints that are kept in this Church. The great Place near it, 256 Foot long, and 86 broad, was formerly called the *Field of Mars*, but has since changed its Name into that of *Prato della Valle*, or the *Meadow of the Valley*. The Hall of the Town-house is a hundred and ten Paces long, and forty broad, but dark: It contains many Monuments of illustrious Persons. The *Paduans* have had no less Success in finding the Tomb of their Countryman *T. Livius*, than in that of *Antenor*, for in 1413, a Shrine of Lead having been found in the Gardens of St. *Justina*, they did not in the least question but that this Coffin must be that of *Titus Livius*, considering this noted Historian was the Priest of *Concord*, and that this Monastery of the *Benedictines* of St. *Justina* was built upon the Ruins of the ancient Temple of *Concord*.

To be short, this pretended Coffin of *Livius* being changed for one of Wood, was carried with a great deal of Pomp to the Palace of Justice, where they erected the same Monument that is seen to this Day, and afterwards added the following Inscription, which was found in the Neighbourhood of the Place where the *Temple of Concord* formerly stood :

V. F. (*)
Titus Livius
Liviae T. F.
Quartæ L.
Halys
Concordialis
Patavi
Sibi & suis
Omnibus.

(*) *Vivens Fecit.*

Over this Inscription they have placed a Head of Marble, which passes for that of *Titus Livius* ; but tho' both the Head and the Inscription are ancient, yet *Orfato* has, in his late Dissertation, sufficiently proved, that the *Titus Livius*, mentioned in this Inscription, was no more than a freed Man, of one of the Daughters of *Titus Livius* the Historian. But satisfying the Learned and the People are two Things.

To leave the Fables and Incertainties of Antiquity, I shall give you an Account of another Monument which we saw in the same Hall, and which is worthy of Observation. Some have exalted *Susannah* above *Lucretia* ; but it may be justly said, that the Marchioness *de Obizzi* surpassed *Susannah* and *Lucretia* both. Since when she saw Death present before her, she resolved to suffer it courageously, rather than to permit her Chastity to be violated. A Gentleman of *Padua* was passionately in Love with this young and beautiful Lady, and found an Opportunity to get into her Chamber when she was in Bed, in the Absence of the Marquis *d'Obizzi* her Husband. It is probable that he tried the softest and most gentle Ways before he proceeded to Acts of Violence : But at last, when he saw he could not prevail, his Love turned to Fury, and he was so transported with Rage, that he stabb'd this virtuous Lady. Here is the Inscription.

Venerare, Hospes, Pudicitiae Simulacrum & Victimam,
Cui hanc Aram Patavini erexere Proceres :
 LUCRETIAM, sicut, DE DONDIS AB HOROLOGIO,
Quæ Latinam Lucretiam Intemerati Thoris
Gloria vicit.
Hæc, inter Noctis Tenebras Maritales asseruit Tedas,
Et furiales recentis Tarquinii faces,
Casto Cruore extinxit.
Per Januas Saucii oris juguli Pectorisque
Impiâ Novacula reforatas,
Candidam efflavit Animam.
Tam fortis Heroine
 Quam Numen Pio ANEÆ ex OBIZZONIBUS,
Orciani Dynastæ Connubio junxit,
Glorosis Manibus,
Patria Lacrymis, Italia Atramento
Parentavit.
 Anno M.DC.LXXII.

You will, doubtless, commend the *Paduans* for taking Care to eternize the Memory of so rare a Virtue, that met with such a barbarous Treatment : And perhaps your Curiosity will prompt you to desire the Continuation of the Story. When the Marchioness was surprized in her Bed, her only Son, about five Years old, was with her ; but the Murderer having carried him into a neighbouring Chamber before he perform'd his horrid Villany, the Child could not see all that passed. The Thing being brought to Light, the said Murderer was taken into Custody upon Suspicion. It was known that he had an Inclination to the Marchioness. The Child gave some Information : Some Neighbours affirm'd, they had seen the Gentleman in that Part of the City. They found a Button of his

Sleeve upon the Bed, Fellow to that which he still wore ; and these Things were strong Presumptions of his Guilt. They then put him to the Torture, both ordinarily and extraordinarily ; but he still denied the Fact, and after fifteen Years Imprisonment, his Friends, by their Importunity, saved his Life, and even, as I suppose, obtained his Liberty, which yet he enjoyed not long ; for some Months after his Deliverance, the young Marquis, which was the Child I spoke of, shot him with a Pistol in the Head, and so revenged the Death of his Mother. He is at present (1687) in *Germany* in the Emperor's Service.

The Amphitheatre of *Padua* exceeded that of *Verona* ; however, nothing is to be seen of it now, but an Heap of Ruins. I must tell you, to shew how different People's Notions are, that going into a Tennis-court here, I found the Walls white, the Balls black, and the Rackets of the Bigness of a large Sieve.

3. We left *Padua* the 20th of *December*, and came to *Venice* the same Night in good Time. By the Way we saw many good Villages and fine Country-houses belonging to *Noble Venetians*. Coming to *Mestre*, a little City on the Shore of the Gulph, five Miles from *Venice*, we took a *Gondola*, which carried us in an Hour and a half thither.

To give a true Idea of *Venice*, I must say something of the Waters, in the Midst whereof it is built. It is certain, that the Grounds upon which *Venice* now stands were, thirteen or fourteen hundred Years ago, drowned by the Sea, till afterwards they were raised out of the Water, and Channels made betwixt them, for the more convenient Approach of Vessels to the City, some of them being capable of admitting Ships of the greatest Burthen ; whereas some cannot carry Vessels of above two hundred Tuns. To empty the Mudd out of these Channels, they have Mills and other Engines, and have turn'd the Mouth of the *Brent* and other Rivers, to prevent their forcing the Sands into the Lagues or Channels, for Fear the Earth should gain upon them, who put their greatest Safety and Strength in their watery Situation : But as they are obliged on one Side to keep the Depth of their Waters, so on the other hand, it is not for their Interest that these Channels should be of an equal Depth in all Places, this being one of their main Securities, which has stood them in good Stead at several Times, witness the Mis-carriage of *Pepin's* Vessels in these Channels, and of the *Genoese* Fleet about three hundred Years ago.

Imagine then, a City with thirty or forty tall Steeples to rise from among these Channels, at a League and a half Distance from the Continent, without any other Defence than the Waves of the Sea, and you will have a tolerable Idea of *Venice*.

I know that all Geographers agree, that *Venice* is composed of seventy two Isles ; nor will I controvert so received an Opinion : But I must confess, that I can by no Means conceive where these seventy two Isles should be ; and I dare assure you, that this Account gives a false Notion of the Situation of this City. It should seem by this Description, that there were seventy two little Hills, one near the other ; and that these little Eminencies being all inhabited, had at last formed the City of *Venice* ; which is not true. *Venice* is generally flat, and built on Piles in the Water, which washes the Foundations of the Houses, to the Height of four or five Feet. It is true, they have made the best Use of several Spaces of Ground of a reasonable Bigness, which may, indeed, give Occasion for one to believe, there was formerly some Land there ; but not seventy two Isles, or any Thing like them. For the Streets, they are very narrow, and the most Part of them seem to have been filled up, and raised with Mud and Rubbish, especially along the Canals ; but it is not at all probable, that they have a solid natural Ground at the Bottom. If all the Divisions, which the Canals make, were reckoned for Isles, we should find near two hundred instead of seventy two. It must be farther observed, that the Number of these Isles might be arbitrarily increased, and new ones made in any Place, by fixing Piles, and building Houses upon them, as Bridges are

are built, by Means of *Basterdeaux*, in the deepest and most rapid Rivers; nay, even in the Sea also, as at *Pozzuolo* and *Dunkirk*, besides several Moles. So that taking the Thing after this Manner, they could make such artificial Islands where-ever they pleased.

We are not to give Credit to what is commonly said of the Extent of *Venice*; some reckon it eight Miles in Circuit, and others allow but seven; as for me, I assure you, *Venice* is not either eight or seven Miles in Compass, they reckon five Miles from *Mestre* to *Venice*, which Way we came in an Hour and an half with two Rowers, and we took a Turn about *Venice* in the same Space of Time with two other Rowers, who made neither more nor less Haste than those of *Mestre*. Judge then by this of the Circuit of that City; consider too, that our Gondola was frequently obliged to describe a larger Compass, to avoid the little Capes which the City makes in several Places; and by Consequence the Line that it made, was much greater than the true Circuit of the City. Add to all this, that to mark the Circumference of a City, without considering its Figure, is not a competent Way to determine the Largeness of its Extent. One might easily demonstrate, without great Help of Mathematicks, that a City which is eight Miles in Compass, for Example, may contain a less Number of Houses, than a City which is only four Miles or less, if you please. This depends upon the Regularity or Irregularity of the Figure.

The Number of Inhabitants is another Thing which has often been determined, but seldom well examined. It is commonly reported at *Venice*, that there are two hundred thousand Souls in the City, and some have advanced the Number to three hundred thousand; but we must not rely upon those frivolous Opinions: When the Trade of *Venice* flourished, it is probable enough that the Number of its Inhabitants was much greater than it is at present, but if we may give Credit to the Report of a Person who hath been settled here for a long Time, and assures me that his Calculation is very exact, *Venice* does not at present contain more than an hundred and thirty or forty thousand Souls, comprehending the Isle of *Giudeca*. Those who please themselves with representing *Venice* as a very populous City, take great Care to put us in Mind, that it has neither Gardens, void Places, or Church-yards; and that the Streets are very narrow. But when, on the other Hand, they would describe the Beauty of *Venice*, they magnify its Gardens, its Places or Squares, and the Breadth and Number of its Canals. I read the other Day, in a *Venetian* Author, that he counted in *Venice* fifty three publick Places, and three hundred and thirty five Gardens. Thus you may see how variously Things are represented. But to speak freely, there is a Mixture of Truth and Falshood on both Sides. I will not deny that there may be fifty three Spaces, great and small, to which this Author hath thought fit to give the Name of Places; and the same might be said of his Gardens; but if we take a particular View of those Places and Gardens, we must conclude him to be too prodigal of such honourable Titles. To speak properly, there is but one Place at *Venice*, the famous and magnificent Place of *St. Mark*. But let us allow him the Liberty of that Name to five or six void Spaces more, which are neither large nor beautiful; yet all this comes far short of fifty three Places. There are also some Gardens here, and particularly towards *Santa Maria del' Orto*, but if we set aside fifteen or twenty, or should even allow thirty or thirty five to be so called, I can positively aver, that the three hundred which remain would not, one with another, be ten Foot square; and are not these very noble Gardens? Nor is the other Account exactly true, for besides the Gardens and void Spaces that are in *Venice*, there are many Places very thinly inhabited. It is true indeed, there are no Church-yards.

As for the Argument that is brought from the Narrowness of the Streets, it is a Sophism easy to be cleared. The Streets are narrow, I confess, and so narrow, that the Justling of Elbows, in the most frequented of them, is very troublesome; but then, sure, the Canals ought to be reckoned instead of Streets? If the Ca-

nals were filled and paved, the Narrowness of the Streets could not be alledged. I must tell you, since we are on this Subject, that all the City is so divided with these Canals and Streets, that there are but few Houses which you may not go to by Water as well as by Land, though every Canal is not bordered with a double Quay, as in *Holland*; for the Conveniency of those who go on Foot, there are indeed some of those, but very often the Canal takes all the Space from one Row of Buildings to another. The Streets are in the little Isles that are borrowed from the Canals, and there are about four hundred and fifty Bridges dispers'd among those Canals, so that there are few Parts of the City to which one may not go either with or without a Gondola. It is true, all these little Passages, and all the Turns that must be made to find the Bridges, make *Venice* a true Labyrinth; but the best Way of giving you a true Idea of the Plan of *Venice*, is to send you a Draught of it, which is the most exact of all those that have been seen by me.

The first Place we visited was the Palace of *St. Mark*, the Glory of *Venice*; the Church of *St. Mark* fronts one End of it, and that of *St. Geminian* the other; and betwixt both these Churches, the *Procuraties*, or Inns of Court and Offices of Lawyers, built very regularly of fine Marble, border both Sides of it with lofty Piazzas. This Place is two hundred and eighty Foot long, and one hundred and ten broad. As you are going from the Church of *St. Geminian* towards that of *St. Mark*, and instead of entering there, to the right Hand you come into another Square two hundred and fifty Paces long, and eighty broad, called the *Broglio*, the Extremity of which reaches to the Sea-side. The *Doge's* Palace takes up one Side of it, and the *Procuraties* are continued on the other.

The Tower of *St. Mark* being near the Angle of the Square within, does in some Measure spoil the Symmetry of the Place; its Height is three hundred and sixty Foot, including the Angel that serves for a Weathercock, formerly it was finely gilt, and could be discerned thirty Leagues at Sea, but the Gold being now worn off, it appears at no great Distance. The *Broglio* is the Place where the Nobles walk, who sometimes take one, sometimes the other Side, according to the Conveniency of the Sun or Shade, and no body else is admitted to mix with them on that Side the Walk, but the other is free for every body; they are so nice in this Point, that when a young Nobleman comes to an Age that qualifies him for the Council, and to take the Robe, four Noblemen of his Friends introduce him the first Day into the *Broglio*; and if any Nobleman is excluded from the Council, he is no longer admitted into the *Broglio*.

About the ninth Age, the Merchants of *Venice* transported the Body of *St. Mark* from *Alexandria* in *Egypt* to *Venice*; and as Christ is said to have saluted this Evangelist in Prison with these Words, *Peace be unto thee Mark, my Evangelist*; so the Body of this Saint was received with the same Words by the Senate of *Venice*; who order'd the same to be written in the open Book held by the Lion of *St. Mark* in the Arms of *Venice*, and the Church of *St. Mark* to be built to his Honour; though at the same Time they were so careless in observing his Shrine or Tomb, that now they can't precisely tell where it is. I will not detain you with the Story of his Apparition, when he shew'd his Arm to the *Doge*, and bestow'd upon him the Golden Ring, which is carried with great Solemnity in Procession every Year on the 28th of *June*, because it is fabulous.

The Patriarchal Church, dedicated to *St. Peter* and *St. Mark*, is no more than the *Doge's* Chapel, and the *Primicerio* or Dean of the Canons of *St. Mark* wears a Mitre and Rochet like a Bishop, and has no Dependance on the Patriarch; I saw him officiate in great Pomp on *Christmas-Day*; he must be always a Noble *Venetian*, and his annual Revenue may be about a thousand Pounds Sterling.

The Church of *St. Mark* is a square Structure after the *Greek* Way, being a Cross shortned, but not very lofty, and somewhat dark; its chief Ornaments consist in excellent *Mosaic* Work and Marble; the Roof has several

several Domes, among which, that in the Middle exceeds the rest: It has a vast Number of Statues on the Outside, among which, the *Adam and Eve*, by *Ricco*, are chiefly remarkable: I don't speak, in this Place, of the four Brazen Horses over the Porch, as being foreign Pieces brought thither by Accident. A certain learned Antiquary told me, that these Horses belong'd formerly to the Chariot of the Sun, which was made as a singular Ornament to a triumphal Arch erected by the Roman Senate to the Honour of *Nero*, after his Victory over the *Parthians*; *Constantine* the Great carried them from *Rome* to *Constantinople*, where they stood in the *Hippodrome* till the *Venetians* brought them from thence: One may still see they were gilt, when first erected. But the greatest Curiosity belonging to the Church of *St. Mark*, is the vast Quantity of *Mosaick* Work wherewith both the Roof and Pavement is cover'd. To give you some Idea of this Work; it deduces its Origin from *Greece*, tho' they tell you that its Use has been in *Italy* near two thousand Years; for *Vitruvius* (who liv'd under *Augustus*) calls it *Opus sectile*, *Pavementa sectilia*, *Opera musæa* and *musiva*; by others it is call'd *Opus varniculatum* or *tessellatum*. All Works therefore compos'd of small inlaid Pieces, whether of Stone, Wood, Ivory, or any other Matter, let their Representations be what they will, come within the Compass of what is call'd *Mosaick* Work: The most curious Works made out of *Florence* Stone, come also under this Denomination; but instead of natural Stones, which would take up too much Time to be polish'd and prepar'd, they have made Use here of a certain Composition of Glass and Enamel, melted together in a Crucible, which takes a most lively and bright Colour, that never fades nor stains. Every Piece of the *Mosaick* of *St. Mark* is a little Cube; the Field is *Mosaick* finely gilt, and incorporated in the Fire, upon the Superficies of one of the Faces of the Square, all the Figures (with their Draperies and Ornaments) being colour'd according to Nature, by the artificial joining together of all the Pieces of the Work, according to the Design which the Workman has before him, being nicely fixed in the compound Matter or Plaster prepared to receive them, which immediately after becomes so hard and solid, that this Work has lasted near eight hundred and fifty Years without losing any Thing of its Beauty.

The Pavement of the Church is not inferior to the Roof, being compos'd of *Jasper*, *Porphyry*, spotted-green, Marble of several Colours, which make Compartments different from each other. Among all the Relicks, miraculous Images, and other holy Rarities kept here, I will mention only the Rock which *Moses* struck in the Wilderness, in the Chapel of *Madona della Scarpa*, at the End of the Font, of a greyish Marble; the three Holes out of which the Water issued, are placed triangular-wise, about two Inches asunder; but as each of them is no bigger than a Goose Quill, how these could furnish Water sufficient, in so small a Time, to quench the Thirst of six hundred thousand Men, with their Wives, Children and Cattle, is what I am not able to determine. In the Middle of the Portico of the Church, over-against the Door, they shew a Piece of *Porphyry* enchas'd in the Pavement where Pope *Alexander III.* set his Foot on the Neck of the Emperor *Frederick Barbarossa*.

From the Church of *St. Mark* we were conducted to the Treasury, of which three Procurators of *St. Mark* are always Guardians, and which is never open'd but in the Presence of one of them. In the first Apartment they shew you some Relicks, several Pieces of the true Cross, the Hair and Milk of the Virgins. Thence you go into another Room, where the real Treasure is kept, most of which was brought from *Constantinople* with the before mentioned brazen Horses. The most considerable Pieces here, are the two Crowns of the Kingdoms of *Cyprus* and *Candia*, abundance of precious Vessels of *Agate*, the Root of an *Emerald* and of *Rock-Crystal*; all these, they tell you, belong'd to *Constantine's* Cupboard: A Seal eight Inches deep, and as many in Diameter, made of one single *Granate*; a *Saphyr* weighing ten Ounces; twelve Crosetts of Gold, adorn'd with Pearls; as many Head-tires in Form of a Crown, worn upon certain

Festivals by the Maids of Honour to the Empress *Helen*; a Cup made out of a single *Turquoise*, with *Egyptian* Characters; it is seven Inches Diameter, and three and a half deep; a Picture of *St. Jerome* in curious *Mosaick*; and many other rich Things of this Nature: But the Duke's *Corno* is, in my Opinion, the finest Piece of all, (which *Camerarius* values at no more than two hundred thousand Crowns) the Circle is of Gold, the Bonnet of *Crimson Velvet*, enrich'd all over with precious Stones and Pearls of a large Size: *Charles Paschal* is of Opinion, that this *Corno* is the *Phrygian* Bonnet or *Trojan* Mitre brought into *Italy* by *Antenor*, the Figure whereof is express'd in several ancient Pieces, as in the Statue of *Ganymede*, which is to be seen in the Porch of the Library of *St. Mark*, upon some Medals of the God *Lunus*; in some others where *Aeneas* carries *Anchises* upon his Back, and in the Miniatures of the ancient Manuscript of *Virgil* in the *Vatican*.

This Manuscript puts me in Mind of another, viz. the so much celebrated Gospel of *St. Mark*, kept in this Treasury, which I had Leave, by a special Favour, to consider all over; its Leaves are of Parchment loosen'd from each other, very much worn and torn, defaced, and so rotted, that where-ever you touch it something will stick to your Fingers; it is very hard to discern any thing distinctly of it; it was in Quarto, of the Thickness of two Fingers, and the Remnants of this precious Treasure are kept shut up in a Box of *Vermilion* gilt, made in the Shape of a Book. Here and there you may still discern the Traces of some imperfect Characters upon the moist Parchment, but so as scarce to be distinctly seen what they were; by a nice Inspection I discover'd three or four Letters well form'd, and met with the Word *KATA* distinctly written as you see it here. The Abbot *Lith*, Library-keeper of *St. Mark*, assisted me in turning over, with a great deal of Exactness, all the Leaves, but could discover nothing material, except that it had a very broad Margin, and the Lines were placed at a great Distance from one another, rul'd with two parallel Lines, to make the Writing equal and streight. The before-mention'd Word *KATA*, with one Δ and one Σ , which we also plainly discern'd, prove that it is a *Greek* Manuscript; *Alphon-sus* says 'tis *Latin*, and *Baronius* confirms it; but that it should be of *St. Mark's* own Hand-writing, I can't find sufficient Reason to believe, being rather of Opinion, that (the Manner of Writing consider'd) it is the Work of some profess'd Transcriber; and as for the rest, we must rely upon Tradition and common Fame, that it is the Gospel of *St. Mark*; it being so much defac'd by the Injuries of Time, that few Letters can be decypher'd in it, and consequently it is a difficult Task to prove or disprove whether it really be, or not, what they pretend it is.

In the Year 1427, one *Stamati*, a *Candiote* by Birth, robb'd this Treasury, and broke the Wall, but was taken, and every thing recover'd, and he sentenc'd to be hang'd, which was executed accordingly betwixt the Marble Pillars which stand at the Entrance of the Palace over-against the *Lagietta*: They say, he begg'd of the Judges that he might be hang'd in a golden Haltar, which was granted. Next adjoining to the Church of *St. Mark*, is the Palace of *St. Mark*, a great Mass of Building after the *Gothick* Manner, but nevertheless very magnificent: It has been very often defac'd by Fire, so that the Reparations made at divers Times, have made it not so uniform as it would be otherwise. That Part which faces the Canal, is built of a very hard Kind of Stone brought from *Istria*, and excellently well design'd; were all the rest like this, it might pass for an exquisite Piece of Architecture; as it is, it is very venerable. It is in this Place that the Duke keeps his constant Residence; and here it is that the Council of State and the other Assemblies meet. The Apartments are spacious and lofty enough, and well wainscotted, but want Light in respect to our modern Way of Building.

The Hall appointed for the Meeting of the Great Council (where, in Effect, the Sovereignty is lodg'd) is of a large Size, and adorn'd with curious Painting; here

here you see the Pictures of all their Dukes, the History of the taking of *Constantinople* in 1192, but was lost again within sixty Years after; among the rest they shew you the History of Pope *Alexander* and *Frederick Barbarossa*, with the Pope's Foot on the Emperor's Neck, or rather his Shoulder; as it is expressed here. If you remember the Story of the Rebellion of *Bajamonta* against the Senate, in 1210, I must tell you, that this was the Occasion of the little Arsenal kept in this Palace, from whence there is a Passage to the Hall of the *Great Council* where the Nobility assemble, that in Case such another Design should break out whilst they are assembled in Council, they might readily be supplied with Arms from thence for their Defence. It was upon the same Score that they built the little Judgment-Seat called the *Loggia*, at the Foot of St. Mark's Tower, in Sight of the Palace and the *Grand Council* Chamber: Here are always some Procurators of St. Mark upon the Watch whilst the *Great Council* meet and deliberate of Matters of State, for the Security of the Republick.

This Arsenal is provided with a good Number of Fusils and Musquets ready charg'd, besides many other Arms. Here they have an Engine that will light five hundred Matches at once: They preserve here also some very curious Arms of an ancient Make, and among the rest, the Sword of the famous *Scanderbeg*. Here also they shew you the Bust of *Francis Carrara*, the last Lord of *Padua*, who for his Cruelties was strangled, with four of his Children, by the Command of the Senate of *Venice*, in 1405. I observed likewise a little Trunk with six little Guns, which the same *Carrara* sent for a Present to a Lady, and was so contrived by certain Springs, that upon opening of the Trunk the Guns all fired at once, and killed the Lady. They also shew'd us some little Pocket Cross-bows and Arrows of Steel of this Tyrant, with which his Custom was to kill such as passed by, without knowing from whence they received their Wounds; and various whimsical Sorts of Locks and Bolts he used to keep his Concubines confin'd. Here I also saw the two little Statues of *Adam* and *Eve*, which *Albert Durer* made in Prison with the Point of his Penknife only, and which purchased him his Liberty. We must not forget the antick Mouths under the inner Portico of this Palace, and in divers Places of the Galleries, into the Throat of which any body may cast a Note, to give Advice or Notice of any Thing he is able to the Inquirers, who have the Keys of these Boxes, and sometimes reward those who make what they call the *Secret Accusation*, who, to discover themselves, tear a Piece off the Billet, and by joining it again are known.

The Library is kept in the *Procuraties* opposite to the Palace, on the other Side of the *Broglio*; it is none of the most numerous, rare, and best condition'd, and has but few Manuscripts, which are, for the most Part, *Greek*; though they also shew you a Treatise, entituled, *De Consideratione Dei*, attributed to St. *Austin*; but to make Amends, it has many excellent Pictures, done by *Titian* and other great Masters, and several exquisite *Greek* Statues, as that of *Ganymede*, a *Venus*, an *Apollo*, and two Gladiators. It is the Opinion of some, that *Venice* has as many rare Pictures as *Rome*; I will not pretend to determine that Matter, but only tell you, that the three most celebrated Pieces we could see, either in the Churches or in any other publick Place, are the Wedding of *Canah* by *Paul Veronese*, in the Refectory of St. *George Major*; the Presentation of the Virgin in the School of Charity; and St. *Peter Martyr*, in St. *John* and St. *Paul's*, both by *Titian*. *Venice* is the properest Place in *Europe* for young Painters to improve themselves, for in both the Academies they have the Opportunity of viewing naked Persons of both Sexes, in what Posture they please.

In Answer to your Question concerning the Flux and Reflux, I can only tell you, that the Sea flows six Hours, and ebbs as many; it is later every Day about three Quarters of an Hour, as it is generally upon the Coasts. The Tide commonly rises at *Venice* four Foot, or four and a half, sometimes more, sometimes less. The Shore beyond *Venice* is extremely pleasant, the long and narrow Isles enclosing this City from North to

South, in the Form of a Semicircle. The main Sea affords some Shell-fish, and abundance of Oysters, but they are neither so savoury nor so wholesome as ours.

The *Venetians* boast much of their *Policy* and *Liberty*; for the Proof of the first they generally alledge, that they have maintain'd themselves for thirteen hundred Years. This Reason might perhaps stand, if they could boast to have maintain'd the same Form of Government; whereas it is beyond all Contradiction, that the Government of *Venice* has often chang'd its Constitution, since their Dukes were heretofore as absolute as *Cæsar* was at *Rome* not long before his Death. Another Consideration is, that the Republick of *Venice* being confin'd to such narrow Bounds, in Comparison of the more powerful States of *Europe*, and surrounded by Neighbours less potent than itself, it seems not to require such profound Maxims of Policy to maintain itself, by living quietly and peaceably with the rest; and notwithstanding all this, the Senate of *Venice* have, with all their Policy, not been able to prevent the Declension of their State at divers Times. As for their Liberty, of which they so loudly talk, it amounts chiefly to this; that provided they don't intermeddle with State-Affairs, and commit no enormous Crime, that must of Necessity, or by its Notoriety, fall under the Censure of Justice, every body is at Liberty to live as he pleases: Hence it is that the *Greeks*, *Armenians*, and *Jews*, are allowed the publick Exercise of their Religions; and all the other Sects are tolerated, or at least connived at, provided they manage with a little Discretion: It is true, the worshipping of Images and Relicks, and such-like Superstitions, abound as much among the common People of *Venice*, as in other Places, but the better Sort set no great Value upon them. They are now as jealous of the Liberty of the *Venetian* Church, as the *French* were of the *Gallican*; and it is for this Reason they keep the *Jesuits* so much in Awe; they allow none in their Convents but their own Subjects, and will not admit any Superior, except a Native of the City. They do not hesitate to permit these Fathers to wear Masks during the Carnival, to entertain their Concubines, to sing on the Stages, and what else they think fit, provided only they keep their Fingers out of publick Affairs.

Concerning the Faith of the *Greeks* here, I can't but be of Opinion, that they differ in many Points from the *Greek* Churches of the *East*, though they exclaim heavily against the Usurpation of the Church of *Rome*; they declare for Transubstantiation; they make use of common Bread, mingle Water with Wine, and communicate under both Kinds. In their Churches they have two Altars, one called the *Altar of Preparation*, the other of *Consecration*; the first they make use of to cut the Bread with a Knife shap'd like the Iron Point of a Launce, where they also mix the Water and Wine, and the Priest takes it with a Sponge out of the Vessel in which it was first mix'd, and afterwards squeezes it into the Chalice. They embrace one another before they have communicated, and the Communicants receive the Bread steep'd in the Wine, the Priest putting it with a Spoon into their Mouths: Of all this I was an Eye-witness. The Archbishop officiated in a Mitre not unlike an Imperial Crown, and all his Ornaments were exceeding magnificent, and were changed several Times, according to the different Parts of the Service. They abound in mysterious Ceremonies; whenever the Bishop blesses the People, he has in his Right-hand a three-branch'd Candlestick, with as many lighted Tapers; this, they say, is an Emblem of the Trinity, as the Candlestick with two Branches he holds in his Left, is of the two Natures of *Jesus Christ*. They divide their Churches into four several Parts; the Altars stand at one End, which they call *holy*, none but the Priest who officiates, and his Attendants, are admitted there; the next to that is appointed for the other Service; the third is where the Men are separated from the Women by little Balisters; the Women sitting behind Lettices at the other End of the Church, or in the Galleries. They perform their Divine Service in the vulgar *Greek*, and highly condemn the Use of an unknown Language in the Church. They worship standing,

standing, bow their Heads, and put their Hands at the same Time on their Breasts. Marriage is among them no Bar to Priesthood, but if they are single at the Time of their being admitted into Orders, they must not marry afterwards, and they forbid the fourth Marriage for Decency-sake, deny the Popish Purgatory, and yet pray for the Dead. They use Confession, but not after the Manner of the *Romanists*. Concerning the Article of the *Proceeding of the Holy Ghost*, they say as little now as they formerly disputed upon it, looking upon it as a Point that has more of Nicety than Use; they also preserve Relicks, but never worship them.

I have made the best Enquiry I was able about the Doctrines of the *Armenians*, but their Church being repairing at present, I have had no Opportunity to see their Worship, nor to learn the Truth of it from others, except that a Friend of mine told me, that they were of very different Opinions in respect of several Articles, but that these four or five were most generally received among them, *viz.* They communicate under both Kinds, they give the Sacrament even to Infants, acknowledge the Sequestration of Souls as the *Greeks* do, allow of Divorces, and believe, that at the Time of the Resurrection there will be no Difference of Sexes.

4. Before I leave *Venice*, I must add some few other Observations to what I have already said concerning this City, and all the Curiosities therein. The Bridge of *Rialto* challenges the first Place, founded on ten thousand Elm Piles, and which cost two hundred and fifty thousand *Venetian* Ducats. It is built over the Middle of the great Canal which divides this City in the Figure of an S. The *Venetians* are so much taken with this Bridge, that they often want Terms to express its Grandeur, whereas it is certain that it has Nothing extraordinary belonging to it, except that it is built upon one Arch: As I took particular Care to measure it, so I can give you an exact Account of it. The Compass of the Arch makes the third Part of a Circle; the whole Extent, from one Extremity of the Arch to the other, on the Level of the Canal, is ninety Foot, and its Height twenty four. I know some have blam'd the Architecture, which, according to the strict Rules of Art, might, for its greater Strength, be an exact Semicircle; but, in my Opinion, this Objection may soon be answer'd, it being reasonable to suppose, that the remaining Part of the Semicircle is taken up in the Foundation under Water. It is strongly built of great Pieces of a kind of white Marble; it has two Rows of Shops, which divide it into three Streets, *viz.* one large one in the Middle, and two other little ones, between the Rails and the Backsides of the Shops. Almost all the other Bridges of *Venice* have but single Arches, and Steps of a white and hard Stone, and most commonly very slippery, which in Part has given Occasion to the common Proverb of *Venice*,

*Beware here, of White Stones,
Whores, Priests, and Pantaloons.*

All the best Houses stand on both Sides of the *Great Canal*, among which are the magnificent Palaces of *Pisani*, *Morosini*, *Loredano*, *Rosini*, *Vandramino*, and *Grimani*, but their chief Beauty consists in their Frontispieces, which commonly are of two or three Sorts of Architecture, the rest being but very indifferent. The *Lagunes* contribute not a little to the Unwholsomeness of the Air of *Venice*, though the *Venetians* are very unwilling to own it, but their Water is generally bad; for among an hundred and fifty Springs they have here, there are not above two or three that afford good Water, which is the Reason that most private Persons of Note are forc'd to preserve the Rain-water in Cisterns. The Wines generally drank here are either fulsomely sweet, or sower and eager: Their Bread is also very ill made, for let it be never so fresh, it is as hard as a Biscuit, and must be broken with a Hammer. The little Opportunity a Stranger has of conversing with the *Venetians* in their Houses, makes me give you no Account of their Manner of House-keeping, but it puts me in Mind of what I read the other Day in a Preface

of *Henry Stephens*, That in his Time, a Woman that appear'd bare-neck'd abroad, was look'd upon with a very indifferent Eye in *France*; whereas in *Italy*, and especially in *Venice*, every old Hag shew'd her wither'd Neck, but at present none but declared Whores shew their Necks bare; nay, the Women of Quality do not even shew their Faces in the Churches, the only Places where they appear in Publick; and the ordinary Women wear over their Heads a great Scarf, opening only a little about the Eyes. Their Females they educate in the Convents, from their tender Age till they are married, which is done commonly by their Parents or Kindred, without letting them see their future Husbands: For it is to be observed, that among Persons of Quality there are no Regards in Reference to this Point, but a good Family and Riches, the rest being left to Chance: Whence it is that the Men commonly remedy the Defects of their Wives, by maintaining Concubines: They have here a peculiar Way of cohabiting with certain Women, much used among those of a tender Conscience: It is a Kind of clandestine Marriage, the Ceremony whereof is not perform'd sometimes till many Years after they have lived together, and often not till a few Days or Hours before the Death of one of the Parties: But the most general Way is, to keep their Mistress at a certain Allowance as long as both Parties agree; and this is so frequently practis'd here, that such as are not able to keep one singly, join with two or three more, who enjoy the Woman, without the least Jealousy, each in his Turn.

This Kind of Libertinism is so general at *Venice*, that the Mothers of young Noblemen are commonly the first who agree with a poor Maiden's Father or Mother, for the Use of their Sons, at a certain Rate, to be paid monthly or yearly, as they can agree best. I have it from credible Hands, and *Roman Catholics*, that the Confessors look upon this as such a Trifle, that they take not the least Notice of it in their Confessions. For Strangers and Passengers you have whole Streets fill'd with Ladies, easily distinguished from others by their Habits, being dressed in red and yellow, with naked Breasts, painted Faces, and Nosegays above their Ears; whereas all the other Ladies appear in black. The Carnival commences here the second Holiday in *Christmas*; then it is they begin to wear Masks, and open their *Play-houses* and *Gaming-houses*: The Place of *St. Mark* is fill'd with *Mountebanks*, *Jack-puddings*, *Pedlars*, *Whores*, and such Sort of Cattle, who flock thither from all Parts. In the Beginning they act with some Moderation; but the nearer they come towards *Shrove-Tuesday*, the more their Madness encreases. The Senate of *Venice* allow these Extravagancies, to divert the People from feeling the heavy Burthen of their Government, which, without such-like Amusements, would be insupportable to them: Besides that, the vast Number of Strangers, which come from all Parts to *Venice*, to the Diversions of the *Carnival*, brings a vast Sum of Money to the City: I was credibly inform'd, that during the last *Carnival*, there were no less than seven Sovereign Princes, and thirty thousand other Foreigners there.

To give you my Opinion of the *Opera's* and *Comedies* of *Venice*, in respect to those of *Paris*, I must be plain with you, That the Ornaments of the first are infinitely inferior to those of *France*: Their Habits are mean, without Dances, and generally without any Machines or Illuminations, except here and there a few Candles, scarce worth mentioning. I will not venture to contradict the general Opinion of the World concerning the *Italian* Musick; and it must really be confessed, that they have some excellent Airs, and most exquisite Voices: But, to tell you my Sentiment of the Matter, there is a certain unpleasant Confusion in several Songs of their *Opera's*, and they dwell many Times longer in one Quavering, than in singing four whole Lines, and immediately after they run so fast, that you cannot tell whether they sing or speak, or do both by Turns. It is certain, that the overstrained Scream is not so pleasing to Foreigners as to the *Italians*. The Orchestre is much less than at *Paris*; but this may perhaps

haps be esteemed rather a Perfection than a Fault. There is another Thing I cannot pass by without a Remark, I mean the preposterous Figure which their Eunuchs make on the Theatre: It is a very odd Sight to see one of these mutilated Fellows act the Part of a Bully with his effeminate Voice; and another to represent a young Lover, with his withered wrinkled Face.

There are at present no less than seven *Opera's* at *Venice*, which by Foreigners are frequented chiefly for the good Company's Sake: They have a Buffoon in every *Opera*, who intermixes his Fooleries, without Discretion, with the most serious and tragical Part of the Play. Their Comedies are fill'd with such ridiculous Buffooneries, that in other Parts they would not pass for tolerable Farces, *Harlequin* being commonly the Head Actor, who is back'd in his Grimaces with the most rank Bawdry that can be invented, to make the Spectators laugh; and for Fear they should be disappointed in their Aim, they admit whole Troops of the *Gondoliers*, or Watermen, into the Playhouse for nothing, when they are ready to begin: These are very diligent on this Occasion, by bawling and clapping their Hands, to extort, as it were, a general Applause from the Spectators. These Theatres belong to some Noblemen, who make a considerable Profit of them during the Carnival.

Their Assemblies, where they play at Basset, they call *Ridotti*, which are kept open as long as the Theatres: They allow none but Noblemen to cut: You shall see sometimes ten or twelve Rooms on a Floor, with Gaming-tables in all, crowded with Gamesters masked, with Courtesans and Ladies of Quality, who, under this Disguise, have the Privilege of enjoying all the Diversions of the Carnival, provided they can get a little out of the Way of their Spies or jealous Husbands. They have also certain Rooms, where they sell Liquors, Sweetmeats, and such-like Things, to relieve such as are fatigued with Standing. Every one thus masked, provided he be in good Apparel, has the Liberty of talking to the Ladies even of the highest Quality, nobody, not even the Husband himself, taking Notice at that Time what is said to his Wife, because the Mask is sacred; though this sometimes gives Occasion to an Intrigue, in a Place where the Scarcity of Opportunity prompts them to do more with the Wink of an Eye, than in other Countries with a longer Courtship.

But the chief Place for Masquerading is the Place of *St. Mark*, where you may put yourself in what Disguise you please, provided you can maintain the Figure of the Person you assume; for here you see the *Harlequins* jeer one another handsomely; those who personate Doctors, dispute learnedly; and so with the rest: But such as have no Inclination to venture upon these Engagements, may appear in the Habit of a Nobleman, or some foreign Dress, and be only Spectators. All the Masquers must appear without Swords. Here you see, besides *Puppet-players*, *Rope-dancers*, and *Fortune-tellers*, whose little Stages are fill'd with *Globes*, *Spheres*, and other *Astronomical Instruments*: They make Use of a Tube of Tin to speak into the Ears of those who consult them; and it is a pleasant Sight to see the Priests and Monks more frequently taking up the Tube than the rest.

I will not pretend to give you an Account of their *Bull-baitings*, *Goose-bunting*, *Wrestling*, or *Boxing*, *Balls*, *Races* upon the Water, or of their *Feast* on *Shrove-Tuesday*, when they cut off a Bull's Head in the Presence of the whole Senate, in Memory of a Victory in *Friuli*: But I must not omit to tell you, that the Carnival is not the only Time when *Masks* are in Request at *Venice*, there being no Feast of Pleasure where they are not used more or less, as at the Audiences of Ambassadors, on *Ascension-day*, &c. All these Days are very profitable to the Watermen, who knowing all the Turns and By-ways, keep Correspondence with the Waiting-women, and for a good Reward will furnish Ladders of Cords for an Intrigue, one of their main Businesses being Pimping; in which Art they are so well versed, that they will deposit a Sum of Money, as a Security,

that their Ware shall prove good. They hire the *Venetian Gondola's*, or *Boats*, either from Place to Place, or by the Hour, or by the Day. You may have one of the best for five or six Shillings a Day. These Boats are prettily contrived, and very light: Their Length is generally thirty or thirty two Foot, and their Breadth four or five, in which you may sit with a great deal of Conveniency, under a Cover like a Coach, with Glasses on both Sides; the left is reckoned the best Place, because there you can best see the Boatman, and command him as you please. These Fellows are very dextrous in their Business, and will, with a surprizing Facility, manage their Oars, standing with their Faces towards the Place where they are to go. All the *Gondola's*, or *Boats*, must be black, even the little Chamber, which is generally cover'd with black Cloth or Serge; but Foreigners are not so strictly tied to this Rule; the *Gondola's* especially of the Ambassadors are generally exceeding magnificent: They have commonly four or five, and make their Entries in them.

The Arsenal of *Venice* challenges Precedence among the first of *Europe*; but as it must be confess'd, that it is a Place of great Consequence, so on the other hand it ought to be consider'd, that it is the only one the *Venetians* have in *Italy*, and that in its Enclosure it comprehends all their Ammunition, Stores for their Navy, Casting-houses, Rope-yards, Forges, Lodges for the Galleys, and Galeasses, and the *Bucentoro* itself, besides the Docks for refitting their Ships: And notwithstanding all this, you must not believe above half they tell you upon this Head. I remember that our Guide would fain have persuaded us, that it contain'd no less than two thousand five hundred Pieces of great Cannon, Arms for a hundred thousand Foot, and compleat Accoutrements for twenty thousand Horse; but these are only Words. Among their Men of War, that call'd *The Redeemer* is the biggest, and, as they told us, carried eighty Pieces of Cannon and fourteen Pattareroes, and is now at Sea. Their Galeasses have three Rows of Guns in the Prow, but only two in the Poop; their Complement of Slaves is ninety two, six on a Bench. The *Bucentaure* is a large Galeass of State finely carved and gilt, in which the Doge and Senate, with many of the Nobles, go out to Sea every Year on *Ascension-day*, to perform the Ceremony of marrying the Sea.

As to the Rank the Noblemen of *Venice* aspire to, which they have push'd to that Degree, that they pretend their Nobility to comprehend all other Titles, so as even to compare themselves with Princes of Royal Blood; I must tell you, that it appears to me rather founded upon Opinion than solid Reason. It is true, that considering the *Noble Venetians*, by Right of Inheritance, are Members of the great Council, which gives Life to all the rest; they are born with some Character of Sovereignty, but at that Rate the Nobility of *Genoa* might challenge the same Prerogative; and, after all their Boasting, the Commands, great Offices, Wealth, and ancient Extraction, make new Distinctions among them; and they are not so nice, but that they will sell this Title for a certain Sum of Money. They never appear in Publick but in their Robes, which are of black Cloth, and ought to be lined with greyish Cloth in the Winter, and Ermins in the Summer. The Stole is of the same Cloth, as well as the Girdle, which, being about four Inches broad, is adorned with Silver Buckles and Plates. Their Bonnets are no more than a Kind of Caps of black Worsted, with a Fringe of the same Stuff, which they commonly bear in their Hands, because they are unwilling to incommode their great Perriwigs; however, the Procurators of *St. Mark*, the *Sacri Grandi*, and some others of the great Officers of the State, are distinguished by their peculiar Habits: Those that have been Ambassadors have the Privilege of wearing a Stole of Cloth of Gold, and Golden Buckles on their Girdles, but they generally content themselves with a little Gold Galloon upon their black Stole.

The *Physicians*, *Advocates*, *Notaries*, and all those they call *Cittadini*, wear the same Habits as the Nobles; they challenge the Title of *Excellency*, and the Manner

of saluting them is to kiss their Sleeve, which about the Elbow is as big as a moderate Sack, and serve sometimes to carry Provisions in from the Market, because they scarce ever appear with any Attendance at their Heels. They are never saluted in the Street, except by those who wear the same Robe, being rather fear'd than lov'd by the People, not so much on account of the Hardships they suffer from them, as for want of knowing them, the Nobles being not permitted to converse familiarly with any body. The Nobility of *Venice* is not restrained to the eldest Sons, as in *England*, but they are not permitted to traffick, much less to marry with Foreigners. Those *Marquisses*, *Counts*, and other titular Nobles belonging to the *Venetian* State, are no Noblemen of *Venice*, but either such as really enjoy'd these Dignities in their respective Countries before they became subject to the *Venetians*, or by the *Venetians*, since their Conquests, have been dignified with these Titles to humble the rest, and by a Confusion of new Titles, abate the Pretensions of the ancient Nobility of those Countries. There are a third Sort of titular Nobility in the *Venetian* State, whose Ancestors, though not fully entitled to those Dignities, yet had some Pretensions to them, and upon the Change of the Government, assumed these Titles by the Connivance of the *Venetians*.

Your Information concerning the Duke or Doge of *Venice*, is wrong in all its Parts; for, I can assure you, he bears only the Figure of a Prince, and the Shadow of Greatness without any real Substance; much in the same Manner the Dukes of *Aquitain* and *Normandy* do at the Coronation of a King of *England*. It is true, he has some outward Marks of Grandeur annex'd to his lofty Title, but these are bestow'd on him no otherwise than as he is a Representative of the Republick, as Ambassadors are of their Masters. That this is true beyond all Contradiction, you will very clearly perceive, if you consider, that all his Councillors have a constant Eye over all his Actions, and have an Authority to visit his Closet every Hour. It is not in his Power to pardon any Criminal; he can't so much as pass over to the Continent without Permission from the State; and he no sooner sets Foot ashore on that Side, but his Ducal Authority and Dignity cease, and he is consider'd as Nothing more than a bare Nobleman of *Venice*; immediately all his Kindred, that were before in any Offices, are turn'd out, and when he dies, there is no such Thing as the least publick Mourning upon that Occasion. He is, beside this, as much subject to the Law as the meanest Person, and the Inquisition of State is chiefly level'd at his Power, which is so streightned, that except two or three inconsiderable Privileges, he possesses Nothing beyond other Noblemen; these are, that he has a double Voice in the *Grand Council*, and the Disposal of divers little Offices belonging to the Palace, and the Nomination of the *Primicerio* and Canons of *St. Mark*. The Honours, as I told you before, which are paid to him, being nothing else than the Marks of the Sovereignty of the Common-wealth in their Representative; it is in this Sense he bears the Title of Duke and of *His Serenity*, (a Title esteem'd here beyond that of *Highness*) and when he appears abroad upon any solemn Occasion, has a Torch carried before him, a folding Chair (having two Arms and no Back) with its Cushion, eight Silver Trumpets, and as many Standards with the Arms of *Venice*, and perhaps some Hautboys: Of these Standards two are white, two red, two violet, and two blue, which, they say, signify, *Peace*, *War*, *Truce*, and the *League*: They shew'd us that the two red ones were carried first, the State being then engaged in a War against the *Turks*, whereas in Time of Peace, the white ones precede the rest. He has also a Kind of Umbrello carried after him.

Upon these Occasions the Doge is generally accompanied by the *Nuncio*, and the Ambassadors residing at *Venice*, except the Minister of *Spain*, who never appears at these Solemnities, to avoid disputing with the *French* Ambassador about Precedence; all these Ministers have their Hats on; the Duke never pulls off his ducal Cornet,

except when the Host is elevated, or when he is visited by a Prince of Royal Extraction, or by a Cardinal, who sits in a like Chair with the Duke, and even on his right Hand. After these march the chief Senators, before whom is carried the Sword of State, as an evident Mark of the Sovereignty of the Council. It is true, upon their Coin the Duke's Name is stamp'd, but on the Reverse you see him on his Knees, at the Feet of the *Primicerio*, who sits and represents *St. Mark*; of him the Doge takes the Oath of Fidelity, with the Mass-book in one Hand, and with the other receiving the Standard of *Venice*; so it is evident, that his Image bears no more Marks of Honour here than that of the *Primicerio*. The Letters of foreign Princes are also directed and delivered to the Doge, but he is so far from having any Power of opening them, that he must deliver them to the Council: The same Thing is observed in respect to Ambassadors; for after Matters have been deliberated and concluded in the Council, the Answer is put so exactly into the Duke's Mouth, that should he commit the least Mistake, he is corrected upon the Spot. Thus in all Acts or Declarations, of State, he is no more than the Herald, who has the Honour of publishing what is enacted by the Senate.

I will not pretend to unravel to you the Mysteries of the *Venetian* Common-wealth, the same being above my Purpose, and even out of my Knowledge, for want of sufficient Time to be fully instructed in so many Things: I will only add concerning the Patriarch of *Venice*, that after he is elected by the Senate, he receives his Confirmation from the Pope: Though his Station is very eminent, yet his Authority is kept within very narrow Bounds; for, except two or three Benefices, the People of each Parish chuse their own Curates, and the Clergy acknowledge no Superiority but that of the Senate. This Prelate must always be chosen out of the Nobility, and his Garment is of a Violet Colour; he styles himself *Divini Miseratione Venetiarum Patriarcha*, i. e. by God's Mercy Patriarch of *Venice*; but not as others do, *Et Sanctæ Sedis Apostolicæ Gratia*; and by the Grace of the Holy Apostolick See; the *Venetians* acknowledging no such Superiority. For the rest, this Election is commonly carried on by Interest and Intrigue, as in the chusing of a Pope, little Regard being had to Merit; and it is beyond all Dispute, that the Ignorance of the Clergy here is greater than what can well be express'd or imagin'd; to remedy which, as also their Licentiousness, and the too free Conversation with the Nuns, Cardinal *Barberigo*, Bishop of *Padua*, a wise and venerable Person, has taken a great deal of Pains of late Years, but to little Purpose.

I must not forget to tell you a pleasant Secret they make use of here, in Behalf of some Priests that are Musicians: You are not ignorant, that one of the main Qualifications belonging to a Priest, is to be a compleat Man; but as the Sweetness of the Voice is of great Use, both in their Opera's and Churches, they have found out this Expedient, that a Priest thus fitted for Musick, may exercise the Functions of Priesthood, provided he carry the same Implements that belong'd to his Body in his Pocket. Is not this a most religious Distinction!

Father *Mark Aviano*, whom I mention'd in my Letter from *Augsburgh*, is here at present, but I could never hear him preach, the Crowd of the People being such, that they were forc'd to break a Hole through the Wall of the Church, to let him go into it from a neighbouring House.

5. It is one of the Peculiarities of *Venice*, that some of the Churches are dedicated to Saints that were never canonized, such as the good Man *Job*, the Prophets *Moses*, *Samuel*, *Jeremiah*, *Daniel*, and *Zachary*, to whom there might be some others added. I had the Curiosity to visit the Temples that are consecrated to those illustrious Names, but could not find any Thing more extraordinary in them, than their Dedication. One of the finest of those sacred Structures is that which is dedicated to *St. Moses*; it has a majestick Front, which was built by *Alexander Tremignone*, at the Charge of the Procurator *Vincint Fini*. They preserve several Relicks

licks in this Church, and pretend, that they are both very authentick and potent; however, since they consist only of Arms, Legs, and Jaw-Bones, I will not trouble you with a Catalogue of them: But when I meet with some holy Curiosity, which deserves to be particularly taken Notice of, as some Foreskin of a *Philistine*, some Pease of *St. Francis's* Issue, or a Shoe of the *Trojan Horse*, you may expect to hear of it. As for the Church of *St. Samuel*, it will be sufficient to tell you, that there is nothing remarkable to be seen in it: *St. Job's* is a very fine Building. In the Vestry they keep a Body of *St. Luke*, and the *Benedictins* of *St. Justina* at *Padua*, have another: But since the Pope declared for the former, the Monks of *Padua* have very prudently taken the Resolution to be silent.

At *St. Jeremy's*, which is a fine Edifice, they have one of that Prophet's Teeth, and it is reasonable they should have a Relick of their Nation. If the rest had imitated so judicious an Example, we might, perhaps, have had the Pleasure to have seen one of *Moses's* Horns and *Job's* Scabs. The great Altar, and the Tomb of *St. John* the Martyr, Duke of *Alexandria*, are the most remarkable Things I observed at *St. Daniel's*. *St. Zachary's* is a fine Building. The Architecture is not modern, but the Front is enriched with fine Marble, and the Inside beautified with many Ornaments. There are also magnificent Altars in it. The famous Church of *St. Mark* is so enriched with *Mosaick* Work, that, in this Respect, the Churches of *St. George Major* and *della Salute* ought not to come in Competition with it: But if we consider the Architecture of *St. Mark*, it is an obscure Place, in Comparison to those Churches. The best Judges give the Preference to *St. George's*, but common Eyes find something in the Church *della Salute* that is more agreeable to them. The Designs are quite different: *St. George's* is not unlike to *St. Justina's* at *Padua*, for the Contrivance or Gusto is the same in both. It is true, *St. Justina's* is larger, and perhaps more magnificent within, but its Outside is naked; whereas the other is adorned with an admirable Front. The great Altar in this Church is enriched with Marble of the finest Sort, and curiously wrought: It is also adorned with several Statues, the chief of which are the four Evangelists supporting a World, on which there is a *Padre Eterno*. The Whole is of Brass gilt. The Seats of the Canons round the Choir are of Walnut Tree, on which the Life of *St. Benedict* is described in very fine *Basso relievo*, where the Rules of Perspective are well observed. In a Chapel near the Tomb of the Procurator *Vincent Morosini*, those, who have good Eyes, observe on a Marble Pillar, and on some Places on the Balusters, Fishes, Birds, and other Things naturally figured; and even an entire Crucifix; I mean the Eyes of Imagination; for there is nothing like it in Reality, though certain little Books, that are to be bought at *Venice*, say so.

In this Church they have the Body of *St. Stephen* the Proto-martyr, which a pious Woman called *Juliana*, brought from *Jerusalem* to *Constantinople*, from whence it was afterwards transported to *Venice* by one *Peter* a Monk. The whole Story is described at Length in two long *Latin* Inscriptions, which I had the Patience to transcribe, but I am afraid you would not have the Patience to read. The Choir, Altars, Floor, Dome, and Vestry, of the Church *della Salute*, are all extremely beautiful: The Foundations of this Structure were laid March the 25th, 1631, two Years being spent in fixing the Piles. The Occasion is related in an Inscription which was placed on the first Stone; importing, a Vow to the Virgin for Deliverance from the Plague. This Church was built by *Balthasar Longhena*: It is adorned both without and within with about one hundred and thirty Marble Statues. It was erected at the Charge of the Publick; whereas most of the other Churches were built by private Families, and consequently may be look'd upon as so many Marks either of their Vanity or Piety, and at the same time, of their vast Riches. On the great Altar there is a Statue of the Virgin holding the little *Jesus* in her Arms. The *Genius* of *Venice* on her Right Hand imploring her Assistance to stop the Progress of

that mortal and contagious Distemper: On the other Side is *Pestilence* flying, pursued by an Angel with a Torch in his Hand. *St. Mark* is present with the blessed *Lawrence*, *Justiniani*, and several others. All these Statues are of fine Marble, and wrought by a curious Hand. I dare not undertake to describe all the Embellishments of this noble Structure.

St. James de Rialto is said to be the first Church that was built on these Spots of Ground on which *Venice* is founded; but it has been so often destroyed and rebuilt, that it may be reckoned a new Church, notwithstanding all its boasted Antiquity. The Altar in the great Chapel is of white Marble, and adorned with a fine Statue of *St. James* by *Alex. Vittoria*. *St. Mark's* Church is but a Chapel to the Doge's Palace. *St. Peter di Castello* is the Episcopal and Patriarchal Church, pretty large, and the Front deserves to be taken Notice of for its beautiful Simplicity; and though no extraordinary Care has been taken to embellish this Church, there are some very considerable Ornaments, and several remarkable Things to be seen in it. The great Altar was erected by the Senate, in Pursuance of a Vow they had made during the War against the *Turks* in 1649. It is dedicated to the *Beato Lorenzo*; and the Body of that Demi-Saint is placed there, in a stately Marble Tomb, supported by Angels and Apostles. The Statue of *Beato* stands upon the Tomb, and that contains his Bones. I have seen some devout Persons kiss a Stone Chair, which is kept in this Church, on the Right Hand as you enter betwixt the second and third Altar, by the Wall. They pretend that *St. Peter* made Use of it when he was at *Antioch*; and a Sacristan informed me, that it was a Present of *Michael Palaeologus*, Emperor of *Constantinople*. The same Person told me a Story of a Brazen Cross that was found floating in some Part of the Lagunes, and brought with a great deal of Ceremony to this Church. They have a Veneration for it, but the Cross could never tell them what kept it from sinking when it was in the Water; and though it is evidently miraculous, nobody may say that he remembers to have seen it working any Miracle: So that notwithstanding every Church, and almost every Chapel, is abundantly provided with Pieces of the true Cross, this brazen one, as extraordinary as it is, is somewhat neglected.

The Monks of *St. Michael*, betwixt *Venice* and *Murano*, have, in the Chapel of the Family *Priolo*, a fine one, which is endued with a particular Virtue to appease Tempests: The History of it is full of surprising Wonders: It is written on a Scroll of Vellum in so antique a Manner, that this Consideration alone would be sufficient to prove the Truth of the Relation, though they had no other Arguments to confirm it. It was in Usage heretofore, that never any Vessel set Sail from the Port of *Venice*, till the Pilot and all the Ship's Crew had recommended themselves to the Protection of this miraculous Cross: But the Heat of this Devotion is much abated, for it seems it is the Misfortune of *Venice*, as well as of other Places, that good Customs are sooner forgotten than bad ones. The Choir of the Church is much commended for the Richness and Beauty of the Work. In a little Chamber near the Choir there is a Map of the World drawn with the Hand, and adorned with Miniatures, which is certainly a curious Piece. He that made it was a Monk of this Convent, as it appears by the Medals that were struck on that Occasion, with this Motto, *Frater Maurus S. Michaelis, Morianensis, de Venetiis, Ordinis Camaldulensis, Cosmographus incomparabilis*. The Monk, who shewed us these Things, carried us to a little but magnificent Chapel near the Church: He said, the People generally believed that it was built by a Courtesan, with the Profits of her Vocation; yet at the same Time he assured us, in strong Terms, that they were mistaken. But what signifies it, whether true or false. *Solon* built a Temple to *Venus*, with the Money that was earned by common Prostitutes; and why should they not do the same at *Rome* and *Venice*, where such lewd Women are not only tolerated, but invited, protected, countenanced, and publicly allowed? The Convent can-

not be termed a magnificent Structure, but it is certainly a great Building and agreeably situated, for from hence you have the Prospect of *Venice*, *Murano*, *Lido*, *Terra Firma*, and several Places in the *Lagunes*, without mentioning the Walks and Gardens that belong to the Convent. In the Year 1497, a *Spanish* Ambassador was so charmed with the Beauties of this Place, that he resolved to spend the Remainder of his Days in it: They made us take Notice of his Epitaph, which they told us was written by the famous *Aldus Manutius*.

I will not trouble you with any Account of the other Tombs and Epitaphs that are to be seen in this Place; but since we are so near the Glass-houses of *Murano*, I shall take this Occasion to make some Remarks upon them. *Murano* is one of the largest and most agreeable Islands in the *Lagunes*, about a short Mile from *Venice*: It contains fifteen Churches, comprehending those of the Convents. There are some fine Houses in it, and a great many more Gardens proportionably than at *Venice*. There is a Canal which runs cross the Island, which is larger than the other Canals in the same Place, and the famous Glass-houses which you have heard so often mentioned, are seated on this Canal. You must not imagine that there is any Thing at all extraordinary in these Buildings; they are divided into several Lodgings, Halls, Warehouses, Furnaces, &c. as in other Places. Formerly, the Glass called *Venice Crystal* was the finest in *Europe*, but at present it does not merit that Title, not that it is coarser than before, but because they have found the Secret in other Places to make Glass at least as fine as that of *Venice*. Mr. de S. Didier writes, that he heard a Master of a Glass-house at *Venice* offer an hundred thousand Franks to any Man that would teach him the Secret of making Glass as white as that of a Cup that was brought from *Paris*; and one of my Friends assured me, that a few Years ago having carried a Vial of the finest Crystal of *Murano* to *London*, the Workmen there were so far from looking upon it as extraordinary or inimitable, that they said they could, and sometimes did, make finer Work. The Skill they have acquired in other Countries, and the Manufactures they have erected, have almost ruined the Trade of *Murano*. Their whitest and purest Glass is made of certain Stones that are found in *Jesina*, the Ashes of several Herbs that are found in the Country about *Tripoli* in *Barbary*, and the other usual Ingredients; they make it also of certain Stones that they found in the *Adige*, and the Sand that is gathered on the Shore of the Gulph on the *Dalmatian* Side: But this is only for common Glass. The Glass-makers of *Murano* stile themselves Gentlemen, since they were enobled by *Henry III.* who had the Curiosity to see them at Work when he passed through *Venice*, and they enjoy all the Privileges of the *Citadinance*.

But let us return to our Churches. I will not lose Time in describing that which bears the Name of St. *Nicholas of the Lettice*, which was founded by the famous *Nicholas Leono*, on Occasion of his being cured by the sanctified Lettices that were sent to him by the Monks. Nor that of St. *Maria Celestis*, which took its Name from an Image that fell from Heaven, and is enriched with a precious Leg of St. *Lawrence*, which serves to extinguish Fire; nor will I trouble you with an Account of *Jonas's* Head, which is kept at St. *Apollinaris's*; nor of St. *Claras's* Nail; nor of the Coif at St. *Lawrence's*; nor of other Rarities of the same Nature, which perhaps you would look upon as Trifles. *Sancta Maria Gloriosa* is another of the principal Churches in *Venice*; it is large and very much embellish'd with divers Ornaments. They pretend that the Seraphick St. *Francis*, in proper Person, mark'd the Place where it should be built. I spent two whole Afternoons in viewing and decyphering the Epitaphs that were to be seen in it, but I only transcribed two of them; one of a Woman, which is the only Monument of that Kind I observed there; and the other of a *Doge*, who is made to speak his own Elegy. It is *Francis Foscarei* who was deposed, or rather remov'd from his Seat of Authority and Power to that of a private Person, in the 84th Year of his Age, as not being capable of performing longer any Function belonging to his Ducal Office, in which he had honourably acquit-

ted himself for the Space of thirty four Years. In all States they depose their Princes when they become traitorous to their Country, and declare themselves Enemies instead of nursing Fathers and Protectors of it, according to natural Equity, and the solemn Oath they are obliged to take on Day the of their Instalment. They depose also Fools and Madmen, such as *Alphonso* of *Portugal*, Uncle to the present King; and when they fall into an irrecoverable State of Infirmary, why should they not exhort them to make an honourable Resignation of their Power? Does a General of an Army that grows old and infirm, make any Scruple of resigning his Post to another? I shall take this Occasion to observe, that by the Epitaphs I have seen in this Place, I find that a considerable Number of the Persons on whom they are written, died above 80 Years old; a Sign that the Air of *Venice* is not so bad as is commonly reported.

I liked much the greater Altar of St. *Justina's*, with the Tabernacle; the devout Adorers of that Saint are always careful to visit the Stone where she left the Print of her Knees when she said her last Prayer before her Martyrdom, as the Story is related in an Inscription beneath the Stone. Those who chuse the huge St. *Christopher* for their Patron, have an extraordinary Veneration for a Statue of that Saint, which is to be seen in the Church of St. *Maria del Horto*, on the great Altar. It was made by an excellent Sculptor, according to the Proportion of a Bone of the Original, which was heretofore brought from *England* by a very curious Person, who was a nice Judge of Relicks; so that a devout Spectator has the Pleasure to behold the exact Dimensions of that Saint; and this Consideration has so enhanced the Value of the Statue, that those who have most Experience in Affairs of this Nature, are confident that it will quickly begin to work Miracles. I could easily reckon up a vast Number of fine Paintings with which the Churches are adorn'd, but I know not whether you would have the Patience to read such a dry Catalogue, nor will I undertake to give you an Account of those half sacred Places, which are here called *Scuole*; these are publick Edifices divided into Chapels, Halls, Chambers, and Lodgings, which belong to Fraternities of Monks, or some other particular Societies. I have seen at least thirty five of them, and I doubt not but that there are more. Among the rest there are six called *Scuole grandi*, which are embellished with so much Art and Cost, that they may vie with the finest Churches both in the Richness and Beauty of their Ornaments.

In many Churches and Fraternities, there are annual Funds established to raise Portions and procure comfortable Matches for poor Maids; and generally over all *Italy* Care is taken by such charitable Foundations to provide for the Necessities of the Sex. After I have given you my Observations on the Christian Churches, you will perhaps expect an Account of the *Jewish Synagogues*; but all that I can say on this Subject is, that there are seven of them, and that the best of the seven is not near so fine as the *Portuguese Synagogue* in *London*. If we give Credit to the vulgar Computation, there are about two thousand *Jews* at *Venice*; some of them are Rich, but few in Comparison to the Poor. They are obliged to wear red Hats; but I find by *Martinelli* in his *Ritratto*, that they may be exempt from that disagreeable Distinction by paying a small Sum of Money. They have a Sort of Court that determines petty Suits among themselves. They are generally a Kind of People that never refuse any Sort of Employment, and are made use of on several Occasions, especially by the Nobles, who are a very great Support to them. They may take the Degree of Doctors in Medicine at *Padua*, and practise Physick any where in the City and State of *Venice*.

6. The only Thing worth taking Notice of betwixt *Padua* and *Rovigo* is the Country, which is flat and fruitful, adorned with Vineyards, Groves, Meadows, and well-till'd Grounds, and water'd by many Rivulets. Upon the Road you see some Houses of Pleasure belonging to the *Venetians*, but the Country People about *Rovigo* dwell only in Huts made of Reeds. The City of *Rovigo* itself is very poor, and of no great Extent, and

and yet it is the Residence of the Bishop of *Adria*, that famous City, which imparted its Name to the Gulph, though now no more than a half-drown'd Village.

Ferrara is a large and beautiful City, but poor and ill Peopled: We went on Purpose to one of the best Places of the whole City, where four Streets meet, but could not perceive one Person in any of them, though the Country about it is one of the best in *Lombardy*, but wants Tillage for Want of Inhabitants, this fruitful Country being almost desolate, by the Severity of the Papal Government. *Ferrara* was united to the Ecclesiastical State under the Pontificate of *Clement VIII.* who built a very strong Citadel, which is still in good Repair. Of the ancient University of *Ferrara*, there remains only a poor College, belonging to the *Jesuits*. Near the Cathedral stand some Statues on Horseback of Brass; and directly over against the Palace of the Nobility is one of Duke *Hercules II.* on Horseback, on the Pedestal of which is an Inscription granting a Sanctuary to Criminals for Twenty Paces round it. We also saw the Ducal Palace, the House of the *Marquess de Villa*, and divers Churches and Convents, which have all their peculiar Beauties; and, among the rest, took Notice of the Tomb and Epitaph of *Ariosto*, in the Church of the *Benedictins*. In the Opera we heard a pretty little Songstress of Twelve or Thirteen Years of Age; most of the Boxes were fill'd with *Jesuits* and Clergymen.

From *Ferrara* to *Ravenna* is Fifty Miles; all the Way we saw not one Town or Village worth taking Notice of. The first Day's Journey was very passable, but afterward the Road becomes very deep, betwixt the Branches of the *Adige* and the *Po*: The ancient Geographers describe its Situation like that of *Venice*, amongst the Waters, and it is certain that this was the best Harbour the *Romans* were Masters of in the *Adriatick* Gulph, but since that time the *Lagunes* are dried up, and the Sea is at least three Miles from it, the City being now surrounded with the most fruitful Fields of *Italy*: Neither is there the least Doubt, but that the present *Ravenna* stands in the same Place where the ancient *Ravenna* was, there being in the Walls that face the Sea-side many great Iron Rings, by which they used formerly to fasten their Vessels; and the Ruins of the ancient Beacon are to be seen to this Day. This City is seated in a flat Country, is not above half as big as *Ferrara*, but meanly built, and as thinly peopled. Without the Walls, near the ancient Harbour, you see the *Mausoleum* erected to the Memory of *Theodoric* King of the *Ostrogoths*, by *Amalasinth* his Daughter; it is since turned into a little Church call'd the *Rotunda*; it is covered with one hewn Stone of Thirty eight Foot Diameter, and Fifteen in Thickness, on the Top of which stood the Tomb of *Theodoric*, surrounded by the Statues of the Twelve Apostles, which were destroyed during the last Wars of *Lewis XII.* together with the Tomb of *Porphyry*, which since has been fix'd in the Wall of an ancient Palace within the City.

The Cathedral is a very ancient Structure, supported by Fifty six Pillars of Marble of the *Archipelago*, placed in a double Range on each Side. The Choir is vaulted with excellent *Mosaick* Work, where they shew you, as a precious Relick, one of the Stones with which *St. Stephen* was martyr'd. But the great Door of this Church is the most curious Thing, and deserves most a Traveller's Observation, being made of Planks of Vines, some of which are twelve Foot high, and Fourteen or Fifteen Inches broad; for it is to be observ'd, that hereabouts, in those Places that were formerly covered by the Sea, the Vines grow to a prodigious Bigness. In the Church of the *Theatins* (or *Jesuits*) they shew a little Window just over the Altar, with the Figure of a white Pigeon upon it, placed there, as they tell you, in Memory of a Miracle that happened at the Election of the second Bishop of *Ravenna*, after the Death of *S. Apollinarius*, when a Pigeon coming into the Window, perch'd upon him who was to be elected; and the same Thing happened Eleven Times after successively.

The Churches of *S. Vitalis*, *S. Apollinarius*, *S. Romu-*

aldus, and *S. Andrew* have many stately Pieces of *Marble* and *Porphyry*, brought from *Greece* during the Time of the *Exarchy*, or while under that Name it continued a Province of the *Greek Empire*. The Tomb of *Galla Placidia*, the Daughter of *Theodosius the Great*, is to be seen in the Church of *S. Cel-sus*, between those of *Valentinian* and *Honorius*.

In the *Grand Place* you see a noble Statue of Brass of Pope *Alexander VII.* And at the other End of the same Square, two Columns, on which formerly stood the ancient Patron and the Arms of *Venice*, whilst *Ravenna* was under their Jurisdiction; the like Columns they erect in all Cities belonging to their State; but since that Time the Pope has put the Statutes of *S. Victor* and *Apollinarius* upon the same Columns. Near them, under a Portico, they shew the Gates of Brass, and some other Spoils, those of *Ravenna* took from those of *Pavia*.

We had scarce travel'd a good Hour from *Ravenna*, but we enter'd a Forest of Pine-trees, which is four Miles long, after which we travell'd within Sight of the Sea to the left, and the Marshes to the right.

Having passed the River *Savio* in a Ferryboat, we continued our Journey thro' the little City of *Cervia*, seated among the Bogs; the Inhabitants live by making of Salt. We dined at *Cosenate*, near the Sea-side, and before we had made three Miles more, came to the Banks of the famous River *Rubicon*, call'd also the *Pisatello*, and by some the *Frumicino*; and we were not a little surpriz'd to see our Coach pass it without a Bridge or Ferry-boat, yet *Lucan* in his Time gives it the following Character:

Fonte cadit modico, parvisque impellitur undis.

Within an Hour after we travel'd close along the Sea-shore, which was even, sandy and firm, without any Rocks or Shells, till within a Mile of *Rimini*, where we were forc'd to travel deeper into the Country, for the Conveniency of passing the River *Ariminum*, which washes the Walls of the City of *Rimini*; it is now call'd *Marechia*.

Rimini is a small and poor City, seated in a rich Country. On the Bridge of Marble are two entire Inscriptions, intimating, that *Augustus* and *Tiberius* were the Founders of this City, and that the triumphal Arch was built by the first. Behind the Gardens of the *Capuchins* are to be seen the Ruins of an Amphitheatre, and Five hundred Paces thence, without the City, a Brick Tower, which was the *Pharos* of the ancient Harbour, but is now encompassed with Gardens, the Sea being retir'd at least half a Mile thence.

The Church of *S. Francis* was built out of the Ruins of the Harbour, which was once one of the best in *Italy*. The Library of the Count *de Gambalunga* is numerous, but without any rare Books that deserve Notice. In the Midst of the Market is a Marble Pedestal with these Words upon it, *Caius Caesar Dict: Rubicone superato civili bell: Commilit: suos hic in foro Ar: adlocutus*. In another Place you see the brazen Statue of *Paul V.* and near it a curious Marble Fountain.

From *Rimini* we travel'd for fifteen Miles along the *Downs* betwixt the Sea and the Fields. As we passed thro' the Village *Catholica*, we found over the Portal of the great Church an Inscription, by which it appear'd that this Village receiv'd its Name from certain Orthodox Fathers, who, during the Council of *Rimini* in 359, compos'd, for the most part of *Arians*, used to perform their religious Service here, in Spite of that Assembly. About ten or twelve Miles thence, towards the *Apennines*, we discover'd the City and little Republick of *Marino* on the Top of a Mountain, at the Foot of which are the Limits of its Territories: This small and inconsiderable Commonwealth being below the Envy and Jealousy of its Neighbours, has maintain'd its Liberty for many Ages. The Country between *Catholica* and *Pesaro* is for seven Miles together very well inhabited and cultivated.

The City of *Pesaro* exceeds *Rimini* as well in Big-
nests

ness and the Pleasantness of its Situation, upon an easy Ascent, as in the Neatness and Beauty of its Buildings. Nothing can be more pleasant to the Eye, than the little Hills that surround it, with the agreeable Mixture of *Pastures, Vineyards, and Orchards*. Their Olives are very good, but their Figs are absolutely esteemed the best in *Italy*. Meat is so cheap here, that you may buy a Pound (which contains eighteen Ounces here) for less than a halfpenny; Bread and Wine are cheaper in Proportion than Meat; and as both the Sea and Rivers furnish them with Plenty of Fish, so this City abounds in all Things necessary for Life. Its Fortifications are none of the worst, considering they are after the old Fashion. In the Market-place is a fine Fountain, and a Statue of Pope *Urban VIII.* under whose Pontificate this City and the Dukedom of *Urbino* were incorporated with the Ecclesiastical State, as they have ever since continued.

From *Pesaro* we continued our Journey along the sandy Shore for seven Miles, as far as *Fano*. We saw Abundance of Walnuts, Chestnuts, Rushes, and many other Things, forced by the Winds from the neighbouring Rivers to this Shore. One of our Company, among the rest, took up here a certain little Fish call'd *Cavaletto* by the *Italians*, in *France, Cheval Marin*, or the *Sea-horse*: It is frequently to be met with in Cabinets, being easily dried and preserved; its Head and Neck has some Resemblance to those of a Horse. The *Italians* attribute to it a peculiar Quality of curing the Bite of a mad Dog, if eaten roasted, and applied to the affected Part, skin'd and beaten with Honey and Vinegar. *Fano* itself is a small but neat City, having nothing in it worth taking Notice of, except one Triumphant Arch, but the Inscription on it is quite defaced. It is composed of three distinct Gates.

About a Mile from *Fano* we travel'd over a wooden Bridge five or six hundred Paces long, built over the several Branches of the *Pongio*, which overflow all the circumjacent Country, when the Snow begins to melt on the *Apennines*; afterwards coasting along the Sea-side for fifteen Miles, we came to *Senegallia*, an old City, enclosed with a strong Wall, and some Bastions, but not very regular. Our Weariness, after a tedious Day's Journey, proved the Occasion of our good Fortune, without which we had run the same Danger that befel several of the Inhabitants, who were the same Night at a Play acted at the Governor's House, but the Arch, which supported the Stage, with some of the nearest Seats, being overladen, gave Way, and above thirty Persons were kill'd, and many more wounded by this Accident.

From *Senegallia* we kept still all along the Shore, but for seventeen Miles met with no Houses, except an old Castle and some Inns, about a hundred Paces from the Sea-side. Near a little Village call'd *Turreet*, about three Miles from *Ancona*, we turn'd into the Land-way, where we arrived in good Time. This City is seated upon a double Hillock, at the very Point of the Cape, being much larger than any of the four or five last-mentioned Cities, but not much richer, though the Excellency of its Harbour, and the Fertility of the adjacent Country seems to entitle it to Traffick, of which it had a sufficient Share formerly, but is much decayed of late Years, by being under the papal Dominion. The Streets of *Ancona* are both narrow and dark, and their Buildings but indifferent; besides that, its Situation up and down Hill renders it very inconvenient. The Citadel is seated on the first Hill, which commands both the City and Harbour; and on the other, which makes the Point of the Cape, stands the Church of *St. Cyriaca*, being a low dark Fabrick, the Front whereof is of Marble, but without any Ornament. Here they boast of the Body of *St. Ursula*, as well as those of *Cologne*, besides many other Saints and Relicks in high Veneration among the People. From hence we had a very delightful Prospect of the Sea, City, and Country at once.

At the Entrance of the Mole is a magnificent triumphal Arch of white Marble, erected to the Honour of *Trajan*, by the Senate, in Acknowledgement of the Charge he had been at in repairing this Harbour, as

the Inscription, which is not in the least defac'd, tells the Reader; but it was with some Difficulty defended from the Monks, who would often have demolish'd it to repair their Convents. The Exchange where the Merchants meet, is built in the Nature of a Portico of an indifferent Bigness; at the four Corners stand as many Statues, representing *Faith, Hope, Charity, and Religion*, the last of which was thrown down by an Earthquake, and the rest shaken. Before I leave *Ancona*, I must tell you something of the Oddness of the Dress of the Inhabitants: We saw the chiefest Burghers, on a Holiday, appear in a black Cloak lin'd with green, with blue or philamot Stockings, Shoes whiten'd with Chalk, and tied with Ribbons of all Sorts of Colours; their unbutton'd Doublets were embroider'd with divers Colours, and the great Sleeves of their Shirts hung down to their Fingers Ends. The ordinary Sort of Women wear a Kind of Coif, with a long Fringe hanging over their Faces; the Body of the Gown is generally red or yellow, fasten'd on four Sides with Laces, and trimmed all over with colour'd Galloon; their Waistcoats and Petticoats are both very short, and of various Colours. The Ladies of Quality imitate in their Dress the *French* Fashion, but after so awkward a Manner, that they appear more ridiculous than the others in their own Country Dress.

We observ'd another Custom upon this Road, which, they told us, runs from *Ferrara* all over *Italy*; I mean their Paper Windows, which being always torn, prove very inconvenient in the Winter, and afford a very odd Prospect to Foreigners, as well as very inconvenient. To compleat our Misery, they would commonly bring a Fricacy of three Eggs, and perhaps as many Pilchards, for a Supper for five or six Persons, and at last make us pay as dear as if we had had extraordinary good Cheer, our Dinner and Supper amounting generally to four Shillings a Head. The Flux and Reflux of the Sea increase and decrease according to the Distance from the Extremity of the Gulph; for at *Venice* the Tide rises about four Foot, near *Ravenna* to three, at *Pesaro* two, and scarce above one at *Ancona*, and so decreases till at last it comes to nothing.

7. The Country between *Ancona* and *Loretto* is the best in *Italy*, but the Roads the worst, which oblig'd us to alight several Times to ease the Coach. I don't question but you have seen several Accounts of our famous Lady of *Loretto*; but since Matters of this Nature are variously represented, the Curiosity of the Thing deserves very well an exact Abridgment of what I was able either to learn or see, which I will give you with great Fidelity. This House, so much celebrated among the *Roman Catholics*, is the same (if you will take their Word for it) in which the Virgin was born, where she was betroth'd and married to *Joseph*, where she receiv'd the Salute of the Angel, and where the Son of God was incarnate. This House was from *Nazareth* transported by the Angels into *Dalmatia*, and placed on the Hill of *Terfatto*, 10 May, 1291, where, after it had continued for three Years and seven Months, the Angels removed it from thence into the Middle of a Forest in the Territory of *Recanati*, Part of the Marquisate of *Ancona*; but this Wood being famous for many Robberies committed thereabouts, this *holy House* was, after eight Months, removed a third Time from thence, to the same Hill on which it now stands; but soon after a Controversy arising betwixt two Brothers, Coheirs of the Ground on which it stood, about the Possession of this House, it was in four Months after placed by the Angels some Paces from thence, in the high Road, where it is to be seen to this Day.

To prevent all Inconveniencies that might happen to so sacred a Place, they built a most sumptuous Church about it, in the Middle of which it stands free from all Injuries; and for its better Preservation, they have since erected four Walls, which enclose it on all Sides like a Box, without touching the Walls of the *Santa Casa*, or *Holy House*; all that Painting, Sculpture, and Architecture, were able to perform in the Beginning of the last Age, has been bestow'd on this Fabrick, which is built of white Marble of *Carrara*, after the *Corinthian* Order, adorn'd

adorn'd with the most exquisite *Basso relievo*, in which the whole History of the Virgin is represented. Between the double Pillars are two Niches, one above the other ; the ten Niches below contain the Statues of the ten Prophets, and those above, the ten *Sybils*. In the Middle of this, the *Santa Casa*, or *holy House*, is enclos'd, which is only a single Chamber forty four Palms long within, eighteen broad, and thirteen high, each Palm and a half being equivalent to thirteen Inches of our *English* Measure. To make the Story of the Removal of this Hall or Chamber the more probable, they pretend it to be built of some unknown Stones ; but, upon the strictest Examination I could make, I found the same to be true Brick, of a different Bigness and unequal Shape, mix'd with some flat, greyish, or reddish Stones, which are very common here ; the whole is cemented with Lime and Sand, but the Pieces are ill join'd, as if it had been done in great Haste : The Mason's Work is almost open to View on the Inside, except in some Places, where you see certain Fragments of Plaster-work cover'd with Painting, representing the Virgin, with the little *Jesus* between her Arms ; this appears plainly in five or six different Places. The *holy House* stands from East to West, a Thing not much used in *Italy* ; on the East Side is a little Chimney, over which, in a Niche, stands the Image of the great Lady of *Loretto*, made, as they say, of Cedar Wood, and by the Hands of *St. Luke*, being about four Foot high. Her Ornaments are of an inestimable Value, and if we may believe those that live thereabouts, she has a great many Robes for Change, and seven different Mourning Habits for the Holy Week : Her triple Crown, which is all over cover'd with precious Stones, was the Present of *Lewis XIII.* King of *France* ; they told us this Distich was engraven upon it :

*Tu Caput ante meum cinxisti ; VIRGO, Coronæ
Nunc Caput ecce tenet nostra Corona tuum.*

He gave also a Crown to the Infant.

On both Sides of the Niche are Cupboards fill'd with ancient Ornaments of this Statue ; and in a little Window in the Wall, on the South-side, they shew you some earthen Dishes which were used by the holy Family ; some of these Vessels have since been edg'd with Gold, but that which they shew'd us was a Porringer with a silver Foot at the Bottom, done on Purpose to persuade the World that it was made of a strange Earth, whereas it is no more than Potters Ware, the Glazing whereof is not so nicely taken off, but that some Parts of it remain to be discover'd by a curious Eye. At the West-end, just opposite to our Lady, they shew you a Window of about three Foot square, through which the Angel enter'd : The present Arch of this House being of a modern Fabrick, I ask'd them what was become of the old Roof, but they could tell me no Tidings of it. Here are also two remarkable Things, which, they say, were transported at the same Time with the House, *viz.* the Altar made by the Apostle's own Hands, and the Stone on which *St. Peter* celebrated Mass the first Time ; it is cover'd with Silver, and kept as a precious Relick under the Altar where they usually officiate. The Floor of the *Santa Casa* is of Squares of red and white Marble ; but this is not the old Floor, because that was left, together with the Foundations, at *Nazareth*. This sacred Place has three Doors, two of which are at the End facing the East, and give Passage to cross from North to South ; here the Pilgrims are let in : The other is on the South-side, and leads to the Sanctuary, *i. e.* the Space between the Altar and the End of our Lady's Chamber.

To enumerate all the Riches of this Place, would be an endless Piece of Work, the infinite Number of precious Stones wherewith the Mantle of this Image is adorn'd, are alone sufficient to dazzle the Sight of the Spectators, besides that, all about you see nothing but Lamps, Statues, Busts, and other Figures of Gold and Silver, not including the twenty eight Candlesticks of Silver and Vermilion, and the twelve of massy Gold of twenty seven Pounds Weight each. They have a Custom

of exposing the last Offering of Value for a certain Time, before the Eyes of our Lady, in a Place made for that Purpose. That which we saw there was an Angel of Gold, with a Heart of the Bigness of an Egg in his Hands, set all over with Diamonds of a great Value. Our Conductor being an *English* Jesuit, did not forget to tell us, that it was a Present of the Queen of *England*, and that the said Princess had conceiv'd at the same Minute the said Present was offer'd to our Lady, and was then big with Child. He had taken the Pains to make a whole Copy of Verses upon this Subject, by way of Dialogue between our Lady and the Angel, and took a great deal of Care to recite them to us more than once with a audible Tone, and would at last force a Copy of them upon me. This Queen was *Mary of Este*, Consort to *James II.*

Round the Walls of the Chapel that enclose the *holy House*, you see a vast Number of branch'd Candlesticks, to illuminate the whole Fabrick : But the greatest Curiosity is the Processions of those Devotees, who crawl round the *holy House* upon their Knees, some five Times, others seven, and others twelve Times, according to the different Degrees of their Devotions ; some of these creep along from one Side, whilst others meet them coming from the other, but all furnish'd with Beads, and muttering *Pater nosters* ; but as they all covet to come nearest to the holy Place, this sometimes occasions no small Confusion, which is the Reason that this is never done but when there is only a slender Number of Pilgrims. The chief Resort is at *Easter*, and the Virgin's Nativity, which they celebrate in *September* : I had it from credible Hands, that in some Years they have had here above two hundred thousand Pilgrims during these two Feasts. It is no unpleasant Sight to observe the Caravans of these Pilgrims of both Sexes, who commonly come in Societies : As for Instance ; a certain Body of Men join at *Bologna*, each of whom has a Frock of coarse Linnen, and a Cawl of the same made like a Strainer for *Hippocras*, which covers their Head, leaving only three Holes for the Eyes and Mouth. They appear in different Colours, each Society chusing their own, but are all provided with Beads, Girdles, Pilgrims Staves, and the Arms of the Society, which are either painted or wrought on the Back and Breast of every Member of the Fraternity. They commonly ride on Asses. The Women appear in as rich Apparel as possibly they can, and fix to the Bodies of their Gowns a little Pilgrim's Staff of the Length of a Hand, some of which are of Gold and Silver, adorn'd with Gems and Pearls, others of Ebony, Ivory, &c. artificially wrought. The Ladies commonly ride in Calashes, attended by whole Squadrons of Ass-troopers.

After all the extraordinary Things that have been said of the *holy House*, the Treasury infinitely surpasses it in Riches ; this is a spacious Chamber or Hall, wainscotted, with ten large Presses with folding Doors, the arched Roof being a most curious Sort of Plaster, divided by gilt Compartments, beautified with excellent Pictures. Formerly they were glad to keep Abundance of Silver Work here, but the same having since given Place to Gold, is laid up elsewhere in great Heaps in private Places, and perhaps for private Uses. These Presses therefore are now quite fill'd up with nothing but pure Gold, precious Jewels, among which they shew a Pearl of an inestimable Value, shap'd after the Fashion of a *Gondola*, or such Vessels and Ornaments as exceed the Value of Gold and Gems, by their Rarity. It would be a Piece of Folly to attempt a particular Account of what exceeds even Imagination itself ; the best Idea I am able to give you of this Treasure is, that you must consider, that all the People, Princes and States, who acknowledge the papal Authority, have, for these four hundred Years past, endeavour'd to outvie each other in bestowing the richest Presents that could be had upon this *holy House*. They have, besides this, a settled Revenue, and vast Tracts of Land belonging to it ; and the Boxes in which they gather the Alms of the Pilgrims, furnish them every Year with more Money to make fresh Purchases. To excite the Charity of the Pilgrims, they do nor forget to give it out, that the annual Charges

of maintaining all that belong to the *holy House*, amounts to no less than 38634 Crowns, whereas their ordinary yearly Revenue is no more than 27000 Crowns.

From the Treasury we were conducted to a little Arsenal, which has scarce any thing remarkable but some Arms taken from the *Turks*, who about fifty Years before (under the Reign of *Mahomet II.* and *Selim*) made a Descent thereabouts, to plunder this sacred Place, but were struck blind by our Lady, as they were endeavouring to break into the House. From the Windows of this Arsenal they shew you that Part of the Sea over which the House was carried by the Angels; and our Jesuit made most solemn Protestations, that ever since there remains a certain white Tract on the Water, and that he had often observed it. I can't pass by in Silence, that as we were going towards the *holy House*, the Rabble flock'd about us, telling us, that we must not approach the holy Place without confessing and communicating, unless we would throw ourselves into manifest Danger of sudden Death.

From hence we went to the great Wine Cellar, stor'd with an hundred and fifty Tuns of excellent Wine. And in the *Apothecary's* Office they shew'd us an hundred and forty five earthen Vessels, highly esteem'd, because they believe them to have been painted by *Raphael*. On five of the largest are painted *St. Paul* and the four *Evangelists*, the rest being adorn'd with the Histories of some Saints, the Metamorphoses of *Ovid*, &c. The City of *Loretto* is but small, yet well fortified, and has the Title of a Bishoprick. In the *Great Place* stands a most noble Fountain of Marble, beautified with divers Brass Statues, and another erected by the Citizens of *Loretto*, in Acknowledgment of certain Privileges granted them by Pope *Sixtus V.* The Inhabitants get their Livelihood by making and selling Medals, Rosaries, sanctified Beads, Images, *Agnus Dei's*, Measures of the Height of the Image of our Lady, and such Trifles. They sell here Chaplets, the Beads of which were as big as Goose-Eggs, and are used on Days of extraordinary Devotion. The Tradition of the Removal of the *holy House* is so stedfastly maintain'd in this Place, that there is scarce an Inhabitant so mean, but pretends to be descended from the Race of those that saw the *holy House* fix'd where now it is, by which Means they transplant this Tradition from Father to Son *in infinita*.

8. Travelling from hence through *Recanati*, a little City seated on the Top of a Hill, three Miles from *Loretto*, I look'd into the great Church, where I could see nothing worth mentioning but the Tomb of Pope *Gregory XII.* who was deposed from the Pontificate by the Council of *Pisa*. Ten Miles further, in a most fertile Country, on the Bank of the *Potenza*, we pass'd thro' the Ruins of the City formerly known by the Name of *Hebvia Ricina*, where we saw vast Fragments of an Amphitheatre built of Stone and Brick mingled together. We travel'd on this Side of the River for two Miles among the Hills, till we came to *Macerata*, where we lodg'd that Night; it being foul Weather, we could not stir abroad, but were told by the Inhabitants, that it was a pretty large and pleasant Place. The Country between *Macerata* and *Tolentino* lies all upon a Level, and is extremely fruitful, but very indifferently peopled. They prop their Vines with Reeds, and plough with Boufflos, these Beasts being stronger than Oxen, and easier fed.

Tolentino is seated on a rising Ground; for the rest, a Place that has nothing remarkable belonging to it. The next Place we came to was *Belfort*, built all of Stone: A Mile beyond it begins the Province of *Umbria*, where we enter into the *Apennine*. I remember we fell into the Company of a Gentleman, who was going from *Macerata* to *Foligno*, who, after some Discourse relating to the Lady of *Loretto*, told us, among other Things, that they were extremely pleas'd in *Italy* at the News they had lately received from *England*, that their King was turn'd Christian. I desir'd him to explain his Meaning, which he did in such Terms, that I could not but stand amaz'd at his Ignorance, his Notions of the *Protestants* being very near the same the *Pagans* entertain'd of the *Primitive Christians*, so that

with all the Art I had, I could not persuade him that we used Baptism among us: This Simplicity is so universal in this Country, that they are more ignorant of our Religion than the *Chinese* themselves, in which they are encourag'd by their Clergy, who leave no Stone unturn'd to make the *Protestants* odious to the People at any rate.

After we had left *Tolentino*, we travel'd for forty Miles among the Rocks; the chief Villages we took Notice of in our Way, were *Valcimara*, *Ponte di Trava*, *Matia*, *Dignano*, *Colfiorito*, *Casa Nuova*, &c. We left the Mountains near the Village of *Pala*, from whence we discover'd the Plain of *Foligno*, which affords the most delightful Prospect from the Hill, being water'd with many Rivulets, well inhabited, and extraordinarily improv'd; so that we had no sooner quitted the Mountains, but we found ourselves, as it were, on a sudden, in a sweet and agreeable Climate, where we saw the Almond-trees already in Blossom, after we had scarce recover'd our selves from the Cold of the frosty Rocks. Having continued our Journey for four Miles in a continual easy Descent, we came into a narrow level Way, on one Side whereof runs a small and clear River, at the End of which lies *Foligno*, in the most fertile Country in the World; it has the Reputation of a better Traffick than most of the other Cities in the Ecclesiastical State; their Trade consists chiefly in Draperies, Gold and Silver Laces, Silk Stuffs, and Spices. Soon after we came out of *Foligno*, we discover'd, on the other Side of the Plain, upon an Eminency, the Town of *Montefalco*, famous for the Interment of *St. Clara*. They shew here the three Stones of the Bigness of small Nuts, said to be found in the Heart of that Saint, upon which the History of the Passion is engrav'd. Near the Village of *Pesignano*, between *Foligno* and *Spoletto*, at the Foot of the Hill which encloses the Plain, a large Spring arises through four several Outlets from under the Rocks, which make a small Lake by their Conjunction, and thence send forth a pleasant Rivulet, which waters the adjacent Country.

Not above two hundred Paces from the Spring-head, you see, near the Road, a small Temple of the *Corinthian* Order, called *St. Salvatore*, where the Bishop of *Spoletto* says Mass once a Year. We observed the three following Inscriptions on the Front, and on both Sides;

(1.) + S. C. S. *Deus Profetarum qui fecit Redemptionem.*

(2.) *Deus Angelorum qui fecit Resurrectionem.*

(3.) + S. C. S. *Deus Apost * * **

the rest being quite defac'd; which together with its Manner of building Cross-wise and Eastward, as most other Churches, and the Crosses carv'd in divers Parts of the Pediments, sufficiently contradict the Opinion of those who would have this Temple to have been consecrated to *Clitumnus*, though perhaps it may have been erected upon or out of the Ruins of that of *Clitumnus*. But it is much more probable what I heard a skilful Antiquary say at *Spoletto*, viz. that the River before-mentioned is the *Clitumnus* mention'd by the Ancients, and among the rest, by *Virgil*, in the second of his *Georgicks*.

From *Pesignano* to *Spoletto* you travel for seven Miles in a plain Country, at the Foot of the Hills, full of Inhabitants. *Spoletto* is seated within the Mountains, beyond the before-mention'd Plain, a poor, ill-built, and thinly-peopled City. The Cathedral is celebrated for its Height, which however is not extraordinary. The Pavement is inlaid with small Pieces of Marble, like *St. Mark's* Church at *Venice*, and the Pediment of the great Portal is very fine *Mosaick* Work on a golden Ground. The Castle is seated on the highest Ground, and has nothing to boast of but its Situation. About five hundred Paces without the City, is a Church consecrated to *Concord*, and since called the Chapel of the Crucifix. *Spoletto* has also some Remnants of Antiquity, a triumphal Arch half ruin'd, and the Fragments of an Amphitheatre with divers loose Marble Stones, without

without Inscriptions, except that the Arch still retains a few Characters. The most remarkable Thing here is, the Aquaduct, which joins the Mountain of St. Francis to that of *Spoletto*. It is a *Gothick* Work, and remains entire and useful to this Day: Its Length is three hundred and fifty Paces, and its Height, from the Bottom of the Valley, two hundred and thirty.

Three Miles beyond *Spoletto* we pass'd the highest Mountain hereabouts, called *Semma*; and after we had travel'd about five or six Miles among the barren Rocks, we found the succeeding Hills, for four or five Miles, covered with Lawrels, wild Olive Trees, Tamarinds, Junipers, ever-green Oaks, and divers other sempervirent Trees and Shrubs, which is very pleasant. At our Approach to *Terni*, the Mountains, which had enclosed us in a streight Passage upon the Brink of a Torrent, which runs at the Bottom of the Valley, extended themselves by Degrees to a great Forest of Olive-trees laden with Fruit, which they generally suffer to hang till they drop off themselves: The Olives for Pickling are gathered before they are ripe, and their Bitterness is removed by Art; the ripe are as bitter as the green ones, notwithstanding which they produce the sweetest Liquor that can be imagined.

From this Wood of Olives we travel'd for a Mile in an agreeable Plain, which brought us to *Terni*, seated upon the River *Nera*, in a most fruitful Country. This City is not so large in Compass as *Spoletto*, but much more populous; they sell Abundance of Oyl: We were told, that during six Months of the Year they make here an hundred Charges of Oil every Day, each Charge weighing six hundred Pounds, and is generally sold at the Rate of twelve *English* Crowns. By an Inscription to be seen on the Porch of the Seminary near the Cathedral, it appears, that it may contend for its Antiquity with *Rome* itself; the Inscription being made for *Tiberius*, is dated thus;

Post Interamniam conditam DCCIII.

Terni being anciently called *Interamna* and *Interamnium*, from its Situation *inter amnes*, or the two Branches of the River that waters it. On the Bridge is to be seen another Inscription, put there in the Time of Pope *Urban* the Eighth, intimating, that this Bridge was built by *Pompey the Great*. About three Miles from *Terni* is the famous Waterfall of Mount *del Marmore*; the Way that leads up to it is very rocky, so that we were forced to alight often from our Horses. By the Way we observed, on the South Side of the Mountain, divers Corners, which never felt the Rigour of the Winter-Season, and among the Busto's Abundance of *Jesmins*, *Lawrels*, *Myrtles*, *Rosemary* as fresh then (in February) as they are with us in April.

As we were ascending the Hill *Papinio*, we observed, in a Valley near the Bank of a River, a Tract of Ground planted with at least seven hundred Orange-trees, a Thing rarely to be seen in the open Field, where they have no Shelter. But to return to our Cataract. The River *Valerio* has its Rise among the Mountains, twelve or thirteen Miles from the Place where the Water falls down. At about nine Miles from its head Spring it falls into the Lake of *Luco*, whence continuing its Current, with a much larger Stream than before, to a Plain, which, in respect of the Depth below it, proves a Mountain, it falls with great Force down from a craggy Rock three hundred Paces high, into the Concavity of another Rock underneath it, against which the Waters break with such a violent Agitation, that it rises like a Cloud of Dust twice as high as the Fall, and occasions a Kind of perpetual Rain in all the adjacent Parts: The Repercussion of the Sun-beams in this pulverized Water produces an infinite Number of Rainbows, according to the various rebounding and spurting of this watery Cloud, the Sight whereof fills the Spectators with Amazement; at last all these Waters gather into an Abyss, occasioned by the continual Falling down of the Waters, and from thence break forth with incredible Force through the Crevices of divers Rocks, and so continuing their Course with a murmuring Noise a little fur-

ther, at last join themselves with the little River *Nera*, which is much enlarged by the Accession of these Waters.

From *Terni* to *Narni* you travel for seven Miles thro' a plain and fertile Country; it affords an indifferent good Prospect from the adjacent Hills on the Side you come from *Terni*, but deceives you in your Expectation after you come into it, being in a Manner destitute of Inhabitants, with narrow dirty Streets, and so uneven, that you cannot go five Steps without ascending or descending; and their Paper Windows make a verry beggarly show. I took Notice *en passant* of two tolerable handsome Fountains of Brass. The Emperor *Nerva* was a native of this City. A little before you enter the City, you see the Ruins of a Bridge, said to have been built under the Reign of *Augustus*: It is admirable both for its Height and Structure, because, after having joined the Mountain of *Spoletto* to another neighbouring Mount, it ends in the high Road towards *Pemsa*. The vast Pieces of Marble, which are the Materials of this Bridge, are joined together without any Cement or Iron-work: It hath four or five Arches, of which only one remains entire, the Top of the Mould of the largest being broken. I was credibly inform'd, that this Arch is a hundred and seventy Foot in Extent, which, if so, far exceeds the celebrated Bridge of *Rialto*.

We had no sooner left *Narni*, but we found ourselves again among the Mountains. Thus traveling on for eight Miles, we came to the Town of *Otricoli*, near which, at the Entrance of a Plain, are to be seen the Ruins of the ancient *Otriculum*; but we could find nothing worth our Observation among them. Not long after we pass'd the *Tyber* over a Stone Bridge that owes its Foundation to *Sixtus V.* and its Perfection to *Urban VIII.* as the Inscription tells you. We came very late to *Citta Castellana*, and departed again early in the Morning, this Place having nothing that could invite us to stay therein. Near to *Regnano* we found the old *Via Flaminia*, with its Pavement entire, having not perceived any Footsteps of it before since we left *Rimini*, to which Place it extended itself, as ancient Authors inform us. After we had dined at *Castel Nuova*, an inconsiderable Place as well as *Regnano*, we continued our Journey to *Rome*, through an infinite Number of ancient Ruins; but most of the Country lay untill'd, and almost destitute of Inhabitants. Having repass'd the *Tyber* by the *Pons Milvius*, (as the ancient Authors call it) since by Corruption call'd *Ponte Molle*, we came upon a paved Way, which brought us betwixt many Gardens and Summer-seats, to the famous City of *Rome*.

9. After we had rambled two or three Days about *Rome*, good Company invited us to hasten our intended Journey for *Naples*, which is reckon'd eight Days distant from *Rome*. About twelve Miles from this City we came to *Marino*, a great Town now belonging to the Prince *Colonna*, and formerly known by the Name of *Villa Mariana*. From *Marino* we ascended a rocky Mountain, where we saw nothing but Wood and Boufflos: Of the Lake of *Castel Gandolfo*, which we coasted near an Hour, we shall have Occasion to speak in our Return. About five Miles after we had left the Lake, at the Descent of the Mountain, we discovered the Sea, and on our Right Hand, on a little Hillock, the City call'd *Citta de la Vigna*, being the ancient *Lavinium*, a Municipal City, which gave Birth to *Antoninus Pius*, but not the *Lavinium* of *Aeneas*, according to the common Opinion: *Lavina littora* is twelve Miles thence, towards *Prattica*.

It was late before we reached *Velitri*, a little City seated on a Hill, and surrounded by a Wall; it was anciently a considerable Place, when it durst strive with *Rome* itself, but now makes a very indifferent Figure. The People here are generally of Opinion, that *Augustus* was a Native of this City; and one of the Servants in the Inn was so communicative as to tell us so; but being ask'd who that *Augustus* was, he answer'd, He was the first Christian Emperor; for you must observe, that nothing is more common in *Velitri*, among the

Italians,

Italians, than to canonize all the illustrious Men of Antiquity, whether *Christians* or *Pagans*. It is certain that *Augustus* was born at *Rome*, under the Consulate of *Cicero* and *Anthony*, as *Suetonius* positively affirms: It is however true, that his Family deduced its Origin from *Velitri*, *Gentem Octaviam Velitris præcipuam olim fuisse, multa declarant*. The same Author tells us, that the Chamber in which he was nurs'd, near *Velitri*, was held in the same Veneration as now the holy House of *Loretto*: *Huc introire, says he, nisi necessariò & castè religio est. Temerè adeuntibus metus & horror objiciebatur*. In the Midst of the Market-place of *Velitri* stands a curious Brazen Statue of Pope *Urban VIII.* sitting, as generally all the Statues of Popes are represented, to denote (as I suppose) their Superiority over other Princes. The Marquess de *Ginetti's* House is worth viewing, both for its pleasant Situation, and the many Antiquities preserved there; which are fine and judiciously chosen.

Descending from the Hill of *Velitri*, we took Notice of a great many Caves dug on purpose to keep their Wines cool; after which we travel'd for fifteen Miles through a poor Country, to the Foot of the Mountain, on the Top whereof stands the little City of *Lermonetta*, built upon the Ruins of the old *Lera*. About four Miles further we saw, on the Left Hand, about fifty Paces from the Highway, certain ancient Ruins, which they told us were the Remains of the Place called by *St. Paul* the *Three Shops*, but now the *Three Taverns*. On the Right Hand we discover'd the Cape called now-a-days *Monte Circello*, supposed by some to have been an Island formerly: Here it was that the jealous *Circe* changed her Rival *Scylla*, the Mistress of *Glaucus*, into a Sea Monster, and *Ulysses's* Companions into Hogs. A little Way from the *Three Taverns* you see the City of *Letia*, seated on a Mountain; its ancient Fame for the Goodness of its Wine is now quite lost, the Mountain producing nothing of that Nature at present. It is true, the Woods, wherewith these Mountains are almost covered, produce Abundance of those Trees, called *Ficus Indica*, some of which grow up to the Height of thirty or forty Foot, with Trunks as thick as a Man: *Lawrels* and *Myrtles* you find in great Plenty in the Hedges, and Abundance of Orange Trees in the open Field.

Not far from *Letia*, at the Village of *Casa Nuova*, you may take Boat upon the Lake, which brings you to *Terracina*, but we continued our Journey by Land, and turning to the Left, entred into a Valley, which brought us to the Mountain and City of *Piperno*. In our Passage thither I observed a Churchyard planted with Orange-trees, a Thing not usually seen in *Italy*, where all People of Fashion have their Chapels or Vault in some Church or Convent, and the poorer Sort are buried in some private Corner, without the Cities; besides, whenever they have any Churchyards, they plant them with Pines, Yew-trees or Cypressess, but never with Orange-trees.

Piperno is a modern City, built near the Place where the ancient *Privernum* stood, the Metropolis of the *Volsi*, and the Residence of their King *Metabus*, Father to the famous *Camilla*. The Bishoprick of *Piperno* was united with that of *Terracina*, by reason of its Poverty: They keep the Bishop's Chair in the Choir of the Cathedral. In the Church of *St. Benedict* they shew you an Image of our Lady, made by *St. Luke*, which, they say, could not be burnt at the Time of the Conflagration of *Piperno*. On the Hill of *Piperno*, called *Colle rosso*, the Lilies and Daffodils grow naturally in great Plenty: This Hill also affords a peculiar fine Earth for Potters Ware. From the Top of this Hill you may see a little City called *Mayença*, near which is a Lake, the Waters whereof rise considerably two Days before Rain.

From *Piperno* we travel'd over sandy Hillocks, cover'd with various Sorts of sempervive Shrubs; we got afterwards into a Wood, where we saw Abundance of Cork-trees much resembling an ever-green Oak, and, to speak Truth, I believe it to be a Kind of Oak, since it bears Acorns: It has this peculiar Quality, that the more you strip it of its Bark, the stronger it grows,

and produces immediately a new one, which renders it very profitable. Soon after we came out of the Wood, we went to see the Abby of *Fossa Nuova*, said to be built upon the Ruins of the *Forum Appii*, about some three hundred Paces from the high Road. The Story the Monks told us concerning *Thomas Aquinas* is a very odd one; they affirm, that the said *Thomas Aquinas*, in his Way from *Fondi* to the Council of *Lyons*, finding himself very ill, alighted from his Mule, and fastning a Stick in the Ground, tied his Mule to it, whilst he laid himself down to sleep in a Corner of the Wood not far from the Church; the Mule getting loose, ran strait to the Church, and setting his Feet in the Choir, sunk in an instant into the Pavement, where he died. They shew you the Print of his Feet, over which they have laid an Iron Grate. However, as they search'd after the Master, to chastise him for his Negligence, they met with *St. Thomas*, who was so afflicted at the Loss of his Mule, that he died within a few Days after in this Convent, where his Body was entomb'd in the Church, and was from thence afterwards removed to *Fondi*, and from *Fondi* to *Tholouse*.

About ten Miles thence we began to discover certain Remnants of the ancient high Road call'd *Via Appia*, made by *Appius Claudius* when he was Cenfor: You see it come out of a deep Marsh, which is at present inaccessible, whereas formerly it was the direct and common Road from *Capua* to *Rome*; a convincing Instance of the perpetual Vicissitude of worldly Things. The same Thing we observed in our Way betwixt *Citta Castellana* and *Rome*, of the *Via Flaminia*, of which we saw now and then considerable Tracts preserved entire, as on this Side *Regnano*, and towards *Castel Nuova*, fifteen Miles from *Rome*; whereas in other Places it mounts up to inaccessible Mountains, and in other Places it is swallowed up in deep Marshes and Valleys, occasioned questionless by Winds, Rains, great Floods, Earthquakes, and other such-like Accidents, which produce such stupendious Changes upon the Surface of the Earth.

In my Opinion these famous Roads are more surprising than most other Pieces of Antiquity, considering that an infinite Number of Passengers, Horses and Chariots should incessantly, for so many Ages, tread on this Pavement, and yet so many considerable Fragments of it remain entire. The Stones which compose this Pavement are not all of the same Bigness, (*Procopius* says they were all square, but he is in an Error) of a grey and reddish Colour, not unlike rusty Iron, very hard, and ten or twelve Inches thick; generally speaking, those of the largest Size are above two Foot, and the least not less than one. Notwithstanding the great Difference in their Shape and Figure, they have been join'd so nicely, that in those Places, where the Pavement is quite entire, you cannot thrust the Point of a Sword betwixt them. These Ways, which they call *Vie Consulares*, had on each Side Borders of the same Stone raised about two Foot above the rest: I have observed them very entire in some Places: They called them *Cippo* or *Margines*, or *Marginationes Viarum*; and it is betwixt these Borders the true Breadth of these Highways ought to be taken, according to which I found the two Ways, *Via Appia* and *Via Flaminia*, twenty Palms broad, with very little Difference, which makes fourteen Foot, bating four Inches, *English* Measure. In some Places you see Ruts made by the Chariot-wheels three or four Inches deep, the Tract whereof, from one Pavement to another, is the surest Mark of its ancient Situation; for the rest, the Pavement is whole and even, without any visible Impressions made by the Horseshoes. They told us, that the Foundation of this Pavement was another very thick Lay of Stone, fix'd on a Bed of Sand, which keeps it from sinking. All along the Road to *Terracina* are to be seen the Ruins of many ancient Monuments, erected formerly for Ornament Sake, as on other great Roads.

Trachina (so call'd from its Situation upon a Rock of difficult Access) or *Terracina* is the *Anxur* of the Ancients, now a poor and ill-peopled Place, seated in a desolate Country. A little beyond *Terracina* one may plainly

plainly discover divers Parts of the Pavement of the *Via Appia* to have been cut through the Rock called *Pisca Marina*, which being near a hundred twenty six Foot high, the ancient Cyphers are mark'd from ten to ten in a capital *Roman* Character, on the Inside of the Rock, which is cut perpendicular; so that the Cypher on the Top is CXX. A certain Antiquary of *Rome* told me, that having measured these Distances, he found them almost all unequal; whence some conjecture, that these Marks were only made for the Direction of the head Workman, without any farther Design. Others are of Opinion, that the Distance of each Cypher marks the Division of the Work of every ten Days, and that the Inequality must arise from the greater or less Difficulty the Workmen met with in cutting the Stone. The Narrowness of the Rock towards the Top, and the greater Distance in Proportion to it, seem to confirm this Opinion, were it not that, according to this Supposition, the first Tenth must have been mark'd above, and the Cypher CXX at the Bottom, it being very probable that they begun at the Top of the Rock. We continued our Journey over the Hills cover'd with Cork-trees, the Marshes and the Sea on our Right; and thus keeping near the old Pavement, we arrived at Night at *Fondi*. In our Way, about three Miles beyond *Terracina*, we saw an old Wall, which, they told us, was the Boundary between the Ecclesiastical State and the Kingdom of *Naples*.

Fondi is seated in a flat Country, not far from a Lake bearing the same Name, which extends itself into a large Compass among the Marshes, betwixt the Hills and the Sea. The Eels of this Lake are highly celebrated for their extraordinary Bigness. This City was entirely ruined in 1534, by *Hariaden Barbarossa* Admiral of the *Turkish* Fleet, the History of which is painted in the Church of the *Annunciata*. *Fondi* is paved with the Stones taken from the *Via Appia*, but are not near so exactly joined. Not far from the Castle they shew you a Garden which (they say) belonged to *Cicero*. The *Dominicans* preserve, with a great deal of Veneration, the Chamber and Auditory of *Thomas Aquinas*, as also an old Orange-tree which he planted; he died in 1273, so that certainly this is the oldest Orange-tree that ever was heard of. I remember they told us strange Things of this Tree, and among the rest, that its Leaves were of a quite different Shape from those of other Orange-trees; but we could not find the least Difference, and were convinced by our own Eyes, that the Winter had not spared the Oranges of this Tree, any more than the rest in other Places. After we had left *Fondi*, we travel'd for ten Miles upon the old Pavement to *Mola*, among the Mountains.

Near *Itru*, a small City seated upon a Rock about six Miles from *Fondi*, I took Notice of certain large Trees, called thereabouts *Soucellè*; the Fruit is a Cod of half a Foot long, of the Thickness of a Bean-cod; they dry them, and then they taste like Honey or Manna; their true Name is *Carobba*. About Ten o'Clock in the Morning we came to *Mola*, a little City seated upon the Sea-shore: Here are to be seen vast Heaps of Marble Stones and other Ruins, of *Formiæ* once a glorious Place, built by *Antiphates* King of the *Lestrygons*. The Air is infinitely sweet here, and the Hills on the Gulph between *Cajeta* and *Mola* produce most excellent Fruits and Wines, as the Sea affords them vast Quantities of Fish. They shewed us in particular the Ruins of a certain old Palace, which, they tell you, belonged to *Cicero*, and was for the most part destroyed by the Sea. The various Pieces of *Mosaick*, which are plainly to be distinguished yet in several Parts, sufficiently testify it was no ordinary Structure; and they assure you, with a great deal of Confidence hereabouts, that certain Inscriptions have been taken from thence, which made it plainly appear to be *Cicero's*.

It blowing then a very brisk Gale, we were at a Stand whether we should venture over the little Gulph (which is four Miles broad) to *Gaieta*, seated on the very Point of the Cape, directly opposite to *Mola*; but at last having resolved on the Passage, we found *Gaieta* of a pretty large Extent, strong by Art and Nature, by

its difficult Access upon the high Rock. The Harbour is also very good. Here is to be seen the Tomb of *Charles of Bourbon*, Constable of *France*, who was slain in the Sacking of *Rome* by the Imperial Forces: And the ancient *Mausoleum* of *Munatius Plancus*, commonly called the Tower of *Orlando*. The Epitaph of the first is as follows:

Aucto Imperio, superatâ Italiâ, devictò Gallo, pontifice obfesso, Româ captâ, Bourbonii hoc marmor cineres continet. i. e.

The Empire enlarged, Italy subdued, the Gaul beaten, the Pope besieged, Rome taken, the Ashes of BOURBON, (by whom all this was done) this Marble contains.

From hence we were conducted to the Cleft Mountain called *La Spaccata*, just at the Edge of the Sea-shore: It is separated from the Top quite to the Bottom, where it is about four or five Foot asunder, but grows broader and broader towards the Height: The Concavities on one Side, and the Protuberances on the other, directly opposite to one another, seem to be evident Marks of its being really divided, which, they say, happened at the Time when our Saviour gave up the Ghost. Upon one of the Insides of this Rock they shew you the Print of a Hand, which softened under it on the Challenge of a certain incredulous Person: Beneath it you see this Distich:

*Improba mens verum renuit, quod fama fatetur
Credere: at hoc digitis saxa liquata probant.*

*Th' unbelieving Mind the Truth denies
Tradition proves: The Rock new Proof supplies.*

This Rock being a famous Pilgrimage, there are small Steps contrived, which lead down to a little Chapel dedicated to the holy Trinity. The Curate would have given us some Pieces he cut off with a Hammer; but finding us not willing to overcharge ourselves with such Sort of Baggage, he seem'd to be offended at our Refusal, and at the losing his own Pains.

From thence taking our Way to the Cathedral, we were shew'd, among other Antiquities, a pretended Pillar of the Temple of *Solomon*; four such-like are to be seen at the high Altar of *St. Mark's* Chapel at *Venice*. Here is also a very ancient Vessel of white Marble, said to have been found at *Mola*, which now serves instead of a Font in the Baptistry: It is a most curious Piece, and most admirably preserved: Its Shape resembles a Bell about four Foot high, supported by four Lyons of the same Materials. The *Basso relievo* is esteemed excellent Workmanship, especially the little *Bacchus* rising out of *Jupiter's* Thigh, put by *Mercury* into the Hands of *Ino*. All round it you see *Satyrs* and *Bacchanals*, and among the rest a *Faunus* playing on two Pipes at once, as I have seen the Shepherds do in *Tyrol*; the Workman's Name is engraven on the Vessel, ΣΑΛΠΙΩΝ ΑΘΗΝΑΙΟΣ ΕΠΟΙΗΣΕ. Not far from the Garden of the *Franciscans*, call'd *Zoccolanti*, is a Bush of Thorns, which has scarce any Pricks, which they say has grown thus ever since *St. Francis* rowl'd himself there to extinguish his Lust. Near the Place called *Della Foglia*, they shew you where he preached to the Fish.

As you go up by the little Door of the Episcopal Palace, over-against the Altar of the *Holy Sacrament*, there is a Marble Statue of about four Palms high, representing an old Man setting his Feet upon a little Dog, underneath which is a Death's Head, and a Serpent whose Tail is placed on the Dog, wraps itself about the old Man, and rests on his Head, and has an Eagle on his. This is generally supposed to be the Statue of *Æsculapius*, with his Serpent, the Dog signifying Vigilance required in a Physician, and the Eagle the Empire of God; the Death's Head is an Emblem of human Nature, subject to that Deity, or the Object of the Art of Physick. After a short Stay at *Gaieta*

we return'd to *Mola*, and then coasting the Sea upon the *Via Appia* for eight Miles, came to the Ruins of the ancient City of *Minturna*, in the Neighbourhood of which *Marius* shelter'd himself after his Army had been defeated by *Sylla*, as History informs us.

We took Notice in our Passage of the Ruins of an old Amphitheatre, and the Remnants of an Aqueduct which came from the little City of *Tajetto*, two Miles further on the Left Hand. The River *Garigliano* (formerly call'd *Lyris*) runs just by *Minturna*; we pass'd it in a Ferry-boat, and quitting the old troublesome and slippery Pavement, travel'd through the Meadows to the Village of *St. Agatha*, where we lodg'd that Night. The Country between this Village and *Capua* (which is sixteen Miles) is very level, and extremely fruitful near *Capua*. Not far from *St. Agatha* they shew'd us, at some Miles Distance, the Hills which formerly produced the famous *Falernian* Wine, that inspired the *Roman* Poets, but are at present barren.

Capua is seated upon the Bank of the *Volturno*, the chief River of the Kingdom of *Naples*, though of an indifferent Bigness; it has various Inscriptions and Marble Stones, brought thither from the ancient *Capua*, the Ruins whereof we visited, about two Miles from thence, near the Mountains to the Eastward, the Town called *St. Mary's* being built out of the Ruins of this once so celebrated City: The many little Temples and old Castles, the Remnants of two Amphitheatres, one of the Gates, and a great Number of broken Pillars, and other magnificent Fragments of Architecture, are undeniable Proofs of its former Grandeur. The Country People brought us Variety of Medals to sell, but as they are cunning enough to carry the best to the Antiquaries of the neighbouring Cities, who pay them a good Rate for them, so they seldom offer any Thing but their Refuse to Travellers. The Campaign betwixt *Capua* and *Naples* (which is sixteen Miles, and Part of the Province of *Terra di Lauro*) is perhaps the most fruitful Soil in the World, whence it is that they have given it the Name of *Campagna Stellata*, to signify the benign Influence of the Stars upon this Country, as if Fertility proceeded wholly from thence. Among other Places we pass'd through *Aversa*, built (as they tell you) out of the Ruins of *Atella* by the *Normans*, after they had driven the *Saracens* and *Greeks* out of *Naples*.

The City of *Naples* was rebuilt by the *Cumani*, who gave it the Name of *Νεάπολις*, to distinguish it from the Remnants of the high City, unto which they gave the Name of *Παλαιόπολις*, for both were before that Time called *Parthenope*, from the Mermaid *Parthenope*, who, after *Ulysses* and his Companions had escaped her Snare, threw herself, out of Despair, headlong from a Precipice, and was interr'd at *Palaiopolis*; though some others derive its Etymology from *Parthenope* the Daughter of *Eumelus* King of *Thessaly*, who settled a Colony there, and changed its ancient Name into that of *Parthenope*. These *Grecian* Names seem sufficiently to evince, that the *Greeks* were the Founders of this City, which is very large and populous, though I am not able to give you an exact Account of the Number of its Inhabitants: Its Figure is very irregular, and its Circuit, according to the Computation of some who have walk'd round the Wall, is about nine Miles, not including the Suburbs, which, amounting to nine more, make the whole Circumference up eighteen: It is pav'd all over with square Stones of the same Bigness, the Streets being generally straight and broad, the Houses lofty, flat-roof'd and uniform, in which it exceeds the Buildings of *London*, *Paris*, *Venice*, and even *Rome* itself, all which have very fine Palaces, but these are mix'd with a great Number of ordinary Houses, whereas at *Naples* they are, generally speaking, very handsome Fabricks. To the South it is enclosed by a little Bay, and to the North by very fertile Hills, which rise, by an easy Ascent, into *Campagna Felice*; to the East lies the Plain which leads to Mount *Vesuvius*, and on the West Side the high Town, where are the *Chartreux*, and the Castle of *St. Erasmus*, the Prospect of which Ascent is very charming to the Beholders.

Besides these fine private Houses, there are a great many may be rank'd among the Number of the best Palaces; as for instance, those of the Dukes of *Matalone*, *Gravina*, *Airola*, and *de la Tour*; of the Princes of *St. Agatha*, *Montmilet*, *Botera*, and *Cellamare*; the Palace of the Viceroy stands in a Great Place, its Front is very regular, and adorned with three Orders of Architecture; its whole Length is near four hundred foot, and was built by the famous *Montana*. The three Castles of *Naples*, the Academy called *Studii Nuovi*, the School for riding the great Horse, the Convents in general, the Hospitals, the Arsenal, and the Magazines for their Gallies, are all very remarkable Structures. The whole City is adorn'd with a considerable Number of Fountains, among which three are of an incomparable Grandeur and Beauty: But the Churches here, both for their Number and Beauty, surpass all the rest; their Frontispieces, Portals, Chapels, Altars and Tombs being the most exquisite Pieces of Architecture that Art ever produced; they are filled with Pictures, Sculptures, and Gold and silver Vessels, and their Arches, Wainscots and Walls are covered with the most precious Marble curiously laid together, or with Compartments of *Basso relievo*, or of gilt Joyners Work, and beautified with the Performances of the greatest Painters. To be short, wherever you turn your Eye, you are dazzled with the curious Works of *Jasper*, *Porphyry*, and *Mosaick* of all Sorts, and the most exquisite Products of Art. The Church of the *Jesuits* is an excellent Fabrick, embellish'd with magnificent Ornaments from Top to Bottom. The Painting of the Dome is the Work of *Lanfranc*; that of *St. Mary* of the *Annunciata* is not inferior to it; and the famous Hospital (which has two hundred thousand Ducats annual Revenue) is exceeding rich, as are those of *St. Philip* of *Neri*, *St. Maria la Nuova*, *St. Severin*, *St. Paul*, *St. Dominick*, the Church and Convent of Mount *Olivet*, the Church of the *Holy Apostles*, *St. John Carbonara*, of the little Hospital, and *St. Maria della sanità*, not to mention many more, which are all very fair, and have their Vestries and Treasuries crowded with Riches. I remember that two *Theatines*, as they were conducting us into their Church of the *Holy Apostles*, made heavy Complaint of the Poverty of their Order, (they having no Possessions, and at the same Time not being permitted to beg like the *Mendicants*) but after they had shew'd us the Magnificence of their Church, and fourteen large Cupboards in the Vestry filled with Gold and Silver Vessels, and other precious Things, we had sufficient Reason to believe that they had no great Occasion to go a Begging. In *Italy* all Monks are at once Misers and Mendicants.

The spacious Convent of the *Chartreux* of *St. Martin* is every where full of curious and magnificent Pieces; and the Church, though none of the largest, yet is a compleat Piece, both for the Materials and Exquisite-ness of the Art. The Monks that were our Conductors assur'd us, that under one Priorate there were bestow'd among them above five hundred thousand Ducats in Silver Plate, Sculptures and Pictures: The Nativity of Christ is a most exquisite Piece, done by *Guido*; the four Pictures of the Last Supper are of the Hands of *Espagnolet*, *Hanibal Caracche*, *Paul Veronese*, and Cavalier *Massimo*, the last of which has represented Christ standing, giving the Sacrament to his Apostles, who are upon their Knees; besides many other Pieces of high Value, and exquisite in their Kind.

The Pavement of the Cloyster (which is an hundred Paces square) is of Marble inlaid in Boughs and such-like Ornaments, the four Galleries being supported by sixty Pillars, each of one entire Piece of the best white Marble of *Carrara*. Every Frier has his own Chamber, a Closet and Library, besides a little Garden; and the Prior's Lodgings are fit for the Reception of a Prince: Here it is they shew the famous Crucifix of *Michael Angelo*, done, as they say, to the Life after a Peasant, who, to that End, was crucified by the Painter; it is of Wood, and not above half a Foot high: It is observable, that the Crucifix holds his Head straight, which looks not very like the Posture of an expiring Person.

Person on the Cross. They have also a St. Lawrence, by Titian; and some Designs of Rubens and Albert Durer, which are valued at a high Rate, and are very fine.

From this Ascent you have the most delightful Prospect that can be well conceiv'd; you have at one View the Sea and many Islands, and among these that of Caprea, the famous Seraglio of Tiberius, as likewise the whole City of Naples, with its three Castles, viz. of the Egg, the new Castle, and that of St. Elmo; the Harbour, Mole, and Lantern; and along the Sea-shore, the Creeks and Inlets mix'd with little Capes, as also a great Number of Villages built along the Sea-side; towards the Land-side, the Gardens and fertile Hills leading into Campania Felice are the most agreeable Objects in the World; and at a greater Distance you may behold the horrible Smoke of Mount Vesuvius. To describe all the Relicks, Statues, or miraculous Images, as they stile them, would be endless; I will only mention a few of them: At St. Lewis they keep some of the Virgin's Milk, which becomes liquid on all our Lady's Festivals; at St. John Carbonara, the Blood of St. Januarius is boil'd up when any one approaches his Shrine, as the Blood of St. John Baptist (preserv'd at St. Maria Donna Romita) does, whilst they say Mass for his Beheading. I pass by the Pieces of the true Cross, the Nails, the Branches of the Crown of Thorns, the Images said to be made by St. Luke, and such-like Rarities. At St. Dominick the Greater, they shew the Crucifix that spoke to St. Thomas Aquinas; and another in that of the Benedictins, which, if you will believe them, spoke more to Pope Pius V. At the Church of St. Agnello, in the Chapel of the Monaci, they shew you also a speaking Crucifix, with a long Inscription underneath relating to the Story; and another in the same Church, which, they tell you, used to hold Dialogues with Jane the Mother of St. Agnello, and with St. Agnello himself; this they stile the Image of St. Mary of Intercession. Among the miraculous Crucifixes here, that of St. Mary of the Carmelites must not be pass'd by in Silence; for when D. Pedro d'Arragon besieg'd Naples in 1439, it bow'd its Head at the Sight of a Cannon-ball, which only beat off the Crown of the Crucifix.

The Churches contain a vast Number of Tombs and Epitaphs: In that of St. John the Evangelist, are six or seven Epitaphs made by Joh. Jovianus Pontanus, among which one is for his Daughter Lucia, another for his Son, and two more for his Wife and himself. At St. Clara's you see the Epitaph of King Robert, firmamed the Good and the Wise. At St. Domin. maj. one for a Lord of the noble Family of Caraffa, and another for the Cardinal d'Ariano of the same House. In the Vestry of this Church you see many of the Tombs of the Kings and Queens of Naples, among which, those of Isabel of Arragon, Daughter of Alphonsus I. and Wife of John Galeazzo Duke of Milan, and of Joan the first Queen of Jerusalem and both the Sicilies, deserve to be remember'd: The first runs thus:

*Hic Isabella jacet, centum fata sanguine Regum,
Quicum Majestas Itala prisca jacet;
Sol qui lustrabat radiis fulgentibus orbem,
Occidit, inque alio nunc agit Orbe diem.
Obiit die 11 Febr. 1524.*

The second thus:

*Inclita Parthenopes jacet hic Regina Joanna
Prima; prius felix, mox miseranda nimis
Quam Carolo genitam, multavit Carolus alter
Qua morte illa virum sustulit ante suum.*

She was the Daughter of Charles of Sicily, Duke of Calabria, and was strangled by Charles Duras, whom she had adopted, and who rebelling against her, accused her of having strangled Andrew of Hungary, her first Husband, whose Tomb is to be seen in the Cathedral.

In the same Place is also to be seen the Tomb and Epitaph of the famous Marquis of Pescara, by Ariosto; and in the Church of St. Mary of Concord, a long In-

scription upon the Tomb of a King of Fez, who having embrac'd the Roman Faith, and fought under the Imperial and Spanish Banners, died an hundred Years old in 1641. The Tomb of Innocent IV. who died at Naples in 1254, is to be seen in the Cathedral, with two long Epitaphs, one whereof is in Leonine Verse. In the Church of St. Agnello is the following Epitaph for a Bishop who refused the Cardinal's Cap.

*Sigismundo Pappacudæ Franc. F. Tropeiensium Præsul;
viro opt. & Jurisconsulto, qui cum in cætum Cardina-
lium fuisset a Clemente VII. adscitus, maluit in Pa-
triæ Episcopus vivere. Vixit Ann. 80. M. 6. D.
10. Obiit 1536.*

In the Church of St. Severin of the Benedictins, in the most beautiful Chapel belonging to the Family of St. Severin, are to be seen the Tombs and Inscriptions of three young Lords, Brothers, poyson'd by their Uncle; as also that of their Mother, lamenting the untimely Death of her Sons. Directly opposite to the Church of the Carmelites you see a Kind of Chapel, erected by Order of Charles I. King of Naples, in the same Place where he caused the Head of the unfortunate Conradin to be cut off, and at the same Time that of his Cousin Frederick Marquis of Baden and Duke of Austria, with five or six other Lords, the whole History of which is painted in Fresco on the Inside of the Walls of the Chapel, in the Middle of which stands a Pillar of Porphyry, and round about it this Distich:

*Asturis ungue Leo, pullum rapiens Aquilinum
Hic deplumavit, Acephalumque dedit.*

The Carmelites shew'd us in their Convent the Place where the famous Rebel Thomas Aniello (commonly called Massaniello) was slain, after he had been the Head of the Rebels eighteen Days: I have a Piece of Money that was coin'd whilst this Rebellion lasted, with this Inscription, S. P. Q. N. As we pass'd by the Church of St. Mary major, our Conductor told us, there was a brazen Hog to be seen there, made by Pomponius Bishop of Naples; it seems the Place where this Church now stands was haunted by the Devil in the Shape of a Hog, which so terrified the Inhabitants, that they left their Houses, till this holy Bishop being bid by the Virgin to build a Church for her in the same Place, the infernal Hog disappear'd.

10. The City of Naples having been subject to so many Masters and various Revolutions, has lost the greatest Part of its Antiquities; however, in the Front of St. Paul major you still see the Frontispiece of the ancient Temple of Apollo, afterwards dedicated to Castor and Pollux by one Tiberius Julius Tarsus, his Name being to this Day distinctly to be seen on one of the Friezes of this Frontispiece.

T I B E P I O Σ I O T A I O Σ T A P E O Σ

The Portico rests upon eight twisted Pillars of the Corinthian Order, and the Pediment is adorn'd with Basso relievo, representing the Deities. The Columns of the Ristituta are said to have been taken from the ancient Temple of Neptune. Here are also to be seen some Ruins of an Amphitheatre, and an ancient Statue of the Nile upon a Crocodile. The House of D. Diomedes Caraffa contains many Sculptures and ancient Inscriptions; in the Court you see the Head and all the Crest of a brazen Horse, that had no Bridle, which being an Emblem of the Liberty of Naples, whilst yet a Common-wealth, stood in one of the great Places, but King Conrad having order'd a Bit to be put on this Horse, directed the following Distich to be set on the Pedestal:

*Hactenus effrænis, Domini nunc paret habenis
Rendomat hunc æquus Parthenopensis equum.*

On the Hill, where it is supposed the ancient Paleopolis stood, are a great many old Ruins, and divers Collec-

tions

tions of Medals, which contribute not a little to the true Understanding of the History of *Naples*, are to be found in the Cabinets of the Antiquaries of this City, and especially in that of Mr. *Richetti*. Of the Catacombs I shall have Occasion to speak hereafter.

After Pope *Sixtus V.* had cleared the Ecclesiastical State of the *Banditti*, they became more numerous in the Kingdom of *Naples*; so that even within these few Years Travellers were forced to go in Caravans to secure themselves against their Insolencies; but the Honour of freeing this Countty from these dangerous Vermin is due to the Marquis *del Carpio*, late Viceroy of *Naples*, who put a great Number of them to Death; and I remember we saw lately above five hundred of them at Work in the Arsenal, who had surrender'd under Condition that their Lives should be saved, and not to be made Galley-slaves. But notwithstanding all this, it must be owned, that the Generality of the *Neapolitans* are a very wicked Generation. We were credibly inform'd, that in two Prisons only there were no less than four thousand Malefactors at that Time. This has questionless given Occasion to the noted Proverb, *That Naples is a Paradise inhabited by Devils*.

Besides this, notwithstanding all the outward Grandeur of this City, it has several Things which not a little overcloud its Lustre; for Women are as hard to be seen here, as in any Part of *Italy*. The Habits and Equipages of Persons of Quality are all black, not being allow'd the Wearing of Gold and Silver, and the greatest Lord has no more than two Footmen; besides, most of their Coaches are drawn by Mules; and they generally appear in the *Spanish* Dress. The Viceroy's Court is very silent and melancholy: Their Trade is also much decayed, their chiefest Commodities at this Time being Soap, Snuff, Stockins, Waistcoats, some Silk Manufactories &c.

From *Naples* to the Top of Mount *Vesuvius* is eight Miles, of which I shall endeavour to give you a more exact Account than you have seen hitherto. The first four Miles, as you pass along the Sea-coast, you go through many good Villages, and the Grounds are very well cultivated; yet from Place to Place you see great Stones, thrown thither by the Eruptions of that Mountain: The last of these Villages is called *Resina*; when turning to the Left, we began to ascend, but still on Horseback for two good Miles further, among loose Stones, and Heaps of burnt Earth; the nearer you come to the Top, the more you find the Ground crack'd and cover'd with these burnt Stones; and in some Places you see the Tracts of the Channels of Sulphur, which have been forced down from the Top towards the Bottom. About the Middle, the Ascent beginning to grow extream rough, you must alight to pass on Foot, which is not done without a great deal of Difficulty, the Ashes, or rather calcined Dust, not affording any sure Footing: But at last, after several small Restings, we came up to the ancient Gulph or Hollowness, for of late considerable Alterations have happened in this Mountain. The Circumference of this first Gulph has about a Mile in Diameter, to the best of our Guess; the Edges being worn into several rugged Elevations, you may go down into it several Ways about a hundred Paces below the first Circle, being the whole Depth of this old Mouth; for this vast Abyfs was by an extraordinary Eruption, almost quite fill'd up with a Mixture of Sulphur, Alom, Bitumen, Saltpetre, and Nitre, which, after the Violence of the Eruption was past, turning into a hard Crust, produced a Level in this Gulph not above a hundred Paces below its exterior Brims; but some Time after, a furious Eruption having shaken and broken through this Crust, tumbled the hardened Pieces one upon another, as we see the broken Ice of a Pond congealed by a sudden Frost. This unequal Superficies is interspersed with burning Funnels, which emit continual Exhalations; and in some Places we could feel the Heat through our Shoes. You must know, that in the Middle of this Superficies (which is almost of a circular Figure) another most violent Eruption has forced its Passage, and cast up a

new Mountain, which is likewise round and about a Quarter of a Mile high.

After we had traversed that rough Space of about three hundred Paces broad, between the greater and lesser Mountain, we ascended this little Mountain with as much Pains as we had done the first, which we found full of smoaking Chinks, and in many Places lay a pure Sulphur mixed with a Kind of *Sal Armoniac*, of a Citron Colour. In some Places we saw a reddish porous Substance, like the Dregs or Scum of Iron as it comes from the Smiths Forge. The Top of this lesser Mountain hath its Mouth as well as the great one, which is about one hundred Paces broad, and the Inlet to this vast subterraneous Abyfs, sends forth a thick Flood of Smoak, which fills up the whole Concavity; the Winds forcing it sometimes on one Side, and sometimes on the other, we had an exact View of the Height of its Entrance or Brink, which is perpendicular within, except in one Place, where it is sloping enough to descend into it, which we did after our Guide for sixty or eighty Paces, when coming to the very Brink of this Precipice, we rowl'd down many Stones we broke off near it: We found them sometimes to stop at the first or second Falling, and sometimes to take a long Course rebounding with a great Noise. We could not perceive any considerable Increase of the Smoak by the Tumbling in of these Stones; and if they had been much bigger, they would perhaps have produced no other Effect, there being no great Reason to imagine, that the sulphurous Lake is perpendicularly under the Opening of this Mountain: I know some have had the Curiosity to blow up Part of these Rocks with Gunpowder; but this seems to me a dangerous Piece of Curiosity, where it is not safe to stay too long, by reason of the sudden Eruptions that happen now and then; witness the famous *Pliny*, who was surprized with such an one, though at a considerable Distance; and the furious Eruptions in 1682, 1685, and 1687, not to mention those recorded by the more ancient Authors.

The little Time we had to stay about *Pozzuolo* did not permit us to take so particular an Account of all the Curiosities there, as we might have done, had we been more at Leisure; however, I do not question relating something that is new concerning this Journey. In our Way from the Suburbs of *Naples* to *Pozzuolo* we saw the Hill known by the Name of *Pausilypus*: To confess the Truth, it is most delicious, of an infinitely charming Situation, extreamly well cultivated, full of Summer Seats, and planted with most excellent Vines. The Ascent to this Hill was not so steep, but that it might have been made easy enough, but, moved by an extravagant Humour, they resolved to pierce the Mountain, and by that Means made indeed a shorter Way, and of an extraordinary Contrivance, but much more troublesome than the Ascent would have been. This Cave is generally call'd the *Grott* of *Pozzuolo*, being in some Places cut through the Rock, in others through the Sand; its whole Length is near a Mile, the Height between thirty and forty Foot, and eighteen in Breadth, affording an easy Passage for two Coaches: It has no other Light than at the two Extremities, and a little Hole in the Middle over the Oratory, which is made in the Rock by enlarging that Part somewhat beyond the rest. The Dust which is raised by the Passengers is very troublesome, to avoid which you cover your Face with a Handkerchief; and to avoid running against each other, you cry as you pass along, *To the Right*, or *to the Left*? This is an ancient Work, *Seneca* in his Time complained of its Dust and Darkness; it is attributed to one *Coccejus*, who (according to some ancient Annals) is said to have employed a hundred thousand Men in it, who finish'd it in fifteen Days; but it is not known who this *Coccejus* was, some believe him to be a Prince or Governor of that Part of the Country, some only the Head Workman, or Undertaker of the Design.

A little beyond *Pausilypus* lies the Lake of *Agnano*, between two Hills, almost round, and two Miles in Circumference: The Water is very clear, and without any

ill Taste, and though it seems continually boiling, produceth not the least Heat, but abounds with great Plenty of Tench and Eels. Near the Banks of this Lake are the two celebrated Caves, known by the Names of the *Baths of St. German*, and the *Grotta di Cane*, or *Grott of the Dog*; the Etymology is so fabulous, that I will not pretend to enlarge upon it; thus much is certain, That after you have descended three or four Steps into these *Baths*, you on a sudden feel Heat, and a sulphureous Smell, which put you immediately into a Sweat, and is accounted very salubrious to gouty Persons, and those afflicted with some other Diseases, who come hither in Crowds for that Purpose.

The *Grotto of the Dog* is no more than the opening of a Cave, at the very Foot of a Hill, being no more than nine Foot long, four and a half broad, and five high, and not made by Art; the Bottom is pure Earth, and the Sides have nothing but what is natural: I observed some Drops falling from above, which, they told us, were produc'd by the Condensation of the Exhalations or Vapours raised from below; though I am rather of Opinion, that they distil from the Mountain, and pierce the Top of the Cave, out of the Bottom of which arises a subtile penetrating Exhalation, without any visible Smoak, being a sulphureous Steam, which stops the Breath in a Minute. We saw him who keeps the Key of this Cave, as well as of the aforesaid Baths, make the Experiment with a Dog in the following Manner. He enters as upright as he can, proceeds to the Middle of the Cave, where bowing and kneeling by Degees, holding his Head as upright as he can, he sits down upon his Heels, so that with his Hands he can hold a Dog by all his four Feet down close to the Ground: The poor Creature is seized in an Instant with violent Convulsions, stretches himself without crying, and becomes stiff, when he that holds him throws him out of the Cave, and being presently cast into the Lake, which is not above twenty Paces distant, he recovers his Breath in a Minute, and swims out of the Water. The same Experiment has been made upon Men and several Sorts of Animals with the same Effect; the Viceroy D. *Pedro de Toledo* made it with two of his Slaves, who died. Two Foot from the Ground, and even lower, there is nothing to be seen of this Nature. The Keeper shew'd us another Experiment with two lighted Torches, one of which he put near the Ground, and it was extinguished immediately without the least Smoak; then lighting it by the other, he put that near the Ground as the former; which being likewise put out, he rekindled that by the first, and so by Turns.

The like sulphureous Exhalations are said to be in a Cave at *Zoli* in *Hungary*; and *Pliny* calls this we are speaking of now, *Spiraculum Puteolanum*. All the adjacent Country seems to be filled underneath with Brimstone, especially about *Monte Secco* and *Solfatara*, where we saw subterraneous Holes fill'd with Sulphur and Allom, which send forth Flames and Smoak with the same Smell and Noise as we see in *Vesuvius*. They prepare Abundance of *Rock-Allum* on the *Solfatara*, which is a yellow and white Mountain, dried up and consumed by its own Fire; they work in small Hutts, and the Cauldrons boil only by the Heat coming out of the Openings. The Top of this Hill has a Kind of oval Basin about 1250 Foot long, and a Mile in Breadth, the Exhalations of which are often smelt at *Naples*, and blacken their Marble and other Ornaments, nay, even corrupt the neighbouring Waters; whence it is that the *Capuchins* of *St. Januarius*, who live near it, have been forced to raise their Cisterns from the Ground upon Pillars. Most of the Inhabitants in the City, and about it, will tell you, that these smoaking Holes of *Solfatara* are actually the Chimneys of Hell itself: *Capaccio* is of the same Opinion, and assures us, that the *Capuchins* hear often most dreadful Howlings, and are frequently disturbed with Hobgoblins.

From hence we descended towards *Puzzoli*, anciently a famous City, as a vast Number of stately Ruins sufficiently testify, though at present it is but an inconsiderable Place. Near to *St. James's Church* you see the

Ruins of a magnificent Amphitheatre, the *Arena*, whereof was an hundred seventy two Foot long, and eighty eight broad; built of hewn Stone: Here they tell you *St. Januarius*, with six other *Christians*, being thrown before the Beasts; they ador'd instead of devouring them; but not long after these seven had their Heads cut off near *Solfatara*, in the same Place where the Church dedicated to *St. Januarius* now stands. On the Altar you see these Words:

Locus de collationis S. Januarii & sociorum ejus. i. e.

The Place where St. Januarius and his Companions were beheaded.

Close to the Amphitheatre remain still vast Ruins, but buried almost under-ground, look'd upon by some as the Remainders of a Labyrinth, though I am rather inclined to believe it a Fishpond like the *Piscina Mirabilis*. The Cathedral is built not only upon the Ruins of the Temple of *Jupiter*, but also of Part of its Materials. In the Frontispiece you see these Words, *Calurnius Luc. Fil.* which shew evidently by whom it was built.

Between the City and the Amphitheatre are to be seen also the Ruins of the Temple of *Diana*: In tempestuous Weather the Sea throws ashore, near the *Dominicans* of *Jesus Maria*, many new Marks of the ancient Magnificence of *Puzzoli*, as *Cornelians*, *Agates*, *Jaspers*, *Amethysts*, as likewise divers other Sorts of Stones, upon which are found engrav'd all Sorts of Figures, as *Cocks*, *Eagles*, *Swans*, *Hares*, *Serpents*, *Grasshoppers*, *Ants*, *Vine-branches*, *Grapes*, *Ears of Corn*, *Heads of Men*, and *Motto's* in *Greek* and *Latin*. The Sand of *Puzzoli*, used in their Building, is much commended both by *Vitruvius* and *Pliny*; and, in effect, if mixed with a certain Sort of Mortar, become as hard as Marble, even in the Sea itself. As we passed along in our Boat to go the Lake of *Lucrin*, two Miles distant from *Puzzoli*, we had the Opportunity of taking a full View of the famous Arches, generally supposed to be the Remnants of a Bridge built by *Caligula* from *Bajæ* to *Puzzoli*, whence to this Day they are known by the Name of *Caligula's Bridge* among the Inhabitants; but if we will attend to the Words of *Suetonius*, nothing is more evident than that this pretended Bridge of *Caligula*, was not of Stones or Brick, but of Boats; these are his Words: *Bajaram medium intervallum Puteolanas ad Moles trium millium & sexcentorum ferè passuum ponte conjunxit, contractis undique onerariis navibus, & ordine duplici ad anchoras collocatis, superjectoque aggere terreno, ac directo in Viæ Appiæ formam.* &c. The Words *Puteolanas Moles* plainly discover what these Arches we now see were, viz. belonging to a Mole that defended the Harbour against the Violence of the tempestuous Waves: Neither is it a sufficient Objection to say, that we do not build our modern Moles with Arches, since Things of the same Nature may be done variously at so great Distances of Time; besides that, some will maintain, that a Mole with Arches might be more durable than one without, and be nevertheless sufficient to break the Waves, and to defend the Harbour.

The Lake of *Lucrin*, so famous in ancient Times, is now no more than a little Pond of about one hundred Paces broad, and a Quarter of a Mile long, being for the most Part fill'd up with the *New Mountain*. It is now about sixty or eighty Leagues from the Sea, whereas anciently it join'd with it; for if we may credit *Pliny*, they were forced to make Use of many Engines to separate them: The Water of this Lake is always salt; it was highly celebrated among the Ancients for its Oysters: *Nuptiæ videbant Ostreas Lucrinas*, saith *Varro*; and *Concha Lucrini delicacior stagni*, *Martial*. I suppose you remember the Story related by *Pliny* and several other Authors concerning a Dolphin, frequently fed with Bread by a Boy that went every Day to School from *Bajæ* to *Puzzoli*, became at last so familiar with the Boy, that he used to carry him often on his Back over the little Bay; *Appian* tells us, he was an Eyewitness of it, besides many more that flock'd from all Parts to *Puzzoli* to see it; and *Solinus* affirms, that at last

it was so common, that it was scarce regarded as an extraordinary Thing. I remember, that in my Travels I saw a Sea-calf, so very tame, that it would do as many Tricks as a Spaniel.

In the Year 1538, in the Night between the 19th and 20th of September, the Earth produc'd on a sudden a certain Mountain never seen before, which for that Reason has since retained the Name of *Monte Nuovo*, or the *New Mountain*. Those who have measured it, make its Height perpendicularly four hundred Toises, and its Circumference three large Miles. The Gulph or Opening of fifty Paces diameter on the Top of this *New Mountain*, sufficiently proves its Production to have been caused by an Eruption, though it never sent forth either Fire or Smoke since its first Eruption, which was attended with a most dreadful Earthquake, that put all the neighbouring Country under a great Consternation, the Sea recoiling, many Churches and Houses being burnt or swallowed up, a vast Number of Men and Beasts perishing by this prodigious Birth of the *New Mountain*. Your Mountain of *Markle-hill*, in the County of *Hereford*, was usher'd into the World after a much easier and more pleasant Manner, because it mov'd with a gentle Pace for three Days and Nights, with Houses and Trees, for about four hundred Paces.

On the other Side of the *Lucrin Lake*, you see another famous Hill called *Monte di Christo*, the Story whereof runs thus: A most violent Earthquake having made an Opening in this Hill, which reach'd from the Superficies to the very *Limbus Patrum*, *Jesus Christ* enter'd through this Cavern, where being joyfully receiv'd by the Souls that were destin'd to heavenly Felicity, he led them through this Passage up to the Top of the Mountain, from whence they were lifted up to Heaven. A fine *Italian Fable*!

The Lake of *Averno* is not above a Mile from the Lake of *Lucrin*, being much about the same Bulk as the Lake *Agnano*; it is beyond Question, that what *Virgil*, *Lucretius*, *Pliny*, and others say of its deadly Vapours, is not so at present, the Birds flying over it without the least Detriment, which is the Reason that *Pliny* is reckoned by some modern Authors to have advanced a manifest Falshood. But if the Matter be truly weigh'd, it will sufficiently appear, that *Pliny* only quotes *Varro* in what he says of this Lake, but speaks not as an Eye-witness; for, discoursing of the Lakes which have extraordinary Qualities, he cites *Ctesias*, a *Greek Historian*, who mentions a Lake in the *Indies* on which nothing swims, and afterward alledges the Testimony of *Varro* about the *Averno*. Add to this, that *Strabo* attributes the Cause of this Stench in the *Averno* to the Thickness and Number of the Trees that surrounded it on all Sides, which, he says, being removed by *Augustus*, the Air became pure and sweet: And *Boccace*, who liv'd not above three hundred Years since, assures us, that some subterraneous Chanel of Sulphur being mixed with the Waters of the *Averno*, they became stinking, and killed many of the Fish, which he saw with his own Eyes: Two manifest Instances, that this Lake hath been at different Times in very different Conditions. *Virgil* derives the Word *Avernus* from *Aornus*, notwithstanding which, this Name seems to have been the ancient Appellation of sulphureous Gulphs in general, which makes *Lucretius* call these Kind of Pools *Averna Loca*.

The Ruins to be seen to this Day about the *Averno*, plainly demonstrate, that the adjacent Hills were well peopled after the before-mentioned Trees were cut down. The Antiquaries do not agree, whether the Ruins next to the Lake belong'd to a Temple of *Mercury*, or of *Neptune*; but certain it is, it could not be the Temple of *Apollo*. As we approach'd the *Averno*, I could plainly perceive something of a nauseous Smell, but whether it proceeded from the Lake, or not, I will not pretend to determine; for the Lake abounds with Fish, its Waters are fresh and pretty clear, only inclining somewhat to a Blue; I tasted them in divers Places, and found them to have a pretty sharp Twang of some Mineral, but what I could not distinguish.

Not far from hence is the subterraneous Passage and Cave commonly known by the Name of the *Sybil's Grott*, the chief Entrance whereof is said to have been near

Cuma, four Miles from *Averno*, but it is all filled up on that Side. We went into it through a narrow Passage, every one with a lighted Torch in his Hand, the Passage being on both Sides overgrown with Briars and Thistles. This subterraneous Passage is dug under Hills, without any Ornaments, except in the Place I am going to describe to you: It is about ten Foot broad, and twelve high. After you have gone two hundred and fifty Paces in a straight Line, you meet with a square Grott on the right, and seventy or eighty Paces further a little Cell of fifteen Foot long, and eight or nine broad. You may perceive by various Remains, that the Roof was formerly painted and the Walls adorned with *Mosaick Work*. After I had read the learned Treatise of Mr. *Blondel* concerning these pretended *Sybil's*, and their Writings, I was sufficient Proof against all the vulgar Opinions of this Grott; notwithstanding what divers ancient Authors have told us concerning the *Sybillæ Cumæa* and her Cave, which by the *Italians* has been applied to this subterraneous Passage, I am not ignorant of the Description of *Virgil*,

*Quo lati ducunt aditus centum, ostia centum
Unde ruunt totidem voces—*

but at the same Time am convinc'd, that *Virgil* spoke of it only as a fabulous Tradition; for what else will you say to the *centum aditus*, and *centum ostia*, which are not to be found here or any where else? In my Opinion, this might be such another Passage as the Grott of *Pausilippus*, and the painted Cell appropriated to some Deity. *Strabo* relates, upon the Credit of *Ephorus*, an ancient Historian of *Cumæ*, that the *Cimmerians* of *Italy*, (to distinguish them from those inhabiting near the *Bosphorus*) did inhabit in subterraneous Caverns between *Bajæ* and the Lake *Averno*, from whence they sallied out in the Night-time to perpetrate their Murders. The digging of this Cave seems more properly to belong to them, were it not that the *Mosaick Work* in the Cell hath as little Resemblance to their Way of living, as to the Habitation of a pretended Mad-woman, such as the *Sybil* is supposed to have been.

From this Cave we took a Turn to *Bajæ*, the most pleasant and magnificent Place in the World in ancient Times; *Horace*, *Martial*, *Josephus*, *Seneca*, *Albinus*, and others, have left us such a Character of it, as might put this Assertion beyond all Question, were not the Ruins of many Temples, Baths, and Palaces, which are to be seen round the Bay, and even in the Sea itself, undeniable Proofs of its former Grandeur. The Bay of *Bajæ* is infinitely pleasant, the Air exceeding sweet, and the adjoining Hills with easy Ascents charming beyond what can be express'd or imagin'd; but alas, that vast Number of Summer-seats which adorn'd the Neighbourhood of this City, are now nothing but a vast Heap of Ruins, and a dismal Solitude. Between *Bajæ* and *Miseno* is the Precinct call'd *Bauli*, where you see the Tomb of *Agrippina*, and near it the Remnants of the Fishpond of *Q. Hortensius*, Colleague of *Q. Cecilius Metellus*.

Not far from this are very great Ruins, commonly called *Mercato di Sabato*, which some pretend to be the Remains of a Circus. At the very Sea-side are to be seen considerable Ruins of the Country House of *Hortensius*; and near his Fishpond, the Remains of a Temple said to have been dedicated to *Diana*. Not many Years since, a most noble Statue of *Venus*, twice as big as the Life, was dug up in this Neighbourhood, holding a Globe in her right Hand, and three Oranges in the left. *Capaccio*, who has given an exact Description of it, says, that this Statue was found in the same Place where anciently stood the Temple of *Venus Genitrix*. From *Bajæ* it is not above a large Mile to that delightful Plain called the *Elysian Fields*, situate between the Sea and that stinking Marsh *Acheron*, called by *Virgil*, *Tenebrosa Palus*, now *Lago della Coluccia*. I might farther speak of the Academy of *Cicero*, now turned into an Ox-stall, of the Baths of *Tritoli*, the Tomb of *Agrippina* Mother of *Nero*, of the *Piscina mirabilis*, or Fishpond of *Agrippa*, and the other Fishpond called

Cento Camerelle, besides a great many other remarkable Remnants of Antiquity, but that I had not sufficient Leisure to make so exact an Observation of them as was sufficient to give you a full Description of them.

From *Bajæ* we took Boat to *Puzzoli* again, and thence went on Horseback to *Naples*. But before we depart, I must say a Word or two of the Tomb of *Virgil*. At the Entrance of the Grott of *Pausilypus*; which leads to *Puzzoli*, stands an ancient Monument shaped like a Pyramid, but above half destroyed. Some modern Historians assure us, that in their Time there were nine small Columns of Marble in the little Chamber of this *Mausoleum*, which supported an Urn of the same Substance, with this Distich upon it :

*Mantua me genuit, Calabri rapuere, tenet nunc
Parthenope ; cecini, pascua, rura, Duces.*

But now there are neither Columns nor Urn to be seen here. The *Mausoleum* is built of very large square Stone, notwithstanding which, it is almost cover'd with Bushes and Shrubs, that have taken Root between the Stones; among the rest there grows a Lawrel on the Top of it, which, if you will believe the Inhabitants, has been often cropp'd and pluck'd up, but always grows again.

Virgil is look'd upon by many of the Inhabitants of this Country as a great Sorcerer; whence it is that they have attributed to him the making of the Grott of *Pausilypus*, as also of the brazen Horse, the Head whereof, as I told you before, is still preserved at the Palace of *D. Diomedes Caraffa*. Unto this Horse they attributed, for the same Reason, a secret Virtue of curing all Sorts of Diseases in Horses, and of preserving them from sinister Accidents, and for a considerable Time used to bring their Horses from the remotest Parts of the Kingdom of *Naples*, to lead them in Procession round this pretended Horse of *Virgil*; till at last the Horse was, by the Order of a certain Archbishop of that Kingdom, removed from thence, and a great Bell cast of its Body, which remains in the Cathedral, and is of somewhat more Use than the Horse. The House of *Sannazarius*, which stood on the Sea-side, at the Foot of the Hill of *Pausilypus*, being destroyed by the War, a Church was built in the same Place, dedicated to the most holy Birth of the Mother of God, where his Tomb is now to be seen in one of the Chapels. The Tomb is of white Marble, done by the excellent Hand of *St. Croce*: Upon it you see the Bust of *Sannazarius* crowned with Lawrel, and on each Side the Statues of *Apollo* and *Minerva*, which they commonly call *David* and *Judith*. I suppose you are informed, that *James Sannazarius* changed his Name into that of *Actius Sincerus*, according to the Custom or rather Affectation of those Times.

II. Your Letter I received with a great Pleasure, in Return whereof I will endeavour to satisfy your Curiosity, in resolving your Questions concerning *Venice*, in the same Order you have proposed them; after which I will proceed to give you an Account of *Rome*.

I. Whatever your Friend may say on Pretence of his being a Citizen of *Venice*, of the Number of Inhabitants in that City, which he makes amount to 250,000, I cannot allow him a competent Judge; though on the other hand I must tell you, that you carry the Matter too far, when you declare, that it is impossible to know the exact Number of Inhabitants in great Cities, *Sir William Petty* having proposed to us a rational Method of making such a Computation, without any remarkable Error. I ought however not to pass by in Silence, that in my Computation I included the Inhabitants of the Isle of *La Giudeca*, but not the Isle of *Murano*.

II. The two Columns of Granite in the Place of the *Broglia*, some say, were brought from *Egypt*, others from *Constantinople*, (perhaps they were brought from *Egypt* to *Constantinople*.) Upon one of these Columns stands the Arms of *Venice*, viz. the wing'd Lion of *St. Mark* holding an open Book, with the Inscription of *Pax tibi Marce*. On the other you see the Statue of *St. Theodore*. The like Columns the *Venetians* erect in all the

great Cities under their Jurisdiction, as Trophies of the Republick. The same *Venetian* also misinform'd you about the three great Banners set on Festival Days upon the brazen Pedestals opposite to *St. Mark's Church*, viz. That they represent the *Venetian State*, and the two Kingdoms of *Cyprus* and *Candia*, the Republick's Arms being to be seen without the least Alteration in all the three Banners. Another vulgar Error is, That the *Venetian Signiory* has no Coat of Arms, though the Lion is to be seen in all those Places where the Arms of a State are generally to be seen. The Lion of *St. Mark* takes its Origin from the Vision of *Ezekiel*, and not from the imaginary Transformation of *St. Mark* into a Lion, to check the incestuous Love of his Sister. Hence it is, that the *Venetian Ambassador* being ask'd, what Country it was that produced those wing'd Lions? replied; The same that brought forth the double-headed Eagles; alluding to the Arms of the Empire, *Russia*, and other Sovereignities.

III. What I told you concerning the Air of *Venice* must be taken with some Grains of Allowance, though the Air of *Venice* is none of the worst. In the *Lagunes* it is so bad, that the Inhabitants of the lesser Isles commonly leave their Habitations in the hot Season, and retire elsewhere. But this is not peculiar to *Venice*, but is also common in several other Parts of *Italy*, especially in the Country about *Rome*.

IV. That the Doge of *Venice* continues for Life, whereas the Doge of *Genoa* reigns only for two Years, is sufficiently known. The Revenues of the Doge of *Venice*, so far as I was able to learn, do not amount to quite 3000 *l. Sterling per Annum*; but the Frugality wherewith the *Venetians* manage their Government, has taught them not to allow their Spouses any Share in those useless Honours they pay to their Husbands.

V. Concerning the Libertinism in the Monasteries of *Venice*, as I will not profess myself to be acquainted with it in particular, so I can only tell you, that it is generally acknowledged here, that the Nuns are often visited by Persons in Masquerade at the Grates; that they go to Plays and other Places in Disguise; that they have made Tables on Purpose for Entertainments, one half within, and the other half without the Grates; nay, that they are often engaged in Intrigues; and that the Friars are guilty of such Debaucheries as can scarce be imagined. These, I say, are common Reports; but I do not affirm them.

VI. What your Friend has been pleased to alledge against the Sovereignty of the Doge, is not worth taking Notice of, the same being sufficiently known to all that have had any Insight into the *Venetian State*, or enquired into the Principles of their political Constitution.

VII. The whole Revenue of this Commonwealth, according to the best Computation, amounts annually to six Millions of Crowns, including the Sale of Offices and Nobility, Confiscations, &c.

VIII. They permit some Jews to live at *Venice*, who are rich, especially the Portuguese: Their Quarter is called *Il Ghetto*, or the Jewry; their Hats are cover'd with Scarlet, lined and edged with black. The poorer Sort are contented with wax'd Linen. By the Help of Money this Badge may be dispensed with.

IX. The whole Number of their Nobility, arrived to a proper Age of sitting in the Great Council, amounts to about thirteen hundred; but one half of them being generally abroad in Civil or Military Employments, this Assembly scarce ever exceeds six or seven hundred; yet these seem too many for the Management of those Matters of Consequence that come before them, which hath given Birth to this Proverb, *Troppo Teste, troppo Feste, troppo Tempeste*; Too many Heads, too many Festivals, and too many Tempests. And as the first is meant of the Great Council of *Venice*, so their Festivals are so frequent, that they exceed those observed in *France* by one third Part, and they are commonly pester'd with Storms in the Summer.

X. The Golden Book I have mentioned, contains a Catalogue of all the Noblemen in their State; and as all the Brothers of every Family have an equal Share in

in the Nobility, so their Names are registred in this Book as soon as they are born. Upon this Occasion I cannot forbear to add something in Reference of what has been told you against the Account I gave you of the Haughtiness of the *Venetian* Nobles: There is scarce any Body that is acquainted at *Venice*, but will easily agree with me, that the *Venetian* Nobles are not only extremely conceited of their Nobility, but also very difficult of Access to Strangers of great Note; though the last may be attributed either to Custom, or rather to the Politicks of their Government: And though they are not very sparing of Salutations when they are walking at the *Broglio*, yet they always appear very reserved and proud in the Company of the Citizens; nay, they give and receive but few Visits among themselves. It must however be confessed, that in private Conversation, especially if their Interest be concerned, they will be as obliging as most Men, and will sometimes enter into a familiar Acquaintance with Strangers, provided both Sides be not of more than ordinary Quality, for this would have ill Consequences.

What I told you concerning the great Sleeves of the Noblemen, that they serve instead of a Basket at certain Times, was not a bare Jest; for I remember I saw once a good Sallad, and at another Time an excellent Cod's-tail, thus carried out of the Market. There are besides this, about two or three hundred *Barnabotes*, so call'd from a cheap Place in the City, where they live, (a Sort of poor Gentlemen, that serve for a Foil to the richer) who both beg about the Streets, and would be glad to earn a Penny in carrying home Provisions for other People. In the Summer these Noblemen have their Vests without Furrs, but the turning up on the Edges, remains always furr'd.

XI. It was not from my Ignorance of your Inclination, or rather Love to Painting, that made me guilty of that Negligence with which you upbraid me, in giving you so imperfect Account of those curious Pieces that are to be seen at *Venice*. However, in Obedience to your Desire, I shall endeavour in some Measure to supply that Defect, by adding some new Observations, though I am afraid my Memory will not furnish me with many.

There were formerly, in the Hall of the great Council, some Pictures done by *Gentil Bellini*, and *John* his Brother, which excelled the best Pieces of that Age, but they were consumed, with almost the whole Palace, in 1577. The same Histories were copied five Years after by *Frederick Zuccherò*, and set up again in the same Order in which they still remain. *Pordenone's* Pictures in *Fresco*, in the Cloyster of *St. Stephen*, are very much esteemed, as are likewise his *St. Sebastian* and *St. Roch*, at *St. John de Rialto*. *Pordenone* was an excellent Painter; his Designs are esteemed very judicious, and his Colours admirably well managed. He emulated *Titian*, and with some Degree of Success.

The *St. Peter Martyr* of *Titian*, is reputed to be one of the finest Pictures that ever was made, but it begins to be much defaced. The best Judges are charmed with this Piece, though it has lost all that Lustre which ravishes an unskilful Eye. They think they can never enough admire the Beauty and Richness of its colouring, and judicious Disposition of the Lights, the Roundness of the Figures, the Passion and Life that is observed in the Face, and Strength of Expression which reigns through the whole Piece. There are several other Pictures by the same Hand in the Churches, *St. Mark's* Palace, the Library, Convents and Fraternities. There are also some Pieces by *Schiavoni* in the Library, which have been frequently taken for *Titian's*. *Horace Vecelli* his Son has almost equal'd him in some Works, and the Picture in the Hall of the great Council, which represents the Battle fought by the *Romans* against the Troops of *Frederick*, is the Work of *Horace*, though it is commonly ascribed to his Father.

The Wedding Dinner at *Cana* by *Paul Veronese*, in the Refectory of the *Benedictine* Monks in the Isle of *St. George*, is esteemed to be the Master-piece of that Painter, who, you know, is famous for the same Excellencies that we admire in *Titian*. His Works are

particularly remarkable for the beautiful Disposition of the Figures, judicious Choice of Colours, a sublime Genius, vast Ideas, the greatest Easiness imaginable, and the most charming Variety. This Piece takes up all the bottom Wall of the Refectory, it is two and thirty Foot broad, and contains one hundred and twenty-five Figures.

In the Church of *St. Sebastian*, the Feast of *Simon the Leper* is one of the most celebrated Pieces of the same Artist. There are also three other Pictures by the same Hand in the Arch of *St. Mark's* Library, which, if my Memory do not deceive me, represent Geometry, Arithmetick, and the Glory which is acquired by Learning.

The *Paradise*, by *Tintoret*, in the Hall of the Great Council, is a famous Piece. It was said of *Tintoret*, that he united the Designs of *Michael Angelo* with the Colouring of *Titian*, which certainly was a very noble Character. Besides, he had the most fruitful Invention, and at the same Time the quickest Hand of the Age. A Painter who was with me in the Fraternity, or, as they call it at *Venice*, the School of *St. Roch*, made me observe with Admiration that rare Picture which *Tintoret* finished almost in a Moment, while *Paul Veronese*, *Salviati*, and *Frederick Zuccherò*, his Competitors in the same Work, were still busy upon the rough Draught which was to be presented to those who designed to employ them. I have seen several Pieces by the same Hand in the above-mentioned School, at *St. Maria dell' Oro*, at *St. Mark's* School, and other Places. There are some of *Bassani's* Works at *St. Mary major*. *Schiavoni's* Pictures in the Library are, I think, Emblems of *Valour*, *Sovereignty*, and *Sanctity*.

XII. I told you, if I remember right, that their Gondola's or Boats have black Tilts; I will add, that nobody (except the Doge) can be attended by Servants in Liveries; tho' the Ladies of Noblemen, during the first and second Years of their Marriage, are allowed to give what Colours they like best to their Gondoliers or Boatmen, and to use Jewels; but that Time being once expired, this Courtesy ceases, and they are not permitted to appear in Jewels unless on some high Festivals, and during the Carnival; whence it is that the rich Courtezans rather pay the Fine than debar themselves of these Ornaments. What you heard affirmed by some, that the *Venetian* Ladies enjoy a greater Share of Liberty than those of *England* or *France*, seems to me to be the Effect of a fond Spirit of Contradiction; for, supposing the Ladies of *Venice* have the Liberty in Carnival-time to go to Plays, Opera's, Fairs, or Gaming-houses, in Disguise, what Advantages can they reap from the Diversion of so short a Time, especially considering that all this while they are constantly attended by their Husband's Spies, who cannot but put them in Mind of the Slavery they are to undergo for ten or eleven Months in the Year? What Comparison is there between this Confinement and the entire Liberty the *English* and *French* Ladies enjoy in their Walks, Visits, Meetings, and Divertisements, without the least Restraint?

XIII. The young Noblemen are permitted to be as splendid in their gold and silver Laces, Stuffs, Plumes, and Embroideries, as they think fit: They put on the Gown at fifteen Years of Age, tho' they have no Vote in the great Council till they are five and twenty. They have also the Liberty of wearing what Habits they like best on the Continent, the Jurisdiction of the Tribunal that regulates Habits, not extending beyond the *Laguna's*.

XIV. When we were viewing the Treasury, no Mention was made by our Guides of *St. Mark's* Thumb, and that he was dismembered to prevent his being a Priest; but they were not so forgetful as not to tell us the Tradition of the Loss of his Ring, and how it was recover'd, and the Story runs thus: In the Year 1239, three Men came to a Gondolier in very tempestuous Weather, and having constrained him to carry them two Miles to the *Lido*, they found there a whole Shipful of Devils, that were busied in raising a Tempest by their Enchantments; but these three Men had no sooner given

given them a severe Reprimand, but the Tempest ceased. The first of these three Persons made the Boatman carry him back to the Church of St. *Nicholas*, the second to that of St. *George*, and the third to that of St. *Mark*; but the last, instead of paying the Boatman, gave him a Ring, ordering him to carry it to the Senate, and told him at the same time, that he who went on shore first was St. *Nicholas* himself, the second St. *George*, and that he was St. *Mark*. The Boatman, astonish'd at his Words, related the whole Matter to all the Senate, who, receiving the Ring, bestowed a considerable Reward upon him.

XV. They suffer *Protestants* to be buried in their Churches; the Reason is, because they take no Notice of them here as *Protestants*, all such as are neither *Jews*, *Greeks*, nor *Armenians*, being reputed *Roman Catholics*.

XVI. Your Admirer of the Palaces of *Venice* hath mistaken my Aim, because I did not deny that there were some stately Palaces there, and made particular Mention of several of them; but notwithstanding all this, what I said of the *Italian* Palaces in general, is

true beyond Contradiction: And because you own that he hath no Skill in Architecture, you will do very well not to rely too far upon his Judgment in this Point, any more than in what you have been informed concerning the Machines in the *Venetian Opera's*, and that *Venice* is, for Neatness, to be compared to *Holland*.

XVII. I told you, that there is a Passage by Water to all the Houses in *Venice*; I am well satisfied you did not take this Part absolutely according to the literal Sense, because there may be perhaps about five or six in a thousand that can't be approach'd but by Land, and in this I speak the outside; for what your young Traveller has assur'd you, that there was no Canal within five hundred Paces of the House where he lodg'd, and that there are twenty such Places in the City, is a Contradiction in itself, for at this Rate, how many Spaces of a Mile in Diameter must there be in *Venice*? And whether this is possible, I leave to your own Determination, if you will carefully examine the Platform of this City, which I send you, and is founded upon unquestionable Evidence.

SECTION III.

The TRAVELS of Mr. MAXIMILIAN MISSON continued, from his Arrival at Rome, to his Departure out of Italy; with Observations and Remarks.

1. *A succinct Description of Rome; a more particular Account of the famous Church of St. Peter; a View of the Palace and Library of the Vatican; with various Remarks and Observations.*
2. *The Author's Visit to Queen Christina of Sweden; the Description of Rome resum'd, with a Multitude of curious Particulars resulting from the Author's Observations while resident in that City and in its Neighbourhood.*
3. *The Solution of various Queries relating to the Antiquities of Rome; the Story of Pope Joan; an Account of Albano, and other Places in the Vicinity of that great City.*
4. *Some farther Remarks on the History of the Female Pope; the State of the Greeks, Armenians, and Jews, at Rome; together with additional Remarks on the Antiquities and Curiosities there and thereabouts.*
5. *The Author's Travels resum'd; an Account of Viterbo, Siena, Pisa, Leghorn, Lucca, and several other Places.*
6. *The noble City of Florence describ'd, the Great Duke's Palace there, the most remarkable Churches, and Monuments in them; with other curious and entertaining Particulars.*
7. *A View of the Country between Florence and Bologna, the last mentioned City described, and the most remarkable Places therein; and the Author's Journey from thence to Modena.*
8. *An Account of Reggio, Parma, Placentia, Cremona, Mantua, Brescia, Bergamo, and several other Places.*
9. *The large and famous City of Milan described, with a distinct View of its principal Edifices; an Account of Pavia, and other Places.*
10. *The Author's Journey from Pavia to Genoa; Historical Observations on that City and Republick.*
11. *A Description of Alexandria, Casal, Turin, and of the Country of Piedmont.*
12. *Some Observations of the Author in relation to Italy in general.*
13. *Remarks upon the two foregoing Sections; with an Account of some of the principal Mistakes, charged upon our Author by later Writers, and those Charges impartially discuss'd.*

I. **W**E will now come to *Rome*, which being thoroughly describ'd by several Persons of Note, who had all possible Opportunities of giving the best Account of it, I will pretend to no more, than to give you a general Idea of this great and famous City, together with what Observations I was able to make upon such Matters as were then altogether new, or but little known, and have Relation to your Questions. I need not tell you, that before the Reign of *Servius Tullius* it comprehended no more than seven Hills, whence it got the Name of *Septicollis*, or *Seven Hills*; but being much enlarg'd since, contains no less than twelve; viz. *Monte Capitolino*, *Palatino*, *Aventino*, *Celio*, *Esquilino*, *Viminato*, *Quirinale* or *Monte Cavallo*, *Janiculo*, *Pincio*, *Vaticano*, *Citorio*, and *Giordano*; however, you must not imagine them to be huge Mountains, but only little Hills, the Ascent whereof is scarce discernable.

Vopiscus (who flourish'd under *Dioclesian*) would make us believe, that the Walls of *Rome*, built by *Aurelian*, were no less than fifty Miles in Compass; but there must be an enormous Error in this, seeing that the present Walls of *Rome* are very near the same with

those *Aurelian* erected, and yet are not above thirteen Miles in Circumference, this being the largest Compass *Rome* ever had, though its Suburbs perhaps extended far beyond them on all Sides. But of what is enclos'd within the Walls, there is not above one third Part inhabited at present, the rest, (viz. to the South and East) being either *Gardens* or *Ruins*. Most of the Houses are of Brick, and plaister'd over on the Outside; the Roofs are ridg'd, but the Angle on the Top is very obtuse; and some are built, as we call it in *France*, *à la Mansarde*. Neither the Houses nor Streets are very beautiful, and the Pavements narrow and not very neat.

Which Way soever you approach *Rome*, you may discover St. *Peter's* Cathedral above all the other Spires and the Tops of the highest Edifices. The Course of the *Tyber* (which makes a little Island here) is from North to South: That Part on the right Side, called *Trastavera*, is not above the sixth Part of the other. The first Prospect of this great City does not surprize the Traveller, but the longer he stays in it, the more frequent Opportunities he will meet with of observing something worth his Attention, in ruminating upon the Remnants of the Spoils of the Universe, which made

once the *Porphyries*, *Granites*, and the purest *Oriental Marble*, to be more common at *Rome*, than the Bricks or Stones out of the neighbouring Quarries; the *Collosses*, *Temples*, *Palaces*, *Amphitheatres*, *Arches*, *Baths*, *Cirques*, *Columns*, *Fountains*, *Aquæducts*, *Obelisks*, *Mausoleums*, and other magnificent Structures, being for the most Part of these precious Materials, which tho' buried now in Ruins, yet still retain some Remains of their ancient Splendor.

The Country about *Rome*, for ten or twelve Miles, is flat, but uneven, ill peopled, unhealthy, and barren in many Places. As to the Number of the Inhabitants, they are generally computed to be two hundred thousand; but I will not be answerable for this Computation, these Things being founded upon uncertain Conjectures, so that even the Passages in the ancient *Roman* Authors are very hard to be reconcil'd in this Point, some telling us of Three millions one thousand and thirty seven, under the Reign of *Augustus*, others of four or five Millions, whereas *Suetonius* computes no more than One million and six hundred thousand under *Tiberius*, the immediate Successor of *Augustus*; and I remember that *Werner Rookwink*, in his *Fasciculus Temporum*, does not hesitate at making them amount to Twenty seven millions and eighty thousand. I suppose he included all such as had the Privilege of *Roman Citizens* in his Account.

Two Days after our Return from *Naples*, we happen'd to see the Ceremony of making either Wives or Nuns, of three hundred and fifty Maidens, the Fund for which was rais'd by a Club of sixty charitable Gentlemen. This Ceremony is perform'd every Year on the Festival of the *Annunciation*, when the Pope and the sacred College meeting at the *Minerva*, the Pope, (or in his Absence some Cardinal) says High Mass, and all the Girls confess, and receive the Sacrament, being cloath'd in white Serge, with Veils over their Heads, having only one Opening for their Sight; they enter thus two and two into the Choir, where prostrating themselves at the Pope's or Cardinal's Feet who officiates, near whom stands an Officer with a Bason full of little white Bags, each of which contains either a Bill of fifty Crowns for such Maidens as chuse Marriage, or a Bill of an hundred Crowns for those that are willing to embrace a religious Life. Each Maiden having declared her Choice, receives her Bag hanging on a little String, with a Kiss, and so goes off to make Room for another. Those that have chosen a religious Life are crown'd with Garlands of Flowers, and have the first Place assigned them in the Procession. At that Time there were no more than thirty two of these among the three hundred and fifty.

Having taken a full View of the *Minerva*, (where we saw the famous Statue of Christ embracing the Cross, the Work of *Michael Angelo*) we went to the beautiful *Borgese* Palace, the Portico of which is supported by ninety six antique Pillars of *Egyptian Granite*. In the lower Rooms alone are no less than seventeen hundred original Pictures, by the best Masters of *Europe*, among which, that of *Venus* blindfolding *Cupid*, done by *Titian*, far excels the rest. The Picture of *Paul V.* (who was of this Family) in most exquisite *Mosaick* Work, is reputed to contain above a Million of Pieces, which however I cannot find by my Calculation. We also saw here a Crucifix of the same Bigness with that shewn us by the *Carthusians* at *Naples*, and they assured us that this is that celebrated Original of *Michael Angelo*. The Name of *Rotundo* was given to the *Pantheon* by common People, by reason of its circular Figure. *Boniface IV.* dedicated it to the *Virgin* and all the *Martyrs*, whence he call'd it *St. Maria ad Martyres*: And another Pope would needs comprize all the *Saints* with the *Martyrs*. The Origin of its ancient Name is likewise somewhat doubtful, some deriving the Etymology of the *Pantheon* and ascribing its Convexity to the Resemblance of the Heavens; others alledging, that it was dedicated to *Jupiter*, and *Cybele* the Mother of the Gods, others, to *Jupiter*, and all the Gods. This last Opinion seems to be founded upon the many Niches which are seen in the Inside, and were (question-

less) full of Idols: But if we may believe *Varro*, who tells us of no less than thirty thousand Gods worshipp'd at *Rome*; and the Philosopher *Bruxillus*, who, in his Speech to the Senate, makes them amount to no less than two hundred and eighty thousand; there are not near Niches enough to accommodate all these Deities.

This Temple, though despoiled of its best Ornaments, yet is one of the fairest and most entire Pieces of Antiquity in *Italy*. The Columns of the Portico of this Church are all of one Piece of *Granite*, of the *Corinthian* Order, not equally big, but, according to the most exact Measure I could take, they were fifteen Inches in Compass, some few Inches less or more: That Piece of *Granite*, in which the Opening of the great Gate is cut, is forty Foot high, and near twenty broad. The two Lions under the Portico of the *Pantheon* stood formerly on the Front of the Temple of *Isis*. *La Guillitiere* (who is follow'd by *Meursius*) would needs persuade us, that the *Pantheon* of *Athens* surpasses that of *Rome* in Magnificence, having mistaken the Temple of *Minerva* for the *Pantheon*, into which Error they have been misled by the erroneous Account of *Theodosius Zygomala*, in his Letter to *Martin Crusius*; or perhaps by the mistaken Name of *Paribenion*, which *Pausanias* gives it.

It being not my present Purpose to give you a particular Description of Churches, I will only communicate to you my Observations upon them. That of *St. Peter* has the Reputation of the most magnificent and largest Church in the Universe: He that is willing to give a true Judgment of it, must not be sparing of his Pains in viewing it frequently, as well on the Top into the very Ball, as the Church under Ground. You no sooner enter this great Structure, but your Eyes are surprized with the incomparable Proportions of the nicest Pieces of Architecture, and a most exact and unparallel'd Order, rather to be admired than described: And since you are pleas'd to rely upon my Fidelity and Judgment, I will send you the principal Dimensions of this Structure, as I have taken them with the Assistance of very skilful Persons, more than once.

1. The Length of the Church, taken on the Outside, including the whole Portico and the Thickness of the Walls, 722 *Engl. Feet*.
2. The Length of the Church within, not reckoning either the Portico or the Thickness of the Walls, 594 *Feet*.
3. The Length of the Cross of the Church on the Outside, 490 *Feet*.
4. The Length of the said Cross within, 438 *Feet*.
5. The Breadth of the Body of the Church, 86 *Feet*, 8 *Inches*.
6. The perpendicular Height of the Body of the Church, 144 *Feet*.
7. The Bigness or outward Circumference of the Dome, 620 *Feet*.
8. The Diameter of the Dome within, 143 *Feet*.
9. The Breadth of the Front of the Church, 400 *Feet*.
10. The compleat Height of the Church, from the Floor to the Top of the Cross, which is over the Ball, 432 *Feet*.
11. The Diameter of the Ball, 8 *Feet*, 4 *Inches*.
12. The Height of the Statues on the Cornish of the second Order of the Front, 18 *Feet*.

Michael Angelo and *Bramante* were the two chief Architects of this noble and majestic Structure, the first under Pope *Paul III.* the second under *Julius II.* The Chair of *St. Peter* is supported by the four Doctors of the Church: The Statues of Brass gilt, and the Tombs of *Urban VIII.*, *Paul III.*, *Alexander VII.*, and the Countess *Maud*, are most magnificent and curious Pieces of Workmanship, worthy of the Edifice in which they are placed.

In short, where-ever you turn your Eyes, you meet with nothing but gilt Work, excellent Pictures, and Statues of Brass and Marble, and these disposed in so excellent an Order, that their Multitude does not cause the least Confusion. The Inside of the Cupola is of *Mosaick* Work, and the Arch of the Nave of a certain fine Clay, with Compartments of raised Work gilt; all the Pilasters are designed to be over-cast with the same Matter, as well as the remaining Part of the Inside of the Church. The High Altar stands in the Midst of the Cross, directly under the Dome, the Pavilion being supported by four wreath'd Pillars of Brass,

Habits of the Women of STRASBURG

Brass, beautified with Foliages and Bees, the Arms of Pope Urban VIII. On each of these Columns stands a Brass Angel seventeen Foot high, and on the Cornish you see Children playing and walking up and down: The whole Height amounts to ninety Feet. Under this Altar is a Pair of Stairs leading to the Chapel under Ground, where St. Peter's Body is kept, and to some other sacred subterraneous Places belonging to this Church. At the Entrance down these Stairs I saw a Bull engraven in Marble, forbidding any Woman to enter there, except on *Whitsun-Monday*, when Men are prohibited to enter, under Pain of being anathematized: The Place being very dark, we were told by the Sexton, that this Prohibition was occasioned by an amorous Intrigue. An Indulgence of seven Years is granted for every Step of the Stairs leading to St. Peter's Chapel, to all such as descend them with Devotion.

The double Row of Pillars (286 in Number) which surround the Great Place before the Church, and lead to the same by a double Portico on each Side, is a surprising Piece to behold. The two magnificent Fountains in this Place are highly worth a curious Traveller's Observation, as well as the Obelisk that stands in the middle of one entire Piece of Granite seventy eight Foot high, with either the Pedestal or Cross placed on the Top of it by *Sixtus V.* when he set up this ancient Monument here, which in 1586. weighed 956,148 Pounds without the Base. It is a general (but erroneous) Opinion, That the Globe of Brass, which was there formerly, contain'd the Ashes of *Augustus*; but *Dominicus Fontana*, the famous Architect, upon Examination, found it not fit for that Use, but to be only an Ornament to this Obelisk, which was consecrated to *Augustus* and *Tiberius*; as is apparent from the Inscription, which remains still undefaced:

*Divo Casari, divi Julii F. Augusto
Tiberio Casari D. Aug. F. Augusto sacrum.*

The Palace of the *Vatican*, so call'd from the God *Vaticanus*, who gave his *Vaticinia* or Oracles here, is conveniently seated for the Pope near St. Peter's Church, but by its too near Neighbourhood takes off Abundance of the Prospect, as well as some other Edifices near it. This Palace is not one entire regular Structure, but a Composition of many beautiful Pieces, said to contain 12500 Chambers, Halls and Closets, which may in some Measure be discover'd in the Model which is shewed of it in Wood.

The *Belvedere*, belonging to the *Vatican*, received its Name from its delightful Prospect: We were so surpriz'd with the most excellent Pieces of *Raphael*, *Michael Angelo*, *Julius Romanus*, *Pinturiccio*, *Rolidorus*, *John d'Udina*, *Daniel Volterra*, and other great Masters, and they found us so much Diversion, that we neglected to take Notice of all the other Perfections of this beautiful Edifice. I have often, with a great deal of Delight, seen the most curious Persons in *Rome* gaze with great Amazement upon the History of *Attila*, (the Work of the incomparable *Raphael*, who was born 1483, and died when he was thirty seven Years old) and admire its Beauty and Perfections, nay, even put their Wits on the Rack to find out Expressions suitable to the several Excellencies of this marvellous Piece; when after all, some nice Judges have, and not without very good Reason, found Fault with the Dress in which *Raphael* has thought fit to represent *Leo I.* and two Cardinals, being after the same Manner as they are worn by them now-a-days; whereas it is evident, from the History of those Times, that Pope *Constantine*, and the other Popes, (two hundred and fifty Years after *Leo I.*) wore plain Camblet Garments. Thus *Titian* hath painted *Rosaries* at the Girdles of the Two Disciples that met Christ in his Way to *Emaus*; and another celebrated Painter, *Rosso*, has represented Monks in their Habits as Guests at the *Virgins Weddings*. I remember that at *Soest*, a Town of *Westphalia*, there is a Picture of our Saviour's Last Supper painted in a Glass Window of a Church, wherein that Painter has put a Gammon of Bacon instead

of the *Paschal Lamb*. Nay, even *Michael Angelo*, in his most celebrated Piece of the Last Judgment, has introduced many indecent Postures, Angels without Wings; nay, even the Ferryman *Charon* with his Boat full of Souls.

In the Hall where the Pope gives Audience to Ambassadors, are three large Pictures representing the History of the Admiral *Coligni*; the first shews you the Admiral as he was carried to his House, after his being wounded by the Russian *Morevel*, (fifty thousand Crowns were set upon his Head) at the Bottom whereof you read this Inscription:

*Gasper Colignius Ammiralius, accepto vulnere domum
refertur. Greg. XIII. Pontif. Max. 1572. i. e.
The Admiral Gasper Coligni carried home wounded.*

The second represents him murder'd in his own House, with his Son-in-law *Teligny* and others, with this Motto underneath:

*Cades Coligni & Sociorum ejus.
i. e. The Slaughter of Coligni and his Adherents.*

In the third the News of this Murder is brought to the King, who shews a Satisfaction in his Countenance, with this Inscription:

*Rex Coligni necem probat:
i. e. The King approves of the Slaughter of Coligni.*

Besides these Trophies of so barbarous an Action, the same Pope caused Medals to be coin'd with this Inscription, *Gregorius XIII. Pont. Max. an. 1.* and on the Reverse an Angel with a Cross in one Hand, and a Sword (with which he seems to thrust) in the other, with this Inscription, *Ugonottorum Strages 1572, i. e. The Slaughter of the Hugonotts 1572.* I obtained one of these Medals, though they are become very rare of late Years.

Of the Gardens of *Belvedere*, and the Statues there, I will put you in Mind only of the invaluable Marble Statue (of one entire Stone) of *Laocoon*, the Work of *Agesander*, *Polydorus* and *Athenadorus*, three Grecian Sculptors; of the Trunk without Head, Arms or Legs, with the Sculptor's Name engraven on the Pedestal,

*ΑΠΟΛΛΑΝΙΟΣ ΝΗΣΤΟΡΟΣ ΑΘΗΝΑΙΟΣ. i. e.
Apollonius, the Son of Nestor, an Athenian.*

The *Vatican Library* owes much of its Contents to that of *Hydelbergh*, and of the Duke of *Urbino*; the Number of Books it contains is so variously reported, that I thought it best to determine nothing upon that Head. The Pictures represent for the most Part the Sciences, Councils, noted Libraries, Inventors of Letters, and some Pieces relating to the Life of *Sixtus V.* The old MS. of *Virgil* is in Quarto, but of greater Breadth than Length, in capital Letters, without Points, or any other Distinction of Words. The *Gothick Letters*, as well as the Miniature, shew it not to be written in the first Ages of Antiquity, as some would have it. Among the Manuscripts of the latter Ages, I took Notice of some Letters written to and by Cardinals, wherein they give one another no other Title than Mr. *Peter* and Mr. *Julius*. They also shew'd us a Volume in Quarto, of the Thickness of a Finger, containing Letters from King *Henry VIII.* to *Anne Bullen*. I also took particular Notice of the *German Bible* which you mention'd, and, as they say, translated by *Luther*, and written with his own Hand; which might have some Probability of Truth, were it not that a certain extravagant Prayer, written apparently with the same Hand, at the End of it, did destroy it; the Words are thus in the Original:

*O God, durch deine Gute
Beschere uns Kleider and Hute,
Auch Mäntel and Röcke
Fette Kälber and Böcke,*

Oxen,

Oxen, Schafa and Binder,
Viele Weiber, wenig Kinder;
Slechte, Spaise and Trank
Machet cikem das Yabr lang.

- i. e. O God, thro' thy Mercy, grant us Clothes and Hats, Cloaks and Gowns, fat Calves and Goats, Oxen, Sheep and Bulls, many Wives, and few Children: Indifferent Meat and Drink makes the Year pass away very slowly.

In the Arsenal, they tell you, the Pope preserves constantly Arms for forty thousand Foot and twenty thousand Horse; but I am sure there were not half enough for that Number, and those very indifferent. I told you that the Pope may, with great Conveniency, descend from the Vatican to St. Peter's Church; and on the other Side he may, with the same Ease, make a secret Retreat from thence into the Castle of St. Angelo, through a Gallery built by Alexander VI. It was Urban VIII. fortified it with four Bastions, unto which he gave the Names of the four Evangelists. In the Chapel you see a Picture representing Pope Gregory I. prostrated at the Feet of an Angel that appear'd to him on the Top of the *Moles Adriani*, or *Adrian's Mausoleum*, and sheathing his Sword, foretold the Pope the Deliverance of the City of Rome from a most violent Pestilence; whence this Place received the Name of St. Angelo.

In the little Arsenal belonging to this Castle, we saw, besides the Papal Triple Crown, an Armoury full of prohibited Arms, taken, for the most Part, from such unfortunate Persons as were executed on that Account. Among the rest, they shew'd us the Pistols of *Ranuccio Farnese*, Son and Heir of *Alexander Farnese*, Duke of *Parma* and Governor of the *Netherlands*, who usually carrying Pistols about him, contrary to the express Prohibition of *Sixtus V.* who being a rigorous Person, and of a Disposition very forward to maintain his Authority, order'd *Ranuccio* to be seized in one of the Chambers of the Palace, as he was going to desire Audience of his Holiness, and to be carried Prisoner to the Castle of St. Angelo. Cardinal *Farnese*, *Ranuccio's* Uncle, left no Stone unturn'd to procure his Liberty, but in vain; for one Evening, about Ten o'Clock, whilst the Cardinal was soliciting his Release with the Pope, he sent his Orders to the Governor of the Castle of St. Angelo, to have the Prince *Ranuccio* beheaded: This done, the Pope not questioning but that his Orders had been executed immediately, and willing to make a Shew of obliging the Cardinal, gave him a new Order about Eleven a Clock, enjoining the Governor of the Castle to set *Ranuccio* at Liberty. The Cardinal, who knew nothing of the first Order, made all the Haste he could thither, but was highly surpriz'd when he found his Nephew preparing himself for present Death in the Arms of a Confessor, the only Reason that had delay'd his Execution; but the Cardinal, overjoy'd to have nick'd the Time so exactly, and producing his new Order to the Governor, had his Nephew put into his Hands, who, by his Uncle's Procurement, took Post immediately, and so escaped the Hands of his Executioners.

During our Stay here, there was a certain Prisoner of Note kept in the Castle of St. Angelo, named *Borri*, a Gentleman of *Milan*, and a good Physician and Chymist, accused of Heresy in receiving the Errors of the *Collyridians* in the fourth Age, who paid a Kind of Adoration to the *Virgin*, nay, some say that he made her a fourth Person in the Godhead: However, he has the Liberty of visiting some of his Patients of the best Quality in the City, being supposed not to be in his right Wits at certain Times.

I am not well able to resolve your Question concerning Dr. *Molinos*, for though I have seen those Propositions that are said to be his, yet will I not presume to give my Judgment of them, unless I could hear *Molinos* himself; however, as they are published, some of them are dangerous, others ambiguous, several of them indifferent, and many very reasonable and orthodox. As to his Person, he has a very bad Character, being reputed a Villain and lewd Fellow, who, by his pre-

tended *Insensibility* and *Extasy*, has deluded a great Number of Nuns, of which they tell you a thousand Stories, which have procured him his ignominious Confinement to a Cell for his Life. I have however observed, that his most inveterate Enemies have a much better Opinion of his Followers, who have embraced *Quietism*, and other Opinions you have heard so often attributed to *Molinos*.

2. The Queen of Sweden, *Christina Vasa*, is a Princess about sixty Years of Age, of a low Stature, and very fat; her Complexion, Voice, and Countenance are masculine, with a great Nose, large and blue Eyes, and yellow Eye-brows; her double Chin is strewn'd with some few long Hairs, and her under Lip sticks out a little; her Hair is of a light Chestnut Colour, of a hand-breadth long, powder'd and curl'd up in Puffs, without any other Head-dress; her Air is very pleasing, and seldom without a Smile. As for her Habit, imagine a Man's *Justaucor* of black Sattin reaching to the Knees, and button'd quite down; a very short black Petticoat, which plainly discovers a Man's Shoe; a Knot of black Ribbon instead of a Neckcloth, and a Girdle above the *Justaucor*, which supports the Belly. The Queen having left us, we took a View of the Palace *Riari* her Residence, where we met with many ancient Pieces; the most exquisite of them are, the *Augustus*, of the rarest transparent oriental Alabaster, but the Head and Feet are modern, and of Brass gilt; sixteen ancient Columns of *Giallo*, with two Pillars of transparent oriental Alabaster seven Foot high; the *Venus*, whose mangled Legs are so admirably supplied by new Pieces, that the Joining is not to be perceived; the *Castor* and *Pollux* on each Side of their Mother *Leda*, all of one Piece of Marble; the Sons are bigger than the Mother: The Altar of *Bacchus*, of beautiful white Marble, is adorn'd with most exquisite Sculptures in *Basso relievo*. Old *Silenus* going home drunk from the Feast of his Foster-child, supported by two Men; the *Bacchantes* appearing in the Posture of Mad-women. In another Place we saw a Goat flea'd alive, for cropping the Vines; and a Boar, which is wash'd in order to be sacrificed.

Among the Pictures, the Piece of *Correggio*, representing the Intrigue of *Jupiter* with *Leda* in the Shape of a Swan, is exceeding fine; as are the *Virgin*, with the Infant *Jesus*; the little St. *John*, by *Raphael*; and *Danae*, by *Carraccio*; besides several other rare Pieces of *Titian*, *Paul Veronese*, *Guido*, and other great Masters. It would be much beyond the Compass of a moderate Treatise to enter upon a Description of all the rare Medals to be seen in this Palace, I will therefore content myself with mentioning only the best: The *Oibo*, of Brass, an *Egyptian* Piece, with *Serapis* on the Reverse of it; the *Pertinax*, a small *Latin* Medal, on the Reverse whereof you see that Emperor offering a Sacrifice; the *Antoninus Pius*, another *Latin* Medal, having on the Reverse *Victory* and *Plenty* offering him Fruit; another little Medal of the same *Antonin*, called by Mr. *Bellori*, *l'Anno Nuovo*, or, the New Year, from the four Letters *A. N. F. F.* which he interprets *Annum Novum*, *Faustum*, *Felicem*; and a Medal of *Nero*, with *Hercules* on the Reverse; the *Cicero*, of Onyx, the Head white on a brown Ground, a most curious Piece. But we will pass from hence to some other Curiosities: In St. *Sabina's* Church, on Mount *Aventine*, we saw a great Stone, which, they tell you, the Devil of *Colen* hurl'd down from the Top of an high arch'd Roof, to knock out St. *Dominick's* Brains, after he had been disappointed in his Design of beating down the Chapel of the Three Kings.

The Crucifix in St. *Paul's* Church, which spoke to St. *Bridget*, was the Work of P. *Cavallini*; it was made in the Year 1360; besides which, they have several other talking Images at Rome, as, the Crucifix of St. *Mary Transportin's*, which spoke several Times to St. *Peter* and St. *Paul*; our Lady of St. *Cosmo* and *Damian*, (formerly the Temple of *Remus* and *Romulus*) which chid St. *Gregory* for passing by without saluting her: They shew you certain *Latin* Verses (attributed by some to the Abbot *Joachim*, by others to *Beda*) containing the

the whole Dialogue betwixt the Image and the Saint : Another at *St. Mary's the Empress*, and one more in *St. Gregory's* on Mount *Celio*, have now and then given some Proofs of their Faculty of speaking, as divers others (if you will believe them) have not been sparing with their Tears ; as at *St. Mary's of Peace*, *St. Mary's in Valicella*, and another *St. Mary's* call'd *del Pianto*, and that in the Church of the *Holy Ghost*, has shed whole Floods of Tears, as these credulous People believe. The Image of Christ at *St. Sylvester's* in the *Campo Martio*, done by himself, as they say, and sent by him to King *Abagarus*, is the rarest Picture in *Rome*. *Eusebius* mentions the Letter pass'd between Christ and *Abagarus*, but says nothing of the Image, the Story being of much later Date.

This City abounds also in Variety of Relicks ; as, the Ark of the Covenant, *Moses* and *Aaron's* Rods, and the Fountain of Christ preserved at *St. John Lateran* ; a Piece of the same Money *Judas* received, his Lanthorn is also shewn at *St. Dennis* in *France*, and the Cross of the *Good-Thief*, are shewn at the Church of the *Holy Cross* of *Jerusalem*, with the Tail of *Balaam's* Ass and *St. Paul's* Thorn ; *St. Rock's* Bowels are kept at *St. Marcell's*. The Beams of the Star that conducted the Women have been evaporated of late Years, as well as the Sound of the *Jerusalem* Bells ; but *Moses's* Horns, it seems, are still preserved at *Genoa*. The Navel of Christ is preserved at *St. Maria del Popolo*, concerning the Foundation of which they tell you the following Story : In the very same Place stood a large Walnut-tree, on the Branches of which used to perch a certain Troop of Devils, who guarded the Ashes of *Nero* in an Urn near it : This being very injurious to the Neighbourhood, they prevailed with Pope *Paschal II.* to rid them of this hellish Company : After some Time spent in Fasting and Prayer, it was revealed to him, that he should pull up the Tree by the Root, and build a Church ; and this being done accordingly, he gave it the Name of *St. Mary of the People*.

In the Church of *St. Giacomo Scoffa-Cavalli*, or *St. James Shake-horses*, they shew the Stone, on the Altar of the Presentation, on which Christ was circumcised, with the Impression made by one of his Heels upon the Marble ; as also another Marble Table on *St. Anne's* Altar, on which *Abraham* intended to sacrifice his Son : These Relicks, they say, were sent by the Empress *Helena*, to be kept in *St. Peter's* Church ; but the Waggon was no sooner come near *St. James's* Church, but the Horses stop'd ; so that the Drivers not being able to make them go one Step farther, some Mystery was supposed to be hidden in this unaccountable Accident ; and it being consider'd at last, that *St. Paul* call'd *St. James*, as well as *St. Peter*, the Pillar of the Church, they resolved to leave them at *St. James's*, and to preserve the Memory of the Miracle, gave that Saint the Name of *Scoffa-Cavalli*, or *Shake-horses*.

You may easily imagine, that my Curiosity might lead me to hear some of their Preachers, who, generally speaking, express themselves more in fantastical Gestures, wry Mouths, and odd-composed Faces, than in their Arguments, or a fine Disposition of Words, serving more for Diversion than Instruction. I must farther tell you, that each Order has its peculiar Way of preaching ; the *Jesuits* declaim very well, without those Gestures and Motions the rest are guilty of, but their Style is extravagant. The *Capuchins* thunder out nothing but Hell and Destruction, and make a hideous Noise ; whence it is that a certain *Italian* Author says pleasantly, That when a *Capuchin* preaches, the Dogs run out of the Church. In short, their Discourse has neither Strength nor Gravity, a confused Noise and Heat, without Sense or Reason. I remember I heard once a *Carmelite* preaching before the Penitent Whores of the *Holy Cross*, concerning *Mary Magdalen*, who spent at least a Quarter of an Hour in representing all her Features to the greatest Nicety, not like a Preacher, but like a Painter.

The Question you put to me, Whether there are more Courtesans at *Rome* or *Venice*, I am not able to answer ; for though I see not so many here as at *Venice*,

I have it from credible Persons, that their Number is almost infinite. *Sixtus V.* endeavour'd to root out this Evil ; but after he had done all he could with Banishments and otherwise, was forced to recal them again, as *Sixtus IV.* did before, to prevent, as they say, greater Disorders. Upon this Occasion I cannot but remember an ancient Picture of a Wedding at the *Aldobrandin* Palace. This is a Piece of Frize, brought hither with the same Part of the Wall on which it is painted, being highly valuable both for its Antiquity and Workmanship. I need not tell you, that the Marriage Ceremonies were very different among the *Romans*, the Bride being seated sometimes upon a Sheep's Fleece, sometimes on a Figure of the God *Priapus*, sometimes in another Posture. In this Picture she is seated on the Bed-side, her Head hanging down with an Air of Coyness, whilst a Matron sitting by her puts her in Mind, with a smiling Countenance, of her Duty. The Bridegroom, in an odd Dress, with an Ivy Garland on his Head, is seated near the Bed, waiting, with an eager Impatience express'd in his Looks, for the Compliance of his whining Spouse, whilst divers Maids are busy in preparing Baths and sweet-scented Ointments, and a she-Musician plays upon the Harp, whilst another seems to sing some *Hymenia* ! O *Hymenæe*, some *Epithalamium*, or lascivious Song, to dispel the Charms. This Picture on the Frize, and another on the Pyramid of *Cestius*, are the only Remnants of the true ancient Painting in *Rome*. This Pyramid is square, ending in a sharp Point ; it is of Brick, but cover'd with white Marble ; it was repair'd 1673, and restored to its former Beauty by *Alexander VII.* and, as appears by the Inscription, was erected to the Memory of *C. Cestius*, one of the Seven Magistrates appointed to take Care of Religious Feasts.

You enter the *Mausoleum* through a narrow Opening in the Middle of the Thick Wall, and thence into a vaulted Room nineteen Foot long, thirteen broad, and fourteen Foot high, plaister'd over with a certain white polish'd Mortar, on which are seen several Pictures of Women, Vessels, and other Ornaments.

To enter into a particular Description of so difficult a Subject being beyond my Scope, I will content myself to tell you, that I found the Antiquaries here of different Opinions in reference to these Figures, some pretending that they represent the Preparatives for a Funeral Show, others a Banquet, as a Memorial of the Office of the Deceased. One of the Figures holds a Vessel, into which some others pour lustral Water, and others Wine. Another Figure you see with large Pipes, designed, as some say, for Mirth, and according to some, for Mourning, both Parties pretending to back their Opinions by this Distich in *Ovid's Fasti*.

*Cantabat Fanis, cantabat Tibia Ludis
Cantabat mæstis, Tibia funeribus.*

There is one Thing, viz. the different Colours of the Figures, which seem to intimate, that these Habits were not intended for Funeral Ceremonies ; and as, according to the Inscription of a Pedestal dug up near this Pyramid, this *Cestius* died in the Beginning of *Augustus's* Reign, so it is beyond Dispute, that the Women were cloath'd in White at the Funerals in his Reign, the Fashion of Mourning in Black being abolish'd in the Beginning of *Cæsar's* Dictatorship. Perhaps these Pictures were designed only for an Ornament to the Tomb, without the least Respect either to Feasts or Funerals, as the Sepulchre of the *Nasos* has many such historical Ornaments, the bare Product of the Painter's Fancy. The like is to be seen in several other Tombs, and especially Urns. The greatest Curiosity in these Pictures is the Durableness, especially of their Colours, which were only mix'd with Water, and do not even penetrate the Plaister ; besides that, Painting in Oil is an Invention of the latter Ages, by *John de Bruges*, about 1450.

This Pyramid is about two hundred Paces distant from the Hill call'd *Doliolo* or *Monte Testaceo*, i. e. the Hill of Potshards, which some would have derive its Name from the broken Pieces thrown there by the Pot-

ters, that were obliged to live near the *Tyber*, to prevent its Inundation on that Side, by casting together the Pieces of the broken *Idols*, *Bathing-tubs*, *Statues*, *Tiles*, and other Sorts of earthen *Vessels*, which amounting to a vast Quantity in so great a City, produced this Hillock.

But as probable as this Opinion appears at first View, I have upon strict Examination of the Matter, observ'd Things which induce me to believe otherwise; for having seen, at several Times and at several Places, the People dig Caves under this Hill to keep their Wine in, I could never observe them bring out any Fragments of *Images*, *Tiles*, &c. but only the Remnants of *Urns*; whence I conjecture, that whilst the Custom of burning the Dead continued, a prodigious Quantity of earthen *Urns* were made for the common People, and as of Necessity many of them must be broken, the Reverence they had to those *Vessels*, that had contain'd the Ashes of the dead Bodies, had induced them to assign a certain Place for these Fragments to be laid up in a Heap, just as we, out of Respect to the Dead, preserve their Bones.

Your Curiosity concerning the famous *Pasquin* and his Antagonist *Marforio*, I will satisfy as well as I can: This *Pasquin* was a Taylor, a jovial smart Fellow, at whose House the Newsmongers used to meet; his *Lampoons* were called *Pasquinades*, and these, as well as all the other *Libels* of the Town, were affix'd to a Statue which stood near his Gate: It is a mangled Statue, thought by some to be a *Roman Soldier*; it stands leaning against a House at the Corner of a Place where several Streets meet. Pope *Alexander VI.* being advis'd to throw this *Pasquin* into the *Tiber*, he answer'd, *I should be afraid it would turn into a Frog, and trouble me Day and Night with its Croaking.* *Marforio* is likewise a maim'd Statue, said by some to be made for *Jupiter*, others for the *Rhine*, or for *Nera*, which runs by *Terni*: It stands in one of the Courts of the Capitol; and *Marforio* commonly asks the Questions which are resolved by *Pasquin*.

You will perhaps expect me to relate Wonders of *Tivoli* and *Frescati*, and it is not to be denied but that they are pleasant, or (if you will have it so) fine Places, but if Things are best distinguished by Way of Comparison, (as for Instance, betwixt *Frescati* and *Versailles*, or even some other that are not Royal Seats) I dare boldly affirm, that both *Tivoli* and *Frescati*, and all the other celebrated Places about *Rome*, in respect to their Gardens and Waterworks, are only Toys. *Frescati* is a small Town seated on the Brow of a Hill, twelve Miles from *Rome*; it has several beautiful Country Seats, the three principal of which are, *Monte Dracone*, belonging to Prince *Borghese*; *Belvedere*, to the Prince *Pamphilio*; and the *Villa Ludovisia*, to the Dutchess of *Guadagnola*, the Constable *Colonna's* Sister; all which are in Comparison to *Versailles* the same as *Frescati* is to *Rome*. *Monte Dracone* is a very large Structure, seated on an Ascent, from which you may see *Rome* and the interjacent Plain; but as the City lies at too great a Distance, and the Plain is not embellish'd with that Variety of things which render a Landship agreeable, so the Prospect of *Paris* from *St. Clou* is infinitely more delightful: On the Side of *Monte Porcio* there is much greater Variety in the Prospect, but more straitned. The Avenues to the House are but indifferent, and very difficult, and the Gardens and Fountains much out of Order. The Situation of *Belvedere* is near the same with *Monte Dracone*; it has a pretty Cascade and a Grotto, where you see *Apollo* with the *Nine Muses* on *Parnassus*. The chief Ornament of the *Villa Ludovisia* is the Cascade; but the Furniture of all these Houses were but very indifferent.

Tivoli is such another small Town, about eighteen Miles from *Rome*: Here is a Country Seat belonging to the Duke of *Modena*, commonly in the Possession of the Cardinals of that Family; it is very spacious, but wants both convenient Apartments and good Furniture; the best Thing belonging to it are three Rooms painted in *Fresco* by *Raphael*, and some ancient Statues: The Gardens, though but small, yet are adorn'd with

most delightful Terras Walks and curious Waterworks, far beyond those of *Frescati*, and perhaps all other Works of this Nature in *Italy*; but at present, what with the Stoppage of the Canals, and the Defect of the Pipes, every Thing is so much out of Order in this House, that you see only the Remains of its Beauty. This Sight, as well as of most other celebrated Country Seats, put me in Mind, after the surprizing Things I had heard concerning the *Italian Waterworks*, that if formerly they did surpass those of *France*, the Face of Affairs is much altered now; and allowing even what they say of the Palace *d'Este*, that the Waterworks cost no less than three millions, it is nevertheless beyond all Dispute, that the Waterworks and other Beauties of *Versailles* abundantly exceed all those at *Tivoli*. The Cascade or Cataract of the River *Treverona* (which produces white smooth Flints call'd the *Hailshot of Tivoli*) in this small Town is very pleasant, being not very high. Near it you see the Ruins of an ancient Structure, reputed by some to have been the *Sybil's House*, by others a Temple of *Hercules*: In the Court stand two ancient Statues of a reddish Granite speckled with Black, representing (according to Mr. *Spon's* Opinion) the Goddess *Isis*, which he supposes to have been brought by *Adrian* out of *Aegypt*, to adorn his Country Seat.

The Hill near this Place has many Ages ago, and still affords most of the Stones used in *Rome*, called commonly *Travertin* by Corruption, instead of *Tibur-tin*: The Front of *St. Peter's Church* is built of the same, as well as the *Colisseum*, which is quite cover'd with it: The Stone is very excellent, but yellowish and porous, and not so serviceable as your *Portland Quarry*, and those of *Paris* and *Caen*. *Alexander Tassoni*, in his *Various Thoughts*, says, That some Workmen having cleft a great Piece of one of the Stones of *Tivoli*, found in the Middle of it, in an empty Space, a *Crayfish* weighing four Pounds, which they boil'd and eat. *Alexander ab Alexandro* assures us, that he found a wrought Diamond in the Heart of a great Piece of Marble, and at another Time a considerable Quantity of sweet-scented Oyl in another Piece of Marble. *Baptista Fulgosus* speaks of a Worm found in the Middle of a Flint. The before-mentioned *Tassoni* relates, (to shew the Spirit of the Man) that a Cat suckled a Rat at *Tivoli*.

About three Miles from *Tivoli* we saw a small Lake called *Lago de Bagni*, or *Solfatara*, called by the Vulgar the *Sixteen Barges*, from the same Number of small floating Isles that are upon it: It is no more than a large round Pond, of about two hundred Paces diameter, the Water whereof is very transparent, and of a blueish Colour; it gives Rise to a small Rivulet which, after a short but rapid Course, joins its Waters with the *Anieno*; they say the Waters of the *Anieno* whiten the Teeth. The Lake as well as the Brook emit a very strong sulphureous Scent. The late Cardinal *d'Este* in vain attempted to sound the Depth of this Lake, though two Divers were prevailed upon to enter into it, one of whom never return'd, and the other related, that coming at a certain Depth, he found the Water so hot, that he was not able to endure it, though on the Surface it is very cold: The Sound caused by the treading of the Horses thereabouts, makes it apparent, that there is a Hollowess underneath the Ground near the Banks of this Lake. It is not unlikely that the Circumference of this Lake is only the Mouth of a much larger Abyss extending a great Way under-ground on all Sides, and that the Diver, who was never seen again, happened to be carried into the subterraneous Gulph, and could not find out again the Entrance of the Lake, for he never appeared afterwards upon the Surface of the Water. Near the Bank of this Lake are seen some Ruins, supposed by many to be the Baths of *Agrippa*: The largest of the floating Islands is of an oval Figure, not above fifteen Foot long: As the least Touch puts them in Motion, so they are easily carried by the Wind which Way soever it blows. Two of our Company got upon the least of these Islands, and push'd it from the Bank only with the Points of their Swords.

The *Villa Borghese* is in my Opinion one of the most pleasant and the best kept of any about *Rome*; it is all cover'd

cover'd on one Side with most curious ancient Pillars of *Basso rilievo*, so naturally disposed, as if they had been made for those Places where you see them. All the Apartments are fill'd with admirable *Statues* and *Pictures*, among the first, the *Gladiator* made by *Agastias* Son of *Dositheus* the *Ephesian*, as the *Greek* Inscription on the Base expresses it, a Copy whereof in Brass stood at the End of the Canal in *St. James's Park* in *London*, (since removed to *Hampton Court*) is an excellent Piece, as well as the *Juno* of *Porphyry*; *Romulus's* Wolf of the finest *Egyptian* Marble; the Busts of *Hannibal*, *Seneca*, and *Pertinax*; the *Hermaphrodite*; the old *Silenus*, with *Bacchus* in his Arms; the *David* throwing a Stone out of his Sling at *Goliath*, *Aeneas* carrying his Father, and the Transfiguration of *Daphne*, three modern Pieces of *Bernini*, yet deserve to be rank'd among the best of the former Ages. Among the *Pictures*, which are numberless here, the *St. Anthony* by *Caracchio*, and the dead *Christ* by *Raphael*, are preferr'd before all the rest. In short, the *Villa Borghese* is a most delicious Seat, and if it wants something of that Royal Magnificence, which gives a Lustre to some Palaces, its sweet and natural Beauties seem to make an ample Amends for it: Besides that, for *Statues* and *Sculptures* the Seat of a *Roman* Gentleman may challenge the Precedency before all the other Palaces in the World. In the Garden, the Gardener shew'd us a double white *Hya-cinth*, the Root of which, he told us, cost five hundred Crowns the Year before; a Thing not much surprizing to me, when I had known the Fondness (to speak no worse) of some People to proceed to that Extravagancy in *Flowers*, as to give four or five hundred Pistoles for a Tulip-root in *Flanders*.

The *Villa Ludovisa*, though much out of Order otherwise from the Poverty of the Prince of *Piombino* its Master, yet is very remarkable for a vast Number of *Statues*, and those for the most Part very ancient and valuable. The *Faustina* embracing a *Gladiator*, her Lover; the two *Gladiators*, one a dying *Mirmillo*, and the other reposing himself after the Engagement. The *Statues* of *Bacchus*, *Mercury*, and *Concord* are all most curious Pieces: The choicest *Pictures* and richest Furniture are removed from hence to other Places, the only Thing of Value remaining there, being the Bedstead, which (they say) cost twenty thousand Pistoles, but was much out of Order. In the same Chamber they shew'd us some Bones, which, they would make us believe, were the Skeleton of a petrified Man; but, upon a strict Search, I found these Bones not petrified, but cover'd only with a stony Crust; not that I believe it impossible for Bones to be liable to Petrification as well as other Things, having in my Travels had the Opportunity of seeing great Variety of petrified Fruits, Flowers, Trees, Wood, Plants, Fishes, broad Pieces of Flesh, and Animals of all Sorts: *Paræus* speaks of a whole Child petrified in the Mother's Womb; and *Kircher* relates the same of the Town of *Biedoblo* in *Afric*, that it was petrified in one Night, with Men, Beasts, Trees, and every Thing that was in it.

The *Villa Chigi* is famous for its curious little Water-spouts, and the Cabinet of Curiosities, in which the *Adrian* of oriental Jasper excels the rest, and is really invaluable. The curious Walks of the *Villa Montalto* or *Savelli*, are not inferior to any of *Rome* for valuable *Statues* and *Pictures*; among the first, the *Germanicus*, the *Pescennius Niger*, the *Scipio*, the Goddess *Nenia*, the *Adonis*, and the *Gladiator*, are most excellent Pieces of Antiquity; and among the *Pictures*, the dead *Christ* by *Raphael*, the *St. Francis* by *Caracchio*, the *Virgin* and the *Bacchus* by *Guido*, and the *St. John* by *Pomarancio*. I observed here an unusual Figure of *Abraham's* Sacrifice, by *l'Espagnolet*, who, instead of a Cymetar, or short two-handed Sword, as *Abraham* is commonly painted with, has, more agreeable to Truth, given him a plain sacrificing Knife, to cut his Son's Throat.

The Gardens of the *Villa Pamphilia* would, for their Exactness and orderly Disposition, challenge the Preference before many others, were they kept in better Repair, the House being adorn'd on the Outside with

excellent *Basso rilievo*, like that of the *Villa Borghese*, and is as well furnish'd within, but that the best *Statues* are much disorder'd by an odd Accident; for the Prince *Pamphilio* being very young, and much bigotted to the *Jesuits*, these holy Fathers, under a Pretext of Devotion, prevail'd upon him so far, as to have all his Marble *Statues*, Men, Women, and Children, quite laid over with Plaster-work in divers Parts of their Bodies, except a little *Bacchus*, who had the good Fortune to escape their ill-placed Zeal; and a poor *Venus*, the Masterpiece of *Caracchio*, but her Beauties hid by Smutt from Head to Foot. After some Time, however the Prince, being got out of the Hands of these pretended Zealots, order'd the nasty Clay or Plaster to be taken off again, which was done accordingly, but he found, to his no small Regret, that the clumsy Plasterers had mangled several Parts of the *Statues* to make their Clay stick the better.

The *Vigne Madame*, a Country-seat belonging to the Duke of *Parma*, is neither spacious nor magnificent, but very regular and pleasantly seated, being the Design of *Julius Romanus*: On one Side it has a most delightful Prospect of *Rome*, with many Gardens and adjacent Seats; and on the other, a most beautiful Landskip of little well-cultivated Hills. Over against it you see the *Tyber* flow through the pleasant Meadows and Fields, and at a Distance the snowy Tops of the *Apennines* rising up among the Clouds; behind it is a Wood of tall Trees, divided into cool and shady Walks; the Gardens rise by Degrees into Terrass Walks, and are well adorn'd with *Statues* and Fountains. Having sufficiently tired your Patience with the Description of *Statues* and *Pictures*, I will say nothing of the Houses of *Medicis*, *Matthæi*, *Lanti*, *Cesarini*, *Justiniani*, and many others.

3. I will at present begin with answering your Questions concerning the *Tyber*. As on one Hand it owes its chief Reputation to that famous City that was built upon its Banks, so on the other Hand, it has been represented by some with too much Contempt, its Breadth being by a general Computation at *Rome* about three hundred Feet, as may be seen by the Bridges of *St. Angelo* and of *Sixtus*; the first is three hundred and thirty, and the last three hundred Foot long; besides that, it has a rapid Current, and a considerable Depth. What some Antiquaries would maintain, that it was unlawful to erect Houses upon the Banks of the *Tyber*, may be sufficiently refuted out of *Claudian* and other Authors. *Suetonius* says, that *Augustus* order'd it to be clean'd, and enlarged its Chancel, to render the Passage easier to the Current; whose Example has been follow'd by several other Princes, to prevent its Inundations, but without any remarkable Success; for the South-East Wind off the *Mediterranean* (here call'd the *Sea Wind*) sometimes blows with such Violence, that it stops the Waters of the *Tyber* at its Outlet, which if it happens at a Time when (either by continual Rains, or the Melting of the Snow in the *Apennines*) the Torrents of the lesser Rivers that join with the *Tyber* are swoln, this Concatenation of Accidents produces those Inundations, which are look'd upon as the Scourge of *Rome*, as the sulphureous Eruptions of Mount *Vesuvius* are the Scourge of *Naples*; and of these, one of the most fatal happen'd under *Clement VIII.* in *December* 1698.

The Waters of the *Tyber* appear always muddy and yellowish, but if they are set by for a Night to settle, they will become clear and limpid, and are then accounted very good; notwithstanding which, the *Romans* have been anciently, and still are, at a vast Charge to convey other Waters to *Rome*, through the Mountains, by the Means of costly Aqueducts. The *Aqua Felice* cost Pope *Sixtus V.* near four hundred thousand Crowns to bring them twenty Miles to *Rome*; and as the Waters of the Fountain of *Montorio* were carried at a greater Distance by Pope *Paul* the Fifth, 1612; so it is probable they cost a great deal more Money in the Materials necessary for their Carriage.

On the High Altar of the Church of the *Franciscans* at *Montorio*, is to be seen that most excellent Piece of the

the *Transfiguration*, which is the last Work and Master-piece of *Raphael Urbin* the greatest Painter of his Time.

Not far from thence stands the Chapel, built in the same Place, as they believe, where *St. Peter* was crucified; for which Reason they shew a deep Hole in the Chapel, where they affirm the Cross was fix'd. The Picture of this Crucifixion, with the Head downwards, is to be seen at *St. Paul's at the three Fountains*, by the Hand of *Guido*; where they also shew you the Pillar, on which, they say, *St. Paul* was beheaded. In the Cloyster of *St. John de Lateran* they shew the Column on which *St. Peter's* Cock crew; and another, which, they tell you, was cleft asunder from the Top to the Bottom, on the Day of Christ's Passion: Here you see also the Measure of Christ's Height, and the Stone on which *Pilate's* Soldiers cast Lots for Christ's Garments; it is of Porphyry, four Foot long, and three broad; the Dice they pretend to be kept at *Umbriatico in Calabria*. I will not trouble you with many other Curiosities pretended to be preserved here, but cannot forbear to mention the Chair I saw there, being a kind of arm'd Chair of one single Piece of Porphyry, about which you desire to be inform'd, as being that which was formerly made use of in the Ceremony instituted to prevent all Doubts concerning the Pope's Sex.

I will not be too curious to enquire into the Reason and End of that Search, but since you have given me sufficient Occasion to make the best Reflections I can upon the Subject of the *She-Pope*, I must frankly confess, that I have not hitherto met with the least Solidity, either in your Objections, or any made by others, against the Truth of this History; though I am not ignorant that some *Protestant* as well as *Roman Catholick* Doctors of the last Ages, have rejected the same as a Fable. For, what Reason can be given to rank this among many other extraordinary Events recorded in History, when seventy or eighty Authors (*Blondel* says seventy one *Greek* and *Latin*, some too canoniz'd Writers) all Men of Sense, not prompted either by Interest or Honour, have related the same at divers Times; nay, when the Interest of Religion, and Fear of Punishment, might, in all Likelihood, rather have deterr'd them from publishing the same? It is a very slender Objection to alledge the Difficulty of the Thing, the same not being sufficient to disprove a Matter founded upon so unquestionable Authority, especially if we give some Allowance for the Diversity of Times, it being certain, that People living then in an Age of Ignorance and Stupidity, they might be sooner impos'd upon than in this crafty Age; besides, that Things which seem'd to be involv'd in insurmountable Difficulties, have nevertheless been brought about by Time and Chance; witness *Joan of Arc*, known by the Name of the *Maid of Orleans*, born in the Village of *Damremy*, in the Year 1429, who at the Age of eighteen or twenty, from a poor Shepherdess, became at once a great General: Besides, the Difficulties objected by our Adversaries are of such a Nature, as cannot render this History fabulous, all the Circumstances attending the same, being, if not altogether probable, or at least within the Compass of Possibility.

The beardless Chin objected to her Holiness is of little Validity, when we consider that the papal Chair has at other Times been filled with beardless Youths, witness *Benedict IX.* and *John XII.* the first of whom was chose at ten or eleven, and the last at eighteen Years of Age. Perhaps this *She-Pope* might be of the Number of those *Viragoes*, who have not only a masculine Mien and Beard, but also the Courage and other Qualifications of great Men; and why might not such a one, in Disguise, have as fair a Pretension to the papal Chair as a begging Vagabond, such as *Adrian IV.* or a Swineherd, like *Sixtus V.*; And others who might be mentioned? But, say they, how could a Woman hide her great Belly so long, and at last expose herself to the Danger of being deliver'd in a solemn Procession? As to the first Part of your Objection, What Difficulty is there for a Woman that is taken for a Man to hide her great Belly, any more than for a Man that has a swell'd Belly to be imagin'd to be with Child? And as to the

pretended Imprudence of our *She-Pope*, it is to be consider'd, that certain Things in this World are involv'd in such Difficulties as must be overcome at any Rate, maugre all the Danger that attends them; besides that, it is no hard Matter to suppose that she might be deliver'd before her Time.

You alledge the different Calculations of the Time, but the Reason is obvious, those who have expung'd the *Pope's* Name out of the Catalogue of Popes, being forced to extend the Reigns of the preceeding Popes, to fill up the Breach they made themselves. The next Objection, concerning her Voyage to *Athens*, when she was but a young Scholar, is founded upon a frivolous Supposition, which I may soon answer, by telling you, that perhaps she was old enough to be admitted among the Auditors of the *Athenian* Philosophers; besides that, it is not all the Authors who mention her, speak of her going to *Athens*: And though from these various Relations of my Authors you may seem to hope for an Advantage on your Side, I must tell you, that even in *sacred History* there are not wanting Instances of Variations in Circumstances of this Nature, and that these Variations, provided they do not amount to Contradictions, do not in the least weaken, but rather strengthen the Credit of such a Relation; for had there been a Combination set on Foot on Purpose to usher a fabulous Story, as that of *Pope Joan* is pretended to be, they would have certainly agreed in all the Circumstances relating to the Story.

The strongest Argument (in your Opinion) against us, is the Silence of those Authors who were Contemporaries of *Pope Joan*; but you will find this as weak as the rest, if you consider that *Marianus Scotus*, who died at *Fulda* in *Germany*, 1086; *Sigebert* a learned Monk, who died in the Beginning of the twelfth Century, and divers other more ancient Authors, did in all Probability take it from those Authors that had mentioned the same before them, there being not the least Likelihood that they invented it, for the Reasons before-mentioned: Besides, let me tell you, your Argument is built upon a wrong Bottom; for the Editions of *Anastasi* (surnamed the *Bibliothecary*, who was a *Roman* Abbot, a Person of Learning, and Contemporary of *Pope Joan*) which have escaped Castration, give a very circumstantial Account of the whole Matter. But suppose they did not, what Wonder is it, if *Fear* and *Shame* did impose Silence to the Writers of that Age, when the Invention of Printing was unknown as yet in the World, which could not be kept secret afterwards? As we see that the worst of Princes have been flattered during the Age they liv'd in, whom afterwards Posterity, not cow'd by Fear, hath painted in their true Colours. I can't see why the Church of *Rome* should make such a Stir to hide this Disgrace, when *Baronius* bestows the Title of *Monsters* upon several other Popes, and not without Reason, considering the Enormities the Popes have been guilty of, in distributing Scepters, and treading crown'd Heads under their Feet, notwithstanding they retain'd the Quality of Priests; and what is worse than all the rest, to set a certain Rate of Absolution upon the most abominable Crimes that can be committed, as appears from the Book entituled, *The Rates of the Apostolical Chamber*, which I bought some Days ago. It is true, they have since endeavoured to suppress the Book, by inserting it in the *Index Expurgatorius* of the Council of *Trent*, but continue nevertheless in selling their Dispensations.

— Venalia nobis,

Templa, Sacerdotes, Altaria, Sacra, Corona

Ignis, Thura, Preces, Caelum est venale, Deusque.

i. e.

B. Mant.

Priests, Temples, Altars, all with us are sold,

Fire, Incense, Pray'rs, Heaven, God himself for Gold.

I will appeal to all unbiass'd Persons, when once Posterity shall read the History of the Persecution of *France*, as represented by *Maimbourg*, *Varillas*, the Bishop of *Meaux*, and others of the same Stamp, I say, when they shall read the same in these Authors, whether they

they would not be apt to imagine that these poor Wretches were used with all imaginable Moderation, if it werenot manifest from irrefragable Authority, that these unfortunate Creatures suffer'd all the Cruelties that could be invented by their implacable Enemies. Before I take my Leave of Pope Joan, I cannot forbear mentioning what Mezeray says (in the Life of Charles the Bald) upon this Subject, viz. That *this Opinion was generally received as an undoubted Truth for five hundred Years together.* If you are curious to know the Reason why the Use of this Chair is laid aside now-a-days, the following Epigram of Pannius will satisfy your Curiosity.

*Non poterat quisquam referantes Æthera Claves
Non exploratis, sumere Testiculis :*

*Cur igitur nostro mos hic nunc tempore cessat ?
Ante probat quod se quilibet esse marem.*

The Sense is this :

*The sacred Keys none could of old obtain
Unless by Search his Manhood was made plain ;
Why does not to our Days this Rule extend ?
More certain Signs they give e'er they pretend.*

Pasquin, in his Verses on Paul II. and Innocent VIII. gives you the same Reason ;

*Pontificis Pauli Testes ne Roma requiras,
Filia quam genuit, sat docet esse marem.*

In English :

*That PAUL's a Man Rome need no Proof require,
Except the Maid that calls the Pontiff Sire.*

*Octo Nocens pueros genuit, totidemque puellas,
Hunc merito poteris dicere Romæ patrem.*

That is,

*Eight Boys, eight Girls, begot ; He well may claim,
Tho' not a holy, yet a Father's Name.*

The Church of St. John Lateran is celebrated for its spacious Magnificence, and the Title she bears of *The Head and Mother of all Churches*, according to the Inscription engraven on the Portico :

*Dogmate Papali, datur simul Imperiali
Ut sim cunctarum mater Ecclesiarum.*

Sixtus V. built a large Palace near this Church, but it was never inhabited. Next adjoining to this Structure is the *Sancta Scala*, so called from the twenty eight Steps of white Marble, pretended to be the same by which Christ ascended into Pilate's House, which no body is permitted to ascend but kneeling, though there are two little Stairs, on each side one, by which every one is permitted to walk up into the Chapel called *Sancta Sanctorum*, or the *Holy of Holies*, except Women, who are forbid to enter there. It has this Name from an Image of Christ, which, they say, was made by Angels : I saw it, and can assure you it is very ill-shapen, and very unworthy of the pretended Workmen.

From hence we passed by St. Mary major, a sumptuous Fabrick. A certain devout Roman Lord being warn'd in a Dream to go to Mount Esquilin, and there to build a Church to the Honour of the Mother of God, in the Place where he should find Snow ; and Pope Liberius having at the same Time such another Vision, they walk'd thither the next Morning ; and notwithstanding it was then in August, Anno 355, they found Snow, which they removed with their own Hands, and laid the Foundation of a Church in that Place. The Chapel of Sixtus V. the Work of Dominick Fontana, which cost seven hundred thousand Roman Crowns, and of Paul V. are very magnificent Structures ; in the last of which they shew you the Manger of Bethlehem, and the Picture of the Virgin done by St. Luke. Near it stands the little Church of St. Anthony, where all the Horses of the City receive Benediction every Year on that Saint's Festival. Soon after we took a Turn to Castel Gondolfo, sixteen Miles from Rome, a Palace belonging to the Pope, but has little remarkable in it.

VOL. II. NUMB. 108.

About a Mile from this Castle we saw the little Town of Albano, where in former Ages stood the famous City of Alba, which, they say, extended from the Lake of Castel Gondolfo to this Town of Albano ; but this is a Matter of Fact, question'd by some.

We were shewn at Albano the Ruins of a *Mausoleum* not unlike an old Tower, called commonly the Tomb of Ascanius, but with the same Uncertainty. There is another very ancient Tomb near Albano, supposed to be the Sepulchre of the two Horatii, and the three Curiatii, occasion'd, questionless, by the five Pyramids standing on this Tomb ; but Livy expressly contradicts this Opinion, viz. that their Sepulchres were erected in the same Places where each of them expired, viz. those of the Horatii near Alba, and those of the Curiatii not far from Rome. They told us that the Lake of Castel Gondolfo was six or seven Miles in Circumference, enclosed on all Sides with rising Grounds in the Form of an Amphitheatre. In two Places the Depth of this Lake cannot be sounded, and sometimes the Waters of this Lake swell on a sudden to the very Brink of these high Banks, occasion'd, without doubt, by some subterraneous watery Receptacles which discharge themselves into it. Near Gensana, about half a Mile from this Lake, is another little one, called by the Moderns the Lake of Nemi, but by the Ancients *Speculum Dianæ*, from a Grove and Temple consecrated to that Goddess, which formerly were very near the Banks of this Lake.

Between Albano and Castel Gondolfo are to be seen the Ruins of an ancient Amphitheatre ; and we were not a little surpriz'd to see several large Trees, that had taken Root without, to have forc'd their Passage thro', and cleft asunder the best cemented Stone and Brick. The Country about Albano and Gensana is very fertile, affording the best Wines and Fruits, and the Inhabitants still hold their most ancient Custom of cultivating Leeks and Onions ; *Mittit præcipuos nemoralis Aricia porros.* Mart. Before I leave the Roman Palaces, I must tell you also something of those within the City, which I will do with all the Brevity that is possible.

At the Palace Justiniani there is a Catalogue of Antiquities of 1867 Pieces, and of 638 curious Pictures, the most excellent of which are, the Nero's Head, the Minerva, Venus coming out of a Bath, and the three little Cupids sleeping and leaning one upon another. Cardinal Chigi's Palace is scarce inferior to any in Rome, the Gates are over-crusted with an old green Marble : The Statues of the two Venus's, of Marsias flea'd, and of the dying Gladiator, are admirable Pieces. The Farnesian Palace was begun by Antonio de S. Gallo, but brought to Perfection by the famous Michael Angelo ; the Front being in Breadth one hundred and eighty Foot, and ninety Foot high. The Gates, Corner-pieces, Cross-bars of the Windows, Cornish, and in short, all the principal Stones of this beautiful Structure, were the Spoils taken from the great Coliseum, which admirable Monument of Antiquity has furnish'd Materials also not only to the Palace of the Chancery and St. Lawrence's Church, but also to some Part of the City Walls. Thus Innocent VIII. destroyed the Gordian Arch to build a Church ; and Alexander VI. that most beautiful Pyramid of Scipio, to pave the Streets with the Stones.

The Marble Steps to the Church of Ara Cæli belong'd formerly to the Temple of Romulus : St. Blaise's Church owes its Ornaments to the Spoils of the Temple of Neptune, as S. Nicholas of the Souls was built out of the Ruins of the Circus Agonalis ; and had it not been for Sixtus V. we might now look in vain for any of the precious Remnants of Antiquity in Rome.

The Hercules and Bull in the Farnesian Palace are celebrated throughout the World ; and the Gallery by Caracchio, the Hall by Salviati, and the Venus and Adonis by Titian, are also excellent Pieces. The Library in the Palace of Altieri contains a good Number of the best Books. The whole Staircase, and especially the Statue of a Captive King at the Foot of it, (found five hundred Years ago in the Place called

Navona) is very fine. It has very spacious Apartments well filled with curious Pictures and rich Furniture. I saw here a *Looking Glass* of *Rock Crystal*, ten Inches long, and six broad, in a Frame of Gold set with precious Stones of a considerable Value. They also shew'd us a little earthen Dish carefully kept in a rich Frame, as being supposed to be the Work of *Raphael*, and is of the same Kind with the Vessels of *Loretto*; but discouraging upon this Subject with the noted *Carlo Maratti*, he assured me, that *Raphael* never drew a Stroke on any of these Dishes, but that, by the Resemblance of the Way of working, some of his Scholars painted the same, in Imitation of his Designs.

The Palace *Barberini*, called the *Palestrina*, containing four thousand Chambers, is the largest in *Rome* next to the *Vatican*, and has abundance of Antiquities; the little *Diana*, of Oriental Alabaster, is of great Repute; the *Tullia*, Daughter of *Servius Tullius*, and Wife to *Tarquin the Proud*, is very rare, and said to be the only one of that Kind in *Rome*: Here I also saw the God *Osiris*, with his Hawk's Head on a human Body, which was found with the Obelisk of *Minerva*, under the Ruins of the Temple of *Isis*; and a Marble Bust of Pope *Urban VIII.* made by a blind Man, and yet the best that is extant of that Pope. The other Palace of *Barberini*, towards the four Fountains, is fill'd up with Rarities, Antiquities, and Curiosities of all Sorts: They told us, that the Library contains four thousand Volumes. In the Halls of the Palace *Colonna* you see the Pictures of two Popes, *Adrian I.* and *Martin V.* two of the best that ever sat in the Chair, nineteen Cardinals, and fifty four Generals, all descended from the House of *Colonna*. In this Palace are nine very spacious Apartments, eight thousand original Pictures, a little Arsenal, Busts, antique *Basso rilievo*, Statues, and rich Furniture, in considerable Quantities.

As for their Way of Building in general, I told you before, that they cover their Houses with ridged Roofs, found out by our famous *Mansard*, and much preferable to flat Roofs; and upon this Occasion I must intreat you to lay aside that partial Opinion you seem to have conceiv'd of the entire Perfection of the *Roman Architecture*, which, as well as in other Places, varies according to the Difference of the Age and peculiar Mode of the Country, and is not always suited to the Regularity and Magnificence of just Architecture. The Obelisks in *Rome* are quadrangular, ending in a sharp Point, their Angles respecting the four Corners of the World, and denoting the four Elements, as the whole resembled the Rays of the Sun, the chief Divinity adored by the *Egyptians* under the Name of *Osiris*. The Hieroglyphick Characters on these Obelisks, supposed by some to have been the Elogies or Histories of great Actions, erected by the *Egyptians* in Honour of the Heroes of their Nation, have since been clearly demonstrated to contain the Secrets of their Divinity, *Astrology*, *Metaphysics*, *Magick*, and such other Sciences as were in Vogue among the *Egyptians*: All these Obelisks, (not one of them being made at *Rome*) are of *Granite*, a Kind of very hard Marble, which, they say, will resist the Fire for a considerable Time, and without Question induced the ancient *Egyptians* to make Choice of it for such lasting Monuments. The Obelisk of *St. John Lateran* has stood three thousand Years, and that of *St. Peter* nine hundred Years longer: The first, which is the biggest of the two, is an hundred and eight Foot high, without including the Pedestal or the Cross. There are also some *Granites* of *Corfica* in this Place, but their Grain is much coarser than those of *Egypt*.

4. Since you desired me to give you my Observations upon what Mr. *Chevreau* hath alledged, in his History of the World, concerning Pope *Joan*, I will write you my Sentiments upon this Head. That Gentleman acknowledges, That a considerable Number of famous Authors have mention'd that Story, and positively asserted the Truth thereof: And what Reason, I pray, can he alledge, why so many unbiass'd Witnesses of unquestionable Credit, who unanimously attest that Matter, should not be credited? He says, *The more judicious*

and cautious Part of Mankind, relying on the Silence of several other Authors, have examined and rejected the same. It is certainly a very weak Way of arguing, to say, that a Thing attested by the unanimous Voice of seventy or eighty Men, all of the *Roman Catholick Religion*, most of them Clergymen, and some canoniz'd Saints, all which is confess'd by the *Romanists*, should be invalidated by the Silence of some other Authors. But, says Mr. *Chevreau*, *Anastasius the Bibliothecary makes no Mention of the She-Pope Joan*: But this Author, as well as *Onuphrius*, who alledges the same Argument, is mistaken. If you will be pleased to consult Mr. *le Sueur's Ecclesiastical History*, and *Colomesius's Historical Miscellanies*, you will hear there of an *Anastasius* in the *French King's Library*, containing a circumstantial Account of this female Pope; besides two other Copies of the same Author, seen by the great *Salmasius* at *Augsbourg*, and another at *Milan*, which give an Account of the same Pope *Joan*. These before-mentioned Books tell you further, that the Jesuits of *Meniz* having only suffer'd two Copies to be wrought off conformable to the Original, (which they do not deny themselves to be true) suppress'd what displeased them in the rest of the Edition. Upon this Occasion, I cannot but put you in Mind to weigh strictly the Authority of the Testimony of *Anastasius*, (he wrote the Lives of the Popes to *Nicholas I.* the Successor of *Benedict III.*) who being a Man of singular Learning, lived at *Rome*, and was Contemporary with this female Pope.

I cannot forbear, in the next Place, to give you my Thoughts upon the Reflections made by Mr. *Chevreau* on *Martinus Polonus*, or the *Pole*, Archbishop of *Cosenza*, and Penitentiary to *Innocent IV.* and (according to the Opinion of some) to *Nicholas III.* whom he calls a silly Monk; and, I pray, for what Reason? Since, says he, in his Treatise of the Wonders of *Rome*, he mistakes the Gate of *Ostia* or of *St. Paul*, and of *Capenna* and *St. Sebastian*, for another which he calls *Collina*, instead (as we may probably suppose) of *Collatina* or *Pinciana*, the Pantheon for a Temple of *Cybele*, and the Amphitheatre for a Temple of the Sun, we may the easier forgive his Blunder in History when he mistakes a Pope for a Popes. If this Argument holds, That supposing M. *Polonus* had mistaken one Gate for another, therefore he must take a Pope for a Popes, I might with the same Reason retort it upon *Chevreau* himself, that since his Reflections on M. *Polonus* are groundless, therefore he mistakes a Popes for a Pope. That his Reflections are groundless, appears, (1.) That Mr. *Chevreau* himself knew not that there was such a Gate at *Rome* as the *Collina*, when he says, that *Polonus* took the Gate of *Ostia*, and the Gate *Capenna*, for another which he call'd *Collina*, instead of *Collatina*, or *Pinciana*; it being certain that *Collina* was the Name of a Gate as well as *Collatina*, and had its Name à *Colle Quirinali*, mention'd by *Ovid*:

*Templa frequentari Collinæ proxima portæ
Nunc decet, ————— Fast. 4.*

being now call'd *Salarco*. (2.) The Gate *Collatina*, so called from the Town of *Collatium*, is different from the *Pinciana*, as *F. Nardin* hath sufficiently demonstrated. (3.) Mr. *Chevreau* has as little Reason to find Fault with *Polonus* for calling the Pantheon the Temple of *Cybele*, the same being founded upon the Opinion of several learned Antiquaries, who believe it to have been consecrated by *Agrippa* to *Jupiter the Avenger*, and to *Cybele* the Mother of all the Gods, who was sometimes worshipped under the Names of *Ops*, *Rhea*, *Vesta*, *Berecynthia*, *Dindymene*; sometimes under the Names of *Tellus*, *Magna Pale*, *Magna Mater*, and frequently stiled *Natura Rerum Parens*. (4.) Mr. *Chevreau* speaks so ambiguously concerning the *Roman Amphitheatre*, that his Meaning is not easily to be understood; for since there were several Amphitheatres, the Ruins of some of which are still remaining, I suppose he means the great Amphitheatre called *Coliseum*, built by *Vespasian*, and dedicated by *Titus*. (5.) It is certainly too great an Absurdity to believe, that *Polonus* could mistake this *Coliseum* for the Temple of the Sun; which makes me imagine,

imagine that some of his Expressions must not be well understood, and that instead of saying the *Coliseum* as a Temple of the *Sun*, he might speak of the Temple near the *Amphitheatre*.

You tell me, you have seen a Manuscript of *Polonus*, where this Story is written in the Margin by another Hand; and what can be infer'd from thence, except, that the Author having been mutilated by some body or other, a more equitable Person supplied the Defect, *Bellarmino* himself making not the least Scruple to confess, that *M. Polonus* wrote the History of the *Pope's*? For the rest Mr. *Chevreau* being not a little puzzled to give the World a probable Account of the first Rise of this Story, is forced to have Recourse to *Onuphrius*, (though he conceals his Name) who pretends, that Pope *John* was nick-nam'd *Joan*, from a favourite Concubine he had of that Name; though neither of them can produce any other Authority for this Assertion than their own, or make it appear that Pope *John* had such a Concubine: It is true, they cite *Luitprand* in their Behalf, but erroneously, the Widow's Name he speaks of being *Anne*, and not *Joan*. And Mr. *Chevreau*, it seems, was ignorant that Mr. *du Plessis Mornay* had already made a Discovery of this Forgery of *Onuphrius*, and that this Pope *John* fill'd the Chair a hundred Years after Pope *Joan*.

What he affirms of the Chair not being bored, I can contradict as an ocular Witness, having seen it more than once; and it is bored after the Manner of Close-stools. There are two of them, (both of Porphyry) one broken and the other entire, both made after the same Manner. *Platina* affirms positively, after *Chalcondylas* an *Athenian*, who flourished about the Middle of the fifteenth Century, and other approved Authors, that the new-elected Pope was placed in the bored Chair, and that the youngest Deacon used to thrust his Hand through the Hole, to feel whether he had the true Marks of Virility. This was, questionless, the primitive Use of this Chair; and though this Custom was laid aside by Degrees, they continued however for some Time to set the Popes on the same Chair, to put them in Mind, as Mr. *Chevreau* affirms after *Fauchet*, that they were still subject to the common Infirmities of human Nature.

What Mr. *Chevreau* tells us concerning the Deputies of the Council of *Soissons*, sent to Pope *Leo IV.* who was deceased before their Arrival, is of little Consequence, since he mentions a Council of *Soissons* without any peculiar Distinction, and without the least Proof, which ought to have been founded upon Manuscripts of uncontroverted Antiquity and Credit, to extricate himself and his Adherents out of the Labyrinth in which they have entangled themselves, by confounding the Succession of the Popes that preceded and followed the Popes *Joan*; whence it is, that whereas *Platina*, *Garenza*, and other unbiass'd Historians, compute twenty four Popes that bore the Name of *John*, (the rest count but twenty three) and thus introduce an irreparable Confusion in History. But it is Time to have done with Mr. *Chevreau*; I will only add, that it ought not to seem strange to you, that our *Pope's* is sometimes called *Anglicus*, sometimes *Moguntinus*; the Author of the *Fasciculus Temporum* (*Werner Wolnink* a *Westphalian*) has unfolded the Riddle in these Words, *Joannes Anglicus cognomine, sed natione Moguntinus*: Her Name was *Joan English*, but was born at *Mayence*. Neither must the Variations observed in Manuscripts disturb you, who are not ignorant of a thousand Instances of what Forgeries have been introduced by Transcribers; any more than the doubtful Expressions you meet with in some Authors that relate this History, it being to be consider'd, that as the Force of Truth prompted them to speak, so Fear, on the other hand, was a sufficient Bridle to restrain them from speaking too freely of the Matter: But as, notwithstanding all this, some Authors have broken through all these Obstacles, and given us a positive and circumstantial Account of the whole Matter, all the negative Authorities in the World cannot be sufficient to counterbalance the Credit of so many authentic Witnesses, and of a Relation so generally and so-

lidlly attested. To bring up the Rear of your Arguments, you have called to your Aid some of the *Protestant Doctors*, who deny the Story of Pope *Joan*, and among the rest the famous *David Blondel*, a Man of Learning and Wit: But, to deal frankly with you, as the Author's Name is the strongest Argument in his Book; so it is an unaccountable Piece of Prejudice to build blindly upon the Opinion of any Man not divinely inspired, let his Name be ever so great in the World, for Learning and Knowledge.

For my Part, I cannot reconcile his Argument when he confesses, that the History of the Female Pope is contain'd in the *Augsburgh Copies* of *Anastadius*, but in Opposition to these pretends to cite (and that without quoting any entire Passage) a certain private Copy of *Anastadius*, to be met with (which we must take upon his Credit) at *Paris*, the Certainty whereof he seems to question himself, when he tells us, that it has often been mistaken for *Platina*; so that in the Main this Book may, without much Difficulty, be refuted by itself, the rest being a confused Medley of Chronological Cavils, and an Heap of needless Quotations, serving more for Ostentation and to confound than demonstrate the Matter he has taken in Hand, to stand either one Way or other. To conclude the Whole, and to tell you my Thoughts with all imaginable Freedom, I have a great deal of Reason to believe, that it was rather Interest and Ostentation than the Love of Truth that engaged our Author in this Design; for I was assured by a Person of Honour at *Paris*, who knew the Author very well, that he had it from the first Hand, that he was hired to write a Treatise against the History of Pope *Joan*. And as my Author is a Person of unquestionable Reputation, so the only Thing that can be said upon this Head is, that Mr. *Blondel* is not the first Man that has been overcome by the Force of Gold.

All that I am able to answer to your Questions concerning the *Armenians* and *Greeks* is, That as they have each their peculiar Ceremonies, so they officiate according to their own Rites; but before they can settle at *Rome*, are obliged to acknowledge the Pope's Supremacy. Some Antiquaries say, the little *Armenian* Church was formerly one of the Temples of the *Sun* and *Jupiter*. Before the Pontificate of *Paul IV.* the *Jews* lived pretty easy in any Part of *Rome*, but this Pope confined them to a certain Quarter of the City, whither they were to retire at Sun-set, forced them to sell their Possessions, and allow'd them to deal only in old Clothes, and for Distinction Sake to wear yellow Hats. *Gregory XIII.* obliged a certain Number of them to hear a *Christian* Sermon every *Saturday* in the Afternoon; but I had no Opportunity to see this Assembly. The *Italian Jews*, and especially those of *Rome*, religiously observe that Custom of marrying before the twentieth Year of Age: Their Number may amount in *Rome*, to about six or seven thousand; but they are generally poor and despised.

If any *Jew* or other *Infidel* has a Mind to be baptized, the Ceremony is generally put off to *Saturday* in the *Holy Week*, and is then perform'd in the Church of *St. John Lateran*, because they believe *Constantine the Great* was baptized here. We saw six *Turks* baptized; they wore white Damask Cloaks, and a large Band, with a Silver Cross hanging at their Necks; the Cardinal that was to officiate, attended by the Canons of the Church, began the Ceremony with blessing the Water; then the new Converts being presented by their respective God-fathers, advanced one after another, and having declared their Willingness to receive Baptism, they lean'd over the Font, and the Cardinal baptized them by pouring Water upon their Heads with a large Silver Spoon; and having given each his Name, they were, with Wax Tapers in their Hands, conducted to the Chapel of the Baptistry, to be confirm'd, and from thence went to hear Mass in the same Church.

The *Thursday* before we were present at the Ceremony of washing the Feet of thirteen Pilgrims in one of the Chapels of the *Vatican*: They appear'd all in white, with a Kind of Hood and square Cap, seated in a Row upon a Bench. After they had pull'd off their Shoes and

and Stockins, a great Basin was brought, and Ewers of Vermilion, one for each Pilgrim; then the Cardinal that officiated instead of the Pope, putting their Feet in the Basin, wash'd and rubb'd them with his own Hands, and at last wip'd and kiss'd them: Soon after, each of them being regaled with two golden Medals, they went all together to an Apartment of the Palace, to partake of a magnificent Entertainment prepared for them; they were placed in one Row at a Table, the Cardinal dining at the same Time at another in the same Room.

The Pope [*Innocent XI.*] though really old and infirm, yet often makes the Want of Health serve for a Pretence to excuse his Absence at those numerous Ceremonies used at *Rome*. I had it from very credible Persons, that he did not approve of the *French Way* of converting People by *Dragooning*, and shew'd a great deal of Aversion to those who pretended to propose certain Methods of Accommodation to him with the Crown of *France*. His Retirement is the Occasion he is seldom seen by Strangers; nay, it is a Rarity to meet any of his Coaches, Footmen, or others belonging to his Retinue. If he happens to stir abroad, it is in a large Litter lined with Crimson Velvet, without and within adorn'd with Gold Galoons and Fringes, the Harnesses of the Mules cover'd with the same Stuff. He sits always alone in his Litter, with a little Table before him. All the Popes have the same Livery, viz. Scarlet, with a double Velvet Galoon of the same Colour; even the Apartments of the *Vatican* and *Monte Cavallo* are hung with red Damask intermixed with Edges of Gold Galoons, and adorn'd above with Gold Fringes.

The Situation of the Gardens of *Monte Cavallo* is very delightful, but their Contrivance is not very regular, nor are they well kept. The two Marble Horses before this Palace are generally reputed to be made by *Phidias* and *Praxiteles*, whose Names are engraven upon them.

Opus Phidias, Opus Praxiteles.

Some will have them to be the Statues of *Bucephalus* the Horse of *Alexander*, which these Artists made in Emulation of each other; but there is a Mistake in this Tradition, considering that *Phidias* flourished a whole Age before *Praxiteles*, and *Alexander* the Great reign'd fifty Years after *Praxiteles*. The two Marble Horses in the Court of the Capitol, were brought thither from the Theatre of *Pompey*, and the *Equestrian Statue* of Brass, placed here by *Paul III.* is supposed to be the Statue of *Marcus Aurelius*. The Capitol is a modern Structure, built not only upon the Ruins, but even upon Part of the Foundations of the ancient Fabrick, the old Foundations still appearing.

The Antiquities here being so many, that a Description of them would require an entire Volume, I will only mention some of the principal: The *She-Wolf* giving Suck to the two Brothers, on which is to be seen the Mark of the Thunderbolt mentioned by *Cicero*, (*Orat. 3. contr. Cat.*) four great *Basso relievo's* representing divers Passages of the History of *M. Aurelius*; the *Columna rostrata* of *Duilius*, the first that was honour'd with a naval Triumph at *Rome*; the Messenger pulling out a Thorn in the Senate-house; the Bust of *Cicero* with his Vetches; the four ancient Measures, one for Oil, two for Wine, and the fourth for Grain; the Bust of *Virgil*; *Nero's* Nurse holding him by the Hand; the Goddesses of *Silence*; the God *Pan*; the three Furies; a Statue of *Cæsar* in Armour; another of *Augustus*; those of *Castor* and *Pollux*; the Fragments of the *Colosses* of *Apollo*, *Domitian*, and *Commodus*; the Lion devouring a Horse; and the Trophies of *Trajan*, but believ'd by others to have belong'd to *Marius*. The Pictures in *Fresco* in the great Hall are of Cavalier *Joseph's* Hand; in my Opinion they represent the Battle of the *Romans* with the *Sabines*.

I am somewhat doubtful what Account to give you of the Pillar called the *Milliarium*; it is of white Marble eight Foot and a half high, with a Cypher [I]

mark'd on the Top, and on the Chapter a brass Globe of two Foot Diameter: It is the general Opinion, that this Pillar stands in the Center of *Rome*, from whence they used to compute the Distances from that City, divided into Miles by other Pillars erected on all the great Roads of *Italy*; but there are several Arguments which contradict this Opinion, for the Column in the *Forum Romanum* was, according to *Suetonius*, *Tacitus*, and other ancient *Roman* Authors, either of Brass or Brass gilt, with the Names of the great Roads and Distances of the chief Cities engraven upon it, Nothing like which appears on the *Milliarium* in the Capitol. If you object, that perhaps the brazen *Milliarium* being lost, this was set up instead of it; the Inscription engraven on one of the Faces of the Pedestal will tell you, that it was found near the *Appian Highway*.

S. P. Q. R. *Columnam Milliarium primi ab Urbe lapidis indicem ab Imperatore Vespasiano & Nerva restitutam de ruinis Suburbanis Viæ Appiæ in Capitolium transtulit.*

And it seems not likely that this Column was from the Center of the City transpos'd to a Mile's Distance from the Walls; then which Way can you give a true Explication of these Expressions, *primus*, or *secundus*, *ab Urbe lapidis*, if these Stones or Pillars were not without the City, the Words *ab Urbe* shewing plainly that they were not within? And since this *Milliarium* was found in one of the Suburbs near the Highway, I cannot but persuade myself that it then stood in its proper Place, and that the Number of those first Columns was equal to that of the great Roads. Whether we suppose the gilt *Milliarium* to be the only first Pillar, and the second Columns to have been placed at the Distance of one Mile from it; or that the gilt Column in the Center of the City was the Head-mark from whence all the Distances were computed, and that the next Columns were called the first *Milliariums*, and mark'd with an Inscription like that you see in the Capitol; it is evident from either of these Suppositions, that considering the Extent of *Rome*, none of these first or second Columns but must be within the City; and that consequently this Expression, *primo ab Urbe lapide*, could not take Place, but instead thereof, the *primus lapis* must have been in *Urbe*, and not *ab Urbe*.

There is a very ancient Inscription in the Palace call'd *Palæstrinum*, which contains the Statues of a College of *Æsculapius* and of *Health*, unto which *Salvia Marcellina* bequeath'd a Temple, a Place or Court, and a Walk, the Whole situate on the *Appian Way*, near the Temple of *Mars*, *Intra milliarius primum & secundum ab Urbe euntibus*, i. e. *Between the first and second Mile as you go from the City*; which Words, join'd to the Opinion of the best Antiquaries, that there was a Temple of *Mars* without the City, and on the *Via Appia*, are a sufficient Inducement to convince me, that the gilt *Milliarium* was erected as a publick Mark to know where all the great Roads begun, and to compute the Distance of great Cities; but that all the first Columns were each one Mile distant from the Walls of *Rome*. The two following Inscriptions are engraven on the Body of the *Milliarium* in the Capitol:

IMP. CÆSAR VESPASIANUS PONTIF. MAXIM.
TRIB. POTESTAT. XVII. IMP. XVII. P. P.
CENSOR. COS. VII. DESIGN. VIII.

IMP. NERVA CÆSAR AUGUSTUS PONTIFEX MAXIMUS TRIBUNITIA POTESTATE
COS. III. PATER PATRIÆ REFECIT.

Adjoining to the right Wing of the Capitol is the Church known by the Name of *Ara Cæli*: They tell you, that *Augustus* having for a considerable Time, but in vain, solicited the Oracle of *Delphos* to know his Successor in the Empire, the Oracle at last declared, that his Mouth was stop'd by the *Hebrew Child*, who was the Son of God, and God himself; and that *Augustus*, finding this to agree with *Sibyllin* Prophecies, order'd an Altar to be built in the Capitol to the Honour of

of the *Hebrew Child*, unto which he gave the Name of the *Ara primogeniti Dei*, *The Altar of the First-born of God*. The before-mentioned Church being built in the same Place where *Augustus's* Altar still remains near the Quire, had thence the Name of *Ara Cæli*.

Near unto this Place is a Chapel called *St. Pietro in Carcere*, built in the same Place where *St. Peter* and *St. Paul* were kept in Prison, after their Condemnation, and, according to the Opinion of the best Antiquaries, is the *Tullianum* finish'd by *Servius Tullius* or *Tullius Hostilius*, and used as a Prison for condemned Malefactors only. Here they shew you a Spring (they tell you that the Water has a milky Taste) which, they say, gushed out of the Rock at the Prayer of *St. Peter*, in order to baptize certain Profelytes; as also an Impression in the Wall, made (as they say) by that Apostle's Face, the Stone yielding as he was thrust with his Head against it by a Soldier.

Among the Multitude of ancient Ruins behind the Capitol, is the famous *Tarpeia*, (so called from one *Tarpeia* a Roman Lady) that once so dreadful Precipice, which is now not above twenty Foot high. The Triumphal Arch erected to *Titus* after his Conquest of *Jerusalem*, the *Basso rilievo* representing the Candlestick, Table, Trumpets of the Jubilee, and some Vessels taken out of the Temple, is highly worth a Traveller's Observation. The Arch of *Constantine* is very near entire, except that you see some Statues thereon without Heads, supposed to be carried privately by *Lawrence de Medicis* to *Florence*; and as the nicest Judges have observed a considerable Difference in the Beauty of the *Basso rilievo*, it is suspected that some of the best Pieces were taken off when it was erected. The Lake of *Curtius* was in the Middle of the *Forum Romanum*, but was already lost in *Ovid's* Time:

*Curtius ille Lacus, siccus qui sustinet aras
Nunc solida est tellus: sed fuit antè Lacus.*

The vast *Amphitheatre* call'd *Coliseum*, from a *Colossus* that was near it, is of a circular Figure on the outside, though the *Arena* is oval; it was capable of containing eighty five thousand Spectators, not including the twenty thousand *Excuneati* who stood in the Passages, and consequently four Times as many as the Amphitheatre of *Verona*. The Pillars of the third Order, and the Pilasters of the fourth, had *Corinthian* Chapiters. Though I cannot engage to answer your Questions concerning the Senate of Women instituted by *Heliogabalus*, yet I can thus far satisfy your Curiosity, that the little Edifice at *Monte Cavallo*, by some supposed to have been the Temple of the *Sun*, by others the Temple of *Health*, is suspected to have been the Meeting-place of that sage Assembly.

The Columns of *Trajan* and *Antoninus* are truly magnificent Monuments of Antiquity, adorn'd with most excellent *Basso rilievo*, ascending in a spiral Line from the Base to the Chapter, and representing the great Actions of those great Princes. The first is composed of twenty four Stones, each containing eight Steps, erected by the Senate to the Honour of *Trajan*, and served afterwards for his *Mausoleum*, his Ashes being placed in an Urn of Gold, on the very Top of it; in lieu of this Urn was afterwards placed the Statue of *St. Peter*, of Brass gilt, by *Sixtus V.* The whole Height of the Body of this Column is 128 Roman, or 124 English Feet; and you ascend to the Top by 123 Steps. The second, composed of twenty eight Stones, was likewise built by the Senate, to the Honour of *Antoninus Pius*, with the Statue of that Emperor on the Top of it, but has since been forced to make Way for *St. Paul*, whose Statue of Brass is now placed there, and gilt like that of *St. Peter* on *Trajan's* Pillar. The Body of this Column is 160 Roman, or 155 English Feet high; and the Stairs leading to the Top consist of 206 Steps.

One Day as we were visiting the Caves, known generally by the Name of *Catacombs*, we entered into the *Mausoleum* of *Cecilia*, the Daughter of *Metellus*, surnamed *Creticus*, where, at the very Entrance of it, we were shewn a Hole, into which, but a few Weeks

VOL. II. NUMB. 108.

before, a certain Gentleman (*D. Malatesta Strinati* of *Cesena*) happened to tumble deep under Ground, unperceived by his Company; his Friends being amazed and not knowing what was become of him, after they miss'd him, went in Search of him; but whether it was the Depth of the Pit, or that he was stunn'd by the Fall, he was not able to cry, or at least not loud enough to be heard by them, so that they were forc'd to return without him: The poor Gentleman having continued in this deplorable Condition for sixty Hours, at last found Means to open a Passage, and so clambering out of the Pit with a great deal of Difficulty, got to an adjacent House, where being comforted with some good Broths, he soon after recover'd his Strength. I am apt to believe there is no Place in the World that can compare with *Rome* for subterraneous Passages; and though the Earth has stopt up the Entrances of some, yet there are still left a prodigious Number of Caves, generally known by the Name of *Catacombs* among the modern Authors, though they cannot well support the Etymologies they produce.

These *Catacombs* are not single Vaults, but rather whole subterraneous Cities, with Turnings and Windings like Streets; as for Instance, those of *St. Agnes*, *St. Sebastian*, &c. There are some Caverns; as, those of the Gate *Pinciana*, and those near *St. John* and *St. Paul*, which seem never to have been made Use of as Burial-places, and are known by the Name of *Grotto's*.

The *Catacombs* of *Rome* extend under all its Suburbs, but those of *Naples* only under one Part of that City; these are dug out from among the Rocks, each Passage being commonly betwixt fifteen and eighteen Foot wide, and twelve or fifteen Foot high: The hollow Niches in both Sides of the Walls are shaped like Chests, of divers Sizes, placed in Rows above one another without the least Order, in which were laid the Bodies without any Coffins, cover'd only with flat Stones like Tiles, cemented with a Kind of Mortar or Mixture of Chalk and Sand. Besides these, the *Catacombs* of *Naples* have divers Tombs of an indifferent Bigness, with several Figures of Heads, Half Lengths, &c. with the Names of the Persons entombed, as *Paulus*, *Nicolaus*, *Proculus*, &c. and sometimes *hic jacet*, or *quiescit* underneath it.

On one of these Tombs I saw a blue and yellow Cross with the following Characters.

Ἰησοῦς Χριστὸς νικᾷ.

Jesus Christus vincit.

Jesus Christ overcame.

Where it is to be observed, that the *Greeks* wrote their Ξ almost like our *Latin C*, during the three first Ages. Among all the *Catacombs* of *Rome*, those of *St. Sebastian* are the greatest; their Height is the same as those of *Naples*, but the Passages are not above two Foot and a half broad, by reason the sandy Ground could not be easily underprop'd, of which those at *Naples*, hewn out of the Rock, do not stand in Need. We saw one of these Niches opened, where we found a Skeleton moulder'd away into whitish Ashes, yet we could perceive that the Corps had been laid on its Back.

The *Roman Catholics* have taken a great deal of Pains to persuade the World, that these subterraneous Vaults were dug by the Christians in primitive Times, to bury their Dead in, with the Exclusion of all Pagans; that they used to perform their Religious Worship in them during the Times of Persecution; and that consequently they contain an inexhaustible Store of Relicks of Saints and Martyrs interr'd in them.

Though the Proof of this Assertion lies at the Door of the *Romanists*, and hitherto they have scarce attempted any Thing on that Head, yet will I subjoin some few Observations:

Observations which seem to contradict this Opinion. The first Thing I have to offer upon this Subject is, a Description of *Horace* of the *Puteoli*, or *publick Burying-places* of the poorer Sort, which is exactly applicable to the *Catacombs* ;

*Huc prius angustis ejecta Cadavera Cellis
Conseruus vili portanda locabat in arcâ :
Hoc miseræ plebi, stabat commune sepulchrum.*

The second Observation are the Words *Fata, Diis manibus, Domus æterna*, and such-like, found in the Epitaphs of some Tombs in the *Catacombs*, which I cannot conceive to have been in the least suitable to the Simplicity and Piety of the Inscriptions of Christian Tombs in primitive Times. I remember Mr. *Spon*, that most celebrated Antiquary, is of the same Opinion, in his Voyage to *Greece*, where he looks upon the Words *Æthera* and *Superis* as sufficient Proofs to shew, that the Tomb, which contain'd them, belonged to a Heathen.

The glass Vials and little metallick Vessels frequently found in the *Catacombs*, seem to be additional Marks of *Paganism* ; and though the *Romanists* pretend those Vessels formerly contain'd the Blood of the Martyrs, (this is rather a Conjecture than a Proof) whereas it is certain, that the *Roman Pagans* used to put *Lachrymatories* (in which they gather'd the Tears of certain Women hired for that Purpose) into their Urns and Tombs. I remember a certain Passage in *Tertullian's Apologetic*, which does not at all agree with the Pretensions of the *Roman Church* ; he says, The *Pagans* used to take the dead Bodies of the *Christians* out of their Tombs, and drag them about the Streets ; whence it seems very probable, that they would have deprived them of their Caves, had they discover'd them. Besides, how can it be conceived that the *Christians* should be able to dig those vast subterraneous Passages without being perceived ? And, how could they dispose of the Rubbish ? They will tell us perhaps, that they did not do it in secret, and that the Sand of the *Catacombs* was sold by the poor *Christians*, who, for this Reason, were nicknamed *Arenarii* ; but this is not applicable to the *Catacombs* of *Naples* : Besides that, it does not appear that the poor *Christians* were the only People that employed themselves in the Selling of Sand about the City.

The Cyphers of the Name of *Christ*, *Palm-branches*, *Doves of Peace*, *Crosses*, *Crowns*, and other Marks of Christianity, to be seen upon the Stones of these Sepulchres, are so far from proving, that these Burial-places were peculiar to the *Christians*, that they rather appear to be intended as Marks to distinguish them from the *Infidels*. The same may be said of the *Christian* Epitaphs, the Question being, not whether the Bodies of some *Christians* were buried here, (which is beyond all Dispute) but whether all others were excluded from being interr'd in the same Vaults, set apart for the Dregs of the People. The Pictures and Altars of different Sorts and Ages, found in the *Catacombs* of *Naples* and *Rome*, have been the Product either of the zealous Covetousness of the Popes, who, looking upon the *Catacombs* as a profitable Source of Relicks, have repair'd and made such Alterations in them, as they found most agreeable to encourage the Concourse of the Pilgrims. *Pancirollus* gives us a large Account of these Reparations. Most of the Bodies now to be seen in the *Catacombs* of *Naples*, were buried there forty Years ago, during the great Plague that raged in that City.

About a hundred and sixty Paces distant from the *Catacombs* of *St. Agnes*, stands an ancient Temple of a circular Figure, reputed by some to have been the Temple of *Bacchus*, on account of the Representations of certain Vines on the Roof, and some Vine-branches, Grapes, Vessels, and such-like Instruments on a Tomb of *Porphyry* in the same Temple ; but it being certain that *Bacchus* did not die at *Rome*, its Nearness to the Church of *St. Agnes* (built by *Constantine*) seems to be a sufficient Proof, that it was built by the same Em-

peror, to serve for a Baptistry to the said Church. The Tabernacle of *St. Agnes's Church* is supported by four Pillars of the best polish'd *Porphyry* : The Statue of *Agnes* you see there, is supposed to have been anciently the Statue of some *Pagan Deity*, the Mantle whereof is chiefly remarkable.

As it is beyond the Compass of a moderate Treatise to comprehend an exact Description of all the Antiquities and other Curiosities I observed in the Cabinets here, so I will content myself with mentioning only the most remarkable of those in the Cabinet of Mr. *Bellori*, which, for their Number, exceed all that ever I saw of this Kind. His *Fortuna Panthea* of Brass is not above half a Foot high, this little Goddess being a Composition of all the Characters of Divinity appropriated to other Gods, for she appears with the Beauty of *Venus*, *Juno's* Crown, *Diana's* Crescent, the Mitre of *Isis*, the Horn of Plenty of *Ceres*, *Minerva's* Robe, the Wings of *Fame*, *Cupid's* Quiver, the Goat-skin of *Bacchus*, the Serpent of *Esculapius*, *Fortune's* Rudder, and several other Characteristical Marks of different Deities ; the *Faustina* deified with her Veil strew'd with Stars ; the *Magna Mater*, or *Natura rerum parens*, suckling Animals of different Kinds at all her Breasts ; the Goddess *Fortune* with the Horn of Plenty in one, and the Nail of Necessity in the other Hand ; the Bust of a young *Roman*, with his Golden Bull hanging at his Neck ; the *Cistrum*, or an Instrument used by the *Egyptians* to call the People together to the Sacrifice, and afterwards introduced among the *Romans* for the same Purpose : It is a most curious Piece of Antiquity, resembling a small Racket, the Wood pierced with four Pieces of Brass like Cords or Rods, which play and make a Noise ; an ancient brown earthen Vessel extremely fine, and of the same Sound as the true Porcelane, with Pictures upon it representing the ancient Customs of Bathing : Among others, you see a Woman holding in one Hand a *Strigil* or Instrument for rubbing off Sweat, and in the other, a *Guttum* or Vessel with sweet-scented Liquors, not to mention the Urns, Sepulchral Lamps, *Lachrymatories*, Pictures, &c.

Father *Kircher's* Cabinet was once one of the most celebrated in *Europe*, and notwithstanding its being garbled of late Years, retains still a good Collection of natural Curiosities and mechanical Engines. The *Roman College*, or chief House of the *Jesuits*, (where it is to be seen) is perhaps one of the finest Palaces in *Rome* : The Library is numerous, but without any ancient Manuscripts, or other Rarities. In the Great Hall of this Society you see the Picture of the famous Jesuit *Garnet*, who was executed in *England* on Account of the Gunpowder Plot, with an Angel at his Side shewing him the Way to Heaven, open'd to receive him. This Hall is adorn'd with the Pictures of many other Jesuits that suffer'd Martyrdom.

During the last three Days in the *Holy Week*, we saw the Streets of *Rome* crowded with Processions and Penitents with Hoods over their Heads, some in white, others in violet Colour, blue, yellow, and other Colours ; some lashing their naked Bodies with Whips of small twisted Cords, which made more Noise than they did Execution : It is sufficiently known that some of them are hired for this Purpose. However, the Concourse of Pilgrims was not so great this Year as it had been at some other Times. I remember I read, in an Account of *Trinity Hospital*, that in 1600, (being the last Jubilee Year) that House entertained or provided for (according to Custom) 440,500 Men, and 2500 Women. The *Italian* Pilgrims are entertain'd here three Days, but Foreigners four Days, and are served at Table by Princes, Princesses, Cardinals, and the Pope himself. One Thing I must not pass in Silence, viz. that we never met the Sacrament in *Rome*, or any other Town of *Italy*, except at *Venice*, where we saw it twice carried in great State under a magnificent Canopy, attended by a great Number of Torches.

I must do this Justice to the *Italians*, that they are not possess'd with the Spirit of Persecution, at least against Strangers ; and I don't remember that in all our Travels through *Italy*, not excepting even *Rome* and *Loretto*,

Loretto, we were in the least affronted on the Account of not worshipping Relicks or Images, the worst we ever heard upon that Score being stiled now and then, *Non sano Christiani, no sound Christians.*

5. The Way between Rome and Viterbo has little remarkable, except some Remnants of the *Via Emilia*, which we found of the same Breadth with the other Consular High-roads. The ancient *Lacus Cyminus* (now Lake *de Vico*) is at the Foot of a very high Hill, but of an easy Ascent, bearing the same Name with the Lake. It is almost covered with Sycamores and Chestnut-trees, and produces vast Quantities of *Primroses*, *Narcissus's*, *Hya-cinths*, and many other Flowers. The City of Viterbo is built of Stone, and surrounded with a Wall: Besides its Steeples, it has eight or ten square Towers, built by the Inhabitants for Retreats during the intestine Com-motions of the *Guelph* and *Gibellin* Factions. The following Inscription on the Town-house, gives you an Account of the Restoration of the ancient *Tuscan* Name *Viterbo*.

Desiderius ultimus Insubrium Rex Longulam, Vetulo-niam atque Volturniam mœnibus cingit: & Etruriæ priore Nomine inducitur, Viterbium, multa capitis indi-cte, appellari jubet. Sal. An. DCC.LXXIII.

Schroder says he saw another ancient Inscription.

M. T. Ciceronem ob egregias ejus virtutes singularesque animi dotes; per totum Orbem nostris armis virtuteque perdomitum; saluum & incolumem esse jubemus.

In the before-mentioned Place is to be seen another authentick Inscription, confirming the Donation made by the Countess *Maud* to the See of Rome:

Æternæ memoriæ inclytæ Mathildis, quæ ob præstabile Religionis studium, ac pietatem, sed Pontificiæ suum hoc patrimonium, Divi Petri in Tuscia dein nuncupatum elargitur. Et in veterem Urbis ejus splendorem intuens, Paschalis II. Bleden Pontif. Max. ejus Metropolim, ut ante Viterbium constituit. An. S. 1113.

It would be a fine Thing for the *Romanists*, if they had so good a Plea for the Donation of *Constantine*; the *Latin* Version of it is to be seen in *Barth. Picerna* and *Aug. Steuchus*, pretended to be done after the *Greek* Original in the *Vatican*; it is also inserted in *Gratian's Decretals*, but *St. Antonin* of *Florence* assures us it is not in the old *Decretals*; and divers noted Authors have refuted this Fable.

This puts me in Mind of a witty Repartee of *Hieronymo Donato*, Venetian Ambassador to *Alexander VI.* who being ask'd by the Pope where their Title of Sovereignty to the *Adriatick Gulph* was recorded? reply'd, That his Holiness might find their Title written on the Back of the Donation of *Constantine*. Notwithstanding the Inscription of *Desiderius* mentions only three Cities united under the Name of *Viterbo*, yet I remember that this City is sometimes stiled *Tetrapolis*, and its Inhabitants *Quaterni Populi*; the Names of the four Cities are express'd in a Distich written on the Top of the Stair-case in the Town-house:

Hanc Fanum, Arbanum, Vetulonia, Longula quondam Oppida, dant Urbem: prima Elementa. F. A. U. L.

Some deduce the Origin of the ancient *Viterbium* from *Isis* and *Osiris*, for which they produce some *Greek* and *Latin* Inscriptions; but being inform'd by credible Persons that they were supposititious, and suppos'd to have been contrived by *John Annius* the Dominican, known commonly by the Name of *Annius Viterbiensis*, an Author of no Reputation, I will not insert them here.

In one of the Halls of the Town-house you see a Picture representing an innumerable Swarm of Locusts, which darkened the Sun and cover'd the Earth, devouring every thing they met with upon the Ground about *Viterbo*. This happened in 1526. *Mezeray* relates such

another Story, which happened in *France* in 873, and was followed by a great Plague; and *Oforius* another Instance of the same Nature, which, he says, happen'd in *Africk* in the Year of the World 3825.

We were no sooner come within Sight of *Montefiascone*, a little Town seated on a little Hill within eight Miles of *Viterbo*, but the Children came out and ask'd us, whether we would not take a View of the *Est, est, est?* The Story, I know, has been mention'd by others, but perhaps not with all its Circumstances: A certain Abbot or Bishop travelling from *Germany* to *Italy*, used to send a Servant before, to know in which Inn he could meet with the best Wine, and to mark it with the Word *Est* over the Door. Coming to *Montefiascone*, the Servant was so highly pleas'd with the *Muscattello*, that he writ three *Ests* over the Door, which inviting his Master to drink more plentifully than he used to do, he fell sick and died on the Spot; his Monument stands in *St. Flavian's* Church, about two hundred Paces from the Town; he is represented with a Mitre on his Head, with two Scutcheons (*quarterly in the first a Lion, in the second two Fesses, the Shield not blazon'd*) and as many Drinking-glasses on each Side of him; at his Feet you see the following Inscription in *Gothick* Characters, by Way of Epitaph, made in all Probability by his Servant:

Est, Est, Est, propter nimium Est, Joh. de Fuc. D. meus mortuus est.

That is,

Est, Est, Est, by taking too much of Est, John de Fuc, my Lord, died like a Beast.

His true Name was *John de Fucris*, and he was of a great Family in *Augsburgh*.

All the Way between *Montefiascone* and *Bolsena*, we pass'd near the Banks of the Lake of that Name; it is of an oval Figure, and forty Miles in Compass; it contains two Islands, called *Martana* and *Passentina*; the first is celebrated for the Banishment of *Amalefuntba*, the Daughter of *Theodoric* King of the *Goths*, who was afterwards murther'd there by the Command of her Cousin *Theodat*, whom she had made her Associate in the Government. *Bolsena* is a very indifferent Town, formerly an Episcopal See, till it was translated to *Orvieto*. Behind it you see the Ruins of the ancient *Volturnum*, which, as *Pliny* relates, was burnt by Lightning. The Country between *Bolsena* and *Aquapendente*, is the worst in the whole World; the last of these two is poor and almost desolate, yet retains the Title of an Archbishoprick ever since the Destruction of *Castro. Centino*, a little Village at the Foot of the Hill *Radicoferani*, is the utmost Boundary of the Pope's Dominions on that Side; the Town and Citadel, built by *Desiderius* the last King of the *Lombards*, bearing the Name of the said Hill upon which they stand, are for half the Year conceal'd in the Clouds. In our Way hence towards *Siena*, we saw for eight or ten Miles nothing but barren Mountains; but as we came towards *St. Quirico*, the Country began to grow better and better, though this lasted not long, for near *Torrinieri* the Land grew worse than before, and continued thus, with some small Alteration, till we came to *Siena*.

Siena, the third City, and perhaps the most pleasantly situated in all *Tuscany*; its Air is excellent, the Streets, though not level, yet very neat, being pav'd with Bricks laid sideways; the Houses are handsomely built, and the Water very good; besides that, the *Tuscan* Language is spoken here in its utmost Purity, without the Roughness of the *Florentine* Dialect.

The Cathedral of *Siena* is a *Gothick* Structure, but very beautiful, and one of the most perfect among all the great Churches of *Europe*, being cover'd within and without with Marble; the Pavement is of black and white Marble *a la Mosaïque* in the Choir. On the Corridor running round the Body of the Inside of the Church, are to be seen the Statues of the Popes, and among the rest there is one smooth-chin'd Creature, which, as is said, was placed there in the Room of the Pope's *Joan: Baronius* says, it was taken away and broken to Pieces; *Launoy* says it was to be seen in 1634, and *Blondel* acknowledges

knowledges the same, as also the Statue erected in the Place where Pope *Joan* was deliver'd; Father *Mabillon* confesses the same Statue, and says, that the Name *Joannes VIII. Fœmina Angliæ* was added to it. All the Authors that ever I saw, who inveigh against the Story of this female Pope, and mention this Statue, acknowledge that it is still remaining, or at least, that it really subsisted heretofore. This Structure was begun by *Duccio*, and finish'd by *Dominic Beccafumi*. That Part next the Choir is beautified with the Pictures of *Abraham's* Sacrifice, and the Passage of the *Israelites* through the Red-Sea; the arch'd Roof is azur'd, intermix'd with Stars of Gold. From the Church you pass into the Place where the Library was kept formerly; here we saw those glorious Pieces in *Fresco* representing the Life of *Pius II.* design'd by *Raphael*, but painted by *Peter Perugin* his Master, with *Bernardin* and *Pinturicchio*; most of the Faces represent Persons then alive; among others, the Pope's Soul soaring upwards in the Shape of a *Paradise* Bird, and the *Hermit* gazing on it, is an exquisite Piece.

I will not detain you with the Story of *St. Katherine* of *Siena*, but I can't pass by in Silence the old Citadel with fifteen or twenty square Towers; among these the Tower of *Mangiana* is mightily extoll'd for its Height, but it is by those who have seen but few others. The Arms of *Siena* are, the famous *She-wolf* that gave Suck to *Romulus* and *Remus*, founded upon a Fable, that *Siena* was built by the Children of *Remus*. Travelling between the City of *Siena* and the River *Arno*, we found the Ground grow better and better the nearer we came to the River, especially about *Camiano*, *Granayola*, *Ponte d'Era*, and between *Pontgibon* and *Pisa*. Near *Pontgibon* or *Poggi-bonzi* (famous for its Tobacco) we met whole Troops of Girls going from House to House singing and wishing a merry *May*; their Songs are composed of a Number of pleasant Wishes, every Stanza concluding with a merry, merry, *May*.

On several sandy Hills near *Certaldo*, we saw great Quantities of several Sorts of Shells, as we had before at *Monte-Mario*, a Mile from *Rome*, in the *Alps* in *France*, and other Places; the same have been observed by *Olearius*, *Steno*, *Cambden*, *Speed*, and others. I received your Observations with a great deal of Satisfaction, but, to deal frankly with you, I must tell you, that I differ with you in Opinion; for if these Shells were the Remains of the Deluge, I see no Reason why the same should not rather have been left in the Valleys, and more universally spread upon the Surface of the Earth; whereas now they are only gather'd into Heaps in certain Places. Nor see I any sufficient Cause to have Recourse to supposed Inundations, Tempests, and Eruptions; for though some such Thing might rationally be concluded in reference to certain Places subject to Earthquakes, (as for Instance, the *New Vesuvius*, or *Monte Nuovo*) yet as the same Reason does not hold in all other Places where these Shells are found, so the Solution of this *Phænomenon* may with much more Ease be look'd for in the same Property upon the Land which produces these Shells at Sea. You will perhaps tell me, that Shells are inseparable from Fishes, Snails, &c. but you may easily answer your self, if you will but consider, that Shells have been found in the Stomachs, Kidneys, and other Parts of human Bodies. But we will proceed on our Journey.

Pisa is the second City of *Tuscany*, formerly a considerable Republick, seated in a level Plain on the River *Arno*, dignified with the Title of an Archbishoprick and an University; its Streets are spacious, streight, and well pav'd with broad Stones, and generally well built. The *Arno*, which is navigable here, and twice as broad as the *Tyber* at *Rome*, divides the City into two Parts; it is at present very poor and ill-peopled, its desolate Condition must be attributed to their Wars with the *Florentines*, who, after the Conquest of this Place, founded the great Mart of *Leghorn* upon the Ruin of *Pisa*. The Cathedral here is very like that of *Siena*, but not quite so large; it is a regular Structure, and over-crusted with curious Marble. The Baptistry is of a circular Figure an hundred and eighty Foot in Circumference, and

arch'd, surmounted by a *Cupola*: By an Inscription on a Pillar of this Baptistry it appears, that the Church was finish'd 1153. Here is an Eccho, which magnifies a Noise to such a Decree, that the Sound thereof lasts as long as the Tinkling of a great Bell. Travellers make a great Wonder of the Leaning Tower, which some pretend to appear leaning on all Sides, by a peculiar Art of the Architect, when, in Effect, its Inclination is only on one Side, occasioned by the Sinking of the Foundation: Its whole Height is a hundred and eighty eight Feet, and is of the Figure of an exact Cylinder. I let down a Plummets from the Balcony on the Top, on that Side where it inclines most, and after several Tryals both to the Right and Left, found that the Lead touch'd fifteen Foot distant from the Foundation.

The famous Burying-place of *Siena*, call'd *Campo Santo*, (because the Earth was brought from the *Holy Land* 1228.) is a Kind of Cloyster, one hundred and ninety Paces long, and sixty six broad. On a Wall under one of the Portico's I saw an Inscription, being a Decree of the Senate of *Pisa* upon the Death of *Cæsar*, ordering their Subjects to appear in Mourning for a whole Year, and to abstain from all publick Divertisements. I will not trouble you with their Physick-garden, as having nothing memorable in it; but I must not quite forget the Knights of *St. Stephen*, who have their Residence here: They must be of noble Blood, and born in Wedlock: They vow Conjugal Chastity, and say a hundred *Pater Nosters* and *Ave Maria's* every Day. This Order was founded by the Great Duke *Cosmo I.* 1561, the sixth of *August*, after he had gain'd the Battle of *Marciano*; his Statue stands directly opposite (in the Place) to the Church.

Legborne is about fourteen Miles distant from *Pisa*, the Country between them being very level, but woody, fill'd with Oaks, Cork-trees, and wild Myrtles: They tell you, that these Woods were formerly all cover'd by the Sea, which reach'd within three Miles of *Pisa*, where you see a large Church at the Entrance of these Woods, which, they tell you, was built in the same Place where *St. Peter* was shipwreck'd one Day when he was fishing. I need not tell you, that *Legborne* is a modern City, built on a level Ground, and strengthened with good Fortifications faced with Brick-work; its Streets are large, streight, and uniform, the Houses generally of the same Height, and painted on the Outside. In our Journey from *Legborne* to *Lucca*, passing a second Time through *Pisa*, we saw, three Miles on this Side of it, the craggy Mount *St. Julian*, the Boundary betwixt *Tuscany* and the Republick of *Lucca*.

The City is most pleasantly seated in a fruitful Plain of fifteen or twenty Miles in Extent, enclosed by very rich and well-cultivated Hills; its Fortifications are regular, and faced with Bricks: We walked round the Ramparts in an Hour's Time: But though it is not so big as *Pisa*, it contains many stately Houses, and is very well peopled. They shew'd us the Palace of the Republick, where the *Gonfalonier*, or Standard-bearer, with the seven *Anziani*, or Counsellors, lodge and eat together. The State of *Lucca* is a Fief of the Empire; its Government is Aristocratical, managed by the Council of two hundred and forty Nobles, divided into two Bodies, who rule alternately every six Months, with the *Gonfalonier* at their Head. This chief Magistrate bears some Resemblance to the Doges of *Venice* or *Genoa*, but continues no longer than two Months in this Dignity; from whence he reaps no other Profit but maintaining of his Table at the publick Charge: His Dress is a Robe of Crimson Velvet, with a Bonnet and Stole, and his Title, *His Excellency*; his Guard consists of sixty *Switzers*, and he may not be chosen to the same Dignity till after six Years. Their Arsenal is abundantly provided with Arms, and those very well kept.

In the Cathedral we saw the Chapel of the *Volto Santo*. They tell you, that *Nicodemus* having several Times attempted in vain to paint the Crucifix, was at last assisted by the Angels, who guided his Pencil to finish it: They are not able to tell you how this Picture came to *St. Fredian's* Church, but are positive that it removed

ved from thence to the Cathedral, where it hung in the Air, in the Place where we saw it, till they built an Altar under it, on which it rested, and about which they afterwards built a magnificent Chapel. This Crucifix is in such high Esteem with them, that they stamp it on their Coin, with the Arms of the Signiory. In St. Fredian's Church is a Marble Table seventeen Foot long, six and a half broad, and fourteen Inches thick; the whole Story whereof is express'd in the following Inscription:

O quisquis legis, lapis es, ni lapis hic moveat in admirationem & cultum D. Frediani, qui templo huic construendo, molem hanc in montibus ad quartum lapidem naſtus, viribus impar, sed spiritu fervens; mirā facilitate manibus humerisque suis, & Canonicorum in plaſtrum binis indomitis vacculis trahendum impoſitum, sexto salutis ſæculo, hâc in æde ſtatuit ſacrum monumentum.

In the Miſt of the ſame Church is to be ſeen a Tomb-ſtone with this Inſcription:

*Hic jacet Corpus Sancti Riccardi Regis Angliæ.
Here lies the Body of St. Richard King of England.*

Who this Royal Saint was, I am not able to imagine; for Richard I. (ſurnam'd Lyonheart) died in France, and was interr'd in the Abbey of Fontevrault; Richard II. was, after his dethroning, ſtabb'd at Pomfret, and buried firſt in St. Paul's, from whence he was carried to Langley, and afterwards to Weſtmiſter; and Richard III. being ſlain in the Battle of Boſworth in Leiceſtershire, his Body was interr'd in the City of Leiceſter. I do not remember ever to have heard any Thing of a King Richard before the Heptarchy.

In the Church of St. Auſtin you ſee an Image of our Lady, with the little Jeſus in her left Arm, concerning which they tell you the following Story: A certain Soldier having loſt all his Money at Dice, fell into ſuch a Rage, that after having given a great many ill Words to the Image of our Lady placed then againſt the Wall of the Guard-houſe, he threw a Stone level'd directly at the Head of the little Jeſus; but our Lady perceiving the Danger, toſs'd the Child in an Inſtant from her right Arm into the Left, where it remains ever ſince; the insolent Soldier was ſwallow'd by the Earth, the Hole being ſhewn to this Day. About the Time of the Reformation divers noble Families retired from Lucca to Geneva, where ſome ſtill flouriſh.

Half Way betwixt Lucca and Florence ſtands Piſtoya, viz. twenty Miles from each; the Country thereabouts is extreamly fertile, and well cultivated, but the City is almoſt deſolate, having loſt all its Trade with its Liberty: It is much bigger than Lucca; and its large and regular Streets and beautiful Buildings are ſufficient Teſtimonies of its former Grandeur.

The Inhabitants of Piſtoya have a moſt profound Veneration for St. James and his Relicks; the Altar of his Chapel in the Cathedral is cover'd with Plates of Silver, and adorn'd with very rich Lamps. Here I obſerved, in a peculiar Prayer directed to him, theſe Words, *Tu qui primatum tenes inter Apoſtolos, imo qui eorum primus; i. e. Thou that waſt the firſt, nay, the chief among the Apoſtles, &c.* There are not a few who pretend to look for the Original of the Guelph and Gibellin Factions among the Piſtoyans, where, they ſay, lived two Brothers called Guelph and Gibel, the elder of which ſided with Pope Gregory IX. whiſt the younger embraced the Intereſt of the Emperor Barbaroſſa; but, in my Opinion, thoſe come much nearer the Mark, who derive the Names of thoſe two famous Factions from the illuſtrious and potent Families of the Guelphs and Gibellines, (upon the Borders of Germany and Italy) who were at open Enmity, a conſiderable Time with each other, before one declared for the Emperor and the other for the Pope.

6. My laſt being written the next Day after our Arrival at Florence, I will in this give you a brief Deſcription.

tion of this City, and afterwards communicate ſuch Obſervations as I have had Occaſion to make during our Stay. Florence, the capital of Tuscany, dignified with the Title of an Archbiſhoprick, and the ordinary Reſidence of the Great Dukes, is ſeated upon the River Arno, as it were within the Arena of an Amphitheatre, being enclor'd at four or five Miles Diſtance, (except on the Side toward Piſtoya) with very fruitful Hills, riſing by an eaſy Aſcent till they unite with the high Mountains: If you take a full View from one of the Towers of Florence, of the Villages and Houſes of Pleaſure in the Plain and Hills, it ſeems to be only the Continuation of Suburbs, this Valley being perhaps the beſt peopled Place of that Kind in the Univerſe.

I was credibly inform'd, that the Circumference of the Walls of Florence is 15,240 Fathoms, and that the River Arno, which runs through it, is 500 Fathoms broad; ſo that adding the double Breadth of the River to the Compaſs of the Walls, the whole Circuit of Florence amounts to 16240 Fathoms, three of which are equivalent to five Feet eight Inches Engliſh Meaſure, according to which Computation it amounts to 36,675 Feet: It is almoſt of a circular Figure. The ſame Perſon told me, that there are in Florence about eight thouſand eight hundred Houſes, ſixty thouſand Souls, twenty two Hoſpitals, eighty nine Convents, eighty four Fraternities, one hundred and fifty two Churches, eighteen Halls belonging to Merchants, ſeventy two Courts of Juſtice, ſix Columns, two Pyramids, four Bridges, ſeven Fountains, ſeventeen Places or Squares, and one hundred and ſixty publick Statues. The Streets are paved with broad Pieces of a grey Stone called Pietra-forſe, and moſt of the Houſes are built of the ſame; theſe are brought from the neighbouring Quarries.

The Great Duke's Palace (called Pitti) is a moſt noble Structure, but has this Defect, that the Court is not ſpacious enough in Proportion to the Edifice, which being one hundred and twenty Foot high to the Corniſh of the third Order, cannot be ſeen without Trouble in any Part of the Court, which is only one hundred and ſixty Foot long, and one hundred and forty broad. As we were entering the old Ducal Palace, (the Receptacle of the ſo much celebrated Curioſities) we took a full View of the four Statues of white Marble on the Bridge of the Trinity, representing the four Seasons of the Year, made by Michael Angelo. The chief Curioſities we obſerved here were, the David, the Work of Michael Angelo; the Judith, by Donatello; the Sabin Women carried off by Violence, by John of Bologna; the Perſeus of Braſs, by Coligni; the Hercules and Cacus, by Bandinelli; and the Braſs Statue on Horſeback of Coſmo I. by John Bologna; all theſe are moſt exquisite Pieces. The three Baſſo relievo's on the Peſtial of that Statue represent Coſmo I. kneeling before the Pope as he was giving him the Title of Great Duke; the ſame Prince entering Florence in a triumphant Chariot; and the Reſignation of the Sovereignty to him by the Senate of Florence. The great Gallery of the Palace is four hundred Foot long, where we paſs'd between two Rows of ancient Statues and Buſts. Above them, againſt the Wall, we ſaw the Pictures of the ancient Philoſophers on one Side, and thoſe of great Generals on the other.

Among theſe Statues, that ſuppos'd to be Scipio's, in a Robe of Braſs, excels all the reſt, the Characters on the Hem of his Garment are of the old Hetruſcan; the Leda embracing Jupiter with a Pleaſure mix'd with Shame; the Bacchus, with a Copy of the ſame by Michael Angelo, not inferior to the Original; Julia the Daughter of Auguſtus, the Pomona, the Venus, the Diana, the Apollo, another Bacchus, the Peaſant ſtriking a Boar, the Buſts of all the Emperors to Galienus, and eſpecially thoſe of Adrian, Pertinax, and Severus, are excellent Pieces.

In the Chambers behind this Gallery, we obſerved in the firſt a great branch'd Candleſtick of Amber, an admirable Column of Oriental Alabaſter, a Rhinoceros's Horn of an extraordinary Bigneſs, Abundance of Baſſo relievo's,

and a great Number of ancient Sculptures, Medals, Idols, sepulchral Lamps, Stones, Minerals, and other natural Curiosities : The second is fill'd with Pictures ; the third, called the *Mathematical Chamber*, (here used to be kept the Iron Nail, one half of which was pretended to be transmuted into Gold, but is not shewn now, it having been found to be no more than a Sodering) has, among other things, Globes and Spheres of seven Foot diameter : The fourth has likewise nothing but Pictures, which excel those of the second, except the Ornaments of Ivory, Amber, and precious Stones in a peculiar Cabinet, and among the rest, a large rough Emerald rooted in its Rock, and the Platform of *Leghorn* on a Table of *Lapis Lazuli* : In the fifth Chamber you see the Pictures of most of the illustrious Persons of the present Age ; among the Generals are *Cromwell*, *Monk*, and the late Earl of *Ossory* : The sixth contains an hundred and thirty seven Pictures of the most famous Painters, done by themselves : The seventh is filled with Porcelane Vessels, and the five following with all Manner of surprizing Curiosities, and great Quantities of Arms of all Countries ; the Horsetail of twenty Foot long, presented to the Great Duke by the late *Charles Duke of Lorrain*, is none of the least among these Rarities ; but the most precious Things are preserv'd in an octagonal Apartment called the *Tribune*, built by *Buontalenti*, being twenty Foot in Diameter ; the Floor is pav'd with Marble of divers Colours, artificially join'd like inlaid Work ; the Hangings are of crimson Velvet, the Windows of Crystal, and the Inside of the Lanthorn cover'd with Mother of Pearl. You have, questionless, heard of that most celebrated Diamond, which weighs 139½ Carats ; *Tavernier* says, it is Pity that the Water is yellowish. Among the other Rarities, the following are the choicest ; an antique Head of *Julius Caesar*, of one entire *Turquoise* of the Bigness of an Egg ; a Cupboard filled with Vessels of Agate, *Lapis Lazuli*, Cornelian, and Rock-crystal set with Gold and precious Stones ; a large Table and Cabinet of inlaid Work of Oriental Jasper, Calcedony, Rubies, Topazes, and other precious Stones, excellently well contrived ; a Collection of the best Medals ; a vast Number of carv'd and engraved Pieces nicely kept ; some Master-pieces of the most excellent Painters ; six very beautiful *Grecian Statues* ; two Wrestlers ; the Peasant whetting his Bill, and at the same time listening to the Conspirators, *Cataline's* Associates ; a *Tauro*, a *Cupid* sleeping, a *Venus* six Foot high, and another five Foot, both of white Marble, the finest Piece of Workmanship in the World, the Head turns a little towards her left Shoulder, with her right Hand before her Bosom, yet at some little Distance, and covering her Nudity with the other, but without touching ; she stands bowing gently with her right Knee forward, the better to hide herself. This bashful Posture is accompanied with all the Marks of Modesty and Chastity in her Face, and with an incomparable Beauty, Sweetness, and youthful Air ; her Neck is exceeding beautiful ; and, in short, this Master-piece is the most exquisite Imitation of the Perfection of Nature. On the Marble Base are these Words :

ΚΛΕΟΜΕΝΗΣ ΑΠΟΛΛΟΔΟΡΟΣ ΑΘΗΝΑΙΟΣ ΕΠΙΘΕΣΕΝ.

Cleomenes, Son of Apollodorus the Athenian, made it.

From this Palace passing through a small Gallery, we came into the ancient Palace of the Republick, where the Great Duke's Wardrobe is kept ; and among other Things we saw there the rich Coach made for the Solemnity of the Great Duke's Marriage. The Hall of this Palace is a hundred and seventy two Foot long, and seventy four broad. The Cathedral is a large and stately Building, though for the most Part of a *Gothick* Architecture, being over-crust'd within and without with the finest polish'd Marble of several Colours : Its whole Length is four hundred and ninety Feet, and its Height, to the Top of the Cross on the Globe, three hundred and eighty Feet ; the worst is, that it has no Frontispiece. The rarest Statues in this Church are, *St. James*, by *Sansovin* ; the *Adam* and *Eve*, by *Bandinello* ; the Statue of *God the Father* ; the *dead Christ*, and an Angel supporting him, by the same Hand, on the high

Altar : The *Eve* is somewhat larger than *Adam*. The *Resurrection* painted in the Dome is a most excellent Piece, though the Criticks find Fault with *Fred. Zuccherro*, who made it, because he has represented the rising Bodies with Clothes on : Besides this, we took Notice of a greater Blunder in the same Church, committed by no less famous a Painter than *Paul Urcello*, who has painted *Sir John Hawkwood*, whom the *Italians* call *Acutus*, an *Englisman*, General of the *Pisans*, on Horseback, and his Horse resting on two Legs on the same Side, while the other two are in Motion.

The Pieces of the Rods of *Aaron* and *Moses*, shewn in the Cathedral, are question'd by some, because these Rods are said to be entire at the Church of *St. John de Lateran*. The Steeple (near the Church) is a Tower of one hundred and eighty Feet high, over-crust'd with square Pieces of red, black, and white Marble, and beautified with several excellent Statues : The old Bald Man, by *Donatelli*, is highly esteem'd.

The Baptistry is not unlike that of *Pisa*, and cover'd like the Church ; some say it was anciently the Temple of *Mars*, and that after its being converted into a Baptistry, it was dedicated to *St. John Baptist*. The *Mosaick* Work on the arch'd Roof is esteem'd excellent, and among the Statues here, the *Magdalen* of Wood, by *Donatelli*, excels all the rest : But the most surprizing Pieces are, the three Gates of Brass, whereon are represented some sacred Histories in *Basso relievo*. The Back-Gate, with this Inscription, *Andreas Ugolini de Pisis me fecit 1330*, is not altogether so beautiful as the other two, which put *Michael Angelo* into such a Rapture, that he said, they deserved to be placed at the Entrance of Heaven :

*Dum cernit valvas aurato ex ære nitentes
In templo Michael Angelus, obstupuit ;
Attonitusque diu, sic alta silentia rupit ;
O Divinum Opus ! O Janua digna Polo !*

The Sense of which is,
*These Gates of burnish'd Brass when he beheld,
Great ANGELO, best Judge of what excell'd ;
Amaz'd he stood, long silent, and then sigh'd !
O Work Divine ! O worthy Heaven ! he cry'd.*

The Statue of Justice near the Church of the *Trinity* is supported by a Column of Porphyry said to have stood formerly in the *Pantheon*. In the Court before the middle Gate of the Baptistry, you see two Columns of Porphyry at some Distance from each other, and yet chain'd together, which, they say, were brought from *Majorca*, and bestow'd upon the *Florentines* by the *Pisans*, for the Assistance they gave them in the Conquest of Part of that Isle. Near them stands another Column erected in Memory of a pretended Miracle wrought by the Body of *St. Zenobius*, when it was removed from *St. Lawrence* to the Cathedral Church, for his Shrine touching by Chance the Trunk of a dry Tree that lay upon the Ground, it blossom'd immediately, and produced Fruit.

The Church of *St. Lawrence* is both spacious and rich, and the Chapel, I must confess, when finish'd, will be the most exquisite Structure that ever was seen of this Kind ; it is both very large and magnificent : In the Middle of each Face of the Hexagon stands a double Pilaster of Jasper, with a double Chapter of Brass gilt, the Base being the same. The Emblematical Figures on the Pedestals of these Pilasters are very artificially made of precious Stones : In the six Angles are placed as many rich Tombs of Porphyry, Oriental Granite, and some other of the most precious Kinds of Marble ; on each Tomb lies a great Pillow of Jasper, valued each at sixty thousand Crowns, enrich'd with precious Stones, and upon each Pillow stands a Crown, exceeding in Richness the Pillow itself : The Base supporting the Tombs is over-crust'd with Porphyry and Calcedony, on which will be engraven the Epitaphs of the Princes for whom these Tombs are designed, and their Statues of Brass gilt, twice as big as the Life, are to be placed in the Niches of black Marble that are over the Tombs.

Tombs. The inner Roof of the Dome is intended to be covered with *Lapis Lazuli* intermixed with Roses and other Carvings gilt; and the rest of the Walls are over-crufted in Compartments with the finest Agate, Granite, Onyx, and other precious Stones, each Pannel being divided into Squares, embellish'd with various Sorts of Ornaments of Copper gilt; and the high Altar is likely to surpass all the rest.

The Library of St. *Lawrence*, which is eighty Fathom long, and twenty broad, is celebrated for its Manuscripts; as for Instance, that of *Virgil* of the Age of *Theodosius*, and a very ancient Greek MS. of the Chirurgery of the Ancients, of *Hippocrates*, *Galen*, *Asclepiades*, *Bitlynus*, *Apollonius*, *Archigenes*, *Nymphodorus*, *Heliodorus*, *Diocles*, *Rufus Ephesus*, and *Apollo-dorus Citienfis*, with the Manner of curing Dislocations, and Figures painted on Vellum, the only ancient Work of this Nature now extant. Mr. *Magliabecchi*, the Bibliothecary, was very sorry he could not communicate to me St. *Chrysostom's* Letter to *Cæsarius*, having received express Orders to the contrary from the Great Duke; but he positively assur'd me, that the Passage cited by *Martyr* is contain'd *verbatim* in that Manuscript.

In the Church of the *Holy Cross* we saw the Tomb of *Michael Angelo*, which, in my Opinion, bears no Proportion to the Merit of so famous a Person. In this Church is a Chapel belonging to the Family of the *Zanbini*, on the Altar of which is a Picture of Christ delivering the Souls of the Fathers, and among them many female Spirits, the Work of *Angelo Bronzini*: Some are of Opinion, that she who represents *Eve* is the true Resemblance of *Bronzini's* Mistress, and that the Man in the right Corner of this Piece, gazing upon this pretended *Eve*, is the Painter himself; just as *Pinturicchio* painted in the *Vatican*, Pope *Alexander VI.* prostrate at the Feet of *Julia Farnese*, under Pretence of adoring the holy Virgin.

In the *Annunciata* are kept two of the thirty Pieces *Judas* received to betray his Master; and in the Church of the *Carmelites*, the Crucifix that spoke to St. *Andrew d'Ursini*. Among the several fine Seats belonging to the Great Duke, we had only the Opportunity to see *Poggio Imperiale* and *Pratinola*; it must be confessed they are very delightful Places, and have even a sufficient Share of Beauty; but since our Gardens and Waterworks are advanced to that Height in *France*, the only Way to maintain the ancient Reputation of the *Italian* Seats, is to pass by in Silence their pretended miraculous Ornaments.

The Arsenal and Citadel of St. *John Baptist* are kept in very good Order, but the Forts of *Belvedere* and St. *Miniato* are much out of Repair. The Great Duke also maintains various Kinds of wild Creatures, and Nurseries for them. In the Hospital *ad Scalas* is the Tomb and Epitaph of a human Monster, with two Heads and four Hands on one Body, named *Peter* and *Paul*; one of these Heads would often weep, whilst the other laugh'd, and this slept often whilst the former was awake. The Mountains near *Florence* produce certain Stones, which being saw'd in the Middle and polish'd, represent sometimes Trees of divers Sorts, sometimes whole Towns, and the Ruins of old Castles; the first are called *Dendrites* by *Kircher*.

To conclude, I must tell you, that though *Florence*, for its Situation, and other Advantages, may be reckoned among the finest Cities in the World, yet to those who know the Pleasures of Society, and especially of Conversation with the fair Sex, the insupportable Constraint, and unavoidable Ceremonies used at *Florence*, appear an intolerable Burthen, except to those that are inur'd to this Kind of Slavery from their Infancy.

7. The Road between *Florence* and *Bologna* being one continued Ridge of the *Apennine* Mountains, and consequently not very fit for Calashes, we were forced to hire Horses, all the Littermen being taken up in carrying Monks (by what Accident I know not) over the Mountains. For two Days together we passed through a barren and mountainous Country; the highest Mountain we met with in our Passage, was that called *Monte*

Juovo; however, the Valleys of *Sarperia* and *Fiorenzola* (which some think to be the *Fidentia* of the Ancients) are not quite so desolate as the rest; the first is famous for Knives and other Cutlers Work made there; it was destroy'd by an Earthquake in 1642. We took Notice, that near the Village of *Pietra Mala* the Air sparkled in the Night. At the Village of *Scarica l'Assino*, between the last nam'd Place and *Loyano*, we saw a Post the Boundary of the Pope's and Great Duke's Territories, the Arms of the first being affixed on one, and the *Florentine* Arms on the other Side. From the Top of the last Hills of the *Apennine*, as we approach'd *Bologna*, and arrived by an easy Descent near that City, we had the most glorious Prospect in the World, of the extensive and delightful Plain of *Lombardy*, extending along the *Po*, from the *Apennines* to the *Alps*.

Bologna, the Seat of an Archbishop, who has the Title of a Prince of the Empire, and the second City in the Ecclesiastical State, is seated at the Foot of the *Apennine* Hills, at their opening into the Plain, upon the *Via Emilia*. The fairest Prospect of *Bologna* and the adjacent Country is from the Convent of St. *Michael in Bosco*, where at the same Time you may have the Pleasure of seeing one of the most magnificent Monasteries in *Italy*, comparable for its Beauty to most of the Royal Palaces of *Europe*; and to speak the Truth, as *Bologna* is larger and more populous, nay, even richer than *Florence*, so its Convents are generally very spacious and exceeding magnificent. The City is surrounded only with a single Wall without a Citadel; for when they surrendred to Pope *Nicholas* in 1278, it was under Condition, that they should not be bridled by a Citadel, their Estates not be liable to any Confiscations, and should be allow'd an Auditor of the *Rota*, and an Ambassador of their own at *Rome*; which Privileges have not been hitherto infringed. The University acknowledges for its Founder *Theodosius* the younger, in 425, but owes its chief Splendour to *Charles the Great*; hence it is that the Motto *Bononia docet*, is seen on the Coin of this City, as the Word *Libertas* is in their Arms.

In one of the Halls of the University College is a Monument erected to the Memory of a certain noted Chirurgeon named *Gabriel Taglicozzo*, who made artificial Noses, Lips, &c. of Flesh, mentioned by *Butler* in his *Hudibras*. The Canal which joins the *Arno* with the *Po*, is a great Conveniency for the Commerce of this City, the Inhabitants of which trade in Wax, Hemp, Flax, Hams, Sauciges, Soap, Tobacco, and Perfumes, besides that they have near four hundred Silk-mills; formerly they used to sell their little Dogs at a high Rate. The Houses of this City are generally of Stone, or Brick plaister'd over; the Streets have Portico's on both Sides, like those of *Padua*, but are higher and larger, and are for the most Part very straight; the Women are handsome, and not kept under so much Restraint as at *Florence*; the better Sort are inclin'd to follow the *French Mode*. In General *Caprara's* Palace, one of the best in the whole City, we saw many rich Spoils taken from the *Turks*.

The publick Palace of this City is appointed for the Lodging of the Cardinal Legate, and the *Gonfalonier* and his Counsellors. Over the Portal stands a Brass Statue of *Gregory XIII.* and on one Side of it that of *Boniface VIII.* with this Inscription;

Bonifacio VIII. P. M. ob eximia erga se merita, S. P. Q. B.
Ann. MCCC.

Here you are also shewn the Cabinet of Curiosities of *Ulysses Aldrovandus*, join'd with that of the Marquis of *Costi*, both belonging to the Publick. Among the rest we took Notice of the Picture of a certain Woman, who (as *Aldrovandus* says of his own Knowledge) had a long and thick Beard like a *Capuchin*. M. *Lotier*, a Banker of this City, has also an excellent Collection of Medals, in which are to be seen two *Otho's* in Brass of unquestionable Antiquity. In a Chamber near it they shewed us one hundred and eighty seven Volumes in *Folio*, all of *Aldrovandus's* own Hand-writing, and about two hundred

dred Bags full of loose Papers ; the Margins were pretty large, and the Lines not very close.

On the Front of this Palace, between the Statues of the Popes, is a *Latin* Inscription, intimating, that the Emperor *Charles V.* and Pope *Clement VIII.* meeting at *Bologna* in *November 1529*, restored the Peace of *Italy*, and that afterwards the said Emperor was crown'd King of *Lombardy* in the Church of *St. Petronius* ; the Emperor had been crown'd before, *Oct. 22, 1520*, at *Aix la Chapelle*. In another Place of this Palace, you see the Picture of one named *Ugolino*, on the Wall, hanging by one Foot, with this Subscription, *Ugolino traditore, filatugliero alla Patria* ; perhaps this might be Count *Ugolin* of *Pisa*, one of the Heads of the *Guelphs*. In another Place you see an Inscription beginning thus : *Adeste O Sol & Luna Testes, &c.* relating to a Miracle wrought by an Image of our Lady, who deliver'd *Bologna* from the Pestilence. That great and stately Fountain which faces this Palace, is the Work of the famous Architect and Sculptor *John* of *Bologna*, said by some to have cost seventy thousand Crowns.

In the Church of *St. Petronius* (the biggest in the whole City) is to be seen the so much celebrated *Meridian* Line of *Cassini*, engraven on a Copper Plate of 222 Foot long, and fixed in the Pavement. It begins at the Entrance of the great Body on the left Hand, and passes between the Pillars, without the least Obstacle, to the End of the little Nave of the Church, the Situation of which is almost *East* and *West*. In the arch'd Roof of the last Nave is a Hole, directly over the Noon-point of this Line, through which a Ray of the Sun entering, marks the Solstices and Equinoxes upon the Line. The same Operation may, without much Difficulty, be perform'd in any other convenient Place, the whole Mystery consisting only in measuring the Degrees on the Line, proportionably to the Height of the Hole through which the Ray enters.

In the Church of *Corpus Domini* they shew an embalm'd Body of *St. Catherine Vigni*, which has wrought many Miracles : But the Image of our Lady, said to be made by *St. Luke*, is in much greater Veneration with them ; her Residence is at the Mount *la Guardia*, eight Miles from the City (they were then making a cover'd Way to that Mountain) from whence they bring her at certain Times in Procession into *Bologna* with more than ordinary Magnificence, attended by the several Companies of the Artisans, the Fraternities, Convents, Heads of the Parishes, Magistrates, the *Gonfalonier*, and the *Legate* himself : The Image is always carried under a rich Canopy, the People upon their Knees saluting it as it passes by, with the most zealous Ejaculations that can be conceiv'd.

In the Church of the *Dominicans* you see the most magnificent Chapel and Tomb of *St. Dominic* ; the inlaid Work of different Colours on the Benches of the Choir, done by *Damian* of *Bergamo*, a Monk, are highly esteem'd to this Day, though it is beyond all Dispute, that since the finding out of the Art of imprinting natural Colours on Wood, this Kind of Work has been brought to a much greater Perfection. In the same Church is to be seen the Tomb of *Hentius* or *Enzelin* King of *Sardinia* and *Corfica*, natural Son to the Emperor *Frederick II.* The Epitaph gives you an Account of his being taken Prisoner by the *Bononians*, who detain'd him twenty two Years, nine Months, and sixteen Days in Captivity, till his Death, which happen'd in *March 1272*. The Tower called *Garisenda* is about 130 Foot high, and leans like that of *Pisa* ; it is a square Tower built of Brick, and its Inclination to one Side proceeds, questionless, from the same Reason (*viz.* from the Sinking of the Foundation) as does that of *Pisa*. The bright Stones, known by the Name of *Bononian* Stones, are the Product of the Hill of *Paderna*, about three Miles distant from the City.

The Heats being almost as troublesome here as in the *Apennines*, the Men use Fans as well as the Women, some of which are of Paper, and sold for a Penny a piece. In our Inn they had a Way of driving away the

Flies by a Machine ; they often treated us with *Lake Toisies* of the Bigness of a good Trencher ; their Flesh is pretty firm, and not ill tasted.

Leaving *Bologna* about Sun-set, we travel'd ten Miles to *Samogia*, a small Village about half Way between this City and *Modena*. They told us, that from this Place to the *Alps*, the Country is as level as a Bowling-green, and that the Roads are lined on both Sides, either with Cornfields or Vineyards ; the Vines are supported by Fruit-trees planted Chequer-wise, as we had seen them already in several Parts of *Lombardy*, and afforded a very delightful Prospect at first, but at Length grew offensive to the Eyes of us Travellers, for Want of that Variety which is diverting to the Sight, and without which nothing is diverting. The same Night, as we came near to the Village, we were surprized with the Sight of a prodigious Quantity of shining Flies, called *Lucciole*, with which the Hedges were cover'd to such a Degree, that they seem'd to be on Fire ; they are not unlike the Locusts in Shape, but not so large ; the shining Part is a certain yellow hairy Down under the Belly, which being stretch'd at every Motion of their Wings, sends forth a bright Glance like Fire.

Early in the Morning we pursued our Journey to *Modena*, where we arrived in two Hours. In our Way we pass'd by the Fort of *Urban VIII.* defended by four Bastions bearing the Names of *St. Mary*, *St. Peter*, *St. Paul*, and *St. Petronius* ; and a little on this Side of it we cross'd the River *Panaro*, the Boundary between the *Bolonian* and *Modenesse* Territories. The City of *Modena* itself is seated in a fertile Country, but for Want of Trade makes but an indifferent Appearance ; for its Fortifications are much decay'd, the Streets are narrow and dirty, the Portico's on both Sides of them low and narrow, and even the Churches contain nothing worth taking Notice of ; so that were it not for its ancient Reputation, and the Residence of the Dukes of that Name, it would scarce deserve a Place among the Cities of *Italy*. The old Palace is an inconsiderable Edifice, but the new one promises much better.

8. We travel'd in Calashes in four Hours from *Modena* to *Reggio*, a City as barren in Curiosities as *Modena*, but better built, and its Situation very pleasant. The Inhabitants tell you Wonders of their Churches, but these Things they must tell those that have not seen *Rome* or *Naples* ; their chief Pretensions lie in the Workmanship of Bones, of which they make several Sorts of Toys not worth the mentioning, and sold miserably cheap. They told us of certain ancient Inscriptions found at *Reggio*, in which this City was called *Regium Lepidi*, the other *Reggio* in *Calabria ulterior*, being known by the Name of *Regium Julium*, and its Inhabitants *Regienses*, whereas those of the first were called *Rhegini*. They stile their Prince Duke of *Reggio* and *Modena*, just as in *Scotland* (before the Union) they put the Name of their Country before *England* in the Title of the King. About eight Miles from *Reggio* we pass'd the Bridge over the River *Lenza*, on the other Side of which begins the Dutchy of *Parma*, being a plain Country, mostly Pasture, whereas about *Bologna* and *Modena* the Grounds are generally till'd.

The City of *Parma* is seventeen Miles from this Bridge, very pleasantly seated, and seen at a considerable Distance, by reason of the Straightness of the Road leading to it, and the Height of its Spires. Over the Gate, through which we enter'd, we saw the Arms of Pope *Paul III.* the same who bestow'd the Dukedoms of *Parma* and *Placentia* upon his natural Son *Lewis*. The River of *Parma* divides it into two Parts, but is not navigable ; its Fortifications are very good, and the Citadel design'd after the Model of that of *Antwerp*, formerly esteem'd a Master-piece.

The Ducal Palace is a very indifferent Building, but the new one is likely to be much larger and handsomer. The Wardrobe is well furnish'd, and so are the Stables, and the Coaches very rich. The great Theatre is beyond any of that Kind I ever saw, either at *Paris* or *Venice* ; the softest Whisper may be heard through any Part of it, though it is of a very large Extent ; there are no Boxes, but only Benches rais'd one above the other,

other as in an Amphitheatre. The Pit is also very spacious, and may be filled with Water to the Height of three Foot, in which they represent Naval Combats with whole Squadrons of little gilt Boats.

Besides the Schools of the University, they have here a College, wherein they receive young Gentlemen of all Nations, but none except such as are capable of being admitted Knights of *Maltba*. They eat together according to the different Sciences they learn; their Number at this Time amounted to two hundred and thirty. The Dome of the Cathedral is painted by the Hand of *Correggio*, and in the Churches of *St. John* and *St. Anthony* are various excellent Pieces. At the Race we saw Abundance of very good Company taking the *Tour à la mode* in their Coaches; but they observe here the same Custom that is practised upon this Account at *Rome*, viz. that the Women never go with the Men in the same Coach, but always appear in Coaches by themselves. In our Journey from hence to *Placentia*, we saw not any Village or River worth mentioning, except the little dismantled Town of *St. Domino*, tho' they are thirty five Miles distant one from another.

The City of *Placentia* is seated in a pleasant Plain about six hundred Paces from the *Po*; its Circumference is larger than that of *Parma*; the Houses are of Brick, neatly built, but very low, and on each Side of the Houses Foot-ways fenced with Posts, as in *London*, especially in the *Race-street*, which is as straight as a Line, of an equal Breadth from one End to the other, and three thousand Foot long. The Statues of the famous *Alexander Farnese*, Governour of the *Netherlands*, and of his Son *Ranuccio I.* adorn the *Great Place*, or, in plain *English*, the *great Square*. From the Top of one of the highest Steeples we had a full View of the Country round about, embellish'd with the various Windings of the *Po*, and could plainly discern *Cremona*, though at twenty Miles Distance. The Cathedral has some Pictures, done by the Hand of *Carache*; and that of *St. Sixtus*, an Image of our Lady, by *Raphael*. To conclude, *Placentia* is ill-peopled, and the Fortifications are but indifferent, though much extolled by the *Italians*; and their Weights, Measures, and Coins, are different from those of *Parma*. We coasted the Banks of the *Po*, but at some Distance from the River, following the Current till we came over-against *Cremona*, where we passed in a Ferry-boat, for there are no Bridges upon the *Po* below *Turin*.

The City of *Cremona* is seated on the *Milanese*-side of that River; it is very large, but poorer and less populous than *Placentia*. The Castle, though much extoll'd by the romantick *Italians*, is an antick shapeless Heap of Ruins; the Inhabitants of this City boast exceedingly of its Antiquity, but can produce no authentick Proofs for it. This City is forty Miles from *Mantua*, and in the Way between both you meet with no considerable Town except *Buzzolo*, a small City surrounded with some inconsiderable Works, which among some People pass for Fortifications; however, it bears the Title of a Dukedom, and its Prince is at the same Time Sovereign of the adjacent Country for four or five Miles about it. We passed the River *Oglio*, which rises with a large and rapid Current out of the Lake of *Iseo*, and falls into the *Po*.

Almost all Descriptions I ever saw of *Mantua*, have given a very imperfect Account of the true Situation of this City, which is generally represented to be in the Midst of a Lake; but to speak the Truth, this pretended Lake is no more than the Waters of the River *Mincio*, arising from the Lake of *Guarda*, which overflowing the flat Country, makes a kind of Marsh fourteen or fifteen times longer than it is broad, in which, but toward one Side of it, the City of *Mantua* is built on a firm Tract of Ground. The Cawsey over which we passed, was between two and three hundred Paces long, but on the Side towards *Verona* it is of a larger Extent. In some Places of these Marshes, the Water is always in Motion, but as it stagnates in most Places, the best Part of the rich Inhabitants leave the City during the Summer Season. *Mantua* has only a Wall for its Defence, but the Citadel is very strong: For the rest, it

is about the same Bigness as *Cremona*, but much better peopled; the Streets are broad and straight, but the Houses indifferently built.

The *Italians* will tell you strange Things of the Magnificence of the Palace, though, in Effect, it has neither Beauty nor Regularity, and the best Idea I can give you of it, is to compare it to *Whitehall*, viz. that it is large and commodious, without the other Qualifications belonging to a Royal Palace. We were assur'd, that this Palace was most magnificently furnish'd before it was pillaged by the *Imperialists*, July 18, 1639, but even as you see it now, the Duke's Lodgings want nothing of what is requisite to render them both convenient and splendid: The Hall is filled with rare and ancient Pictures, and the Cabinet of Curiosities wants not Materials to entertain the industrious Traveller. The Duke of *Mantua* has seven or eight Country Seats, among these we only saw *la Favorite* and *Marmirol*, the last of which is very pleasantly seated near a delightful Brook and Wood, and well furnish'd with Pictures and Antiquities, with Gardens, Orange-walks, Aviaries, and most curious Fountains belonging to it. In the Church of *St. Andrew*, they shew the *St. Longin*, with some Drops of that miraculous Blood found in this City in the Time of *Leo III.* which afterwards gave the Occasion (viz. in 1608.) to the Institution of the Order of *Mantua* by *Vincent Gonzaga*, who selected twenty Knights to be Companions of this Order. The other remarkable Things in *Mantua* are, the Churches of the *Jesuits*, of *St. Barnabas*, *St. Maurice*, *St. Sebastian*, *St. Ursula*, and *St. Barbara*, the Town-house, Theatre, Manufactory Halls, the Mill of the twelve Apostles, the Synagogue and Shambles. But before we part with *Mantua*, we must remember the Village of *Andes* near this City, which gave Birth to *Virgil*;

Mantua Musarum Domus, atque ad sidera cantu
Eveſta Andino. Sil. Ital. l. 8.

Leaving *Mantua*, we travel'd for twenty two Miles, till we came to the River which is the common Boundary between that Dukedom and the *Venetian State*, and eighteen Miles further came and lodg'd the same Night at *Brescia*. We were not a little surpriz'd at the Sight of the Women in the Streets and Shops, a Thing we had not seen since our Arrival at *Verona*. *Brescia* is pretty well peopled, and indifferently large; its Citadel, which is very strong, stands on an adjacent Hill near the Foot of the *Alps*; the other Fortifications are of no great Moment. The Palace of *Justice* is a noble Structure, of a certain Stone not unlike Marble; on the Pediment of the Front you see these Words;

Fidelis Brixia Fidei & Justitiæ consecravit.

The Armourers Shops are directly opposite to this Palace, under a Portico of five hundred Paces long, the Fire-arms of *Brescia* being accounted the best in *Italy*. This City is watered with many fine Springs, and a commodious Rivulet, which have their Rise among the *Alps*.

In the Cathedral they shew you what they call *Constantine's Oriflame*, which they told us was the same blue Cross that appear'd to *Constantine*, with this Motto, *In hoc Signo vinces*. But how is it possible that an Apparition in the Air could be preserv'd? And how could it be called an *Oriflame*, which signifies a Kind of gilt Standard or Banner? Some deriving its Etymology from *Flammula*, a Banner, and *aurea*, golden, because it was affix'd to a gilt Launce; others from a Sort of gold and flame-colour'd Stuff; it was adorn'd with green Tassels. I remember *Mezeray* tells us, that the second Race of the *French Kings* used to have *St. Martin's Cope* born before their Armies, but that the *Capets* made Use of the Banner of *St. Dennis*, called *Oriflame*, kept in that Saint's Church. Perhaps this *Oriflame* of *Brescia* is the *Labarum* in which *Constantine*, after his Victory over *Maccatius*, order'd a Cypher, which consists of the initial Letters of the Name of Christ, to be inserted,

As we travelled from *Brescia* to *Bergamo*, we passed constantly along the Ridge of the *Alps* on our right Hand, at the Distance of two or three Miles.

At *Palazzuolo*, a Place seated half Way between both these Cities (*viz.* fifteen Miles distant from each) we passed the *Oglio* a second Time. Coming to *Bergamo*, we found it both a trading and a strong Town, its Situation being at the Foot of the *Alps*. The Fortifications are well faced and kept, and the Citadel, with some Outworks, defend the rising Grounds about the City, which has no less than five good Suburbs. In the Cathedral you see the Tomb of the great *Barth. Cogliano*, General of the *Venetian* Forces against the *Milaneſe*; and in that of the *Austin* Friars, the Tomb of the famous *Ambroſe Calepin*, a Native of *Calepio*, a Village not far from *Bergamo*. In the Choir of the Cathedral you see some inlaid Work on the Benches, done after the ſame Manner, and by the ſame Hand, as that we ſaw in the Church of the *Dominicans* at *Bologna*. The *Bergameſe* Jargon is very groſs, beſides which, the Inhabitants have, for the moſt Part, ſcrophulous Tumors on their Throats, which appear very nauſeous to Strangers, though to them it appears ſo natural, that they queſtion whether it be a greater Perfection to have or be without theſe Tumors, and are inclined to hold the former.

The Grounds about *Bergamo*, and generally all over the *Milaneſe*, being watered with many Rivulets ariſing from the *Alps*, the Country People have from thence derived an infinite Number of Channels, whereby they prevent the Inconveniency of Drought, and render their Grounds fertile. The River *Adda* (ariſing out of the Lake of *Como*) having at this Time overflown its Banks, we were obliged to quit our Calafh at *Canonica*, a Village about twelve Miles from *Bergamo*, and to paſs the River in a Boat, not without ſome Danger, by reaſon of the Violence of the Current. Two Miles above *Canonica*, on the oppoſite Side of the River, lies *Trezzo*, where we embark'd on the Canal called *Navilio della Marreſana*, which reaches in a ſtraight Line within half a Mile of *Milan*, its Length being about twenty Miles. It is ſupplied with Water by the *Adda*, which River having in many Places very ſteep Cataracts or Waterfalls before it comes into the flat Country, is near *Canonica* twenty five or thirty Foot lower than the Canal; which is the Reaſon that ſo many Attempts were made in vain to bring the Waters of the *Adda* to *Milan*, till at laſt that moſt celebrated Architect and Engineer *Leonardo da Vinci* undertook this Work, and brought it to Perfection. Mr. *Felibien* gives this great *Florentine* the following Character; That he was of a very large Stature, and of ſuch Strength, as to be able to twiſt the Clapper of a Bell with one Hand; he was an excellent Horſeman, a fine Dancer, and very dextrous in the Management of Arms, and all other Gentleman-like Exerciſes; he was one of the beſt Painters of his Age; he and *Michael Angelo* having engaged *Raphael* to leave his firſt Way of Drawing; beſides which, he was a ſkilful Architect, a good Sculptor, and great Engineer; a learned Mathematician, Muſician, Anatomist, Philoſopher, Poet, and Hiſtorian; all which, join'd with his courteous and generous Behaviour, certainly render'd him one of the moſt accompliſh'd Perſons the World ever ſaw. He died in the 75th Year of his Age, in the Arms of *Francis I.* King of *France*, who giving him a Viſit, and our illuſtrious *Leonardo* endeavouring to ſhew his Acknowledgment by raiſing his Body in the Bed, the King advanc'd with his Arms to hinder him, and ſo he expir'd. From this Canal we had a moſt delightful Proſpect of the adjacent Country, border'd in many Places with Summer-houſes, Gardens, and Orchards, like ſome of the Canals in *Holland*.

9. Scarce any City in *Europe* hath been ſo entirely deſtroyed by the two terrible Scourges of Mankind, *War* and *Peſtilence*, as *Milan*; notwithstanding which, it may at this Day be rank'd among the fineſt Cities in the World: It was quite deſtroy'd by *Frederic Barbaroſſa* in 1162. It is almoſt of a circular Figure, about ten Miles in Compaſs, and is ſaid to contain no leſs than thirty thouſand Inhabitants. There are but few

Instances of ſuch great Cities built in the Middle of the Land without the Conveniency of either the Sea or a River, the Defect of which is ſupplied by many Springs and Rivulets that water the Country adjoining, and the Canal deriv'd from the River *Adda* fills the Ditch of the inward Encloſure of the City with running Water. The Fortifications, or outward Encloſure, were made ſince the Deſtruction of this City by *Barbaroſſa*. Near the Gate of *Pavia* is to be ſeen the Beginning of a Canal, intended to be drawn from thence to the City of *Pavia*, by *Galeazzo Viſconti*, but the Execution thereof was ſtopt by his Death. A certain *Latin* Author (*Werner Rookwink*) derives the Etymology of *Mediolanum*, à *Sue dimidia lanata*, i. e. from a Sow half cover'd with Wool, found in the ſame Place where this City was founded.

The firſt Thing we thought worthy our Attention, was the famous Cabinet of the late Canon *Manfredi Settala*, a Man equally learned and judicious, not only in his Choice, but alſo in working many curious Things with his own Hands. We ſaw here various Machines, invented for the Diſcovery of the *Perpetual Motion*; Looking-glaſſes of ſeveral Sorts, Dials, Muſical Inſtruments ancient and modern, and ſome of his own inventing; Books, Medals, curious Locks and Keys, Seals, Rings, Pictures, *Indian* Works, Muramies, Arms, ſtrange Habits, Lamps, Urns, Idols, and a great Number of all Sorts of Antiquities; Fruits, Stones, Minerals, Animals, Variety of Shells, Curioſities in Steel, Wood, Amber, and Ivory; a Piece of Cloth made of the Stone *Amiantos*, Monsters, &c. But the Diſh of yellow Amber, two Foot in Diameter, is a moſt exquisite Rarity: There are divers other Pieces of rough Amber with Ants, Flies, Spiders, and other Inſects, enclod in the Subſtance of them, a convincing Proof, in my Opinion, that Amber is a Kind of Gum or Bituminous Matter harden'd by the Air, the Sea, or ſome other Cauſe, ſo that when (for Inſtance) an Ant happens to light upon a raw and clammy Piece of this Bituminous Matter, ſhe is entangled in this unctuous Subſtance, and it growing harder and bigger by Degrees, the Inſect is enclod in it. This Opinion is exactly the ſame *Martial* had of it;

*Dum Phaëtontea formica vagatur in umbrâ
Implicuit tenuem succina Gutta feram:
Sic modò quæ fuerat vitâ contempta manente
Funeribus facta eſt nunc pretioſa ſuis.*

There are three or four pretended *Unicorn* Horns in this Cabinet; for though, beyond all Diſpute, they are properly no more than the Teeth of a certain Fiſh found in the *Northern Seas*, yet here, as well as in the *Venetian Treasury*, and other Places where they are preſerv'd, they retain ſtill the Opinion, that they grow on the Head of that imaginary Creature. There are alſo ſome *Fossil Horns* exactly like thoſe that grow on Fiſhes, though of a very different Matter. The *Remora*, a Fiſh about the Bigneſs of a Herring, ſhewn in many Cabinets, is of the ſame fabulous Kind; I am ſure I have ſeen no leſs than twelve of them in ſeveral Places, but never two of the ſame Kind.

The Cathedral, founded by *John Galeas Viſconti*, firſt Duke of *Milan*, 13 June 1386. and which ſtands in the Center of the City, is a Structure of a prodigious Bulk, though (according to my Computation) a ſixth Part leſs than *St. Peter's* at *Rome*, but is infinitely beyond it in the Curioſity of the Ornaments and Sculptures, wherewith it is cover'd both within and without, there being not the Breadth of a Hand to be ſeen in the whole that is unwrought. It is built after the *Gotick* Manner, and to form a true Idea of this Edifice, you muſt repreſent to your ſelf a vaſt Collection of *Roſes*, *Trees*, *Animals*, *Grotesques*, *Pyramids*, *Niches*, *Statues*, and a thouſand other Varieties, affording an agreeable Confuſion to the Eye: However, there are only ſome Parts of this Church compleatly finiſh'd, the Canons of the Chapter thinking it their Intereſt not to proceed with too much Vigour in a Thing of this Nature, which brings vaſt Sums of Money by *Donations*, *Legacies*,

Legacies, &c. into their Coffers, Part of which they know how to employ to other Uses. According to an Inscription in Gold Letters, engraved on a Piece of Marble in the same Church, one *John Peter Carcannis*, a Native of *Milan*, left by his Will the Sum of 230,000 Crowns of Gold, toward the Building and Adorning the Front of this Church, which, nevertheless, remains to this Day almost naked. There may, perhaps, also be another Reason why the same is not finish'd; for considering that there are two Sorts of Architecture in that Part of it which is already begun, it seems as if the Undertakers were not a little puzzled how to reconcile the Uniformity of the Architecture to the *Gothick* Structure of the whole Body of the Church.

Martin the Fifth's Statue stands in the Choir of this Church, without a Beard, and a very young Face, tho' he was near fifty Years old when he was chosen Pope; the Inscription says, it exceeds *Praxiteles*:

*Præstantis Imaginis author,
De Tradate fuit Jacobinus in arte profundus,
Non Praxitele minor, sed major, farier ausim.*

Near it is the Statue of *Pius IV.* Behind the Choir are two Marble Tables, containing a Catalogue of all the Relicks preserved in this Church, among which is a Piece of *Moses's* Rod, though at the same Time they pretend to have it entire at *St. John de Lateran's*. Besides this Piece, there is another preserved at *Florence*, and *Baronius* says another was found at *Sens* 1008. On the great Altar you see the Nail of the Crucifixion, of which it is said *Constantine* made a Bit for a Bridle; five Lights burn constantly round it Day and Night.

The Pavement of this Cathedral is more curious and more solid than that of *St. Peter's* at *Rome*, the Marble whereof being very thin, is almost worn out. The whole Charge of this Pavement (when finished) is computed at 66,290 Crowns, not including the Choir. We had from the Steeple of this Church a full View of *Milan*, besides other Cities in the Plain of *Lombardy*, and the Conjunction of the *Alps* and *Apennines* near *Genoa*. The great Bell, called *St. Ambrose*, is seven Foot in diameter, and weighs thirty thousand Pounds. In the great Square before the Church we observed generally about thirty Coaches; but their ordinary *Tour à la Mode* is a spacious unpaved Street, (called *Strada Marina*) sprinkled every Day with Water.

The *Ambrosian* Library obtained its Name from being dedicated to *St. Ambrose*, by *Frederick Borromeo* Archbishop of *Milan*. A certain Author, in his Description of this Library, printed at *Tortona*, makes the Number of its MSS. amount to 12,000, and the printed Volumes 72,000; but the Library-keeper told us, there were not above 40,000 in all. Among the first, *Ruffinus's* Version of *Josephus* challenges the Precedency for its Antiquity. The great Hall is seventy five Foot long, and thirty broad; it is kept open two Hours in the Forenoon, and as many in the Afternoon. Among other Rarities, we were shewn a large Volume of mechanical Draughts, done, as they said, by *Leonardo da Vinci's* own Hand; the Writing is so bad, that it is not to be read without a Perspective-glass. An Inscription on the Wall near it tells you, that a King of *England* offered three thousand Pistoles for it, but mentions not his Name. In the Academy for Painting, adjoining to this Library, we saw a Picture of *Clement X.* resembling a Print so exactly, that we were all deceived in it. The Cittadel is a regular Hexagon Fortification, well faced, and strengthen'd with a good Ditch and Counter-scarps. The principal Structures, besides the Churches and Convents are, the two Palaces of the Governor and Archbishop, the Houses of *Marquis Homodeo*, *Count Barth. Aresè*, and *Signior Martini*.

The Seminary (founded by *Charles Borromeo*) has a double Portico 176 Foot three Inches long, and 16 Foot 10 Inches and a half broad, extending round the Inside of the great square Court; the first Order is *Doric*, the second is *Ionian*. Over the high Portal you see the Statue of *Piety*. The *Townhouse* and the *Great*

Hospital, the great Court of which is 120 Paces square, about the Inside whereof are two Rows of Portico's, supported on each Side by forty two Pillars of a certain Kind of Marble found in the *Alps*, each Pillar consisting of one single Piece of Stone. The Body of the Structure is of Brick; the old Hospital is united with it, but the *Lazaret* or Hospital for infected Persons lies about three hundred Paces without the City; *Bramante* was the Architect. This large Structure is composed of four Galleries joined in a Square, each of which contains ninety two Chambers, about twenty four Foot broad; so that the whole Length of each Gallery (including the Walls) amounts to eighteen hundred Feet. The Inside is surrounded with a Portico sustained by Marble Pillars, and the Square within is a Meadow, water'd by several Springs and Brooks, in the Middle of which stands an Altar under a Dome, supported by Pillars, by which Means the Sick may see Mass said from their Chambers.

The Church of *St. Ambrose* hath many Statues and Pictures, which were the Production of the ignorant Ages: Among the rest, you see here a *Dragon* of Brass, resting upon a Column of Marble; some think it to be the Serpent of *Æsculapius*, others an Emblem of the Serpent in the Desert; but the common Opinion is, that this Dragon was cast out of the Fragments of that Serpent; which makes many Pilgrims flock thither to worship it, as *Bossi* and *Charles Torre* assure us by their own Experience. In the Church of *St. Eustorgia* they shew still the Tomb that contain'd the Bodies of the three Kings that were afterwards removed to *Cologne*; they pretend, that it retains to this Day a certain Virtue of curing Distempers; for it is to be observed, that the Inhabitants of the *Milanese* are not behind-hand with the rest in magnifying their Relicks, of which they have Abundance, for at *St. Alexander's* there are no less than 144,000 Martyrs of the Catacombs of *St. Sebastian*.

The chief Curiosities made in *Milan* are Works of several Sorts in Steel and Rock-Crystal, with which they are furnish'd by the neighbouring *Alps*; of the largest Pieces they make Looking-glasses, but they are seldom above a Foot square. It is to the Curiosity of their Workmanship that some attribute the Original of the old Proverb, *viz. He that wishes well to Italy, must destroy Milan*: meaning, that thereby its Riches would be dispersed through the whole Country; though some explain the same Proverb of the fatal Wars that have afflicted *Italy* on the Account of this City, it having been forty Times besieged, and two and twenty Times taken. The House of the *Marquis of Simonetta*, two Miles without the City, hath an *Eccho* which repeats the last Syllable about forty Times: We heard it in a cover'd Gallery in one of the Wings of the Buildings, where the *Eccho* answering from the other Wing, we found the Sound to decrease like the Rebouncings of an Ivory Ball.

In our Way from *Milan* to *Pavia* (which is only fifteen Miles) we went to take a View of the famous Convent in the Plain of *Barco*, founded by *John Galeazzo Visconti* first Duke of *Milan*. The Church is of a *Gothick* Architecture, but the Chapels and Altars not inferior to any in *Italy*; the Cloysters are wonderfully handsome, and the Gardens, Parks, Brooks, and Avenues exceeding delightful; it contain'd then about fifty eight Friars, who lived there very deliciously. The once famous, but now inconsiderable, City of *Pavia* is so much fallen from its ancient Lustre, that its poor Remains bear scarce any Resemblance to what in ancient Times its Buildings were, when the Metropolis of a Kingdom, and the Residence of no less than twenty Monarchs, the Castle being now no more than an old Heap of Stone, and the Fortifications quite neglected. The University (founded by *Charlemain*, and re-established by *Charles IV.*) is not much better than the Town; it hath, however, five Colleges, among which that of *Borromeo* is worth taking Notice of, for the Beauty of its Structure; the Scholars of every College wear different Gowns; which Distinction is of great Service.

The Cathedral is a low, dark, and very old Edifice;
over-

over-against it is an *Equestrian* Statue of Brass, called the *Regisul*, which some think to be the Statue of *Antoninus Pius*; *Platina* gives it the same Name, and says, it was brought from *Ravenna* after that City had been sack'd by King *Luitprand*, the same who (as they say) brought *St. Austin's* Body from *Sardinia* to *Pavia*, where it was buried in *St. Peter's* Church, now in the Possession of the *Austin Friars*, though it is certain that they cannot shew the Place where the Body lies, the Marble Tomb in the Chapel on one Side of the Church being erected only in Honour of that Saint. *Bernard Saccus*, (l. 10. c. 3.) a Native of *Pavia*, in his History of that City, gives us the following Account of the Translation of *St. Austin's* Body: *In templo D. Petri à Luitpranda ædificato conditum Augustini corpus fuit; & ne facile resciri posset, ferunt Luitprandum tribus locis effossis, struistisque, sepulchris, alibi deinde nocte, paucis operi adhibitis, jussisse corpus condi, omnibus sepulchris eadem nocte, occlusis, ut certa corporis sede ignorata, difficilior in ævum fieret occasio, ejus perquirendi rapiendique. Constructum deinde alio sæculo sacellum D. Augustino fuit, juxta Templum D. Petri, in quo sacello Arca marmorea & celebris, composita est, Augustini sepulchrum representans.* The same Author makes the following Observations concerning *Pavia*, That the Grounds thereabouts produce naturally *Asparagus* twice every Year, which are eaten raw by the Country People; and that the *Po*, which now is five or six Miles from that City, reach'd formerly within five hundred Paces of it; which explains several Passages in the ancient Geographers, who place *Pavia* near that River: *Padus*, adds *Saccus*, *sæpe totus ab alveo profiliens, alium sibi extemplo alveum sine fossoribus eruit. Si ab Apennino aquarum copia irruat, fluctus in adversam ripam torquet, contra vero si ab Alpium latere aquarum impetus fiat: si ex utraque parte, effertur supramodum.*

Coming out of *Pavia*, we pass'd the River *Tesin* (*Ticinum*) over a cover'd Bridge, being the most rapid and largest River of all that fall into the *Po*. It is subject to great Inundations, which sometimes prove fatal to the adjacent Fields; they say, that if these Inundations continue for eight Days, (which, however, happens rarely) the Coldness of the Waters destroys the Herbs to that Degree, that they scarce recover in several Years after.

The River *Ticinum* had formerly communicated its Name to the City of *Pavia*, built upon its Bank; *Saccus* says, in the Year 472. its Name was changed in the Time of *Odoacer*, who, after he had destroyed it, granted Immunity for five Years to the Inhabitants, in order to rebuild the City; whence the City was call'd *Papia quasi piorum patria*, from the Piety of its Citizens, who went to *Ravenna* to implore the King's Pardon, not for their embracing the Christian Religion, which they had done long before. *Me si audieritis*, said one of their Envoys after their Return, *nomen inveniemus, quod nostræ pietatis officia in patriam restituendam, paucis syllabis posteritati attestabitur, & Ticini nomen aquis restituetur. Papia piorum Patria, &c.* I shall add only, that *Pavia* is famous for the Misfortune of two Kings taken Prisoners there, viz. *Desiderius* by *Charlemain*, and *Francis I.* by *Charles V.*

10. We dined at *Voghera*, a Town about fifteen Miles from *Pavia*, and lodged the same Night at *Novi*, a City seated at the Foot of the *Apennines*, thirty Miles from *Genoa*, under whose Jurisdiction it is; the Road betwixt both is very mountainous. The Situation of *Genoa* is at the End of a Gulph, partly on the Brow of a Hill, which forms a Crescent round the Gulph, and partly on a little Plain betwixt the Foot of the Hills and the Sea-shore; the Streets are narrow, and the Houses in the lower Part of the City six or seven Stories high, but are lower by Degrees as the Ascent rises; this affords a pleasant Prospect at a Distance, but carries with it divers Inconveniencies, especially for Coaches, which for that Reason are not much in Fashion here, the Ladies being generally carried in Litters, and Gentlemen using Calashes they drive themselves. It is strengthened by a double Fortification, reaching on both Sides to the Shore, the innermost incloses the Body of the City,

and the second the rising Grounds about it. When I had taken a View of the City of *Genoa*, I could not but be surpris'd at what is commonly reported of it, viz. that it is built all of Marble, whereas it is beyond all Contradiction, that (except some Houses in the *Strada Nuova*, that are either adorn'd with, or have whole Fronts of Marble) their ordinary Materials for Building are Brick and Stone, or both together, and their Houses are generally plaister'd over on the Outside. Notwithstanding this, *Genoa* is not destitute of beautiful Structures, especially in five or six of the best Streets, and in the Suburbs of *St. Pietro d'Arena*; besides that, *Genoa* has this Advantage in Building, that Slates and Glafs are as plentiful here as they are rare in other Parts of *Italy*.

The pretended Gardens in the Air in *Genoa*, compar'd by some to the pensile Gardens of *Semiramis*, owe their Original to nothing else but the Scarcity of Ground, which obliges the Inhabitants to put their Flowerpots in their Balconies, and sometimes to cover them with Earth. The best Edifices of *Genoa* escaped the Fury of the French Bombs, which being level'd against the middle Part of the City, did most dreadful Execution, there being to this Day (1688) above five hundred ruin'd Houses in that Part of the City. In the Church of our Lady of the Vineyards they shew'd us a Bomb which fell there without the least Detriment; had not the French Bombs thrown down four or five Churches and as many Convents at the same Time, they would certainly make the World believe that the Bombs had a Respect for so sacred a Place. During this Conflagration, the Doge, with thirty Persons more, shelter'd themselves in the great Hospital called the *Albergo*, whither many of the Inhabitants also carried their best Effects. To prevent the like for the future, they are at present busied in making a third Mole, which is to stretch further into the Sea than the two former. The Harbour of *Genoa* is capacious enough, and of a good Depth, but is expos'd to the *Lubeccio* or the African South-West Wind, the most dangerous that reigns in this Part of the Mediterranean. This oblig'd them to make another lesser Port within the great one, for the Security of their Gallies, which are now reduced to so small a Number as six, an insignificant Squadron in Comparison of what the *Genoese* Navies were in former Times.

Those that intend to have a compleat Idea of *Genoa*, must view it distinctly from three several Places, from the Top of the *Pharos* or Water-Tower; from the Sea at a Mile's Distance; and from the Top of the Hill. The publick Palace, or *Palazzo Reale*, where the Doge and some of the Senators lodge with their Families, is a very large Structure. In the little Arsenal of this Palace we were shewn a *Rostrum* of an ancient Roman Ship; it was of Iron, with a Boar's Head at the End of it: The Inscription tells you, that it was found in the Harbour of *Genoa*, as they were cleansing it. Here are also some Curiaffes, said to have belong'd to certain Ladies of this City who fought against the Turks.

The Ladies generally dress themselves after the French Mode, but the ordinary Sort make Use of a Kind of little Fardingals. The Noblemen, though not obliged to any particular Habit, yet wear for the most Part Black and Cloaks; they assume the Titles of *Dukes*, *Marquisses*, *Counts*, &c. which the *Venetian* Nobility do not, but they wear no Swords.

The Doge (who must be fifty Years old at least) is stiled *His Serenity*, the Senators *Their Excellencies*, and the Noblemen *Most Illustrious*, a Title of no great Moment in *Italy*. The Doge is crown'd with a Crown of Gold, and holds a Scepter in his Hand, by reason of the Kingdom of *Corfica* under the Jurisdiction of this Republick, but his Power is as much limited as that of the Doge of *Venice*; besides that, at the End of every two Years Deputies are always sent to his Serenity, to give him to understand, that his Time being expired, he must leave the Palace. We saw once the whole Senate in their Formalities at the Procession on the Feast of *Corpus Christi*, where the Doge appeared

A PROSPECT OF THE CITY OF GENOA

Vol. II. page 584.

peared in a crimson Robe, with a kind of square Bonnet on his Head; before him were carried two Battle Axes and a Sword in the Scabbard, a Senator marching on each Side of him in a black Gown, but of the same Make with that of the Doge; the Streets were strew'd with green Herbs, and lined on both Sides with Tapestry; in the Windows we saw the Ladies dress'd in their best Attire, with Baskets full of Flowers, which they threw among those that follow'd the Procession, according to their several Inclinations, the Gentlemen receiving these Favours with low Reverences from the Hands of the fair Distributors.

The Church of the *Annunciata*, though the fairest in *Genoa*, yet in Beauty and Magnificence is much inferior to many we have had Occasion to describe before. The most remarkable Thing that belongs to it is, that it owns for its Founder a Citizen of *Genoa* of the Family of *Lomellino*, who built it at his own Expence.

I will not detain you with the Dialogue between the Crucifix at *St. Jerome* and *St. Bridget*, any more than with an ample Description of the great Dish made of one single Emerald, in which, they say, Christ eat the *Paschal Lamb*, (*Beda* says it was a Silver Dish) *Du Val* would have this Emerald Dish to be one of the Presents made by the Queen of *Sheba* to *Solomon*.

At *St. Mary of the Castle* there is another speaking Crucifix; for a certain Gentleman, it seems, having made a Promise of Marriage to his Mistress in a Place of the City where a Crucifix stood, which he afterwards refused to fulfil; the Lady accused him before the Judges, where, being upon the Point of losing the Cause for Want of sufficient Witness, she appeal'd to the said Crucifix; and some Persons being sent thither, and the Question proposed to the Crucifix, it answer'd with a Nod, which made the Judges determine in Favour of the injured Lady; which is the Reason that this Crucifix is particularly reverenc'd by Maids. But I cannot say how far it is trusted. The Ashes of *St. John Baptist* are preserved in the Cathedral, in a Shrine supported by four beautiful Columns of Porphyry, brought from *Smyrna* in 1098. This Saint and the Emperor are the two Protectors of *Genoa*, and the Image of the first is stamp'd on its Coin, which is the fairest and best in *Italy*, commonly called *Genouines*.

The Traffick of *Genoa* consists chiefly in *Velvets*, *Points*, *Gloves*, *Anchovies*, dry *Confections*, and various Sorts of *Fruits*, but is much decay'd; for though some private Persons are still exceeding rich, yet the Generality grow poor; the Government monopolizes the Trade of Wine and Corn, so that the *Tavern* and *Innkeepers* must buy their Wines out of the Cellar of the State, and the Bakers fetch their Corn from the publick Granaries.

11. Taking our Way from *Genoa* towards *Casal*, we came back the same Way we went as far as *Novi*, where, hiring a Coach to *Turin*, we dined the next Day at *Alexandria*, a little City, provided with slender Fortifications; notwithstanding which, it maintain'd a Siege of six Months against *Frederick Barbarossa*, who gave it the Name of *Casarea*, which *Alexander III.* changed into *Alexandria*. What some affirm, viz. that the Emperors used to be crown'd here with a Crown of Straw, is a meer Fable, whence (they say) it got the Name of *Alexandria di Paglia* or of *Straw*, which, indeed, it retains to this Day, though the Reason of it is not known. *Casal* is a strong City, seated on the right Bank of the *Po*; besides the old Castle, it has a new Citadel, fortified with six Royal Bastions, Half-moons before the Curtains, and a large and deep Ditch full of Water, and an Arsenal stored with Arms for ten thousand Men. Since the *French* have been in Possession of this Citadel, they have made considerable Alterations in the Fortifications, especially in the Bastions, which being very large, they made a second Rampart, and new Bastions within the other.

From *Casal* we pass'd the *Po* a fourth Time, the Banks of which our Coach follow'd for a considerable Time; we pass'd in Sight of *Terni*, a small fortified Place in that Part of *Montferrat* under the Jurisdiction of the Duke of *Savoy*. *Verrue* lies on the right Side of the *Po*,

and is much stronger than the other. After we had travel'd eight Miles from *Casal*, we enter'd *Piedmont*, the Ground being still level, but not long after found ourselves among the Mountains, in a large and flat Valley, almost surrounded with the *Alps*: The Grounds in some Parts of this Plain are exceeding rich, but in some others very indifferent. In our Passage we saw two or three large Spots of Ground, where two Days before had stood the finest Corn in the World, now laid quite Waste by the Hailstones, the very Straw being beaten into the Ground, and the Vines, Walnut and other Trees broke all to Pieces. It is generally reckon'd but forty five Miles from *Casal* to *Turin*, but the *Montferrat* Miles, as well as those in *Piedmont*, are much longer than those in *Lombardy*.

The City of *Turin* is seated in a Plain upon the River *Doire*, three hundred Paces from the *Po*; not only the Town, but also the Avenues leading to it, are very pleasant; but what most pleases Strangers is, that here they are joy'd with the frank Conversation of the Inhabitants, after they have been almost tired out with the starched and jealous Reservedness of the *Italians*, it being certain, that their Manner of living at *Turin*, may be compar'd to the most polite City of *France*, and that Language is as commonly spoken here as the *Italian*, the People generally following the same Steps in their Conversation, and it may be said without the least Exaggeration, that the Court of *Savoy* is as sprightly and gay as any in *Europe*. The old Part of *Turin* is somewhat indifferently built, but to make Amends for this, the new Part has broad straight Streets, and the Houses are large, high, and pretty uniform. The Street that passes through the two Squares, and reaches from the Castle to the new Gate, is one of the fairest in *Europe*. The Houses in the new Square are adorn'd with large Portico's that enclose them on all Sides. The Duke's Palace has very good Apartments, though it appears with no great Lustre on the Outside. The Palace of the *Jesuits*, and of the Prince of *Carignan*, (but lately finish'd) are both magnificent Structures. *Turin* is but of an indifferent Bigness, enclos'd with a regular Fortification by the present Duke; but the Citadel exceeds the rest both in Strength and Beauty, but was not quite finish'd. The Walks of Oaks on the Ramparts are very delightful to behold at a Distance, and afford an agreeable Shade to those that divert themselves here, with the most delicious Prospect towards the Rivers; but the general Meeting-place of the Gentry is near *Valentia*, a Country Seat of the Duke upon the Banks of the *Po*, about a Mile from *Turin*, besides which the Duke has seven or eight more, all well furnish'd. Before we leave *Turin*, we must not forget to say something of the new Chapel dedicated to the *holy Handkerchief*, in the Cathedral; it is, beyond all Question, a very glorious Piece of Workmanship, but what some have pretended, viz. that it excels the Chapel of *St. Lawrence* at *Florence*, is so far from being true, that it is not comparable to it; they are indeed both of the same Figure, but that of *Turin* is much less, and will be embellish'd only with black Marble. I must upon this Occasion put you in Mind, that instead of one, there are at least five or six of these pretended *holy Handkerchiefs*, viz. two at *Rome*, in *St. Peter's* and *St. John de Lateran*; one at *Cadoin* in *Perigord*; one at *Besançon*, one at *Compeigne*, one at *Milan*, and another at *Aix la Chapelle*; they all produce papal Bulls to maintain their Titles, in which Point the Handkerchief of *Cadoin* has the Preference, being authorized by no less than fourteen Bulls, whereas that of *Turin* has only four.

12. Since we are going to leave *Italy*, I have a Mind to entertain you with some Observations, which I had not the Opportunity to insert in any of my former Letters. Our short Stay in the Places through which we pass'd, would not suffer us to spend much Time in making Acquaintance with the People of the Country; and consequently, we could not be so particularly informed of their Customs; neither do I intend to enter on that Subject, but only to communicate some Remarks to you, without any other Order than as they shall

offer themselves to my Memory. I could not give you an Account of those Academies of the *Virtuosi*, that are established in almost all the Towns in *Italy*, because I had not Time to enquire particularly about them; but if I may give Credit to the Information I received from several Persons, they are certainly, notwithstanding the Noise they make about them, but very inconsiderable Societies, as I have intimated before. The affected Oddness of their Titles are very whimsical, they are not much unlike the Names which the Grooms in *France* and *England* give to their Horses. I shall only mention a Dozen of them. Thus the *Academists* of *Genoa* call themselves *Addormentati*, i. e. *Drowsy*; those of *Naples*, *Ardenti*, i. e. *Burning*; those of *Alexandria*, *Immobili*, i. e. *Immovable*; those of *Rome*, *Fantastici* and *Humoristi*, i. e. *Fantastical* or *Humorous*; those of *Viterbo*, *Ostinati*, i. e. *Obstinate*; those of *Siena*, *Intronati*, i. e. *Giddy-headed*, or *Block-heads*; at *Perusa* they stile themselves *Insenfati*, i. e. *Mad*; at *Parma*, *Innominati*, i. e. *Harmless*; at *Bologna*, *Otiosi*, i. e. *Idle*; at *Milan*, *Nascofi*, i. e. *Concealed*; at *Ancona*, *Caliginati*, i. e. *Obscure* and *confused*; at *Mantua*, *Invaghiti*, i. e. *Easy* or *Pliable*; and at *Macerata*, *Catenati*, i. e. *Chained*. I perceive I have skipped from Place to Place without any Order, but that is not material in a Thing of this Nature.

We were treated with a great deal of Civility and Kindness by the *Italians*, as far as we could judge by outward Appearances; but to deal plainly, their Complaisance is a Mixture of Flattery and Design. We found also by Experience, that the People of this Nation are very sober. The Inns in the little Towns, especially on certain Roads, are very ill furnished with Provisions. The first Course they call the *Antipasto*, is a Dish of Giblets boiled with Salt and Pepper, and mixed with Whites of Eggs; after which Course, comes two or three small Dishes, one after another, of different *Ragous*. Between *Rome* and *Naples* the Traveller is sometimes regal'd with *Buffaloes* and *Crows*. Some Historians relate, that the first *Buffaloes* that were seen in *Italy*, were brought thither *Anno Dom. 595*; the *Buffaloe's* Flesh is black, stinking, and hard; there are none but the most beggarly *Jews* at *Rome* who eat it, and the Beast must be hunted, otherwise it is impossible to chew its Flesh. They have all the various Kinds of Wine in *Italy*, but the best Sorts are scarce. About *Rome* there is the Wine of *Gensano*, *Albano*, and *Castle Gandolfo*, in which Places the Soil is the same; the *Greco* of *Naples* and the *Lacryma Christi* are strong, but the small *Asprino bianco*, and the *Chiarello piccante*, seemed more agreeable to our Taste, though they are much less esteemed. At *Florence* and *Montefiascone* the richest Wines are pleasant, and have no more Fire than what is convenient for ordinary Drink; but there is no great Quantity of them. The Great Duke's delicate *Moscadello* grows in a little Vineyard, and is consecrated to his own Ule, or to be sent as Presents, but never dispersed through the Country. There are also some good Sorts of Wine near *Verona*, and in the State of *Genoa*. About *Loretto* the Casks are made short and broad, like a *Dutch Cheese*, but towards *Pavia* their Length is about seven Times their Diameter. Towards *Parma* and *Placentia*, where there are excellent Pastures, they make Cheese of all their Milk. Butter is scarce in *Italy*, instead of which they use Oil in all their *Ragous* and *Fricasies*; but though they draw it from their own Olive-trees, it is oftentimes worse than in those Countries where none of these Trees grow; for what will yield the Price and keep longest is always transported for the Sake of Gain. We have not seen the chief Season for Fruit in this Country. At *Venice*, where we staid two Months in Winter, we had white Grapes of *Bologna*, very firm, and of a most delicious Taste. At *Naples* we eat Winter Melons, and at *Genoa* we were entertained with all Sorts of small Fruits, and I never saw so good and large Cherries as there. The *Riviera di Genoa* is peculiarly famous for excellent Fruit; it may be truly said of *Genoa*, that its Hills are without Wood, but all the rest of the Proverb is false, *Men without Faith, Ladies without Shame, and Sea without*

Fishes. There are both Rogues and honest Men every where, and we found by Experience, that there are very good Fish in the Sea of *Genoa*. I took Pleasure two or three Times to go in the Morning to see the Fish-market at *Naples*, *Venice*, *Ancona*, and *Leghorn*, and other Places, where I observed several Sorts that I had never seen in other Places. The Gulph of *Cajeta* abounds with Sturgeon, some of which are also found in the *Tiber*; it is excellent when roasted fresh.

In all our Travels through *Italy*, we never saw either a Hare or Partridge in the Fields; and I might also add, we saw as few in the Inns. It is very strange, in my Opinion, that these Animals are not more plentiful, since the Country is not wholly destitute of them. There are large Extents of Ground in *Italy*, which are almost uninhabited, and consequently ought to abound with Game, proportionable to the like Places in the rest of the World. And again it might be reasonably supposed, that the Game should be more here than in other Places, because the Lords of these Grounds are never wont to reside on them, and yet are no less jealous of their Rights than the Gentlemen of other Countries. In *England* and *France*, there are many Persons of Quality who pass their Time in the Country, but that is not the Custom in *Italy*, where all Persons of Note live in the Cities, out of which there are no Castles or great Houses to be seen, which belong to private Persons, or at least they are very rare, especially if we compare this Country with *France* and with *England*. To return to our Game; it must be acknowledged, that Quails are not so great Rarities here as Partridges, for on the Approach of Spring they come in Bevy's from *Africa* and cover the whole Country. These poor little Creatures are so tired with their long Passage, that they throw themselves into Ships, and where-ever they can find a Place to repose themselves. They may be caught in Heaps without the least Trouble; but since they are extremely lean, they who take them usually feed them, for some Time, before they eat them. I believe it is a Question not yet resolved, whether these Birds fly over the Sea at one Flight, or whether they do not sometimes swim to take Breath? It is indeed hard to conceive, that the Quail, which has not a strong Wing, and flies heavily, should be able to continue its Flight so long. But on the other Side, I am inclined to believe, that the Water would so moisten and drench the Feathers, that it could never spread its Wings again; and besides, its Leanness and Weariness, the Dangers to which it exposes itself, and its Eagerness to find a Resting-place, are, in my Opinion, convincing Arguments, that it flies all the Way without Intermission, though, it must be confessed, this Notion is subject to Difficulties.

I saw but one *Scorpion* in *Italy*, and I could not learn that these Animals are very mischievous in this Country: There are several Ways to guard against them; but I never saw any of those hanging Beds that are usually talked of as common there. The People about *Verona* make Use of Iron Bedsteads, which they place at some Distance from the Walls, that those Insects may neither breed in them, nor be able to come upon the Beds, and the Feet of the Bedsteads are filed and polished for the same Reason. If the Animal itself can be caught and bruised, on the Part which it stung, it is a certain Remedy; and there are also Salts and Oils extracted out of it, which produce the same Effect: But after all, the Stinging of Scorpions is not mortal in *Italy*; and besides, such Instances happen so very rarely, that they who are desirous to travel into that Country, ought not be discouraged by them. There are two Sorts of Animals to which the *Italians* give the Name *Tarantula*; one is a Sort of Lizard, whose Biting is reputed mortal; it is found especially about *Fondi*, *Cajeta*, and *Capua*: But this is not that, which other Nations call *Tarantula*. The true *Tarantula* is a Spider, and lives in the Fields; there are many of them in *Abruzzo*, *Calabria*, and they are also found in some Parts of *Tuscany*. Such as are stung by this Creature, make a thousand different Gestures in a Moment; for they weep, dance, tremble, laugh, grow pale, cry, swoon away,

away, and, after a few Days of Torment, expire, if they be not assisted in Time. They find some Relief by Sweating and Antidotes, but *Musick* is the great and specifick Remedy. A learned Gentleman of unquestionable Credit told me at *Rome*, that he had been twice a Witness both of the Disease and of the Cure. They are both attended with Circumstances that seem very strange; but the Matter of Fact is well attested, and undeniable. I think I could produce natural and easy Reasons to explain this Effect of Musick; but without engaging myself in a Dissertation that would carry me too far, I shall content myself with relating some other Instances of the same Kind: Every one knows the Efficacy of *David's* Harp to restore *Saul* to the Use of his Reason. I remember *Lewis Guyon*, in his *Lessons*, has a Story of a Lady of his Acquaintance, who lived one hundred and six Years without ever using any other Remedy than Musick; for which Purpose she allowed a Salary to a certain Musician, whom she called her Physician; and I might add, that I was particularly acquainted with a Gentleman, very much subject to the Gout, who infallibly received Ease, and sometimes was wholly freed from his Pains by a loud Noise. He used to make all his Servants come into his Chamber, and beat with all their Force upon the Table and Floor; and the Noise they made, in Conjunction with the Sound of a *Violin*, was his Sovereign Remedy. Highway Robbers (about which Reports prevail so strongly) are not more frequent or dangerous in this Country, than *Scorpions* or *Tarantula's*, for there have not been any *Banditti* at *Rome* since the Pontificate of *Sixtus V.* And I think I told you, that the Marquis *del Carpio* hath extirpated them out of *Naples*. I do not remember that ever any Person was put to Death in all the Places through which we travel'd, during the Time we staid in them. There is not a City, perhaps, in the whole World, where Executions are so rare as at *Venice*. They who are under the Patronage of a Nobleman, which is a Thing very easily obtain'd, may do what they please; only they must take Care never to commit a Villany in a publick Place, or that may make too great a Noise. At our Entry into most Cities our Pistols were taken from us; but we always found them at the other Gate at our Departure. This is a troublesome Thing, for at the End of the Voyage the Charge amounts to as much as the Pistols are worth. It is not lawful to wear Swords either at *Genoa* or *Lucca*, but that Privilege is readily granted to Strangers, when they desire it; and both this and the former Custom are daily declining, so that, in all Probability, they will be very soon out of Date.

The Bayonet is prohibited in Cities, but in the Country every one may wear what Arms he pleases; and even those who travel on Horseback, oftentimes carry Fuses. The *Stiletto's* of *Milan* are famous, for they do their Work effectually. Love and Jealousy are the two Furies that shed most Blood in *Italy*. The *Italians* are said to be jealous without Reason, and the least Suspicion puts them into a Fit of implacable Rage. Not only at *Venice*, but every where else, the Girls are sent to Nunneries in their Infancy, and they are usually married, or at least contracted, without seeing their future Husbands; the Girls of the lowest Rank are suffer'd to remain with their Parents, and for that Reason it is not without much Difficulty that they are able to find Husbands. I am not so well acquainted with the Customs of other Places, but at *Rome* there are several Funds established, either to marry poor Maids, or to confine them for ever to a Convent. These Charities are distributed with almost the same Ceremonies that are observed at the *Minerva*, which I described. I observed in the Churches at *Rome*, that in Lent the Women hearing Sermons, are shut up in a Place under the Pulpit, with an Inclosure of well-joined Boards six Foot high. There are several Trees and Plants in *Italy*, which grow neither in *England* nor, for the most part, in *France*, unless perhaps in the Southern Parts of it. The Palm-tree is a Stranger in *Italy*, and rarely bears Fruit there. In the Garden of Simples at *Pisa*, there is a Male and Female Palm-tree planted together,

agreeable to the ancient Error of those who thought such a Marriage was necessary to make those Trees fruitful. But this is a meer Fable, for I observed a Palm-tree alone full of Dates at the *Villa Madome* on *Mount Mario* at *Rome*. We went to the Pope's Chapel on *Palm Sunday*, where all the Cardinals were assembled, and he who officiated for the Pope, presented a Palm Branch to every one of the rest. These Branches were almost five Foot long, and the Leaves were woven together into Knots of several Figures with great Art. We saw that which was sent to the Pope. All the Prelates and other Ecclesiasticks had also Branches, which were either greater or smaller, according to the Dignity of those who bore them; the Laicks use only Olive Branches. In M. *Badouer's* Garden at *Verona*, there are Cypress-trees an hundred Foot high, and two hundred Years old; the Citrons of *Florence*, called *Cedratti*, are the most excellent of all this Kind of Fruit. Silk-worms were brought into *Italy* from *Japan* and *China*. I have already told you, that we observed several Sorts of Trees commonly planted in the Ground in *Italy*, which they are forced to put into Pots or Boxes in the colder Countries, that they may carry them in Winter into Green-Houses, to preserve them from the Rigour of the Season. Such are the Orange-trees and Lemon-trees, the Pomgranate-trees, the Olive-trees, the Myrtles, the *Ficus Indica*, the Caper-trees, and many others. They have commonly also the Plane-tree, the Cork-tree, the Scarlate Oak, the Jujub-tree, the Carob-tree, Cypress, Sena, Lentisk, &c. The Roads are lined, in several Countries in *Italy* with white Mulberry-trees, for the Nourishment of Silk-worms. Those, who love Simples, will find enough to gratify their Curiosity on the *Appennine* Mountains between *Loretto* and *Rome*, and every where in the *Alps*, but they must have more Time than we had.

I gathered certain Sorts of Sponges on the Sea-side towards *Terracina*, of which, two were in a Manner rooted on very hard Flints, the rest lay loose on the Shore. These Sponges put me in Mind of Pumice-stones; and I must not forget to tell you, that I spent some Time to no Purpose, in searching for those Stones on *Mount Vesuvius*, though it is generally said, and even by very learned Men, to be full of them. This is a very great Mistake, there are indeed many porous and calcined Stones, which have some Resemblance to Pumice-stones, but the Difference is soon perceived, tho' Pumice-stone is a Production of Nature, and it is so far from being true that they are made so by the Fire of *Vesuvius*, or any other, that such a Fire would certainly destroy them, as it destroys all other Substances that are within its Reach. Over-against the Cape of *Mycene* there is a little Island where those Stones grow. When the Sea is agitated by a Storm, it loosens and carries away some of them that are swimming, and the Wind drives ashore a great many small Pieces between *Puzola* and *Cumæ*, especially towards *Bajæ*, where I have gathered some that were very fine. You may then be assured, that there are no Pumice-stones to be found about *Vesuvius*, and that all that you have read about it in the Books of Travellers and Naturalists, ought to be reckoned among the grossest popular Errors. The Mountains of *Italy* and particularly the *Appennine* Hills, abound with Metals, Mineral Waters, Crystal, Alabaster, a Kind of Agate, and several Sorts of Marble, but the Marble of the *Archipelago* has brighter Colours. The white Marble of *Cararo* is one of the finest Sorts in *Italy*, and a great deal of it is transported to *France*. The Winter had been very long and sharp, almost all the Oranges and Citrons were frozen, and the Ground under the Trees was covered with them in the above-mentioned Places, where these Fruits are most common.

I observed that they take a great deal of Care at *Rome* to preserve themselves from the Inconveniencies occasioned by the Heats which are usually very troublesome in that Place. The People of Quality have low Apartments, where the Sun never appears, which are paved with Marble, and furnished with Fountains and Water Spouts; and besides, the Doors and Windows

are so contrived, that they are never without a kind of cool Breeze. The Beds are encompassed at some Distance with a Curtain of Gauze or Tiffany, which is joined close to the Boards of the Floor and Ceiling above and below, and hinders them from being tormented with Gnats. It is also the Custom to sleep two Hours immediately after Dinner, but they never lie down, for they have a Sort of folding Chairs which have Backs that rise and fall with a Spring. The Use of Umbrello's is common every where. The *Serain*, or Evening Dew, in the *Campagna di Roma*, is esteemed mortal during three or four Months in the Summer, and great Care is taken to avoid it. Travellers double their Pace to arrive at *Rome* in Time, or stay at the Distance of eighteen or twenty Miles from it. I found the following Verses over the Gate of a House at *Rome*; they contain the Rules that ought to be observed for the Preservation of Health in that City, according to the Opinion of the Author.

*Enecat insolitos residentis Pessimus Aer
Romanus; solitos non bene gratus habet.
Sospes ut hic vivas, lux septima det medicinam
Absit odor fœdus; sit modicusque labor.
Pelle Famam & Frigus, Fructus, Femurque relinque,
Nec placeat gelido fonte levare sitim.*

That is,

*The pois'nous Air of ROME, all Strangers fear,
Nor wholly safe e'en those establish'd here.
Would'st thou escape? Take Physick once a Week,
Ill Smells avoid, nor too much Labour seek.
Fly Hunger, Cold; from Fruit, from Females, fly,
Nor taste Spring Water,—if you do—you die.*

You may observe by the Way, that the Author chose rather to run the Hazard of a false Quantity, than to lose the Jingle of his four *F's*; he might have said *Venerem* instead of *Femur*, the first Syllable of which is short. I have not given you an Account of the Antiquity of several Cities, though Enquires of that Nature are sometimes curious; but besides, that they require a great deal of Time and Labour, and have been prosecuted already by very able Pens. I find that these Controversies are very often Questions only about the Places where those Cities stood, for in many of them there is not the least Remains, or any Proof of their first Foundations. They have been subject to the same Alterations which the Vessel of the *Argonauts* underwent of old; besides, the Sight of the Places might perhaps raise a Traveller's Curiosity, but wears off by Degrees when they are only the Objects of his Imagination. I must tell you now I think on't, that in all *Italy* we observed but one Windmill, or rather the Ruins of one, at *Legborne*. They use no Tin Vessels in this Country, because of the Scarcity of that Metal; all their Vessels are made of Earth leaded, or of Earthen Ware; we have seen it made in several Places, but they have none that resembles *China* so exactly as that of *Delft*. Whereas we place the Beginning of the natural Day immediately after Midnight, the *Italians* make it begin after Sun-setting, and their Clocks strike always four and twenty Hours, from one Sun-setting to another. You may easily perceive, that, according to this Computation the Hour of Noon varies daily, for when the Sun sets at Four o'Clock according to our Calculation, they reckon One when we count Five, and consequently it is Noon at twenty Hours; and in like Manner when the Sun sets at Eight on our Dials, it is One o'Clock with them when we reckon Nine, and it is just Noon at Sixteen Hours. Nevertheless, with respect to the artificial Day between Sun-rising and Sun-setting, they use the Words Yesterday and To-morrow as we do. The *Babylonians* began their natural Day at Sun-rising, and the *Jews* at Sun-setting, as the *Italians* do at present. The Inhabitants of the Province of *Umbria*, with *Ptolemy*, and some others, in former Times, reckoned the Beginning of the Day at Noon, and the *Egyptians* at Midnight, as we do. The ancient *Romans* also began the Day at Midnight, but their Hours are

unequal. I cannot forbear acquainting you, that we left *Rome* without seeing the Pope; there were, doubtless, some Reasons, that would not permit him to appear in Publick; and there were others that hindered us from paying him a Visit. I shall conclude this Account with telling you, that we bought some modern Medals at *Rome* from the famous *Hameranus*, who is reputed to excel in that Sort of Workmanship. Of all the Medals we saw of Queen *Christina*, this, in my Opinion, is the most heroical, and most worthy of that great Princess. Her Dominions are on the Reverse, with the whole Hemisphere, and this Motto, *Ne mi besogna ne mi basta*, I don't want them, and they are not sufficient to me. *Alexander the Great* could use the last Part of this Motto, but instead of reigning over himself, his Ambition made him desire more Worlds.

15. The Account we have of our Author's Voyages, contains also the History of his Return through *Switzerland*, Part of *Germany*, and the Low-Countries; but as we have a much better Description of those Countries by Bishop *Burnet*, who without Question had his Head better turned for writing upon such Subjects, and for giving his Readers useful and important Relations, rather than a bare Detail of Roads, Churches, Inns, Tombs, and Inscriptions, we have chosen rather to omit the Remainder of his Travels in Haste through these Places, and to give those of that learned Prelate, who though he was the Author of many Books, upon a great Variety of Subjects, all of which have been received with Applause, at least by a great Part of the World, yet perhaps there are none of them that will do him greater Honour with Posterity than the Letters he published containing the Account of his Travels.

But before we part entirely with *Misson*, it may not be amiss to make some few Observations upon his Writings, for the Sake of doing Justice to Truth, to our Readers, and to his Reputation. It must be confess'd, that there are a great Variety of curious, useful and entertaining Remarks to be met with in his Travels, and that as his Design was to render them as useful as possible to the World, so the Pains he took for that Purpose were very great and very laudable; but on the other Hand it must be also allowed, that his Method is very far from being so just or so judicious as might be wished.

The Reader will easily observe, and, indeed, he confesses it himself, that he made but a very short Stay in many Places; but then he visited many of those Places afterwards, which gave him an Opportunity of enlarging, altering, and correcting those Observations; but then the Method in which he has done this is also none of the best, for instead of reviewing and reforming his first Book, he has inserted new Letters, Supplements, Dissertations, critical Discourses, and perpetual marginal Notes; which so distract and disturb the Narration, that one is frequently obliged to run over his whole four Volumes, in order to draw together his dispersed Accounts of the same Thing.

We have removed, as far as it were in our Power, this Difficulty in the Abridgment we have given of his Travels; but without Doubt it would give a great Satisfaction to the Publick, and add very much to the Value of this Work, if, in the next *English* Edition of it, Care was taken to digest the Whole into Chapters rather than Letters, to bring the several Notes, Dissertations and Supplements into their proper Places, and to throw out all the unnecessary Repetitions, which would at once reduce the Size, augment the Credit, and add to the Utility of the Book, which would be then much superior to any Thing of its Kind.

We have already observed, that in the Author's Lifetime his Book had been attack'd by several Writers, against whom, however, he defended himself with equal Spirit and Success; and where-ever he found himself in the Wrong, he took Care immediately to correct it. There were, however, some Things in his Disposition, which led him to write upon some very tender Subjects, not to be touch'd even by the nicest Hand, without giving Offence to great Bodies of People: As for Instance, his laying open the superstitious Follies

Follies of the Papists, the Artifices of their Priests, the Credulity of the common People, and the Injuries done to the Christian Religion by such Practices on the one Hand; and Bigottry on the other.

He has been condemned for this as a very partial Writer by the *Romanists*, which is natural enough, but he has not been refuted. It is no Wonder at all, that in the Reign of King *James II.* when the Papists thought themselves secure of reviving their Religion in *England*, Men firmly attached to the Protestant Cause should likewise shew their Zeal; and it was still the more excusable in Mr. *Misson*, as he had been very lately banish'd out of his native Country on the Score of Religion. The learned Father *Labat* cannot forgive him the Pains he has taken to restore the Credit of the Pope or Popes *Joan*. He says very truly upon that Subject, that several learned Protestants have given it up besides *David Blondel*, such as *Chamier*, *Du Moulin* and *Bochart*: But what then? Can there be a clearer Answer given to this than that which Mr. *Misson* has given, viz. That this Story was written and believed for many Ages by the Papists themselves? We may add to this, that it would be no difficult Task to shew, that some very learned Papists still believe it.

Misson has very honestly and very ingenuously confessed, that the Fact is of no great Importance with respect to any religious Dispute; and surely this was as much as could be expected from him, and is a very great Mark of his Impartiality. With regard to his Arguments, there has been little or nothing said against them; and I am persuaded that it would be a very difficult Matter to overturn them. The same Writer, I mean Father *Labat*, is very angry with him about the *Sella stercoraria*, or Close-stool Chair, but he does not contradict him with respect to the Fact, he only says it is a Kind of Close-stool, and that the Use of it was to put the Pope in Mind that his Exaltation to that Dignity did not release him from the Infirmities incident to human Nature. This he gives us as his Opinion, and a very probable Opinion it is, but I do not see why *Misson* was not as much at Liberty to give us his Sentiment upon the same Subject, more especially as he gives his Authorities, which very plainly prove, that what he thought upon this Point was once the common Opinion of the *Romanists* themselves, and therefore it is hard to assign a Cause for blaming him upon this Head.

It must however be observed, that *Labat*, in many other Places, commends the Travels of *Misson*, and is only in Pain, that an Author who wrote so well, should treat various Subjects in such a Manner, as to expose the Cause which he found himself bound to espouse, and at the same Time he has himself taken the Liberty to treat very freely the ridiculous Superstitions of the *Italians*; and if with all his Respect for their Faith he has used this Freedom, one cannot help being surprized that he should take it ill, that a Protestant Writer carried his Remarks a little farther, and much more that he should charge him with Impiety, since throughout his whole Book there is Nothing that has the least Tendency that Way; and upon many Occasions he shews himself very ready to refute vulgar Prejudices, and to do Justice to the Papists. As for Instance, he allows that they are very far from having a Spirit of Persecution in *Italy*, and that he never knew them carry their Resentment farther against Protestants, than saying they were not sound Christians.

The Historical Remarks he has given us are, generally speaking, very correct as well as curious, though now and then he falls into Mistakes; as for Example, when he says that *Francfort* has an University erected by the House of *Brandenbourg*, he is speaking there of *Francfort* upon the *Maine*; but the University he means is at *Francfort* upon the *Oder*. It is no Wonder at all that in such a Multitude of critical Remarks, he should now and then be guilty of an Oversight. He retained all his Life a sincere Love for his Country, which discovers itself frequently in his Writings, more especially in preferring the Palaces and Gardens of *France* to those of *Italy*. There might, perhaps, in this, be a little Partiality, and yet, generally speaking, he is in the right, and the

Noise which the *Italians* have made about the Wonders that are to be found in their Country, might well enough deserve the critical Remarks he has made upon them.

As for his Digressions with Respect to Natural History, they may very well be regarded as the most curious Pieces in his Work, and are so allowed to be by the best Judges. His Conjectures in relation to the Formation of Shells in Mountains, and other Places at a Distance from the Sea, are very judicious as well as highly probable. We may say the same Thing with regard to the Curiosities of this Country, and particularly what he has inserted in Relation to the *Tarantula*, about which however there have been very warm Disputes; but he lays down nothing but from Authority, and therefore is not at all interested in the Event of those Disputes, so that his Character cannot suffer in the Judgment of the Learned, however they may be at last determined.

As he mentions only such Curiosities as came in his Way, and he had an Opportunity of visiting, examining and enquiring, we need not wonder at his Silence as to many curious Particulars. As for Example, that we may conclude this Section with something more entertaining than dry Remarks, let us mention one, *Grotta dei Serpi* is a subterraneous Cavern, near the Village of *Sassa*, eight Miles from the City of *Braccano* in *Italy*, described by *Kircher* thus:

The *Grotta dei Serpi* is big enough to hold two Persons; it is perforated with several fistular Apertures, somewhat in the Manner of a Sieve, out of which, at the Beginning of the Spring Season issue a numerous Brood of young Snakes of divers Colours, but all free from any particular poisonous Quality. In this Cave they expose their Lepers, Paraliticks, and elephantiack Patients, quite naked, where the Warmth of the subterraneous Steams resolving them into Sweat, and the Serpents clinging variously all around, licking and sucking them, they become so thoroughly freed of all their vicious Humours, that upon repeating the Operation for some Time, they become perfectly restored.

This Cave *Kircher* visited himself, and found it warm, and every Way agreeable to the Description given of it: He saw the Holes, and heard a clamorous hissing Noise in them, though he missed seeing the Serpents, it not being the Season of their creeping out; yet he saw a great Number of their *Exuviae* or Sloughs, and an Elm growing hard-by laden with them. The Discovery of this Cave was by the Cure of a Leper going from *Rome* to some Baths near this Place, who losing his Way, and being benighted, happened upon this Cave, and finding it very warm, pulled off his Cloaths, and being weary and sleepy, had the good Fortune not to feel the Serpents about him, till they had wrought his Cure.

One might suspect, that our curious Traveller had not heard of this Curiosity, which, by the Way, is now totally lost, and lost by the strangest Means in the World, otherwise one could hardly think he would have omitted it. But we will repair that Mistake from the Works of his Antagonist Father *Labat*, who travel'd through *Italy* twelve or fourteen Years later than *Misson*, and visited this Cave in Person; but it had then lost its Virtue and its Serpents, as he assures us in the following Manner.

It was found necessary, in order to dispose the Patients quietly to endure the Operation necessary to their Cure, to compose them by a Dose of *Opium*, and, for this, Recourse was had to the Physicians, who perceiving that their Business was much lessened by this new Method, so that *Æsculapius* was in Danger of being devoured by his own Serpent, they resolved to undo the Cave, and to prevent such Patients from having any Diseases for the Future. In short, they gave so much *Opium* to their Patients that were sent to the Grotto, that they not only lay still for a Night, but for ever.

This Scheme, though well laid, did not take, the People continued obstinate, and were resolved rather to trust the Serpents than the Doctors. They took therefore their *Opium* at home, and the Cures were as frequent and as effectual as ever. The Physicians had then

Recourse to a new and more successful Contrivance than the former; they had in vain tried to keep the People from the Serpents, they resolved to try next, whether it might not be possible to keep the Serpents from the People: And with this View, in the Midst of a dry Summer, they caused the Bushes to be set on Fire that grew upon the Mountain, by which that Generation of Serpents was totally destroyed; and the Grotto has remained useless ever since.

Let us now take Leave of this Subject, and of the Travels of *Misson*, observing only, that in a subsequent Voyage of his, he had the Misfortune to be taken by a French Privateer, and carried to *Dunkirk*, where he suffered a severe Imprisonment, chiefly on the Score of his being a Protestant, and having on that Account, as

we observed before, been banish'd *France*. But his Friends having applied themselves to the King on his Behalf, he was immediately set at Liberty, which contributed not a little to confirm that high Spirit of Loyalty with which he had been possessed, and of which he has left abundant Testimonies in his Works, by defending, as much as in his Power lay, the Character of *Lewis XIV.* for though he could not prevail upon himself to be a good Catholick, yet a better *Frenchman* or a better Subject that great Monarch had not in all his Dominions; which is a plain Proof that *Lewis XIV.* with all his Policy, served the Priests much more than himself or his Family, in driving so many Thousands of Protestants out of his Territories.

SECTION IV.

TRAVELS through *Switzerland*, Part of *Italy*, some Provinces of *Germany*, and the *Low-Countries*, in which are contained many curious Historical and Political Remarks on the Manners of the People, the Forms of Government, and the State of the Countries before mentioned.

Extracted from the Letters of Doctor GILBERT BURNET, (afterwards Bishop of Salisbury) to the Honourable Robert Boyle, Esq; written in the Years 1685, and 1686.

1. The wretched Condition of the Country between Paris and Lyons; Antiquities observable in those Parts, with some literary and critical Remarks.
2. A large Description of the City of Geneva, of the Manners and Customs of the Inhabitants, and of the Form and Maxims of Government in that little Republick.
3. A Description of the City and Canton of Bern, the Manners of its Inhabitants, their Riches and Industry, the Modesty of their Women, and the martial Virtues of their Men.
4. The Reasons which induced the Swiss to overlook the Conquest of the County of Burgundy by the French, which has proved so much to their Detriment.
5. The History of the War between the Protestant and Popish Cantons in the Year 1656, and the Means by which those Disputes were compromised.
6. A most curious and entertaining Account of the scandalous Cheat and Imposture of the Dominicans at Bern in 1509.
7. A Comparison between the Country of France and that of Switzerland, with some Remarks upon the Government in both Countries, shewing that Tyranny will turn a Paradise into a Desert, and Liberty convert a Wilderness into a Land of Plenty.
8. Of the miserable Bigottry of the People in the Popish Cantons, from the Number of the Jesuits and Monks, and of their immense Wealth in those Countries.
9. Of the Canton of Zurich, its Wealth, Forces, Manufactures, Trade, Frugality in the Administration of Publick Affairs, and other Particulars.
10. Some general, useful and entertaining Remarks on the State of the Swiss Cantons, and a full Display of the pernicious Spirit of Popery.
11. A Description of the Country of the Grisons, with an Account of the City of Coire, and of the Character of the Bishop at that Time.
12. A distinct View of the Government of the Grisons, the Manner of their obtaining their Liberty, the Division of their Country, and of their Diets.
13. Of the Valteline, Chavannes, and Bormio Territories which they possess in Italy, and how they obtained them; with an Account of the Fertility of the Soil in the Valteline, and of the Liberty that those Districts enjoy under the Leagues.
14. Of the Massacre in the Valteline, of the War that followed it, and of the State of that Country.
15. Of the Remains of the ancient Waldenses, the true Character and religious Sentiments of the People so called.
16. Of Chavannes, with an Account of the most observable Villages upon the Road, of its Situation, the Fertility of the Soil, Easiness of the Government, Plentifulness of Provisions, with an Account of the Nature of their Wine, and the Manner how they make and preserve it, with other Particulars.
17. Some other Curiosities in this Part of the Country, together with an Account of a Town and all its Inhabitants overwhelmed by the Fall of a Mountain.
18. A Description of the Borromean Islands, esteemed beyond Comparison the most beautiful Part of Europe.
19. A large Account of Lombardy, and the City of Milan, with many curious Observations made by the Author during his Stay in those Parts.
20. A Collection of useful, judicious, and entertaining Remarks on several Parts of Italy, in which Care is taken to avoid repeating any thing contained in the former Section.
21. The same Subject continued in relation to other Parts of Italy not hitherto mentioned.
22. Conclusion of those Observations and Remarks, comprehending the Characters and Histories of several remarkable Persons, written with great Impartiality and Freedom.
23. A Description of Marseilles, and some Reasons given for the extensive Commerce and great Wealth of that Port, in Comparison of any other in France.
24. Some other Observations on the Country thereabouts.
25. Description

scription of the Town of Basil, the Places most worthy of Notice there, together with the Manners, Customs, and Government of the Inhabitants. 26. *An Account of Huningen, Brisac, and Strasbourg, with a particular Account of the Manner in which the French made themselves Masters of this last mentioned City.* 27. *An Account of the Fortres of Phillipsbourg, and its great Importance to the Empire.* 28. *A Description of the City and Bishoprick of Spire, and of the Country thereabouts.* 29. *A large, distinct, and entertaining View of the Lower Palatinate, of the famous City of Heidelberg, and the History of some of the Electors Palatine.* 30. *The pleasant and delightful Country between the last mentioned City and Francfort, with other Remarks and Observations.* 31. *The like Description of the City and Electorate of Mentz, with a clear Account of the Revenues, Strength, and Trade of that Country.* 32. *A large and curious Account of the City and Electorate of Cologne, of the Cities of Dusseldorpe, Keyserswart, and Wesel.* 33. *Observations made by the Author in his Journey through the Dutchy of Cleves, the Town of Nimeguen, and other Places in the Low-Countries.*

I. IT is so common to write TRAVELS, that for one who has seen so little, and as it were in Haſte, it may look like a presumptuous Affectation to be reckon'd among VOYAGERS, if he attempts to say any Thing upon so short an Excursion, and concerning Places so much viſited, and which are consequently so well known: Yet having had Opportunities that do not offer themselves to all that travel, and having join'd to those a Curiosity almost equal to the Advantages I enjoy'd, I fancy it will not be an ungrateful Entertainment, if I give you some Account of those Things that pleased me most, in the Places through which I have pass'd. But I will avoid saying such Things as occur in ordinary Books, for which I refer you to them. For as you know that I have no great Inclination to copy what others have said, so a Traveller has not Leisure, or a Disposition suited for so dull an Employment.

As I came all the Way from *Paris* to *Lyons*, I was amaz'd to see so much Misery as appear'd, not only in Villages, but even in big Towns, where all the Marks of an extreme Poverty shew'd themselves both in the Buildings, the Cloaths, and almost in the Looks of the Inhabitants; and a general dispeopling, in all the Towns, was a very visible Effect of the Hardships under which they lay.

I need tell you Nothing of the irregular, and yet magnificent Situation of *Lyons*, of the noble Rivers that meet there, of the Rock cut from so vast a Height for a Prison, of the *Carthusians* Gardens, of the Town-house, of the *Jesuits* College and Library, of the famous Nunnery of *St. Peter*, of the Churches, particularly *St. Irene's*, of the Remnants of the Aqueducts, of the Columns, and the old *Mosaick* in the Abbey *Dene*.

The Speech of *Claudius*, engraven on a Plate of Brass, and set at the End of the low Walk in the Town-house, is one of the noblest Antiquities in the World, by which we see the Way of Writing and Pointing in that Age very copiously. The Shield of Silver of twenty two Pounds Weight, in which some Remains of Gilding do yet appear, and that seems to represent the generous Action of *Scipio*, in restoring a fair Captive to a *Celliberian* Prince, is certainly the noblest Piece of Plate that is now extant; the embossing of it is so fine and so entire, that it is indeed invaluable; and if there were an Inscription upon it, to put us beyond Conjecture, it were yet much more estimable.

A great many Inscriptions are to be seen of the late and barbarous Ages, as *Bonum Memorium*, and *Epitaphium hunc*. There are twenty three Inscriptions in the Garden of the *Fathers of Mercy*, but so placed, as shew how little those who possess them either understand or value them. I shall only give you one, because I made a little Reflection on it; though perhaps not too well grounded, because none of the Criticks have consider'd it. The Inscription is this:

D. M.

Et Memoriae Eternæ

SUTIA ANTHIDIS,

Quæ vixit annis xxx. M.XI.D.V.

Quæ dum Nimia Pia fuit, facta est Impia:

ET ATTIO PROBATIOLO, CECALIVS CALISTIO

Conjux & Pater,

Et sibi vivo ponendum curavit,

Et sub ascia dedicavit.

This must be towards the barbarous Age, as appears by the false *Latin* in *Nimia*. But the Inscription seems so extravagant, that a Man dedicating a Burial-stone for his Wife and Son, and under which himself was to be laid with Ceremonies of Religion, should tax his Wife of Impiety, and give so extraordinary an Account of her becoming so through an Excess of Piety, that it deserves some Consideration.

It seems the Impiety was publick, otherwise a Husband would not have recorded it in such a Manner; and it is plain, that he thought it arose from an Excess of Piety. I need not examine the Conjectures of others; but will chuse rather to give you my own, and submit it to your Censure.

It seems to me, that this *Sutia Anthis* was a Christian; for the Christians, because they would not worship the Gods of the Heathens, nor participate with them in their sacred Rites, were accused both of Atheism and Impiety. This is so often objected, and the Fathers in their Apologies have answered it so often, that it were lost Labour to prove it. So this Wife of *Cecalius Calistio* having turn'd Christian, it seems he thought he was bound to take some Notice of it in the Inscription: But by it he gives an honourable Character of the Christian Doctrine, at the same Time that he seems to accuse it, viz. that through an Excess of Piety his Wife was carried to it; since a Mind, seriously possess'd with a true Sense of Piety, could not avoid falling under a Dislike of Paganism, and becoming Christian.

At *Grenoble* there is not much to be seen. The learned Mr. *Chorier* has some Manuscripts of considerable Antiquity. In one of *Vegetius de Re Militari*, there is a clear Correction of a Passage, that in all the printed Editions is not Sense. In the Chapter of the Size of the Soldiers, he begins, *Scio semper mensuram a Mario Consule exactam.* *A* is in no Manuscript, and *Mario Consule* is a Mistake for *trium Cubitorum*; for *III.* which are for *trium*, have been read for *M*; and *C*, which stands for *Cubitorum*, as appears by all that follows, was by a Mistake read *Consule*. So the true Reading of that Passage is, *Scio mensuram trium cubitorum fuisse semper exactam.* He shew'd me another Manuscript of about five or six hundred Years old, in which *St. John's* Revelation is contain'd, all exemplified in Figures; and after that comes *Æsop's* Fables likewise, all designed in Figures; from which he infer'd, that those, who designed those two Books, valued both equally, and so put them together.

I will not describe the Valley of *Dauphine*, or entertain you with a Landskip of the Country, which deserves a better Pencil than mine, and in which the Height and Rudeness of the Mountains, that almost shut it up, together with the Beauty, the Evenness and Fruitfulness of the Valley, that is all well water'd with the River *Lisferre*, make such an agreeable Mixture, that this vast Diversity of Objects at once fill the Eye, and give it a very entertaining Prospect.

Chambery has nothing in it that deserves a long Description; and *Geneva* is too well known to be much insisted on. It is a little State; but it has so many good Constitutions in it, that the greatest may justly learn of it. The Chamber of Corn there has always two Years Provision for the City in Store, and forces none but the Bakers to buy at a fixed Price; and so it is both necessary against any Extremities under which the

the State may fall, and is likewise of great Advantage; for it produces a good yearly Income, that has helped the State to pay a Debt of near a Million, contracted during the Wars; and the Citizens are not oppress'd by it, for every Inhabitant may buy his own Corn as he pleases, only publick Houses must buy from the Chamber.

At *Rome* the Pope buys in all the Corn of the Patrimony; for none of the Landlords can sell it either to Merchants or Bakers. He buys it at five Crowns their Measure, and even that is slowly and ill paid; so that there was eight hundred thousand Crowns owing upon that Score when I was at *Rome*. In selling this out, the Measure is lessened a fifth Part, and the Price of the Whole is doubled; so that what was bought at five Crowns, is sold out at twelve; and if the Bakers, who are obliged to take a settled Quantity of Corn from the Chamber, cannot retail all that is imposed upon them, but are forced to return some Part of it back, the Chamber discounts to them only the first Price of five Crowns: Whereas in *Geneva*, the Measure by which they buy and sell is the same; and the Gain is so inconsiderable, that it is very little beyond the common Market-price: So that upon the whole Matter, the Chamber of Corn is but the Merchant to the State. But if the Publick makes a moderate Gain by the Corn, that and all the other Revenues of this small Commonwealth are so well employ'd, that there is no Cause of Complaint given in the Administration of the publick Purse, which, with the Advantages that arise out of this Chamber of Corn, is about an hundred thousand Crowns Revenue. But there is much to go out of this: Three hundred Soldiers are paid, an Arsenal is maintain'd, that, in Proportion to the State, is the greatest in the World, for it contains Arms for more Men than are in the State. There are a great Number of Ministers and Professors, in all twenty four, besides all the publick Charges and Offices of the Government. Every one of the lesser Council of Twenty-five having an hundred Crowns, and every Syndick having two hundred Crowns Pension; and, after all this, come the accidental Charges of the Deputies, that they are obliged to send often to *Paris*, to *Savoy*, and to *Switzerland*; so that it is very apparent no Man can enrich himself at the Cost of the Publick. And the Appointments of the little Council are a very small Recompence for the great Attendance that they are obliged to give the Publick, which is commonly four or five Hours a Day. The Salary for the Professors and Ministers is indeed small, not above two hundred Crowns; but to balance this, those Employments are here held in their due Reputation; and the richest Citizens in the Town breed up their Children so as to qualify them for those Places. And a Minister, that is suitable to his Character, is thought so good a Match, that generally they have such Estates either by Succession or Marriage, as support them agreeable to the Rank they hold. And in *Geneva* there is so great a Regulation of Expences of all Sorts, that a small Sum goes a great Way. It is a surprising Thing to see so much Learning as one finds in *Geneva*, not only among those whose Profession obliges them to study, but among the Magistrates and Citizens; and if there are not many Men of the first Form of Learning among them, yet almost every body here has a Tincture of a learned Education, insomuch that they are Masters of the *Latin*, they know History and the Controversies of Religion, and are generally Men of good Sense.

There is an universal Civility, not only towards Strangers, but one another, that reigns all the Town over, and leans to an Excess: So that in them one sees a Mixture of a *French* Openness, and an *Italian* Exactness; but there is, indeed, a little too much of the last.

The publick Justice of the City is quick, and is more commended than the private Justice of those that deal in Trade; a Want of Sincerity is much lamented by those that know the Town well. There is no publick Lewdness tolerated, and the Disorders of that Sort are managed with great Address. Notwithstanding their Neighbourhood to the *Switzers*, drinking is very

little known among them. One of the best Parts of their Law is the Way of selling Estates, which is likewise practised in *Switzerland*, and is called Subhastation, from the *Roman* Custom of selling *sub hasta*. A Man, that to is buy an Estate, agrees with the Owner, and then intimates it to the Government, who order three several Proclamations to be made six Weeks after one another, of the intended Sale, that is to be on such a Day; when the Day comes, the Creditors of the Seller, if they apprehend that the Estate is sold at an Under-value, may out-bid the Buyer; but if they do not interpose, the Buyer delivers the Money to the State, who upon that grant him his Title to the Estate, which can never be so much as brought under a Debate in Law; and the Price is paid to the State, and is by them given either to the Creditors of the Seller, if he owes Money, or to the Seller himself.

This Custom prevails likewise in *Swisse*, where twelve Years Possession gives a Prescription; so that in no Place of the World are Titles to Estates so secure as here. The Constitution of the Government is the same in *Geneva* and in most of the Cantons. The Sovereignty lies in the Council of *Two Hundred*; and this Council chooses out of its Number *Twenty-five*, who are the lesser Council; and the Censure of the *Twenty-five* belongs to the Great Council. They are chosen by a Sort of Ballot, so that it is not known for whom they give their Votes; which is an effectual Method to suppress Factions and Resentments, since no Man can know who voted for him or against him; yet the Election is not so carried, but that the whole Town is in an Intrigue concerning it; for since the Being of the little Council leads one to the Syndicate, which is the chief Honour of the State, this Dignity is sought for here with as active and solicitous Ambition, as appears elsewhere for greater Matters. The *Two Hundred* are chosen and censured by the *Twenty-five*; so that these two Councils, which are both for Life, are Checks upon each other: The Magistracy is in the former, and the Sovereignty in the latter. The Number of *Twenty-five* is never exceeded in the lesser Council; but for the greater, though it passes by the Name of the Council of *Two Hundred*, yet there are commonly eight or ten more; so that notwithstanding the Absence or Sickness of some of the Members, they may still be able to call together near the full Number. There is another Council besides these two, composed of sixty, consisting of those of the two hundred that have born Offices, such as Auditors, Attorney-generals; or those that have been in other Employments, which are given for a certain Number of Years. This Court has no Authority, but is called together by the *Twenty-five*, when any extraordinary Occasion makes it adviseable for them to call for a more general Concurrence in the Resolutions they are about to take. And this Council is of the Nature of a Council of State, that only gives Advice, but has no Power in itself. The whole Body of the *Burgesses* choose the Syndics the first *Sunday* of the Year; and there are some other Elections that likewise belong to them. The Difference between the *Burgesses* and Citizens is, that the former Degree may be bought, or given to Strangers, and they may be of the two hundred; but none is a Citizen, but he that is the Son of a *Burgess*, and that is born within the Town.

This little Republick's chief Support is in the firm Alliance that has subsisted so long between it and the Cantons of *Bern* and *Zurich*; and it is so visibly the Interest of all *Switzerland* to preserve it, that if the Cantons had not forgot their Interest so palpably, in suffering the *French* to become Masters of the *Franche Comté*, one would think that they would not be capable of suffering *Geneva* to be touch'd: For all that can be done in fortifying the Town, can signify no more, than to put it in a State to resist a Surprise or Scalade; since if an Army comes to besiege it in Form, it is certain, that unless the *Switzers* come with a Force able to raise the Siege, those within will be able to make but a very short Resistance.

2. From *Geneva* I went through the Country of *Vaud*, or the *Valley*, and *Lausanne* its chief Town, in my Way

to *Bern*. The Town of *Lausanne* is situated on three Hills, so that the whole is Ascent and Descent, and that very steep, chiefly on the Side on which the Church stands, which is a very noble Fabrick. The South Wall of the Cross was so split by an Earthquake about thirty Years ago, that there was a Rent made from Top to Bottom above a Foot wide; which was again so closed up ten Years after by another Earthquake, that now one only sees a Crack where the Breach was. This extravagant Situation of the Town was occasioned by a Legend of some Miracles wrought near the Church; which prevail'd so much on the Credulity of that Age, that by it the Church, and so in consequence the Buildings near it, were added to the old Town, which stood on the other Hill, where there was a Town made on the Highway from the Lake into *Switzerland*, to which the chief Privileges, particularly the Judicature of Life and Death, still belong. Between *Geneva* and this lies the Lake, which at one End is called the Lake of *Geneva*, at the other the Lake of *Lausanne*. I need not mention the Dimensions, which are so well known, only in some Places the Depth has never been found. The Banks of the Lake are the most beautiful Plots of Ground that can be imagined, for they look as if they had been laid out by Art; the Sloping is so easy and so equal, and the Grounds are so well cultivated and peopled, that a more delightful Prospect cannot be seen. The Lake is well stock'd with excellent Fish, but their Numbers sensibly decrease, and one Sort is quite lost. It is to be ascribed not only to the Ravenousness of the Pikes that abound in it, but to another Sort of Fish that they call Moutails, which were never taken in the Lake till within these six Years last past. They are in the Lake of *Neufchâtel*, and some of the other Lakes of *Switzerland*; and it is likely, that by some Conveyance under Ground, they have come into Channels that fall into this Lake. The Water of the Lake is all clear and fresh. It is not only a great Pond made by the *Rhone*, that runs into it, but does not pass through it unmix'd, as some Travellers have fondly imagin'd; because sometimes a soft Gale makes a Curling of the Water in some Places, which runs smooth in the Places over which that soft Breath of Wind does not pass, the Gale shifting its Place often; but it is believed, that there are also many great Fountains all over the Lake. These Springs may very probably flow from some vast Cavities that are in the neighbouring Mountains, which are as great Cisterns, that discharge themselves in the Vallies which are covered over with Lakes. And on the two Sides of the Alps, both North and South, there are so great a Number of those little Seas, that it may be easily guessed they must have vast Sources, that feed so constantly these huge Ponds.

One Hill not far from *Geneva*, call'd *Maudit*, or *Cursed*, of which one Third is always cover'd with Snow, is two Miles perpendicular in Height, according to the Observation of that incomparable Mathematician and Philosopher, *Nicolas Fatio Duilier*, who, at twenty two Years of Age, is one of the greatest Men of his Age, and seems born to carry Learning beyond what it has yet attained.

But I will now entertain you a little with the State of *Bern*; for that Canton alone is above a third Part of *Switzerland*. I will say nothing of its Beginning or History; nor will I enlarge upon the Constitution; which are all well known. It has a Council of *two hundred*, that goes by that Name, though it consists almost of three hundred; and another of *twenty five*, as at *Geneva*. The chief Magistrates are two *Advoyers*, who are not annual, as the *Syndics* of *Geneva*, but for Life, and have an Authority not unlike that of the *Roman* Consuls, each being his Year by Turns the *Advoyer* in Office. After them there are the *four Bannerets*, who answer to the Tribunes of the People in *Rome*; then come the *two Bursars* or Treasurers, one for the ancient *German* Territory, the other for the *French* Territory, or the Country of *Vaud*; and the two last, chosen of the twenty five, are called the *Secrets*; for to them all Secrets relating to the State are discovered; and they have an Authority of calling the *two hundred* together

when they think fit, and of accusing those of the Magistracy, the *Advoyers* themselves not excepted, as they see Cause; though this falls out seldom.

3. The whole Canton of *Bern* is divided into seventy two Bailiages; and in every one of those there is a Bailiff named by the Council of *two hundred*, who must be a Citizen of *Bern*, and one of the *two hundred*, into which Council no Man can be chosen till he is married. These Bailiages are Employments both of Honour and Profit, for the Bailiff is the Governor and Judge in that Jurisdiction; since though he has some Assessors, who are chosen out of the Bailiage, yet he may by his Authority carry Matters which Way he will against all their Opinions, and the Bailiffs have to their own Use all the Confiscations and Fines; so that drinking being so common in this Country, and that producing many Quarrels, the Bailiff makes his Advantage of all those Disorders; and in the six Years of his Government, according to the Quality of his Bailiage, he not only lives by it, but will carry perhaps twenty thousand Crowns with him back to *Bern*, on which he lives till he can carry another Bailiage: For one is capable of being twice Bailiff; and though some have been thrice Bailiffs, this is very extraordinary. The Exactions of the Bailiff are the only Impositions or Charges to which the Inhabitants are subjected; and these, falling only on the Irregularities and Disorders of the debauch'd, makes this Grievance, though in some particular Cases it presses hard, yet not so universally felt; for a sober and regular Man is in no Danger. Many in this Canton are Lords of Castles or Manors, and have a Jurisdiction annex'd to their Estates, and name their Magistrate, who is called the *Castellan*. In Matters of small Consequence there lies no Appeal from him to the Bailiff; but beyond the Value of two Pistoles an Appeal lies; and no Sentence of Death is executed, till it is confirmed at *Bern*. There lies also an Appeal from the Bailiff to the Council at *Bern*. There are many Complaints of the Injustice of the Bailiffs; but their Law is short and clear, so that a Suit is soon ended; two or three Hearings are the most that even an intricate Suit amounts to, either in the first Instance, or in the second Judgment at *Bern*. The Citizens of *Bern* consider these Bailiages as their Inheritance; and they are courted in this State perhaps with as much Intrigue, as was used among the *Romans* in the Distribution of their Provinces: And so little signify the best Regulations, when there are radicated Diseases in the State, that though there is all possible Precaution used in the Nomination of these Bailiffs, yet that has not preserved this State from falling under so great a Mischief by those little Provinces; that as it has already in a great Measure corrupted their Morals, so it may turn in Conclusion to the Ruin of this Republick. All the Electors give their Voices by Ballot, by which they are free from all Aftergame in the Nomination of the Person. All the Kindred of the Pretenders, even to the remotest Degree, are excluded from Voting, as are also all their Creditors; so that none can vote but those who seem to have no Interest in the Issue of the Competition: And yet there is so much Intrigue, and so great a Corruption in the Distribution of these Employments, that the whole Business, in which all *Bern* is continually in Motion, is, the Catching of the best Bailiages, on which a powerful Family will have its Eye for many Years before they fall. For the Counsellors of *Bern* give but a very small Share of their Estates to their Children when they marry them; all that they propose is to make a Bailiage sure to them; for this they feast and drink, and spare nothing by which they may make a sufficient Number of Votes; but it is the Chamber of the *Bannerets* that admits the Pretenders to the Competition. When the Bailiff is chosen, he takes all possible Methods to make the best of it he can, and lets few Crimes pass with Impunity, that produce either Confiscations or Fines: His Justice also is generally suspected. It is true, those of the Bailiage may complain to the Council at *Bern*, as the oppressed Provinces did anciently to the Senate of *Rome*; and there have been severe Judgments against some Bailiffs; yet as Complaints are

not made, except upon great Occasions, which are not often given, so it being the general Interest of the Citizens of *Bern* to make all possible Advantages of those Employments, the Censure will be but gentle, except the Complaint is very crying.

In *Bern* there is very little Trade, only what is necessary for the Support of the Town. They maintain Professors in the Universities of *Bern* and *Lausanne*; the one for the *German* Territory, which is the ancient Canton, and the other for the new Conquest, which is the *French*: In the former there are about three hundred Parishes; in the latter there are about one hundred and fifty: But in the Benefices of the *German* Side, the ancient Rights of the Incumbents are generally preserved so, that some Benefices are worth a thousand Crowns; whereas in the *Païs de Vaud* the Provisions are set off as Salaries, and are generally from one hundred to two hundred Crowns. It is visible that those of *Bern* trust more to the Affections and Fidelity of their Subjects, than to the Strength of their Walls; for as they have never finish'd them, so what is built cannot be esteem'd a regular Fortification; and is not preserv'd with any Care, nor furnish'd with Cannon; but if they have none on their Ramparts, they have Abundance in their Arsenal, in which, they say, there are Arms for forty thousand Men.

The Peasants are generally rich, chiefly on the *German* Side, and are all well armed. They pay no Duties to the Publick, and the Soil is capable of great Improvements; in which they succeed so well, that I was shew'd some that were by Accident at *Bern*, who, as I was told, had Estates to the Value of an hundred thousand Crowns, but that is not ordinary; yet ten thousand Crowns for a Peasant is no extraordinary Matter. They live much on their Milk and Corn, which in some Places, as about *Payerne*, yields an Encrease of fifteen for one. They breed many Horses, which bring them in a great deal of Money. The worst Thing in the Country is the Moisture of the Air, which is occasioned by the many Lakes that are in it, and by the neighbouring Mountains that are cover'd with Snow, some all the Summer long, and the rest till Midsummer, also by the vast Quantity of Fir-trees, which seem to fill very near the Half of their Soil: And if these were for the most Part rooted out, as they would have much more Soil, so their Air would be purer; yet, till they find either Coal or Turf for their Fuel, this cannot be done. I was told that they had found Coal in some Places; if this Coal is conveniently situated, so that by their Lakes and Rivers it may be easily carried over the Country, it may save them a great Extent of Ground, now cover'd with Wood, and their Air become thereby the more clear and the more wholesome.

They have some Fountains of Salt Water, but the making Salt consumes so much Wood, that hitherto it has not turn'd to Account.

The Men are generally sincere, but heavy: They think it necessary to correct the Moisture of the Air with liberal Entertainments; and they are well furnish'd with all necessary Ingredients; for as their Soil produces good Cattle, so their Lakes abound in excellent Fish, and their Woods in Fowl; the Wine is also light and good. The Women are generally employ'd in their domestick Affairs; and the Wives, even of the chief Magistrates of *Bern*, look into all the Concerns of the House and Kitchen, as much as those of the meanest Peasants. Men and Women do not generally converse together; and the Women are so much amused with the Management at home, and enter so little into Affairs, that among them, as an eminent Physician told me, they know not what Vapours are, which he imputed to the Idleness and the Intrigues that abound elsewhere; whereas, he said, with them the Blood was cleansed by their Labour; and as that made them sleep well, so they did not amuse themselves with much Thinking, nor did they know what Amours were. The third Adultery is punish'd with Death; which is also the Punishment of the fifth Act of Fornication, of which I saw an Instance while I was in *Bern*: For a Woman, who confess'd herself guilty of many Whore-

doms, and design'd to be revenged on some Men that did not furnish her with Money as she expected, was upon that condemned and executed. The Manner was solemn; for the Advoyer comes into a Place prepared in the Middle of the Street, and for the Satisfaction of the People, the whole Process is read, and Sentence pronounced in the Hearing of all; the Counsellors, both of the great and lesser Council, standing about the Advoyer, who, after Sentence, took the Criminal very gently by the Hand, and pray'd for her Soul; and after Execution there was a Sermon for the Instruction of the People.

4. The whole State is disciplined for War; for every Man that can bear Arms is list'd, and knows his Post and Arms; and there are Beacons so laid over the Country, that the Signal can run through the whole Canton in a Night; and their military Lists are so laid, that every Man knows whether he is to come out upon the first or second, or not till the general Summons. They assured me at *Bern*, that, upon a general Summons, they could bring above eighty thousand Men together. These Men are robust and strong, and capable of great Hardship, and of good Discipline, and have generally an eager and quick Sense of Liberty, and a great Love to their Country; but they labour under a Want of Officers. And though the Subjects of the State are rich, yet the Publick is poor; they can well resist a sudden Invasion of their Country, but they would soon grow weary of a long War; and the Soil requires so much Cultivation, that they could not spare from their Labour the Men necessary to preserve their Country. They were, indeed, as happy as a People could be, when the Emperor had *Alsace* on the one hand, and the *Spaniards* had the *Franche Comté* on the other: They had then no Reason to fear their Neighbours; but now that both those Provinces are in the Hands of the *French*, the Case is quite alter'd; for as *Basil* is every Moment in Danger from the Garrison of *Hunningen*, that is but a Cannon-shot distant from it; so all the *Païs de Vaud* lies open to the *Franche Comté*, and has neither fortified Places nor good Passes to secure it. Their Error therefore in suffering this to fall into the Hands of the *French* was so gross, that I took some Pains to be informed concerning it, and will give you this Account that I had from one who was then in a very eminent Post; so that as he certainly knew the Secret, he seem'd to speak sincerely to me. He told me, that the Duke of *Lorraine* had often moved in the Councils of War, that the Invasion of *France* ought to be made on that Side in which *France* lay open, and was very ill fortified. This he repeated often, and it was known in *France*; so that the King resolv'd to possess himself of the *Comté*, but us'd that Precaution, that fearing to provoke the *Switzers*, he offer'd a Neutrality on that Side: But the *Spaniards* who judg'd right, that it was as much the Interest of the Cantons, as it was theirs, to preserve the *Comté* in their Hands, refus'd to consent to it; but they took no Care to defend it, and seem'd, for that Reason, to leave that to the *Switzers*.

In the mean while, the *French* Money went about very liberally at *Bern*; and after those that were most likely to make Opposition were gain'd, the *French* Minister laid before them the Necessity in which his Master found himself to secure that Side; but that still he would grant a Neutrality on their Account, if the *Spaniards* would agree to it; and with this, all the Assurances that could be given in Words were offer'd to them, that they should never find the least Prejudice from the Neighbourhood of the *French*, but, on the contrary, all possible Protection. There was just Cause given by the *Spaniards* to consider them very little in their Deliberation; for they would neither accept of the Neutrality, nor send a considerable Force to preserve the Country, so that it seem'd almost inevitable to give Way to the *French* Proposition. But one propos'd that which an unbiass'd Assembly would certainly have accepted, that they should themselves seize the Country, and by so doing secure the Neutrality, which was all that the *French* pretended to desire; and they might easily

easily satisfy the *Spaniards*, and reimburse themselves the Expence of the Invasion, by restoring the Country to them, when a general Peace should be made. He laid out the Misery to which their Country must be reduced by so powerful a Neighbour, but all was lost Labour; so he went out in a Rage, and publish'd through the Town that the State was sold, and all was lost. They now see their Error too late, and would repair it if it were possible; but the Truth is, many of the particular Members of this State do prey so much upon the Publick, that unless they, with one Consent, resolve to reform those Abuses, they will never be in a Condition to do much; for in many of their Bailiages, of which some are Abbies, the Bailiffs not only feed on the Subjects, but likewise on the State, and pretend they are so far super-expended, that they discount a great deal of the publick Revenue (of which they are the Receivers) for their Reimbursement. Which made Mr. *D'Erlack* once say, when one of those Accounts was presented, that it was very strange, if the Abbey could not feed the Monks. It is true, the Power of their Bannerets is so great, that one would think they might redress many Abuses. The City of *Bern* is divided into four Bodies, not unlike our Companies of *London*, which are the Bakers, the Butchers, the Tan-ners, and the Blacksmiths; and every Citizen of *Bern* must incorporate himself into one of these Societies, which they call Abbies; for it is likely they were anciently a Sort of religious Fraternity. Every one of these chooses two Bannerets, who bear Office by Turns, from four Years to four Years; and every one of them has a Bailiage annexed to his Office, which he holds for Life. They carry their Name from the Banners of the several Abbies, as the Gonfaloniers of *Italy*; and the Advoyers carry still their Name from the ancient Title *Ecdicus*, or Advocate, that was the Title of the chief Magistrates of the Towns in the Times of the *Roman* Emperors. The Chamber of the four Bannerets that bear Office hath a vast Power; they examine and pass all Accompts, and they admit all the Competitors to any Offices; so that no Man can be proposed to the Council of *two hundred* without their Approbation; and this being now the chief Intrigue of their State, they have so absolute an Authority in shutting Men out from Employments, that their Office, which is for Life, is no less indeed, but rather more considerable than that of the Advoyer, though they are inferior to him in Rank.

They manage Matters with great Address, of which this Instance was given me in a Competition for the Advoyership not long ago. There was one whose Temper was violent, that had made it so sure among those that were qualified to vote in it, as being neither of his Kindred nor Alliance, that they believed he would carry it from the other Competitor whom they favour'd; so they set up a third Competitor, whose Kindred were the Persons that were best affected to him whose Advancement they opposed, and by this Means they were all shut out from voting, so that the Election went according to the Design of the Bannerets. The chief Man now in *Bern*, who was the reigning Advoyer when I was there, is Mr. *D'Erlack*, Nephew to that Mr. *D'Erlack* who was Governor of *Brisack*, and had a Brevet to be a Marshal of *France*. This is one of the noblest Families in *Bern*, that acted a great Part in shaking off the *Austrian* Tyranny; and they have been ever since very much distinguish'd there from all the rest of their Nobility. The present Head of it is a very extraordinary Man; he has a great Authority in his Canton, not only as Advoyer, but by the particular Esteem which is paid him. For he is thought the wisest and worthiest Man of the State; though it is somewhat strange, how he should bear so great a Sway in such a Government; for he neither feasts nor drinks with the rest. He is a Man of great Sobriety and Gravity, very reserved, and behaves himself more like a Minister of State in a Monarchy, than a Magistrate in a popular Government; for one sees in him none of those Arts that seem necessary in such a Government. He has a great Estate, and no Children; so he has no

Projects for his Family; and does what he can to correct the Abuses of the State; though the Disease is inveterate, and seems past Cure.

5. He had a Misfortune in a War that was thirty Years ago (in the Year 1656) between the Popish and Protestant Cantons; the Occasion of which will engage me in a short Digression. The Peace of *Switzerland* is chiefly preserved by a Law agreed on among all the Cantons, that every Canton may make what Regulations concerning Religion they think fit, without Prejudice to the general League. Now the Popish Cantons have made Laws, that it shall be capital for any to change their Religion; and on a set Day every Year they go all to Mass, and the Masters of Families swear to continue true to the State, and firm in their Religion to their Lives End; and so they pretend they punish their falling into Heresy, with Death and Confiscation of Goods, because it is a Violation of the Faith which is so solemnly sworn. But on the other Hand, in the Protestant Cantons, such as turn are only obliged to go and live out of the Canton; but for their Estates, they still preserve them, and are permitted to sell them. One cannot but observe more of the merciful Spirit of the Gospel in the one than in the other. In two Cantons, *Appenzel* and *Glaris*, both Religions are tolerated, and are capable of equal Privileges; and in some Bailiages that were conquered in common by the Cantons of *Bern* and *Friberg*, in the Wars with *Savoy*, the two Cantons name the Bailiffs by Turns; and both Religions are so equally tolerated, that in the same Church they have both Mass and Sermon so peaceably, that on one *Sunday* the Mass begins, and the Sermon follows, and the next *Sunday* the Sermon begins, and the Mass comes after, without the least Disorder, Murmuring, or other Inconvenience.

But in the Year 1656, some of the Cantons of *Schwitz* changing their Religion, and retiring to *Zurich*, their Estates were confiscated; and some others that had also changed, but had not left the Canton, were taken and beheaded. *Zurich* demanded the Estates of the Refugees, but instead of granting this, the Canton of *Schwitz* demanded their Subjects, that they might proceed against them as Delinquents; and they founded this on a Law by which any of the Cantons are obliged to deliver up the Criminals of another Canton, if they are demanded by the Canton to which they belong. But those of *Zurich* and *Bern* thought this was both inhuman and unchristian; tho' the Deputy of *Basil* was of another Mind, and thought that they ought to be delivered up, which extremely disgusted those of *Zurich*. Those of *Schwitz* committed some Insolencies upon the Subjects of *Zurich*, and refused to give Satisfaction; upon which a War followed between the *Protestant* and *Popish* Cantons. The Cantons of *Bern* and *Zurich* raised an Army of twenty-five thousand Men, which was commanded by Mr. *D'Erlack*, but was dispersed in several Bodies; and the *Papists*, who had not above six thousand, surprized Mr. *D'Erlack* with a Body much superior to theirs. Both Sides, after a short Engagement, ran; the Cannon of the Canton of *Bern* was left in the Field a whole Day; at last those of *Lucern*, seeing that none staid to defend the Cannon, carried them off. This Loss raised such a Tumult in *Bern*, that they seemed resolved to sacrifice Mr. *D'Erlack*; but he came with such a Presence of Mind, and gave so satisfactory an Account of the Misfortune, that the Tumult ceased, and soon after the War ended. Upon this many thought, that though the *Papists* acted cruelly, yet it was according to their Laws, and that no other Canton could pretend to interpose or quarrel with those of *Schwitz* for what they did upon that Occasion. Within these few Years there were some Quarrels like to arise in the Canton of *Glaris*, where it was said, that the equal Privileges agreed on to both Religions were not preserv'd; but on this Occasion the Pope's Nuncio acted a very different Part from that which might have been expected. For whereas the Ministers of that Court have been commonly the Incendiaries in all Disputes that concern Religion, he acted rather the Part of a Mediator. And whereas it was visible, that the Injustice

tice lay on the Side of the *Papists*, he interposed so effectually with those of *Lucern*, which is the Chief of the *Popish* Cantons, that the Difference was compos'd.

But to return to *Bern*. The Buildings have neither great Magnificence, nor many Apartments; but they are convenient, and suited to the Way of living in that Country. The Streets not only of *Bern* and the bigger Towns, but even of the smallest Villages, are furnish'd with Fountains that run continually, which as they are of great Use, so they want not their Beauty. The great Church of *Bern* is a very noble Fabrick; but being built on the Top of the Hill on which the Town stands, it seems the Ground began to fail, so to support it they have rais'd a vast Fabrick, which has cost more than the Church itself; for there is a Platform made which is a Square, to which the Church is one Side, and the farther Side is a vast Wall fortified with Buttresses about an hundred and fifty Foot high. They told me, that all the Ground down to the Bottom of the Hill was dug into Vaults. This Platform is the principal Walk of the Town, chiefly about Sun-set; and the River underneath affords a very beautiful Prospect. For there is a Cut taken off from it for the Mills; but all along as this Cut goes, the Water of the *Aar* runs over a sloping Bank of Stone, which they say was made at a vast Charge, and makes a noble Cascade.

The second Church is the *Dominican* Chapel, where I saw the famous Hole that went to an Image in the Church from one of the Cells of the *Dominicans*, which leads me to set down that Story at Length: For as it was one of the most signal Cheats that the World has known, so it falling out about twenty Years before the Reformation was received in *Bern*, it is very probable that it contributed not a little to the preparing of the Spirits of the People for that Change. I am the more able to give a particular Account of it, because I read the original Process in the *Latin* Records, signed by the Notaries of the Court of Delegates that the Pope sent to examine the Matter. The Record is above one hundred and thirty Sheets, writ close on both Sides, being indeed a large Volume. And I found the printed Accounts so defective, that I was at the Pains of reading the whole Process, of which I will give here an authentick though concise Abstract.

6. The two famous Orders, that had possess'd themselves of the Esteem of those dark Ages, were engaged in a mighty Contest. The *Dominicans* were the more learned; they were the most eminent Preachers of those Times, and had the Conduct of the Courts of Inquisition, and the other chief Offices in the Church in their Hands. But on the other Hand, the *Franciscans* had an outward Appearance of more Severity, a ruder Habit, stricter Rules, and greater Poverty, which gave them such Advantages in the Eyes of the simple Multitude, as were able to balance the other Honours of the *Dominican* Order. In short, the two Orders were engaged in a high Dispute; but the Devotion towards the Virgin being the prevailing Fashion of those Times, the *Franciscans* had great Advantages. The *Dominicans* being all engaged in the Defence of *Thomas Aquinas's* Opinions, were thereby oblig'd to assert, that she was born in original Sin. This was propos'd to the People by the *Franciscans* as no less than Blasphemy; and by this the *Dominicans* began to lose Ground extremely in the Minds of the People, who were strongly prepossess'd in Favour of the immaculate Conception.

About the Beginning of the fifteenth Century, a *Franciscan* happened to preach in *Frankfort*; and one *Wigand*, a *Dominican*, coming into the Church, the Cordelier seeing him, broke out into Exclamations, praising God that he was not of an Order that profaned the Virgin, or that poisoned Princes in the Sacrament (for a *Dominican* had so poisoned the Emperor *Henry VII.*) *Wigand* being extremely provoked with this bloody Reproach, gave him the Lie, upon which a Dispute arose, which ended in a Tumult that had almost cost the *Dominican* his Life; yet he got away. The whole Order resolv'd to take their Revenge, and in a Chapter held at *Vimpfen* in the Year 1504, they contriv'd a Method for supporting the Credit of their Order, which was

much sunk in the Opinion of the People, and for bearing down the Reputation of the *Franciscans*: Four of the J unto undertook to manage the Design; for they said, since the People were so much dispos'd to believe Dreams and Fables, they must dream on their Side, and endeavour to cheat the People as well as others had done. They resolv'd to make *Bern* the Scene in which the Project should be put in Execution; for they found the People of *Bern* at that Time apt to swallow any Thing, and not dispos'd to make severe Enquires into extraordinary Matters. When they had form'd their Design, a fit Tool present'd itself; for one *Jetzer* came to take their Habit as a Lay-Brother, who had all the Dispositions that were necessary for the Execution of their Project; he was extreme simple, and much inclined to Austerities; so having observ'd his Temper well, they began to execute their Project the very Night after he took the Habit, which was on *Lady-day*, 1507. One of the Fryers convey'd himself secretly into his Cell, and appear'd to him as if he had been in Purgatory, in a strange Figure; he had a Box near his Mouth, upon which, as he blew, Fire seem'd to come out of his Mouth. He had also some Dogs about him, that appear'd as his Tormentors. In this Posture he came near the Fryer while he was in Bed, and took up a celebrated Story that they us'd to tell all their Fryers, to beget in them a great Dread of ever laying aside their Habit, which was, that one of the Order, who was Superior of their House at *Solothurn*, had gone to *Paris*, but laying aside his Habit, was kill'd in his Lay Cloaths. The Fryer in the Vizard said he was that Person, and was condemn'd to Purgatory for that Crime; but he added, that he might be rescu'd by his Means; and he seconded this with most horrible Cries, expressing the Miseries which he suffer'd. The poor Fryer *Jetzer* was excessively frighted; but the other advanced, and required a Promise of him to do that which he should desire, in order to the delivering him out of his Torment. The Fryer promis'd all that he ask'd of him. Then the other said, he knew he was a great Saint, and that his Prayers and Mortifications would prevail; but they must be very extraordinary: The whole Monastery must, for a Week together, discipline themselves with a Whip, and he must lie prostrate in the Form of one on a Cross, in one of their Chapels, while Mass was said in the Sight of all that should come to it; and he added, that if he did this, he should find the Effects of the Love that the Blessed Virgin bear him, together with many other extraordinary Things; and said he would appear again, accompanied with two other Spirits; and assur'd him, that all he suffer'd for his Deliverance should be most gloriously rewarded. Morning was no sooner come, than the Fryer gave an Account of this Apparition to the rest of the Convent, who seem'd extremely surpriz'd: They all press'd him to undergo the Discipline that was enjoin'd him, and every one undertook to bear his Share; so the deluded Fryer perform'd it exactly in one of the Chapels of their Church. This drew a vast Number of Spectators together, who consider'd the poor Fryer as a Saint; and in the mean while the four Fryers that managed the Imposture, magnified the Miracle of the Apparition to the Skies in their Sermons. The Fryer's Confessor was in the Secret; and by this Means they knew all the little Passages of the poor Fryer's Life, even to his Thoughts, which help'd them not a little in the Conduct of the Matter. The Confessor gave him an Hostie, with a Piece of Wood, that was, as he pretended, a Piece of the true Cross; and by these he was to fortify himself, if any other Apparitions should come to him; since evil Spirits would be certainly chained up thereby. The Night after that, the former Apparition was renewed, and the masqued Fryer brought two others with him in such Vizards, that the Fryer thought they were Devils indeed. The Fryer present'd the Hostie to them, which gave them such a Check, that he was fully satisfied of the Virtue of this Preservative.

The Fryer, that pretended he was suffering in Purgatory, said so many Things relating to the Secrets of his Life and Thoughts, which he had from the Confessor,

feffor, that the poor Fryer was fully possessed of the Reality of the Apparition. In two of these Representations, that were both managed in the same Manner, the Fryer in the Masque talked much of the *Dominican* Order, which he said was excessively dear to the blessed Virgin, who knew herself to be conceived in original Sin, and that the Doctors who taught the contrary, were in Purgatory: That the Story of St. *Bernard's* appearing with a Spot on him, for having opposed himself to the Feast of the Conception, was a Forgery; but that it was true, that some hideous Flies appear'd on St. *Bonaventure's* Tomb, who had taught the contrary: That the Blessed Virgin abhor'd the *Cordeliers* for making her equal to her Son: That *Scotus* was damned, whose Canonization the *Cordeliers* were then soliciting at *Rome*; and that the Town of *Bern* would be destroy'd for harbouring such Plagues within their Walls. When the enjoined Discipline was fully performed, the Spirit appeared again, and said, he was delivered out of Purgatory; but before he could be admitted to Heaven, he must receive the Sacrament, having died without it; and after that he would say Mass for those, who had by their Charities rescued him out of his Pains. The Fryer fancied the Voice resembled the Prior's a little; but he was then so far from suspecting any Thing, that he gave no great Heed to this Suspicion. Some Days after this, the same Fryer appeared as a Nun all in Glory, and told the poor Fryer that she was Saint *Barbara*, for whom he had a particular Devotion; and added, that the Blessed Virgin was so much pleased with his Charity, that she intended to come and visit him. He immediately call'd the Convent together, and gave the rest of the Fryers an Account of this Apparition, which was entertained by them with great Joy; and the Fryer languish'd for the Accomplishment of the Promise that St. *Barbara* had made him. After some Days the long'd for Delusion appear'd to him, cloathed as the Virgin used to be on the great Feasts, and indeed in the same Habits. There were about her some Angels, which he afterwards found were the little Statues of Angels, which they set on the Altars on the great Holidays. There was also a Pulley fastened in the Room over his Head, and a Cord tied to the Angels, that made them rise up in the Air, and float about the Virgin, which encreased the Delusion. The Virgin, after some Endearments, extolling the Merit of his Charity and Discipline, told him that she was conceived in original Sin, and that Pope *Julius II.* that then reign'd, was to put an End to the Dispute, and was to abolish the Feast of her Conception, which *Sixtus IV.* had instituted; and that he was to be the Instrument of persuading the Pope of the Truth in that Matter. She gave him three Drops of her Son's Blood, which were three Tears of Blood that he had shed over *Jerusalem*; and this signified, that she was three Hours in original Sin, after which she was by his Mercy delivered out of that State. For it seems the *Dominicans* were resolved so to compound the Matter, that though they should gain the main Point, of her Conception in Sin, yet they would comply so far with the Reverence for the Virgin with which the World was then possessed, that she should be believed to have remained a very short while in that State. She gave him also five Drops of Blood in the Form of a Cross, which were Tears of Blood that she had shed while her Son was on the Cross. And to convince him more fully, she presented an Hostie to him, that appeared as an ordinary Hostie, and of a sudden it appeared to be of a deep red Colour. The Cheat of those supposed Visits was often repeated; at last the Virgin told him, that she was to give him such Marks of her Son's Love to him, that the Matter should be past all Doubt. She said, that the five Wounds of St. *Lucia* and St. *Catherine* were real Wounds, and that she would also imprint them on him; so she bid him reach his Hand. He had no great Mind to receive a Favour in which he was to suffer so much; but she forced his Hand, and struck a Nail through it. This Hole was as big as a Grain of Pease, and he saw the Candle clearly through it. This threw him out of a supposed Transport into a real Agony: But she seem'd to touch his Hand, and he thought

he smelt an Ointment with which she anointed it; though his Confessor persuaded him that that was only an Imagination; so the supposed Virgin left him for that Time.

The next Night the Apparition return'd, and brought some Linnen Clothes, which had some real or imaginary Virtue to allay his Torment; and the pretended Virgin said, they were some of the Linnen in which Christ was wrapped; and with that she gave him a soporiferous Draught, and while he was fast asleep, the other four Wounds were imprinted on his Body in such a Manner, that he felt no Pain.

But in order to this, the Fryers betook themselves to Charms; and the Sub-prior shewed the rest a Book full of them; but he said, that before they could be effectual, they must renounce God; and he not only did this himself, but by a formal Act in Writing, signed with his Blood, he dedicated himself to the Devil: It is true, he did not oblige the rest to do this, but only to renounce God. The Composition of the Draught was a Mixture of some Fountain Water and Chrism, the Hairs of the Eyebrows of a Child, some Quick-silver, some Grains of Incense, somewhat of an *Easter* Wax-candle, some consecrated Salt, and the Blood of an unbaptized Child. This Composition was a Secret, which the Sub-prior did not communicate to the rest. By this the poor Fryer *Fetzer* was made almost insensible. When he was awake, and came out of this deep Sleep, he felt this wonderful Impression on his Body; and now he was ravish'd out of Measure, and came to fancy himself to be acting all the Parts of our Saviour's Passion: He was exposed to the People on the great Altar, to the Amazement of the whole Town, and to the Mortification of the *Franciscans*. The *Dominicans* gave him some other Draughts, that threw him into Convulsions; and when he came out of those, a Voice was heard, which came through that Hole, which yet remains, and runs from one of the Cells, along a great Part of the Wall of the Church: For a Fryer spoke through a Pipe, and at the End of the Hole there was an Image of the Virgin's, with a little *Jesus* in her Arms, between whom and his Mother the Voice seem'd to come. The Image also seem'd to shed Tears; and a Painter had drawn those on her Face so lively, that the People were deceived by it. The little *Jesus* asked, why she wept? And she said, it was because his Honour was given to her, since it was said that she was born without Sin. In Conclusion, the Fryers so over-acted this Matter, that at last even the poor deluded Fryer himself came to discover it, and resolv'd to quit the Order.

It was in vain to delude him with more Apparitions, for he well-nigh kill'd a Fryer that came to him personating the Virgin in another Shape with a Crown on her Head. He also over-heard the Fryers once talking among themselves, of the Contrivance and Success of the Imposture, so plainly, that he discover'd the whole Matter; and upon that, as may be easily imagined, he was filled with all the Horror with which such a Discovery could inspire him.

The Fryers fearing that an Imposture, which was carried on hitherto with so much Success, should be quite spoil'd, and turn'd against them, thought the surest Way was to own the whole Matter to him, and to engage him to carry on the Cheat. They told him in what Esteem he would be, if he continued to support the Reputation that he had acquired; that he would become the Chief of the Order; and in the End they persuaded him to go on with the Imposture. But at last, fearing lest he should discover all, they resolv'd to poison him; of which he was so apprehensive, that once a Loaf being brought him, that was prepared with Spices, he kept it for some Time, and it growing green, he threw it to some young Wolf's Whelps that were in the Monastery, which died immediately. His Constitution was so vigorous, that though they gave him Poison five several Times, he was not destroyed by it. They also press'd him earnestly to renounce God, which they judg'd necessary, that their Charms might have their Effect on him; but he would never consent to that. At last they forced him to take a poisoned

Hostie, which yet he vomited up soon after he had swallowed it. That failing, they used him so cruelly, whipping him with an Iron Chain, and girding him about so strait with it, that to avoid further Torment, he swore to them in a most imprecating Stile, that he would never discover the Secret, but would still carry it on; and so he deluded them, till he found an Opportunity of getting out of the Convent, and of throwing himself into the Hands of the Magistrates, to whom he discovered all.

The four Fryers were seized and put in Prison, and an Account of the Matter was sent first to the Bishop of *Lausanne*, and then to *Rome*; and it may be easily imagin'd, that the *Franciscans* took all possible Care to have it thoroughly examined. The Bishops of *Lausanne* and *Zyon*, with the Provincial of the *Dominicans*, were appointed to form the Process. The four Fryers first excepted to *Jetzer's* Credit; but that was rejected: Then being threaten'd with the Question, they put in a long Plea against that; but though the Provincial would not consent to that, yet they were put to the Question: Some endured it long, but at last they all confessed the Whole of the Imposture. The Provincial appeared concerned; for though *Jetzer* had opened the whole Matter to him, yet he would give no Credit to him; on the contrary, he charged him to be obedient to them; and one of the Fryers said plainly, that he was in the whole Secret; and so he withdrew, but he died some Days after at *Constance*, having poisoned himself, as was generally believed. The Matter lay asleep some Time, but a Year after that, a *Spanish* Bishop came, authorized with full Power from *Rome*, and the whole Cheat being fully proved, the four Fryers were solemnly degraded from their Priesthoods, and eight Days after, it being the last of *May*, 1509, they were burnt in a Meadow on the other Side of the River, over-against the great Church. The Place of their Execution was shewed me, as well as the Hole in the Wall through which the Voice was conveyed to the Image. It was certainly one of the blackest, and yet the best carried-on Cheat that has been known; and, no Doubt, had the poor Fryer died before the Discovery, it had passed to Posterity as one of the greatest Miracles that ever was; and it gives a shrew'd Suspicion, that many of the other Miracles of that Church are of the same Nature, but more successfully finish'd.

7. *Switzerland* lies between *France* and *Italy*, both Countries incomparably more rich, and better furnished with the Conveniencies of Life than it; and yet *Italy* is almost dispeopled, and the People in it are reduced to Misery that can scarce be imagined but by those who have seen it: And *France* is in a great Measure dispeopled, and the Inhabitants reduced to such Poverty as appears in all the Marks in which it can shew itself, in their Houses, Furniture, Cloaths, and Looks.

On the contrary, *Switzerland* is full of People, and in several Places, in Villages as well as in Towns, one sees all the Marks of Plenty and Wealth. Their Houses and Windows are in good Order, the Highways are well maintained, People are well clothed, and every one at his Ease. This Observation surprised me still more in the Country of the *Grisons*, where there is hardly any Soil at all, the Vallies being almost washed away with the Torrents that fall down from the Hills, and swell their Brooks sometimes so suddenly, that in many Places the whole Soil is carried away; and yet those Vallies are well peopled, and every one lives happy under a gentle Government: Whilst rich and plentiful Countries are reduced to such Misery, that as many Inhabitants are forced to change their Seats, so those who stay behind can scarce live, and pay those Impositions that are laid upon them. The common People generally reason very simply of Government; but they feel truly though they argue false. So an easy Government, though in a Country with an ill Soil, and accompanied with great Inconveniencies, draws, or at least keeps People in it; whereas a severe Government, though it may in Speculation appear reasonable, drives its Subjects even out of the best and most desirable Seats.

8. In my Way from *Bern*, I passed by *Solothurn*, and I came through *Fribourg* in my Way to *Bern*. These are two of the chief Popish Cantons after *Lucern*; and one sees in them a Heat and Bigottry beyond what appears in *France* or *Italy*. Long before they come within the Church, they kneel down in the Streets, when Mass is saying. The Images are extreme gross. In the chief Church of *Solothurn*, there is an Image of God the Father, as an old Man with a black Beard, having our Saviour on his Knees, and a Dove over his Head. Here also begins Devotion at the *Ave-Mary* Bell, which is scarce known in *France*, but is practised all over *Italy*: At Noon, and at Sun-set, the Bell rings, and all say the *Ave-Mary*. But whereas in *Italy* they content themselves with putting off their Hats, in *Switzerland* they kneel down in the Streets, which I saw no where practised except at *Venice*, and there it is not commonly done. But notwithstanding this, all the *Switzers* see their common Interest so well, that they live in a very good Understanding one with another. This is chiefly owing to the Canton of *Lucern*, where there is a Spirit in the Government very different from what is in the other Popish Cantons. The Jesuits begin to grow as powerful in *Switzerland*, as they are elsewhere; they have a noble College and Chapel in the best Place of *Fribourg*. It is not long since they were at *Solothurn*, where there was a Revenue of a thousand Livres a Year settled for the Maintenance of ten of them, with this Provision, that they should never exceed that Number. But where once settled, they find Means to break through all Limitations; and are now become so rich there, that they are raising a Church and College, which will cost, before finished, above four hundred thousand Livres, to which the *French* King gives ten thousand Livres for the Frontispiece; for as this is the Canton in which his Ambassadour resides, he thought it for his Glory, to have a Monument raised by an Order, that will never be wanting to flatter their Benefactors, as long as they can find their Account in it.

In the same Canton there is an Abbey, that has one hundred thousand Livres of Revenue; there is also a very rich House of Nuns that wear the Capuchins Habit, that has sixty thousand Livres of Revenue, and but sixty Nuns in it, who, having a thousand Livres a-piece, may live in all possible Plenty, in a Country where a little Money goes a great Way. But that which surprises one most at *Solothurn* is, the great Fortification they are building about the Town, the noblest and solidest that is any where to be seen. The Stone with which it is faced, is a Sort of coarse Marble, but many Stones are ten Foot long, and two Foot thick: But though this will be a Work of Expence and Beauty, yet it would signify little against a great Army that attack'd it vigorously. The Wall is finished on the Side of the River, the Ditch is very broad, and the Counterscarp and Glacis are also finished, and they are working at a Fort on the other Side of the River, which they intend to fortify in the same Manner. This has cost them near two Millions of Livres, and this Expence has made them often repent the Undertaking; and it is certain, that a Fortification able to resist their Peasants in case of a Rebellion, is all that is needful. This Canton has two Advoyers, as *Bern*; the Little Council consists of thirty-six: They have twelve Bailiages, which are very profitable to those that can carry them; one Bursar, and but one Banneret. All the Cantons have Bailiages; but if there are Disorders at *Bern* in the Choice of Bailiffs, there are far greater among the Popish Cantons, where all Things are sold, as a foreign Minister told me; who, tho' he knew my Religion, did not stick to own frankly, that the Catholicks were not near so well governed as the Protestant Cantons. Justice is generally sold among them; and in Treaties with foreign Princes, they have sometimes taken Money both from *French* and *Spanish* Ambassadors, and have signed contradictory Articles at the same Time.

9. *Baden* has nothing in it remarkable, except its convenient Situation, which makes it the Seat of the General Diet of the Cantons, tho' not one of them, but a Bailiage that belongs in common to eight of the ancient

cient Cantons. At last I came to *Zurich*, which as it is the first and most honourable of all the Cantons, so with relation to us, it has a Precedence of a higher Nature, it being the first that received the Reformation.

This Canton is less than *Bern*, yet the Publick is much richer; they reckon that they can bring fifty thousand Men together on twenty four Hours Warning; their Subjects live happy, for the Bailiffs here have Appointments, and have only the Hundred Penny of the Fines; so that they are not tempted as those of *Bern*, to whom the Fine belongs entirely. And whereas at *Bern*, the constant Intrigue of the whole Town is concerning their Bailiages; here it is a Service to which the Citizens are bound to submit, according to their Constitution, but to which they do not aspire. The Government is almost the same as at *Bern*, and the Magistrate called the Advoyer at *Bern*, is here called the Burgomaster. The Revenue of the State is justly accounted for, so that the Publick is much richer than at *Bern*; the Arsenal is much better furnished, and the Fortifications more regular. There is a great Trade stirring; and as their Lake, that is twenty four Miles long, and two or three broad, supplies them with Provisions, so their River carries their Manufacture to the *Rhine*, from whence it is conveyed as they please. One of their chief Manufactures is *Crape*, in all Respects the best I ever saw. I will not describe the Situation of the Town, but content myself with telling you, that it is very pleasant, the Country about it mountainous, and the Winters hard; for the Lake freezes quite over, only in some Places Ice never lies, which is esteemed a Mark that Springs rise there and cause that Heat. So also in the Lake of *Geneva*, tho' never quite frozen, yet Flakes of Ice lie in several Parts, but are never seen in some Parts of the Lake; which is supposed to flow from the same Cause.

But to return to *Zurich*: One sees here the ancient Simplicity of the *Switzers*, not corrupted with Luxury or Vanity. Their Women not only do not converse with Men, except those of their near Kindred, but even in the Streets make no Returns to the Civility of Strangers; for it is only Strangers put off their Hats to Women, but they make no Courtesies; and here, as through all *Switzerland*, Women are not saluted, but the Civility is expressed by taking them by the Hand. There is one Thing singular in the Constitution of *Zurich*, that is, their *Little Council* consists of Fifty Persons, but there sit in it only Twenty-five at a Time; and so the Halves of this Council, as each of them has his proper Burgomaster, have also the Government in their Hands by Turns, and they shift every six Months, at *Midsummer*, and at *Christmas*. The whole Canton is divided into nine great Bailiages, and twenty-one Castellannies; in the former the Bailiff resides constantly; but the Castellan, who is also one of the *Great Council*, has so little to do, that he lives at *Zurich*, and goes only at set Times of the Year to do Justice.

The Virtue of this Canton has appear'd in their adhering to the ancient Capitulations with the *French*, and not slackening in any Article, which has been done by all the other Cantons, where Money has a Sovereign Influence; but here it never prevailed. They have converted the ancient Revenues of the Church more to pious Uses, than any where else. They have many Hospitals well endowed; in one, as I was told, there was six hundred and fifty Poor kept: But as they support the real Charities which belong to such Endowments, so they despise that vain Magnificence of Buildings, which is generally affected elsewhere; for theirs are plain; and one of the Government said to me very sensibly, that they thought it enough to maintain their Poor as Poor, and not lodge them as Princes.

The Dean and Chapter are still continued as a Corporation, and enjoy the Revenues which they had before the Reformation; but if they subsist plentifully, they labour hard; for they have two or three Sermons a Day, and at least one; the first begins at Five o'Clock in the Morning. At *Geneva*, and all *Switzerland* over, there are daily Sermons, which were substituted upon the Reformation. But the Sermons are generally too

long, and the Preachers have departed from the first Design of these Sermons, which were intended to be an Explication of a whole Chapter, and an Exhortation upon it; and if this were so contrived, that it were in all not above a Quarter of an Hour long, as it would be heard by the People with less Weariness, and more Profit, so it would be a vast Advantage to the Preachers; for as it would oblige them to study the Scriptures much; so having once made themselves Masters of the practical Parts, such short Discourses would cost them less Pains than those laboured Sermons do, which consume the greatest Part of their Time, and often to little Purpose.

I told you, in *Bern* the Bailiages are given by a Sort of Ballot, which is so managed, that no Man's Vote is known: But I must add, that since I was first there, they have made a considerable Alteration in the Way of Voting, when Offices are to be given; which approaches much nearer the *Venetian* Method, and which exposes the Competitors more to Chance, and may put an End to the Intrigues that are so much in Use for obtaining those Employments. There are Balls put into a Box, equal to the Number of those that have a Right to vote, and are present; of these one Third are gilt, and two Parts are only silver'd; so every one takes out a Ball, but none can vote, except those who have the gilt Balls; so that a Man may have more than two Thirds on his Side, and yet be disappointed in a Competition.

10. There is one Thing, for which the *Switzers*, in particular those of *Bern*, cannot be too much commended: They have, ever since the Persecution began in *France*, open'd a Sanctuary to such as retired thither, in so Christian a Manner, that it deserves all honourable Remembrances that can be made of it. Such Ministers and others, as were at first condemned in *France* for the Affair of the *Cevennes*, have not only found Reception here, but all the Support that could be expected, and indeed much more. For they have assign'd the *French* Ministers a Pension of five Crowns a Month if unmarried, and have increased it to every one who had a Wife and Children, so that some had above ten Crowns a Month Pension. They dispersed them all over the *Païs de Vaud*, but the greatest Number staid at *Lausanne* and *Vevay*. In order to the supporting of this Charge, the Charities of *Zurich* and other Protestant States were brought hither. Not only the Protestant Cantons, but the *Grisons*, and some small States that are under the Protection of the Cantons, such as *Neuchâtel*, *St. Gall*, and some others, have sent their Charities to *Bern*, who dispense of them with great Discretion, and bear what farther Charge this brings upon them. And in this last total Dispersion of those Churches, the Country has been animated with such a Spirit of Compassion, that every Man's House and Purse has been opened to the Refugees, who have passed in such Numbers, that sometimes there have been above two thousand in *Lausanne* alone, and of these at one Time near two hundred Ministers; and they all met with a Kindness that look'd more like the primitive Age, than the Degeneracy of that in which we live.

The only considerable Tax under which the *Switzers* lie, is, when Estates are sold, the fifth Part of the Price belongs to the Publick, and all the Abatement that the Bailiff can make, is to bring it to a sixth. This they call the *Lod*, which is derived from *Alodium*; only there are some Lands that are *frank-alod*, which lie not under this Tax. But this falling only on the Sellers, it was thought a just Punishment and a wise Restraint on ill Husbands of their Estates.

I was the more confirm'd in the Account I have given you of the Derivation of *Advoyer*, when I found that in some small Towns in the Canton of *Bern*, the chief Magistrate is still so called, as in *Payerne*: So that I make no Doubt, but as the ancient Magistrates in the Time of the *Romans*, that were to give an Account of the Town, were called *Advocates*; and afterwards the Judge in Civil Matters, that was named by the Bishops, was called at first *Advocate*, and afterwards

Vidam

Vidam or *Vicedominus*; so that this was the Title that was still continued in *Bern*, while they were under the *Austrian* and *German* Yoke, and was preserved by them when they threw it off.

I have touch'd too slightly on the last Difference in *Switzerland*, which related to the Canton of *Glaris*. In the Canton of *Apenzel*, as the two Religions are tolerated, so they are separated in different Quarters; those of one have the one Half of the Canton, and those of the other Religion have the other Half; so they live apart, but in *Glaris* they are mix'd; and now the Number of the Papists is very low; one assured me, there were not above two hundred Families of that Religion; and those so poor, that their Necessities dispose some every Day to change their Religion. The other Popish Cantons seeing the Danger of losing their Interest entirely in that Canton, and being set on by the Intrigues of a Court that understood the Policy of embroiling all other States, made great Use of some Complaints of the Papists of *Glaris*, as if the prevailing of the other Religion exposed them to much Injustice and Oppression; and upon that they proposed that the Canton should be equally divided as *Apenzel* was. This was extremely unjust, since the Papists were not the tenth, perhaps not the twentieth Part of the Canton. It is true, it was so situated, that the Protestant Cantons could not easily come to their Assistance; but those of *Glaris* resolved to die rather than suffer this Injustice; and the Protestant Cantons resolved to engage in a War with the Popish Cantons, if they imposed on their Brethren of *Glaris*. At last this Expedient was found, that in all Suits between those of different Religions, two Thirds of the Judges should be of the Religion of the Defendant. But while this Contest was on Foot, those who fomented, if they did not set it on, knew how to make their Advantage of the Conjunction; for then was the Fortification of *Hunningen* at the Ports of *Basil* much advanced, of which they are now very apprehensive when too late. There are six noble Families in *Bern* that have this Privilege, that when any of them are chosen of the Council, they take Place before the ancient Counsellors; whereas the rest take Place according to the Order in which they were chosen.

11. After a short Stay at *Zurich*, we went down the Lake, where we passed under the Bridge at *Ripperfwood*, which is a noble Work for such a Country. The Lake is there about half a Mile broad, the Bridge about twelve Foot broad, but hath no Rails on either Side; so that if the Wind is high, which is no extraordinary Thing, a Man is in great Danger of being blown into the Lake. This Defect I found in almost all the Bridges of *Lombardy*, which seem'd very strange; for since that Defence is made at so small an Expence, it was amazing to see Bridges so naked; and more surprising in some Places, where the Bridges are both high and long: Yet I never heard of any Mischief that follow'd; but those are sober Countries, where Drinking is not much in Use. After two Days Journey we came to *Coire*, the chief Town of the *Grisons*, and where we found a General Diet of the three Leagues sitting; so that having staid ten Days there, I came to be informed of a great many Particulars which are not commonly known. The Town may contain between four and five thousand Souls. It lies in a Bottom upon a small Brook, that a little below the Town falls into the *Rhine*. It is environed with Mountains, so that they have a very short Summer; for the Snow is not melted till *May* or *June*, and it began to snow in *September* when I was there. On a rising Ground at the East End of the Town is the Cathedral, the Bishop's Palace, and the Close where the Dean and six Prebendaries live: All within the Close are Papists, but the Town are Protestants, and they live pretty well together. Above a Quarter of a Mile up the Hill, one goes by a steep Ascent to St. *Lucius's* Chapel: My Curiosity carried me thither, though I gave no Faith to the Legend of King *Lucius*, and his coming so far from home to be the Apostle of the *Grisons*. His Chapel is a little Vault about ten Foot square, where there is an Altar, and Mass is said upon

some great Festivals. It is situated under a natural Arch in the Rock, which is given out to have been the Cell of a Hermit. From it some Drops of a Fountain fall down near the Chapel. The Bishop assured me it had a miraculous Virtue for weak Eyes, and that it was oily; but neither Taste nor Feeling discover'd to me any Oiliness. I believe it may be very good for the Eyes, as all Rock Water is. But when I offer'd to shew the good old Bishop that the Legend of *Lucius* was a Fable, and most remarkably so in that which related to the *Grisons*, that we had no Kings in *Britain* at that Time, but were a Province to the *Romans*; that no ancient Authors speak of it, *Bede* being the first; and that the pretended Letter to Pope *Eleutherius*, with his Answer, bear evident Characters of Forgery; it signified nothing to the Bishop, who assured me, that they had a Tradition in their Church, and it was inserted in their Breviary, which he firmly believed. He also told me the other Legend of King *Lucius's* Sister, St. *Emerita*, who was burnt there, and of whose Veil there was yet a considerable Remnant among their Reliques. I confess I never saw a Relict so ill disguised, for it is a Piece of worn Linnen Cloth lately washed, and the Burning did not seem to be a Month old; and yet when they took it out of the Case, there were some there that with great Devotion rubbed their Beads upon it. The Bishop had some Contests with his Dean, and being a Prince of the Empire, he had proscribed him. The Dean also behaved himself so insolently, that by an Order of the Diet he was put in Prison as he came out of the Cathedral. By the Consent both of the Popish and Protestant Communities, a Law was long ago made against Ecclesiastical Immunities; this Attempt on the Dean was made four Years ago. As soon as he was let out, he went to *Rome*, and made great Complaints of the Bishop, and it was thought the Popish Party intended to move in the Diet, while we were there, for the repealing that Law, but they did it not. The Foundation of the Quarrel between the Bishop and Dean was, the Exemptions to which the Dean and Chapter pretend, and upon which the Bishop made some Invasion. I took Occasion to shew him the Novelty of those Exemptions, and that in the Primitive Church it was believed, that the Bishop had the Authority over his Presbyters by a divine Right; and if it was by a divine Right, then the Pope could not exempt them from his Obedience. But the Bishop would not carry the Matter so high, but contented himself with two Maxims; one was, that the Bishop was Christ's Vicar in his Diocese; and the other, that what the Pope was in the Catholick Church, the Bishop was in his Diocese.

He was a good-natur'd Man, and did not make use of the Authority that he had over the Papists, to set them to live uneasily with their Neighbours of another Religion. That Bishop was anciently a great Prince, and the best Part of the League, that carries still the Name of *the House of God*, belong'd to him; though I was assured that *Pregallia*, one of those Communities, was a free State above six hundred Years ago; and that they have Records extant that prove this: The other Communities bought their Liberties from several Bishops some Time before the Reformation, of which the Deeds are yet extant; so that it is an impudent Thing to say, that they shook off his Yoke at that Time.

The Bishop hath yet a Revenue of about a thousand Pounds a Year, and every one of the Prebendaries hath near two hundred Pounds a Year. It is not easy to imagine how the Riches of this Country are raised; for one sees nothing but vast Mountains, that seem barren Rocks, and some little Vallies among them not a Mile broad, and the best Part of these wash'd away by the *Rhine*, and some Brooks that fall into it. But their Wealth consists chiefly in their Hills, which afford much Pasture; and in the hot Months, in which all the Pasture of *Italy* is parched, the Cattle are driven into these Hills, which brings them a clear Revenue of above two hundred thousand Crowns a Year. The Publick is indeed poor, but particular Persons are so rich, that I knew

knew a great many there, who were look'd on to have Estates to the Value of one hundred thousand Crowns. Mr. *Schovestein*, accounted the richest Man in the Country, is believed to be worth a Million of Livres. The Government here is a pure Common-wealth; for in the Choice of their Magistrates, every Man above sixteen Years old hath his Voice, which is also the Constitution of some of the small Cantons. The three Leagues are, the League of the *Grisons*, that of the *House of God*, and that of the *Ten Jurisdictions*.

12. They believe, that upon the Incursions of the *Goths* and *Vandals*, as some fled to the *Venetian* Islands, out of which rose that famous Common-wealth, so others came and shelter'd themselves in these Vallies. They told me of an ancient Inscription lately found on a Stone, where on the one Side is graven, *Omitto Rbetos indomitos*, and *Ne plus ultra* is on the other; which they pretend was placed by *Julius Caesar*. This Stone is upon one of their Mountains; but as I did not pass that Way, so I can make no Judgment concerning it. After the first forming of this People, they were cast into little States, according to the different Vallies which they inhabited, and in which Justice was administred; and so they fell under the Power of some little Princes, that became severe Masters. But when they saw the Example that the *Switzers* had set them, in shaking off the *Austrian* Yoke, above two hundred Years ago, they combined to shake off theirs; only some few of those small Princes used their Authority better, and concurred with the People, and so they are still Parts of the Body; only *Haldenstein* is an absolute Sovereignty. It is about two Miles from *Coire* to the West, on the other Side of the *Rhine*. The whole Territory is about half a Mile long, at the Foot of the *Alps*, where there is scarce any Breadth. The Authority of these *Barons* was formerly more absolute than now; for the Subjects were their Slaves: But to keep together the little Village, they have granted them a Power of naming a List for their Magistrates, the Person being to be named by the Baron, who hath also the Right of Pardoning, of Coining, and every Thing else that belongs to a Sovereign. I saw this little Prince in *Coire*, in an Equipage not suitable to his Quality; for he was in all Points like an ordinary Gentleman. There are three other Baronies that are Members of the Diet, and subject to it; the chief belonged to the Archdukes of *Inspruck*; the others to Mr. *Schovenstein*, and Mr. *de Mont*; they are the Heads of those Communities of which their Baronies are composed; they name the Magistrates out of the Lists that are presented to them by their Subjects, and have the Right of Pardoning, and to Confiscations. That belonging to the *House of Austria* is the biggest: It hath five Voices in the Diet, and can raise twelve hundred Men. One *Travers* bought it of the Emperor in the Year 1679; he entered upon the Rights of the ancient Barons, which were specified in an Agreement that passed between him and his Peasants, and was confirmed by the Emperor. *Travers* made many Encroachments upon the Privileges of his Subjects, who made their Complaints to the League; but *Travers* would have the Matter judg'd at *Inspruck*, and the Emperor supported him in this Pretension, and sent an Agent to the Diet. I was present when he had his Audience, in which there was nothing but general Compliments. The Diet stood firm to their Constitution, and asserted, that the Emperor had no Authority to judge that Matter, which belong'd only to them: So *Travers* was forced to let his Pretensions fall.

All the other Parts of this State are purely *Democratical*: There are three different Bodies or Leagues, and each of these an entire Government; and the Assembly or Diet of the three Leagues is only a Confederacy, like the United Provinces, or the Cantons. There are *sixty seven Voices* in the Diet, which are thus divided: The League of the *Grisons* hath *twenty eight* Voices, that of the *House of God* *twenty four*, and that of the *Jurisdictions* *fifteen*. The *Jurisdictions* belonged anciently to the *House of Austria*; but having shaken off that Authority, were incorporated into the Diet: But in the

last Wars of *Germany*, the *Austrians* thought to have brought them again under their Yoke; yet they defended their Liberty with so much Vigour, that the *Austrians* thought the Conquest would not quit the Cost. They were affrighted by two extraordinary Actions; in one Village, which was quite abandoned by all the Men, who left the Women in it, some Hundreds, as I was told, being there quartered, were apprehensive of no Danger from their Hostesses: But the Women intended to let their Husbands see, that they were capable of contriving and executing a bold Action, though it must be confess'd it was a little too barbarous for the Sex. They enter'd into a Combination to cut the Throats of all the Soldiers at one Time. The Woman that proposed this, had four lodged with her, and she, with her own Hands, dispatched them all; and so did the rest, not one Soldier escaping to carry away the News. In another Place, a Body of the *Austrians* came into a Valley that was quite abandoned; for the Men having no Arms but their Clubs and Staves, had got up to the Mountains: But they took their Measures so well, and possessed themselves of the Passes in such a Manner, that they came down upon the Soldiers with so much Fury, that they defeated them, so that very few escaped; and it is certain, that the subduing them would have proved a very hard Work. It is true, they are not in a Condition to hold out long, the Publick is so poor; so that though particular Persons are rich, yet they have no publick Revenue, but every Man is concerned to preserve his Liberty, which is more entire here than even in *Switzerland*; but often swells too high, and throws them into Convulsions. The League of the *Grisons* is the first and most ancient, and is composed of *eight* and *twenty* Communities, of which there are *eighteen* Papists, and the rest are Protestants. The Communities of the two Religions live neighbourly together, yet do not suffer those of another Religion to live among them; so that every Community is entirely of the same Religion; and if any changes, he must go into another Community. Each Community is an entire State within itself, and all Persons meet once a Year to chuse the Judge and his Assistants, whom they change or continue from Year to Year, as they see Cause. There is no Difference between Gentleman and Peasant, and the Tenant hath a Vote as well as his Landlord; nor dare his Landlord use him ill when he votes contrary to his Intentions, for the Peasants would consider this as a common Quarrel. An Appeal lies from the Judge of the Community to the Assembly of the League, where all Matters end; for there lies no Appeal to the General Diet of the three Leagues, except in Matters that concern the conquer'd Countries, which belong in common to the three. There is one chosen by the Deputies for the Assembly of the League, who is called the Head of the League, that calls them together as he thinks proper, and can bring a Cause that hath been once judged to a second Hearing. *Ilants* is the chief Town of this League, where their Diet meets. The second League is that of the *House of God*, in which there are *four* and *twenty* Communities. The Burgomaster of *Coire* is always the Head of this League, which at this Time is almost wholly Protestant; and the two Vallies of the Upper and Lower *Engedin*, are pointed out by the Papists as Canibals towards such Catholics as come among them. But Fryer *Sfondrato*, Nephew to Pope Gregory XIV. whose Mother the Marquis of *Bergominiero*, that was in *England*, married, found the contrary of all this to be true, to his great Regret. About eighteen Years ago he was believed to have wrought Miracles; and he became so much in Love with the Crown of Martyrdom, that he went through the *Engedin*, not doubting but he would find there what he desired. His Brother had come sometime before into the Country to drink the Mineral Waters, and was well known to the Gentry; so some of these hearing of the Fryer's coming, went and waited on him, and he was entertained in their Houses, and conveyed through the Country, though he took all possible Methods to provoke them; for he was often railing at their Religion, but to all that they made

no Answer, only they continued their Civilities ; which so enraged the warm Fryer, that he went to *Bormio*, and there died of Grief. An Accident fell out five Years ago, that the People of the Country esteemed a Miracle. The Papists, in their Processions, go out of one Community into another ; and when they pass through Protestant Communities, they lower the Cross, and give over singing till they come again upon Popish Ground ; but then they went on bearing up the Cross, and singing ; upon which the Protestants stopp'd them. They, finding that they were not equal in Number to the Protestants, sent to a Catholick Community, and desired their Assistance. Two thousand came, and in all Appearance the Dispute would have had a bloody Issue ; for the Protestants were resolved to maintain the Rights of their Community, and the others no less resolved to force their Way. But an extraordinary thick Mist rose, and through it the Papists fancied they saw a vast Body of Men, which was no other than a Wood ; but terrified with the Appearance, they retired, and this saved a Battle that probably would not only have ended in the Shedding much Blood, but might have disorder'd the whole Constitution of their Leagues. The Papists of Quality endeavour to keep their People in Order ; but they acknowledge, that the Protestants are much more peaceable than the Catholicks. The *Jurisdictions* have fifteen Votes in the General Diet ; yet they are generally called the Ten Jurisdictions, and the greater Part of them are likewise of the Protestant Religion : For upon the general Computation of the *three* Leagues, the Protestants are about *two* Thirds. In their Diets there are three Tables, one in the Middle, and two on either Side. At every Table sits the Head of the League, and a Secretary near him ; and from the Table there go down Benches on both Hands for the Deputies from the Communities of that League. They hold their Diets by Turns, in the chief Towns of the several Leagues, and it happened to be the Turn of the *House of God*, when I was there ; so they met at *Coire*.

13. The three Leagues, or *Grisons* in general, have a conquered Country in *Italy*, divided into three Districts ; the *Valtelline*, *Chavennes*, and *Bormio*. When *John Galeasse* possessed himself of the Dutchy of *Milan*, and drove out *Barnabas* ; *Maftinus*, one of *Barnabas's* Sons, to whom his Father had given those three Branches of the Dutchy of *Milan*, retired to *Coire*, and being hospitably received and entertained by the Bishop, when he died, he gave his Right to those Territories to the Cathedral of *Coire* ; so the Prelate had a Title, without a Force able to make it good. But when the Wars of *Italy* were on Foot, the three Leagues being much courted by both the Crowns, since they were Masters of all the Passes, through which either the *Switzers* or *Germans* could come into *Italy*, they resolved to lay hold on that Opportunity : Yet they had not Zeal enough for their Bishop, to engage upon his Account ; but agreed to pay him such a Revenue, and he transferred his Title to them, and they were so considerable to the *Spaniards*, that they yielded those Parcels of the Dutchy of *Milan* to them, and by this Cession they are possessed of them. Those Accessions to this State are much better than the Principal ; for as the *Valtelline*, which is above forty Miles long, and two broad, is one of the richest Vallies in the World, in which there are three Harvests some Years ; so the *Chavennes* and *Bormio*, though not so good as that, are much preferable to the best Vallies of the *Grisons*. Yet the Engagement that People have to their Homes appears signally here, since the *Grisons* have not forsaken their Country, that they might plant themselves so advantageously : But they love their rugged Vallies, and think the Safety they enjoy in them, beyond the Pleasures of their acquired Dominions ; which they govern by Bailiffs and Podestats, and other Officers whom they send among them ; and all the Advantage that they draw from them is, that the Magistrates they send enrich themselves in the same Manner as the Bailiffs in *Switzerland*. All those Offices go round the several Communities, which have the Right of Nomination in their Turn : But if there is none of the Community

proper, any one of another Community may buy of them the Nomination for that Turn, and the Community distribute among them the Money that he gives them. The Publick draws nothing out of those Parts, except the Fines, which in some Years amount to no considerable Sum ; and ten or twelve thousand Crowns is thought a great deal to be raised in a Year : So that their Subjects live happy, and free of all Taxes, which made their last Revolt appear the more extraordinary. It was, indeed, the Effect of a very surprising Bigottry, when a People, who had no other Grievance, but that now and then their Magistrates were of another Religion, and that Protestants were tolerated amongst them, would therefore throw off their Rulers, cut the Throats of their Neighbours, and cast themselves into the Hands of the *Spaniards*, who are the worst Masters in the World.

14. To give a more particular Relation of that Matter, and tell the Circumstances which seem a little to lessen that Rebellion and Massacre, I must give an Account of a Part of this Constitution that is very terrible, and which makes the greatest Men tremble. The Peasants come sometimes in great Bodies, and demand a Chamber of Justice from the Diet, and they are bound to grant it when thus demanded, which happens generally once in twenty Years. This Tumult of the Peasants is set on by some of the Malecontent Gentry, and generally there are a great many Sacrifices made. This Court is composed of Ten Judges out of every League, and twenty Advocates, who manage such Accusations as are presented. It is superior to all Law, and acts like a Court of Inquisition : They give the Question, that is, put to the Torture, and do every Thing that they think necessary to discover the Truth of such Accusations as are presented to them ; and the Decisions of this Court can never be brought under a Review, though there is one Exception to this ; for about a hundred Years ago, one Court of Justice reversed all that another had done. The Peasants are in as great Jealousy of the *Spaniards*, as the *Switzers* are of the *French* ; and the good Men among them are sensible of a great Corruption of Morals, that the *Spanish* Service brings among them. For there is a *Grison* Regiment kept in Pay by the *Spaniards* ; there are in it twelve Companies of fifty a-piece, and the Captains have a thousand Crowns Pay, though they are not obliged to attend the Service. This is a Pension paid under a more decent Name to the most considerable Men of the Country ; and is shared among them without any Distinction of Protestant and Papist, and is believed to sway their Councils too much. The Peasants are apt to take Fire, and to believe they are betray'd by these Pensioners of *Spain* ; and when Rumours are blown about among them, they come in great Numbers to demand a Chamber of Justice. The common Question that they give, which is also used through all *Switzerland*, and in *Geneva*, is, they tie the Hands of the suspected Person behind his Back, and pull them up to his Head, and so draw them about ; by which the Arms, and chiefly the Shoulder-blades, are disjointed. And when a Person put to the Question confesses his Crime, and is upon that condemned to die, he is obliged to renew his Confession, upon Oath, at the Place of Execution ; and if he goes off from it then, and saith, That his Confession was extorted by the Violence of the Torture, he is put again to the Question ; for this passes for a Maxim, That no Man must die, unless he confesseth himself guilty. Generally when the Fury of demanding this Chamber spreads among the People, the Gentry run away, and leave the whole Matter in the Power of the Peasants ; for they know not where it will end : And so the Peasants being named Judges, the Justice goes quick, till some Sacrifices appease the Rage. Two Years ago, upon the Sale of a Common to the Bishop of *Como*, to which he had ancient Pretensions, the Peasants, having no more the Liberty of the Common, were enraged at their Magistrates, and a Report was spread abroad, of which the Author could never be discovered, that the *Spaniards* had sent a hundred thousand Crowns among them

them to corrupt all their Magistrates. Upon this they were so on Fire, that it was generally thought there would have been many Sacrifices made : But the Gentry happened to be then so much united, that there was none of them engaged among the Peasants, or that directed their Rage. A Chamber of Justice was granted, but the Matter was so ordered, that it did not appear that any was guilty : Yet some that had dealt in that Transaction were fined, not so much for any Fault, as to raise a Fund to pay the Expences of the Chamber. And because they could not find Colour to raise so much out of the Fines, there was a Fine of five hundred Livres laid on every one of the *Spanish* Companies.

In the Year 1618, there was a Report that the *Spaniards* had a Treaty on Foot to take away the *Valteline* from the Leagues. This was supported in Credit by the Fort *Fuentes*, that the Governor of *Milan* was building upon the Lake of *Como*. Near the *Valteline* there was one *Ganatz* a Minister, but a bloody and perfidious Man, that managed the Rage of the Peasants; and there was great Reason to suspect some under-hand Dealing, though he threw it which Way he pleased. A Chamber of Justice was appointed to sit at *Tossane*, which is a considerable Town, twelve Miles from *Coire*, on the Road to *Italy*, near *Alta Rhetia*, which is an high but small Hill, to which there is no Access but on one Side, where there are the Ruins of a Castle and a Church, and which they believe was the Palace of *Rhetus*, the first Prince of the Country. There was severe Justice done in this Chamber; a Priest was put to the Question, and so ill used, that he died in it, which is a crying Thing among them. The chief Suspicion lay upon one *Pianta*, who being of one of the best Families of the *Grisons*, was then one of the Captains in the *Spanish* Regiment : He withdrew himself from the Storm; but the Peasants, led on by *Ganatz*, pursued him so close, that at last they found him, and hewed him in Pieces, *Ganatz* himself striking the first Stroke with an Ax, which was taken up, and preserved by his Friends; and four and twenty Years after, fifty or sixty of this Gentleman's Friends fell upon *Ganatz* in *Coire*, and killed him with the same Axe. *Ganatz* had, during the Wars, abandon'd both his Religion and his Profession, being a Disgrace to both, and had served first in the *Venetian*, and then in the *Spanish* Troops. After the Peace was made, he became so considerable, being supported by the *Spanish* Faction, that he was chosen Governor of *Chavennes*, and was come over to *Coire* to a Diet, being then in so important a Charge. Yet he was so much hated, that though the Murthing of a Magistrate in Office, and at a publick Assembly, in so terrible a Manner, ought to have been severely punish'd; yet no Enquiry was made into the Crime, nor was any Man so much as questioned for it. In that Chamber many that were put to the Question confessed enough to hang them; some endured the Question, and escaped with the Loss of the Use of their Arms. Those of the *Valteline* have pretended this Severity was that which gave the Rise to the Massacre; and it is very probable this might have drawn in some that would have been otherwise more moderate, and that it did likewise precipitate that barbarous Action. But it was afterwards discovered, that the Plot had been formed long before; so that the Industry and Rage of the Priests, managed by *Spanish* Emissaries, working upon the Bigottry of the People, was the real Cause; and this only made Use of as a Pretext to give some Colour to the Massacre, which was executed some Months after this Chamber was dissolved. It began while the Protestants were at Church : There were some Hundreds destroyed, the rest got all up into the Mountains, and so escaped into the Country of the *Grisons*; and those of *Chavennes* got likewise up to the Hills, for they are situated just at the Bottom of them.

I shall not prosecute the rest of that War; the *French* saw of what Advantage it was to them, not to let this Pass from *Italy* into *Germany* fall into the Hands of the *Spaniards*; so *Bassompierre* was sent to *Madrid*, and obtained a Promise, that Things should be put into the

same State in which they were before the Year 1618. But when that Order was sent to the Governor of *Milan*, it was plain he had secret Instructions to the contrary, for he refused to execute it. So a War followed, in which the *Grisons* found it was not easy for them to support the Charge of it, without having Recourse to the Assistance of the *French*. But the *Spaniards* pretended to have no other Interest in the Affairs of the *Valteline*, than the Preservation of the Catholick Religion; and to shew their Sincerity, they put the Country into the Pope's Hands, knowing that he could not preserve it but by their Assistance, or restore it without securing it from all Change of Religion. The *French* willingly undertook the Cause of the *Grisons*, and because the Duke of *Roban* was like to be the most favoured General, as being of their Religion, he was sent to command some Forces that march'd thither. But he saw, that if the *French* once made themselves Masters of the Passes of the Country, it would turn to their Ruin; and finding the *Grisons* reposed an entire Confidence in him, he thought it unbecoming him to be an Instrument in that he saw must be fatal to them. The *Spaniards* seeing the *French* engage in the Quarrel, and fearing they should possess themselves of the Passes, offered to restore all the Territory in *Italy*; for *Chavennes* and *Bormio* had likewise revolted, only the Protestants got away so quick upon the Disorders in the *Valteline*, that they prevented the Rage of the Priests. The *Spaniards* stood upon these Conditions; That an Amnesty should be granted for what was past : That there should be no Exercise of the Protestant Religion tolerated in the Country : And that the Bailiffs and other Magistrates of that Religion, who were to be sent into the *Valteline*, should not openly practise their Religion : And as for other Persons, that none of that Religion might stay above six Weeks at a Time in the Country. The Duke of *Roban*, seeing that Conditions of so much Advantage to the Leagues were offered to them, did under-hand advise those of that Religion to accept of them, at the same Time that he seem'd openly to oppose the Treaty set on Foot on those Terms; and that he might get out of this Employment with the less Dishonour, he advised their clapping him up in Prison, till they had finish'd their Treaty with the *Spaniards*. So that they very gratefully to this Day own, that they owe the Preservation of their Country to the Advices of that great Man. Many that were of that Religion returned to their Houses and Estates; but the greatest Part have since changed their Religion, others sold their Estates, and left the Country; some stay still, and go two or three Hours Journey to some of the Protestant Communities, where they have the Exercise of their Religion; and though they may not stay in the *Valteline* above six Weeks at a Time, yet they avoid that by going for a Day or two out of the Country once within that Time; nor is that Matter at present so severely examined, because there is a Calm among them as to those Matters. But when it comes to the Turn of the Protestant Communities to send one of their Religion to those Employments, he is often much embarrassed by the Bishop of *Como*, to whose Diocese those Territories belong : For if the Bishop fancies that they do any Thing contrary to the Ecclesiastical Immunities, he excommunicates them. And tho' this may appear a ridiculous Thing, since they are in a worse State by being Hereticks, yet it produces a very sensible Effect; for the People, who are extremely superstitious, will not come near such Magistrates : So that about three Years ago, a Bailiff found himself obliged to desire to be recalled, though his Time was not out, since being excommunicated, he could no longer maintain the Government.

Among the *Grisons* the *Roman* Law prevails, modified a little by their Customs : One a little particular was executed when I was there. A Man, that hath an Estate by his Wife, enjoys it after her Death as long as he continues a Widower; but when he marries again, he is bound to divide it among the Children he had by her. The Justice is short, but it is thought that Bribes go here, though but mean in proportion to their Poverty,

verty, as well as in other Places. The married Women scarce appear abroad, except at Church; but the young Women have more Liberty before they are married. There is such a Plenty of all Things, by Reason of the Gentleness of the Government, and the Industry of the People, that in the ten Days I staid at *Coire*, I was but once ask'd an Alms in the Streets. There are two Churches; in the one there is an Organ, that joins with their Voices in the Singing of the Psalms; and there was for the Honour of the Diet, while we were there, an Anthem sung very regularly. In all the Churches both of *Switzerland* and the *Grisons*, except in this, the Minister preaches covered, but here he is bare-headed. And I observed a particular Devotion used here in saying of the Lord's Prayer, that the Ministers, who wear Caps, put them off. The Women, as in *Bern*, turn all to the East in Time of Prayer, and in their private Devotions before and after the publick Prayers: Many also bow at the Name of Jesus. They christen discovering the whole Head, and pouring the Water on the Hind-head, using a trine Asperision; which is also the Practice of the *Switz*. It was Matter of much Edification, to see the great Numbers, both here and all *Switzerland* over, that come every Day to Prayers Morning and Evening. They give here, in the Middle of the Prayer, a good Interval of Silence for the private Devotions of the Assembly. The Schools here go not above *Latin*, *Greek*, and *Logick*; and for the rest they send their Children to *Zurich* or *Basil*. The Clergy are very meanly provided; for the the most Part they have nothing but the Benevolence of their People. They complained much to me of a Coldness in their People in the Matters of Religion, and of a great Corruption in their Morals. The Commons are extreme insolent, and many Crimes go unpunished, if the Persons that commit them have either great Credit or much Money. The poor Ministers here are under a terrible Slavery; for the *Grisons* pretend a Prescription not only for the Patronage of their Churches, but a Power to dismiss their Churchmen as they see cause. How it is among the Papists I cannot tell; but the Dean of the Synod of *the House of God* told me, they had an ill Custom of ordaining their Ministers without a Title, upon Examination of their Abilities, which took them up generally six or seven Hours; and when this Tryal was dispatch'd, if the Person was qualified they ordainec him; and it was too ordinary for those to endeavour to undermine the Ministers already in Employment, if their People grew disgusted at them, or they became disabled by Age; and often the Interest and Kindred of the Intruder carried the Matter against the Incumbent without any Pretence; and in that Case the Synod was bound to receive the Intruder. In one Half of the Country they preach in *High Dutch*, and in the other Half in a corrupt *Italian*, which they call *Romanish*, that is, a Mixture of *French* and *Italian*. In every League they have a Synod; and as the People choose their Ministers, so, in Imitation of the *Switz*, every Synod chooses their *Antistes*, or Superintendent. He is call'd the Dean among the *Grisons*, and hath a Sort of Episcopal Power; but he is accountable to the Synod: The Office is for Life; but the Synod, upon great Cause, may make a Change. The People are much more lively than the *Switzers*, and they begin to have a Tincture of the *Italian* Temper. They are extreme civil to Strangers; but it seems, in all Commonwealths Innkeepers think they have a Right to exact upon Strangers; which one finds here, as well as in *Holland*, or in *Switzerland*.

15. I shall conclude what I have to say of the *Grisons* with an extraordinary Story, which I had from the Ministers of *Coire*, and several other Gentlemen, that saw in *April* 1685, about five hundred Persons of different Sexes and Ages, that passed through the Town, who gave this Account of themselves. They were the Inhabitants of a Valley in *Tyrol*, belonging the Archbishoprick of *Salzburg*, but some of them were in the Dioceses of *Trent* and *Bresse*. They seemed to be a Remnant of the old *Waldenses*; they worshipped neither Images nor Saints, and they believed the Sacrament

was only a Commemoration of the Death of Christ; in many other Points they had their peculiar Opinions, different from those of the Church of *Rome*: They knew nothing either of *Lutherans* or *Calvinists*; and the *Grisons*, though their Neighbours, had never heard of this Nearness to the Protestant Religion. They had Mass said among them; but some Years since some of the Valley going over *Germany* to earn somewhat by their Labour, happened into the *Palatinate*, where they were better instructed in Matters of Religion; and these brought back with them into the Valley the *Heidelberg* Catechism, with some other *German* Books, which ran over the Valley; and they being in a good Disposition, those Books had such an Effect upon them, that they gave over going to Mass, and began to worship God in a Way more suitable to the Rules set down in Scripture. Some of their Priests concurred in this Change; but others who adhered still to the Mass, went and gave the Archbishop of *Salzburg* an Account of it; upon which he sent some to examine the Matter, to exhort them to return to Mass, and to threaten them with Severity, if they continued obstinate: So they seeing a terrible Storm ready to break on them, resolved to abandon their Houses, and all they had, rather than sin against their Consciences; and the whole Inhabitants, old and young, Men and Women, to the Number of two thousand, divided themselves into several Bodies; some to go to *Brandenburg*, others to the *Palatinate*, and about five hundred took the Way of *Coire*, intending to disperse themselves in *Switzerland*. The Ministers told me, they were much edified with their Simplicity; for a Collection being made for them, they desired only a little Bread to carry them on their Way. From *Coire* we went to *Tossano*, and from thence through the Way that is justly called *Via Mala*. It lies through a Bottom between two Rocks, through which the *Rhine* runs, but under Ground, for a great Part of the Way: The Way is cut out in the Middle of the Rock in some Places; and in several, the Steepness of the Rock being such, that a Way could not be cut, there are Beams driven into it, over which Boards and Earth are laid. This Way holds an Hour; after that, there is for two Hours a good Road, and we pass'd through two considerable Villages, finding good Lodging in both: From thence there is, for two Hours Journey, terrible Way, almost as bad as the *Via Mala*; then an Hour's Journey good Way to *Splugen*, which is a large Village of two hundred Houses that are well built, and the Inhabitants seem to live at their Ease, though they have no Soil but a little Meadow Ground about them. This is the last Protestant Church that was in our Rout: It was well endow'd; for the Minister had near two hundred Crowns. Those of this Village are the Carriers between *Italy* and *Germany*, and drive a great Trade; for there is here a perpetual Carriage going and coming; and we were told, that there pass generally a hundred Horses through this Town, one Day with another; and there are above five hundred Carriage-horses that belong to it. From this Place we went mounting for three Hours, till we got to the Top of the Hills, where there is only one great Inn. After that, the Way was tolerably good for two Hours; and for two Hours there is a constant Descent, which, for the most part, is as steep as if we were going down Stairs. At the Foot of this is a little Village, called *Campodolin*; and here we found we were in *Italy*, both by the vast Difference of the Climate, (for whereas we were freezing on the other Side, the Heat of the Sun was uneasy here) and by the Number of the Beggars; though it may seem the Reverse of what one ought to expect, since the richest Country of *Europe* is full of Beggars; and the *Grisons*, one of the poorest States, have no Beggars at all. One Thing is also strange, that among the *Grisons*, the rich Wine of the *Valtelline*, after carried three Days Journey, is sold cheaper than the Wine of other Countries at the Door; but there are no Taxes nor Impositions here. From *Campodolin* there are three Hours Journey to *Chavennes*, all in a slow Descent, and in some Places the Way is extreme rugged and stony.

16. *Chavennes* is very pleasantly situated at the very Foot of the Mountains; there runs through the Town a charming little River. It is nobly built, and hath many rich Vineyards about it; and the Reverberation of the Sun-beams from the Mountains so increases the Heats, that the Soil is as rich here, as in any Part of *Italy*. Here one begins to see a noble Architecture in many Houses: In short, all the Marks of a rich Soil and a free Government appear here. The Town stood a little more to the North about five hundred Years ago, but a Piece of the *Alps* came down upon it, and buried it quite; and at the upper End of the Town there are some Rocks that look like Ruins, about which there hath been a very extraordinary Expence, to divide them one from another, and to make them fit for Forts and Castles: The Marks of the Tools appear'd all over the Rock in one Place. I measured the Breadth of the one from the other, which is twenty Foot, the Length is four hundred and fifty Foot; and, as we could guess, the Rock was two hundred Foot high, cut down on both Sides in a Line, as even as a Wall; towards the Top of one, the Name *Salvius* is cut in large Letters, a little *Gothick*. On the Tops of those Rocks, which are inaccessible, except on the one Side, and to that the Ascent is uneasy, they had Garrisons during the Wars of the *Valtelline*: There were fifteen hundred in Garrison in that which is in the Middle. There fall down frequently Pieces from the Hills, that extremely fatten the Ground which they cover, so that it becomes fruitful beyond Expression: And I saw a Lime-tree that was planted eight and thirty Years before in a Piece of Ground which has been so cover'd, two Fathom and an half in Compass. On both Sides of the River, the Town and the Gardens belonging to it, cover the whole Bottom between the Hills; and at the Roots of the Mountains they dig great Cellars and Gröttos, and strike a Hole about a Foot square, ten or twelve Foot into the Hill, which all the Summer draws a fresh Air into the Cellar, so that the Wine of those Cellars drinks as cold as if it were in Ice; but this Wind-pipe did not blow when I was there, which was towards the End of *September*: For the Sun opening the Pores of the Earth, and rarifying the exterior Air, that, which is compressed within the Cavities that are in the Mountains, rushes out with a constant Wind; but when the Operation of the Sun is weakened, this Course of the Air is less sensible. Before, or over those Vaults, they build little pleasant Rooms like Summer-houses, and in them they go to Collations generally at Night in Summer. I never saw bigger Grapes than here; there is one Sort larger than the biggest *Damascene* Plumbs that we have in *England*.

There is a Kind of Wine here and in the *Valtelline*, which I never heard named any where else, that is called Aromatick Wine; and as the Taste makes one think it must be a Composition, (for it tastes like a strong Water drawn off Spices) so its Strength, being equal to a weak Brandy, disposes one to believe that it cannot be a natural Wine: Yet it is the pure Juice of the Grape without any Mixture. The Liquor being singular, I informed myself particularly of the Way of preparing it. The Grapes are red, though it appears white. They let the Grapes hang on the Vines till *November*, when they are extreme ripe; then they carry them to their Garrets, and set them all upright on their Ends by one another for two or three Months; then they pick all the Grapes, and throw away those in which there is the least Appearance of Rottenness, so that they press none but sound Grapes: After they are pressed, they put the Liquor in an open Vessel, in which it throws up a Scum, which they take off twice a Day; and when no more comes up, which, according to the Difference of the Season, is sooner or later, (for sometimes the Scum comes no more after eight Days, and at other Times it continues a Fortnight) then they put it in a close Vessel. For the first Year it is extreme sweet and luscious, but at the End of the Year, they pierce it a little higher than the Middle of the Vessel, almost two Thirds from the Bottom, and drink it off till it cometh so low, and then every Year they fill it

up anew: Once a Year (in the Month of *March*) it ferments, and cannot be drank till that is over, which continues a Month; but their other Wine ferments not at that Time. *Madam de Salis*, a Lady of that Country, who entertained us three Days with a Magnificence like *London* or *Paris*, had Wine of this Composition that was forty Years old, and was so very strong, that one could hardly drink above a Spoonful; and it tasted high of Spicery, though she assured me there was not one Grain of Spice in it, nor of any other Mixture. Thus, as I conceive, the Heat that is in this Wine becomes a Fire, and distils itself, throwing up the more spirituous Parts of it to the Top of the Hogshead.

Both here, and in the Country of the *Grisons*, the Meat is very juicy; the Fowl are excellent, their Roots and Herbs very well relish'd; but the Fish of their Lakes are beyond any Thing I ever saw. They live in great Simplicity as to their Habit and Furniture; but they have Plenty of all Things, and are very rich. The Family, where we were so nobly entertain'd, is believed to be worth about two hundred thousand Crowns. Here the *Italian* Custom, of one only of a Family that marries, begins to take place. There is a Sort of Pots of Stone that is used not only in all the Kitchens here, but almost all over *Lombardy*, called *Lavege*; the Stone feels oily and scaly, so that a Scale sticks to one's Finger that touches it, and is somewhat of the Nature of a Slate: There are but three Mines of it known, one near *Chavennes*, another in the *Valtelline*, and the third in the *Grisons*; but the first is much the best. They generally cut it in the Mine round, about a Foot and a half diameter, and a Foot and a Quarter thick; and they work it in a Mill, where the Chissels that cut the Stone are driven about by a Wheel that is set a going by Water, and which is so ordered, that he, who manages the Chissel, very easily draws forward the Wheel out of the Course of the Water. They turn off first the outward Coat of this Stone, till it is exactly smooth, and then they separate one Pot after another by those small and hooked Chissels, by which they make a Nest of Pots, all one within another, the biggest being of the Size of an ordinary Beef-pot, and the inward Pot being no larger than a small Pipkin: These they arm with Hooks and Circles of Brass, and so they use them in their Kitchens. One of these Stone-pots takes Heat, and boils, sooner than any Pot of Metal; and whereas the Bottoms of Metal-pots transmit the Heat so entirely to the Liquor within, that they are not insufferably hot, the Bottom of this Stone-pot, which is about twice so thick as a Pot of Metal, burns extremely. It never cracks, or gives any Sort of Taste to the Liquor that is boiled in it; but if it falls to the Ground, it is very brittle; yet this is repair'd by patching it up; for they piece their broken Pots so close, though without any Cement, by sewing with Iron-wire the broken Parcels together, that in the Holes which they pierce with the Wire, there is not the least Breach, except that which the Wire both makes and fills. The Passage to this Mine is very inconvenient; for they must creep into it for near half a Mile through a Rock, that is so hard, that the Passage is not above three Foot high; and those, that draw out the Stones, creep along upon their Belly, having a Candle fastened in their Forehead, and the Stone laid on a Sort of Cushion made for it upon their Hips: The Stones are commonly two hundred Weight.

17. But having mentioned some Falls or Breaches of Mountains in those Parts, I cannot pass by the extraordinary Fate of the Town of *Pleurs*, that was about a League from *Chavennes* to the North in the same Bottom, but on a Situation that is a little more raised. The Town was half the Bigness of *Chavennes*; the Number of the Inhabitants about two and twenty hundred Persons, but it was much better built; for besides the great Palace of the *Francken*, that cost some Millions, there were many other Palaces erected by several rich Factors of *Milan*, and the other Parts of *Italy*, who liked the Situation and Air, as well as the Freedom of the Government; so they used to come hither

during

during the Heats, and gave themselves all the Indulgences that a vast Wealth could furnish. By one of the Palaces that was a little distant from the Town, which was not overwhelmed with it, one may judge of the rest. It was an Out-house of the Family of the *Francken*, and yet it may compare with many Palaces in *Italy*; and certainly House and Gardens could not cost so little as one hundred thousand Crowns. The Voluptuousness of this Place became very crying, and Madam *de Salis* told me, that she had heard her Mother often relate some Passages of a Protestant Minister's Sermons, preached in a little Church which those of that Religion had there, which warned them often of the terrible Judgments of God which were hanging over their Heads, and that he believed would suddenly break out upon them. On the twenty-fifth of *August*, 1618, a Person came and told them to be gone, for he saw the Mountains cleaving; but he was laughed at for his Pains. He had a Daughter, whom he persuaded to leave all and go with him; but when she was gone out of Town with him, she called to Mind that she had not lock'd the Door of a Room, in which she had some Things of Value, and so she went back to do that, and was buried with the rest; for at the Hour of Supper the Hill fell, and buried the Town and all the Inhabitants, so that not one Person escaped. The Fall of the Mountains so fill'd the Channel of the River, that the first News those of *Chavennes* had of it, was by the failing of their River; for three or four Hours there came not a Drop of Water, but the River wrought for itself a new Course, and returned to them. I could hear no particular Character of the Man who escaped, so I must leave the secret Reason of so singular a Preservation to the great Discovery of the last Day. Some of the Family of the *Francken* got some Miners to work under Ground, to find out the Wealth that was buried in their Palace; for besides their Plate and Furniture, there was great Quantity of Cash and many Jewels in the House. The Miners pretended they could find Nothing; but they went to their own Country of *Tirol*, and built fine Houses, and a great Wealth appeared, of which no other visible Account could be given but this, that they had found some of that Treasure. The chief Factors of *Italy* have been *Grisons*; and they told me, that as the Trade of Banking began in *Lombardy*, so that all *Europe* over a *Lombard* and a *Banker* signified the same Thing; so the great Bankers of *Lombardy* were *Grisons*, and to this Day the *Grisons* drive a vast Trade in Money; for a Man there of a hundred thousand Crowns Estate, hath not perhaps a third Part of this within the Country, but puts it out in the neighbouring States: And the Liberty of the Country is such, that the Natives, when they have made Estates elsewhere, are glad to leave even *Italy*, and the best Parts of *Germany*, and come and live among those Mountains, of which the very Sight is enough to fill a Man with Horror.

From *Chavennes* we went for two Hours through a Plain to the Lake of *Chavennes*, which is almost round, and is about two Miles Diameter. This Lake falls into the Lake of *Como*, over-against Fort *Fuentes*; when we passed, the Water was so low, that the Boat could not easily get over a Bank between the two Lakes. The Lake of *Como* is about eight and forty Miles long, and four board, and runs between two Ranges of Hills. I did not stay long enough in *Como* to give any Description of it. The best Thing in it is a fine Chapel, which the present Pope *Innocent XI.* who is a Native of *Como*, is building. From *Como* we went eight Miles to *Code-laggo*, belonging to the *Switzers*, and from thence to *Lugane* we had eight Miles on the Lake. This Lake doth not run in an even Current, as other Lakes that rise under the *Alps*, but the Situation of the Hills about it throws it into several Courses.

The *Switzers* have here several little Provinces, of which, during the Wars of *Italy* between the two Crowns, in *Francis I.* and *Charles V.*'s Time, they possessed themselves as a Pledge for Payment of their Arrears; and they were then such considerable Allies, that they made both the Competitors for the Dutchy of *Milan* court

them by Turns, and became the peaceable Possessors of almost all that Tract that lies between the Lake of *Como* to the Country of the *Valeffi*, or the *Vallies*. The Inhabitants here are so well used, live so free of all Impositions, and the Government is so gentle, that I must tell you another Paradox; this is the worst Country, the least productive, the most exposed to Cold, and the least capable of Trade of all *Italy*; and yet it is by far the best peopled of any that I saw in all *Italy*. There belongs to the Bailiage of *Lugane* alone ninety nine Villages, of which a great many are very large, and all full of People. The twelve ancient Cantons have their Turns of all the Bailiages and other Offices here; but when it comes to the Turn of those of the Religion, their Bailiffs must be content with private Devotions in their own House, but can have no publick Exercises, nor so much as a Minister in their Houses. For here, as in the *Valtelline*, when the *Spaniards* confirmed the Right of the Cantons, they made an express Provision, that no Religion, except the Popish, should be tolerated here; so that the Bailiff, who is the Prince, often hath not the free Liberty of his Religion in these Parts. The Bailiffs make their Advantages, as well as in the other Parts of *Switzerland*, yet with more Caution; for they take great Care not to give the Natives any Distaste, though the Miseries to which they see all their Neighbours exposed, and the Abundance and Liberty in which they live, might, in all Appearance, deliver their Masters from any great Apprehensions of a Revolt. A great many Mechanicks of all Sorts live in these Parts, who go all Summer long over *Italy*, and and come back hither with what they have gained, and live free from all Taxes. I was told, that some Nephews of Popes, in particular the *Barberini*, had treated with the *Switzers* to buy this Country from them, and so to erect it into a Principality; and that they had resolved to offer twelve thousand Crowns to each of the twelve Cantons; but they found it would certainly be rejected, so they made no Proposition to the Diet of the Cantons, as they once intended. And it is certain, whenever this Country is brought under a Yoke, like that which the rest of *Italy* bears, it will be soon abandoned; for there is nothing that draws so many People to live in so bad a Soil, when they are in Sight of the best in *Europe*, but the Easiness of the Government.

18. From *Lugane* I went to the *Lago Maggiore*, which is a noble Lake, six and fifty Miles long, and in most Places six Miles broad, and a hundred Fathom deep about the Middle of it; it makes a great Bay to the Westward, and there lie two Islands, called the *Borromean* Islands, which are certainly the loveliest Spots of Ground in the World. There is nothing in all *Italy* that can be compared to them; they have the full View of the Lake, and the Ground rises so sweetly in them, that nothing can be imagined equal to the Terraces here. They belong to two Counts of the *Borromean* Family. I was only in one of them, which belongs to the Head of the Family, Nephew to the famous Cardinal, known by the Name of *St. Carlo*. On the West End lies the Palace, which is one of the best in *Italy* for the Lodgings within, tho' the Architecture is but ordinary. There is one noble Apartment above four and twenty Foot high, and there is a vast Addition making to it; and here is a great Collection of noble Pictures, beyond any Thing I saw out of *Rome*. The whole Island is a Garden, except a little Corner to the South, set off for a Village of about forty little Houses. And because the Figure of the Island was not very regular by Nature, they have built great Vaults and Portico's along the Rock, which are all made grotesque; and so they have brought it to a regular Form, by laying Earth over those Vaults. There is first a Garden to the East, that rises up from the Lake by five Rows of Terraces, on the three Sides of the Garden, that are watered by the Lake; the Stairs are noble, the Walls are all covered with Oranges and Citrons; and a more beautiful Spot of a Garden cannot be seen. There are two Buildings in the two Corners of this Garden; the one is a Mill for fetching up the Water, and the other is a noble Summer-house all wainscotted with

with Alabaſter and Marble, of a fine Colour inclining to red. From this Garden one goes on a Level to all the reſt of the Allies and Parterres, Herb and Flower-gardens, in all which there are Variety of Fountains and Arbours; but the great Parterre is a ſurprizing Thing: For as it is well furniſhed with Statues and Fountains, and is of a vaſt Extent, and juſtly ſituated to the Palace, at the further End of it there is a great Mount; the Face of it, that looks to the Parterre, is made like a Theatre, all full of Fountains and Statues, the Height riſing up in five ſeveral Rows, about fifty Foot high, and about fourſcore Foot in Front; and round this Mount, anſwering to the five Rows into which the Theatre is divided, there run as many Terraces of noble Walks. The Walls are all as cloſe covered with Oranges and Citrons, as any of our Walls in *England* are with Laurel. The Top of the Mount is ſeventy Foot long, and forty broad: and here is a vaſt Ciſtern, into which the Mill plays up the Water that furniſhes all the Fountains. The Fountains were not quite finiſhed when I was there; but when all is compleat, this Place will look like an enchanted Iſland. The Freſhneſs of the Air, it being both in a Lake, and near the Mountains, the fragrant Smell, the beautiful Proſpect, and delightful Variety that is here, makes it ſuch a Habitation for Summer, that perhaps the World hath nothing like it.

19. From hence I went to *Seſtio*, a miſerable Village at the End of the Lake; and here I began to feel a mighty Change, being now in *Lombardy*, which is certainly the beautifulleſt Country that can be imagined, the Ground lies ſo even, is ſo well watered, ſo ſweetly divided by Rows of Trees, incloſing every Piece of Ground of an Acre or two in Compaſs, that it cannot be denied that here is a vaſt Extent of Soil, above two hundred Miles long, and in many Places an hundred broad; where the whole Country is equal to the love- lieſt Spots in *England* and *France*; it hath all the Sweetneſs that *Holland* or *Flanders* have, but with a warmer Sun, and a better Air. The Neighbourhood of the Mountains cauſes a Freſhneſs here, that makes the Soil the moſt deſireable Place to live in that can be ſeen, if the Government were not ſo ſevere, that there is nothing but Poverty all over this rich Country. A Traveller in many Places finds almoſt nothing, and is ſo ill furniſhed, that if he does not buy Proviſions in the great Towns, he will be driven to a very poor Diet, in a Country that ſeems to flow with Milk and Honey: But of this I ſhall ſay more hereafter. The *Lago Maggiore* diſcharges itſelf in the River *Tefino*, which runs with ſuch a Force, that we went thirty Miles in three Hours with a ſingle Skulker, and the Water was no Way ſwelled. From hence we went into the Canal which *Francis I.* cut from this River to the Town of *Milan*, which is about thirty Foot broad, and on both its Banks there are ſuch Contrivances to diſcharge the Water when it riſes to ſuch a Height, that it can never be fuller of Water than it is intended it ſhould be: It lies alſo ſo even, that ſometimes for ſix Miles together one ſees the Line exactly before one. It is thirty Miles long, and is the beſt Advantage that the Town of *Milan* hath for Water-carriage.

I will not entertain you with a long Deſcription of this City, which is one of the nobleſt in the World for an inland Town, that hath no Court, no Commerce either by Sea, or any navigable River, and that is now the Metropolis of a very ſmall Country; for that, which is not mountainous in this State, is not above ſixty Miles ſquare, and yet it produces a Wealth that is ſurprizing. It pays for an Eſtabliſhment of ſeven and forty thouſand Men, and yet there are not ſixteen thouſand Soldiers effectively in it; ſo many are eat up by thoſe in whoſe Hands the Government is lodg'd. But the Extent of the Town, the Nobleneſs of the Buildings, and above all, the ſurprizing Riches of the Churches and Convents, are Signs of great Wealth: The Dome hath Nothing to commend it of Architecture, it being built in the rude *Gothick* Manner; but for the Vaſtneſs and Riches of the Building, it is equal to any in *Italy*, *St. Peter's* itſelf not excepted. It is all Marble, both Pavement

and Walls, both Outſide and In, and on the Top it is all flagged with Marble; and there is the vaſteſt Number of Niches for Statues of Marble, both within and without, that are any where to be ſeen. Juſt under the *Cupola* lies *St. Carlo's* Body, in a great Caſe of Cryſtal, of vaſt Value, but I could not come near it; for we were there on two Holidays, and there was a perpetual Crowd; and the Superſtition of the People for his Body is ſuch, that on a Holiday he runs a Hazard that comes near it without doing ſome Reverence. His Canonization coſt the Town an hundred thouſand Crowns. They pretend they have Miracles too from Cardinal *Frederigo Borromeo*; but they will not ſet about his Canonization, the Price is ſo high. The Plate and other Preſents made to *St. Carlo*, are Things of a prodigious Value; ſome Services for the Altar are all of Gold, ſome ſet with Jewels, others ſo finely wrought, that the Faſhion is thought equal to the Value of the Metal. The Habits, and all the other Ornaments for the Function of his Canonization, are all of an incredible Wealth. He was indeed a Prelate of great Merit; and according to the Anſwer that a Fryer made to *Philip de Comines*, when he asked him, how they they came to qualify one of the worſt of their Princes with the Title of Saint, in an Inſcription which he read, which was, that they gave that Title to all their Benefactors; never Man deſerved of a City this Title ſo juſtly as Cardinal *Borromeo* did; for he laid out a prodigious Wealth in *Milan*, leaving Nothing to his Family, but the Honour of having produced ſo great a Man, which is a real temporal Inheritance to it. For as there have been ſince that Time two Cardinals of that Family, ſo it is eſteemed a *Cafa Santa*, and when-ever it produces an Eccleſiaſtick of any conſiderable Merit, he is ſure, if he lives, to be raiſed to this Archbiſhoprick: For if there were one of the Family capable of it, and that did not carry it, that alone might diſpoſe the State to a Rebellion; and he were a bold Man that would venture on a Competition with one of this Family. He laid out a great deal on the Dome, and conſecrated it, though the Work will not be quite finiſhed for ſome Ages; that being one of the Crafts of the *Italian* Priests, never to finiſh a great Deſign, that, by keeping it in an unfiniſh'd State, they may be always drawing vaſt Sums from the Superſtition of the People. He built the Archbiſhop's Palace, which is very noble, and a Seminary, a College for the *Switzers*, ſeveral Pariſh Churches, and many Convents. In ſhort, the whole Town is full of the Marks of his Wealth. The Riches of the Churches of *Milan* ſtrike one with Amazement, the Building, the Painting, the Altars, and the Plate, and every Thing in the Convents, except their Libraries, are Signs both of great Wealth and Superſtition; but their Libraries not only here, but all *Italy* over, are ſcandalous Things. The Room is often fine, and richly adorn'd, but the Books are few, ill bound, and worſe choſen; and the Ignorance of the Priests, both ſecular and regular, ſuch, that no Man, that hath not had Occaſion to diſcover it, can eaſily believe it. The Convent of *St. Viſtor*, that is without the Town, is by much the richeſt; it is compoſed of Canons regular, called in *Italy*, *The Order of Mount Olive*, or *Olivetans*. That of the *Barnabites* is extreme rich; there is a Pulpit and a Confessional, all inlaid with Agates of different Colours, finely ſpotted Marbles, and *Lapis Lazuli*, that are thought almoſt ineſtimable. *St. Lawrence* has a noble *Cupola*, and a Pulpit of the ſame Form with that of the *Barnabites*. The *Jefuits*, the *Theatines*, the *Dominicans*, and *St. Sebaſtians*, are very rich. The Citadel is too well known to need a Deſcription; it is very regularly built, and is moſt effectual to keep the Town in Order. The Hoſpital is indeed a Royal Building; I was told it had ninety thouſand Crowns Revenue. The old Court is large, and would look noble, if it were not for the new Court that is near it, which is two hundred and fifty Foot ſquare, and there are three Rows of Corridors, or Galleries, all round the Court, one in every Stage, according to the *Italian* Manner, which makes the Lodgings very convenient, and leaves a Gallery before every Door. It is true, theſe take up a great deal

deal of the Building, being eight or ten Foot broad ; but then here is an open Space, that is extreme cool on that Side where the Sun doth not lie ; for it is all open to the Air, the Wall being only supported by Pillars, at the Distance of fifteen or twenty Foot one from another. In this Hospital there are not only Galleries full of Beds on both Sides, as is common in all Hospitals ; but there are also a great many Chambers, in which Persons, who were formerly of a distinguished Condition, are treated with a particular Care. There is an Out-house, which is called the *Lazaretto*, which belongs to this Hospital ; it is an exact Quarter of a Mile square, and there are three hundred and sixty Rooms in it, and a Gallery runs all along before the Chambers ; so that as the Service is convenient, the Sick have a cover'd Walk before their Doors. In the Middle of this vast Square there is an octangular Chapel, so contrived, that the Sick, from all their Beds, may see the Elevation of the Hostie, and adore it. This House is for the Plague, or for infectious Fevers ; and the Sick, that want a freer Air, are also removed hither.

I need not say any Thing of the curious Works in Crystal that are seen in *Milan* ; the greatest Quantities, that are in *Europe*, are found in the *Alps*, and wrought here. It is certain, the *Alps* have much Wealth shut up in their Rocks, if the Inhabitants knew how to search for it : But I heard of no Mines that were wrought, except Iron Mines ; yet, by the Colourings that in many Places the Fountains make as they run along the Rocks, one sees Cause to believe that there are Minerals shut up in them. Gold hath been often found in the River *Arve* that runs by *Geneva*.

The last Curiosity that I shall mention of the Town of *Milan*, is the Cabinet of the *Chanoine Settala*, which is now in his Brother's Hands, where there are a great many very valuable Things both of Art and Nature. There is a Lump of Ore, in which there is both Gold and Silver, and Emeralds, and Diamonds which was brought from *Peru*. There are many curious Motions, where, by an unseen Spring, a Ball, after it hath roll'd down through many winding Descents, is thrown up, and so it seems to be a perpetual Motion : This is done in several Forms, and it is well enough disguised to deceive the Vulgar. Many Motions of little Animals, that run about by Springs, are also very pretty. There is a Loadstone of a vast Force, that carries a great Chain. There is also a monstrous Child, that was lately born in the Hospital, which is preserved in Spirit of Wine : It is double below, hath one Breast and Neck, two Pair of Ears, a vast Head, and but one Face. As for the Buildings in *Milan*, they are large and substantial, but they have not much regular or beautiful Architecture. The Governor's Palace hath some noble Apartments in it. The chief Palace was built by a Banker. There is one Inconvenience in *Milan*, which destroys all the Pleasure that one can find in it : They have no Glass Windows, so that one is either exposed to the Air, or shut up in a Dungeon ; and this is so universal, that there is not one House in ten that hath Glass in their Windows. The same Defect is in *Florence*, besides all the small Towns of *Italy*, which is an Effect of their Poverty ; for what by the Oppression of the Government, what by the squeezing Oppression of their Priests, who drain all the rest of their Wealth, that is not eat up by the Prince, to enrich their Churches and Convents, the People here are reduced to a Poverty that cannot be easily believed by one that sees the Wealth that is in their Churches ; and this is going on so constantly in *Milan*, that it is scarce accountable from whence so vast a Treasure can be found ; but Purgatory is a Fund not easily exhausted. The Wealth of the *Milanese* consists chiefly in their Silks ; and that Trade falls so mightily by the vast Importations that the *East-India* Companies bring in to *Europe*, that all *Italy* feels this very sensibly, and languishes extremely, by the great Fall that is in the Silk Trade. There is a great Magnificence in *Milan* ; the Nobility affect to make a noble Appearance in their Cloaths, their Coaches, and their Attendants ; and the Women go

Abroad with more Freedom here, than in any Town of *Italy*.

20. Twenty Miles from *Milan* we pass'd through *Lodi*, a miserable Garrison ; but indeed the Frontiers, both of the *Spaniards* and the *Venetians*, as well as those of other Princes of *Italy*, shew, that they are not very apprehensive one of another. And when one passes through those Places, which are represented in History as of great Strength, capable of resisting a long Siege, he must acknowledge, that the Sight of them brings the Idea that he had conceived a great many Degrees lower. For *Lombardy*, which was so long the Seat of War, could not resist against a good Army now, so many Days as it did then Years. The Garrison of *Crema*, which is the first of the *Venetian* Territory, is no better than *Lodi*, only the People in the *Venetian* Dominions live happier than under the *Spaniard*.

The Senate sends *Podestas*, like the Bailiffs of the *Switzers*, who order the Justice and the Civil Government of the Jurisdiction assigned them. There is also a Captain-General, who hath the Military Authority in his Hands ; and these are Checks upon each other, as the *Bashaws* and the *Cadis* are among the *Turks*. But here in *Crema* the Town is so small, that both these are in one Person. We were there in the Time of the Fair ; Linnen Cloth and Cheese (which though it goes by the Name of the *Parmesan*, is made chiefly in *Lodi*) are the main Commodities. The Magnificence of the *Podesta* appeared very extraordinary ; for he went through the Fair with a great Train of Coaches, all in his own Livery ; and the two Coaches, in which himself and his Lady rode, were both extraordinary rich : His was a huge Bed-coach, all the Outside black Velvet, and a mighty rich gold Fringe, lined with black Damask, flowered with Gold. From *Crema* it is thirty Miles to *Brescia*, which is a great Town, and full of Trade and Wealth. Here they make the best Barrels for Pistols and Muskets in *Italy*. There are great Iron-works near it ; but the War with the *Turk* had occasioned an Order, that none might be sold without a Permission from *Venice*. They are building a noble Dome at *Brescia*. I was shew'd a Nunnery there, which is now under a great Disgrace. Some Years ago a new Bishop coming thither, began with the Visitation of that Nunnery : He discovered two Vaults ; by one Men came ordinarily into it, and by another the Nuns that were big went and lay-in. When he was examining the Nuns severely concerning those Vaults, some of them told him, that his own Priests did much worse. He shut up the Nuns, so that those who are professed live still there, but none come to take the Veil ; and by this Means the House will soon come to an End. The Citadel lies over the Town on a Rock, and commands it absolutely. Both here and in *Crema* the Towns have begun a Compliment, within these last ten or twelve Years, to their *Podestas*, which is a Matter of great Ornament to their Palaces, but will grow to a vast Charge ; for they erect Statues to their *Podestas* ; and this being once begun, must be carried on, otherwise those to whom the like Honour is not done, will resent it as an high Affront ; and the Revenges of the noble *Venetians* are dreadful Things, especially to their Subjects. This Name of *Podesta* is very ancient ; for in the *Roman* Times, the chief Magistrates of the lesser Towns were called the *Potestas*, as appears by that of *Juvenal*.

— *Fidenarum Gabiorumve esse Potestas.*

From *Brescia*, the Beauty of *Lombardy* is a little interrupted ; for as all the Way from *Milan* to *Brescia* is a Garden, so here on the one Side we come under the Mountains, and we pass by the Lake of *Guarda*, which is forty Miles long, and where broadest, twenty Miles over. The Miles indeed all *Lombardy* over are extreme short ; for I walk'd often four or five Miles by Way of Exercise, and I found a thousand Paces made their common Mile ; but in *Tuscany*, and the Kingdom of *Naples*, the Mile is fifteen hundred Paces. We pass'd through a great Heath for seven or eight Miles on this Side *Verona*, which begins to be cultivated. *Verona* is

is a vast Town, and much of it well built. There are many rich Churches in it ; but there is so little Trade stirring, and so little Money going, that it is not easy to change a Pistole without taking their Coin of base Alloy, which won't pass out of the *Veronese* : For this seems a strange Maxim of the *Venetians*, to suffer those small States to retain still a Coin peculiar to them, which is highly inconvenient for Commerce. The known Antiquity of *Verona* is the Amphitheatre, one of the least of all that the *Romans* built, but the best preserved ; for tho' most of the great Stones of the Outside are pick'd out, yet the great sloping Vault, on which the Rows of the Seats are laid, is entire : The Rows of the Seats are also entire ; they are four and forty Rows ; every Row is a Foot and a half high, and as much in Breadth, so that a Man sits conveniently in them under the Feet of those of the higher Row ; and allowing every Man a Foot and a half ; the whole Amphitheatre can hold twenty three thousand Persons. In the Vaults, under the Rows of Seats, were the Stalls of the Beasts that were presented to entertain the Company. The Thickness of the Building, from the outward Wall to the lowest Row of Seats, is ninety Foot : But this noble Remnant of Antiquity has been so often and so copiously described, that I will say no more of it. The next Thing of Value is the famous *Museum Calceolarium*, now in the Hands of Count *Mascardo*, where there is a whole Apartment of Rooms all furnished with Antiquities and Rarities. There are some old Inscriptions made by two Towns in *Africa* to the Honour of *M. Crassus* ; there is a great Collection of Medals and Medaillons, and of the *Roman* Weights, with their Instruments for their Sacrifices ; there are many Curiosities of Nature, and a great Collection of Pictures, of which many are of *Paulo Veronese's* Hand. There is a noble Garden in *Verona*, that rises up in Terrasses the whole Height of a Hill, in which there are many ancient Inscriptions which belong to Count *Giusto*. As we go from *Verona* to *Vincenza*, which is thirty Miles, we return to the Beauty of *Lombardy* ; for there is all the Way a Succession of Gardens : The Ground is better cultivated than I saw it in any other Part of *Italy*, but the Wine is not good ; for at the Roots of all their Trees they plant a Vine, which grows up winding about the Tree to which it joins ; but the Soil is too fat to produce a rich Wine, for that requires a dry Ground. There is near the Lake of *Guarda*, a very extraordinary Wine, which they call *Vino Santo*, which drinks like the best Sort of Canary ; it is not made till *Christmas*, and from thence it derives the Name of *Holy Wine* ; and it is not to be drunk till *Midsummer*, for it is so long before it is quite wrought clear ; but I have not marked how long it may be kept : We had it there for a Groat an *English* Quart ; I wonder'd that they did not trade with it. All the Cattle of *Italy* are grey or white, and all their Hogs are black, except in the *Bolognese*, and there they are red. I will not enquire into the Reasons of these Things ; it is certain Hog's Flesh in *Italy* is much better than it is in *France* and *England* ; whether the Truffles, on which they feed much in Winter, occasion this or no, I know not ; the Husks of the pressed Grapes are also a mighty Nourishment to them ; but Cattle of that greyish Colour are certainly weaker : The Carriage of *Italy* is commonly performed by them, and this is very hard Work in *Lombardy*, when it hath rained ever so little ; for the Ground being level, and there being no raised Highways, the Carts go deep, and are very hardly drawn.

Vincenza hath still more of its ancient Liberty than any of these Towns, as *Padua* hath less ; for it submitted itself to the *Venetians*, whereas the other disputed long, and brought it often very low. One sees the Marks of Liberty in *Vincenza*, in the Riches of their Palaces and Churches, of which many are lately built : They have a modern Theatre made in Imitation of the ancient *Romans*. *Lombardy* differs in Climate from the Southern Part of *Italy*, for here they keep their Oranges and Citrons in great Boxes, as we do in *England*, that so they may be lodged in Winter, and defended from

Breezes that blow so sharp from the *Alps*, that they would kill those delicate Plants ; whereas in *Tuscany* they grow as other Trees in their Gardens ; and in the Kingdom of *Naples* they grow wild without any Care or Cultivation. We were at *Vincenza* upon a Holiday, and there I saw a Preparation for a Procession that was to be in the Afternoon : I did not wonder at what a *French* Papist said to me, that he could hardly bear the Religion of *Italy*, the Idolatry in it was so gross. The Statue of the Virgin was of Wood, so finely painted, that I thought the Head was Wax ; it was richly clad, and had a Crown on its Head, and was set full of Flowers. How they did when it was carried about, I do not know ; but in the Morning all People ran to it, and said their Prayers to it, and kissed the Ground before it, with all the Appearances of Devotion.

From *Vincenza* it is eighteen Miles to *Padua*, all a Garden : Here one sees the Decays of a vast City, which was one of the biggest of all *Italy* : The Compass is the same that it was, but there is much uninhabited Ground in it, and Houses there go almost for Nothing. The Air is extreme good ; and there is so great a Plenty of all Things, except Money, that a very little of that goes a great Way. The University here, though so much supported by the *Venetians*, that they pay fifty Professors, yet sinks extremely : There are no Men of any great Fame in it, and the Quarrels among the Students have driven away most of the Strangers that used to come and study here ; for it is not safe to stir abroad after Sun-set. The Number of the Palaces is incredible ; and though the Nobility of *Padua* are almost quite ruined, yet the Beauty of their ancient Palaces shews what they once were. The *Venetians* have been willing to let the ancient Quarrels, that were in all those conquer'd Cities, continue still among them ; for while one kills another, and the Children of the other take their Revenges, both come under the Bando by this Means, and the Confiscation goes to the Senate. At some Times of Grace, when the Senate wants Money, and offers a Pardon to all that will compound for it, the Numbers of the guilty Persons are incredible. In *Vincenza*, and the Country that belongs to it, I was assured by Monsieur *Patin*, that learned Antiquary, that hath been many Years a Professor in *Padua*, that there were five and thirty thousand pardoned at the last Grace ; this I could hardly believe, but he bid me write it upon his Word. The Nobility of *Padua*, and of the other Towns, seem not to see what a Profit their Quarrels bring to the *Venetians*, and how they eat out their Families ; for one Family in the same Man's Time, who was alive while I was there, was reduced, from fourteen thousand Ducats Revenue, to less than three thousand, by its falling at several Times under the Bando. But their Jealousies and Revenges are pursued with so much Vigour, that, when these are in their Way, all other Things are forgot. There is here the Remnant of the Amphitheatre, though nothing but the outward Wall. There is here also, as well as in *Milan*, an inward Town, call'd the City, and an outward without that, call'd the Burgo ; but though there is a Ditch about the City, the great Ditch and Wall goeth about all, and *Padua* is eight Miles in Compass ; it lies almost round : The publick Hall is the noblest in *Italy* : The Dome is an ancient but mean Building : The Church of *St. Anthony*, but especially the holy Chapel in it, where the Saint lies, is one of the best Pieces of modern Sculpture ; for round the Chapel the chief Miracles of that Saint are represented in *mezzo relievo*, in a very surprizing Manner. The Devotion that is paid to this Saint all *Lombardy* over is amazing ; he is called, by Way of Excellence, *Il Santo*, and the Beggars generally ask Alms for his Sake. But among the little Vows that hang without the holy Chapel, there is one that is the highest Pitch of Blasphemy that can be imagined, *Exaudit*, speaking of the Saint, *quos non audit & ipse Deus* ; i. e. *He hears those whom God himself doth not hear*. *St. Justina* is a Church so well ordered within, the Architecture is so beautiful, it is so well enlightned, and the Cupolas are so advantageously placed, that, if

the Outside answer'd the Inside, it would be one of the best Churches of *Italy*; but the Building is of Brick, and it hath no Frontispiece: There are many new Altars, made as fine as they are idolatrous, all full of Statues of Marble. This Abbey hath an hundred thousand Ducats Revenue; and so by its Wealth one may conclude that it belong'd to the *Benedictine* Order. Cardinal *Barberigo* is Bishop here; he seems to set *St. Carlo* before him as his Pattern; he hath founded a noble Seminary for secular Priests; he lives in a constant Discipline himself, and endeavours to reform his Clergy all he can; but he is now on ill Terms with his Canons, who are all noble *Venetians*, and so allow themselves great Liberties, of which they will not willingly be abridg'd. He is charitable to a high Degree, and is, in all Respects, a very extraordinary Man.

In the *Venetian* Territory their Subjects live easy and happy, if they could be so wise as to give over their Quarrels; but though the Taxes are not high, they oppress their Tenants so severely, that the Peasants live miserably. Yet on all Hands round about them, the Oppressions being more intolerable, they know not where to fly for Ease; whereas on the contrary, the Miseries under which their Neighbours groan, chiefly those of the Ecclesiastical State, send in Numbers among them, so that they are well stock'd with People. But the *Venetians* are so jealous of their Subjects understanding military Matters, which may dispose them to revolt, that they never make any Levies among them for their Wars. This Jealousy is the true Ground of that Maxim, though another is pretended that is more plausible, which is, their Care of their own People, whom they study to preserve; and therefore they hire Strangers, rather than expose their Subjects. It is certain, a Revolt here were no hard Matter, for the Garrisons and Fortifications are so slight, that those great Towns could easily shake off their Yoke, if it were not for the Factions that reign among them, by which one Party would choose rather to expose the other to the Rigour of the Inquisitors, than concur with them in asserting their Liberty: And the Inquisitors, in such Cases, proceed so secretly, and so effectually, that none dares trust another with a Secret of such Consequence; and the oppressed Nobility of those States retain still so much of their old and un-subdued Insolence, and treat such as are under them so cruelly, that the *Venetians* are as secure, as if they had many strong Citadels and numerous Garrisons among them. From *Padua* down to *Venice*, all along the River *Brent*, there are many Palaces of the noble *Venetians* on both Sides of the River, built with so great a Variety of Architecture, that there is not one like another. There is also the like Diversity in the laying out of their Gardens; and here they retire during the hot Months, and some allow themselves all the Excesses of dissolute Liberty that can possibly be imagined. From *Lizza Fucina*, which is at the Mouth of the *Brent*, we pass for five or six Miles on the *Lagunes*, or Shallows, to *Venice*. These Shallows sink of late so much, that the preserving *Venice* still an Island is like to become as great a Charge to the *Venetians*, as the keeping out the Sea is to the *Dutch*; for they use all possible Industry to cleanse the Channels of the *Lagunes*, and to keep them full of Water: And yet many think, that the Water hath failed so much in this last Age, that if it continues to abate at the same Rate, within an Age or two more, *Venice* may become a Part of the *Terra Firma*. It is certainly the most surprizing Sight in the whole World to see so vast a City situated in the Sea, and such a Number of Islands so united together by Bridges, brought to such a regular Figure, the Pilotty supplying the Want of Earth to build on, and all so nobly built, which is, of all the Things that one can see, the most amazing. And though this Republick is much sunk from what it was, both by the great Losses suffered in their Wars with the *Turks*, and by the great Decay of Trade, yet there is an incredible Wealth, and a vast Plenty of all Things in this Place. I will not offer to describe either the Church or the Pa-

lace of *St. Mark*, which are too well known. The Painting of the Walls, and the Roofs of the Halls and publick Rooms in the Palace, are of vast Value. Here I saw that Story of Pope *Alexander III.* treading on the Neck of the Emperor *Frederick Barbarossa*. The Nobleness of the Stair-cases, the Riches of the Halls, and the Beauty of the whole Building, are much prejudiced by the Beastliness of those that walk there, and leave their Marks behind them, as if this were rather a common House of Office, than so noble a Palace.

I went to the Convent of the *Servi*, but I found Father *Paul* was not in such Consideration there as he is elsewhere. I asked for his Tomb, but they made no Account of him, and seemed not to know where it was. It is true, the Person to whom I was recommended was not in *Venice*, so perhaps they refined too much in this Matter. I had great Discourse with some at *Venice* concerning the Memorials out of which Father *Paul* drew his History, which are, no doubt, preserved with great Care in their Archives; and since the Transactions of the Council of *Trent*, as they are of Importance, so they are become now much controverted, by the different Relations that Father *Paul* and Cardinal *Pallavicini* have given the World, the only Way to put an End to Disputes, in Matter of Fact, is to print the Originals themselves. A Person of great Credit at *Venice* promised me to do his utmost to get that Proposition set on Foot, though the Exactness that the Government hath always affected, as to the Matter of their Archives, is held so sacred, that this made him apprehend they would not give Way to any such Search. The Affinity of the Matter brings into my Mind a Conversation I had with a Person of great Eminence at *Venice*, that had been long at *Constantinople*, and was learned far beyond what is to be met with in *Italy*. He was at *Constantinople*, when the Enquiry into the Doctrine of the *Greek Church* was set on Foot, occasioned by the famous Dispute between Mr. *Arnaud* and Mr. *Claude*: And being a zealous *Roman Catholick*, was dealt with to assist in that Business; but as a Man of great Honour and Sincerity, he excused himself, and said he could not meddle in it. He hath a very bad Opinion of the *Greeks*, and told me, that none of their Priests were more inveterate to the Church of *Rome*, than those that were bred up at *Rome*; for they, to free themselves of the Prejudices that their Countrymen conceive against them, by reason of their Education, affect to shew an Opposition to the *Latin Church* beyond any other *Greeks*. He told me, that he knew the Ignorance of the *Greeks* was such, that as they did not know the Doctrines of their own Church, so a very little Money, or Hope of Protection from any of the Ambassadors that came from the West, would prevail with them to sign any Thing desired of them. He added one Thing, that though he firmly believed Transubstantiation himself, he did not think they believed it, let them say what they pleased. He took his Notions of the Doctrine of their Church, rather from what they did, than from what they said; for their Rites, not being changed for a great many Ages, were the true Indications of Doctrines received among them; whereas they were ignorant of Tradition, and apt to prevaricate when they saw Advantages or Protection set before them. Therefore he concluded, that since they did not adore after the Consecration, that was an evident Sign they did not believe the corporal Presence, and was well able to balance all their Subscriptions. He added, he was often scandalized to see them open the Bag in which the Sacrament was, and shew it with no Sort of Respect, more than when they shewed any Manuscript; and he looked on Adoration as such a necessary Consequent of Transubstantiation, that he could not imagine that the latter was received in a Church that did not practise the former. To this I will add what an eminent Catholick at *Paris* told me, that the Originals of those Attestations were in too exact and too correct a Style to have been formed in *Greece*. He assured me they were penn'd at *Paris*, by one that was a Master of the Puri-

ry of the *Greek* Tongue. I do not name these Persons, because they are alive, and this might be a Prejudice to them.

One of the Ornaments of *Venice*, was the young Woman that spake five Tongues well, of which the *Latin* and *Greek* were two. She passed Doctor of Physick at *Padua*, according to the Forms ; but, which was beyond all, she was a Person of such extraordinary Virtue and Piety, that she is spoke of as a Saint. She died some Months before I came ; she was of the noble Family of the *Cornaros*, though not of the three chief Branches, which are *St. Maurice*, *St. Paul*, and *Calle*, who are descended from the three Brothers of the renowned Queen of *Cyprus*, but the Distinction of her Family was *Piscopia*. Her Merit made all People unwilling to remember the Blemish of her Descent on the one Side ; for though the *Cornaros* reckon themselves a Rank of Nobility beyond all the other Families of *Venice*, yet her Father having entertained a Gondalier's Daughter so long, that he had some Children by her, at last, for their Sakes, married the Mother, and paid a considerable Fine to save the Forfeiture of Nobility, which his Children must have undergone by the Meanness of the Mother's Birth. The *Cornaros* carry it so high, that many of that Family have made themselves Nuns, because they thought their own Name was so noble, that they could not induce themselves to change it for another : And when lately one of that Family married the Heir of the *Sagredos*, which is also one of the ancientest Families, and extreme rich, and she had scarce any Portion at all, (for the *Cornaros* are now very low) some of their Friends came to wish them Joy ; but they rejected the Compliment, and bid them go and wish the *Sagredos* Joy, since they thought the Advantage was on their Side.

There are of the truly ancient noble Families of *Venice* four and twenty yet remaining ; and among these, there are twelve that are thought superior to the rest in Rank. Since the first Formation of their Senate, they have created many Senators. In their Wars with *Genoa*, they conferred that Honour on thirty Families ; several of their Generals have had it given them as a Reward of their Service : They have also offered it to some Royal Families ; for both the Families of *Valois* and *Bourbon* were Nobles of *Venice* ; and *Henry III.* when he came through *Venice* and *Poland*, to take Possession of the Crown of *France*, went, sat among them, and drew his Ballot as a noble *Venetian* : Several Popes have procured this Honour for their Nephews ; only the *Barberini's* would have the *Venetians* offer it to them without asking it, and the *Venetians* would not give it without they asked it, and so it stuck. But during the War of *Candia*, Cardinal *Francis Barberini* gave twelve thousand Crowns a Year towards the War ; and the Temper found for making them noble *Venetians* was, that the Queen-mother of *France* moved the Senate to grant it. In all the Creations of Senators, before the last War of *Candia*, they were free ; and the Considerations were either great Services, or the Dignity of those on whom they bestowed this Honour : Those new Families are divided into those called *Ducal Families*, and *New Families* : The Reason of the former Designation is not rightly understood ; all those Families, say some, that are called *Ducal*, have had the Dukedom in their House ; but as all the old Families have had the same Honour, though they carry not that Title, so some of the new Families have also had it, yet are not called *Ducal*. Others say, that those Families that have had Branches made Dukes without their being first Procurators of *St. Mark*, or that have been chosen to that Honour, without their pretending to it, are called *Ducal*. But the true Account of this is, that from the Year 1450, to the Year 1620, for an hundred and seventy Years, there was a Combination made among those new Families to preserve the Dukedom still among them ; for the old Families carrying it high, and excluding the new from the chief Honours, nineteen of the new Families entered into mutual Engagements to exclude the ancient Nobility. It is true, they made the Dukedom some-

times fall on new Families that were not of this Association ; but this was indifferent to them, as long as the ancient Families were shut out, and it appeared that they bore the chief Sway in the Election. This Combination was a Thing known to the very People, tho' the Inquisitors did all they could to break it, or at least to hide it ; so that I never met with it in any Author. But this failed in 1620, when *Memmio* was chosen Duke, and was descended of the ancient Nobility ; which was so great a Mortification to the *Casa Ducale*, that one of them (*Veniero*) hang'd himself through the Rage to which that drove him ; but his Man came in Time before he was dead, and cut him down, and he lived long after in a better Mind. Since that Time one of the *Bembos*, two of the *Cornaros*, one of the *Contarinis*, and the present Prince of the *Justiniani*, the first of that Family that hath had that Honour, have been Dukes, who are all of ancient Families ; so that this Faction is so entirely buried, that it is not generally known (even in *Venice* itself) that it was ever amongst them. And thus Time and Accidents bring about happy Events, which no Care nor Industry could produce ; for that, which all the Endeavours of the Inquisitors could not compass, came about of itself. It is true, the Factions in *Venice*, though violent enough in those who manage them, are not derived by them as an Inheritance to their Posterity, as formerly among the *Florentines* ; who though they value themselves as much above the *Venetians*, whom they despise as a dull Race of People, yet shewed how little they understood to conduct their State ; since by domestick Heats they lost their Liberty, which the *Venetians* have had the Wisdom to preserve. The Faction of the *Casa Ducale* was perhaps willing to let the Matter fall, for they lost more than they got by it ; since the ancient Families in Revenge set themselves against them, and excluded them from all the advantageous Employments of the State. For they being only united in that Point relating to the Dukedom, the ancient Families let them carry it ; but in other Competitions they set up such Candidates against the Pretenders of the Ducal Families, as were more esteem'd than they, so that they shut them out of all the best Offices of the Republick. Such a Faction as this, if it had been still kept up, might have proved fatal to their Liberty.

It is indeed a Wonder to see the Dignity of the Duke so much courted ; for he is a Prisoner of State, tied to such Rules, so severely restrained, and shut up as it were in an Apartment of the Palace of *St. Mark*, that it is not strange to see the greatest Families, in particular, the *Cornaros*, decline it. All the Family, how numerous soever, must retire out of the Senate, when a Duke is chosen out of it ; only one, that is next a-kin sits still, but without a Vote : And the only real Privilege that the Duke hath is, that he can, without communicating with the *Savi*, propose Matters either to the Council of Ten, to the Senate, or Great Council ; whereas all other Propositions must be first offered to the *Savi*, and examined by them, who have a Sort of tribunitian Power, to reject what they dislike ; and though they cannot hinder the Duke's making a Proposal, yet they can mortify him when he hath made it ; they can hinder it from being voted ; and, after voted, they can suspend the Execution till it is examined over again : And a Duke that is of an active Spirit must resolve to endure these Mortifications ; for it is certain that the *Savii* do sometimes affect to shew their Authority, and exercise a Sort of Tyranny in rejecting of Propositions, when they intend to humble those who make them : Yet the greatest Part of the best Families court the Dukedom extremely. When *Sagredo* was upon the Point of being chosen, there was so violent an Outcry against it, because of the Disgrace they thought would arise, if they had a Prince whose Nose had miscarried in some Disorders, the Senate complied so far with the People, though the Inquisitors took Care to hang or drown many of the Chief of the Mutineers, as to let the Design for *Sagredo* fall ; upon which he retired to a House he had in the *Terra Firma*, and never appeared more at *Venice* : During which Retirement he wrote two Books ;

Books; the one, *Memoire Ottomaniche*, which is printed, and he is accounted the best of all their modern Authors; the other was, *Memoirs of the Government and History of Venice*, which hath never been printed; and some say it is too sincere and too particular, so that it is thought it will be reserved among their Archives. It hath been a Sort of Maxim for some Time, not to choose a married Man to be Duke; for the Coronation of a Dutcheß runs high, and hath cost above one hundred thousand Ducats.

Some ancient Families have affected the Title of Prince, and have called their Branches Princes of the Blood; and the *Cornaros* have done this more than others, yet some, on the Account of Principalities that their Ancestors had in the Islands of the *Archipelago*, have also affected those vain Titles: But the Inquisitors have long since obliged them to lay aside all those high Stiles; and such of them, as boast too much, find the Dislike which that brings on them very sensibly; for when they pretend to any great Employments, they are always excluded. When an Election of Ambassadors was proposed, or to any of the chief Offices, it was wont to be in Terms, that the Council might choose one of its *principal* Members for such an Employment. But because this look'd like a Distinction among the Nobility, they changed it five and twenty Years ago; and instead of Principal, they use now the Term Honourable, which comprehends the whole Body of their Nobility, without any Distinction. It is at *Venice*, in the Church, as well as in the State, that the Head of the Body hath a great Title and Honours; whereas this is a meer Pageantry, and under these big Words there is lodged only a Shadow of Authority; for their Bishop has the sounding Title of Patriarch, as well as the Duke is called Prince and His Serenity, and hath his Name stamped upon their Coin; so the Patriarch hath really no Authority, for not only *St. Mark's Church* is entirely exempt from his Jurisdiction, and immediately subject to the Duke, but his Authority is in all Things so subject to the Senate, and so regulated, that he hath no more Power than they please to allow him: So that the Senate is as really the supreme Governor over all Persons and in all Causes, as the Kings of *England* in their own Dominions since the Reformation. But besides all this, the Clergy of *Venice* have a very extraordinary Sort of Exemption, and are a Body like a Presbytery independent of the Bishop. The Curates are chosen by the Inhabitants of every Parish; and no noble *Venetian* is suffer'd to pretend to any Curacy; for they think it below that Dignity, for one of their Body to engage in a Competition with one of a lower Order, and to run the Hazard of being rejected. I was told the Manner of those Elections was the most scandalous Thing possible; for the several Candidates appear on the Day of Election, and set out their own Merits, and defame the other Pretenders in the most scurrilous Manner imaginable; the Secrets of all their Lives are published in most reproachful Terms; and nothing is so abject, that is not put in Practice on those Occasions. There is a Sort of an Association among the Curates for judging of their common Concerns; and some of the Laity of the several Parishes assist; so that here is a real Presbytery. The great Libertinage that is practised by most Sorts of People at *Venice*, extends itself to the Clergy to such a Degree, that though Ignorance and Vice seem the only indelible Characters that they carry over all *Italy*, yet those appear here in a more conspicuous Manner than elsewhere, and upon these popular Elections all comes out.

The Nuns of *Venice* have been under Scandal for a great while; there are some Nunneries that are as famous for their Strictness, as others are for the Liberties they take; chiefly those of *St. Zachary* and *St. Lawrence*, where none but noble *Venetians* are admitted, and where it is not so much as pretended they retired for Devotion, but merely that they might not be too great a Charge to their Family: They are not veiled; their Necks and Breasts are bare, and they receive Company; but that which I saw was in a publick Room, in

which there were Grills for several Parlours, so that the Conversation is very confused; for there being a different Company at every Grill, and the *Italians* speaking generally loud, the Noise of so many Talkers is very disagreeable. The Nuns talk very ungracefully, and allow themselves a Liberty in rallying, that in other Places none could bear. About four Years ago the Patriarch intended to reform those Houses; but the Nuns of *St. Laurence* told him plainly they were noble *Venetians*, who chose that Way of Life as more convenient, but they would not subject themselves to his Regulations; yet he came and would have shut up their House, upon this they went to set Fire to it; upon which the Senate interposed, and ordered him to desist. There is no Christian State in the World that hath expressed such a Jealousy of Churchmen's getting into publick Councils as the *Venetians*; for as a noble *Venetian* that goes into Orders loses his Right of going to vote in the Great Council, so when any of them are promoted to be Cardinals, the whole Family must, during their Lives, withdraw from the Council, and are also incapable of all Employments; and by a Clause which they added when they received the Inquisition, which seemed of no great Consequence, they have made it become a Court absolutely subject to them; for it being provided, that the Inquisitors should do Nothing but in the Presence of such as should be deputed by the Senate to be the Witnesses of their Proceedings, those Deputies will not come but when they think fit, or stay longer than they are pleased with their Proceedings; so that either their Absence, or their Withdrawing, dissolves the Court; for a Citation cannot be made, a Witness examined, or the least Point of Form carried on, if these Deputies are not present. And thus, though there is a Court of Inquisition at *Venice*, yet scarce any Person is brought into Trouble by it; and there are many Protestants that live there without any Disturbance; and though there is a Congregation that have their Exercises of Religion very regularly, yet the Senate gives them no Trouble. It is true, the Hostie's not being carried about in Procession, but privately by the Priest to the Sick, makes that uneasy Discrimination of Protestant and Papist not offer itself here, as in other Places; for the Narrowness of the Streets, and the Channels through which one must go, makes this impracticable in *Venice*, as it is elsewhere; and from *Venice* this Rule is carried over their whole Territory, though the like Reason doth not hold in the *Terra Firma*.

The *Venetians* are generally ignorant of Matters of Religion to a Scandal; and they are as unconcerned in them, as they are Strangers to them: So all that vast Pomp in their Ceremonies, and Wealth in their Churches, is affected as a Point of Magnificence, or a Matter of Emulation among Families, rather than Superstition; for the Atheism that is received by many here is the dullest and coarsest Thing that can be imagined. The young Nobility are so generally corrupted, and so given up to supine Ignorance, that a Man cannot easily imagine to what a Height this is grown; and for Courage, there is scarce so much as the Ambition of being thought brave among the greater Part of them. It seem'd to me strange to see the *Broglio* so full of graceful young Senators and Nobles, when there was a War on foot with the *Turks*; but instead of being heated in Point of Honour to hazard their Lives, they think it an extravagant Piece of Folly for them to go and expose them, when a little Money will hire Strangers that do it on such easy Terms: And thus their Arms are in the Hands of Strangers, while they stay managing their Intrigues in the *Broglio*, and dissolving their Spirits among their Courtizans: And their Service is of late Years so much sunk, that it is amazing to see so many come to a Service so decried, where there is little Care had of the Soldiers, and so little Regard paid the Officers: The Arrears are so slowly paid, and the Rewards are so scantily distributed, that, if they do not change their Maxims, they may come to feel this very sensibly: For their Subjects are not acquainted with War, their Nobility have no Ambition that Way, and Strangers are extremely disgusted. It is chiefly to the

Conjuncture

Conjuncture of Affairs that they owe their Safety ; to the Feebleness of all their Neighbours, the *Turk*, the Emperor, the King of *Spain*, and the Pope, preserves them from the Apprehension of an Invasion, and the Quarrels of their Subjects save them from the Fears of a Revolt ; but a formidable Neighbour would put them hard to it. One great Occasion of the Degeneracy of the *Italians*, and particularly of the *Venetian* Nobility, is a Maxim, that for the Preservation of their Families it is fit that only one should marry ; to which I will not add, that it is generally believed, that the Wife is in common to the whole Family. By this Means the younger Brothers that have Appointments for Life, and no Families, are not stirr'd up by Ambition to signalize themselves, and so give Way to all the Laziness of Luxury, and are quite enervated by it ; whereas the best Services, done in other States, flow from the Necessities of younger Brothers, or their Families, whose Blood qualifies them to pretend, as their Pride and Necessities push them on, to acquire first a Reputation, and then a Fortune. But all this is a Mystery to the *Venetians*, who apprehend so much from the active Spirits of a necessitous Nobility, that, to lay those asleep, they encourage them in all Things that may depress their Minds ; and Youth naturally hates Letters as much as it loves Pleasure, when so far from being restrained, that it is rather pushed on to all the Licentiousness of unlimited Disorders.

Yet I must add one Thing, that though *Venice* is the Place in the whole World, where Pleasure is most studied, and where Youth have the greatest Wealth, and most Leisure to pursue it ; yet it is the Place that I ever saw, where innocent Pleasure is the least understood. As for the Pleasures of Friendship, or Marriage, they are Strangers to them ; for the horrible Distrust, in which they all live, makes it very rare to find a Friend in *Italy*, but most of all in *Venice* ; and though we have been told of celebrated Friendships there, yet these are now no more. As for their Wives, they are bred in such Ignorance, and converse so little, that they know nothing but the Superstition on Holidays, in which they stay in the Churches as long as they can, to prolong the little Liberty they have of going Abroad, as Children do their Hours of Play. They are not employ'd in domestick Affairs, and generally understand no Sort of Work ; so that I was told, they were the insipidest Creatures imaginable. They are, perhaps, as vicious as in other Places, but it is among them down-right Lewdness ; for they are not drawn in by Amour ; but in them the first Step, without any Preparative, is downright Beastliness. And an *Italian*, that knew the World well, said a very lively Thing to me, that their Jealousy made them restrain their Daughters and their Wives so much, that they could have none of those domestick Entertainments of Conversation and Friendship, that the *French* or *English* have at Home. It is true, those he said hazard a little the Honour of their Families by that Liberty ; but the *Italians*, by their excessive Caution, deprived themselves of the true Delights of a married State ; and notwithstanding all their uneasy Jealousy, they were still in Danger of a contraband Nobility. Therefore he thought they would do better to hazard a little, when it would produce a certain Satisfaction, than to watch so anxiously, and thereby have an insipid Companion, instead of a lively Friend, though she might perhaps have some ill Moments. As for their Houses, they have nothing convenient at *Venice* ; the Architecture is almost all the same, one Stair-case, a Hall that runs along the Body of the House, and Chambers on both Hands ; but no Apartments, no Closets, or Back-stairs : So that in Houses that are of an excessive Wealth, they have yet no Convenience. Their Bedsteads are of Iron, because of the Vermin their Moisture produces. The Bottoms are of Boards, upon which they lay so many Quilts, that it is a Step to get up to them. Their great Chairs are upright, without a Slope in the Back, hard in the Bottom, and the Wood of the Arms not cover'd. They mix Water with their Wine in their Hogsheds ; so that, for Half the Year, it is either dead or four.

They do not leaven their Bread, so that it is heavy ; and the Oven is too much heated, so that the Crumb is Dough, when the Crust is as hard as a Stone. In all Inns they boil the Meat first before it is roasted ; and thus they make it tender, and quite tasteless and insipid. And as for their Land-carriage, all *Lombardy* over, it is extreme inconvenient ; for their Coaches are fastened to the Perch, which makes them as uneasy as a Cart. It is true, they begin at *Rome* and *Naples* to have Coaches that are fastened to a Sort of double Perch, that runs along the Bottom of the Coach on both Sides, which are so thin, that they ply to the Motion of the Coach, and are extreme easy ; but those are not known in *Lombardy*. And besides this, their Calashes are open ; so that one is exposed to the Sun and Dust in Summer, and to the Weather in Winter. But though they are covered as ours are, on the other Sides of the *Appennines*, yet I saw none that were cover'd in *Lombardy*. And thus, by an Enumeration of many of the innocent Pleasures and Conveniences of Life, it appears, that the *Venetians* pursue so violently forbidden Pleasures, that they know not how to find what is allowable. Their constant Practices in the *Broglio* are their chief Business, where those that are necessitous are suing for beneficial Employments, and those full of Wealth take a Sort of Pleasure in crossing their Pretensions. The Walk in which the Nobility tread, is left to them entirely ; and they change the Side of the Square of *St. Mark*, as the Sun and Weather direct. Perhaps a Derivation that Mr. *Patin* gave me of *Broglio* from the Greek *Peribolaion*, a little corrupted, is not forced ; and since they manage all their Intrigues in those Walks, I am apt to think that *Broils*, *Brouillons*, and *Imbroilments*, are derived from the Agitations in those Walks.

As for the late created Nobility of *Venice*, I came by some Particulars that are not yet seen in Books, which I suppose will not be unacceptable. It is certain, that if the *Venetians* could have foreseen, at the Beginning of the War of *Candia*, the vast Expence in which it engaged them, they would have abandoned the Isle, rather than wasted their Treasure, and debased their Nobility. This last was highly sensible to them ; for as the Dignity of the Rank they hold is the more eminent, as it is restrained to a small Number ; so all the best Employments and Honours of the State belonging to this Body, the admitting such a Number into it, as must rise out of seventy-eight Families, was, in Effect, sharing their Inheritance among so many adopted Brothers. This had been less disagreeable, if they had communicated that Honour only to the ancient Citizens of *Venice*, or to the Nobility of those States that they subdued in the *Terra Firma* : For as there are many Citizens, as ancient as the Nobility, only their Ancestors not being of that Council that assumed the Government four hundred Years ago, they have not that Honour ; so there had been no Infamy in promoting some of them to be of the Nobility. It had been also under Consultation long ago, upon the Reduction of those States in the *Terra Firma*, whether, according to the Maxims of the *Romans*, it was not fit to communicate that Dignity to some of their chief Families, as the surest Way to give Contentment to those States, it being a real, as well as a cheap Security, when the chief Families in those Cities were admitted to share the Honours of the Republick. It is true, some of those Nobility thought they had Glory enough by their Birth, and *Zambara* of *Brescia* refused this Honour from those that had robbed his Country of its Liberty ; but his Posterity are of another Mind ; for they came and bought in this last Sale of Honour that which was offer'd to their Ancestor, and by him rejected.

When the Senate found itself pressed for Money, it was at first proposed, that some Families, to the Number of five, might be enobled, they offering sixty thousand Ducats if *Venetians*, and seventy thousand if Strangers. There was but one Person that opposed this in the Senate ; so being passed there, it was presented to the Great Council, and there it was like to have passed without Difficulty : But one Person opposed

it with so much Vigour, that though the Duke desired him to desist, since the Necessities of the War required a great Supply, yet he persisted; and though one of the *Savi* set forth with Tears the Extremities to which the State was reduced, he fell upon a new Conceit that turned the whole Council. He said, they were not sure, if five Persons could be found, that would purchase at such a Rate, and then it would be a vast Disgrace to expose the Offer of Nobility first to Sale; and then to the Affront of finding no Buyers when it was offered: And by this Means he put by the Resolution for that Time. But then another Method was taken, that was more honourable, and of a more extended Consequence. *Labia* was the first that presented a Petition to the Great Council, setting forth his Merits, and desiring that he might be thought worthy to offer a hundred thousand Ducats towards the Service of the State; that is, to be made noble at that Price. *Del-fino* said, he thought every Man might be well judged worthy to offer such an Assistance to the Publick, and that such as brought that Supply might expect a suitable Acknowledgment from the Senate, who might afterwards, of their own Accord, bestow that Honour on those that expressed so much Zeal for the Publick; and this would maintain that Degree, which would be debased, if it were bought and sold. But it seems the Purchasers had no Mind to part with their Money, and to leave the Reward to Gratitude; so the Petition was granted in plain Terms, and the Nobility so acquired was not only to descend to the Children of him that was enobled, but to his Brothers, and the whole Family, to a certain Degree.

After *Labia*, a great many more came with the like Petitions, and it was not unpleasant to see, in what Terms such as came to buy this Honour, set forth their own Merits; which were, that they had furnish'd the Republick with Things necessary for its Preservation. There was a Sort of a Triumvirate formed, of a *Jew*, a *Greek*, and an *Italian*, who were Brokers, and found out Customers, and at last brought down the Price from a hundred to sixty thousand Ducats; and no Qualifications were required, if they had Money enough. For when *Correge* said to the Duke, that he was afraid to ask that Honour for Want of Merit; the Duke ask'd him, If he had a hundred thousand Ducats? And when he answered, The Sum was ready, the Duke told him, That was a great Merit. At last seventy eight purchased this Honour, to the great Regret of *Labia*, who said, that if he had imagined so many would have followed him, he would have bid so high, that it should have been out of their Power. It is true, many of the Purchasers were ancient Families; but others were not only Merchants, but of the lowest Sort of them; who as they had enrich'd themselves by Trade, then impoverish'd themselves by the Acquisition of an Honour, that as it obliged them to give over, and put them in a higher Way of living, so it hath not brought them yet any Advantage to balance that Loss; for they are so much despised, that they are generally excluded, when they contend with the ancient Nobility; tho' this is done with that Discretion, that the old Families do not declare always against the new: For that would throw the new into a Faction against them, which might be a Prejudice to them; for the new are much more numerous than the old. Another great Prejudice by this great Promotion is, that the chief Families of the Citizens of *Venice*, who had been long practised in the Affairs of State, and out of whom the Envoys, the Secretaries of State, and the Chancellor, that is the Head of the Citizens, as well as the Duke is the Head of the Nobility, are to be chosen, having purchased the chief Honour of the State, there is not now a sufficient Number of capable Citizens left for serving in those Employments; but this Defect will be redress'd in Time.

But if this Increase of the Nobility hath lessen'd the Dignity of the ancient Families, there is a Regulation made in this Age, that preserves a considerable Distinction of Authority in their Hands. Crimes against the State, when committed by any of the Nobility, were always judged by the Inquisitors, and the Council of Ten; all other Crimes were judged by the Council of

Forty; but in the Year 1624, one of the Nobles was accused of Peculation committed in one of their Governments, and the *Avogadore*, in the Pleading, as he set forth his Crime, called him a *Rogue* and a *Robber*. Yet though his Crimes were manifest, there being but six and twenty Judges present, twelve only condemned him, and fourteen acquitted him. This gave great Offence; for though he was acquitted by his Judges, his Crimes were evident, so his Fame could not be restored: For the Depositions of the Witnesses, and the *Avogadore's* (or Attorney General's) Charge were heard by the People: It was proposed to make a Difference between the Nobility and other Subjects; and since all Tryals before the Forty were publick, and the Tryals before the Ten secret, it seemed fit to remit the Nobility to be try'd by the Ten. Some foresaw that this would tend to a Tyranny, and raise the Dignity of the ancient Families (of whom the Council of Ten is composed) too high; therefore they opposed it upon this Ground, that since the Council of Forty sent out many Orders to the Governors, it would lessen their Authority, if they were not to be Judges of those who were to receive their Orders. But, to qualify this, a Proviso was made, that reserved to the Council of Forty a Power to judge of the Obedience given to their Orders; but other Accusations of the Nobility were remitted to the Council of Ten; and the Body of the Nobility were so pleased with this Distinction between them and other Subjects, that they did not see this really enslaved them the more, and brought them under greater Danger; since those who judge in Secret give freer Scope to their Passions, than those in Publick; and who, in Effect, are to be judged by the Publick, which is a very effectual Restraint upon Judges themselves. But the Council of Ten being in the Hands of the Great Families, whereas all Sorts are of the Council of Forty, formerly the chief Judicatory of the State, and much ancients than that of Ten; It had been more wisely done, to have been still judged by the Forty: And if they thought it for their Honour to have a Difference made in judging the Nobility and other Subjects, it had been more for their Security to have brought the Tryals of all other Offenders on with open Doors, and the Nobility, when they were judged, to have the Doors shut, which is what they very much desire now, but without Hope of obtaining it: For this Power of judging the Nobility is consider'd as the Right of the Ten; and if any Man would go about to change it the Inquisitors would be very quick with him, as a Mover of Sedition, and, in that Case, prove at once Judges and Parties. Yet the Inquisitors, being apprehensive of the Distaste that this might breed in the Body of the Nobility, have made a Sort of Regulation, though it amounts not to much; which is, that the Nobility shall be judged before the Council of Ten for enormous Crimes; but that for other Matters, they are to be judged by the Forty; yet the Council of Ten draws all Cases before them, and none dare dispute with them.

This leads me to say a little to you of that Part of this Constitution so much censured by Strangers; but is really both the greatest Glory, and chief Security of this Republick; which is, the unlimited Power of the Inquisitors, that extends not only to the chief Nobility, but to the Duke himself, who is so subject to them, that they may not only give him Reprimands, but search his Papers, make his Process, and put him to Death, without being bound to give an Account of their Proceedings. This is the Dread not only of Subjects, but the whole Nobility, and makes the greatest among them tremble, obliging them thereby to an exact Conduct. For though it cannot be denied, that, upon some Occasions, they may have been a little too sudden, as in the known Story of *Foscarini*; yet such Severities have occurred so seldom, that the Wisdom of this Body, in making and preserving such an Institution, cannot be enough admired. In short, the Insolence, the Necessities, and Ambition, that must needs possess many Members of so vast a Body, as the Nobility of *Venice*, must have thrown them often into many fatal

Convulsions,

Convulsions, if it were not for the Dread in which they stand of this Court, which has so many Spies Abroad, among the Gondaliers, [who cannot fail to discover all the secret Intrigues of *Venice* : Besides the Advices that are thrown in at those Lion's Mouths, that are in several Places of St. Mark's Palace, within which there are Boxes under the Keys of the Inquisitors ; that it is scarce possible for a Man to be long in a Design against the State, and not to be discovered. And when they find any in Fault, they are so inexorable, quick, and severe in their Justice, that the very Fear of this is a Restraint, that perhaps the long Preservation of *Venice*, and of its Liberty, is owing to.

The Inquisitors are Persons so distinguished for their Merit, all of different Families, and their Authority lasts so short a Time, that the Advantages of this vast Authority, lodged with them, are constant and visible ; whereas the unhappy Instances of their being imposed on, and carrying Suspicions too far, are so few, that whenever the Nobility grow weary of this Yoke, and throw it off, one may reckon the Glory and Prosperity of *Venice* at an End. It was terribly attack'd not long ago by *Cornaro*, when *Ferom Cornaro* was put to Death for his Correspondence with *Spain*. He was not a-kin to the great Family of that Name ; yet they thought their Honour was so much touch'd, when one of its remotest Branches was condemned of Treason, that they offered a Hundred thousand Crowns to have saved him, and preserved the Family from that Infamy. But tho' this was not accepted (for he suffer'd, as he well deserved) yet it was so visible, that none of the Family were involved in his Crimes, that it did not at all turn to their Prejudice : But, upon the first Occasion that offered after that, to quarrel with the Inquisitors they laid hold on it, aggravated the Matter extremely, and moved for Limiting their Authority : But the Great Council was wiser than to touch so sacred a Part of the Government ; so they retain their Power but manage it with all possible Caution. A Foreigner, many Years in their Service, told me, that the Stories with which Strangers were frighted at the arbitrary Power vested in those Inquisitors, were slight Things in Comparison of the Advantages they found from it ; and after Eleven Years spent in their Service, he said, he never had so much as once received a Reprimand from them. And if the Nobility, that have any Commerce with Strangers, confess it, they are in no Danger ; but if they conceal it, or any Circumstances, their Process will be soon dispatched. I give no Credit to that which a Person of great Eminence assured me was true, that there was a Poisoner-general in *Venice*, that had a Salary, and was employ'd by the Inquisitors to dispatch those against whom a publick Proceeding would make too great a Noise. This I could not believe, tho' my Author protested, that the Brother of one that was solicited to accept of the Employment discovered it to him. There is no Place in the World where Strangers live with more Freedom, and I was amazed to see so little Exactness among the Searchers of the Custom-house ; for tho' we had a Mule's Load of Trunks and Portmanteaus, yet none offered to ask us, either coming or going, what we were, or what we carried with us ? But the best and noblest Entertainment that *Venice* afforded, while I was there, was the Company of M. de la Haye, the French Ambassador, who, as he hath spent his whole Life in publick Ambassies, so he has acquired so great a Knowledge of the World, with so true a Judgment, and so obliging a Civility, that he may well pass for a Pattern ; and it is no Wonder to see him engaged in a constant Succession of publick Employments : And his Lady is so wonderful a Person, that I pay them but a very small Part of what I owe them, in this Acknowledgment of their extraordinary Civilities : And indeed, without the Advantage of such a Rendezvous, a Fortnight's Stay at *Venice* had been a very tedious Matter.

21. From *Venice* we went again to *Padua*, and thence to *Rovigo*, which is a small Town, and so to the *Po*, which divides the Republick from the *Ferrarese*, now

the Pope's Territory ; and here one sees what Difference of a good and bad Government makes in a Country ; for tho' the Soil is the same on both Sides of the River, and the *Ferrarese* was once of the beautifullest Spots of *Italy*, as *Ferrara* one of its best Towns ; while they had Princes of their own, who for some Ages were Princes of such Virtue, and of heroical Nobleness, that they were really the Fathers of their Country ; nothing can be more changed than all this is now. The Soil is abandoned and uncultivated, nor were there Hands enough to mow their Grass, which we saw withering in their Meadows, to our Wonder. We were amazed to see so rich a Soil thus forsaken of its Inhabitants ; and more when we passed thro' that vast Town, which, shews what it was about an Age ago, and now so much deserted, that there are whole Streets without Inhabitants ; and its Poverty appears signally in the Churches, which are mean and poor, for the Superstition of *Italy* is so ravenous, and makes such Progress, that one may justly take Measures of the Wealth of Places from the Churches. The Superstition or Vanity of this Age is so much beyond that of the past, that all the vast Buildings of Churches, or rich Convents, and the surprizing Wealth that appears in them on Festival Days, are Donatives of the present Age. So that it is a vulgar Error some have taken up, who fancy that Superstition is at a Stand, if not in Decay ; unless it be acknowledged, that the Craft of Priests hath opened a new Method to support their Riches, when the old ones of Purgatory and Indulgences were become less effectual ; and that is, to engage Men in an Emulation in enriching their Churches, as much as other *Italians* have in enriching their Palaces ; so that they have a Pleasure as well as Vanity, in seeing so much dead Wealth in their Houses and in their Churches. But to return to *Ferrara* : I could not but ask, how it came, that so rich a Soil was so abandoned ? Some said, the Air was become unhealthy, that those who stay, were short-lived ; but it is well known, that Four-score Years ago it was well peopled, and thence it seems the ill Air is occasioned by the Want of Inhabitants ; for there not being People to drain, and to keep the Ditches clean, this makes a great deal of Water lie on the Ground and rot, which infects the Air, as is observ'd in that rich, but uninhabited Campaign of *Rome* : So that ill Air is the Effect, rather than the Cause, of the dispeopling the Pope's Dominions. The true Cause is the Severity of the Government, the heavy Taxes, and frequent Confiscations, by which the Nephews of Popes have devoured many Families of *Ferrara*, and have driven away many more. And this appears more visibly, by the different State, as well as Constitution of *Bologna*, which is full of People that abound in Wealth ; and the Soil, as it is extreme rich, so is it cultivated with all due Care ; for *Bologna* submitted itself upon a Capitulation, by which there are many Privileges reserved to it. Crimes are only punished in the Persons of those who commit them ; but no Confiscations of Estates ; and though the Authority in criminal Matters belongs to the Pope, and is managed by a Legate and his Officers, yet the civil Government, the Magistracy, and the Power of Judicature in civil Matters, is entirely in the Hands of the State : And by this Regulation it is, that the Riches of *Bologna* amaze a Stranger, though it is neither on a navigable River, nor the Center of a Sovereignty, where a Court is kept ; and the Taxes the Popes fetch from thence are so considerable, that he draws more from this Place of Liberty, than from those where his Authority is unlimited and absolute : For the Greatness of a Prince rising from Numbers of Subjects, those Maxims that retain the Subjects, and that draw Strangers, are certainly the truest for advancing the Greatness of the Master ; and I could not but with Scorn observe the Folly of some *Frenchmen*, who made use of this Argument to shew the Greatness of their Nation, that one found many *Frenchmen* in all Places to which one came ; whereas there were no *English*, *Dutch*, nor *Switzers*, and very few *Germans* ; but this is just contrary to the Consequence that ought to be drawn from this Observations ;

vation ; for it is certain, that few leave their Country to settle elsewhere, if they are not pressed at home so, that they cannot well live among their Friends and Kindred.

But to return to the Wealth of *Bologna*, it appears in every Corner of the Town, and round it, though its Situation is not very favourable ; for it lies at the Foot of the *Appennines*, on the North Side, and is very cold in Winter. The Houses are built as at *Padua* and at *Bern*, so that one walks covered under Piazzas ; but the Walks here are both higher and larger than elsewhere. There are many noble Palaces, and the Churches and Convents are incredibly rich : Within the Town the richest are the *Dominicans*, which is the chief House of the Order, where their Founder's Body is laid in one of the best Chapels of *Italy* ; and next to them are the *Franciscans*, the *Servites*, the *Jesuits*, and the Canons Regular of *St. Salvator*. In this last there is a Scroll of the *Hebrew Bible*, which, though it is not the tenth Part of the Bible, they fancy to be the Whole ; and they were made to believe by some Jew, that hath no doubt sold it at a high Rate, that it was written by *Ezra's* own Hand, and this hath pass'd long for current ; but the Manuscript is only a fine Copy, like those the Jews use in their Synagogues, that may be, perhaps, three or four hundred Years old : That Part on which I cast my Eye, was the Book of *Esther* ; so by the Bulk of the Scroll, I judg'd it to be the Collection of those small Books of the *Old Testament*, that the Jews set after the Law. But those of the House fancy they have a great Treasure in it ; and perhaps such Jews as have seen it, are willing to laugh at their Ignorance, and suffer them to go on in their Error. The chief Church of the Town is *St. Petrone's*, and there one sees the curious and exact Meridional Line, which that rare Astronomer *Cassini* laid along a great Part of the Pavement in a brass Circle : It marks the true Point of Mid-day from *June* to *January*, and is one of the best Performances that perhaps the World ever saw. In the great Square before the Church, on the one Side of which is the Legate's Palace ; among other Statues, one surprized me ; it was Pope *Joan's*, or is so named by the People : It is true, the learned Men say it is the Statue of Pope *Nicholas IV.* who had a womanish Face ; but as I looked at this Statue very attentively, through a little Perspective that I carried with me, it appeared plainly to have the Face of a young Woman, and was unlike that of Pope *Nicholas IV.* which is in *St. Maria Maggiore* at *Rome* ; for the Statue of that Pope, though it hath no Beard, yet hath an Age in it that is very different from the Statue at *Bologna*. I do not build any Thing on this Statue, for I do not believe that Story at all ; and I myself saw in *England* a Manuscript of *Martinus Polonus*, who is one of the ancient Authors of this Matter, which did not seem to be written long after the Author's Time ; in it this Story is not in the Text, but is added on the Margin by another Hand.

On the Hill above *Bologna* stands the Monastery of *St. Michael in Bosco*, which hath a most charming Situation, and is one of the best Monasteries in *Italy* ; it has many Courts, and one that is octangular, which is so nobly painted in Fresco, that it is a great Pity to see such Work exposed to the Air ; all was once retouch'd by the famous *Guido Reni*, but it is now much decay'd : The Dormitory is very magnificent, the Chapel is little but very fine, and the Stalls are richly carved. On the other Side of *Bologna*, in the Bottom, the *Carthusians* have also a very rich Monastery. Four Miles from *Bologna* there is a *Madona* of *St. Luke's* ; and because many go in great Devotion there is a Portico building, which is carried on almost half way ; it is walled towards the North, but stands on Pillars to the South, and is about twelve Foot broad, and fifteen Foot high : It is carried on very vigorously, for in eight or ten Years half is built, and this may prove the Beginning of many such Portico's in *Italy* ; for Things of this Kind want only a Beginning, and when they are once set on Foot, they quickly spread in a Country that is so entirely subdued by Superstition and the Artifices of Priests. In *Bologna* they reckon seventy thousand Persons ; I saw not one of the chief Glories of this Place, for the fa-

mous *Malpighius* was out of Town. I saw a Play there, but the Poesy was so bad, the Farces so rude, and all so ill acted, that I was not a little amazed to see the Company express great Satisfaction in that which would have been hiss'd off the Stage either in *England* or *France*. From *Bologna* we go eight Miles in a Plain, and then advance into that Range of Hills that carry the Name of *Apennines* ; though that is strictly given only to one that is the highest. All the Way to *Florence* this Track of Hills continues, though there are several Bottoms, and some considerable Towns in them, but all is uphill and down-hill, and *Florence* itself is just at the Bottom of the last Hill. The great Roads all along these Hills are kept in so good Order, that in few of the best inhabited Countries one finds the Highways so well maintained as in these forsaken Mountains ; but this is so great a Passage, that all concerned in it find their Account in the Expence they lay out upon it. On the last, in a little Bottom in the Midst of the Hill stands *Pratolino*, one of the Great Duke's Palaces, where the Retreat in Summer must be very agreeable, for the Air is extreme thin and pure. The Gardens in *Italy* are costly, the Statues and Fountains are very rich and noble, the Grounds well laid out, and the Walks long and even ; but as they have no Gravel as we in *England*, so the constant Greenness of the Box so much pleases them, that preferring the Sight to the Smell, their Gardens are so high scented by Box-plots, that it is no Pleasure to walk in them ; they also lay their Walks so between Hedges, that one is confined in them.

I saw first, in a Garden at *Vincenza*, that which I found afterwards in many Gardens in *Italy*, which was very convenient ; there went a Course of Water round the Walls. About a Foot from the Ground in a Channel of Stone, along the Side of the Wall ; and in this there were Holes, so made, that a Pipe of white Iron or Wood put into them, conveyed the Water to such Plants as in a dry Season wanted watering ; and a Cock set the Water a running in this Course, so that without the Trouble of drawing Water, a single Person could easily manage a great Garden. *Florence* is a beautiful and noble Town, full of great Palaces, rich Churches, and stately Convents. The Streets are pav'd in Imitation of the old *Roman* Highways, with great Stones bigger than our Pavement Stone, but much thicker, which are so hollowed in their Joinings to one another, that Horses find Fastening enough for their Feet. There are many Statues and Fountains in the Streets, so that in every Corner one meets with many agreeable Objects. I will not entertain you with a Description of the Great Duke's Palace and Gardens, of the old Palace, and the Gallery that joins it, and of the vast Collection of Pictures, Statues, Cabinets, and other Curiosities, that must needs amaze every one that sees them ; the Plate, and in particular the Gold Plate and great Coach, are such extraordinary Things, that they would require a very copious Description, if that had not been done so often. The great Dome is a magnificent Building, but the Frontispiece to the great Gate is not finished : The Cupola is after *St. Peter's*, the greatest I saw in *Italy* ; it is Three hundred Foot high, and of a vast Compass ; and the whole Architecture of this Fabrick is very singular, as well as regular ; only that which was intended to add to its Beauty, lessened it in my Thoughts ; for the Walls, that are all of Marble, being white and black, laid in different Figures and Orders, looked too like a Livery and had not the Air of Nobleness, which in my Opinion becomes so glorious a Fabrick. The Baptistry, that stands before it, was a noble Heathen Temple ; its Gates of Brass are the best of that Sort that are in the World ; there are so many Histories so well represented in Bas-relieves in them, with so much Exactness, the Work is so natural, and yet so fine, that a curious Man could find Entertainment for many Days, if he would examine the three Gates of this Temple with a critical Exactness. The *Annunciata*, *St. Mark's*, *St. Croce*, and *St. Maria Novella*, are Churches of great Beauty and vast Riches ; but the Church and Chapel of *St. Laurence* exceeds them all,

as much in the Riches within, as it is inferior to them in the Outside, which is quite flay'd, if I may so speak, but on Design to give it a rich Outside of Marble. In a Chapel within this Church, the Bodies of the Great Dukes lie deposited, till the famous Chapel is finished; but I was much scandalized to see Statues with Nudities here, which I do not remember to have seen any where else in Churches. I will not offer at a Description of the glorious Chapel, which as it is, without Doubt, the richest Piece of Building that perhaps the World ever saw, so it goes on so slow, that tho' there are many always at Work, yet it doth not seem to advance proportionably to the Number of Hands that are employed in it.

Among the Statues that are to be in it, there is one of the Virgin, made by *Michael Angelo*, which represents her Grief at the Passion of her blessed Son, that hath the most Life in it of any Statue I ever saw. But the famous Library, that belongs to this Convent, took up more of my Time than all the other Curiosities of *Florence*; for here is a Collection of many Manuscripts, most of them *Greek*, that were gather'd together by *Pope Clement VII.* and given to his Country: There are very few printed Books mixed with them; and those Books are so rare, that they are almost as curious as Manuscripts. I saw some of *Virgil's* Poems in old Capitals. There is a Manuscript in which some Parts both of *Tacitus* and *Apuleius* are written; and in one Place, one in a different Hand had writ, that he had compared those Manuscripts; and he adds a Date to this in *Olibrius's* Time, which is about Twelve hundred Years ago: I found some Diphthongs in it cast into one Letter, which surprized me; for I thought that Way of Writing had not been so ancient. But that which pleased me most was, that the Library-keeper assured me, that one had lately found the famous Epistle of *St Chrysostom* to *Cæsarius*, in *Greek*, in the End of a Volume full of other Things, and not among the Manuscripts of that Father's Books, of which they have a great many: He thought he remembered well the Place where the Book stood; so we turned over all the Books that stood near it, but I found it not: he promised to look it out for me, if I came back that Way; but I changing my Design, and going back another Way, could not see the Bottom of this. It is true, the famous *Magliabecchi*, who is the Great Duke's Library-keeper, and is a Person of wonderful Civility, and full of Candor, as well as learned beyond Imagination, assured me, that this could be no other than a Mistake of the Library-keeper's; he said, such a Discovery could not have been made without making so much Noise that he must have heard of it: He added, there was not one Man in *Florence* that either understood *Greek*, or that examin'd Manuscripts; so that I could not build on what an ignorant Library-keeper had told me. *Florence* is much sunk, for they do not reckon that there are above fifty thousand Souls in it; and other States, that were once great Republicks, such as *Sienna* and *Pisa*, while they retained their Liberty, are now shrunk into nothing; it is certain, that all three together are now not so numerous as any one of them was Two hundred Years ago. *Leghorn* is full of People, and all round *Florence* there are a great many Villages; but as one goes over *Tuscany*, it appears so dispeopled, that one cannot but wonder to find a Country, that hath been the Scene of so much Action, and so many Wars, now so poor, and in many Places the Soil is quite neglected, for Want of Hands to cultivate it; and in other Places where there are more People, they look so poor, and their Houses are such Ruins, that it is scarce accountable how there should be such Poverty in so rich a Country, which is full of Beggars; and the Style a little altered from what I found it in *Lombardy*; for whereas they begged for the Sake of *St. Anthony*, here all begged for the Souls in Purgatory; and this was the Style in all other Parts of *Italy* through which I passed.

In short, the dispeopling of *Tuscany*, and most of the Principalities of *Italy*, but chiefly the Pope's Domi-

nious, which are more abandoned than any other, seemed to flow from the Severity of the Government, the Decay of Trade, and the Weight of the Taxes, which, notwithstanding that Decay of Trade, are still kept up; besides, the vast Wealth of the Convents, where the only People of *Italy* are to be found, that live at their Ease, and in great Plenty, and makes many forsake all Sort of Industry, and seek such a Retreat; so that the People do not increase fast enough to make a new Race, instead of those whom a hard Government drives away. It must needs surprize an attentive Traveller, to see not only the *Venetian* Territory, which is indeed a rich Country, but the Bailiages of the *Switzers*, and the Coast of *Genoa*, so full of People, when *Tuscany*, the Patri-mony, and the Kingdom of *Naples* have so few Inhabitants. In the Coast of *Genoa* there is, for many Miles, as it were, a constant Tract of Towns and Villages, and all well peopled, though they have scarce any Soil at all, lying under the Mountains, that are barren, and that expose them to a most uneasy Sun, and lie upon a boisterous Sea, that is almost always in a Storm; that affords very few Fish; yet the Gentleness of the Government draws such Multitudes thither, and those are so wealthy that Money brings but Two per Cent. But to balance this, so strange and wild a Thing is the Nature of Man, at least of *Italians*, that I was told, the worst People of *Italy* are the *Genoese*, and the most corrupted in their Morals, as to all Sorts of Vice; so that though a severe Government and Slavery are contrary to the Nature of Man, and to human Society, to Justice and Equity, and to that essential Equality among Men; yet, on the other Hand, all Men cannot bear that Ease and Liberty that become the human Nature. The Superstition of *Italy*, and the great Waste of Wealth in their Churches, particularly those prodigious Masses of Plate with which their Altars are covered on Holidays, sink their Trade extremely; for Silver being in Commerce, what Blood is in the Body, when so much is dead, and circulates no more, it is no Wonder if such an unnatural Extravasion of Silver occasions a great Deadness in Trade. I had almost forgot a Remark that I made on the last Hill of the *Apennines*, just above *Florence*, that I never saw such tall and large Cypressess any where, as grew all over that Hill; which seemed a little strange, that Tree being apt to be starv'd by a cold Winter among us, and there the Winters are very severe. All the Roads in *Tuscany* are very rugged, except on the Sides of the *Arno*; but the Uneasiness of the Road is much qualified by the great Care that is had of the Highways, which are all in very good Condition. The Inns are wretched, and ill furnished both for Lodging and Diet: This is the Plague of all *Italy*, for except in the great Towns, one really suffers so much, that the Pleasure of Travelling is much abated by the Inconveniencies that one meets in every Stage through which he passes.

22. I am now in the last Stage of my Voyage; for since my last, I have not only got to *Rome*, but have been in *Naples*; and have now satisfied my Curiosity so fully, that I intend to leave this Place within a Day or two, and go to *Civita Vecchia*, and from thence by Sea to *Marseilles*, and avoid an unpleasant Winter's Journey over the *Alps*. It is true, I lose the Sight of *Turin*, *Genoa*, and some other Courts; but though I am told these deserve the Pains of the Journey, yet when one rises from a great Meal, no Delicacies, how much soever they might tempt at another Time, can provoke his Appetite: So I confess freely, that the Sight of *Naples* and *Rome* have so filled my Stomach that Way, that the Curiosity of seeing new Places is now very low with me; and indeed those I have of late seen are such, that Places, which at another Time would please me, would now make but a slight and cold Impression.

All the Way from *Florence*, through the Great Duke's Country, look'd so sad, that I concluded it must be the most dispeopled of all *Italy*; but I changed my Note when I came into the Pope's Territories at *Pont Centino*, where there was a rich Vale all uncultivated, and not so much as stocked with Cattle. But as I passed from *Mont Fiascone* to *Viterbo*, this appeared still more ama-

zing; for a vast champaign Country lay quite deserted, and that wide Town, which is of so great a Compass, hath so few Inhabitants, and those so poor and miserable, that the People in the ordinary Towns of *Scotland*, and worst Places, make a much better Appearance. When I was within a Day's Journey of *Rome*, I fancied that the Neighbourhood of so great a City must mend the Matter, but was much disappointed; for a Soil that was so rich, and lay so sweetly, that it far exceeded any Thing I ever saw out of *Italy*, had neither Inhabitants nor Cattle to the tenth Part of what it could bear: The Surprise that this gave me, increased upon me as I went out of *Rome* on the other Side, chiefly all the Way to *Naples*, and on the Way to *Civita Vecchia*; that vast and rich champaign Country that runs along to *Terracina*, which from *Civita Vecchia* is above one hundred Miles long, and in many Places twelve or twenty Miles broad, is so abandoned, that as far as one's Eye can carry one, there is often not so much as a House to be seen, but on the Hills that are on the North Side of this Valley: And by this dispeopling of the Country, the Air is now become so unwholesome, that it is not safe to be a Night in it all the Summer long; for the Water that lies upon many Places not being drained, it rots; and in the Summer this produces so many noisome Steams, as are felt even in *Rome* itself; and if it were not for the Breezes that come from the Mountains, the Air would be intolerable: When one sees all this large but waste Country, from the Hill of *Marino*, twelve Miles beyond *Rome*, he cannot wonder enough at it. It is the Rigour of the Government that hath driven away the Inhabitants; and their being driven away, hath reduced it to such a Pass, that it is hardly possible to repeople it; for such as would come to drain and cultivate it must run a great Hazard; and few can resolve on that, when they can hope for no Reward of their Industry.

It is the greatest Solecism in Government, for the Prince to be Elective, and yet absolute; for an hereditary Prince is induced to consider his Posterity, and to maintain his People so, that those that come after him may support the Rank which they hold in the World: But an Elective Prince hath Nothing of that in his Eye, unless he hath a Generosity which is not ordinary among Men, and least of all among *Italians*, who have a Passion for their Families not known in other Places: And thus a Pope, who comes in late to his Dignity, which by Consequence he cannot hope to hold long, very naturally turns to those Councils, by which his Family may make all the Hay they can during this Sun-shine. And though anciently the Cardinals were a Check upon the Pope, and a Sort of a Council, without whom he could do Nothing even in Temporals, yet now they have quite lost that; and have no other Share in Affairs than that to which the Pope thinks fit to admit them; so that he is the most absolute Prince in *Europe*. It is true, as to Spirituals, they retain still a large Share; so that in Censures and Definitions the Pope can do Nothing without their Concurrence, though it is certain, that they have not so good a Title to pretend to that, as to a Share in the temporal Principality. For if the Pope derives any Thing from *St. Peter*, all that is singly in himself, and it is free to him to proceed by what Method he thinks best, since the Infallibility, according to their Pretensions, rests in him alone; yet because there was not so much to be got by acting arbitrarily in those Matters, and a summary Way of exercising this Authority might have tempted the World to have enquired too much into the Grounds on which it is built; therefore the Popes have let the Cardinals retain still a Share in this Supremacy over the Church, tho' they have no Claim to it, either by divine or ecclesiastical Warrants: But as for the Endowments of the See of *Rome*, to which they may justly lay Claim, as being in a Manner the Chapter of that See; there is so much to be got by this, that the Popes have engrossed it to themselves. And thus it is, that the Government of this Principality is very unsteady. Sometimes the papal Family are glorious and magnificent; at other Times they think of nothing but of establishing their

House. Sometimes the Pope is a Man of Sense himself; sometimes he is quite sunk, and, as the last Pope was, becomes a Child again thro' old Age: Sometimes he has a particular Stiffness of Temper, with great Slowness of Understanding, and an insatiable Desire of heaping up Wealth, which is the Character of him that now reigns. By this Diversity, which appears eminently in every new Pontificate, that commonly avoids those Excesses that made the former Reign odious, the Councils of the Popedom are weak and disjointed. But if this is sensible to all *Europe*, with Relation to the general Concerns of that Body, it is much more visible in the Principality itself, that is subject to so variable a Head. There hath been in this Age a Succession of four ravenous Reigns; and tho' there was a short Interruption in the Reign of the *Rospigliosi*, that coming after the *Barbarini*, the *Pamphili*, and the *Ghigis*, did not enrich itself; and yet it disorder'd the Revenue, by the vast Magnificence in which he reigned, more in Twenty-nine Months Time, than any other had done in so many Years. The *Altieri* did in a most scandalous Manner raise themselves, in a very short and despised reign, and built one of the noblest Palaces in *Rome*.

He that reigns now doth not raise his Family avowedly, but he eases not the People of their Taxes; and as there is no Magnificence in his Court, or any public Buildings now carrying on at *Rome*; so the many vacant Caps occasion many empty Palaces; and by this Means there is so little Expence, that it is not possible for the People to live and pay the Taxes; which hath driven, as is believ'd, almost a fourth Part of the Inhabitants out of *Rome* during this Pontificate. And as the Pre-emption of the Corn makes, that there is no Profit made by the Owners out of the Cultivation of the Soil, all that going wholly to the Pope; so there are no Ways left here of employing Money to any considerable Advantage; for the public Banks, which are all in the Pope's Hand, do not pay in Effect Three *per Cent.* tho' they pretend to give Four *per Cent.* Interest: The Settlement is indeed Four *per Cent.* and this was thought so great an Advantage, that Actions on the Pope's Bank were bought at an Hundred and sixteen *per Cent.* But this Pope broke through all, and declared he would give all Men their Money again, unless they would pay him Thirty *per Cent.* for the continuing of this Interest: And thus for a Hundred Crowns principal, one not only paid at first an Hundred and sixteen, but afterwards Thirty, in all, an hundred forty six for the Hundred; which is almost the half lost; for whensoever the Pope will pay back their Money, all the rest is lost. And now, there is a Report, that the Pope is treating with the *Genoese* for Money at Two *per Cent.* and if he gets it on those Terms, he will then pay his Debts; and the Subjects, that have Money in this Bank, will by this Means lose Six and forty *per Cent.* which is almost half of their Stock. A Man of Quality at *Rome*, and an eminent Churchman, who took me for one of their Clergy, because I wore the Habit of a Churchman, said, it was a Scandal to the Christian World, and made one doubt the Truth of the Christian Religion, to see more Oppression in their Territory, than was to be found in *Turkey*; tho' in the Hands of *Christ's* Vicar. And I can never forget the Reflection a *Roman* Prince made upon the Folly of those severe Oppressions, which as they drive away the Inhabitants, so they reduce those that are left to such Degeneracy of Spirit by their Necessities. The *Spaniards*, whose Dominions look so big in the Map, are brought so low; that if they had still kept the Possession they once had of the *United Netherlands*, they would signify no more towards their Preservation, than their other Provinces did, which, by their unskilful Conduct, they have dispeopled and exhausted: Whereas, by their losing the Seven Provinces, those States have fallen upon such wise Notions of Government, and have drawn such Wealth, and such Numbers of People together, that *Spain* itself was preserved by them, and was saved in this Age by the Loss of those Provinces in the last: And those States, that, if they had remained subject to *Spain*, would have signi-

fied

fied little to its Support, did now more considerably, by being Allies, than they could have done, if they had not shaken off their Yoke. Indeed, if *Spain* had been so happy as to have such Viceroy's and Governors, as at this Time in *Naples*, their Affairs could not have declined so fast as they have done. The Marquess of *Carpy*, in his Youth, intended to have taken so severe a Revenge of an Injury that he thought the late King of *Spain* did him in an Amour, that he designed the blowing him up by Gunpowder, when he was in the Council-chamber. But that Crime was discovered in Time, and was not only forgiven him, in Consideration of the Greatness of his Family, he being the Son of Don *Lewis de Haro*, but after that he was made for several Years Ambassador at *Rome*: He is now Viceroy of *Naples*, and is the only Governor of all the Places through which I passed, that is, without Exception, beloved and esteemed by all Sorts of People; for during the few Years of his Ministry, he hath redressed such Abuses as seemed past Cure, or that required an Age to correct them. He hath repressed the Insolence of the *Spaniards* so much at *Naples*, that the Natives have no Occasion to complain of the Haughtiness of their Masters; for he proceeds against the *Spaniards* with no less Severity, when they give Cause for it, than against the *Neapolitans*. He hath taken the Pay of the Soldiers so immediately into his own Care, that they, who, before his Coming, were half naked, and robbed such as passed thro' the Streets of *Naples* in Day-light, are now exactly paid, well disciplined, and so decently clothed, that it is a Pleasure to see them. He examines their Musters so exactly, that he is sure not to be cheated by false Lists. He hath brought the Markets and Weights of *Naples* to a true Exactness; and whereas the Bread was generally too light, he has sent for Loaves out of several Places of the Markets, and weighed them himself; and by some severe Punishments on those that sold the Bread too light, he hath brought this Matter to a just Regulation. He hath also brought the Courts of Judicature, that were thought generally very corrupt, into Reputation again; and 'tis believed he hath Spies to watch in Case Bribes are still going on. He hath fortified the Palace, which was before his Time so much exposed, that it would have been no hard Thing to have made a Descent and seized it.

But the two Things, that raise his Reputation most are, his extirpating the Banditti, and the Regulation of the Coin. It is well known, what a Plague the Banditti have been to the Kingdom; for they, in Troops, not only robbed the Country, but were able to resist an ordinary Body of Soldiers. These travelled about seeking for Spoil all the Summer long; but in Winter they were harboured by some of the *Neapolitan* Barons, who gave them Quarters, and did not only thereby protect their own Lands, but had them as so many Instruments ready to execute their Revenges on their Enemies. This was well known at *Naples*, and there was a Council that had the Care of the reducing the Banditti committed to them, who, as they caught some few, and hanged them, so they fined such Barons as gave them Harbour; and it was believed, that those Fines amounted to near a Hundred and Fifty thousand Crowns a Year: And thus the Disease went on, only now and then there was a little Blood let, which never went to the Bottom of the Distemper. But when the present Viceroy entered upon the Government, he resolved to extirpate all the Banditti; and he first let all the Barons understand, that, if they harbour'd them any more, a little Fine would not save them, but that he would proceed against them with the utmost Severity; and by this Means the Banditti could find no Winter Quarters, which drove them to some Fastnesses among the Hills, and they resolved to make good the Passes, and to accommodate themselves the best they could amidst the Mountains. The Viceroy sent a great Body against them, but they defended themselves for some Time vigorously, and in one Sally killed Five hundred Men: but at last, seeing that they were hard pressed, and that the Viceroy intended to come against them in Person, they accepted of the

Terms that he offered, which were, a Pardon for what was past, both as to Life and Gallies, and Sixpence a Day for their Subsistence in Prison during Life, or the Viceroy's Pleasure; and so they surrender'd themselves. They are kept in a large Prison, and now and then, as he sees Cause for it, he sends some few of them up and down to serve in Garrisons. And thus, beyond all Mens Expectations, he finished this Matter in a very few Months; and the Kingdom of *Naples*, that had been so long a Scene of Pillage and Robbery, is now so much changed, that no Place in *Europe* enjoys a more entire Security. As for the Coin, it, as all the other *Spanish* Money, is so subject to Clipping, that the whole Money of *Naples* became light, and far below the true Value; so the Viceroy resolved to redress this. He considers, that the Crying-down of Money, that passeth upon the publick Credit, is a robbing those in whose Hands the Money happens to be, when such Proclamations are issued; and therefore he takes a Method that is more general, in which every one bears his Share, so that none will be crushed by it. He laid Taxes on the whole Kingdom, and got a great many to bring in Plate to be coined: and when he hath thus obtained such a Quantity, as may serve for the Circulation that is necessary, he intends to call in all the old Money, and to give new for it. Thus this Viceroy sets such a Pattern to the other Ministers of the Crown of *Spain*, that, if many would follow, the State of their Affairs would be soon altered.

The Kingdom of *Naples* is the richest Part of *Italy*; for the very Mountains, that make near half the Soil, are fruitful, and produce either Wine or Oil in great Abundance. *Apulia* is a great Corn Country, but it is excessive hot, and in some Years is all burnt up. The Jesuits are the Proprietors of near half *Apulia*, and they treat their Tenants with the same Rigour that the Barons of this Kingdom generally use towards their Farmers: For the Commons here are so miserably oppressed, that in many Places they die of Hunger, even amidst the great Plenty of their best Years: For the Corn is exported to *Spain*, but neither *Spaniards* nor *Neapolitans* understand Trade so well, as to be their own Merchants or Carriers; so that the *English* generally carry the Profit of this Trade. The Oil of this Kingdom is still a vast Trade, and the Manufactures of Wool and Soap in *England* consumes yearly some Thousands of Tuns. The Silk Trade is so low, that it only serves themselves, but the Exportation is considerable. The Sloth and Laziness of this Nation render them incapable of making those Advantages of so rich a Soil, that more industrious People would find out. For it amazes a Stranger to see in their little Towns, the Men walking in the Market-places in their torn Cloaks, and doing nothing. And though in some large Towns, such as *Capua*, there is but one Inn, yet even that is so miserable, that the best Room and Bed is so bad, that our Footmen in *England* would make a grievous Outcry, if they were no better lodged. Nor is there any thing to be had in them; the Wine is intolerable, the Bread ill baked, no Victuals, except Pigeons, and the Oil stinking. In short, except one carries his whole Provision from *Rome* or *Naples*, he must resolve to endure a good deal of Misery in the four Days Journey that is between those two Places. And this is what a Traveller, that sees the Soil, cannot comprehend. But as they have not Hands enough, so those they have are generally so little employed, that it is no Wonder to see their Soil produce so little, that in the Midst of all that Abundance, Nature hath set before them, they are one of the poorest Nations in *Europe*. But beside this which I have named, the vast dead Wealth, that is in the Hands of the Churchmen, is another evident Cause of their Misery. One that knew the State of this Kingdom well, assured me, that if it were divided into Five Parts, upon a strict Survey, it would be found, that the Churchmen had four Parts of the Five; which he made thus out. They have in Soil above the half of the whole; which is Two and a half; and in Tithes, and Gifts, and Legacies, they have one and a half more: For no Man

Man dieth without leaving a considerable Legacy to some Church or Convent. The Wealth that one sees in the City of *Naples* alone, passeth Imagination. There are four and twenty Houses of the Order of the *Dominicans*, of both Sexes, and two and twenty of the *Franciscans*; seven of the *Jesuits*, beside the Convents of the *Olivitanes*, the *Theatines*, the *Carmelites*, the *Benedictines*; and above all, for Situation and Riches, the *Carthusians*, on the Top of the Hill that lieth over the Town. The Riches of the *Annunciata* are prodigious; it is the greatest Hospital in the World; the Revenue is said to be four hundred thousand Crowns a Year. The Number of the Sick is not so great as at *Milan*, yet one Convenience for their Sick I observed in their Galleries, which was considerable, that every Bed stood as in an Alcove, and had a Wall on both Sides, separating it from the Beds on both Hands, and so much void Space on both Sides of the Bed, that the Bed itself took up but half the Room. The young Children that they maintain are so many, that one can hardly believe the Number they boast of; for they talk of Thousands that are not seen, but are at Nurse. A great Part of the Wealth of this House goes to the enriching their Church, which will be all over within crusted with lovely Marble, in a great Variety and Beauty of Colours. The Plate that is in the Treasury here, and in the Dome (which hath a noble Chapel, and a vast Treasure) and in a great many other Churches, is so prodigious, that upon the modestest Estimate, the Plate of the Churches of *Naples* amounts to eight Millions of Crowns. The new Church of the *Jesuits*, that of *St. John* the Apostle, and that of *St. Paul*, are surprizingly rich. The Gilding and Painting that is on the Roofs of those Churches have cost Millions; and as there are about an hundred Convents in *Naples*, so every one of these, if it were in another Place, would be thought well worth seeing.

A new Governor of the *Annunciata* is annually chosen, who perhaps puts into his own Pocket twenty thousand Crowns; and to make some Compensation, when he goes out he gives a vast Piece of Plate to the House, a Statue for a Saint in Silver, or some Coloss of a Candlestick; for several of those Pieces of Plate are said to be worth ten thousand Crowns. And thus all the Silver of *Naples* becomes dead and useless. The *Jesuits* are great Merchants here; their Wine-cellar is a vast Vault, and holds above a thousand Hogsheads, and the best Wine in *Naples* is sold by them; yet they do not retail it so scandalously as the *Minims* do, who live on the great Square before the Viceroy's Palace, and sell out their Wine by Retail. They pay no Duty, have extraordinary Wine, and are in the best Place of the Town for this Retail. It is true, the *Neapolitans* are no great Drinkers, so the Profits of this Tavern are not so great as they would be in colder Countries; for here Men go for a Draught in the Mornings, or when they are dry; yet the House grows rich, and has one of the finest Chapels in all *Naples*; but the Trade seems very unbecoming Men of that Profession, and of so strict an Order. The Convents have a very particular Privilege, for they may buy all the Houses that lie on either Side, till the first Street discontinueth the Houses; and there being scarce a Street in *Naples* in which there is not a Convent, by this Means they may come to buy the whole Town: And the Progress that the Wealth of the Clergy makes is so visible, that if there is not some Stop put to it, within an Age they will make themselves Masters of the whole. It is amazing to see so profound an Ignorance reign among the Clergy; for though all the secular Persons here speak of them with all possible Scorn, yet they are the Masters of the People. The Women are infinitely superstitious, and give their Husbands no Rest, but as they draw from them great Presents to the Church.

It is true, there are Societies of Men at *Naples*, of freer Thoughts than can be found in any other Place of *Italy*. The *Greek* Learning begins to flourish there, the new Philosophy is much studied, and there is an Assembly that is held in *D. Joseph Valeta's* Library (where there is a vast Collection of well-chosen Books)

composed of Men that have a right Taste of true Learning and good Sense. They are ill looked on by the Clergy, and represented a Set of Atheists, and as the Spawn of *Pomponatius*. But I found no such Thing; for I had the Honour to meet twice or thrice with a considerable Number of them during the short Stay that I made. There is a learned Lawyer, *Francisco Andria*, that is considered as one of the most inquisitive Men of the Assembly. There is also a Grandchild of the great *Alciat*, who is very curious as well as learned. Few Churchmen come into this; on the contrary, it is plain, that they dread it above all Things. Only one eminent Preacher, *Rinaldi*, Archdeacon of *Capua*, associates himself with them. He was once of the *Jesuits* Order, but left it; and as that served to give a good Character of him to me, so upon a long Conversation, I found a great many other Things that possessed me with a high Value for him. Some Physicians in *Naples* are brought under the Scandal of Atheism; and it is certain, that in *Italy*, Men of searching Understandings, who have no Idea of the Christian Religion, but that which they see received, are very naturally tempted to disbelieve it; for finding such notorious Cheats as appear in many Parts of their Religion, they are, upon that, induced to disbelieve the whole. The Preachings of the Monks in *Naples* are terrible Things. I saw a *Jesuit* go in a Sort of Procession, with a great Company about him, and calling all that he saw to follow him to a Place where a Mountebank was selling his Medicines, near whom he took his Stand, and entertained the People with a Sort of a Farce, till the Mountebank got him to give over, fearing his Action should grow tedious, and disperse the Company that was brought together. There are no Preachers or Men of Learning among the *Jesuits*. I was told they had not Men capable to teach their Schools, and were forced to hire Strangers. The Order of the Oratory hath not that Reputation in *Italy* as in *France*; and the little Learning that is among the Clergy in *Naples*, is among some few secular Priests.

The new Method of *Molinos* so much prevails in *Naples*, that it is believed he hath above twenty thousand Followers in this City. And since this hath made some Noise in the World, and yet is generally but little understood, I will give you some Account of him. He is a *Spanish* Priest, that seems to be but an ordinary Divine, and is certainly an ill Reasoner, when he undertakes to prove his Opinions. He hath wrote a Book, which is entitled, *Il Guida Spirituale*, which is an Abstract of mystical Divinity; the Substance of the whole is reduced to this, That in our Prayers, and other Devotions, the best Methods are to retire the Mind from all gross Images, and so to form an Act of Faith, and thereby to present ourselves before God; and then to sink into a Silence and Cessation of new Acts, and to let God act upon us, and so to follow his Conduct. This Way he prefers to the Multiplication of many Acts, and different Forms of Devotion; and he makes small Account of corporal Austerities, and reduces all the Exercises of Religion to this Simplicity of Mind. He thinks this not only fit to be proposed to such as live in religious Houses, but to secular Persons, and by this he hath proposed a great Reformation of Minds and Manners. He hath many Priests in *Italy*, but chiefly in *Naples*, that dispose those who confess to them to follow his Method. The *Jesuits* have set themselves much against this Conduct, as foreseeing that it will much weaken the Empire Superstition hath over the People, make Religion become a more plain Thing, and open a Door to Enthusiasm. They also pretend that his Conduct is factious and seditious, which may breed a Schism in the Church. And because he saith in some Places, that the Mind may attain such a Simplicity in its Acts, as that it may rise in some Devotions to God immediately, without contemplating the Humanity of Christ, they have accused him of laying aside the Doctrine of Christ's Humanity; though it is plain, that he speaks only of the Purity of single Acts: Upon these Motives they have set themselves much against *Molinos*; and also pretend, that some of his Disciples have infused

infused into their Penitents, that they may communicate as they find themselves disposed, without going first to Confession; which they thought weakened the Yoke whereby the Priests subdue the Consciences of the People to their Conduct; yet he was much supported both in *Naples* and in *Sicily*, and had many Friends and Followers at *Rome*. So the Jesuits, as a Provincial of the Order assured me, finding they could not ruin him, got a great King, that is now extremely in the Interests of their Order, to represent to the Pope the Danger of such Innovations.

It is certain, the Pope understands the Matter very little, and that he is possessed with a great Opinion of *Molinus's* Sanctity; yet upon the Complaints of some Cardinals, that seconded the Zeal of that King, he and some of his Followers were clapp'd into the Inquisition, where they have been now for some Months; but they are well used, which is believ'd to flow from the good Opinion the Pope hath of him, who saith still, that though he may have erred, yet he is certainly a good Man. Upon this Imprisonment, *Paquin* said a pleasant Thing. In one Week, one Man had been condemned to the Gallies for somewhat he had said; another had been hanged for somewhat he had writ; and *Molinus* was clapp'd in Prison, whose Doctrine consisted chiefly in this, That Men ought to bring their Minds to a State of inward Quietness, from which the Name of *Quietists* was given to all his Followers. The *Paquin* made upon all this was, *Si parliamo, in galere; si scrivemmo, impiccati; si stiamo in quiete, all' sant' officio: e che bisogna fare?* "If we speak, we are sent to the Gallies; if we write, we are hanged; if we stand quiet, we are clapp'd up in the Inquisition; what must we do then?" Yet his Followers at *Naples* believe he will come out of this Trial victorious.

The City of *Naples* is the best situated, lies in the best Climate, and is one of the noblest Cities of *Europe*; and if it is not above half as big as *Paris* or *London*, it hath much more Beauty than either of them. The Streets are large and broad, the Pavement is great and noble, the Stones being generally above a Foot square; and it is full of Palaces and great Buildings: The Town is well supplied by Markets, so that Provisions are fresh, and in great Plenty. The Wine is the best in *Europe*, and both the Fish and Flesh are extreme good. It is scarce ever cold in Winter, and there is a fresh Air comes both from the Sea and the Mountains in Summer. The Viceroy's Palace is no extraordinary Building, only the Stair-case is grand, but it is now very richly furnished with Pictures and Statues. There are in it some Statues of the *Egyptian* Deities, of Touchstone, that are of great Value. There are no great Antiquities here, only there is an ancient *Roman* Portico, that is very noble, before *St. Paul's* Church: but without the City, near the Church and Hospital of *St. Gennaro*, are the noble Catacombs; which because they were beyond any thing I saw in *Italy*, and to which the Catacombs of *Rome* are not to be compared, I shall describe them more particularly.

They are vast long Galleries cut out of the Rock, three Stories one above another: I was in two of them, but the Rock is fallen in the lowest, so that one cannot go into it, but I saw the Passage. These Galleries are generally about twenty Foot broad, and fifteen Foot high; so that they are noble spacious Places, not little and narrow, as the Catacombs at *Rome*, which are only three or four Foot broad, and five or six high. I was made to believe, that these Catacombs of *Naples* went into the Rock nine Miles, but for that I have it only by Report; yet if true, they may run towards *Puzzuolo*, and so may have been the Burial-places of the Towns on that Bay; but of this I have no Certainty. I walked indeed a great Way, and found Galleries going off on all Hands without End: And whereas in the *Roman* Catacombs three are not above three or four Rows of Niches, that are cut out in the Rock one over another, into which the dead Bodies were laid; here there are generally six or seven Rows of Niches, and they are both larger and higher: Some Niches are for Children, and in many Places there are in the Floors, as it

were, great Chests hewn out of the Rock, to lay the Bones of the dead, as they are dried, in them; but I could see no Marks either of a Cover for these Holes, which look'd like the Bellies of Chests, or of a Facing to shut up the Niches when a dead Body was laid in them; so that it seems they were monstrous, unwholesome, stinking Places, where some thousands of Bodies lay rotting, without any thing to shut in so loathsome a Sight, and so odious a Smell; for the Niches shew plainly, that the Bodies were laid in them wrapped in the dead Cloaths, being too low for Coffins. In some Places of the Rock, there is as it were a little Chapel hewn out in the Rock, going off from the common Gallery, and there are Niches all round about, but I saw no Marks of any Wall that shut in those Places; though I am apt to think these might be Burying-places for particular Families.

There is in some Places on the Walls and Arch old *Mosaic* Work, and some Painting; the Colours are fresh, and the Manner *Gothick*; which made me conclude, that this might have been done by the *Normans* about 600 Years ago, after they drove out the *Saracens*. In some Places there are Palm-trees painted, and Vines in other Places: The Freshness of the Colours shew these could not have been done while this Place was employed for Burying; for the Steams and Rottenness of the Air, occasioned by so much Corruption, must have dissolved both Plaister and Colours. In one Place there is a Man painted with a little Beard, and *Paulus* is written by his Head; there is another reaching him a Garland, and by his Head *Laud* is written; and this is repeated in another Place right against it. In another I found a Cross painted, and about the upper part of it these Letters, J.C.X.O. and on the lower part N I K A. are painted. A learned Antiquary agreed with me, that the Manner of the Painting and Characters did not seem to be above Six hundred Years old; but neither of us knew what to make of these Letters: The Lower seemed to relate to the last Word of the Vision, which it is said that *Constantine* saw with the Cross that appeared to him: But tho' the first two Letters might be for *Jesus*, it being ordinary in old Coins and Inscriptions to put a C for an S, and X stands for *Christ*, yet we knew not what to make of the O, unless it were for the *Greek* ω , and that the little Line in the Bosom of the *Tbeta* was worn out, and then it stands for *Theos*; and thus the whole Inscription is, *Jesus Christ God overcometh*.

Another Picture in the Wall had written over it *S^{ta} Johannes*, a clear Sign of a barbarous Age. In another Place there is a Picture high in the Wall, and three Pictures under it; that at Top had no Inscription; those below it had these Inscriptions, *S. Katharina*, *S. Agape*, and *S. Margarita*: These Letters are clearly modern; besides that, *Margaret* and *Katharine* are modern Names; and the Addition of *ta* a little above the S, were manifest Evidences that the highest Antiquity that can be ascribed to this Painting is Six hundred Years. I saw no more Painting, and I began to grow weary of the Darkness and the thick Air of the Place; so that I staid not above an Hour. This made me reflect more particularly on the Catacombs of *Rome* than I had done; I could imagine no Reason why so little mention is made of those of *Naples*, when there is so much said concerning those of *Rome*; or give myself other Account of the Matter, than that it being a Maxim to keep up the Reputation of the *Roman* Catacombs, as Repositories of Reliques of primitive Christians, it would much lessen their Credit, if it were thought that there were Catacombs far beyond them in all Respects, that yet cannot be supposed to have been the Work of the primitive Christians; and indeed, nothing seems more evident, than that these were common Burying-places of the ancient Heathens; one enters into them without the Walls of the Towns, according to the Laws of the Twelve Tables; and such are the Catacombs of *Rome* that I saw, which were those of *St. Agnes*, and *St. Sebastian*, the Entry into them being without the Town: This answers the Law, though in Effect they run under it; for in those Days, when they had not the Use of the Needle, they could

not know which Way they carried on those Works, when they were once so far engaged under Ground as to lose themselves. It is a vain Imagination, to dream the Christians in the primitive Times were able to carry on such a Work; for as this prodigious Digging into such Rocks must have been a very visible Thing, by the Mountains of Rubbish that must have been brought out, and by the vast Number of Hands employed in it; so it is absurd to think, that they could hold their Assemblies in the Midst of so much Corruption. I found the Steams so strong, that though I am as little subject to Vapours as most Men, yet I had all Day long, after I was in them, which was not an Hour, a Confusion, and as it were a Boiling in my Head, that disordered me extremely; and if there is now so much stagnating Air there, this must have been sensible in a more insufferable Manner, while there were vast Numbers of Bodies rotting in those Niches. But besides this Improbability from the Nature of the Thing, I called to mind a Passage of a Letter of *Cornelius*, that was Bishop of *Rome* after the Middle of the third Century, which is preserved by *Eusebius* in his sixth Book, in which we have the State of the Church of *Rome* at that Time. There were forty-six Presbyters, seven Deacons, as many Subdeacons, and Ninety-four of the inferior Orders of the Clergy among them: There were also fifteen hundred Widows, and other Poor maintained out of the publick Charities. It may be reasonably supposed, that the Numbers of the Christians were as great when this Epistle was writ, as at any Time before *Constantine*: For as this was writ at the End of that long Peace, which both *St. Cyprian* and *Lactantius* mention, of above an Hundred Years; so after there were such a Succession of Persecutions, and these came so thick, that we cannot think the Numbers of the Christians encreased much beyond what they were at this Time.

There are two Particulars in this State of the Clergy, upon which one may make a probable Estimate of the Christians; one is, their Poor, which were but fifteen hundred; now upon an exact Survey it will be found, that where the Poor are well look'd to, they are generally the thirtieth or fortieth Part of Mankind; and this may be believed to be the Proportion of the Poor among the Christians of that Age; for as their Charity was vigorous and tender, so we find *Celsus*, *Julian*, *Lucian*, *Porphyry*, and others, object this to the Christians of that Time, that their Charities to the Poor drew vast Numbers of the lower Sort among them, that they might be supplied by their Brethren. So that this being the State of the Christians, we may reckon the Poor the thirtieth Part; and the whole five and forty thousand: And I am the more inclined to think that this rises near the full Sum of their Numbers, by the other Character of the Amount of the Clergy; for as there were forty-six Presbyters, so there were ninety four of the inferior Orders, who were two more than double the Number of the Priests; and this was in a Time when the Care of Souls was more exactly looked after, than it has been in the more corrupted Ages, the Clergy having then really more Work on their Hands, the instructing their Catechumens, the visiting their Sick, and the comforting the Weak, Tasks that required so much Application, that in so vast a City as *Rome* in those Days, in which the Christians were scatter'd over the City, we make a Conjecture, that every Presbyter had perhaps about a thousand Souls committed to his Care; this rises to six and forty thousand, which comes very near the Sum gathered from the other Hint taken from their Poor: So that about fifty thousand is the highest to which we can reasonably raise the Number of the Christians of *Rome* in that Time; and of so many Persons, the old, the young, and the Women, make more than three fourth Parts; the Men therefore in Condition to work were not above twelve thousand, and by Consequence were in no Condition to undertake and carry on so vast a Work. If *Cornelius* in that Letter speaks of the Numbers of the Christians in excessive Terms, and if *Tertullian* in his Apology hath also set out the Numbers of the Christians of his Time in a very high

Strain, that is to be ascribed to a pompous Eloquence; which disposeth People to magnify their own Party; and we must allow a good deal to an Hyperbole. It is true, it is not so clear when those vast Cavities were dug out of the Rocks: We know that when the Laws of the *Twelve Tables* were made, Sepulture was then in Use; and *Rome* being grown to a vast Bigness, no Doubt they had Repositories for their Dead; so that since none of the *Roman* Authors mention any such Work, it may not be unreasonable to suppose these Vaults had been wrought and cut out from the first Beginnings of the City, and so later Authors had no Occasion to take Notice of it. It is also certain, that though Burning came to be in Use among the *Romans*, yet they returned back to their first Custom of burying Bodies long before *Constantine's* Time; so it was not the Christian Religion that produced this Change. All our modern Writers take it for granted, that it happen'd in the Times of the *Antonines*; yet there being no Law made concerning it, and no Mention in an Age full of Writers, of any Orders that were given for Burying-places, *Velferus's* Opinion seems more probable, that the Custom of Burning wore out by Degrees; and since we are sure that they once buried, it is more natural to think, that the Slaves and the meaner Sort of People were still buried, that being a less expensive and more simple Way than burning, which was both pompous and chargeable; and if there were already Burying-places prepared, it is much easier to imagine how the Custom of Burying grew universal without any Law made to enforce it. I could not for some Time find out upon what Grounds the modern Criticks take it for granted, that Burying began in the Times of the *Antonines*, till I had the Happiness to talk with the learned *Gronovius*, who seems to be such a Master of all ancient Learning, as if he had the Authors lying always open before him: He told me that it was certain the Change from Burning to Burying was not made by the Christian Emperors: For *Macrobius* says, in plain Terms, that the Custom of burning Bodies was quite worn out in that Age; which is a clear Intimation, that it was not laid aside so late as by *Constantine*; and as there was no Law made on that Head, so he and the succeeding Emperors gave such Toleration to Paganism, that it is not to be imagined, there was any Order given against Burning; so that it is clear, the Heathens changed it of their own Accord; otherways we should have found that among the Complaints made of the Grievances under which they lay from the Christians. But it is more difficult to fix the Time when this Change was made. *Gronovius* shewed me a Passage of *Pblegon's*, that mentions Bodies that were laid in the Ground; yet he did not build on that, for it may have Relation to the Customs of Burying that might be elsewhere; and so *Petronius* gives the Account of the Burial of the *Ephesian* Matron's Husband: But he made it apparent to me, that Burying was commonly practised under *Commodus*; for *Xiphilius* tells us, that in *Pertinax's* Time, the Friends of those whom *Commodus* had ordered to be put to Death, dug up their Bodies, some bringing out only some Parts of them, and others raising their entire Bodies. The same Author says, that *Pertinax* buried *Commodus's* Body, and so saved it from the Rage of the People; and here is a positive Evidence that Burying was the common Practice of that Time.

The same learned Person has since suggested to my two Passages of *Festus Pompeius*, that seem to determine this whole Matter; and tell us by what Names those Catacombs were known in the *Roman* time, whereabouts they were, and what Sort of Persons were laid in them: We have also the Designation by which the Bearers were known, and the Time when they carried out the dead Bodies: and it appears particularly by them, that in the Repositories, of which that Author makes Mention, there were no Care taken to preserve the Bodies that were laid in them from Rotting. His Words are: *Puticulos antiquissimum genus sepulture appellatos, quod ibi in puteis sepelirentur homines; qualis fuerit locus, quo nunc cadavera projici solent extra portam Esquilinam: quæ, quod ibi putescerent, inde prius appellatos existimat Puticulos* *Ælius*

Ælius Gallus, qui ait antiqui moris fuisse, ut patres-familias in locum publicum extra oppidum mancipia vilia projicerent, atque ita projecta, quod ibi ea putrescerent, nomen esse factum Puticuli. The other Passage runs thus: *Vespæ & vespillones dicuntur, qui funerandis corporibus officium gerunt, non à minutis illis volucris, sed quia vespertino tempore eos efferunt, qui funebri pompâ duci propter inopiam nequeunt.* All this agrees so exactly, that it will not be hard to persuade one, that those Burying-places, now graced with the pompous Title of Catacombs, are no other than the *Puticuli* of *Festus Pompeius*, where the meanest Sort of the *Roman* Slaves were laid, and without any farther Care about them, were left to rot.

It is very probable, that as we see some of the *Roman* Families continued to bury their Dead, even when Burning was the more common Custom; so perhaps others continued after this to burn their Dead, this Thing being indifferent, and no Law made about it; and therefore it was objected to the Christians after that Time, that they abhorred the Custom of burning the Bodies of the Dead, which is mentioned by *Minutius Felix*; but this, or any other Evidences that may be brought from Medals after this Time, will only prove that some were burnt, and that the Christians practised burying universally, as expressing their Belief of the Resurrection; whereas the Heathens held the Thing indifferent. It is also clear, from many genuine Inscriptions that have been found in the Catacombs, bearing the Dates of the Consuls, that these were the common Burial-places of all the Christians of the fourth and fifth Century; for I do not remember that there is any Date ancients; and yet not one of the Writers of those Ages speak of them as the Work of the Primitive Christians: They speak indeed of the Burial-places of the Martyrs; but that will prove no more, but that the Christians might have their Quarters and their Walks in those common Burial-places, where they laid their Dead, and which might have been known among them, though it is not likely that they would, in Times of Persecution, make such Inscriptions as might expose the Bodies of their dead Friends to the Rage of their Enemies: And the spurious Acts of some Saints and Martyrs are of too little Credit to give any Support to the common Opinion. *Damasus's* Poetry is of no better Authority; and though those Ages were inclined enough to give Credit to Fables, yet it seems this of the Catacombs, having been the Work of the Primitive Christians, was too gross a Thing to be so early imposed on the World: And this Silence, in a superstitious Age, has much Force in it, for so vast a Work must have been well known to all the *Romans*. It were easy to carry this much farther, and to shew that the *Bass Relieves* that have been found in some of those Catacombs, have Nothing of the Beauty of the ancient *Roman* Time.

This is also discernible in many Inscriptions that are rather *Gothick* than *Roman*; and there are so many Inscriptions relating to Fables, that it is plain these were of later Times; and we see by *St. Jerome*, that the Monks began even in his Time to drive a Trade of Reliques; no Wonder then, that to raise the Credit of such a Heap as was never to be exhausted, they made some miserable Sculptures and Inscriptions, and perhaps shut up the Entries with Care and Secrecy, intending to open them upon some Dream, or other Artifice, to give them the more Reputation; which was often practised, to the drawing much Wealth and Devotion even to some single Relique; and a few being in this Secret, either those died, or by the Revolutions that happen'd in *Rome*, might have been dispersed before they made the Discovery: And thus the Knowledge of these Places was lost, and came to be discover'd by Accident in the last Age, and ever since supplied with an inexhaustible Magazine of Bones, which are no other than the Bones of the Pagan *Romans*, though they are now sent over the World to feed a Superstition that is as blind as it proves expensive. And thus the Bones of the *Roman* Slaves, or at least those of the meaner Sort, are set in Silver and Gold, and entertain the Superstition of those who are willing to be deceived, as well as those who seek to deceive the World. But because it cannot be

pretended there was such a Number of Christians at *Naples* as could have wrought the Catacombs; and if it had been thought that those were the common Burial-places of the Heathens, that might have induced the World to think that the *Roman* Catacombs were so too; therefore no Care was taken to examine these.

I will not enter upon a Description of that which is so well known, as *Mont Vesuvio*: It had roared so loud about a Month before I came to *Naples*, that the Inhabitants could hardly sleep in the Nights, and some old Houses were so shaken by the Convulsion of the Hill, that they fell to the Ground; and the great Convulsion above fifty Years ago was so terrible, that there was no small Fear in *Naples*, for though it lies at the Distance of seven Miles, they are very timorous, but now the Storm was choaked under Ground; for tho' it smok'd much more than ordinary, yet there was no Eruption. It was indeed smoaking, not only in the Mouth of the little Mount, formed within the great Waste that the Fire hath made, but along all the Bottom that is between the outward Mouth of this Mountain (which is four Miles in Compass) and that inward Hill. When one sees the Mouth of this Fire, and so great a Part of the Hill, covered some Feet deep with Ashes and Stones of metallick Composition, that the Fire throws out, he cannot but stand amazed, and wonder what can be the Fewel of so lasting a Burning, that hath calcined so much Matter, and spewed out such prodigious Quantities. It is plain, there are vast Veins of Sulphur all along in this Soil, and it seems in this Mountain they run thro' some Mines and Rocks; and as their slow Consumption raises a perpetual Smoke, so when the Air within is so much rarified that it must open itself, it throws up those Masses of Metal and Rock that are shut in it. But how this Fire draws Air to nourish its Flame, is not so easily apprehended, unless there is either a Conveyance of Air under-ground, by some undiscover'd Vacuity, or a more insensible Transmission of Air through the Pores of the Earth. The Heat of this Hill operates so much upon the Soil that lies towards the Foot of it, that it produces the richest Wine about *Naples*, and it also purifieth the Air so much, that the Village at the Bottom is thought the best thereabouts; so that many come thither from *Naples* for their Health. There is a Hill in *Ischia*, an Island not far from *Naples*, which sometimes spews out Fire. On the other Side of *Naples*, to the West, one passeth through the Cave that pierceth the *Pausalippe*, and is four hundred and forty Paces long; for I walked it on Foot. It is twenty Foot broad, and at first forty, afterwards but twenty Foot high. The Stone cut here is good for Building; so that as this opened the Way from *Puzzuolo* to *Naples*, it was also a Quarry for the Building of the Town. All the Way one discovers a strange Boiling within the Ground; for a little beyond this Grott of *Pausalippo*, as we come near the Lake of *Aniano*, there is on the one Hand a Bath, occasioned by a Steam that rises so hot out of the Ground, that as soon as one goes a little into it, he finds himself in a Sweat, which is very proper for some Diseases, especially that which derives its Name from *Naples*. And about twenty Paces from thence, there is another little Grott, that sends out so poisonous a Steam, that it puts out a Candle as soon as it comes near it, and infallibly killeth any living Creature within a Minute; for in half that Time a Dog, upon which the Experiment is commonly tried, (the Grott from thence called *Grotto di Cane*) fell into a Convulsion. From that one goes to see the poor Remains of *Puzzuolo*, and of that Bay, once a continued Tract of Towns, being the Retreat of the *Romans* during the Heats of the Summer. All the Rarities here have been so often and so copiously described, that I am sensible I can add Nothing to what is so well known. I will say Nothing of the Amphitheatre, or of *Cicero* and *Virgil's* Houses, for which there is nothing but dubious Tradition. They are ancient brick Buildings in *Roman* Taste, and the Vaults of *Virgil's* House are still entire. The *Sulfatara* is a surprizing Thing; here is a Bottom, out of which the Force of the Fire, that breaks forth still in many Places,

ces, in a thick Smoke full of Brimstone, threw up about an Hundred and Fifty Years ago a vast Quantity of Earth, which was carried about three Miles thence, and formed the Hill called *Monte Novo*, upon the Ruins of a Town overwhelmed by this Eruption, which is of a very considerable Height. They told me, that there was before that Time a Channel that went from the Bay into the Lake of *Averno*, of which one sees the Beginnings in the Bay, at some Distance from the Shore; it carrieth still the Name of *Julio's Mole*, and is believed to have been made by *Julius Caesar*: But by the Swelling of the Ground, upon the Eruption of the *Sulfatara*, this Passage is stopp'd, and the *Averno* is become now fresh Water. It is eighteen Fathom deep. On the Side of it is that amazing Cave, where the *Sybil* is said to have given out her Inspirations: The hewing it out of the Rock appears to have been a prodigious Work; for the Rock is one of the hardest Stones in the World, and the Cave goeth in seven hundred Foot long, twenty Foot broad, and, as I guess, eighteen Foot high: and from the End of this great Gallery, there is a narrow Passage of three Foot broad, two Hundred foot long, and seven high, to a little Apartment, in a constant sloping Descent from the great Cave. Here are three little Rooms; in one of them there are some Remains of an old *Mosaick*, with which the Walls and Roof were laid over: There is also a Spring of Water, and a Bath, in which it is supposed the *Sybil* bathed herself; and from this it is said, there runs a Cave all along to *Cuma*, which is three long Miles, but the Passage is now choak'd by the falling in of the Rock in several Places. This Piece of Work amazed me. I did not much mind the popular Opinion that is received here, that all this was done by the Devil. The Marks of the Chissel in all Parts of the Rock shew, that it is not a Work of Nature. Certainly they had many Hands at their Command, who set about it; and it seems to have been wrought with no other Design, but to subdue the People more entirely to the Conduct of the Priests who managed this Imposture; so busy hath the Ambition and Fraud of Priests been in all Ages, and in all corrupt Religions. But of all the Scenes of noble Objects in the Bay of *Puzzuolo*, the Remains of *Caligula's* Bridge are most amazing; for there are yet standing eight or ten of the Pillars, and of some of the Arches the half is yet entire. I had not a Line with me to examine the Depth of the Water, where the furthest Pillar is built; but my Waterman assured me, it was fifty Cubits. I have since instructed one going thither in this Particular, and have received this Account from him: That he had taken Care to plum the Water at the furthest Pillar on the *Puzzuolo* Side, and found it seven Fathom and a half deep; but he adds, that the Watermen assured him, that on the other Side before *Baia*, the Water was twenty-six Fathom deep: But as he had not a Plummet long enough to try that, so he believed a good deal ought to be abated; for the Watermen had also assured him, that the Water was ten Fathom deep on the *Puzzuolo* Side; and by this Measure one may suppose that the Water is twenty Fathom deep on the other Side: So that it is one of the most astonishing Things one can think of, that Pillars of Brick could have been built in such a Depth of Water. It is a noble Monument of that profuse and extravagant Expence of a brutal Tyrant, who made one of the vastest Bridges that ever was attempted, over three or four Miles of Sea, merely to sacrifice so great a Treasure to his Vanity. As for *Agrippina's* Tomb, it is no great Matter, only the Bas-relieves are yet entire. The marvellous Fish-pond is a great Basin of Water, wrought like a huge Temple, standing upon eight and forty great Pillars, all hew'd out of the Rock, and laid over with four Crufts of the old Plaster, which is now as hard as Stone. This is believ'd to be a Work of *Nero's*. And about a Quarter of a Mile from thence, there is another vast Work, which leads into a Rock, but at the Entrance there is a noble Portico built of Pillars of Brick; and as one enters he finds a great many regular Rooms hewed out of the Rock, and covered over with Plaster, which is

still entire, and so white, that one can hardly think that it hath not been washed over since first made. There are a vast Number of those Rooms; they are said to be a Hundred, from whence this Cave derives the Name of *Centum Camerae*, i. e. *Hundred Chambers*. This hath been as expensive a Work as it is useless. It is ascribed to *Nero*, and they say here he kept his Prisoners. But there is nothing in all this Bay that is both so curious and so useful as the Baths, which seem to flow from the same Cause with these Eruptions in the *Vesuvio* and *Sulfatara*, and the Grottos formerly mentioned, that as this Heat makes some Fountains boiling hot, so it sends up a Steam through the Rock, that doth not break through the Pores of the Stone where it is hard; but where the Rock is soft and spongy, the Steams come through with so melting a Heat, that a Man is very soon dissolved, as it were in Sweat: But if he stoops low in the Passages that are cut in the Rock, he finds no Heat, because there the Rock is hard. Those Steams, as they are hot, so they are also impregnated with such Minerals as they find in their Way through the Rock; and near this Bath there are Galleries hewed out, and faced with a Building, in which there are, as it were, Bedsteads made in the Walls, upon which those, that come to sweat for their Health, lay their Quilts and Bed-clothes, and so come regularly out of their Sweats.

It is certain, that a Man can no where pass a Day, both with so much Pleasure, and with such Advantage, as he finds in his Journey to *Puzzuolo*, and the Bay. But tho' anciently this was all so well built, so thoroughly peopled, and so beautifully laid out; yet one sees no where more visibly what a Change Time brings upon all Places; for *Naples* hath so entirely eat out this Place, and drawn off its Inhabitants, that as *Puzzuolo* itself is but a small Village, so there is now no other in this Bay, which was anciently built almost all round; for there are seven big Towns upon it. I cannot pass by that noble Remnant of the *Via Appia*, that runs along thirty Miles of the Road between *Naples* and *Rome*, without making some Mention of it. This Highway is twelve Foot broad, all made of huge Stones, most of them blue, and they generally a Foot and half large on all Sides. The Strength of this Causeway appears from its long Duration; for it hath lasted above eighteen hundred Years, and is in most Places, for several Miles together, as entire as when first made; and the Mending such Places as have been worn out by Time, shews a visible Difference between the ancient and the modern Way of Paving. One Thing seems strange, that the Road is level with the Earth on both Sides; whereas so much Weight, as those Stones carry, should have sunk the Ground under them by its Pressure. Besides, that the Earth, especially in low Grounds, receives a constant Increase by the Dust which the Winds or Brooks carry down from the Hills; both which Reasons should make a more sensible Difference between those Roads and the Soil on both Sides; and this makes me apt to believe, that anciently they were a little raised above the Level of the Ground, and that a Course of so many Ages hath now brought them to an Equality. Those Roads were chiefly made for Foot Passengers; for as Nothing is more pleasant than to walk along them, so Nothing is more inconvenient for Horses and all Sorts of Carriage; and indeed Mules are the only Beasts of Burthen that can hold out long in this Road, which beats all Horses after they have gone it a little while. There are several Remains of *Roman* Antiquities at the Mole of *Cajeta*; but the Isle of *Caprea*, now called *Crapa*, which is a little Way to Sea from *Naples*, gave me a strange Idea of *Tiberius's* Reign; since it is hard to tell, whether it was more extraordinary, to see a Prince abandon the best Seats and Palaces of *Italy*, and shut himself up in a little Island, in which I was told there was a Tradition of seven small Palaces that he built in it; or to see so vast a Body, as the *Roman* Empire, governed by such a tyrannical Prince, at such a Distance from the chief Seat, so that all might have been reversed long before the News of it could have reached him. And as there is nothing more wonderful in Story, than

than to see so vast a State, that had so great a Sense of Liberty, subdued by so brutal, and so voluptuous a Man as *Anthony*, and so raw a Youth as *Augustus*; so the Wonder is much improved, when we see a Prince, at an Hundred and Fifty Miles Distance, shut up in an Island, carry the Reins of so great a Body in his Hand, and turn it which Way he pleased.

But I come now to *Rome*, which as it was once the Empress of the World in a Succession of many Ages, so in it there are at present more curious Things to entertain the Attention of a Traveller, than in any other Place in *Europe*. On the Side of *Tuscany* the Entry into *Rome* is very surprizing to Strangers; coming along for a great many Miles upon the Remains of the *Via Flaminia*, which is not indeed so entire as the *Via Appia*; yet there is enough left to raise a just Idea of the *Roman* Greatness, which laid such Causeways all over *Italy*. And within the Gate of the *Porta di Populo* there is a noble Obelisk, a vast Fountain, two fine little Churches, like two Twins, resembling each other, as well as placed one near another, and on several Hands one sees a long Visto of Streets. There is no City in our Part of the World, where the Churches, Convents, and Palaces, are so noble, and where the other Buildings are so mean; which, indeed, discover very visibly the Misery under which the *Romans* groan. The Churches of *Rome* are so well known, that I will not venture on any Description of them; and indeed I had too transient a View, to make it with that Degree of Exactness which the Subject requires. *St. Peter's* alone would make a long Letter, not to say a Book: Its Length, Height, and Breadth, are all so exactly proportioned, and the Eye is so equally possess'd with these, that the Whole, upon the first View, appears not so vast as it is found to be upon a more particular Attention; and as the four Pillars, on which the Cupola rises, are of such a prodigious Bigness, that one would think they were strong enough to bear any Superstructure; yet when one climbs to the Top of that vast Height, one cannot help wondering what Foundation can bear so vast a Weight; for as the Church is of a great Height, so the Cupola rises four hundred and fifteen large Steps above the Roof of the Church. In the Height of the Concave of this Cupola there is a Representation, that though it can hardly be seen from the Floor below, and so it doth not perhaps give much Scandal, yet it is a gross Indication of the Idolatry of that Church; for the Divinity is there pictured as an ancient Man compassed about with Angels. I will say nothing of the great Altar, of the Chair of *St. Peter*, of the great Tombs of *Paul III.* *Urban VIII.* and *Alexander VII.* nor of the vast Vaults under this Church, and the Remains of Antiquity that are reserved in them; or undertake a Description of the adjoining Palace, where the Painting of the *Corridori*, and of many of the Rooms by *Raphael* and *Michael Angelo* are so rich, that one is sorry to see a Work of that Value laid on *Fresco*, and which must by Consequence wear too soon, as in several Places it is almost quite lost already. I could not but observe in the *Sala Reggia*, that is before the famous Chapel of *Sisto V.* and that is all painted in *Fresco*, one Corner that represents the Murder of the renowned Admiral *Chastillon*, and that hath under it these Words, *Rex Colinii necem probat*. The vast Length of the Gallery on one Side, and of the Library on another, surprize one. The Gardens have many Statues of excessive Value, and some good Fountains; but are ill maintain'd both here and in the Palace of the *Quirinal*. And, indeed, in most of the Palaces of *Rome*, if there were but a small Sum laid out to keep all in good Condition, that is brought together at so vast a Charge, they would make another Sort of Show, and be looked at with much more Pleasure. In the Apartments of *Rome*, there are a great many Things that offend the Sight; the Doors are generally mean, and the Locks meaner, except in the Palace of Prince *Borghese*; where, as there is the vastest Collection of the best Pieces, and of the greatest Masters that are in all *Europe*; so the Doors and Locks give not that Distaste

to the Eye that one finds elsewhere. The Flooring of the Palace is all of Brick, which is so very mean, that one sees the Disproportion between the Floors and the rest of the Room, not without a sensible Dislike. It is true, they say their Air is so cold and moist in Winter, that they cannot pave with Marble; and the Heat is sometimes so great in Summer, that a Flooring of Wood would crack with Heat, as well as be eat up by Vermin that would nest in it: But if they kept in their great Palaces Servants to wash their Floors, with that Care that is used in *Holland*, where the Air is moister, and the Climate more productive of Vermin, they would not find such Effects from wooden Floors as they pretend to fear. In a Word, there are none that lay out so much Wealth all at once, as the *Italians* upon Building and Finishing of their Palaces and Gardens, and afterwards bestow so little on the Preserving of them. Another Thing I observed in their Palaces; there is indeed a great Series of noble Rooms one within another, of which their Apartments are composed; but I did not find, at the End of the Apartments, where the Bed-chamber is, such a Disposition of Rooms for Back-stairs, Dressing-rooms, Closets, Servants-rooms, and other Conveniences as are necessary for accommodating the Apartment. It is true, this is not so necessary for an Apartment of State, in which Magnificence is more consider'd than Convenience; but I found the same Want in those in which they lodged; so that, notwithstanding all the Riches of their Palaces, it cannot be said that they are well lodged in them; and their Gardens are less understood, and worse kept than their Palaces. It is true, the *Villa Borghese* ought to be excepted, where, as there is a prodigious Collection of Bas Relieves, with which the Walls are covered over, that are of a vast Value; so the Statues within, of which some are of Porphyry, and others of Touchstone, are amazing Things. The whole Ground of this Park, which is three Miles in Compass, and in which there are six or seven Lodges, are laid out so sweetly, that I thought I was in an *English* Park when I walked over it. The *Villa Pamphilia* is better situated, upon a higher Ground, hath more Water-works, and twice the Extent of the other in Soil; but neither the House nor Statues approach to the Riches of the other, nor are the Grounds so well laid out, or kept: But for the Furniture of the Palaces of *Rome*, the publick Apartments are all covered over with Pictures; and as for those Apartments in which they lodge, they are generally furnish'd with red Velvet or Damask, with a broad golden Galloon at every Breadth of the Stuff, and a gold Fringe at Top and Bottom; but there is very little Tapestry in *Italy*.

I have been carried into all this Digression, from the general View that I was giving you of the Pope's Palace. I named one Part of it, which will engage me in a new Digression, as it well deserves, that is, the Library of the *Vatican*. The Case is great, but what is lodged in it much greater; for here is a Collection of Books that fill a Man's Eye: There is first a great Hall, and at the End there runs out on both Sides two Galleries of so vast a Length, that though the Half of them is already furnished with Books, yet one would hope, that there is Room left for more new Books than the World will ever produce. The *Heidelberg* Library stands by itself, and fills one Side of the Gallery, as the Duke of *Urbino's* Library of Manuscripts fills the other. But though these last are very fair and beautiful, yet they are not of such Antiquity as those of *Heidelberg*. When it appear'd that I came from *England*, King *Henry VIII's* Book of the Seven Sacraments, with an Inscription upon it with his own Hand to Pope *Leo X.* was shewed me, together with a Collection of some Letters that he writ to *Anna Bullen*, of which some are in *English* and some in *French*. I that knew his Hand well, saw clearly that they were no Forgeries. There are not many *Latin* Manuscripts of great Antiquity in this Library; some few of *Virgil's* I saw writ in Capitals.

But that which took up Half of one Day that I

spent at once in this Place, related to the Dispute on Foot between Mr. *Schelstrat* the Library-keeper and Mr. *Maimbourg*, concerning the Council of *Constance*. The two Points in Debate, are the Words of the Decree made in the fourth Session, and the Pope's Confirmation. In the fourth Session, according to the *French Manuscripts*, a Decree was made, subjecting the Pope, and all other Persons whatsoever, to the Authority of the Council, and to the Decrees it was to make, and to the Reformation it intended to establish both in the Head and the Members; which, as it implies that the Head was corrupted, and needed to be reformed, so it sets the Council so directly above the Pope, that this Session, being confirmed by the Pope, puts those who assert the Pope's Infallibility to no small Straits: For if Pope *Martin*, that approved this Decree, was infallible, then this Decree is good still; and if he was not infallible, no other Pope was infallible. To all this *Schelstrat* answers from his Manuscripts, that the Words of a Reformation in Head and Members are not in the Decree of that Session; and he did shew me several Manuscripts, of which two were evidently writ during the Sitting of the Council, and were not at all dash'd, in which these Words were not. I know the Hand and Way of Writing of that Age, too well to be easily mistaken in my Judgment concerning those Manuscripts: But if those Words are wanting, there are other Words in them that seem to be much stronger for the Superiority of the Council above that Pope; for it is decreed, that Popes and all other Persons were bound to submit to the Decisions of the Council, as to Faith; which Words are not in the *French Manuscripts*; upon this I told Mr. *Schelstrat*, that I thought the Words in these Manuscripts were stronger than the other, since the Word Reformation, as it was used in the Time of that Council, belonged chiefly to the correcting of Abuses, it being often applied to the Regulations that were made in the monastick Orders, when they were brought to a more exact Observation of the Rules of their Order: So though the Council had decreed a Reformation both of Head and Members, I do not see that this would import more, than that the Papacy had fallen into some Disorders that needed a Reformation; and this is not denied even by those who assert the Pope's Infallibility. But a Submission to Points of Faith, that is expressly asserted in the *Roman Manuscripts*, is a much more positive Evidence against the Pope's Infallibility; and the Word Faith is not capable of so large a Sense, as may be ascribed to Reformation. But this Difference in so great a Point, between Manuscripts concerning so late a Transaction, gave me Occasion to reflect on the vast Uncertainty of Tradition especially in Matters that are at a great Distance from us; when those that were so lately transacted, are so differently represented in Manuscripts, and in which both those of *Paris* and *Rome* seem to carry all possible Evidences of Sincerity. As for the Pope's Confirmation of that Decree, it is true, by a general Bull Pope *Martin* confirmed the Council of *Constance* to such a Period; but besides that, he made a particular Bull, as *Schelstrat* assured me, in which he enumerated all the Decrees that he confirmed, and among those, this Decree concerning the Superiority of the Council is not named. This seemed to be of more Importance, and therefore I desired to see the Original of the Bull, for there seem to be just Reasons to apprehend a Forgery here: He promised to do his Endeavour, though he told me that would not be easy, for the Bulls were strictly kept; and the next Day when I came hoping to see it, I could not be admitted; but he assured me, that, if that had not been the last Day of my Stay at *Rome*, he would have procured a Warrant for my seeing the Original: So this is all I can say as to the Authenticity of that Bull. But supposing it to be genuine, I could not agree with Mr. *Schelstrat*, that the general Bull of Confirmation ought to be limited to the other that enumerates the particular Decrees: For since that particular Bull was never discovered till he found it out, it seems it was secretly made, and did not pass according to the Forms of the Consistory, and was a fraudulent Thing, of

which no Noise was to be made in that Age; and therefore in all the Dispute that followed in the Council of *Basil*, between the Pope and the Council upon this Point, no Mention was ever made of it by either Side; and thus it can have no Force, unless it be to discover the Artifices and Fraud of that Court: That at the same Time in which the Necessity of their Affairs obliged the Pope to confirm the Decrees of the Council, he contrived a secret Bull, which in another Age might be made use of to weaken the Authority of the general Confirmation that he gave; and therefore a Bull that doth not pass in due Form, and is not promulgated, is of no Authority, and so this pretended Bull cannot limit the other Bull. I will not give you here a large Account of the learned Men at *Rome*; *Bellori* is deservedly famous for his Knowledge of the *Greek* and *Egyptian* Antiquities, and for all that belongs to the Mythologies and Superstitions of the Heathens, and hath a Closet richly furnished with such Things. *Fabretti* is justly celebrated for his understanding the old *Roman* Architecture and Fabricks. *Padre Fabri* is the chief Honour of the *Jesuits College*, and is much above the common Rate both for Philosophy, Mathematicks, and Church History. And he to whom I was the most obliged, Abbot *Nazari*, hath so general a View of the several Parts of Learning, though he has chiefly applied himself to Philosophy and Mathematicks, and is a Man of so engaging a Civility, and used me in so particular a Manner, that I owe him, as well as those others whom I have mentioned, and whom I had the Honour to see, all the Acknowledgments of Esteem and Gratitude that I can possibly make them.

One sees in Cardinal *Estrée* all the Advantages of a high Birth, great Parts, and a generous Civility, and a Measure of Knowledge far above what can be expected from a Person of his Rank: But as he gave a noble Protection to one of the most learned Men that this Age hath produced, Mr. *Launoy*, who lived many Years with him, so it is visible, that he made a great Progress by the Conversation of so extraordinary a Person; and as for theological Learning, there is now none of the College equal to him. Cardinal *Howard* is too well known in *England* to need a Character from me: The Elevation of his Condition hath not in the least changed him; he hath all the Sweetness of Temper that we saw in him in *England*, and he retains the unaffected Humility of a Friar, amidst all the Dignity of the Purple. And as he shews all the generous Concern for his Countrymen that they can expect from him, I met with so much of it, in so many obliging Marks of his Goodness, that went far beyond a common Civility, that I cannot enough acknowledge it. I was told, the Pope's Confessor was a very extraordinary Man for oriental Learning, which is but little known in *Rome*. He is a Master of the *Arabick* Tongue, and hath writ, as Abbot *Nazari* told me, the most learned Book against the *Mahometan* Religion, that the World hath yet seen, but is not yet printed: His Learning is not in Vogue: and School Divinity, and casuistical Learning, being that for which Divines are most esteemed, he whose Studies lead him another Way is not so much valued as he ought: and perhaps the small Account that the Pope makes of learned Men turns on him; for it is certain, that this is a Reign in which true Knowledge is very little encourag'd. Upon the general Contempt that all the *Romans* have for the present Pontificate, one made a pleasant Reflection to me. He said, those Popes that intended to raise their Families, as they saw the Censure this brought upon them, studied to lessen it by other Things that might soften the Spirits of the People. No Man did more for finishing *St. Peter's* and the Library, and for furnishing *Rome* with Water, than Pope *Paul V.* though at the same time he did not forget his Family. And though other Popes, that have raised great Families, have not done this to so eminent a Degree, yet there are many Remains of their Magnificence: whereas those Popes that have not raised Families, have thought that alone was enough to maintain their Reputation, and so have not done much, either to recommend their Government to their Subjects,

jects, or their Reign to Posterity : And it is plain, that the present Pope takes no great Care of this. His Life hath been certainly very innocent, and free from all publick Scandal ; and there is at present, a Regularity in *Rome*, that deserves great Commendation ; for publick Vices are not to be seen there. His personal Sobriety is also singular. One assured me, that the Expence of his Table did not amount to a Crown a Day ; though this is short of *Sisto V.* who gave Order to his Steward, never to exceed five and twenty Bajokes, that is, eighteen-pence a Day for his Diet. The Pope is very careful of his Health, and never exposes it ; for, upon the least Disorder, he shuts himself up in his Chamber, and often keeps his Bed, for the least Indisposition, many Days : But his Government is severe, and his Subjects are ruined.

And here one Thing comes into my Mind, which perhaps is not ill grounded, that the Poverty of a Nation not only dispeoples it, by driving the People out of it, but by weakening the natural Fertility of the Subjects ; for Men and Women well cloathed, and well fed, that are not exhausted with perpetual Labour, and with the Anxieties that Want brings with it, must be much more lively than those that are distress'd ; so it is very likely that they must be much more disposed to propagate than the other. And this appeared evident to me, when I compared the Fruitfulness of *Geneva* and *Switzerland* with the Barrenness over all *Italy*. I saw two extraordinary Instances of the copious Productions of *Geneva*. Mr. *Tronchin*, Professor of Divinity, and Father to the judicious and worthy Professor of the same Name that is now there, died at the Age of seventy six Years, and had an hundred and fifteen Persons all alive, that either descended from him, or by Marriage with those that descended from him, called him Father. And Mr. *Calendrin*, a pious and laborious Preacher of that Town, that is descended from the Family of the *Calendrinis*, who, receiving the Reformation about an hundred and fifty Years ago, left *Lucca*, their native City, with the *Turretini*, the *Diodati*, and the *Bourlamachi*, and some others, came and settled at *Geneva* : He is now but seven and forty Years old, and yet he hath an hundred and five Persons that are descended of his Brothers and Sisters, or married to them ; so that if he liveth but to eighty, and the Family multiplieth as it hath done, he may see some hundreds that will be in the same Relation to him ; but such Things as these are not found in *Italy*.

There is nothing that delights a Stranger more in *Rome*, than to see the fine Fountains of Water, that are almost in all the Corners of it. That old Aqueduct, which *Paul V.* restored, comes from a Collection of Sources five and thirty Miles distant, that runs all the Way upon an Aqueduct in a Canal that is vaulted. It breaketh out in five several Fountains, of which some yield a Discharge of Water about a Foot square. That of *Sixtus V.* the great Fountain of *Aqua Travi*, that hath yet no Decoration, but dischargeth a prodigious Quantity of Water. The glorious Fountain in the *Piazza Navona*, that hath an Air of Greatness in it that surprizeth : The Fountain in the *Piazza de Spagna*, those before *St. Peter's*, and the *Palazzo Farnese*, with many others, furnish *Rome* so plentifully, that almost every private House hath a Fountain. All these, I say, are noble Decorations, that carry Usefulness with them that cannot be enough commended, and give a much greater Idea of those who have taken such Care to supply this City with one of the chief Pleasures and Conveniences of Life, than of others, who have laid out Millions merely to bring Quantities of Water to give the Eye a little Diversion.

There is an universal Civility reigns among all Sorts of People at *Rome*, which, in a great Measure, flows from their Government ; for every Man being capable of all the Advancements of that State, since a simple Ecclesiastick may become one of the *Monsignori*, may thence come to be a Cardinal, and so be chosen Pope ; this makes every Man behave himself towards all other Persons with Exactness of Respect ; for no Man knows what any other may grow to. But this makes Profes-

sions of Esteem and Kindness go so promiscuously to all Sorts of Persons, that one ought not to build much on them. The Conversation of *Rome* is generally upon News ; for though there is no News printed, yet in the several Anti-chambers of the Cardinals, one is sure to hear all the News of *Europe*, together with many Speculations upon what passes. At the Queen of *Sweden's*, all that relates to *Germany*, or the *North*, is ever to be found ; and that Princess, that must ever reign among all that have a true Taste either of Wit or Learning, hath in her Drawing-Rooms the best Court of the Strangers ; and her Civility, together with the vast Variety with which she furnished her Conversation, makes her the Chief of all the living Rarities that one sees in *Rome*. I will not use her own Words to myself, which were, *That she now grew to be one of the Antiquities of Rome*. The Ambassadors of Crowns, who live here in another Form than in any other Court, and the Cardinals and Prelates of the several Nations, that all meet and center here, make more News in *Rome* than any where ; for Priests, and the Men of religious Orders, write larger and more particular Letters than any other Sort of Men. But such as apply themselves to make their Court here, are condemned to a Loss of Time that had Need be well recompensed. As for one that studies Antiquities, Pictures, Statues, or Musick, there is more Entertainment for him at *Rome*, than in all the rest of *Europe* ; but if he hath not a Taste of these Things, he will soon be weary of a Place where the Conversation is always general, and where there is little Openness practised ; and, by Consequence, where Friendship is little understood. The Women here begin to be more conversable, though a Nation naturally jealous will hardly allow a great Liberty in a great City that is composed of Ecclesiasticks, who being denied the Privilege of Wives of their own, are suspected of being sometimes too bold with the Wives of others. The Liberties that were taken in the Constable of *Naples's* Palace, has disgusted the *Romans* much at that Freedom, which had no Bounds. But the Dutches of *Bracciano*, a *Frenchwoman*, hath, by the Exactness of her Deportment, amidst all the innocent Freedoms of a noble Conversation, recovered, in a great Measure, the Credit of those Liberties that Ladies beyond the Mountains practise with all the Strictness of Virtue ; for she receives Visits at publick Hours, and in publick Rooms ; and by the Liveliness of her Conversation, makes her Court the pleasantest Assembly of Strangers that is to be found in any of the Palaces of the *Italians*.

I will not engage in a Description of *Rome*, either ancient or modern ; this hath been done with such Exactness, that nothing can be added to what has been already published. It is certain, that when one is in the Capitol, and sees those poor Remains of what once it was, he is surprized to see a Building of so great Fame sunk so low, that one can scarce imagine that it was once a Castle upon a Hill, able to hold out against a Siege of the *Gauls*. The *Tarpeian* Rock is now so small, that a Man would think it no great Matter, for his Diversion, to leap over it ; and the Shape of the Ground hath not been so much altered on one Side, as to make us think it is very much changed on the other : For *Severus's* Triumphal Arch, which is at the Foot of the Hill on the other Side, is not now buried above two Foot within the Ground, as the vast Amphitheatre of *Titus* is not above three Foot sunk under the Level of the Ground. Within the Capitol one sees many noble Remnants of Antiquity ; but none is more glorious, as well as more useful, than the Tables of their Consuls, which are upon the Walls ; and the Inscription on the *Columna Rostrata*, in the Time of the first *Punick* War, is, without Doubt, the most valuable Antiquity in *Rome*.

From this all along the *Sacred Way*, one finds such Remnants of old *Rome* in the Ruins of the Temples, in the Triumphal Arches, in Portico's, and other Remains of that glorious Body ; that as one cannot see these too often, so every Time one sees them, they kindle in him vast Ideas of that Republick, and make him reflect on what he learn'd in his Youth with great Pleasure. From the

the Height of the Convent of *Araceli*, a Man hath a full View of all the Extent of *Rome*, but literally it is now *Seges ubi Roma fuit*; for the Parts of the City that were most inhabited anciently are those that are now laid out in great Gardens, or, as they call them, Vineyards, of which some are half a Mile in Compass. The Vastness of the *Roman* Magnificence and Luxury is that which passeth Imagination: The prodigious Amphitheatre of *Titus*, that could conveniently receive eighty five thousand Spectators: The great Extent of the *Circus Maximus*; the Vaults where the Waters were reserved that furnished *Titus's* Baths; and above all, *Dioclesian's* Baths, though built when the Empire was in its Decay, are so far beyond all modern Buildings, that there is not so much as Room for a Comparison. The Extent of those Baths is above half a Mile in Compass; the Vastness of the Rooms in which the Bathers might swim, of which the *Carthusians* Church, that yet remains entire, is one, and the many great Pillars, all of one Stone of Marble, beautifully spotted, are Things of which these latter Ages are not capable. The Beauty of their Temples, and of the Portico's before them, is amazing, chiefly that of the *Rotunda*, where the Fabrick without looks as mean, being only brick, as the Architecture is bold; for it riseth up in a Vault, and yet at the Top there is an Open left of thirty Foot in Diameter; which, as it is the only Window of the Church, so it fills it with Light, and is the hardiest Piece of Architecture that ever was made. The Pillars of the Portico are also the noblest in *Rome*; they are the highest and biggest that one can see any where, all of one Stone: And the Numbers of those ancient Pillars, with which not only many of the Churches are beautified, chiefly *St. Mary Maggiore*, and *St. John* in the *Lateran*, but with which even private Houses are adorned, and of the Fragments of which there are such Multitudes in all the Streets of *Rome*, gives a great Idea of the Profuseness of the old *Romans* in their Buildings; for the hewing and fetching a few of those Pillars must have cost more than whole Palaces do now, since most of them were brought from *Greece*. Many of these Pillars are of Porphyry, others of Jasper, others of granated Marble, but the greatest Number are of white Marble.

The two Columns, *Trajan's* and *Antonin's*; the two Horses that are in the Mount *Cavallo*, and the other two Horses in the Capitol, which have not indeed the Postures and Motion of the other; the Brass Horse that, as is believed, carrieth *Marcus Aurelius*; the Remains of *Nero's Colossus*; the Temple of *Bacchus* near the Catacomb of *St. Agnes*, which is the most entire and the least altered of all the ancient Temples. The great Temple of Peace, those of the Sun and Moon, that of *Romulus* and *Rhemus* (which I considered as the ancientest Fabrick that is now left; for it is little and simple, and standeth in such a Place, that, when *Rome* grew so costly, it could not have been left alone unchanged, if it had not been that it was revered for its Antiquity) the many other Porticos, the Arches of *Severus*, of *Titus* and *Constantine*, in the last of which one sees, that the Sculpture of his Age was much sunk from what it had been, only in the Top there are some Bass-relieves, that are clearly of a much ancients time, and of a better Manner: And that which exceedeth all the rest, the many great Aqueducts that come from all Hands, and run over a vast Distance, are Things which a Man cannot see too often, if he would form in himself a just Idea of the Vastness of that Republick, or rather Empire.

There are many Statues and Pillars, and other Antiquities of great Value, dug up in all the Quarters of *Rome*, these last hundred and fourscore Years, since Pope *Leo X's* time; who, as he was the greatest Patron of Learning and Arts, that perhaps ever was, so he was the most generous Prince that ever reign'd: And it was he that first set on Foot the enquiring into the Riches of old *Rome*, that lay, till his Time, for the most part hid under Ground. And indeed, if he had been less scandalous in his Impiety and Atheism, of which neither he, nor his Court, were so much as

ashamed, he had been one of the most celebrated Persons of any Age. Soon after him, Pope *Paul III.* gave the Ground of the *Monte Palatino* to his Family: But I was told, that this large Piece of Ground, in which one should look for the greatest Collection of Antiquities of the highest Value, since this is the Ruin of the Palace of the *Roman* Emperors, hath never yet been searched into with any Exactness. So that when a curious Prince comes, that is willing to employ many Hands in Digging up and down this Hill, we may expect new Scenes of *Roman* Antiquities. But all this Matter would require Volumes, and therefore I have only mentioned these Things, because I can add nothing to those copious Descriptions that have been so oft made of them. Nor will I say any Thing of modern Palaces, or the Ornaments of them, either in Pictures or Statues, which are Things that carry one so far, that it is not easy to set Bounds to the Descriptions into which one finds himself carried, when he once enters upon so fruitful a Subject. The Number of the Palaces is great, and every one of them hath enough to fix the Attention of a Traveller, till a new one drives the former out of his Thoughts. It is true, the *Palestrina*, the *Borghese*, and the *Farnese*, have somewhat in them that leaves an Impression, which no new Objects can wear out; and as the last hath a noble Square before it, with two great Fountains in it, so the Statue of *Hercules* and the *Bull*, that are below, and the Gallery above Stairs, are invaluable. The Roof of the Gallery is one of the best Pieces of Painting that is extant, being all of *Carraccio's* Hand; and there are in that Gallery the greatest Number of Heads of the *Greek* Philosophers and Poets that I ever saw together. That of *Homer*, and that of *Socrates*, were two that struck me most; chiefly the latter: Which, as it is, without Dispute, a true antique, so it carries in it all the Characters that *Plato* and *Xenophon* give us of *Socrates*: The flat Nose, the broad Face, the Simplicity of Look, and the mean Appearance which that great Philosopher made, so that I could not return oft enough to look upon it, and was delighted with this more than with all the Wonders of the *Bull*, which is indeed a Rock of Marble cut out into a whole Scene of Statues; but as the History of it is not well known, so there are such Faults in the Sculpture, that though it is all extream fine, yet one sees it hath not the Exactness of the best Times.

As for the Churches and Convents of *Rome*, as the Number, the Vastness, the riches of Fabrick, Furniture, Painting, and other Ornaments, amaze one; so here again a Stranger is lost, and the Convent, that is last seen is always the most admired. I confess the *Minerva*, which is the *Dominicans*, where the Inquisition sits, is that which makes the most sensible Impression upon one that passeth at *Rome* for an Heretick; though except one commits great Follies, he is in no Danger there; and the Poverty, that reigns in that City, makes them find their Interest so much in using Strangers well, whatever their Religion may be, that no Man needs be afraid there: And I have more than ordinary Reason to acknowledge this, who having ventured to go thither, after all the Liberty that I had taken in Writing my Thoughts freely, of the Church and See of *Rome*, and was known by all with whom I conversed there; yet met with the highest Civilities possible among all Sorts of People, and in particular among the *English* and *Scottish* Jesuits, though they knew well enough that I was no Friend to their Order.

In the Gallery of the *English* Jesuits, among the Pictures of their Martyrs, I did not meet with *Garnet*; for perhaps that Name is so well known, that they would not expose a Picture with such a Name to all Strangers; yet *Oldcorn*, being a Name less known, is hung there among their Martyrs, though he was as clearly convicted of the Gunpowder-treason as the other: And it seemed a little strange to me, that at a Time, in which, for other Reasons, the Writers of that Communion have not thought fit to deny the Truth of that Conspiracy, a Jesuit, convicted of the blackest Crime that ever was projected, should be reckoned among their

their Martyrs. I saw likewise there the Original of those emblematical Prophecies relating to *England*, that the Jesuits had at *Rome* near sixty Years, and of which I had sometime ago procured a Copy, which I found was true. I happened to be at *Rome* during St. Gregory's Fair and Feast, which lasted several Days. In his Church the Hostie was exposed; and from that, all that came thither, went to the Chapel, that was once his House, in which his Statue, and the Table where he served the Poor, are preserved. I saw such vast Numbers of People there, that one would have thought all *Rome* was got together: They kneeled down to his Statue, and, after a Prayer said to it, they kissed his Foot, and every one touched the Table with his Beads, as hoping to draw some Virtue from it. I will add nothing of the several Obelisks and Pillars that are in *Rome*, of the celebrated Chapels that are in some of the great Churches, in particular those of *Sixtus V.* and *Paul V.* in *Santa Maria Maggiore*; of the Water-works in the *Quirinal*, the *Vatican*, and in many of the Vineyards: Nor will I go out of *Rome* to describe *Frescati* (for *Tivoli* I did not see.) The young Prince *Borghese*, who is indeed one of the Glories of *Rome*, as well for his Learning, as for his Virtue, did me the Honour to carry me thither, with those two learned Abbots, *Fabretti* and *Nazari*, and entertained me with a Magnificence that became him better to give, than me to receive. The Waterworks in the *Aldobrandin* Palace have a Magnificence in them beyond all that I ever saw in *France*; the Mixture of Wind with the Water, and the Thunder and Storms that this maketh is noble. The Water-works of the *Ludovisio* and the *Monte Dragone*, have likewise a Grandeur in them that is natural. And indeed, the Riches that one meets with in all Places within-doors in *Italy*, and the Poverty that one sees every where Abroad, are the most unsuitable Things imaginable: But it is very likely, that a great Part of their moveable Wealth will be ere long carried into *France*; for as soon as any Picture or Statue of great Value is offered to be sold, those that are employed by the King of *France* presently buy it; so that as that King hath already the greatest Collection of Pictures that is in *Europe*, he will very probably in a few Years more carry off the chief Treasures of *Italy*.

I have now given an Account of all that appeared remarkable to me in *Rome*. I shall add a very extraordinary Piece of natural History, that fell out two Years before, which I had first from two learned Abbots *Fabretti* and *Nazari*, and afterwards more authentically confirmed to me by Cardinal *Howard*, who was of the Congregation of Cardinals that examined the Matter. There were two Nuns, one in the City, and the other not far from it, who, after they had been for some Years in a Nunnery, perceived a strange Change in Nature, and that their Sex was altered, which grew by Degrees to a total Alteration in one; and though the other was not so entire a Change, yet it was visible she was more Man than Woman: Upon this the Matter was looked into: That which naturally offereth itself here is, that these two had been always what they then appeared to be, but that they had gone into a Nunnery in a Disguise, to gratify their Appetites. But to this, when I proposed it, Answer was made, that as the Breasts of a Woman, that remained still, did in a great Measure take off that Objection, so the Proofs were given so fully of their having been real Females, that there was no Doubt left of that, nor had they given any Sort of Scandal on the Change of their Sex: And if there had been any Room left to suspect a Cheat or Disguise, the Proceedings would have been more severe and more secret; and these Persons would have been burnt, or at least put to Death in some terrible Manner. Some Physicians were appointed to examine the Matter, and at last, after an exact Enquiry, they were judged to be absolved from their Vows, and were dismissed from the Obligations of a religious Life, and directed to go in Men's Habits. One of them was a *Valet de Chambre* to a *Roman* Marquess when I was there. I heard of this Matter only two Days before I left *Rome*, so that I had not Time to enquire after it

more particularly; but I judg'd it so extraordinary, that I thought it was worth communicating to so curious an Enquirer into Nature.

And since I am upon the Subject of the Changes that have been made in Nature, I shall add one of another Sort, that I examined while I was at *Geneva*. There is a Minister of St. *Gervais*, Mr. *Gody*, who hath a Daughter sixteen Years old; her Nurse had an extraordinary Thickness of hearing; at a Year old the Child spoke all those little Words that Children begin usually to learn at that Age, but she made no Progress; yet this was not observed till too late; and as she grew to be two Years old, they perceived that she had lost her Hearing, and was so deaf, that though she hears great Noises, yet she hears nothing that one can speak to her. It seems, while the Milk of her Nurse was more abundant, and the Child suck'd more moderately the first Year, those Humours in the Blood and Milk had not that Effect on her that appeared after she came to suck more violently; and that her Nurse's Milk, being in less Quantity, was thicker, and more charged with that Vapour that occasioned the Deafness: But this Child hath, by observing the Motions of the Mouths and Lips of others, acquired so many Words, that out of these she hath formed a Sort of Jargon, in which she holds Conversation whole Days with those that can speak her own Language. I could understand some of her Words, but could not comprehend a Period, for it seemed to be a confused Noise. She knows nothing that is said to her, unless she see the Motion of their Mouths that speak to her; so that in the Night, when it is necessary to speak to her, they must light a Candle: Only one Thing appears the strangest; she has a Sister, with whom she has practised her Language more than any other; and in the Night, by laying her Hand on her Sister's Mouth, she can perceive what she says, and can discourse with her in the Night. It's true, her Mother told me that this did not go far, and that she found out only short Periods in this Manner. Thus this young Woman, without any Pains taken, has, merely by a natural Sagacity, found a Method of holding Discourse, that doth in a great Measure lessen the Misery of her Deafness. I examined this Matter critically, only the Sister was not present, so that I could not see how the Conversation pass'd between them in the Dark.

23. From *Civita Vecchia* I came to *Marseilles*, where if there were a Road as safe as the Harbour; and if the Harbour were as large as it is convenient, it were certainly one of the most important Places in the World. All is so well defended, that it is, with respect to Storms or Enemies, the securest that Port can be seen any where. The Freedoms of this Place, though now at the Mercy of the Citadel, are such, and its Situation draws so much Trade to it, that there one sees an Appearance of Wealth greater than I found in any Town of *France*; and there is a new Street lately built there, that for Beauty and Largeness, is the noblest I ever saw. There is in that Port a perpetual Heat, and the Sun was so strong in the *Christmas* Week, that I was often obliged to quit the Key. I made a Tour from thence through *Provence*, *Languedoc*, and *Dauphine*. I will offer you no Account of *Nismes*, nor of the Amphitheatre in it, or the *Pont du Garde* near it; which as they are stupendious Things, so they are copiously described by many, and are generally known to the *English* Nation, that if you never went that Way yourself, yet you must needs have received so particular a Relation of them from those that have seen them, that I judge it needless to enlarge upon them; nor will I say any Thing of the Soil, the Towns, or other remarkable Things that I found there.

I have a much stronger Inclination to say somewhat concerning the Persecution, which I saw in its utmost Rage and Fury; and of which I could give Instances, that are so much beyond all the common Measures of Barbarity and Cruelty, that I confess they ought not to be believed, unless I could give more positive Proofs of them, than are now fitting, and the Particulars that I could tell you are such, that if I should relate them with

the necessary Circumstances of Time, Place, and Persons, might be fatal to many that are yet in the Power of their Enemies, that restrains me. In short, I do not think there ever was such a Violation of all that is sacred, with Relation to God or Man; and what I saw and knew there, from the first Hand, hath so confirmed all the Ideas that I had from Books, of the Cruelty of that Religion, that I hope the Impression this hath made upon me, shall never end but with my Life. The Applauses that the whole Clergy give this Way of Proceeding, the many Panegyriks that are already written upon it, and the flattering Sermons that are preached upon this Subject, are such evident Demonstrations of their Sense of this Matter, that what is now on Foot may well be termed, the Act of the Clergy of *France*, which yet hath been hitherto esteemed the most moderate Part of the *Roman* Communion. If any are more moderate than others, and have not so far laid aside human Nature, as to go entirely into those bloody Practices, yet they dare not own it, but whisper it in Secret, as if it were half Treason; but for the greater Part, they do not only magnify all that is done, but they animate the Dragoons to higher Degrees of Rage: And there was such a Heat spread over the Country on this Occasion, that one could not mix in any promiscuous Conversation, without finding such Effects of it, that it was not very safe for such, as were touch'd with Compassion for the Miseries that the poor Protestants suffered. Some perhaps imagine, that this hath not been approved in *Italy*; and it is true, there were not any Rejoicings upon it at *Rome*, no Indulgences, nor *Te Deum's* were heard of: And the *Spanish* Faction being so prevalent, it is not strange if a Course of Proceedings, without Example, was set forth by all that were of that Interest in its proper Colours; of which I met with some Instances myself, and could not but smile, to see the *Spanish* Faction so far forget their Courts of Inquisition, as to argue against Conversions by Dragoons as a Reproach to the Catholick Religion: Yet the Pope was of another Mind; for the Duke *d'Estrée* gave him an Account of the King's Proceedings in this Matter very copiously, as he himself related it; upon which the Pope approved, and expressed a great Satisfaction in every Thing that the King had done in that Matter; and the Pope added, that he found some Cardinals (as I remember, the Duke *d'Estrée* said two) were not pleased with it, and had taken the Liberty to censure it; but the Pope said they were to blame: The Duke *d'Estrée* did not name them, though he said, he believed he knew who they were, and it is very likely that Cardinal *Pio* was one; for I was told that he spoke freely of this Matter. I must add one Thing, that I do not see the *French* King is to be so much blamed in this Matter, as his Religion, which, without Question, obliges him to extirpate Hereticks, and not keep Faith with them; so that, instead of censuring him, I only lament his being bred up in a Religion that obliges him to divest himself of Humanity, and to violate his Faith, whenever the Cause of his Church and Religion require it; or if there is any Thing in this Conduct, that cannot be entirely justified from Principles of Religion, it is this, that he doth not put the Hereticks to Death out of Hand, but forces them, to sign an Abjuration, that all the World must see is done against their Consciences; and being the only End of their Miseries, those that would think any Sort of Death a happy Conclusion of their Sufferings, seeing no Prospect of such a glorious Issue out of their Trouble, are prevailed on by the many lingering Deaths, of which they see no End, to make Shipwreck of the Faith: This Appearance of Mercy, in not putting Men to Death, doth truly verify the Character that *Solomon* giveth of the tender Mercies of the Wicked, that they are cruel.

I pass'd the Winter at *Geneva* with more Satisfaction than I thought possible any where out of *England*; tho' that received great Allays from the lamentable Stories every Day from *France*; but there is a Sorrow by which the Heart is made better. I ought to make the most publick Acknowledgments possible for the extra-

ordinary Civilities that I met with in my own Particular; but that which pleased me most was of a publick Nature; before I left *Geneva*, the Number of the *English* there were such, that I found we could make a small Congregation, for we were twelve or fourteen; so I address'd myself to the Council of Twenty-five, for Liberty to have our own Worship in our own Language, according to the *English* Liturgy. This was immediately granted in so obliging a Manner, that as there was not one Person that made Exception to it, so they sent one of their Body to me, to let me know, that in case our Number should grow to be so great that it were fit for us to assemble in a Church, they would grant us one which had been done in Queen *Mary's* Reign; but till then, we might hold our Assemblies as we thought fit: So after that Time, during the rest of my Stay we had every *Sunday* our Devotions according to the Common-prayer, Morning and Evening; and at the Evening-prayer I preach'd in a Room that was too large for our small Company: But there being a considerable Number in *Geneva* that understand *English*, and in particular some of the Professors and Ministers, we had a great many Strangers; and the last *Sunday* I gave the Sacrament according to the Way of the Church of *England*; and upon this Occasion I found a general Joy in the Town for this, that I had given them an Opportunity of expressing the respect they had for our Church: And as in their publick Prayers they always prayed for the Churches of *Great-Britain*, as well as for the King, so in private Discourse they shewed all possible Esteem for our Constitution; and they spoke of the unhappy Divisions among us, and of the Separation that was made from us upon the Account of our Government and Ceremonies, with great Regret and Dislike. I shall name only two of their Professors, that, as they are Men of great Distinction, so they were the Persons with whom I conversed the most; one, Mr. *Turretin*, a Man of great Learning, that by his indefatigable Study and Labour has much worn out and wasted his Strength, amidst all the Affluence of a great Fortune to which he was born: One discerns in him all the Modesty of an humble and mortified Temper, and of an active and fervent Charity proportioned to his Abundance, or rather beyond it; and there is in him such a Zeal for Religion, as the present Conjuncture calls for, with all the Seriousness of Piety and Devotion, which shews itself in private Conversation, and in his most edifying Sermons, by which he enters deep into the Consciences of his Hearers. The other is Mr. *Tronchin*, a Man of a strong Head, and of a clear and correct Judgment, who has all his Thoughts well digested; his Conversation has a Charm in it, that cannot be resisted; he is a Man of extraordinary Virtue, and of a Readiness to oblige and serve all Persons, that has scarce any Measure: His Sermons have a Sublimity in them that strike the Hearer, as well as edify him; his Thoughts are noble, and Eloquence masculine and exact, and has all the Majesty of the Chair in it, tempered with all the Softness of Persuasion; so that he not only convinces his Hearers, but subdues and triumphs over them. In such Company it was no Wonder if Time seemed to go off too fast, so that I left *Geneva* with a Concern that I could nothave felt in leaving any Place out of *Britain*.

From *Geneva* I went a second time through *Switzerland* to *Basil*. At *Avanche* I saw the noble Fragments of a great *Roman* Work, which seems to have been the Portico to a Temple. The Heads of the Pillars are about four Foot square, of the *Ionick* Order: The Temple hath been dedicated to *Neptune*, or some Sea-God; for on the Fragments of the Architrave, which are very beautiful, there are *Dolphins* and *Sea-Horses* in Bas-relieves; and the Neighbourhood of the Place to the Lakes of *Iverdun* and *Morat* make this more evident. There is also a Pillar standing up in its full Height, or rather the Corner of a Building, in which one sees the Remains of a regular Architecture in two Ranks of Pillars. If the Ground near this were carefully search'd, no doubt it would discover Remains of that

that Fabrick. Not far from this is *Morat*; and a little on this Side of it is a Chapel full of the Bones of the *Burgundians*, that were killed by the *Switzers*, when this Place was besieged by the famous *Charles Duke of Burgundy*, who lost a great Army before it, entirely cut off by the Besieged. The Inscription is very extraordinary, especially for that Age: For the Bones being so piled up, that the Chapel is quite filled with them, the Inscription bears, that *Charles Duke of Burgundy's* Army having besieged *Morat*, *Hoc sui monumentum reliquit*, left that Monument behind it. It cannot but seem strange to one that views *Morat*, to imagine how it was possible for a Town so situated, and so slightly fortified, to hold out against so powerful a Prince, and so great an Army, that brought Cannon before it. I met with nothing remarkable between this and *Basil*, except that I staid some time at *Bern*, and knew it better; and at this second Time it was, that my Lord Advoyer *D'Erlach* gave Order to shew me the original Records of the famous Process of the four *Dominicans*: Upon which I have retouch'd the Letter I wrote to you last Year.

25. *Basil* is the Town of the greatest Extent of all *Switzerland*, but it is not inhabited in Proportion to its Extent. The *Rhine* maketh a Crook before it, and the Town is situated on a rising Ground, which hath a noble Effect on the Eye, when one is on the Bridge, for it looks like a Theatre. *Little Basil*, on the other side of the *Rhine*, is almost a fourth Part of the whole. The Town is surrounded with a Wall and Ditch, but it is exposed on many Sides, and hath now so dreadful a Neighbour within a Quarter of a League of it, the Fort of *Hunningen*, that it hath nothing to trust to, humanly speaking, but its Union with the other Cantons. The Maxims of this Canton have hindered its being better peopled than it is: The Advantages of the Burgership are such, that the Citizens will not share them with Strangers, and by this Means they do not admit them. For I was told, that during the last War, that *Alsatia* was so often the Seat of both Armies, *Basil* having then a Neutrality, it might been very well filled, if it had not been for this Maxim. And it were a great Happiness to all the Cantons, if they could have different Degrees of Burgership, so that the lower Degrees might be given to Strangers for their Encouragement to come and live among them; and the higher Degrees, which qualify Men for the advantageous Employments of the State, might be reserved for the ancient Families of the Natives. *Basil* is divided into sixteen Companies, and every one of these hath four Members in the Little Council, so that it consisteth of Sixty-four: But of those four, two are chosen by the Company itself who are called the Masters, and the other two are chosen by the Council out of the Company; and thus, as there are two Sorts of Counsellors chosen in those different Manners, there are also two chief Magistrates.

There are two Burgo-masters, that reign by Turns, and two Zunft-Masters, that have also their Turns, and all is for Life; and the last are the Heads of the Companies, like the *Roman* Tribunes of the People. The Fabrick of the Stadt-house is ancient. There is a very good Painting in Fresco upon the Walls. One Piece hath given much Offence to the Papists, though they have no Reason to blame the Reformation for it, since it was done several Years before it, viz. in the Year 1510. It is a Representation of the Day of Judgment, and after Sentence given, the Devil is represented driving many before him to Hell, and among these there is a Pope and several Ecclesiasticks. But it is believed, that the Council, which sat so long in this Place, acting so vigorously against the Pope, engaged the Town into such a Hatred of the Papacy, that this might give the Rise to this Representation. The more learned in the Town ascribe the Beginning of the Custom in *Basil*, of the Clocks anticipating the Time a full Hour, to the sitting of the Council: And they say, that in order to the advancing of Business, and the shortening their Sessions, they ordered their Clocks to be set for-

ward an Hour, which continueth to this Day. The Cathedral is a great old *Gothick* Building; the Chamber, where the Council sat, is of no great Reception, and is a very ordinary Room.

Erasmus's Tomb is only a plain Inscription upon a great Brass Plate. There are a great many of *Holbein's* Pictures here, who was a Native of *Basil*, and was recommended by *Erasmus* to King *Henry VIII*. The two best are a *Corpo*, or *Christ* dead, which is certainly one of the best Pictures in the World. There is another Piece of his in the Stadt-House (for this is in the publick Library) of about three or four Foot square, in which, in six several Cantons, the several Parts of our Saviour's Passion are represented with a Life and Beauty that cannot be enough admired. It is valued at Ten thousand Crowns. It is on Wood, but hath that Freshness of Colour still on it, that seems peculiar to *Holbein's* Pencil. There is also a Dance that he painted on the Walls of an House where he used to drink, that is so worn out, that very little is now to be seen, except Shapes and Postures; but these shew the Exquifiteness of the Hand. There is another longer Dance, that running all along the Side of the Convent of the *Augustinians*, which is now the *French* Church, and that is Death's-dance. There are above threescore Figures in it at full Length, of Persons of all Ranks, from Popes, Emperors, and Kings, down to the meanest Sorts of People, and of all Ages and Professions, to whom Death appeareth in an insolent and surprizing Posture: And the several Passions that they express are so well set out, that this was certainly a great Design. But the Fresco being exposed to the Air, this was so worn out some time ago, that they ordered the best Painter they had, to lay new Colours on it; but this is so ill done, that one had rather see the dead Shadows of *Holbein's* Pencil, than this coarse Work.

There is in *Basil* a Gunsmith, that makes Wind-Guns, and he shewed me one, that as it received at once Air for ten Shot, so it had this peculiar to it, which he pretends is his own Invention, that he can discharge all the Air that can be parcelled out in ten Shot, at once, to give a home Blow. I confess those are terrible Instruments, and it seems the Interest of Mankind to forbid them quite, since they can be employed to assassinate Persons so dexterously, that neither Noise nor Fire will discover from what Hand the Shot cometh. The Library of *Basil* is by much the best in all *Switzerland*. There is a fine Collection of Medals in it, and a very handsome Library of Manuscripts. The Room is noble, and disposed in a very good Method. Their Manuscripts are chiefly the *Latin* Fathers, or *Latin* Translations of the *Greek* Fathers; some good Bibles. They have the Gospel in *Greek* Capitals, but they are viciously writ in many Places. There is an infinite Number of the Writers of the darker Ages, and there are Legends and Sermons without Number. All the Books that were in the several Monasteries, at the Time of the Reformation, were carefully preserved; and they believe, that the Bishops, who sat here in the Council, brought with them a great many Manuscripts which they never carried away.

Among their Manuscripts, I saw four of *Huss's* Letters, that he writ to the *Bohemians* the Day before his Death, which are very devout, but excessively simple. The Manuscripts of this Library are far more numerous than those of *Bern*, which were gathered by *Bongarsius*, and left by him to the publick Library there. They are indeed very little considered there, and are the worst kept that I ever saw. But it is a noble Collection of all the ancient *Latin* Authors. They have some few of the best of the *Roman* Times, writ in great Characters, and there are many that are seven or eight hundred Years old. There is in *Basil* one of the best Collections of Medals that ever I saw in private Hands, together with a noble Library, in which there are Manuscripts of good Antiquity, that belong to the Family of *Fesch*, and that go from one learned Man of the Family to another: For this Inheritance can only pass to a Man of Learning; and when the Family produceth

duceth none, then it is to go to the Publick. In *Basil*, as the several Companies have been more or less strict, in admitting some to a Freedom in the Company, that have not been of the Trade, so they retain their Privileges to this Day. For, in such Companies, that have once received such a Number that have not been of the Trade, as grew to be the Majority, the Trade hath never been able to recover their Interest. But some Companies have been more cautious, and have never admitted any but those that were of the Trade; so that they retain their Interest still in the Government. Of these the Butchers were named for one; so that there are always four Butchers in the Council. The great Council consisteth of two hundred and forty, but they have no Power left them, and they are only assembled upon some extraordinary Occasions, when the Little Council thinks fit to communicate any important Matter to them. There are but six Bailiages that belong to *Basil*, which are not Employments of great Advantage; for the best of them affords to the Bailiff only a thousand Livres a Year. They reckon that there are in *Basil*, three thousand Men that can bear Arms, and that they could raise four thousand more out of the Canton; so that the Town is almost the half of this State, but the whole making thirty Parishes. There are eighteen Professors in this University; and there is a Spirit of more free and generous Learning stirring there, than I saw in all those Parts. There is a great Decency of Habit in *Basil*; and the Garb of the Counsellors, Ministers, and Professors, their stiff Ruffs, and their long Beards, have an Air that is venerable and august. The Appointments are but small, for Counsellors, Ministers, and Professors have but one hundred Crowns a-piece: It is true, many Ministers are Professors, so this mends the Matter a little; but perhaps it would go better with the State of Learning there, if they had but half the Number of Professors, and if those were a little better encouraged. No where is the Rule of *St. Paul* better observed than at *Basil*; for all the married Women go to Church with a Coif on their Heads, that is so folded, that it comes down so far as to cover their Eyes, and another Folding covers also their Mouth and Chin, so that nothing but their Nose appears; and then all turns backward in a Folding that hangs down to their Mid-leg: This is always white; so that there is such a Sight of white Heads in their Churches, as cannot be found any where else. The unmarried Women wear Hats turned up in the Brims, before and behind; and the Brims of the Sides being about a Foot broad, stand out far on both Sides: This Fashion is also at *Strasburg*, and is worn there also by the married Women.

26. I mentioned formerly the constant Danger to which this Place is exposed, from the Neighbourhood of *Hunningen*: I was told, that at first it was pretended that the *French* King intended to build only a small Fort there; and it was believed, that one of the Burgomasters of *Basil*, who was thought not only the wisest Man of that Canton, but of all *Switzerland*, was gained to lay all Men asleep, and to assure them, that the suffering this Fort to be built so near them, was of no Importance; but now they see too late their fatal Error; for the Place is great, and will hold a Garrison of three or four thousand Men. It is a Pentagon, only the Side towards the *Rhine* is so large, that if it went round on that Side, I believe it must have been an Hexagon. The Bastions have all Orillons, and in the Middle of them there is a void Space not filled up with Earth, where there is a Magazine built so thick in the Vault, that it is Proof against Bombs. The Ramparts are strongly faced; there is a large Ditch, and before the Cortin, in the Middle of the Ditch, there runs a Horn-work, which is but ten or twelve Foot high; and from the Bottom of the Rampart, there goes a Vault to this Horn-work, for conveying Men for its Defence. Before this Horn-work there is a Half-moon, with this that is peculiar to those new Fortifications, that there is a Ditch that cuts the Half-moon in an Angle, and maketh one Half-moon within another: Beyond that there is a Coun-

ter-scarp about twelve Foot high above the Water, with a cover'd Way, and a Glacis designed, though not yet executed. There is also a great Horn-work besides all this, which runs out a huge Way with its Outworks towards *Basil*. There is likewise a Bridge laid over the *Rhine*, and there being an Island in the River where the Bridge is laid, there is a Horn-work that fills and strengthens it. The Buildings in this Fort are beautiful, and the Square can hold above four thousand Men: The Works are not yet quite finished, but when all is complete, this will be one of the strongest Places in *Europe*. There is a Cavalier on one or two of the Bastions, and there are Half-moons before the Bastions; so that the *Switzers* see their Danger now, when it is not easy to redress it. This Place is situated in a great Plain, so that it is commanded by no rising Ground on any Side of it. I made a little Tour into *Alsace*, as far as *Mountbelliard*; the Soil is extreme rich, but it hath been so long a Frontier Country, and is by Consequence so ill peopled, that it is in many Places overgrown with Woods. In one Respect it is fit to be the Seat of War, for it is full of Iron-works, which bring a great deal of Money into the Country. I saw nothing peculiar in the Iron-works there, except that the Sides of the great Bellows were not of Leather, but of Wood, which saves much Money; so I will not stand to describe them.

The River *Rhine*, all from *Basil* to *Spire*, is so low, and is on both Sides so covered with Woods, that one, that comes down in a Boat, hath no Sight of the Country. The River runs sometimes with such a Force, that nothing but such Woods could preserve its Banks, and even these are not able to save them quite; for the Trees are often washed away by the very Roots, so that in many Places those Trees lie along in the Channel of the River. It hath been also thought a Sort of a Fortification to both Sides of the River, to have it thus faced with Woods, which makes the passing of Men dangerous, when they must march for some Time after their Passage through a Defilé. The first Night, from *Basil*, we came to *Brisac*, which is a poor and miserable Town; but it is a noble Fortification, and hath on the West Side of the River, over which a Bridge is laid, a regular Fort of four or five Bastions. The Town of *Brisac* riseth on a Hill, which is a considerable Height. There were near it two Hills, the one is taken within the Fortification, and the other is so well levelled with the Ground, that one cannot so much as find out where it was. All the Ground about, for many Miles, is plain; so that from the Hill, as from a Cavalier, one can see exactly well, especially with the Help of a Perspective, all the Motions of an Enemy in Case of a Siege. The Fortification is of a huge Compass, above a *French* League, indeed almost a *German* League. The Bastions are quite filled with Earth; they are faced with Brick, and a huge broad Ditch full of Water round them: The Counterscarp, the cover'd Way, which hath a Pallisade within a Parapet, and the Glacis, are all well executed: There is a Half-moon before every Cortin; the Bastions have no Orillons, except one or two, and the Cortins are so disposed, that a good Part of them defend the Bastion. The Garrison of this Place, in Time of War, must needs be eight or ten thousand Men. There hath not been much done of late to this Place, only the Ditch is so adjusted, that it is all defended by the Flanks of the Bastions.

But the noblest Place on the *Rhine* is *Strasburg*; it is a Town of a huge Extent, and hath a double Wall and Ditch all round it; the inner Wall is old, and of no Strength, nor is the outward Wall very good; it hath a *Faussebraye*, and is faced with Brick twelve or fifteen Foot above the Ditch: The Counterscarp is in an ill Condition, so that the Town was not in Case to make any long Resistance; but it is now strongly fortified. There is a Citadel built on that Side that goeth towards the *Rhine*, and is much such a Fort as that of *Hunningen*; and on the Side of the Citadel towards the Bridge there is a great Horn-work that runs out a great

great Way with Out-works belonging to it. There are also small Forts at the two chief Gates that lead to *Alsace*, by which the City is so bridled, that these can cut off all its Communication with the Country about, in case of a Revolt. The Bridge is well fortified; there are also Forts in some Islands in the *Rhine*, and some Redoubts; so that all round this Place there is one of the greatest Fortifications in *Europe*.

Hitherto the Capitulation, with relation to Religion, hath been well kept; and there is so small a Number of new Converts, and these are for the greatest Part so inconsiderable, not being in all above two hundred, as I was told, that if they do not employ the new-fashion'd Missionaries *à la Dragonne*, the old ones are not like to have so great a Harvest there as they promised themselves, though they are Jesuits. The *Lutherans*, for the greatest Part, retain their Animosities almost to an equal Degree both against *Papists* and *Calvinists*. I was in their Church, where, if the Musick of their Psalms pleased me much, the Irreverence in Singing (it being free to keep on or put off the Hat) did appear very strange to me. The Churches are full of Pictures, in which the chief Passages of our Saviour's Life are represented, but there is no Sort of religious Respect paid them: They bow when they name the Holy Ghost, as well as at the Name of Jesus; but they have not the Ceremonies that the *Lutherans* of *Saxony* use, which Mr. *Bebel*, their Professor of Divinity, said was a great Happiness; for a Similitude in outward Rites might dispose the ignorant People to change too easily. I found several good People, both of the *Lutheran* Ministers, and others, acknowledge, that there was such a Corruption of Morals spread over the whole City, that as they had justly drawn down on their Heads the Plague of the Loss of their Liberty, so this having touch'd them so little, they had Reason to look for severer Strokes.

One sees, in the Ruin of this City, what a mischievous Thing the popular Pride of a free City is: They fancied they were able to defend themselves, and so they refused to let an Imperial Garrison come within their Town; for if they had received only five hundred Men, as that small Number would not have been able to have oppress'd their Liberties, so it would have so secured the Town, that the *French* could not have besieged it without making War on the Empire: But the Town thought this was a Diminution of their Freedom, and so chose rather to pay a Garrison of three thousand Soldiers, which as it exhausted their Revenue, and brought them under great Taxes, so it proved too weak for their Defence when the *French* Army came before them. The Town begins to sink in its Trade, notwithstanding the great Circulation of Money that the Expence of the Fortifications hath brought to it; but when that is at an End, it will sink more sensibly; for it is impossible for a Place of Trade, that is to have always eight or ten thousand Soldiers in it, to continue long in a flourishing State. There was a great Animosity between two of the chief Families of the Town, *Dietrick* and *Obrecht*; the former was the Burgo-master, and was once almost run down by a Faction that the other had raised against him; but he turned the Tide, and got such an Advantage against *Obrecht*, who had writ somewhat against the Conduct of their Affairs, that he was condemned and beheaded for writing Libels against the Government. His Son is a learned Man, and was Professor of the Civil Law; and he, to have his Turn of Revenge against *Dietrick*, went to *Paris*, and that he might make his Court the better, changed his Religion. *Dietrick* had been always look'd on as one of the chief of the *French* Faction, though he had been at first an *Imperialist*, so it was thought that he should have been well rewarded; yet it was expected, that to make himself capable of that, he should have changed his Religion; but he was an ancient Man, and would not pay his Court at that Rate; so without any Reason given, and against the express Words of the Capitulation, he was confined to one of the midland Provinces of *France* (as I remember, it was *Limosin*;) And thus he that had been thought the chief Cause of this Town's falling un-

der the Power of the *French*, is the first Man that hath felt the Effects of it.

The Library here is considerable; the Case is a great Room very well contrived; for it is divided into Closets all over the Body of the Room, which runs about these as a Gallery, and in these Closets all round, there are the Books of the several Professions lodged apart: There is one for Manuscripts, in which there are some of considerable Antiquity. I need say Nothing to you of the vast Height and *Gothick* Architecture of the Steeple, and of the great Church, nor of the curious Clock, where there is so vast a Variety of Motions; for these are well known. The Bas-relieves upon the Tops of the great Pillars of the Church are not so visible, but they are surprizing; for this being a Fabrick of three or four hundred Years old, it is very strange to see such Representations as are there. There is a Procession represented, in which a Hog carrieth the Pot with the holy Water, and Asses and Hogs in priestly Vestments follow to make up the Procession: There is also an Ass standing before an Altar, as if he were going to consecrate; and one carrieth a Case with Reliques, within which one seeth a Fox; and the Trains of all that go in this Procession are supported by Monkies. This seems to have been made in Hatred of the Monks, whom the secular Clergy abhorred at that Time, because they had drawn the Wealth and the Following of the World after them; and they had exposed the secular Clergy so much for their Ignorance, that it is probable, after some Ages the Monks falling under the same Contempt, the secular Clergy took their Turn in exposing them in so lasting a Representation to the Scorn of the World. There is also in the Pulpit a Nun cut in Wood lying along, and a Fryar lying near her with his Breviary open before him, and his Hand under the Nun's Habit, and the Nun's Feet are shod with Iron Shoes. I confess I did not look for these Things, for I had not heard of them; but my noble Friend Mr. *Ab-lancourt* view'd them with great Exactness while he was the *French* King's Resident at *Strasburg*, in the Company of one of the Magistrates that waited on him; and it is upon his Credit, to which all that know his eminent Sincerity, know how much is due, that I give you this Particular.

The Habits of the People here, but more especially of the Women, are very singular, and surprize Strangers greatly; they are without Doubt very antique, and there is good Reason to believe that the Tyranny of Fashion has never born hard upon these honest People. They are strongly of Opinion, that as Cloaths are intended to hide Nakedness, so the Manner of Cloathing ought to be suitable to the Condition; and upon this Principle it is, that you see every body regulate their Dress here; so that when you are once acquainted with their Custom, you may distinguish by the Garb of every Woman you meet what Condition of Life she is in. As for Instance, a Country Farmer's Wife wears short Petticoats, a Kind of Boddice, and over these a Sort of long Jacket, which in the Winter Time is lined with Lambs-skin for Want of better Furs. Her Hair is curled with her best Skill, and upon her Head she wears a Hat deck'd with Flowers. The lower Sort of Country People wear a Kind of Coif, under which their Hair is gathered up tight. A Tradesman's Wife in Mourning makes a very solemn Figure; her Petticoats are long, she has a stiff-bodied Gown, close Sleeves, with Cuffs that turn up almost to the Elbows, and a Piece of fine Cloth turns up under the Chin over their Mouths, so that between that and a very close round Cap, you see Nothing but their Nose and their Eyes. A Burgher's Wife is still a more extraordinary Spectacle, for she has a white Robe that covers all her Cloaths, a Hood and Fore-head-cloth upon her Head, the Corners of which are stiffened and stick out on both Sides, so that a stranger Figure can hardly be seen. Ordinary Women mourn in Black, but with a white Veil before them, which reaches up to their Mouths, and below their Knees. A Doctor's Wife has a Garb not easily express'd, her Petticoats are very long, her Sleeves flounc'd upon her Shoulders, close on her Arms, and

Elbows, straiter at the Wrists with Cuffs of white Linnen, and Rings and Bracelets in Abundance. The Body of the Gown is very stiff with Wings that rest upon their Shoulders, a round Ruff about their Necks, and a monstrous large Head-dress, beyond the Size of a Turbant. Their young Women, however, have a more agreeable Habit, their Sleeves are open, they wear very fine Linnen, stiff-bodied Gowns, their Necks close covered, Petticoats so long that Nothing appears under them but the very Points of their Shoes, and on their Heads they wear very large Hats, like those before described in speaking of the Women of *Basil*. These Dresses will be better comprehended by seeing them in a Print, than by any Description that can be given, and this is the more reasonable, because now there is nothing of this Kind to be seen, the *French* Customs generally prevail, and Strangers can discover no Difference between the Habits of the Women at *Strasbourg*, and those of other Frontier Towns in the *French* Dominions.

27. From *Strasbourg* we went down the *Rhine* to *Philipsburg*, which lies at a quarter of a Mile's Distance from the River; it is but a small Place, and the Bastions are but little; there is a Ravelin before almost all the Cortins; and there lie such Marshes round it, that in these consist the chief Strength of the Place. The *French* had begun a great Crown-work on that Side that lies to the *Rhine*, and had cast out a Horn-work beyond that; but by all that appears, it seems they intended to continue their Works quite round the Town, and to make a second Wall and Ditch all round it, which would have enlarged the Place vastly, and made a Compass capable to lodge ten thousand Men; and this would have been so terrible a Neighbour to the *Palatinate*, and all *Franconia*, that it was a Master-piece in *Charles-Lewis*, the late Elector *Palatine*, to engage the Empire in this Siege: He saw well, how much it concerned him to have it out of the Hands of the *French*; so that he took great Care to have the Duke of *Lorraine's* Camp so well supplied with all Things necessary during the Siege, that the Army lay not under the least Uneasiness. From thence, in three Hours, we came to *Spire*, which is so naked a Town, that if it were attacked, it could not make the least Resistance. The Town is neither great nor rich, and is subsisted chiefly by the Imperial Chamber that sitteth here, though there is a constant Dispute between the Town and the Chamber concerning Privileges; for the Government of the Town pretends, that the Judges of the Chamber, as they are private Men, and out of the Court of Judicature, are subject to them; and so about a Year ago they put one of the Judges in Prison: On the other Hand, the Judges pretend, that their Persons are sacred. It was the Consideration of the Chamber that procured to the Town the Neutrality that they enjoyed all the last War. I thought to have seen the Forms of this Court, and the Way of laying up and preserving their Records, but it was not then sitting. The Building, the Halls, and Chambers of this famous Court are mean beyond Imagination, and look more like the Halls of some small Company, than of so great a Body; and I could not see the Places where they lay up their Archives. The Government of the City is *Lutheran*; but not only the Cathedral is in the Hands of the Bishop and Chapter, but there are likewise several Convents of both Sexes, and the Jesuits have a College there. There is little remarkable in the Cathedral, which is a huge Building in the *Gothick* Manner, of the worst Sort. The Tombs of many Emperors that lie buried there are singular only for their Meanness, they being barely great Flag-stones laid on some small Stone Ballisters of a Foot and an half high: There are also the Marks of a ridiculous Fable concerning *St. Bernard*, which is too foolish to be related; yet since they have taken such Pains to preserve the Remembrance of it, I shall venture to write it. There are from the Gate, all along the Nave of the Church up to the Steps that go up to the Choir, four round Plates of Brass, above a Foot Diameter, and at the Distance of thirty foot one from another, laid in the Pavement; on the first of these is engraven *O Clemens*, on the second *O Pia*, on the third *O Felix*,

and on the fourth *Maria*! The last is about thirty Foot distant from a Statue of the Virgin; so they say that *St. Bernard* came up the whole Length of the Church at four Steps, and that those four Plates were laid where he stepp'd; and that at every Step he pronounced the Word that is engraven on the Plate; and when he came to the last, the Image of the Virgin answered him, *Salve Bernarde*; upon which he answered, let a Woman keep Silence in the Church; and that the Virgin's Statue has kept Silence ever since. This last Part of the Story is certainly very credible: He was a Man of Learning that shewed me this; and he repeated it so gravely to me, that I saw he either believed it, or at least that he had a Mind to make me believe it; and I asked him as gravely, if that was as firmly believed there? He told me, that one had lately writ a Book to prove the Truth of it, as I remember, it was a Jesuit: He acknowledged it was not an Article of Faith, so I was satisfied.

28. There is in the Cloister an old *Gothick* Representation of our Saviour's Agony in Stone, with a great many Figures of his Apostles and the Company that came to seize him, that is not ill for the Time in which it was made, it being some Ages old. The *Calvinists* have a Church in this Town, but their Numbers are not considerable. I was told there were some ancient Manuscripts in the Library that belongeth to the Cathedral; but one of the Prebendaries, to whom I addressed myself, being, according to the *German* Custom, a Man of greater Quality than Learning, told me, he heard they had some ancient Manuscripts, but he knew nothing of them; and the Dean was absent, so I could not see them, for he kept one of the Keys. The lower *Palatinate* is certainly one of the sweetest Countries in all *Germany*; it is a great Plain till one comes to the Hills of *Heidelberg*; the Town is ill situated, just in a Bottom, between two Ranges of Hills, yet the Air is much commended. I need say nothing of the Castle, nor of the prodigious Wine-cellar, in which, though there is but one celebrated Tun, that is seventeen Foot high, and twenty-six Foot long, and is built with a Strength more like that of the Ribs of a Ship, than the Staves of a Tun; yet there are many other Tuns of such a prodigious Bigness, that they would seem very extraordinary, if this vast one did not eclipse them. The late Prince *Charles-Lewis* shewed his Capacity in the Peopling and Settling this State, that had been so entirely ruined, being for many Years the Seat of War; for in four Years time he brought it to a flourishing Condition: He raised the Taxes as high as was possible without dispeopling his Country; all Men's Estates were valued, and they were taxed at Five *per Cent.* of the Value of their Estates; but their Estates were not valued to the Rigour, but with such Abatements as have been ordinary in *England* in the times of Subsidies; so that when his Son offered to bring the Taxes down to Two *per Cent.* of the real Value, the Subjects all desired him rather to continue them as they were. There is no Prince in *Germany*, that is more absolute than the Elector *Palatine*; for he layeth on his Subjects what Taxes he pleaseth, without being limited to any Forms of Government. And here I saw that which I had always believed to be true, that the Subjects of *Germany* are only bound to their particular Prince; for they swear Allegiance singly to the Elector, without any Reserve for the Emperor; and in their Prayers for him, they name him their Sovereign. It is true, the Prince is under some Ties to the Emperor, but the Subjects are under none. And by this *D. Fabritius*, a learned and judicious Professor there, explained those Words of *Pareus's* Commentary on the *Romans*, which had respect only to the Princes of the Empire, and were quite misunderstood by those who fancied that they favoured Rebellion; for there is no Place in *Europe* where all rebellious Doctrine is more born down than here.

29. I found a great Spirit of Moderation, with Relation to those warm Controversies that have occasioned such Heat in the Protestant Churches reigning in the University there, which is in a great Measure owing to the Prudence, the Learning, and the happy Temper

Temper of Mind of *D. Fabritius*, and *D. Miek*, who, as they were long in *England*, so they have that generous Largeness of Soul, which is the noble Ornament of many of the *English* Divines. Prince *Charles-Lewis* saw that *Manheim* was mark'd out by Nature to be the most important Place of all his Territory, it being situated in the Point where the *Neckar* falls into the *Rhine*; so that those two Rivers defending it on two Sides, it was capable of a good Fortification. It is true, the Air is not thought wholesome, and the Water is not very good, yet he made a fine Town there, and a noble Citadel, with a regular Fortification about it; and he designed a great Palace there, but did not live to build it. He saw of what Advantage Liberty of Conscience was to the peopling of his Country; so as he suffered the *Jews* to come and settle there; he resolved also not only to suffer the three Religions tolerated by the Laws of the Empire, to be professed there, but he built a Church for them all three, which he called the *Church of the Concord*, in which the *Calvinists*, *Lutherans*, and *Papists* had, in the Order of which I have set them down, the Exercise of their Religion; and he maintained the Peace of his Principality so entirely, that there was not the least Disorder occasioned by this Toleration: This indeed made him to be look'd on as a Prince that did not much consider Religion himself. He had a wonderful Application to all Affairs, and was not only his own chief Minister, but he alone did the Work of many.

But I were unjust, if I should not say somewhat to you of the princely Virtues, and the celebrated Probity of the present Prince Elector, upon whom that Dignity is devolved by the Extinction of so many Princes, that in this Age compos'd the most numerous Family of any of that Rank in *Europe*. This Prince, as he is in many Respects an Honour to the Religion that he professes, so he is in nothing more to be commended by those who differ from him, than for his exact adhering to the Promises he made his Subjects, with relation to their Religion; in which he has not (even in the smallest Matters, broke in upon their establish'd Laws; and though an Order of Men that have turned the World upside down, have great Credit with him, yet it is hitherto visible, that they cannot carry it so far, as to make him do any thing contrary to the establish'd Religion, and to those sacred Promises that he made his Subjects. For he makes it appear to all the World, that he does not consider those, as so many Words spoken at first to lay his People asleep, which he may now explain and observe as he thinks fit, but as so many Ties upon his Conscience and Honour, which he will religiously observe. And as in the other Parts of his Life he has set a noble Pattern to all the Princes of *Europe*, so his Exactness to his Promises is that which cannot be too much commended; of which this extraordinary Instance has been communicated to me since I came into this Country. The Elector had a Procession in his Court last *Corpus Christi* Day; upon which one of the Ministers of *Heidelberg* preached a very severe Sermon against Popery, and in particular taxed that Procession perhaps with greater Plainness than Discretion. This being brought to the Elector's Ears, he sent presently an Order to the Ecclesiastical Synod to suspend him: That Court is compos'd of some secular Men and some Churchmen; and as the Prince's Authority is delegated to them, so they have a Sort of an Episcopal Jurisdiction over all the Clergy. This Order was a Surprise to them, as being a direct Breach upon their Laws, and the Liberty of their Religion; so they sent a Deputation to Court, to let the Elector know the Reasons that hinder'd them from obeying his Orders; which were heard with so much Justice and Gentleness, that the Prince, instead of expressing any Displeasure against them, recalled the Order that he had sent them.

30. The Way from *Heidelberg* to *Francfort* is, for the first twelve or fifteen Miles, the beautifullest Piece of Ground that can be imagined; for we went under a Ridge of little Hills that are all covered with Vines; and from them, as far as the Eye can go, there is a beautiful Plain of Corn-fields and Meadows, all sweetly divided and enclosed with Rows of Trees, so that I fancied I was

in *Lombardy* again, but with this Advantage, that here all was not of a Piece, as it is in *Lombardy*; but the Hills, as they made a pleasant Inequality in the Prospect, so they made the Air purer, and produced a pleasant Wine. The Way near *Darmstadt*, and all forwards to *Francfort*, becometh more wild and more sandy. There is a good Suburb on the South Side of the *Maine* over-against *Francfort*, which hath a very considerable Fortification. There is a double Wall and a double Ditch that goes round it; and the outward Wall, as it is regularly fortified, so it is faced with Brick to a considerable Height. The Town of *Francfort* is of a great Extent, and seem'd to be but about a third Part less than *Strasburg*. The three Religions are also tolerated there, and though the Number of the Papists is very inconsiderable, yet they have the great Church, which is a huge rude Building; they have also several other Churches, and some Convents there. There are several open Squares for Market-places, and the Houses about them look very well on the Outside. Among their Archives they preserve the Original of the *Bulla Aurea*, which is only a great Parchment writ in *High Dutch*, without any Beauty answering to its Title; and since I could not have understood it, I was not at the Pains of desiring to see it; for that is not obtained without Difficulty. The *Lutherans* have here built a new Church, called *St. Katharine's*, in which there is as much Painting as ever I saw in any Popish Church; and over the high Altar there is an huge carved Crucifix, as there are painted ones in other Places of the Church; the Pulpit is extreme fine, of Marble of different Colours, very well polished and joined. I was here at Sermon, where I understood nothing; but I liked one thing that I saw both at *Strasburg* and here, that at the End of Prayers there was a considerable Interval of Silence left, before the Conclusion, for all People's private Devotions. In the House of their publick Discipline they retain still the old *Roman Pistina*, or Hand-mill, at which lewd Women are condemned to grind, that is, to drive about the Wheel that maketh the Mill-stones go. There is a great Number of *Jews* there, though their two Synagogues are very little, and by Consequence, the Numbers being great, they are very nasty. I was told, they were in all above twelve hundred. The Women had the most tawdry Embroidery of Gold and Silver about them that ever I saw, for they had all Mantles of Crape, and both about the Top and the Bottom there was a Border above a Hand's Breadth of Embroidery. The Fortification of *Francfort* is considerable; their Ditch is very broad, and very full of Water; all the Bastions have a Countermine that runneth along by the Brim of the Ditch, but the Counterscarp is not faced with Brick as the Walls are, and so in many Places it is in an ill Condition: The Cover'd Way and Glacis are also in an ill Case. The Town is rich, and driveth a great Trade, and is very pleasantly situated. Not far from thence is *Hockam*, that yieldeth the best Wine of those Parts. Since I took *Francfort* in my Way from *Heidelberg* to *Mentz*, I could not pass by *Worms*, for which I was sorry.

I had a great Mind to see that Place where *Luther* made his first Appearance before the Emperor and the Diet; and in that solemn Audience express'd an undaunted Zeal for that glorious Cause in which God made him such a blessed Instrument. I had another Piece of Curiosity on me, which will perhaps appear to you somewhat ridiculous. I had a Mind to see a Picture, that, as I was told, is over one of the Popish Altars, which one would think was invented by the Enemies of Transubstantiation, to make it appear ridiculous. There is a Windmill, and the Virgin throws Christ into the Hopper, and he comes out at the Eye of the Mill all in Wafers, which some Priests take up to give to the People. This is so coarse an Emblem, that one would think it too gross even for *Laplanders*; but a Man that can swallow Transubstantiation itself, will digest this likewise.

31. *Mentz* is very nobly situated, on a rising Ground, a little below the Conjunction of the two Rivers, the *Rhine* and the *Maine*; it is of too great Compass, and too ill peopled,

peopled, to be capable of a great Defence. There is a Citadel on the highest Part of the Hill that commands the Town; it is encompassed with a dry Ditch that is considerably deep. The Walls of the Town are faced with Brick, and regularly fortified; but the Counterscarp is not faced, so all is in a sad Condition, and the Fortification is the weakest on the Side of the Elector's Palace. There is one Side of a new Palace very nobly built in a regular Architecture, only the Germans still retain somewhat of the *Gothick* Manner. It is of a great Length, and the Design is to build quite round the Court, and then it will be a very magnificent Palace, only the Stone is red; for all the Quarries that are upon the *Rhine*, from *Basil* down to *Coblentz*, are of red Stone, which does not look beautiful. The Elector of *Mentz* is an absolute Prince; his Subjects present Lists of their Magistrates to him, but he is not tied to them, and may name whom he will. The ancient Demefne of the Electorate is about forty thousand Crowns, but the Taxes rise to about three hundred thousand Crowns; so that the Subjects here are as heavily taxed as in the *Palatinate*. There are twelve thousand Crowns a Year given the Elector for his Privy-purse, and the State bears the rest of his Expence. He can arm ten thousand Men, and there is a Garrison of two thousand in *Mentz*. This Elector has three Councils; one as he is Chancellor of the Empire, consisting of three; the other two are for the Government and Administration of Justice in his Principality; He and his Chapter have Months by Turns for the Nomination of the Prebends. In the Month of *January* he names, if any die; and they, such as die in *February*, and so all the Year round. The Prebendaries, or *Dome-beers*, have about three thousand Crowns a Year a-piece. When the Elector dies, the Emperor sends one to see the Election made, and he recommends one, but the Canons may chuse whom they please; and the present Elector was not of the Emperor's Recommendation. Besides the Palace at *Mentz*, the Elector hath another near *Frankfort*, which is thought the best that is in those Parts of *Germany*.

The Cathedral is a huge *Gothick* Building; there is a Cupola in the West End, and there the Choir singeth Mass. I could not learn whether this was done only because the Place here was of greater Reception than at the East End, or if any Burying place and Endowment obliged them to the West End. Near the Cathedral there is a huge Chapel of great Antiquity, and on the North Door there are two great Brass Gates with a long Inscription, which I had not Time to write out, but I found it was in the Emperor *Lotharius's* Time. There are a vast Number of Churches in this Town, but it is poor and thinly inhabited. The *Rhine* here is almost half an *English* Mile broad, and there is a Bridge of Boats laid over it. From *Mentz* all along to *Baccharach*, there are a great Number of very considerable Villages on both Sides of the River. Here the Rats-tower is shewed, and the People of the Country all firmly believe the Story of the Rats eating up an Elector; and that though he fled to this Island, where he built a small high Tower, they pursued, swimming after him, and eat him up: And they told us, that there were some of his Bones to be seen still in the Tower. This extraordinary Death makes me call to Mind a very particular and unlook'd for Sort of Death, that carried a poor Labourer off the Ground a few Days before I left *Geneva*. The Foot of one of his Cattle, as he was Ploughing, struck into a Nest of Wasps, upon which the whole Swarm came out, and set upon him that held the Plough, and killed him in a very little Time; and his Body was prodigiously swell'd with the Poison of so many Stings.

But to return to the *Rhine*: All the Way from *Baccharach* down to *Coblentz*, there is on both Sides of the River, hanging Grounds, or little Hills, so placed, as if many of them had been laid by Art, which produce the rich *Rhenish* Wine. They are indeed as well exposed to the Sun, and covered from Storms, as can be imagined; and the Ground in those Hills, which are in some Places of a considerable Height, is so culti-

vated, that there is not an Inch lost that is capable of Improvement; and this brings so much Wealth into the Country, that all along there is a great Number of considerable Villages. *Coblentz* is the strongest Place that I saw of all that belong to the Empire; the Situation is noble, the *Rhine* running before it, and the *Moselle* passing along the Side of the Town. It is well fortified, the Ditch is large, the Counterscarp high, and the Cover'd Way is in a good Condition: Both Walls and Counterscarp are faced with Brick, and there are Ravelins before the Cortins. But on the Side of the *Moselle* it is very slightly fortified, and there is no Fort at the End of the Stone-bridge that is laid over the *Moselle*, so that it lies quite open on that Side, which seems a strange Defect in a Place of that Consequence: But though the Fortifications of this Place are very considerable, yet its chief Defence lieth in the Fort of *Hermanstan*, which is built on the Top of a very high Hill, that lieth on the other Side of the *Rhine*, and which commands this Place so absolutely, that he who is Master of *Hermanstan*, is always Master of *Coblentz*. This belongs to the Elector of *Triers*, whose Palace lies on the East Side of the *Rhine*, just at the Foot of the Hill of *Hermanstan*, and over-against the Point where the *Moselle* falls into the *Rhine*; so that Nothing can be more pleasantly situated; only the Ground begins to rise just at the Back of the House with so much Steepness, that there is not Room for Gardens or Walks. The House makes a great Show upon the River, but we are told, that the Apartments within are not answerable to the Outside. I say, we were told; for the German Princes keep such Forms, that, without a great deal ado, one cannot come within their Courts, unless when they are abroad themselves: So that we neither saw the Inside of the Palace at *Mentz*, nor this of *Hermanstan*.

32. It is but a few Hours from this to *Bonne*, where the Elector of *Cologne* keeps his Court. The Place hath a regular Fortification, the Walls are faced with Brick; but though the Ditch, which is dry, is pretty broad, the Counterscarp is in so bad a Condition, that it is not able to make a great Defence. This Elector is the noblest born, and the best provided of all the German Clergy; for he is Brother to the great *Maximilian* Duke of *Bavaria*, and besides *Cologne*, he hath *Liege*, *Munster*, and *Hildesheim* which are all great Bishopricks. He hath been also six and thirty Years in the Electorate. His Palace is mean, consisting but of one Court, the half of which is cast into a little Garden, and the Wood-yard is in the very Court. The lower Part of the Court was a Stable; but he hath made an Apartment here, that is well furnished with Pictures; where as there are some of the Hands of the greatest Masters, so there are a great many Foils to set these off, that are scarce good enough for Sign-Posts.

The Elector has a great many Gold Medals, which will give me Occasion to tell you one of the most extravagant Pieces of Forgery that perhaps ever was, which happened to be found out at the last Siege of *Bonne*; for while they were clearing the Ground for a Battery, they discovered a Vault, in which there was an Iron Chest, that was full of Medals of Gold, to the Value of one hundred thousand Crowns, and of which I was told, the Elector bought to the Value of thirty thousand Crowns. They are monstrously large, one weighed eight hundred Ducats, and the Gold was of the Fineness of Ducat Gold: But though they bore the Impressions of *Roman* Medals, or rather Medaillons, they were all Counterfeit; and the Imitation was so coarsely done, that one must be extreme ignorant to be deceived by them. Some few that seem true, were of the late *Greek* Emperors. Now it is very unaccountable, what could induce a Man to make a Forgery upon such Metal, and in so vast a Quantity, and then bury all this under Ground, especially in an Age in which so much Gold was ten times the Value of that it is at present; for it is judged to have been done about four or five hundred Years ago.

The Prince went out a Hunting while we were there, with a very handsome Guard of about fourscore Horse well mounted; so we saw the Palace, but were not suffered to see the Apartment where he lodged. There is a great Silver Casket gilt, set with Emeralds and Rubies, that though they made a fine Appearance, yet were a Composition of the Prince's own making. His Officers also shewed us a Basin and Ewer, which they said were of Mercury, fixed by the Prince himself; but they added, that for many Years he has not wrought in his Laboratory. I did not easily believe this; and as the Weight of the Plate did not approach to that of Quicksilver, so the medicinal Virtues of fixed Mercury (if there is any such Thing) are held to be so extraordinary, that it seemed very strange to see twenty or thirty Pound of it made up in two pieces of Plate. A Quarter of a Mile without the Town, lies the best Garden of those Parts of *Germany*, in which there is a great Variety of Water-works, and very many noble Alleys in the *French* Manner, and the whole is of a very considerable Extent. But as it hath no Statues of any Value to adorn it, so the House, about which it lies, is in Ruins: And it is strange to see, so rich and so great a Prince, during so long a Regency, hath done so little to enlarge, or beautify his Buildings. *Bonne* and *Coblentz* are both poor and small Towns. *Cologne* is three Hours distant from *Bonne*: It is of a prodigious Extent, but ill built, and worse peopled in the Skirts of it; and as the Walls are all in an ill Case, so it is not possible to fortify so vast a Compass, as this Town makes, as it ought to be, without a Charge that would eat out the whole Wealth of this little State.

The *Jews* live in a little Suburb on the other Side of the River, and must not come over, without Leave obtained, for which they pay considerably. There is no Exercise of the Protestant Religion suffered within the Town, but those of that Communion are suffered to live there, and they have a Church at two Miles Distance. The Arsenal here is suitable to the Fortifications, that is, very mean and ill furnished. The Choir of the great Church is as high in the Roof as any Church I ever saw; but it seems the Wealth of this Place could not finish the whole Fabrick, so as to answer the Height of the Choir, for the Body of the Church is very low. Those, that are disposed to believe Legends, have enough here to overset even a good Degree of Credulity, both in the Story of the three Kings, whose Chapel is visited with great Devotion, and stands at the East End of the great Choir; and in that more copious Fable of the eleven thousand *Ursulins*, whose Church is all over full of rough Tombs, and of a vast Number of Bones, that are piled up in Rows about the Walls of the Church. These Fables are so firmly believed by the Papists there, that the least Sign of Doubting of their Truth, passeth for an infallible Mark of an Heretick. The Jesuits have a great and noble College and Church here. And for *Thauler's* Sake, I went to the *Dominicans* House and Church, which is also very great. One grows extreme weary of Walking over this great Town, and doth not find enough of Entertainment in it. The present Subject of their Discourse is also very melancholy. The late Rebellion that was there is so generally known, that I need not say much concerning it. A Report was set about the Town by some Incendiaries, that the Magistrates eat up the publick Revenue, and were like to ruin the City. I could not learn what Ground there was for these Reports; for it is not ordinary to see Reports of that Kind fly through a Body of Men, without some Foundation. It is certain, this came to be so generally believed, that there was a horrible Disorder occasioned by it. The Magistrates were glad to save themselves from the Storm, and abandoned the Town to the popular Fury, some of them having been made Sacrifices to it; and this Rage held long. But within this last Year, after near two Years Disorder, those that were sent by the Emperor and Diet to judge the Matter, having threatened to put the Town under the Imperial Bann, if it had stood longer out, were received, and have put

the Magistrates again in the Possession of their Authority, and all the chief Incendiaries were clapp'd in Prison. Many have already suffered, and a great many more are in Prison. They told us, that some Executions were to be made within a Week, when we were there.

Dusseldorp is the first considerable Town below *Cologne*: It is the Seat of the Duke of *Juliers*, who is Duke of *Newburgh*, eldest Son to the present Elector *Palatine*. The Palace is old, and *Gothick* enough; but the Jesuits have there a fine College, and a noble Chapel, though there are manifest Faults in the Architecture. The Protestant Religion is tolerated, and they have a Church built here within these few Years, that was procured by the Intercession of the Elector of *Brandenburg*, who observing exactly the Liberty of Religion that was agreed to in *Cleve*, had Reason to see the same as duly observed in his Neighbourhood, in Favour of his own Religion. The Fortifications here are very ordinary, the Ramparts being faced but a few Foot high with Brick. But *Keiserwart*, some Hours lower on the same Side, which belongs to the Elector of *Cologne*, though it is a much worse Town than *Dusseldorp*, yet is much better fortified. It hath a very broad Ditch, and a very regular Fortification: The Walls are considerably high, faced with Brick, and so is the Counterscarp, which is also in a very good Condition. The Fortification of *Orsoy* is now quite demolished. *Rheinberg* continues as it was, but the Fortification is very mean, only of Earth, so that it is not capable of making a great Resistance. And *Wesel*, though it is a very fine Town, yet it is a very poor Fortification; nor can it ever be made good, except at a vast Expence; for the Ground all about it being Sandy, nothing can be made there that will be durable, unless the Foundation go very deep, or that it be laid upon Pilotry. In all these Towns one sees another Air of Wealth and Abundance, than in much richer Countries that are exhausted with Taxes. *Rees* and *Emmerick* are good Towns, but the Fortifications are quite ruined, so that here is a rich and a populous Country; that hath at present very little Defence, except what it hath from its Situation. *Cleve* is a delicious Place, the Situation and Prospect are charming, and the Air is very pure; and from thence we came to *Nimeguen* in three Hours.

I will not say one Word of the Country into which I am now come; for as I know that is needless to you on many Accounts, so a Picture that I see here in the Stadt-house puts me in Mind of the most perfect Book of its kind that is perhaps in Being; for Sir *William Temple*, whose Picture hangs here at the upper End of the Plenipotentiaries that negotiated the famous Treaty of *Nimeguen*, hath indeed set a Pattern to the World, which is done with such Life, that it may justly make others blush to copy after it; since it must be acknowledged, that if we had as perfect an Account of other Places, as he hath given us of one of the least, but yet one of the noblest Parcels of the Universe, Travelling would become a needless Thing, unless it were for Diversion; since one finds no farther Occasion for his Curiosity in this Country, than what is fully satisfied by his rare Performance: yet I cannot give over Writing without reflecting on the Resistance that this Place made, when so many other Places were so basely delivered up; though one does not see in the Ruins of the Fortification here, how it could make so long a Resistance; yet it was this Town stemm'd the Tide of a Progress that made all the World stand amazed; and it gave a little Time to the *Dutch* to recover themselves out of the Consternation, into which so many Blows, that came so thick one after another, had struck them.

But then the World saw a Change, that though it hath not had so much Incense given to it, as the happy Conjunction of another Prince hath drawn after it with so much Excess, that all the Topicks of Flattery seem exhausted by it, yet will appear to Posterity one of the most surprizing Scenes in History, and that which may be well matched with the Recovery of the

Roman State after the Battle of *Canne*. When a young Prince, that had never before borne Arms, or so much as seen a Campaign, who had little or no Counsel about him, but what was suggested from his own Thoughts, and that had no extraordinary Advantage by his Education, either for Literature or publick Affairs, was of a sudden set at the Head of a State and Army, that was sunk with so many Losses, and that saw the best half of its Soil torn from it, and the most powerful Enemy in the World, surrounded with a victorious Army that was commanded by the best Generals that the Age hath produced, come within Sight, and settle his Court in one of its best Towns, and had at the same Time the greatest Force, both by Sea and Land, that hath been known, united together for its Destruction: When the Inhabitants were forced, that they might save themselves from so formidable an Enemy, to let loose that which on all other Occasions is the most dreadful to them, and to drown so great a Part of their Soil for the Preservation of the rest; and to complicate together all the Miseries that a Nation can dread; when to the general Consternation with which so dismal a Scene possessed them, a Distraction within Doors seemed to threaten them with the last Strokes; and while their Army was so ill disciplined, that they durst scarce promise themselves any thing from such feeble Troops, after a Peace at Land of almost thirty Years Continuance; and while their chief Ally, that was the most concerned in their Preservation, was, like a great Paralytick Body, more like to fall on those that it pretended to support, and to crush them, than to give them any considerable Assistance: When, I say, a young Prince came at the Head of all this, the very Prospect of which would have quite damp'd an ordinary Courage, he very quickly changed the Scene; he animated the publick Councils with a generous Vigour; he found them sinking into a Feebleness of hearkening to Propositions for a Peace that were as little safe as honourable; but he disposed them to resolve on hazarding all, rather than to submit to such infamous Terms.

His Credit also among the Populace seemed to inspire them with a new Life: They easily persuaded themselves, that as one WILLIAM, Prince of ORANGE, had formed their State, so here another of the same Name seemed marked out to recover and preserve it: It was this Spirit of Courage, which he derived from his own Breast, and infused into the whole People, as well as into the Magistracy, that preserved this Country. Something there was in all this that was Divine. The publick Councils were again settled, and the People were at quiet, when they saw him vested with a full Authority for that Time with relation to Peace and War, and concluded they were safe, because they were in his Hands. It soon appeared how faithfully he pursued the Interest of his Country, and how little he regarded his own. He rejected all Propositions of Peace that were hurtful to his Country, without so much as considering the Advantages that were offered to himself (in which you know that I write upon sure Grounds) he refused the Offer of the Sovereignty of its chief City, that was made to him by a solemn Deputation, being satisfied with that Authority which had been so long maintained by his Ancestors, with so much Glory, and being justly sensible how much the breaking-in upon established Laws and Liberties is fatal even to those that seem to get by it: He thus began his publick Appearance on the Stage with all the Disadvantages that a Spirit aspiring to true Glory could wish for; since it was visible he had nothing to trust to but a good Cause, a favourable Providence, and his own Integrity and Courage: Nor was Success wanting to such noble Beginnings; for he in a short Time, with a Conduct and Spirit beyond any thing that the World hath yet seen, recover'd this State out of so desperate a Distemper, took some Places by main Force, and obliged the Enemy to abandon all that they had acquired in so feeble a Manner. And if a raw Army had not always Success against more numerous and better-trained Troops; and if the Want of Magazines

and Stores in their Allies Country, which was the chief Scene of the War, made that he could not post his Army and wait for favourable Circumstances, so that he was sometimes forced to run to Action with a Haste that his Necessities imposed upon him; yet the forcing of the Beginnings of a Victory out of the Hands of the greatest General of the Age, the facing a great Monarch with an Army much inferior to his, when the other was too cautious to hazard an Engagement; and, in short, the forming the *Dutch* Army to such a Pitch that it became visibly superior to the *French*, that seemed to have been fed with Conquests; and the continuing the War till the Prince, that had sacrificed the Quiet of *Europe* to his Glory, was glad to come and treat for a Peace in the Enemy's Country, and in this very Place, and to set all Engines on work to obtain that, by the Mediation of some, and the Jealousies of other Princes: All these are such Performances, that Posterity will be disposed to rank them rather among the Ideas of what an imaginary Hero could do, than with what could be really transacted in so short a Time, and in such a Manner. And in Conclusion, every Place that belonged to these States, and to their Neighbours along the *Rhine*, together with a great many in *Flanders*, being restored, these Provinces now see themselves, under his happy Conduct, re-established in their former Peace and Security. And though some Scars of such deep Wounds may still remain, yet they find themselves considered on all Hands as the Bulwark of Christendom against the Fears of a new Monarchy, and as the Preservers of the Peace and Liberty of *Europe*.

Here is a Harvest, not for forced Rhetorick or false Eloquence, but for a severe and sincere Historian, capable of affording a Work that will far exceed all those luscious Panegyrics of mercenary Pens: But a small or a counterfeit Jewel must be set with all possible Advantages, when a true one of a great Value needs only to be shewed, in order to have that Value known.

If one was to offer a proper Manner of writing Voyages to the Consideration and Example of those that travel, I do not conceive, that a better Model could well be found, than these Letters of Bishop *Burnet's*. The great End of Travelling is to form right Notions of the Countries one sees, and of the People who inhabit them, and this End our Prelate plainly proposed to himself, and to the honourable Person to whom he wrote, who was likewise a great Judge of the Truth and Fidelity with which he wrote, since he had himself travelled through these Countries, and resided a considerable Time at *Geneva*. But at this Distance of Time we are better judges of his Penetration and Sagacity; for as he represents the Constitution and political Affairs of the *Swissers* impartially, so he very truly foresaw the Disorders that have since happened in that Country as well as at *Geneva*. As those Disorders justify his Political Capacity, so they fully convince us of the Truth of the Maxim by him laid down, That Ambition will produce the same Effects, let the Object of it be great or small, and the Desire of Governing a Bailliage will have just the same mischievous Consequences in a small Republick, that the Thirst of presiding over a great Province has in a larger State. So that in all Governments thus constituted, the very Principles of their Grandeur are also the Seeds of their Destruction, if these Governments are not yet dissolved; this is owing to the Care of their Neighbours, and to some other Accidents; but that they should be torn by Divisions, and once in a Century brought to the Brink of Dissolution, is very natural, and what has really happened within the Compass of our own Memory, when the State of *Geneva* was saved by the Interposition of *France* and the *Swissers*, the Government brought back to its first Principles; and the Government set right another Age at least.

His Prediction with Respect to *Lombardy*, and the other *Spanish* Provinces in *Italy*, have been also fulfilled. The late King *Philip V.* entered into the quiet Possession of them as Successor in the *Spanish* Monarchy, and was supported in the Possession of them, not only by the Forces of that Crown, but also by those of *France*; and

and yet in a very few Campaigns he was deprived of them by the *Germans*, under the Command of Prince *Eugene*, and himself and his Grandfather were glad to enter into a Treaty for the total Evacuation of *Italy*. It is indeed true, that this very Measure contributed not a little to the Preservation of *Spain*, of which he had been likewise deprived, if, by ending the *Italian* War in this Manner, he had not secured a new Body of Auxiliaries for its Defence. The Entrance which the *Spaniards* since have gained into that Country, in virtue of the Succession of the Queen Dowager as Heiress of the House of *Parma*, afforded a new Proof of the Solidity of his Conjecture; for we have seen *Milan*, *Parma*, *Placentia*, and all the strong Places in *Italy*, which made such a Figure in former Ages, taken and retaken in successive Campaigns; so that as he rightly judged, the modern Art of War has made a great Alteration in Things, and we have no Reason to expect that any Sieges for the future will resemble those of former Times, any more than that of *Troy*. A regular Method of attacking, and a large Train of Artillery, soon does the Business, in Spite of numerous Garrisons and the strongest Fortifications.

His Observations in respect to the Territories of the *Venetians*, and other States of *Italy*, have been also verified. That they still continue declining, all modern Travellers agree: That the great Cities which were rich and populous while free, are now falling to Decay, and in a Manner become Deserts, as well as the Districts about them, is not to be disputed; and that it cannot be long before they are either swallowed up by their powerful Neighbours, or change their Masters by some sudden Revolution, is a Thing morally certain; an Event which it is highly probable the present Generation will see. For tho' political Bodies resemble natural ones in many Circumstances; yet in some they differ, for the latter are often worn out and perish by Consumptions; yet this happens very rarely to the former, where the Dissolution of one Government, generally speaking, makes Way for another; so that it may be truly said, a State has many Lives, or which is the same Thing, though it perishes in one Form, it is again revived in another, because the Country, and some Inhabitants at least, remain in Spite of all Revolutions; and as in one Age we see small States destroyed and conquered by great Monarchies; so in succeeding Ages also those great Monarchies sink under their own Weight, and their Dominions crumble again into separate States. Thus the true Politician sees through all these Changes, penetrates their Causes, sees the greatest Events at a considerable Distance, and is never subject to Admiration or Surprise, which are Weaknesses incident only to limited Understandings and narrow Minds.

The Account he has given us of the deplorable State of the People who dwell at present in the finest Countries in *Europe*, serves to give Credit to the Accounts we daily received of their Poverty and Distress, which would otherwise surpass all Belief. It is however worthy of Notice, that within these few Years, the Popes themselves, as well as other Princes of *Italy*, begin to be sensible of the Evils resulting to their Subjects, from their Bigotry to their Religion, which they have endeavoured to remove, or at least to soften in many Respects. The late King of *Sardinia*, one of the wisest, and greatest Princes of his Time, began this, and thereupon some Differences arose between his Majesty and the Court of *Rome*. The Memorials he sent thither on that Occasion opened the Eyes of the late Pope, and some of the most intelligent Cardinals, who thenceforward became willing to make use of the same Methods that Monarch had practised for the Ease and Emolument of the Inhabitants of the Ecclesiastical State; but the natural Slowness of that Court in all its Motions, and the Fear of the Consequences that might attend any Relaxation of religious Discipline among a People, naturally so corrupt as the *Italians* generally are, has hitherto retarded so good a Work, though the Thoughts of it are not quite given up, the Pope having lately attempted to suppress not only many but almost all the Holidays peculiar to his Church, which however has not been

found easy to carry into Execution. The very Attempt however sufficiently shews, that in the Opinion of the Papists themselves, their Faith becomes a political Grievance, against which they are obliged to use such Precautions as are suggested by Reason, which sufficiently distinguishes between that Part of their Religion which is grounded on Revelation, and what is no better founded than on the Authority of the Church, or in plain *English*, the Invention of Priests. For evident it is, that God will command Nothing that is not for the Good of his Creatures; and as Reason teaches, so Experience justifies this Truth; for the Christian Religion, in its most essential Points, flourishes no where better than in those rough and barren Countries, where our Prelate observes, that the People are both happy and rich in Spite, as it were, both of the Soil and Climate; but in the Countries, where Popery is predominant, neither Soil nor Climate can contribute to render them populous, or the People that are left in them happy. The Inference I would draw from this is, that by Degrees it is more than probable, this great Evil will cure itself. For as the Papal Dominions feel it most, and as it is well known, that the best Politicians in *Europe* are generally found at *Rome*, for Reasons which our Prelate has very judiciously assigned, it seems highly likely from thence, that the Reformation of these Abuses, when they come to be intolerable, will be begun here; and when once this is brought about, there is no Room to question, that Precautions of the like Nature will be freely taken by all the Princes of the same Communion, who as they have suffered themselves to be lead wrong, will be, no doubt, as ready to be set right by the Example of this Court. Thus the temporal Interest of the Pope may prove the Means of redressing the Disorders occasioned by his spiritual Authority.

There has been an Observation made by Travellers of all Nations, who have passed through all *Italy*, that the People grow worse and worse, as you advance, and better and better as you come back, which is another Proof of the Principles before advanced; since in those distant Parts of the Country, but more especially in *Naples* and *Sicily*, the People are universally under the Dominion of their Priests, and indeed the Clergy are the Proprietors of the greater Part of the Lands of those Countries, which is the principal Reason that there is no Trade in Places that seem the fittest for it; and that those Countries are left uncultivated, which are naturally the most rich, and the most fruitful. But when-ever it shall happen, as happen it certainly will, that *Naples* and *Sicily* shall fall under the Dominion of an independent Prince, who will study only the Benefit of his Subjects, and the Advantage of his Family, these Grievances will be taken away, and the People put in Possession of those mighty Privileges, which seem to have been intended them by Nature. For it is impossible to consider the convenient Situation, the rich Commodities and the several Ports that are in these two Kingdoms, I mean of *Naples* and *Sicily* without standing amazed, that they are no better peopled; that they have so few Ships belonging to them, and that all the valuable Commodities they produce, are carried away by Foreigners at an under Rate, and manufactured and exported afterwards to enrich the Inhabitants of other Countries.

The great Dutchy of *Tuscany* is since fallen into a worse Condition than when it was visited by our Author. The Princes of the House of *Medicis*, always retain something of the Merchant; and though they wanted not Ambition, and were studious enough for the Advancement of their own Interest, yet they kept always in View the Good of their Subjects, as being truly sensible, that a Prince could never be great or rich if his Dominions were thinly inhabited, or his People poor. It was with this View, that by the Assistance of Sir *Robert Dudley*, an *Englishman*, Son to the great Earl of *Leicester*, that took so much Pains to build the Town, and open the Harbour of *Livorno*, which we taking our Pronunciation from our Sailors, call *Leghorn*, and which they afterwards declared a free Port. In this, and in other Measures of the same Nature,

ture, they pursued the Maxims that had been laid down while *Florence* remained a free State; but there was this Mischief attended the Change of the Government from a Republick, that its Fate depended no longer upon itself, but upon that of the reigning Family, which has brought it into the Circumstances we see it at present, which are very extraordinary, since it no longer is the Inheritance of that Family, or of the Heirs of that Family, but by Way of Exchange has been given to the Duke of *Lorraine*, who is at present Emperor, and thus labours under two additional Misfortunes; for as it had lost its Liberty before, so now it has not only lost its Native Princes, who were always the Parents of their People, and fallen under a foreign Yoke, but has actually no Prince at all, and is become a Province lying at a great Distance from the Residence of its Sovereign. These are, without Doubt, very grievous Misfortunes, the Consequences of which will be seen daily more and more.

The other States of *Italy* have also suffer'd much since they were visited by our Author; the Dutchies of *Milan*, *Mantua*, and *Guastalla*, are no more; and it is doubtful whether the same Thing may not be said of *Modena* and *Mirandola*. The Republick of *Genoa* is certainly undone, if not subverted; and the two last general Wars have gone farther in depopulating distressing, and impoverishing *Italy*, than all she suffered in the two Centuries before, and yet in that Time her Sufferings were not small. But notwithstanding all this, and though it is scarce possible for a Country to be more wretched than this really is at the Time we are writing, there is no Doubt that a few Years of Peace, and the rising up of good Princes, might still recover it to as good a State as ever it was in for these five hundred Years. The Reader will from hence discern the true Reason, why the maintaining a Balance of Power in this Country is so much the Interest of all the Princes and States that are its present Possessors, and why the rest of the Crowns of *Europe*, and the maritime Powers more especially, have also an Interest in maintaining that Balance, which is of so great Consequence to the Commerce of *Europe*, which can never be well regulated if that Balance should be overturned, and, by Addition of Conquests, the greatest Part of this Country fall under the Dominion of any Prince much more powerful than the rest. We may also see how wise and how right an Expedient it would be, if all the *Italian* Powers would unite in a Confederacy for preserving the Peace of that Country, by establishing a perpetual Neutrality, which, as it would prejudice no one Power in *Europe*, so if those concerned would go about it heartily, there could be no Doubt of their succeeding; and this might not only lay a Foundation for their particular Happiness, but prove a very good Precedent for establishing the universal Tranquility of Christendom; which if it be a Blessing that we have small Hopes to see, we may however have Leave to wish, and please ourselves with the Prospect of what would certainly prove the greatest and the most universal Good.

Thus we have taken Pains to accommodate the Accounts, Observations, and Remarks of Bishop Burnet, made threescore Years ago, to the present Times, at least with respect to *Italy*. It is very much to be regretted, that he did not give us a larger Account of his Journey through *France*, notwithstanding the Reasons assigned by him for omitting it. He shews himself very impartial in attributing the Persecution of the Protestants, to the Religion of the *French* King, rather than to the Haughtiness and Cruelty of his Temper, and perhaps there was something of Justice in this, because

it is certain, that in other Respects, this Prince was very far from shewing himself of a Blood-thirsty Temper, for there was but one Man of Quality put to Death, during his whole Reign, the Chevalier *de Rohan*; and the King banished his Mother for not demanding his Pardon, which at the same time he declared he would have granted. It is very remarkable that our Queen *Mary*, who was a most violent Persecutrix, was also a Woman of a mild and gentle Temper; which shews, that the best Princes are capable of doing as bad Things, as the worst, when under the Influence of bad Counsels. But perhaps it may not be amiss to inform the *English* Reader, that the *French* Memoirs of this Reign, suggest a very different Reason for this Persecution, and though they do not lay it upon the King, they lay it as little upon the Priests; for the Account they give of it is this. *Lewis XIV.* was very desirous to see the Protestants converted, as he called it, and for that Reason gave great Encouragement to such of the Clergy as applied themselves to this Work. This gave Occasion to the Archbishop of *Paris*, and the King's Confessor, Father *le Chaise*, to have frequent private Audiences of his Majesty, which lasted an Hour or two at a Time. This gave such Umbrage to one of his Ministers, Mr. *Louvois*, that he determined to put an End to it at any Rate, which induced him to propose the new Method of converting by Dragoons, as the shortest and the most effectual. If there be any Truth in this, as indeed there is too great Reason to believe that this was the real Secret of that bloody Business, then it plainly shews, that both Princes and Priests are liable to be imposed upon, and made the Tools of wicked and ambitious Statesmen, who consider Nothing but their own Interest, and stick at Nothing that may promote it. It was the same Person that filled the Head of that Prince with those dangerous and destructive Views, that were so fatal to the Peace of *Europe*; the Pretence was his Master's Glory, and the Interest of the Crown of *France*, but the true Cause was the Sense he had, that it was impossible for him to preserve his Power, or make himself necessary to his Master, but in Times of War and Confusion, which therefore he made it his constant Study to promote. The Surprising of *Strasbourg*, and the erecting of *Hunningen*, were both his Schemes, and in short, so were all the bad Schemes in his Time. Besides, he first taught the *French* Ministers how to practise upon the *German* Princes, which they have continued to do ever since; and he made it his Boast, that in a Time of full Peace he had added more to the Dominions of *France* than the greatest of her Generals in Time of War by their Conquests: And indeed this was so true, that he brought four of the Electors to become in a Manner dependent upon that Crown, equally to the Disgrace and to the Danger of the Empire. But Reflections of this Kind may lead us too far, and therefore we will put an End to them here, and with them to this Section, that in the next we may carry the Reader into *France*, and give him a short View of a Country, which in Point of Situation, Climate, and Produce, scarce yields to any in *Europe*; the Monarchs of which are the less excusable for aiming at universal Dominion, since the Possession of it would hardly put more into their Power, than by quietly enjoying their own Territories, and attending only to the Welfare of their Subjects, they might, without Envy, Trouble, or Danger, find within their Reach. But Ambition is a Perspective that diminishes Objects that are near, as much as it magnifies those at a Distance, and consequently, shews both in false Lights.

SECTION V.

TRAVELS through the *Low-Countries*, and *Germany* towards *Italy*, interspersed with curious Observations, Natural, Topographical, Moral, Physiological, Philological, &c.

By the late Reverend and Learned Mr. JOHN RAY, F. R. S.

1. *An Introductory Account of the Author and of his Performance, in order to shew the Difference between it and other Books of Travels.*
2. *A Description of Calais, Dunkirk, Gravelin, Newport, and other Places in the Spanish Flanders.*
3. *An Account of Bruges, Ghent, Brussels, Louvain, and Antwerp, with occasional Remarks on whatever is singular or worthy Notice in any of those Cities.*
4. *The same Observations continued, with a copious Description of the Nature of Foreign Universities.*
5. *A Description of Fort Lillo, the City of Middleburgh, Flushing, Ter-Veer, Bergen-op-Zoom, Breda, Dort, and Rotterdam.*
6. *The Description of Delft, with the Monumental Eulogies of William I. Prince of Orange, and Admiral Van Tromp.*
7. *A Description of Leyden, with an Account of the University, and of the Grove of Sevenhuys, and the Method of making Turfs.*
8. *The great City of Amsterdam described, with a very exact Account of its Government.*
9. *The Author's Journey from thence to Utrecht, with an Account of the remarkable Places in its Neighbourhood.*
10. *Bois-le-Duc, Haumont, Maastricht, and other Places, described.*
11. *The Manners, Customs, and peculiar Disposition of the Dutch Nation, together with the curious Observations made upon that Subject by Mr. Barnham, Secretary to the Lord Hollis.*
12. *A large Description of Liege, with the Monumental Inscription of Sir John Mandeville.*
13. *An Account of Spa, Limbourg, and Aix la Chapelle, including the Antiquities and Form of Government of the last mentioned City.*
14. *An Extract from Dr. Francis Blondel's Observations upon those Baths, esteemed the best Account ever published of them..*
15. *A Description of Juliers, and of the City of Cologne, and an Account of the Government of that Place.*
16. *Andernach, Coblenz, and many other Places described, with a particular Account of the Country.*
17. *A Description of Mentz, Francfort, Worms, and Frankendahl.*
18. *An Account of Spire, Mannheim, and Heidelberg, including the Description of the Palatinate.*
19. *Philipsbourg, Strasbourg, Brisac, and the Country adjacent, described.*
20. *The City and University of Basil described, with various Critical and Historical Observations thereon, and on the Places adjacent.*
21. *Zurich, Schaffhausen, Constance, and the Country about them, described very exactly.*
22. *An Account of Lindaw, and other Towns in Bavaria.*
23. *A Description of Munich, Augsborg, and Donawert.*
24. *The Country of Anspach, and the City of Nuremberg, described.*
25. *A Description of Regensberg or Ratisbon, Straubingen, and Passau.*
26. *A large Account of the Country of Austria, with a particular Description of the Capital City of Vienna.*
27. *An Account of the Author's Journey from thence to the Frontiers of Italy.*

IT is impossible to have a just Notion of the Nature and Value of the following Travels, without having some Account of the learned Person who wrote them, whose Name will always do Honour to this Nation. His Father was a *Blacksmith*, at *Black Notley* in *Essex*, where Mr. Ray was born and died. The first of these Events happened the 29th of *November*, 1628. He received his first Education at the Grammar-School at *Braintree*, and from thence was removed to *Cambridge*, where he distinguished himself by his indefatigable Diligence in his Studies, and his particular Turn to *Botany*, which was the principal Cause of all his Travels. In 1658, he made the Tour of *Wales* and the West of *England*; in 1661, he visited the North, and examined the best Part of *Scotland*; in 1662, he made another Journey to *Chester*, and from thence through *Wales*, into *Cornwall*, *Devonshire*, *Dorsetshire*, *Hampshire*, *Wiltshire*, and returned to *London* through *Berkshire*. In 1663, he travelled with Mr. *Willoughby*, Mr. *Skippon*, and Mr. *Bacon*, through the Countries which will be mentioned in the following Pages; and after his Return to *England*, he made many other Journeys into different Parts for the Sake of Botanical Observations, of which he left behind him very large Accounts, that hitherto remain unpublished. In 1677, he returned into his native Country, and built a House in the Parish of *Black Notley*, where he passed the Remainder of his Days. He wrote and published a great Number of very learned and valuable Pieces, which are too well known for us to give any Account of them. He was justly esteemed one of the honestest and most conscientious Men of the

Age in which he lived; he suffered in his Youth for not taking the *Solemn League and Covenant*, and lost his Living after the Restoration, because he would not take the *Abjuration Oath* then imposed in relation to that *Solemn League and Covenant*, which declared it not binding on those who did take it; and thus he was generally esteemed a *Nonconformist*, though always not only a Member, but a Deacon and Priest of the Church of *England*, in which Communion he died, *January* 17, 1705. His Travels are written in a very peculiar Style, and in a very singular Manner; he is generally copious, and always exact, but at the same Time there is hardly any Thing to be met with in his Accounts that hath been recorded by others; so that though he describes the same Places with many other Writers, yet the Reader will meet with very few or no Repetitions, which was the principal Reason of our inserting his Travels in this Collection, which have been always, and still are very justly admired, and generally esteemed. One Thing more it is necessary to observe, which is this, that we have omitted his Catalogues of Professors, the Times and Subjects of their Lectures in the several Universities through which he passed, as being long ago out of Date, and so tending neither to the Entertainment, nor Instruction of the Reader; and we have likewise left out his Catalogues of Plants, because foreign to our Purpose, though they will always add considerably to the Value of the larger Collection published under his Name, which being grown scarce, has been reprinted within these few Years.

2. We went in the Packet-Boat *April* 18th, 1663. from *Dover* to *Calais*, formerly belonging to the *English*, since to the *Spaniards*, and soon after surrendered to the *French*, in 1598. Its Situation is very advantageous, and the Fortifications of Earth, with a deep Ditch and Citadel to the Land-side. It exceeds *Dover* in Bigness, and the Market-place is a very spacious Square; the Government of the Place being administered by a Major and four Aldermen.

April 21. We continued our Journey, by Way of *Gravelin* to *Dunkirk*; the first is a Place but indifferently built and peopled, seated in a watry Country, and enclosed with a good Number of Out-works and broad Ditches: The second may be compared for Extent to *Cambridge*, being very populous and well fortified. It is one of the four Port-Towns of *Flanders*.

We travelled along the Sea-shore from thence to *Ostend*, taking our Way by *Neuport*: This last is another of the *Flemish* Ports, having a capacious and secure Harbour, but will admit of no Ships of any great Burthen; the Streets are broad and uniform, but the Houses are low, and built of Timber. *Ostend* is another of the Harbours of *Flanders*, considerable both for Strength and Conveniency; being capacious and secure against the Violence of the Winds, and capable of receiving Ships of considerable Burthen; the Buildings are likewise but low here, yet pretty uniform, and the Streets regular and streight, being built all at once, after the famous Siege of three Years, before it could be taken by the *Spaniards*. *Sluys*, is another Sea-port Town of this Country, but under the Jurisdiction of the United Provinces; its Harbour exceeds all the before-mentioned for its Capacity, but is growing daily shallower, and will in Time be choaked up.

3. *April* 24. Having taken us Places in the Track-boat, bound for *Bruges*, and drawn by Horses, we came about a League and an half from *Ostend*, to one of those Locks (called *Softegni* by the *Italians*) which are generally made at a great Declivity of a Fall of Water, to keep up the Water, and thereby render a River navigable, which either wants Water, or has too steep a Descent. Such there are in *Guildford* River in *Surry* in *England*. The City of *Bruges* is about four Leagues distant from *Ostend*, well built, and of a great Circumference, having been formerly a very considerable City for Trade. Here, when we saw Pieces of Linnen fastened to the Ring of the Doors, where Women were lying in; it put us in Mind of what *Erasmus* had taken Notice of upon this Head in his *Colloquies*. But what delighted us much, was a certain Engine made use of here, for the drawing up of Water in great Quantities for the Use of the City. This is perform'd by Means of a Chain, unto which are fastned Cylindrical Buckets of Iron; the Chain being round in form of a Wheel-band, and put over a large *Axis*, deeply furrowed, from whence hanging down into the Well below it, and being turn'd about by the *Axis*, the descending Buckets have their Mouths downward, take up the Water as they pass through the Well, which afterwards ascending with their Mouths upwards (yet a little inclining from the Chain outward) they carry up to the *Axis*, to which as soon as they are come, they must, by Reason of their Position, turn it out into a Trough placed lower than the *Axis*, by which it is conveyed into a Cistern, and thence by Pipes through the City. The deep Furrows in the *Axis* are made to hold up the Buckets, without which, the Chain would be apt to slip back, by Reason of the Weight of the ascending Buckets. I have seen many of this kind in *France*, *Spain* and *Italy*. This City has but Seven Parish Churches, but Convents in a great Number: In the Church dedicated to *Our Lady*, you see the Monument of *Charles*, surnamed the *Hardy*, Duke of *Burgundy*, who (as the *French* Inscription tells you) was slain in the Battle of *Nancy*, 1476. and his Body translated thence by the Emperor *Charles V.* We saw here a very tall Fellow, and well-shap'd; from his middle Finger to his Elbow 25 Inches, the Length of his Hand to the Wrist 11 Inches, his middle Finger 7 Inches,

and the rest of his Limbs proportionable: He was afterwards shown in *England*.

According to *Boetius*, a Native of this Place certain subterraneous Woods are digg'd up ten or twelve Ells deep in the Earth, with the Trunks, Boughs, and Leaves so apparent, that the several kinds of them may be easily distinguish'd. The like I have been inform'd, are found in *Friesland* and about *Groningen*, especially in the fenny Ground, where they dig for Turfs. In *England* they are called *Moss-wood*, and are likewise found in moorish and boggy Grounds: It is very probable, that in most ancient Times, before all Records, these Places were Woods on the Continent, and being overwhelm'd by the Sea, continued under Water, till the Rivers and Floods brought thither so much Earth and Mudd, as by Degrees cover'd these Trees, and rejoined them to the Continent. As for the Seas often encroaching upon the Continent, it is manifest on our Coast of *Suffolk* about *Dunwich*, there being very ancient and authentick Records, which mention a certain Wood a Mile and a half to the East of *Dunwich*, which is now a great Way in the Sea. And, as to what concerns the filling up of such Places, I have some Reasons to believe, that if not all, at least a great Part of the *Low-Countries* have been thus gained from the Sea. I remember that *Varenus* mentions, that at the sinking of a Well in *Amsterdam*, of 100 Foot deep, they met with a Floor of Sand and Cockle-shells, a convincing Argument that the Bottom of the Sea lay there in former Ages, and that in Process of Time, these hundred Foot of Earth were accumulated and brought thither by some considerable Rivers which deposited the Sands its Stream had washed from the high Grounds hereabouts. Of this we have divers other Instances in the Flats about *Venice*, and in the *Camarg*, or the Isle of the River *Rhose*, near *Aix* in *Provence*, where (as we were credibly informed) the Watch-Tower had been three Times removed nearer to the Sea, within the Memory of some People, by Reason of the Accession of Land on that Side. Some object concerning the Trees digg'd up in *England*, that, as they are generally taken for Firs (a Tree that never grows well in *England*) this Argument will not hold in respect of our Country; but till we are better convinced that the Trees they speak of are really Fir Trees, the Solution of this Objection meets with no great Difficulty.

We travelled *April* the 27th, by Water, from *Bruges* to *Ghent*, a City which stands on a great Tract of Ground, but scarce half built. It has only Seven Parish Churches, but Fifty-five religious House.

From hence we continued our Journey, *April* the 30th, to *Brussels*, by the Way of *Alost* (a fortified Town) the first being the Capital City of *Brabant*, and the Residence of the Governors of the *Spanish* *Netherlands*. The Inhabitants here, as well as in divers other Cities of the *Low-Countries*, have Dogs to draw their little Wheelbarrows or Carts, in which they sell Fruits and other small Commodities.

May 2. We came to *Louvain*, a City which for its Circuit exceeds that of *Ghent* by three Rods, but contains, like that, abundance of void Ground, and is but indifferently built; the Town-house, which is very stately, being the only Structure worth mentioning. It has 43 Colleges, but does not now make the Figure it did.

The Students are distinguish'd by their Habits, according to their Professions, the Divines wearing constantly Gowns and square Caps, which the rest are not obliged to, except at publick Exercises; yet none are allowed to wear Swords in the City. In the four *Pædagogies*, Philosophy only is taught by two Professors; the first is stiled *Primarius*, the other *Secundarius*. The *Primarius* reads in the Morning, from half an Hour after six till half an Hour after seven, and from ten to eleven a Clock. The other in the Afternoon, from half an Hour after one, till half an Hour after two; and from half an Hour after four, till half an Hour after five. They take the Professors Lectures; (which are divided into *Dictata* or *Theses*, and Propositions, and *Annotata*,

or Objections and Solutions) in certain Note-Books. The Gentlemen Students are placed in a peculiar Form, called *Scamnum Nobilium*. As soon as the Students come to the University, they must enter their Names, with the President of their College; every time they are absent from a Lecture, they pay a Penny, for each Time of Absence from a publick Exercise, three Pence, and if they miss when they are to perform a publick Exercise themselves, twenty Pence. The Professors of each *Pædagog* chuse every Year twelve of their best Scholars, and after they have been publickly examined, out of their Number twelve are selected to be *Burses*, and to have their Lodgings, Diet and a good Stipend in what College each of them pleases, and to choose what Profession they like best, and it is out of these commonly the Professors are chosen. Their Degrees here are *Batchelor*, *Licentiate*, and *Doctor*. After two Years standing in Divinity, they may be created *Batchelors* or *Baccalaurei currentes*, and at one more *Baccalaurei formati*, but can't be *Licentiates* till seven Years after; these immediately after their Creation, are reputed Gentlemen, and have Liberty to choose a Coat of Arms. Doctors are seldom created till they are 50 Years of Age, unless they have given more than ordinary Proof of their Abilities.

May 4. We took a Walk for half a Mile from *Louvain*, to take a View of the Duke of *Areschot's* Palace, and the Convent of the *Celestines* adjoining to it. At *Louvain*, we saw three Things we had not met with before, *viz.* Storks, Women Porters, and Troopers begging on Horseback.

May 5. Leaving *Louvain*, we travell'd to *Mecklin* (*Malines*) a very neat Place, being the Seat of an Archbishop, and Capital of one of the Seventeen Provinces under the Name of the *Lordship of Mecklin*, tho' it has not above nine Villages under its Jurisdiction. The Inhabitants are very industrious in their Manufactories; and among the rest, there are three whole Streets full of Tanners. We continued the same Day our Journey to *Antwerp*, by Boat, which some compare to *Florence*, but exceeds it in my Opinion for Beauty. It is encompass'd with Fortifications of Earth, faced with Free-Stone, of a considerable Thickness, and a broad and deep Ditch, which together, with its Situation in a level Ground, makes it very strong. The Citadel built by the Duke of *Alva*, is a Pentagon. The Houses are generally lofty, and of Brick; the Chapel of the Jesuits very rich and stately; and the Steeple of St. *Mary's* Church a curious piece of Architecture, as is also the Town-house. Our *Royal Exchange* of *London*, was built after that of *Antwerp*, but the Copy much exceeds the Original; this City being much fallen from its Traffick since the vast Encrease of Wealth in the United Provinces. *Plantin's* Printing-House is the best of that kind I ever met with.

4. May 15. We embark'd on board a small Vessel at *Lillo* Fort, upon the *Schelde*, three Leagues below *Antwerp*, belonging to the United Provinces: Having a favourable Wind and Tide, we made 54 *English* Miles, and arrived before Sun-set at *Middleburgh*, the Capital City of the Province of *Zealand*: In our Passage we saw several Sea Calves upon the Sands. This City is seated in the very Center of the Isle of *Walcheren* (whence it derives its Name) being of a large Compass, well fortified, populous and wealthy. It has a Channel reaching from the Town through that Part of the Isle which looks towards *Antwerp*, capable of receiving Ships of great Burthen, which are brought into the very Streets of the City. It has about 20 Churches, the *Lutherans*, *French*, *Protestants*, *Anabaptists* and *Jews*, having also the publick Exercise of their religious Worship allowed them here. This is one principal Cause of their Wealth and Trade. We took a Walk thence to *Flushing*, about three *English* Miles; It is neither so large nor so handsomely built as *Middleburgh*, the Streets being much narrower; but the Convenience and Goodness of its Harbour, together with its Strength and Riches, make it very considerable.

May 19. We took a Walk to the *Ter-Veer*, about the same Distance from *Middleburgh* to the North; it doth not come near to *Flushing* in Bigness, yet has two very good Harbours, and several Wharfs and Keys: As we pass'd along, we found the Banks of the Sea-shoar covered with a Kind of Matting of Rushes or Flags, staked down as high as the Tide commonly rises, to prevent their being washed away by the Strength of the Current.

May 20. We pass'd in a Boat from *Middleburgh* to *Bergen-op-Zoom*; and in our Way went by the strong Fort call'd *Rammekens*, situate at the Entrance of the Channel leading to *Middleburgh*, a Place remarkable for its Fortifications, which are strengthened by many Half-Moons, Horn-works, &c. and is look'd on as one of the best Fortresses in this Country.

May 21. We travelled to *Breda*, eight Hours from *Bergen*, which makes about 24 *English* Miles; it being the Custom of the *Dutch* to measure their Miles by Hours. This Place may stand in Competition with most in those Parts for its Strength, Bigness, and Number of Inhabitants, being enclosed by very good Fortifications, and two broad Ditches, one of which is always fill'd with Water. It belongs to the Prince of *Orange*, whose Palace is seen here, and there is a good Garrison in the Town.

May 22. We continued our Journey by the Way of *Gertrudenburg* (a small but well fortified Place, belonging to the *Dutch*) to *Dort* or *Dodrecht*, a City rich, populous, large, and for its Buildings, to be compared with *Antwerp* itself; the Streets being very neatly pav'd (as in all other Cities of *Holland*) with Stone in the middle, and on each Side with a peculiar kind of yellow Brick, set Edgeways. The *English* enjoy great Privileges here, and have two Churches, whereas the *French* have but one. We saw the Room in the *Gunners-Hall*, in which the Synod, held in this City 1611, was assembled, the Seats thereof being still preserved.

6. May 23. We pass'd in one of their *Trackschoots* or Boats drawn by Horses, to *Rotterdam* in five Hours. This City is of a triangular Figure, and, next to *Amsterdam*, vies with all the other Cities of the United Provinces, not excepting *Leyden* itself, having been considerably augmented of late, by the Addition of many new Streets. Not far from St. *Lawrence's* Church, you see a small House, which having given Birth to the learned *Erasmus*, his Picture is set over the Door, with this Distich on one Side of it; much inferior in Merit to its Subject.

*Ædibus his ortus mundum decoravit Erasmus
Artibus ingenuis, religionem, fide.*

And another thus:

*Fatalis series nobis invidit Erasmus,
At Desiderium tollere non potuit.*

His Statue in Brass stands in the great Market-place, with a Book of the same Metal in his Hand. As the Inhabitants of *Rotterdam* enjoy the Convenience of a very good Harbour, so Ships of great Burthen are carried into the very Streets, and they addict themselves chiefly to Naval Commerce. Their Civil Government is administred by a President, four Burgermasters, and twenty four *Aldermen* or *Senators*, which they call the *Vroetschap*: These continue in their Stations during Life, choose all the publick Officers out of their own Number, and if any one dies, have the Privilege of choosing another in his Room; so that the Government here, as well as in other Cities of the United Provinces, is a Kind of *Aristocracy*, with this Difference only, that in some, the Number of those who compose this *Vroetschap* is more, in others less.

5. May 25. We went into one of their *Trackschoots*, which go every Hour in the Day from hence to *Delft*, where we arrived in two Hours. This City is also very large, with fair Streets and Water-Channels in them

as in most other Places in *Holland*. The *Stadthouse* is a stately Structure, and the old and new Churches are very large. In the middle of the Quire of the last of these, you see the sumptuous Tomb of *William* Earl of *Nassaw*, Prince of *Orange*, who was assassinated by the *Spaniards*, as this following Inscription tells you :

D. O. M.
Et
Æternæ memoriæ
Gulielmi Nassovii,
Supremi Arausionensium Principis,
Patr. Patr.
Qui Belgii fortunis suas posthabuit,
Et suorum.
Validissimos exercitus ære plurimum privato
Bis conscripsit, bis induxit ;
Ordinum auspiciis Hispaniæ tyrannidem propulit :
Veræ religionis cultum, avitas patriæ leges
Revocavit, restituit :
Ipsam deniq; libertatem tantum non assertam
Mauritio Principi,
Paternæ virtutis heredi filio,
Stabiliendam reliquit ;
Herois vere filii, prudentis, invicti ;
Quem Philip. II. Hisp. R. ille Europæ timor, timuit,
Non domuit, non terruit ;
Sed empto percussore fraude, nefanda
Sustulit.
Fæderat. Belg. Provinc.
Perenne memor. monum.
Fec.

In the Quire of the old Church is the Tomb of the famous *Van Tromp* with this Inscription :

Æternæ Memoriæ,
Qui Batavos, qui virtutem ac verum laborem amas, lege
ac luge.
Batavæ gentis decus, virtutis bellicæ fulmen hic jacet, qui
vixit nunquam jacuit, & imperatorem stantem debere
mori suo exemplo docuit ; Amor civium, hostium terror,
Oceani stupor, Martinus Harperti Trompius : Quo no-
mine plures continentur laudes, quam hic lapis capit
sanè angustior ; Et cui Schola Oriens & Occidens, mare
materia triumphorum, Universus Orbis theatrum gloriæ
fuit : Prædonum certa perniciēs, commercii felix assertor,
familiaritate utilis non vilis, postquam nautas ac milites,
durum genus, paterno & cum efficacia benigno rexit im-
perio, post L. prælia, quorum Dux fuit aut pars magna,
post insignes, supra fidem, victorias, post summos, infra
meritum, honores, tandem bello Anglico, tantum non
victor, certe invictus, X. Aug. Anno Æræ Christianæ
M.D.C.L.III. Ætat. LVI. vivere ac vincere desiit. Fæ-
derati Belgii Patres Heroi optime merito M. P.

Over his Arms was written the following Distich.

Urbs * Phœbi cineres jactat, sed currus || honores
Ingreditur quoties egrediturque mari.

* i. e. Delphi. || Phœbi nimirum seu solis.

One Mr. *Mere* an Apothecary of that City had a fine *Musæum* of natural and artificial Rarities, and among the rest, the *Dens Hippopotami* (though I question whether there be such an Animal) the Horns of the *Hircus Bezoardicus*, and the *Cornua & Pedes Alcis*, call'd the *Elk* in *English* ; the same I suppose, which in *New-England* and *Virginia*, is call'd *Moose* ; a Species of Deer of a tall and large Size, the Horns being without Brow-Antlers, but only a broad Palm of several Shags upon it. I saw one of those Horns at *Lewes*, at Mr. *Holney's* an Apothecary, that weighed twenty five Pounds, and the Skin of an *Elk* stuff, in the *Great Duke of Florence's* Gallery. In the Anatomical Theatre we also saw many Rarities, too many to be inserted here. *Delft* is famous for its Earthen Ware, which is made in great Plenty there, in Imitation of *China*. The Government is administer'd by a *Prætor* or *Schout*,

two *Burgomasters*, seven *Eschevins*, and forty *Senators*, which they also call the *Vroetschap*.

May 28. We pass'd by Water, in less than an Hour's Time, to the *Hague*, being rather a Village than a City, and not enclosed with Walls or any thing else ; but for the Fairness of its Streets and beautiful Houses, and Number of People, may challenge the Preference before many Cities. The Grove which is near it, is exceeding pleasant, and here I first saw the *Monophyllum* grow wild, as I found at *Scheveling*, a Village on the Sea-side, near the *Hague*, a Species of *Spartum maritimum*, much larger than our *English* kind. Whilst we were at the *Hague*, we took the Opportunity of viewing the Burial Place of a certain Lady of *Zealand*, in the Church of *Lausdun*, a Village about five or six *English* Miles from the *Hague*, who, as the Inscription tells you, was *Margaret* the Wife of *Herman*, Earl of *Hennenbergh*, and Daughter of *Florentius*, Earl of *Holland* and *Zealand*, and Sister to *William* King of the *Romans*, &c. This Lady being about 40 Years of Age, and meeting with a poor Woman that had Twins in her Arms, told her that she must have been dishonest to her Husband, as not believing that two Children could be begot at once ; at which the poor Woman being highly concerned, wish'd that she might bring forth as many Children at a Birth, as there were Days in the Year ; which was fulfilled in 1276, when at one Birth she was brought to Bed of 365 Children of both Sexes, who were baptiz'd by *Guido*, Suffragan of *Utrecht*, in two Brass Basons, the Sons having the Name of *John*, and the Daughters that of *Elizabeth* given them ; and soon after died all in one Day, as did also the Mother, and were buried in this Church of the Village of *Lausdun*. This Inscription is to be seen in *Latin*, over the two Basons, in which they say, these Children were baptiz'd, and beneath it this Distich :

En tibi monstrum nimis & memorabile factum,
Quale nec à mundi conditione datum.

7. May 31. We went in one of their Passage-boats in three Hours from hence to *Leyden*, being, next to *Amsterdam*, the largest City in *Holland*. The great Church of *St. Peter* contains many Monuments of learned Men, and in the *French* Church is among others, that of *Joseph Scaliger*. The Schools for publick Lectures is a Structure of three Stories high, of Brick, having two Rooms on a Floor ; the two lower being assign'd for Divinity and Physick ; middlemost for Law and Philosophy ; and the uppermost contains the Printing-House, so well known by the Name of *Officina Elzeviriana*. Every Year a Catalogue is printed in *Latin*, and affixed to the School-Gates, containing the Names of the Professors, and what publick Lecture each of them is to keep the Year following. Behind the School-Yard is the Physick-Garden, which encloses about an Acre of Ground in the Square, and has a considerable Number of exotick Plants ; the Catalogues of which are also frequently published here. They have no more than two Colleges here, in the Nature of Hospitals, for the Sustainence of poor Scholars, the rest of the Students living upon their own Purse, without any Gowns or Caps, but walk the Streets with their Swords, and appear in the Schools, and perform their Exercises in them, with their Heads uncover'd. Those that have a Mind to be Members of the University, apply themselves to the *Rector Magnificus* (resembling the Vice-Chancellor of our University) who enters them into the Book, and gives them a Seal, by which they are freed from paying of Excise, yet under a certain Limitation. Besides the publick Lectures, each of the Professors allot certain Hours for reading in private (which they call *Collegia*) for which the Auditors pay a Gratuity. Degrees (of which they have only those of *Master of Arts* and *Doctors*) are conferr'd here, without the least respect to the standing of the Candidates. He that is to commence in any Faculty, proposes only certain Theses upon a selected Subject in Print, which he is obliged to maintain against all Opponents, every one having

having the Liberty (after Leave ask'd from the Professor that presides) to oppose the Candidate. Each of these Professors have a Salary of 200 and 300 *l. per Annum* allowed them. Besides the University, there is a great Manufacture of Woollen Cloth settled in this City. For the rest, the Houses are very well built, with very steep Roofs on Purpose to cast the Rain Water into Cisterns, wherein it is preserved for Use. Its Streets are for the most part very broad, large, and streight, furnish'd with Water Channels. In the Night time certain Watchmen go about the Streets, and making a Noise with a Rapper, tell every Hour what Time of Night it is. In the anatomical Theatre, we saw many Skeletons of Men and Beasts, and among other Rarities, a Box, containing the Skeleton of the Head of an *Indian* Creature, half a Stag's, half a Hog's-head; many Leaves of the *Betle*, not unlike the great *Satyrion* Leaf; an *Ant-Bear*; and in the Library, the Manuscripts of *Joseph Scaliger*. *Leyden* is enclosed with a good Earth Wall, and a Ditch, which being surrounded by Rows of Lime-Trees, make very pleasant Walks.

Before we parted from *Leyden*, we took a Turn to a Village call'd *Sevenbuys*, about four Leagues thence, to view a very pleasant Grove near it, excellently well stor'd with wild Fowl, such as *Scholfers*, call'd *Shags* in *England*, being not unlike *Cormorants*, but somewhat less; we were much surpris'd to see them build upon Trees. *Lepelaers*, call'd *Plateæ* and *Pellicani* by *Gesner*, some call them *Spoonbills* in *England*. *Quacks*, call'd *Night-Ravens* by the *Germans*, because they always make a Noise in the Night Time, and *Reyers* or *Hérons*. Besides which this Wood affords vast Numbers of *Ravens*, *Wood-Pidgeons* and *Turtle Doves*. By the Way, we took Notice of *Lyfimachia lutea flore globoso*, and the *Arum sive Dracunculus* growing in the Ditches. All the Grounds between this Village and *Leyden*, are low, fenny, and full of Pools. We saw the Country People hereabouts busied in making of Turf: They rake with a Kind of Hoop-net, fastened to a Pole, the Mud up from the Bottom of a standing Pool, wherewith having laden a Boat, they throw this Mud with long Shovels on an even Piece of Ground, making of it a Bed of an equal Bigness as near as they can guess; this, after it has lain long enough to dry, they tread with pieces of Boards fastned to their Feet, to make it close and smooth; then they cut the whole Bed with a Spade into Pieces of the Bigness of a Brick, and pile them up in Stacks or Ranks, so that one may see through them, to give a free Passage to the Air and Wind, to dry them further, and afterwards are laid up in Barns, the Sides of which are made up with wooden Bars at some Distance from one another, to make them fit for Firing.

June 6. We continued our Journey in one of the Boats that go from this Place to *Harlem*, where we arrived in four Hours; being a populous, strong and pleasant City; provided with very fair Channels in several of its Streets: It has most delightful natural Groves on that Side where it looks towards *Leyden*. In the Garden of the Prince's House is a Summer-House, where you see the Picture of *Lawrence Coster*, in a furr'd Gown, holding the Letter A in his Hand, with this Inscription over it:

M. S. Viro Consulari, Laurentio Costero *Harlemensi* alteri Cadmo, & Artis Typographicae circa Annum Domini MCCCCXXX, Inventori primo.

The Statue and Inscription which was on his House in the Market-place, are no more to be seen, the House being sold. The chief Trade in this City is in Weaving of Silks, Damasks, Velvets, Sattins, Linen Cloths, &c. The Sea Coast near *Harlem*, and all *North Holland*, are covered against the Sea with green Downs.

8. June 8. We went hence in two Hours by Boat to *Amsterdam*, where we met at the Gate no more than two Soldiers, one without, the other within: This City, as it is the biggest of all the Low-Countries, so for Riches

and Traffick may compare with any in *Europe*. At that Time I look'd upon the Extent of it to be the same with *Venice*, and consequently less by one half than *London*, but as they were then busied in enclosing a very large Tract of Ground with a strong Wall and deep Ditch (which I hear is since fill'd up with stately Houses) it will bid fair for being numbered among those of the first Rank for Bigness. The chief publick Buildings here are, the *Stadtthouse*, a most magnificent Square Pile of Buildings, fac'd without with Free-stone; the Foundation of which, as they told us, cost 100000 *l. Sterling*, the Structure being built upon 13659 great Piles or Trees driven into the Ground. The Exchange a large oblong Square, frequented by vast Numbers of all Nations. The *Admiralty-House*, a noble Structure, with fair Rooms. The *Magazine* and various *Hospitals* and *Houses of Correction*. In this City is also a publick School, in which are kept Lectures in several Faculties, by six Professors, especially in the Summer Time. The *Jews*, who are richer here than in any other Place, amount to twenty thousand: In this City are also tolerated most other Religions (not excepting the *Roman Catholick*) but none, except those of the establish'd Religion, are permitted to erect any Steeples, or to make use of Bells for the assembling of the Congregation. In that stately Structure, called the *New Church*, you see a very fair Monument, erected to the Memory of *John van Galen*, with this Inscription:

Generosissimo Heroi
Johanni à Galen
Essensi

Qui ob res fortiter & feliciter gestas, sexies uno anno *Dunkirk*anorum prædatorum navem captam, & à Barbaris opima spolia reportata, Ordinum Classi in *Mari Mediterraneo* Præfectus, memorabili prælio ad *Livornam*, Deo auxiliante, Anglorum navibus captis, fugatis, incendio et submersione deletis, commercium cum dicti maris accolis restituit, idibus Martii Anno M.DC.LIII. Et uno pede trauncatus, nono post victoriam die, annos natus XLVIII. obiit, ut in secula per gloriam viveret.

Illustriss. & Præpotent. Fæderati Belgii
Ordinum decreto,
Nob. & Pot. Senatus Archibthalass.
Qui est *Amstelodami*
M. H. P.

The Pulpit of this Church is valued at ten thousand Pounds *Sterling*, and there are twenty four established Ministers belonging to this City.

The Government is administer'd here by the *Prætor* or *Schout*, four *Burgomasters*, nine *Eschevins*, and thirty six Counsellors or Senators, which they call the *Vroetschap*. The *Prætor* has the first Place upon the Bench of the *Eschevins*: He is elected by the *Burgomasters* (with the Approbation of the *Vroetschap*) for three Years, but may be continued in his Office from Time to Time: He is not eligible to this Dignity unless he has been a Freeman seven Years. His Business is to make Laws in Conjunction with the *Burgomasters* and *Eschevins*, to apprehend and imprison Criminals, and he presides as Chief Justice in civil as well as criminal Causes; and with the Approbation of the *Burgomasters* and *Eschevins*, determines all Matters before them, and pronounces Sentence against Criminals, and sees it put in Execution. In other Cities, the *Prætor's* Concern reaches no farther than to apprehend and prosecute Malefactors. The whole Number of *Burgomasters* consists of twelve, but four only are regent at a Time, which is a Year: They must at the Time of their Election be forty Years of Age at least. For every Year, the *Burgomasters* that have been *Eschevins*, chuse by the Majority of Votes, three out of the twelve to be Regents, which three select one out of the four that reigned the Year before, a fourth, who tenders them the Oath, and officiates as President the first three Months. The remaining eight *Burgomasters* are employed in other great Offices, such as Treasurers, Masters of Hospitals, and one is sent in Quality of Deputy to the Assembly of the States at the *Hague*, one for a Member of the Council

of the Admiralty of *Amsterdam*, &c. The Office of the *Burgomasters Regent* is, to take Care of the Government and Peace of the whole City, to determine Differences between private Persons, to be Surveyors of the Fortifications, Streets, and publick Buildings. If one of the twelve *Burgomasters* happen to die, it belongs to the *Vroetschap* to chuse another. When the *Eschevins* are to be elected, the *Vroetschap* proposes fourteen Persons, out of which the *Burgomasters* select seven; but one Condition is, that they must not be near of Kin either to the *Schout*, or any of the *Burgomasters Regent*. Unto those seven the new and old *Burgomasters*, together with the new elected *Eschevins*, by the Majority of Voices, add two out of the Number of the *Eschevins* chosen the last Year, which two for that Year have the first and second Rank among the *Eschevins*, who are Judges both in civil and criminal Causes. The Council of thirty six, or *Vroetschap*, continue in their Places for Life, and as often as one of that College dies, the rest chuse another in his Place, but no body under twenty five Years of Age is admitted. They not only have the Power of presenting the fourteen Persons out of whom the *Eschevins* are chosen, but are also called together by the *Burgomasters*, when any Thing of great Moment is to be debated or resolved upon; so that the supreme Power seems to be lodged in them. Not many Years ago, according to the Constitution of this City, no Body could be *Burgomaster*, unless his Father had been a Freeman a Year and six Weeks before he was born; but now any who will pay five hundred Guilders, may be made a Freeman, and after seven Years is qualified to be a *Burgomaster*; but such as do not aspire to this Dignity, may be made Free for fifty Guilders. The City Trained Bands consist of fifty four Companies, divided into four Regiments, of eleven Companies each, one hundred and fifty Men in a Company, which amounted to 8250. Two Companies are drawn out every Night to guard the City, which makes them fit for Service.

9. June the 16th, we prosecuted our Journey to *Utrecht* by the ordinary Passage-boat, where we arrived in six Hours. This is the capital City of the Province of the same Name; a large Place, surrounded with a good earthen Wall and deep Ditch; but its Streets are not comparable for Neatness or Cleanness to those of the Province of *Holland*, though the Water-channels are also conveyed through several Streets. The University here was established by the States General in 1636; the Professors of which, as well as those of *Leyden*, publish a yearly printed Catalogue of their Names and intended Lectures. For the Administration of the Government, they have an Upper and Lower *Schout* and four *Burgomasters*, two of whom are new chosen every Year.

Hence we passed by Boat to *Vianen*, resembling the *Mint*, a Place for Refuge belonging to the Lord of *Brederode*. We saw here a certain Engine for the Weaving of Tape by the Motion of many Shuttles at a Time, at once curious, expeditious and profitable.

We continued our Journey the same Day thro' *Leerdam*, (about three Hours distant from *Vianen*) and the 19th of June, through *Asperen*, below which we crossed the River *Wale* or *Vabalis* in a Ferry-boat, and came to a very pleasant walled Town called *Bommel*, seated in an Island; a small Distance thence we ferried over the *Maese*, and passing in Sight of two strong Forts near the River side, one called *Greveceur*, and the other *Engelen*, came in four Hours to *Hertogenbosch*, *Sylva Ducis*, or *Bois-le-duc*, as the *French* call it, and by which Name it is generally known. As this City is seated upon a Kind of a Hill, surrounded with Fens of a large Extent, the greatest Part of which was then (and is generally) covered with Water, we passed upon Causeways through a Moat, and over two Draw-bridges, before we entered the Town. Besides which, being strengthened by a good Wall and deep Ditch, and defended by a regular Citadel, this, with its Situation, seems to render it impregnable, and yet it has been taken in the late Wars. In the Choir of the Church of *St. John*, are to be seen the Arms of many of the Knights of the *Golden Fleece*, and over the upper Stalls

an Inscription in *French*, importing, That *Philip*, surnamed the Good, Duke of *Burgundy*, *Lorraine*, and *Brabant*, had, in 1429, instituted in the City of *Bruges*, an Order of Honourable Knights, unto whom he had given the Name of *Knights of the Golden Fleece*, limiting their Number to twenty four, their Chief to be the Duke of *Burgundy*, or Supreme Lord of the *Low Countries* for the Time being. The Houses here are for the most Part covered with Boards on the Outside; the Marshes about it produce great Abundance of Wild-fowl, and the sandy gravelly Banks the *Herniaria hirsuta*.

10. June the 20th, we travelled in a Kind of Waggon in six Hours to *Eindhoven*, and thence in four Hours more to *Haumoyt*, both small but walled Towns, the last of which belongs to the Bishop of *Liege*.

June the 21st, we travelled for three Hours through Heaths to *Bry*, a small walled Town, and afterwards ascending the Hills, had a full View of *Maefricht*, and the River *Maese*, where we arrived that Evening, after seven Hours riding. It is a strong well fortified City, strengthened with very good Out-works. The Magistracy here are half *Protestants* and half *Romanists*, and of the last are the greatest Part of the Inhabitants; though the *Dutch Protestants* have also three Churches, and the *English* and *French* one, which they use by Turns. The *Catholics* have twenty Convents here, and are allowed the publick Exercise of their Religion. Most of the old Houses are of the same Fabrick with those of *Hertogenbosch*, but many new Brick Houses have been built of late Years. They were then also building a very stately square Structure, intended for their Town-house. The River *Maese*, which divides the City into two Parts, is joined to both by a large Stone Bridge, sustained by nine Arches, and the lesser Part on the other Side is called the *Wick*, being not inferior in Strength to the other Part.

As to what relates to the common People of *Holland*, it must be confess'd they are surly and ill-bred, which is the Reason that no Strangers that know the Country will deal with Inn-keepers, Waggoners, Boatmen, Porters, and such-like, without bargaining before-hand. The Men are generally very large boned and bulky, and these, as well as the Women, are constantly eating as they travel. At their common Entertainments, a Sallad leads the Van, a Kind of stew'd Meat is the main Part of the Dinner, and it concludes with some boil'd and butter'd Herbs. The chief Food of the ordinary People is Cod-fish and pickled Herring, which they cure better than the *English*. In the publick Houses you commonly meet with smoaked Beef, cut in thin Slices, good Bread and Butter, and four or five Sorts of Cheeses. Their strong Drink (they call it *Dick Beer*, and very properly, for it is seldom clear) is sold for three Pence a Quart; the Dearness of which arises partly from the heavy Excise laid upon this, as well as all other Provisions; partly from the Plenty of Money in those Provinces, which makes Land sold here at between thirty and forty Years Purchase. Most of their Beds are made close like Cabins, narrow and short, and yet you pay an excessive Rate for them in the Inns. Their Houses are kept exceeding neat, even to the Outside of Pots and Pot-hooks, nay, the very Tiles of the Pent-houses; yet has it been observable, that in dressing their Meats, they are not so clean and curious as the *English*. They use Organs in most of their Churches, collect Money for the Poor in Sermon-time, with a Purse fastened to a Stick, and a Bell hanging to it. The Psalms to be sung are set down upon Slates, hung upon the Walls of the Church for that Purpose. They seldom travel on Horseback, but generally in Waggon, some cover'd, others not, but most by Water; and this on Sundays as well as other Days. Beggars are very seldom seen in *Holland*, notwithstanding the vast Multitude of People, this Province containing no less than twenty four walled Towns and Cities, six of which (besides *Amsterdam*) are bigger than any in *England*, except *London*. And upon this Occasion, I cannot but give you the Heads of some Observations made by *Francis Barham*, Esq; who was in *Holland* with my Lord

Lord Ambassadour *Hollis*, which have been esteemed sensible and curious.

II. " There is, says he, a continual Watch kept on the Steeples in all the Cities of the United Provinces: The Differences arising among Boatmen and Waggoners, who shall go first, are decided by casting a Die. They gather the Rain Water by Pipes from the Houses, and preserve it in Cisterns, as they do in *Venice*. The *Dutch* stand much in Awe of their Superiors, because Justice is done there without Delay. They are strangely addicted to Novelties, and mightily taken with any thing that is gay. They are extremely greedy of Profit, yet very just in their Bargains. The Knowledge how to get Money, is what they esteem above all other Things, and scarce ever apply themselves to any Thing besides that and Politicks, in which they are generally well versed; the meanest of them being qualified by his Birth-right to become a *Burgomaster*. They fight bravely at Sea, though naturally they are of a phlegmatick Temper, and consequently not fit for brave Exploits by Land. They allow of Liberty of Religion, but keep a watchful Eye over them to secure the publick Peace; which is the Reason that it is more difficult to hatch a Plot here, than in other Parts; though at the same Time, the People say and print almost what they please, the same being included within the general Notion of Liberty. Most of them have little Sense of Honour or Generosity, being guided merely by the Prospect of Advantage or Interest. They don't prosecute Murder with so much Violence as Theft. The *Dutch* are always careful to solemnize any great Action done by them, with all the publick Marks of Honour and Rejoicings, to imprint into the common People an Idea of the Ability and Wisdom of their Governors; which is the Reason they frequently erect Monuments to those who have deserved well of the Common-wealth. The ordinary Sort of Women (if not all) seem to be more pleased with obscene Discourses than the *English* or *French*; they have also the Reputation of making not so severe an Account of Chastity before Marriage, but of being very faithful to their Husbands. Even the better Sort of Women are not backward of admitting Men, though of very little Acquaintance, to a Salute; and Kissing passes current here, not only at Parting and Returns, but also in Frolicks and familiar Conversation. Most Women are let into all the Actions of their Husbands, who seldom undertake any thing without their Knowledge and Approbation. They have abundance of Chimney in their Cities, and vast Multitudes of Storks building their Nests upon the Tops of the Chimneys. This however is not only observable in *Holland*, but also at *Lowain*, and in other Towns of the King of *Spain's* Dominions, as well as in several Places belonging to sovereign Princes in *Germany*, which contradicts that commonly received Opinion, that those Birds never build their Nests but in Common-wealths."

June the 22d, We went from *Maestricht* to *Liege*, four Leagues distant. As we passed up the Hills, we observed at some Distance from *Maestricht* an arched Passage into a Vault, but being by the wet Season prevented from taking a View of it ourselves, I will here give you the Sense of our *Royal Society* concerning it. This Quarry, say they, lies within a Cannon-shot of *Maestricht*, being cover'd with twenty five Fathoms of Rock or Earth; its Length along the River towards *Liege* being of some Miles, and having one Entry near the River Side, Carts can, with a great deal of Ease, unload the Stones upon the Banks of the River, the Quarry within lying parallel to the Horizon or Level, and very little elevated above the River. After you have entred the Vault with Torches, it affords a most surprizing Prospect to the Beholders, who see some thousands of square Pillars in spacious level Walks, generally twenty Foot (and some more) high, so regularly wrought, that one would imagine that the whole was designed for one of the subterraneous Palaces of the ancient *Roman Emperors*; whereas the whole is no more than the Effect

of the Miners, Labours, who come here to get Stone. This noble Quarry has another remarkable Use, serving People for a Retreating-place when Armies are marching that Way, being able to hold forty thousand Men, who by the many Pillars and Labyrinths, are able to defend themselves with their Fire-arms, against any Power that may attack them.

Further upon the Downs, we observed three or four more of those Passages, and came before Night to *Liege*, a City, though very large, yet for Beauty and Riches not comparable to any of those of *Holland*; the Houses being cover'd on the Sides either with Boards or Clay, and the Streets narrow and very ill kept. The River *Maese* divides itself, and runs through the Town in two or three Branches, which are joined by several Bridges. It is however very pleasantly situated, but surrounded with Hills, on one of which stands the Citadel, the Sides of those Hills cover'd with Orchards and Vineyards. Provisions are very cheap here, and the People very courteous: The Women are not so fair as in *Holland*, and do a great deal of Drudgery. They have Coal-pits near the Town, some of which are an hundred and fifty Yards deep. The Cathedral Church dedicated to St. *Lambert*, has sixty Canons or Prebendaries, who must be all of noble Extraction, except that they admit a few Men of Learning among them. These elect the Bishop of *Liege*. Besides these, there belongs to it twelve *Canonici mediocres*, and twelve more stiled *minores sive parva Mensæ*. The three States of this Diocese, composed of the Clergy, Gentry, and Commons, have a considerable Share in the Government, no Tax being to be imposed, or other Matters of great Weight transacted without their Concurrence and Approbation.

This City is in a Manner filled up with Religious Houses: In the *English* Jesuits College Garden we saw several Dials, the Invention of the ingenious *Franciscus Linus*; and in the Cloister of the *Williamites*, without the Walls, the Tomb-stone of our Countryman Sir *John Mandeville*, with this Inscription:

HIC JACET VIR NOBILIS DNS JOES DE MANDEVILLE AL' DICTUS AD BARBAM MILES DNS DE CAPDI NATUS DE ANGLIA, MEDICINÆ PROFESSOR, DEVOTISSIMUS ORATOR, ET BONORUM LARGISSIMUS PAUPERIBUS EROGATOR, QUI TOTO QUASI ORBE LUSTRATO, LEODII DIEM VITE SUE CLAUSIT EXTREMUM ANNO DNI M^o. CCC^o. LXXI^o. MENSIS NOVEMBRIS DIE XVII.

On the same Tomb-stone was also to be seen the Figure of an armed Man treading on a Lion, with a forked Beard; and his Hand lift upwards in a Blessing Posture, with these Words going out of his Mouth, *Vos ki passeis for mi, pour l'amour Dieu preyes por mi*; which being old *French*, signifies, *You that pass over me, for the Love of God pray for me.*

13. We left *Liege* the 26th of June, and travelling for seven Hours over hilly and rocky Places, arrived at the *Spaa*, a pleasant little wall'd Place, situate in a deep Valley. It is very well built, by reason of the Concourse of many Strangers here, for the drinking of Mineral Waters, of which there are four several Springs.

We pursued our Journey, June the 28th, to *Aken*, through *Limburgh*, three Hours from the *Spaa*, a Place of great Strength for its Situation, being situate on the Side of a very difficult Access, but it has but one Street, and the Houses only of Wood. *Aken*, or *Aix la Chapelle*, as the *French* call it, to distinguish it from *Aix* in *Provence*, is a large and strong Place, and a free Imperial City, being strengthened by a double Wall, and adorned with no less than thirty Churches. The Chair wherein the Emperor sits when he is crowned here, has its Sides of Ivory, and they say, that the Bottom is made of a Piece of Wood belonging to *Noah's Ark*. The Government of this City is administered by a Major, two *Burgomasters*, fourteen *Eschevins*, and one hundred and twenty Counsellors. The Major has the

Presidence

Presidence among the *Eschevins*, is put in by the Duke of *Juliers*, and continues in his Place *quam diu se bene gesserit*. The *Burgomasters* are elected by the Majority of the Companies of the City, and administer this Office two Years, a new one being chosen every Year. The *Eschevins* officiate in Quality of Judges, during Life, another being chosen in the Place of him who dies. The Counsellors are also chosen by the several Companies (of which there are fourteen or fifteen). The Territories belonging to this City are very large, comprehending near two hundred Villages, enclosed on all Sides with Mountains; which producing abundance of *Lapis Calaminaris*, this is employed here in great Quantity to turn Copper into Brass. But what renders this Town most famous, are the *Mineral hot Baths*, some of which are within, the rest without the Town, at a Village called *Borcet*; these latter, both in Heat, and in Abundance of Water, much exceed ours in *England*, being so hot, that one may boil an Egg in them. Their Taste was saltish, and they were used both inwardly and outwardly. One Day as we were walking to *Borcet*, we saw a certain Pool whose Waters were lukewarm, by reason of a small Stream of one of the Springs of the hot Baths passing through it; they told us that it bred very good Fish, but that they were obliged to put them into cold Water for two Months before they eat them. Of the Nature, different Kinds, Ingredients, and Uses of those Baths, both within and without the City, *Francis Blondel*, M. D. has treated admirably, as well as at large, in his Epistolary Discourse, published in *French*, of which the Substance follows:

14. *An Extract from Dr. Francis Blondel's Discourse concerning the Baths of Aix la Chapelle.*

Not to trouble the Reader with the various Opinions of ancient and modern Philosophers concerning the Cause of the actual Heat of natural Baths, our Author's Account thereof in Reference to these of *Aken* is in Brief as follows.

These Waters (saith he) passing through a certain argillaceous Earth, pregnant with a kind of nitrous Salt, almost of the same Taste with the Waters of the Baths (which is to be found in good Quantity in the Lands about this City) charge themselves therewith, and so become a *Menstruum* capable of dissolving such mineral Metals as are contained in the Veins of the Earth thro' which they run. This Solution he conceives is made by piercing and corroding the Minerals after the same Manner as Spirit of Nitre and other *Aque Stygie* are wont to do, which usually causes a great Ebullition and Heat. So then the actual Heat of these Springs proceeds from the Mixture and Encounter of their Waters (impregnated as is before intimated) with the mineral and metallic Substances, Juices, and Spirits contained in the Veins of the Earth through which they have their Course. The nitrous Salt beforementioned may perhaps be the *Hermetic Salt* of Monsieur *Rochas*, or the *Esurine Salt* of *Helmont*. Now the Water once heated, being contained in the Vaults of the Mountains as in a Stove, continues hot a long Time, the Eruption thereof being, it is likely, at a good Distance from the Place where it did at first conceive its Heat.

At the long Continuance and Duration of the Heat of these Waters, for so many Ages past, no Man need Wonder: For *First*, It is generally taken for granted, that all Sorts of Mines grow and increase purely by Addition, converting the more refined, subtile part of the Earth, and which hath a seminal Disposition to such a Change, into their own Nature. *Secondly*, The nitrous Salts, the first Ingredients of these Waters, are also restored in their *matrices*, after the same Manner as we see it happens in the *Caput mortuum* of Vitriol, which though the Vitriol hath been once or twice extracted from it, will, by being exposed to the Air, again recover more and more; whether it be by Conversion of its *Matrix* into its own Nature, by a kind of Aggeneration and Transmutation, or by imbibing and retaining those

subtile and volatile saline Exhalations, which continually ascend out of the Earth, or wander up and down in the Air.

As for the Ingredients of these hot Waters in general, he saith, that besides a threefold Salt-nitre *fixed, volatile*, and mingled, or *Armoniack*, they partake of a fixed and volatile Sulphur, a Manna of Allum, some Vitriol, divers Metals, as Copper and Iron, a very little volatile Earth, a certain *Argilla*, Sand and Calaminary Flowers. That they participate of Copper he proves, in that, the Territory of *Aken* abounds in divers Places with *Lapis Calaminaris*, which is, as it were, the Aliment of Copper: For being mingled in the Furnaces with red Copper, it augments it by the Addition of thirty Pound Weight *per Cent.* and gives it a yellow or golden Tincture. As for Iron, the many ferrugineous Springs, that are found within and without the City, are an evident Testimony that there are Plenty of Iron Mines hereabout; and therefore most likely it is, if not certain, that these hot Waters charge themselves with that Metal. That they contain a three-fold nitrous Salt, he proves from their natural Evaporations. *First*, The fixed is found in the Wells, of *Borcet*, and the *Emperor*, chrySTALLIZED into small shining Square Grains, mingled with a little Flower of Sulphur, sticking to the Covers of those Wells, which have not been of a long time opened. It may be also found in the chemical Examination of the Waters by Evaporation or Distillation. *Secondly*, The *volatile* is carried up by the volatile-Sulphur, as it is hereafter shew'd in the Description of the first Sort of these Baths. *Thirdly*, The *Mingled*, or *Armoniack*, is daily seen in all the Waters of the City, and of *Borcet*, swimming in little Cylinders on the Surface of the Waters, and this is that Cream, or Scum, which is ordinarily found upon the Waters in the Basons. That they contain the rest of the beforementioned Ingredients, shall be shewn in the Description of the particular Baths: The Waters whereof our Author reduces to four Sorts.

First, *Nitro-sulphureous*, such are those of the *Emperor's* Bath, the *little* Bath, and *St. Quirin's* Bath. *Secondly*, *Sulphureo-nitrous*, such are those of *Compus*, or the *Poor-men's* Bath, the *Rose*, and *St. Cornelius's* Bath. *Thirdly*, *Sulphureo-nitro-vitriolic*, such is another Bath of the same *St. Cornelius*. *Fourthly*, *Salso-alumino-nitrous*, viz. those of *Borcet*, a Village adjoining to *Aken*.

First, As for the *Nitro sulphureous* kind, those of the *Emperor's* Bath, and the *little* Bath, are but one Water, coming from the same Source, and collected in one and the same Well. That Part reserved in the *Emperor's* Bath is divided into five great Basons, or Receptacles: That in the *little* Bath into three. All which might be renewed daily, if Time would permit, the Spring is so copious. But by reason of the excessive Heat of the Waters, it is necessary oftentimes that they stand in the Bason sixteen or eighteen Hours to cool, before they be fit for the Patient's Use. Notwithstanding when they are come to a just Temper, one may bathe in in them, and endure them a long time, as those of *Borcet*, without any Inconvenience. This Source hath this Quality peculiar to itself, that in its Well one may find distinctly a Quantity of Nitre coagulated, and good Plenty of Flowers of Sulphur very light, purely fine, and well scented. The Nitre sticks to the Sides of the Well, and so do the Flowers of Sulphur above that: The which sometimes, whether by the extraordinary boiling up of the Fountain, or by the Impetuosity of the ascending Vapours, or by their own Weight are broken off, and fall back into the Source; from whence being no more dissolved by the Water, they come forth intire into the Basons. If you take of this Water, and let it stand in a vessel certain Days, it will precipitate of these yellow Flowers of Sulphur, to the Bottom of the Vessel. Besides these *volatile* Flowers, these Waters contain also fix'd Flowers of Sulphur, a competent Quantity of Nitre both *volatile*, *fix'd*, and *mix'd*, or *Armoniack*, a little Allum, less Vitriol, the Spirits and Principles of Copper and Iron, a very little *volatile* Earth, *Argilla* and Sand: No *Bitumen*, for let them stand

stand as long as you please, you shall find no fatty Substance swimming upon them, as upon the *Spaw* Waters. The volatile *Sulphur* evaporates so strongly, that it carries up with it a Quantity of *Nitre*, as one may see after the Solution of the Vapours, congealed and frozen in Winter time, when it remains incorporated upon the Walls, in the Places where the Icicles were. These Waters are in Weight equal to those of the *Spaw*; coming fresh out of the Source, they appear whitish, or bluish, but having stood a-while and grown cold, greenish. They are very pure, and leave no kind of Mud, or *Lutum thermale*, behind them; in cooling they yield a small Scum or Cream of *Nitre*. Far from their Source, being wrought upon by the Air, they let fall a little whitish Sediment as those of *Borçet* do a blackish one. They preserve the Colour of Roses put into them, and cause them not to wither, as doth common Water. The Vapours ascending from them make Silver Plate black, as those of *Borçet* make it white. The other Source of *St. Quirin's* Bath differs from these in no other Respect, save that the Water thereof is cooler. It is reserved in three Basons. In this Well you find neither *Sulphur* nor *Salt-petre* sticking to the Sides, probably because it is open or uncovered.

II. The second, or *sulphureo-nitrous* Sort of *Compus*, &c. though they spring up in several Places, and have different Wells, yet is the Nature of them all, their Composition, and mineral Ingredients the same. The *Poor-Men's* Bath hath one great Bason or Receptacle, the *Rose* Bath four, whereof two only are used, and *St. Cornelius's* Bath of this Mine two. These Waters are fit for use at all Seasons, being of a temperate Heat, more efficacious, and of greater Force in their Operations, than the first Sort; they weigh two *per Cent.* more than they, and are of a stronger Scent. In these is never found any *Sulphur* condensed, no not in their Wells, though they be covered: But when they are emptied, and new Water let in (as in the *Rose* Bath) the Water running down along the Walls and Seats, into the Bottoms of the Basons or Conservatories, the external Air prevailing upon it, so spread, and in such little Quantity arrests, fixes and condenses its *Sulphur* all along the said Walls and Seats, refreshing the Eyes of the Spectators with its Beauty and Lustre. But the Water rising in the beforementioned Basons, and covering the Seats and Walls, the Sulphur again unites and incorporates with its Dissolvent, and disappears and hides itself therein. The Water of these Sources contains great Quantity of Sulphur, very fine and sweet, less nitrous Salt, a little Vitriol, and less Allum, more of the other Minerals and Metals, than of the first Sort, or those of *Borçet*. So that they are more compounded, oleous and bituminous, than any of the other Sources; and though they come out of the Earth very temperate, as to actual Heat, yet can sick Persons hardly endure them for any long Time, for the most part scarce half an Hour.

III. The third Sort, which I call *Sulphureo-nitro-vitriolic*, and is also of *St. Cornelius*, differs from the Precedent, in that the Taste is a little more acid, the Smell sweeter, and liker that of Spirit of Vitriol, and the Touch less oily. It is of less Efficacy in Use than the second Sort, and of more than the first. Of this Source there are three Basons, which, with the two others of *St. Cornelius* beforementioned, make five in this House. These Waters agree much in their Composition with the Precedent. They are very pure and clear, especially in their Wells; and though they seem troubled in their Basons, yet taken in a Glass, they appear clear.

IV. The *fourth*, or *Salso-alumino-nitrous* kind, are those of the Neighbourhood, or *Borçet*. These come out of the Earth extream hot, and in great Abundance, are all of the same medicinal Quality, have several Wells, and are reserved in ten or twelve Houses, each whereof hath two Basons, or Receptacles; besides which, there is a common Bath exposed to the Air, for the Use of poor People. These Waters cast off a copious Excrement or Tartar, which yet is not Stone, but only a Sand mingled with, and united to the ni-

trous and aluminous Salt of the Water, coagulated by the Beating of the cold Air on its Superficies, to which also concurs the Cold of the Walls exposed to the same Air. These Excrescences are found in the subterranean Conduits, not only of these, but the other Baths in the City; being held to the Fire, they soon become friable, and are nothing but a pure round Sand like the common. The higher Houses and Basons have the more of this Tartar, yet is it so little, that it is not to be seen or perceived in the Water. These Waters are of a different *Species*, Virtue, and Operation, from those of the City, are very easy to suffer, and serve often for Divertisement and Recreation to Persons that are in Health. The Contents of them are a great Quantity of Sea-Salt and Allum, less nitrous Salt, very little Sulphur, and not much of metallick Substances.

Concerning the Virtues and Effects of these Waters inwardly taken, he discourses to this Purpose:

These Waters taken inwardly are very available in the Phthisick, *Asthma*, or Difficulty of Breathing, occasion'd by tough Phlegm lodging in the Branches of the Wind-pipe; against the Weakness of the Stomach, Indigestion, Crudities, Flatulencies, Vomiting, Hiccoughs, and inveterate Cholicks. They dissipate and dry up all Manner of Catarrhs and serous Defluxions; and are very proper to be drunk by those that are troubled with the Palsy, before the Use of the Baths. They quicken the Appetite, cleanse the Blood, and open the Obstructions of the Mesentery. They are of excellent Use against hypochondriacal Maladies, especially in such as have weak and cold Stomachs. They mollify the Hardness of the Liver, Spleen and Mesentery. They dissolve and bring away the Gravel of the Reins, and lesser Stones: And here he produces many Examples of such as voided Stones upon the Drinking these Waters, and among the rest, of some that had drank the *Spaw* Waters, and came from thence without receiving any Benefit. They cleanse the Ulcers of the Bladder, dissolving not only the gross, phlegmatick and viscous Humours which coagulate the Stone, but even the Stone itself, whilst it is yet tender. They have sometimes cured intermittent Fevers of long Continuance, and scrophulous Tumours. They dry up and heal the Itch, Leprosy, and other Affections of the Skin. They stop the immoderate Flowing of the *Menses* in Women, and cure the Jaundice, the Pale-ness and Discolouring of the Skin in Virgins: And finally they give Ease and Relief in the Gout. Of all these Faculties, he brings Instances and Examples of Persons that have been cured. Particularly, that these Waters drunk may have a Power of dissolving the Stone, he proves by this Experiment: Taking a Stone voided by a Man about two Years before, and infusing it in Water hot from the Fountain, for the Space of three Days, we found it (saith he) mollified and reduced into a soft Phlegm. Which Virtue of the Waters was further confirmed to us by a late Accident: For opening the Vault of a Well, there was found a certain Glue or Mucilage, which, it is to me probable, came from the Solution of the Mortar of Lime and Sand in long Time, by the volatile and dissolvent Spirits of the Waters; especially there being found no other Cement between the Stones, and in that this same Glue or Mucilage mingled itself intirely with the Waters of the Fountains, without any Appearance of Scum or Fat swimming on the Top, as Gum of Cherry, or the like is wont to do in Water, and being cast into the Fire burnt not, but dried up. These Experiments and Observations were made upon Occasion of a Burgo-master of *Riga* (who being afflicted with the Stone, drank these Waters) his passing his Urine through a Linen Cloth, and finding therein a certain thick Phlegm left behind, which, being kept a while upon Paper, harden'd into a stony Substance.

15. From *Aken* we continued our Journey to *Juliers*, five Hours thence, a small but neat City, the Houses low, but of Brick, the Streets are somewhat narrow, yet it has a fair Market-place. Its Fortifications are considerable, but the Citadel, in which is the Ducal Palace, may compare for Beauty, Bigness and Strength,

with any of *Europe*. The chief Employment of the Inhabitants here is the making of Malt. June the 30th, we went hence towards *Cologne*, and passing thro' *Berchem*, a little walled Town, met by the Highways, among the Woods and Hedges; with *Mezereon Germanicum*, *Mollugo montana latifolia ramosa*, *Pulmonaria maculosa*, *Galeopsis sive Urtica iners flore purpurascens majore, folio non maculato*, and among the Corn, with *Vaccaria Germ.*

Cologne, dignified with the Title of an Archbishoprick, is a free Imperial City, and perhaps the biggest in all *Germany*, in which however are included three hundred Acres, planted with Vines, besides many other empty Spaces. The middle Part of the City is very well built, having two handsome Market-places: The Walls are lofty and of Stone, with two deep Trenches and several Out-works. In the Cathedral of *St. Peter* are preserved the Bodies of the three Wise Men, that came to bring their Offerings to our Saviour, enclosed in a Chest of Gold. The Number of the Noble Canons belonging to this Church, consists of fifty four, besides eight Canons Presbyters; these sixty two, in Conjunction with the Dean (who has two Voices) and two Burgomasters Regent (who have four Voices) of this City, chuse the Archbishop. The Government of the City is in the Hands of six Burgomasters, seven Eschevins, and one hundred and fifty Councillors; they all continue during Life; but of the first two are only Regents at a Time for a Year: The Eschevins are chosen by the Archbishop, as the Counsellors are by the Companies of the City, and fifty only are in Power yearly, so that it returns to the same Persons every third Year. If a Burgomaster dies, the Counsellors have Power to chuse another in his Room. The Inhabitants are generally *Roman Catholics*, yet have the *Lutherans* a Church within the Walls, but the *Calvinists* are obliged to go to Church on the other Side of the *Rhine*. At *Cologne* we took a Boat, drawn by Men, which carried us up the *Rhine* to *Vidich*, an inconsiderable Village; hereabouts we found among the Corn, *Delphinium flore purpureo-ceruleo vulgare*, and *Nigella arvensis*; and in the barren Grounds adjoining to the River, *Stachas citrina Germanica latiore folio*.

16. Next Morning we pass'd by *Bonn* upon the same River, the ordinary Residence of the Electors of *Cologne*, and lodged at Night at a poor Town called *Brisaca*. July the 6th, we pass'd by *Rhineck* to our Right, and came to *Andernach*, over-against which is the Castle of *Hammerstein*, belonging to the Elector of *Treves*. Further we pass'd betwixt two Castles belonging to the Count de *Weets*, that on the right Hand being seated upon a high Rock, with a Cloister adjoining to it. Two Leagues from *Andernach* we pass'd by *Engers*, and the same Night came to *Coblentz*.

This City, which is the most considerable belonging to the Archbishop of *Treves*, is called in *Latin*, *Confluentes*, from its Situation at the Conflux of the Rivers the *Moselle* and the *Rhine*; over the first of which there is a Bridge here of thirteen Arches, as there is over the *Rhine* a Bridge of Boats to the strong Castle of *Hermanstein*, situate upon a Rock, with a very sumptuous Palace below it, belonging to the same Archbishop. Not far from *Coblentz* are the mineral Springs, near *Helffenstein* Castle, of which Kind there are several in those Parts; as for Instance, one at *Anthony's Stone*, four Hours from *Andernach*, and another at *Zwolbach*, four Miles from *Francfort*; they are generally drank mix'd with Wine, unto which they give a pleasant Taste and purging Quality, but I did not observe in them what *Dr. Blondel* affirms, that they smook, or are hot when they are mixed with Wine.

July the 7th, we pass'd by several Castles and small Places upon the *Rhine*, as the Town and Castle of *Rodesheim* on the Left, and *Capelle* on the Right Hand; next the small Town of *Rens* and *Browbach*, *Boppard* on the same Side, and the Castle of *Bornholm* on the Left. Taking up our Quarters in the Village of *Hertsnach*, we came, July the 8th, in the Morning, to *St. Goer*, a pretty small Town, under the Jurisdiction of the Landgrave of *Hesse*, who has a very handsome Castle here,

built upon a Rock. The Magistrates and most of the Inhabitants are *Calvinists*, yet the *Lutherans*, as well as the *Catholics*, have each their Church. Just opposite to *St. Goer* you see the Town and Castle of *Wellnich*, and further to the Right, the Town and Castle of *Wesfel*, under the Jurisdiction of the Elector of *Treves*; and higher up on the Left Hand, the Town and Castle of *Cub*, the latter upon a Rock belonging to the Elector *Palatine*. The next Place of any Note we came to was *Bacharach*, a walled Town, adorned with many Towers, famous for the Excellence of its Wine, as is likewise a certain Tract of Ground about *Rhingaw*, a Town near *Mayence*. Our Boatmen paid Toll in this, as well as several other Places on the *Rhine*. We pass'd the same Day in Sight of some mean Towns and Villages, and July the 9th, by *Aspithouse* Castle, and immediately after by the *Mouse-Tower*, built in a little Island of the *Rhine*. Further up the River on the Right Hand we left *Bing*, a tolerable good Town, and passing by *Rhodes*, *Gison*, *Elveldt*, and *Wallop*, to the Left Hand, arriv'd the same Night at *Mayence* or *Mentz*.

From *Cologne*, as far as to the Village *Vidich*, the River is very broad, but thence up to the *Mouse-Tower* much narrower, from the many Hills and Rocks on both Sides, some of which are cover'd with Woods, others with Vines and Orchards. The Vines are ty'd to Poles much lower than those we use in our Hop-gardens. The City of *Mayence* (or as we now call it *Mentz*) is very large and well fortified; but the Houses are very old, the Streets narrow and ill paved: The Cathedral of *St. Martin's* has twenty four Canons, all Noble, who chuse the Archbishop. The Arms of this Archbishoprick is a Wheel, which they derive from *Willigesus*, a *Saxon*, their first Archbishop, who being a *Wheelright's* Son, gave this Wheel for his Arms. Near this Place, the River *Maine* joining its Current with the *Rhine*, we went up the first of these two Rivers in a Boat, and passing by *Rudshheim*, a well-built Fort on the Right-hand, belonging to the Landgrave of *Hesse Darmstadt*, and another walled Town called *Hochst*, to the Left, arriv'd the 13th of July at *Francfort*, five Leagues distant from *Mayence* or *Mentz*.

This City is very rich and populous, and not ill-built, though most of the Houses are of Timber: Its Fortifications, which consist in divers strong Bastions and a deep Ditch, are very considerable and well kept: The River *Maine* dividing the City into two Parts, that which lies opposite to *Francfort* is called *Saxonhausen*, which are joined by a very noble Stone Bridge, sustain'd by fourteen Arches. In the great Market-place are three noble Fountains. The Emperors are in our Days chosen here in the Senate-house, and crown'd in the Church of *St. Bartholomew*.

I had the good Fortune to get Sight of the *Aurea Bulla* or *Golden Bull*, of the Emperor *Charles IV.* which instead of a Seal had a large golden Medal hanging on it, with the Effigies of *Charles IV.* on one Side, with this Inscription, *Carolus quartus, divina favente clementia, Romanorum Imperator semp. Aug.* on the Reverse the City of *Rome*, and underneath, *Aurea Roma*, and round it this Verse, *Roma caput mundi regit orbis fræna rotundi.* The Government of this City is in the Hands of a *Prætor*, twelve *Burgomasters*, fourteen *Eschevins*, and forty two Councillors. The whole Senate is divided into three *Scamna* or Benches, First, *Sabinorum*, Secondly, *Literatorum*, and Thirdly, *Opificum*: When a Place happens to be vacant in the Bench of the *Eschevins*, it is supplied out of the second Bench of the *Literatorum*; but the *Scamnum Opificum* rises no higher. The Senate has the Power of choosing yearly two *Burgomasters* out of their own Number. The *Jews*, of whom there are great Numbers here, have their peculiar Quarters assigned them, from whence they dare not stir in the Night-time; they wear a Piece of yellow Cloth to distinguish them from other People. The Magistracy and most of the Inhabitants are *Lutherans*, unto whom belong five Churches. Yet have the *Romans* the free Exercise of their Religion here, and are possess'd of two Convents for Men and one for Women;

men; but the *Calvinists* have their Church a good Way from the Town; the *English* Church, first establish'd here under the Reign of *Queen Mary*, is fallen much to decay, as well as the *English* House, which is turned into a Store-house. In the Country hereabouts, which is exceeding pleasant, we found growing wild, *Gramen amoris dictum*, & *Ischemon vulgare*, *Portulaca sylvestris*, and in the Hedges, the *Aleine baccifera*, which I met with no where else in all my Travels.

July 17. We took the Post-Coach going to *Frankenthal*; we had scarce left *Francfort* half an Hour, when we travelled all that Day, for three *German* Leagues, through Pine-Woods, and lodged that Night at the Village of *Geirsheim*.

July 18. We ferried over the *Rhine* at *Kernsheim*, and at six Leagues End came to *Worms*, a large and ancient City, but much decayed. The Canons of the Cathedral (who are twenty in Number) choose the Bishop. The Government of the City is in the Hands of the *Lutherans*. From hence we came, after an Hour's travelling, to *Frankenthal*, a Place chiefly considerable for its Strength, being situate in a Plain near the *Rhine*, and provided with good Walls and Out-works. It is under the Jurisdiction of the Elector *Palatine*; and has three Churches; one *High-Dutch*, another *Low-Dutch*, and the third *French*.

July 20. We travelled along the Banks of the *Rhine*, by the Way of *Obersheim* to *Spire*, two Leagues and a half distant from *Frankenthal*. *Spire*, though dignified with the Title of a Bishoprick, yet is an imperial City, under the Government of its own Magistrates. The Houses here are generally large, but not very convenient, and of Wood: The chief, if not the only Thing that makes this Place considerable, is the *Imperial Chamber*, which is kept here, consisting of an Imperial President and thirty six Assessors, besides three other Presidents, chosen by the Emperor out of the Delegates; each of the Electors, as well as the ten Circles, sending two Delegates or Assessors. There is such another Chamber belonging to the Imperial Court at *Vienna*, either of which (without any Appeal from one to the other) determines Controversies arising betwixt the Princes and States of the Empire, and betwixt them and their Subjects in some Cases: But the Elector *Palatine* enjoys the Prerogative, *Jus non appellandi*, of not being cognizable by these Tribunals.

July 21. We pass'd the *Rhine* to *Manheim*, seated upon the very Conflux of the *Rhine* and *Neckar*; it belongs to the Elector *Palatine*, strongly fortified, and now strengthening by a new Citadel, almost finish'd. Who was the Founder of this City, you will see out of the Inscription over the *Neckar Gate*:

*Quod felix faxit Jehova,
Fredericus III. Elector
Palatinus Rheni, Dux Bavariae,
E veteri Pago Manhemio
Ad Rheni Necrique confluvium
Iusta spatiorum dimensione
Nobilem Urbem molitus,
Vallo, fossa, muro clausit,
Portam bonis civibus aperuit,
Anno Domini M. DC. X.*

From hence we continued our Journey to *Heidelberg*, where we pass'd over the *Neckar* into the City by a wooden Bridge, covered over with a *Tectum* to preserve the Timber. *Heidelberg*, is not a very large, but a neat and populous City, the Capital of the whole *Palatinate* and Residence of its Princes; the Houses are of Wood, but handsomely built; it is seated at the Foot of a Hill, on the right Side of the River *Neckar*, and is divided into five different Jurisdictions, independent of one another, *First*, *Aulica*, under which are all the Princes and Noblemen; the Martial of the Court sits here as President. *Secondly*, *Cancellaria*, under which belong all Councillors, and other Officers of the Courts, Advocates, Doctors, &c. *Thirdly*, *Bellica*, for the Soldiers where the General presides. *Fourthly*, *Academica*, for the Students, the *Rector Magnificus*, or Vice-Chan-

cellor for the Time being, is their President; and *Fifthly*, *Civica* for the Citizens. The Members of each of these Jurisdictions are not obliged to appear before any other Court but their own. The City is also divided into four Wards, under the Government of a *Prætor* and *Burgomaster*.

About the middle of the Ascent of the Hill call'd *Königsthal*, stands the Royal Palace, a large and stately Structure, enclosed with a Wall and deep Ditch, hewn out of the Rock, which they may fill with Water when they please; here the Prince keeps his Court. According to the Inscription in *High-Dutch* upon the Gate, it was begun to be built by *Lewis V.* in 1519, but several Pieces have been added since, one of which is called the *English Building*. In a Cellar under one of the Towers belonging to this Castle stood the famous great Tun of *Heidelberg*, containing 132 Fudders, one of which is equal to four of our Hogsheads; but this Tun is taken to Pieces of late and a new one Building, which is to contain 150 Fudders or 600 Hogsheads. We were invited to dine in the Palace, where we observed every Thing to be done with great Regularity, and after Dinner the Elector was pleased to shew us the Curiosities of his Closet, and among the rest, a Purse made of *Alumen plumosum*, which being made red hot, received not the least Harm, but appear'd the same it was before, after it was cool'd: Two Unicorn's Horns of eight or ten Foot long, wreathed, and hollow to the Top being the Horns of a Fish, and not a Quadruped, as the ancients vainly imagin'd. An Imperial Crown and Globe, belonging to the Emperor *Rupert* (who was of this Family) richly set with precious Stones: A choice Collection of ancient and modern Coins and Medals; and among the rest a Copper *Swedish Dollar*, of the Bigness of a square Trencher, with the King's Arms and Effigies stamp'd at the four Corners. The great Church (which formerly contained the famous Library of this Place) as also that of the *Franciscans*, have several very noble Monuments of the Princes of this Family, as that of *St. Peter* shews many of learned Persons.

The University of *Heidelberg*, was founded, *A. D.* 1346. and has three or four Colleges for the Subsistence of poor Scholars. The whole Management of it is committed to the *Academical Senate*, composed of Sixteen Professors, *viz.* three for Divinity, four for the Law, three for Physick, and six for Philosophy, but no more than four of them sit in the Senate, for Fear they should make too strong a Party. If a Professor dies, the Senate presents two Persons to the Prince, out of whom he chooses one. The Senate also chooses every Year a *Rector magnificentissimus*, a Honorary Title, not unlike that of Chancellor of our University, as the *Rector Magnificus*, the chief of the Senate is equivalent to Vice-Chancellor; besides which, they elect two or four more Officers out of their own Number, to manage the Concerns of the University. The Senate hath its own Jurisdiction, and unlimited Power in criminal Cases, extending to Life and Death, the Prince reserving to himself only the Prerogative of Pardoning after Sentence pass'd. In Philosophy they have no other Degrees but Masters, and those but few of late Years; In Law and Medicine they create both *Licentiates* and *Doctors*; and in Divinity, *Batchelors*, *Licentiates* and *Doctors*. They have not the least Regard to the standing of the Candidates, all they have to do being to undergo two Examinations, one of which is called the *Examen tentatorium*, before the Faculty, in which he is to commence, and in the Presence of the *Rector Magnificus*; the second the *Examen rigorosum*, before the whole Body of the Professors and the *Rector Magnificus*. After all this, he is to hold a publick Disputation *sub Præsede*, to make a Lecture in his own Faculty, and a Speech. The Ceremony is performed with a great deal of Pomp, and concludes with a sumptuous Feast, at which are present all the Professors, and sometimes the Prince in Person, or else he sends the Marshal of his Court to represent his Person, which is the Reason that oftentimes, when the Candidates have not very strong Purfes, two or three join to save Charges.

Charges. Here also the Professors publish an annual Catalogue of their Names and intended publick Lectures.

The Elector Palatine is absolute in his Dominions, having also the Supremacy in Ecclesiastical Affairs, which formerly belonged to the Bishop of *Spiers*, but since the Reformation the Ecclesiastical Jurisdiction has been annexed to the Sovereignty: He is the universal Patron of all vacant Benefices, tho' he permits the Ecclesiastical Council, (composed of two Clergymen and two Laymen) to present unto him two, out of whom he chuses one. The Generality of the Palatinate are of the Reformed Religion, and divided into three *Præfectures* (the biggest of which is subdivided into less) each of which has an Inspector, who is one of the Pastors of that *Præfecture*, and differs not from the other in Rank or Power, but hath only a larger Salary. Each considerable Town has also a peculiar *Præfecture*, or Presbytery: Thus that of *Heidelberg* is composed of five Ministers of that City, two Deputies from each of the before-mentioned Jurisdctions, except the *Aulica*, and two from each of the four Wards of the City, making in all twenty one, in which the Laymen have equal Voices with the Ministers, these enjoying no other Prerogative in this Point, than that one of them presides always in his Turn. They can't inflict any Church Censure, unless it be making the Transgressor submit to a publick Confession at the Church Door, and to promise Amendment, the rest is left to the Determination of the Civil Magistrate. As the Elector is universal Patron, so he is Master of all the Tithes, which for Conveniency sake, he allows to some Ministers in certain Places, but provides settled Salaries for the rest out of the Church Revenues.

19. July 25. We hired a Coach, which was to carry us in three Days to *Strasburgh*: We had scarce travelled three Leagues, but we pass'd in Sight of the celebrated Fortrefs of *Philipsburgh*, seated in a Plain near the *Rhine*; a League further we pass'd through *Grafte*, and lodged that Night at the Village of *Linknom*.

July 26. After a Journey of four Leagues, we baited at *Raspach*, two Leagues further passed through *Stolboven*, and a League more through *Lichtenaw*, all in considerable Places; we lodged that Night at the Village called *Sertz*.

July 27. We cross'd the *Rhine* over a Bridge laid over the two Channels, made of Fir-trees laid close together, instead of Boats, and soon after came to *Strasburgh*. In our Journey thither we saw Abundance of *Indian* Wheat planted, as also some *Lathyrus sativus*, and *Carthamus*, or bastard Saffron. The *Blattaria*, *Solidago* *Saracenica*, are wild hereabouts, and in the adjacent Meadows of *Strasburgh*, *Carduus* *Pratensis* *Tragi*.

Strasburgh is a free Imperial City, rich and populous, of a great Circumference, and well fortified with regular Out-works. It is govern'd by two Councils, one consisting of seventy one, in which are six *Burgomasters*, as many *Stadtmaisters*, fifteen *Patres Patriæ*, and thirteen selected out of the Militia. The greater Council is composed of three hundred Citizens, chosen by the several Companies of the City. The Women are generally handsome, and the Inhabitants *Lutherans*, though the *Roman Catholics* have also a Church and four Convents, two for Men, and two for Women. The Reformed have their Church at some Distance out of the Town. It is an Episcopal See; the Bishop has a Palace in the City, but is not allowed to stay there above three Days at a Time, but may continue in an Inn for eight Days together. The Armory or Arsenal here, may compare with any in *Germany*, and is not much inferior to any I saw elsewhere. The publick Granaries, Store-houses, and Wine-cellars, are worth seeing. The *Domo*, or Cathedral Church, is a noble Structure, with a Pair of folding Doors of Brass at the West End. Here is the famous Clock described by several Authors, which is a Piece of most excellent Workmanship, made by a Citizen of this Place, whose Name was *Isaac Harbrecht*. But what is most remarkable, is the Steeple, the highest that ever I met with, and curiously built of carved Stone, having six hundred sixty two Steps from the Bottom to the Top; we went up six hundred and forty Steps to a Place

they call the *Crown*, from whence we took a View of the adjacent Country at a great Distance.

About ten Hours distant from *Strasburgh*, towards the Side of *Stutgard*, are very good acid mineral Springs, the Waters of which they drink here and in other Cities with Wine. In this, as well as other Imperial Cities in those Parts, the Inhabitants, but especially the Women, adhere still to an odd Way of Dressing, which yet is very different one from another, each having their peculiar Habits; so that their Condition may be distinguished at Sight. July 31. We continued our Journey towards *Basil*, passing the same Day through the Village of *Tivelsheim*, and August 1, through *Marklesheim*, and two Leagues thence in Sight of the strong Town and Fortrefs of *Brisac*, seated upon a Rock, and lodged that Night at *Lodesheim*.

20. Aug. 2. After a League and a half riding, we arrived at *Basil*, a large and noble City, well built of Stone, the Houses very high, and painted for the most Part on the Outside. It is divided by the River *Rhine* into two Parts (that on the North-side being called *Little Basil*) join'd together by a Bridge sustained by fourteen Arches. The chief Ornaments of this populous and rich City are its Fountains, of which it has above three hundred. It is one of the XIII. *Swiss Cantons*, its Territories comprehending above one hundred Villages. The Bishop of *Baden* has not the least Jurisdiction in the Town, being not suffered to lodge here one Night, but keeps his Residence at *Broudint*. The Government is administered by a greater and lesser Council; the last consists of sixty four Persons, chosen by the fifteen Companies, and the greater, of all the Magistrates and the lesser Council. The University of this Place was founded by Pope *Pius II.* in which are seventeen Professors, three of Divinity, three of Law, three of Physick, and eight in Philosophy and polite Literature. They keep Lectures every Day in the Week in Term-time, except *Thursdays* and *Saturdays*, but have very small Salaries. The Ecclesiastical Government is in the Hands of three Professors of Divinity, four *Scholarchæ*, and the Ministers. The Senate have the Power of nominating three Persons to any vacant Benefice, out of whom the Ministers chuse one. In these Cities the Ministers live upon their yearly Salaries, but in the Country they have half in Tythes and the other half in Money. The Ministers here are at Liberty to change their Profession and become Laymen when-ever they please. They are of the Reformed Religion, as are all the other Protestant Cantons.

Erasmus lived Part of his latter Days, and ended his Life in this City; his Monument, which is of Marble, on the North Side of the Communion Table in the great Church, being to be seen to this Day. He was the Founder of a College in *Basil* for twenty Students of Divinity (in which Number are however comprehended the the Beadle and a School-master) ten of whom are to be Natives of *Basil*; they may stay there as long as they continue unmarried, though the Magistrates have a Power to command any of them thence, if they think it convenient. They are under the Inspection of a Regent, without whose Leave none of them dare stay out of the College one Night. In the same Church where *Erasmus* lies inter'd is also his Library, commonly called *Bibliotheca Amberbachiana*, because *Erasmus* gave it by his last Will to one Mr. *Amberbach*. I saw the said Testament written with his own Hand in half a Sheet of Paper, bearing Date 12 Feb. 1536. In this Library are also several very curious Pieces of Painting, done by that famous Master *Johannes Holbenius*, a Native of this City; some Diplomata of the Pope to *Erasmus*, his Seal and Ring, a fine Gold Medal sent to him by the King of *Poland*, besides other good Coins and Medals, both ancient and modern; three Rappers of Copper (worth about a Farthing a-piece) turned into Gold, as they say, by that famous Alchymist *Leonard Turmitius*, who transmuted the famous Nail of *Florence*; several ancient *Entaglio*; some Manuscripts of *Amberbach*, containing the Antiquities of *Augusta Rauracorum*, anciently a great City, but now turn'd into a Village called *Augst*, near *Basil*. The Professors and Ministers wear Ruffs, and a Kind of Caps painted like Sugar-loaves (in

(in which they are imitated by the graver Sort of the Inhabitants) and Gowns which reach just below their Knees. The Women wear their Petticoats very short, and Caps not unlike the young Scholars at Cambridge, with a Tin Girdle. We took also a View of the *Museum* of Dr. *Platerus*, where we met with many both natural and artificial Curiosities of Minerals, Stones, Metals, Animals preserv'd, &c. The famous Phana-tick *David George* ended his Days in this City. We found divers Plants growing wild about *Basil*, the chief of which were, *Scrophularia*, *Ruta canina dicta*, and *Passerina Tragi*, among the Corn, *Phalangium par-vo flore ramosus*, *Blitum minus album*, among the Hed-ges, *Cymbalaria Italica hederacea*, on the Town Walls near the *Strasburg Gate*, *Stæbe major calyculis non splen-dentibus*, in the Grounds betwixt *Frankenthal* and *Basil*, *Polium montanum Lavendula folio*, *Consolida media Genève-sis* & *Cneorum Matthioli seu Thymelæa minor Cordi*. But of these and other Plants growing about *Basil*, see *C. Baubini Catalogus Plantarum*.

We went hence, *August* the 10th, towards *Zurick*, and in our Way, about a German League from *Basil*, passed through *Augst*, supposed by *Ambachius*, to be the ancient *Augusta Rauracorum* of the Romans, where we saw the Ruins of an Amphitheatre. We travelled afterwards in Sight of a wall'd Town upon the *Rhine*, and many Hills covered with wild Fir-trees, and passing through *Bruck*, a pretty handsome well built, but small Town, lodged the same Night at the Baths of *Baden*, about six German Leagues from *Basil*; here we first got Sight of small green Tree Frogs. These hot Baths, about Sixty in Number, are not above half an English Mile from *Baden*, a City seated upon the River *Limagus*, on the Side of a Hill, famous for the general Meetings of the *Swiss Cantons* here.

21. From hence we continued our Journey *August*, the 11th, along the *Limagus* on one, and very fair Vine-yards on the other Side, to *Zurick*, another City be-longing to the *Swiss Cantons*, scarce so big, but much more populous than *Baden*. Its Fortification is extraor-dinary pleasant, near the *Zurick-Sea* or Lake, being di-vided by the River *Limagus* (which owes its Rise to this Lake) into two Parts, which are joined together by two Bridges, one for Foot-Passengers, the other for Carria-ges, and very broad. The Houses here, though of Timber and Clay, yet are well built, handsomely paint-ed, and lofty; the Streets indeed are none of the broadest, but very well paved, and the whole Body of the City enclosed with a strong Wall and many Out-works of Earth, after the modern Way; the River *Sele* (which below this City falls into the *Limagus*) serv-ing for a Ditch on the South-side. The Inhabitants, are Protestants, much addicted to Commerce, and gene-rally rich. What is worth a Traveller's Curiosity here is, the Colour of the *Zurick-Sea*, which is green ap-proaching near that of Sea-water, though it has not the least brackish Taste, to which in Sea-water this Colour is commonly ascribed. Finding afterwards the Water of the Rivers and Lakes near the *Alps* of the same Colour, we could not attribute it to any other Cause but the melted Snow of those Mountains, with which they are (at least the higher Parts of them) covered for six Months in the Year, which containing a nitrous Salt, may be suffi-cient to give the Water this Colour, though not to affect our Taste.

The Government of this City is administred by two Councils, viz. *The greater* and *the lesser*. The last is com-posed of fifty Members, viz. twenty four Tribunes, chosen by the twelve Tribes or Companies of the City, two out of each: These they call the *Twelvers*, because twelve of them have only their Share in the Govern-ment at a Time; twelve Senators, viz. one out of each Company, chosen by the *lesser Council*, as *Simler* tells us, but according to our Information, by the *great Coun-cil*, six Members more taken indifferently out of the Commonalty, and those likewise chosen by the *great Council*, as we were credibly told; but according to *Sim-ler*, by the *lesser*; four Tribunes and two Senators cho-sen from among the Gentlemen, and two *Burgomasters* elected by the *great Council* of 200. Half this Council

governs by Turns, and that part which rule, is stiled *Concilium novum*, or the *new Council*, as that which goes out is called *Concilium vetus*, or the *old Council*: Yet if any Decree be to be made, the same is dated in the Presence of both, for which Reason the whole Fifty meet once a Week; For the rest, one half of this Council is chosen every half Year, viz. at *Midsummer* and *Christmas*, and as the *Concilium vetus* goes out, it chooses the *Concilium novum*, composed for the most Part of the same Persons that were chosen before.

The whole Council of Fifty determines civil Actions (though *Simler* says, no more than eight selected out of their Number) as the new Council judges in criminal Cases alone. The *greater Council* is composed of 200 Per-sons, viz. Twelve out of each Tribe, making in all forty-four, eighteen chosen by the Gentlemen, from among themselves, twenty-four *Twelvers*, four *Tribuni nobilium*, two *Senatores nobilium*, the six before-mentioned chosen by the great Council out of the People. These choose Governors (call'd by them *Landvoghts*) and are always consulted upon any Emergency, which relates to the whole Commonwealth. They also chuse four *Proconsuls* out of the twenty-four Masters of the Companies; and two Treasurers, either out of the Number of the twelve Senators, or of the twelve Tribunes of the *new Council*.

August 12. In our Way from *Zurick* to *Schaffhausen* we pass'd by a Cataract or Water-fall of the *Rhine*, which is so dangerous for the many Rocks that lie under Water, that the Vessels must unload here, and by the Way found the *Orobis sylvaticus purpureus vernus*, the *Hepatica nobilis*, and *Ulmaria major sive Barba capri*, growing wild. The City of *Schaffhausen* is situate up-on the River *Rhine*, over which is a Bridge, half of Wood, half of Stone, and so are most of the Houses, very well built; especially in the two great Streets, which are handsomely paved. The Citizens of this Place, as well as of *Zurick*, wear Swords constantly: Those of the first being divided into twelve Companies, each of these elect two *Tribuni Plebis*, and these twenty-four make up the *lesser Council*, having each a yearly Allowance of fifty-two *Florins*, and nine Measures of Corn.

The *great Council* is composed out of those twenty-four, and sixty more, (viz.) five chosen out of each of the Tribes. These elect every Year two *Burgomasters*, two Treasurers, one *Proconsul*, and one *Ædilis*, but for the most part the same Persons: A Father and Son, or two Brothers, cannot be chosen at the same time into this Council.

From hence we travelled to *Constance*, *August* the 13th, a free imperial City, in a small Plain near the *Rhine*, at the End of the *Boden Sea*, or Lake of *Constance*, known anciently under the Names of *Lacus Brigantinus*, and *Lacus Aconius*, over which is laid a very long Bridge, part of Wood, and part of Stone: The Streets here are very regular and handsome, and the Buildings of Stone. But what makes this Place most famous is the Council that was held here, 1417. in which the Doc-trine of *John Hus* was rejected, and he condemned to the Fire. It is very strong by Situation, having the Lake on one, and the Fens on the other Side, but its Fortifications are very old and inconsiderable.

22. *August* 15. We passed over the Lake in a Boat, to the City of *Lindaw* (in Sight of the strong Town of *Oberlingen*) situated in the Middle of the Lake, and sur-rounded by its Waters on all Sides, being join'd to the Continent by a Bridge of two hundred and ninety Paces long, one half of which is of Stone, the other, viz. that to the Town-side, of Wood, so that it may be taken down in case of Necessity. This Place, besides its na-tural Strength of Situation, is fortified with strong Bul-warks, and Stakes driven into the Ground to prevent the Approach of any Boats. It is for the most part handsomely built, and the Streets are adorned with Fountains, yet these last are not so spacious, or their Buildings so lofty as at *Constance*: It has on one Side a double Wall, be-tween which is enclosed a large Space of Ground planted with Vines, which produce commonly, as we are told, about three hundred English Hogheads per Annum. They have eight Villages belonging to their Jurisdiction.

August 17. Taking Post-horses at *Constance*, in order to our Journey to *Munich*; we changed our Horses at *Lindau*, an Imperial City, two German Leagues thence; at *Laykirk*, another Imperial City, two Leagues further; at *Memmingen*, both for Strength and Bigness, one of the chief of the Circle of *Suabia*, and dignified with the Title of a free Imperial City, and at *Mindelsheim*, where we lodged that Night. From hence we travell'd to *Landsberg*, four Leagues further, a very fair Town, with a handsome Fountain in the Market-place; after which, without meeting with any considerable Town, we pass'd by the Lake of *Ammersee*, in Sight of the *Alps*, to *Munchen* or *Mitnich*.

23. This being a strong and well fortified City, and the ordinary Residence of the Electors of *Bavaria*, no Strangers are permitted to enter the Gates without the Consent of the Governor: *Cluverius* is not in the wrong, when he calls this City the fairest of all *Germany*, the Splendor and Beauty of its Buildings, both publick and private, especially of the Electoral Palace (which may compare with any in *Europe*) and of several magnificent Churches and Convents, being such as surpasses any Thing in *Germany* for its Bigness, its Streets being the broadest and most regular I have met with. Among other Varieties, you see in the Electoral Gardens a vast Number of *Aloe-trees* (for such they may be called by reason of the Bigness of their Stalks, which shoot up in one Year) the like perhaps all *Europe* can't produce in Number both for their Stalks and Flower. Here also we met with a Convent of *English* Nuns, and found in their Churches Pews and Seats, as is customary in *England*, whereas otherwise, the *Romanists* make use only in their Sermons of moveable Chairs and Benches, and clear the Churches so soon as Sermon is over.

We took a Turn from hence to *Augsbourg*, and passing by the Abby of *Bernardines* called *Pruck*, and the little Town of *Fridbergh*, arrived there the 21st of *August*.

This is a stately and strong City, seated upon the River *Lech*, being about eight *English* Miles in Compass: Its Houses are well built, its Streets fair, and beautified with many Fountains. Its Arsenal consists of twelve Rooms, not inferior to that of *Strasburgh*, as its Town-house may challenge the second Rank next to that of *Amsterdam*; the upper Room especially being very remarkable for its Loftiness, Gilding, and Paintings, in which it exceeds any I have yet seen. The Inhabitants are partly *Romanists*, partly *Lutherans*, but the last are double the Number of the first, though these are in Possession of seven Convents here, among which there is one *English*: Some *Calvinists* there are here, but few. It is a free Imperial City, under the Jurisdiction of its own Magistrates; yet seems somewhat decayed of late Years, the Number of its Inhabitants being scarce proportionable to its Bigness; in the Plains near *Augsburgh*, leading to *Munchen*, we saw many rare Plants.

August 28. We left *Augsburgh*, and travelling three Days out of our Way, in order to take a View of the famous City of *Nurembergh*, we cross'd the *Danube* the first Day, about six Leagues from *Augsburgh*, at a Place called *Donawert*, belonging to the Elector of *Bavaria*, where there is a wooden Bridge over that River. The 29th, we passed through *Manheim* and *Papenheim*, two pretty wall'd Towns, and having made five German Leagues that Day, lodged at *Weissenbergh*, an Imperial City, inhabited by *Lutherans*; near which is also a strong Fort upon a Hill, belonging to the Marquess of *Anspach*, a *Lutheran* Prince.

24. The 30th, We passed through a small Town called *Pleinfeldt*, and after a Journey of three Leagues further, close by another little walled Town called *Rotte*, and so, after two Hours Riding more, arrived at *Nurembergh*, which we were no sooner in Sight of, but we highly applauded the Epithet *Cluverius* bestowed upon it, when he styles it *Germanicarum superbissimam*, it being beyond Question, that for its Buildings, which are very stately, it exceeds all, and for its Bigness may compare with any in *Germany*; and were its Houses, which are of Free-stone, as uniform as the Buildings in the Low-Countries, would even out-vie them for Beauty; be-

sides, that under its Dominion, are at least an hundred Towns and Villages. It is true, the Ground where it is situated is very barren, and the River upon which it stands but very small, and not navigable; notwithstanding which, by the Industry of the Inhabitants, who are generally very excellent in all Sorts of Handicraft Works, this City is very rich and populous. They are generally *Lutherans*, and their Churches more adorned and beautified after the Fashion of the *Romanists*, than ever we saw in any other Place where this Religion is profess'd. The *Roman Catholics* have one Church allowed them, but the *Reformed* none. Their great Market-place, and the Town-house, are worth a Traveller's Observation; it is fortified with a good Wall and Ditches: Their Senate and their whole Government is said to approach very near that of the *Venetians*, being for the rest a free Imperial City.

September 3. We set out from *Nurembergh* towards *Ratisbon*, and came to *Altorff*, a Town and University under the Jurisdiction of *Nurembergh*. It has a very good Physic-Garden, the Catalogue of the Plants therein, as well as another of what Plants grow wild hereabouts, the World stands indebted for to Dr. *Maurice Hoffman*. Over the Cloister of the College, in which are maintained thirty six Students, at the Charge of the City of *Nurembergh*, you see an Inscription in *Latin*, giving a short Account of the Foundation of this University and College, viz. That the said College was founded by the Senate of *Nurembergh* in 1575, under the Reign of the Emperor *Maximilian II.* that in 1578, under the Reign of *Rodolph II.* a *Gymnasium* was established here, which in 1633, under the Reign of the Emperor *Ferdinand II.* was dignified with the Title and Privileges of an University.

Dr. *Hoffman* shewed us several *Cornua Ammonis*, or Serpent-stones, besides many Cockle and Mussel-shells found near *Altorff*, of which we also saw some the next Day in our Way to *Nieu-markt*; upon which Occasion I can't forbear to give, by way of Digression, a brief Account, (1.) In what Places they are found. (2.) The different Opinions concerning them. In *England*, those petrified Shells are found at *Whitby* or *Whitebay*, in the North-riding of *Yorkshire*; at *Huntley-Nab*, more Northward on the same Coast; at *Alderley* in *Gloucestershire*; at *Cainsham* in *Somersetshire*, not far from *Alderley*; at *Farnham* in *Surry*; at *Richmond* in *Yorkshire*; and in several other Places; as for Instance, at *Lyme* in *Dorsetshire*, *Adderbury* in *Oxfordshire*, at *Brickworth* in *Northamptonshire*, about *Daventry*, *Verulam* in *Hertfordshire*, *Shuckborough* in *Warwickshire*, nay, even the Peak of *Derbyshire*. Besides these petrified Shells, other congenerous Bodies are found in several Parts of *England*, viz. 1. The *Star-stones*, called by some *Astroites*, *Lapis stellaris*, and *Stella judaica*. 2. *St. Cuthbert's Beads*, or *Trochites*, and, 3. The *Capstone*, or *Echinites*, called *Lapides Brontiae* by some, and considering that Sharks are often taken upon our Coast, it is a Wonder that no *Glossopetrae* should be found in *England*. As for the *Star-stones* (so called from their five Angles resembling so many Rays) they are found at *Shuckborough* in *Warwickshire*, at *Cassington* near *Gloucester*, and *Belvoir Castle* in *Lincolnshire*. The *Trochites* are to be met with on the Western Shore of the *Holy Island*, and in the Chinks of some Stones found in the Bottom of the Channel of the River *Tees*, the common Boundary between *Yorkshire* and the Bishoprick of *Durham*; these are of a rotund Figure, and not angular like the former. The *Echinites* or *Brontiae*, are found in divers Places of *England*, of several Magnitudes and Shape; and beyond-sea, at *Brescia* in *Lombardy*, upon the Banks of the River *Tanaro* in *Piedmont*, four Miles below *Aste*, but especially in the Isle of *Malta*, where are also many *Glossopetrae*, resembling Sharks-teeth, petrified.

As for these last, *Boetius* says, they are found near *Deventer*, in the Province of *Overysse*; and in *Germany*, in the *Alum-mines* near *Lunenburgh*. *Gropius Becanus* tells us, that they were digged up in the Ditches of *Antwerp*, and are found in great Numbers on a Hill near *Aix la Chapelle* in *Germany*, which he uses as an Argument, that they can't be real Sharks Teeth petrified.

fied. *Georgius Agricola* affirms; that the petrified Cockles, and other Sea-Shells, are found in the Stone Quarries of *Galgenbergh*, and in those beyond Mount *Maurice*, in the Bishoprick of *Hildesheim* in Germany. (2.) At *Alfeld*, a Town of Saxony. (3.) At *Hanover*, in the Lime-Pits, and near the Village of *Lindaw*. (4.) In a Village called *Rabschytz*, near the Rivulet of *Trebitia* in *Misnia*. (5.) At a Place called the *Rose-Garden* in *Prussia*. (6.) Near the Castle of *Spangenberg* in *Hassia*. (7.) In a Mountain of *Italy* near *Verona*. (8.) On the Banks of the River *Elfa*; and (according to *Pausanias*) in the Quarries near *Megara*, and they are also found in *Theffaly*, *Macedonia*, and the Mountains of *Calabria*. *Bernardus Palissius* says, that those petrified Shells are found in *France*, near the Suburb of *St. Martial* near *Paris*; in the Mountains of the Forest of *Arden*, but especially about *Sedan*, in the Provinces of *Valois*, *Xantogne* and *Champaign*, and in the Mountains near *Soissons*.

Joannes de Laet tells us also of a Rock near *Dijon* in *Burgundy*, and speaks much of the Fields about *Sauvignac*, upon this Account. Besides the beforementioned Places of *Italy*, they are found in the Mountain of *Nicani*, in the *Modenese*, and in the Channel of a Rivulet near *Udine* in *Friuli*; *Geropius Becanus* names *Limburgh*, *Liege*, *Namur*, *Tournay*, and divers other Places in the *Low-Countries*: Besides all which Places, there is not the least Question, but that, if strict Observations were made in the other Parts of the World, the same might be discovered there as well as in *Europe*.

We will now proceed to give you a short Hint of the Opinions maintained concerning them. The first, and which was generally received among the Ancients, was, That they were originally the natural Bones or Shells of living Creatures, bred in the Sea, which by Deluges, Inundations, Earthquakes, or other such like Means, being cast up into those Places, being filled with Clay, and some petrifying Water or Substance, were in Tract of Time, hardened into the same Shape and Figures they bore before; this Opinion they support by divers Experiments, as the finding of a petrified Pearl-bearing Shell, in *Tuscany*, with the Pearl yet sticking to the Shell: Of a Piece of the greater Sea-nacre (*Pinna marina*) in which the silk-like Substance within the Shell being consumed, the Colour of that Substance remained in the Clay that had filled the Shell. Another Experiment is, that about the City of *Voltterra*, there are many Beds of Earth not stony, but full of true Cockle-shells, which have not undergone the least Alteration, though they have lain there at least three thousand Years, from whence they would evince, that *Tuscany* was in former Ages cover'd by the Sea, and consequently so might those other Countries in which those petrified Shells are found. Against this Opinion are two considerable Objections, not easily to be resolved.

The first is, that at this Rate the whole Body of the Earth must once have been covered with Water, since these petrified Shells are found at a vast Distance from the Sea, nay, even upon the very Tops of the *Alps*. Some pretend to answer this by the general Deluge; but as that proceeded from the Rains, these were more likely to carry off into the Seas those Shells, than to bring them in. What some argue from the Words of the Scripture, (*The Fountains of the deep were broken up*) will not answer the Point neither; for supposing that by the breaking in of the Rivers and Seas, those Shells were brought, the same must of Necessity have been scattered indifferently over the whole Surface of the Earth. Others are for solving this Difficulty, by referring the same to some particular Inundations, alledging, That those Places, where they are found now, might, in most ancient Times, have been low Places, which, by Earthquakes, have been raised up to Mountains; but tho' this, perhaps, may take Place in respect of some inconsiderable Eminencies or Hills, it is not applicable to those mountainous Bulks, such as the *Alps*, *Pyrenees*, *Apennines*, it being evident from the most ancient Records, that though the Face of the

Earth may have undergone some Change; yet the same Mountains, Islands, Promontories, Rivers and Lakes of any Note, are still remaining, without any Removal in their ancient Stations.

The second Objection against this Opinion is, That among all these petrified Cockles or Shells, there are many Sorts not to be found any where now; nay, some go farther, that among all our Shell-Fishes, there are none found like those petrified Shells; unto which, if it be answered, that those Species are lost, it is a Thing which will scarce be admitted by many, for though it might be granted, that some few Species were lost, yet it seems next to an Impossibility, that a whole Genus, of which there were so many Species scattered in so many far distant Places from one another, should be utterly extinct. As for Instance, of the *Serpentine Stones*, or *Cornua Ammonis*, I have myself seen at least six several Species, and some of them of a Foot diameter, being much beyond the Bigness of any Shell-Fish now living in our Seas. Hence it is; that many of our modern Naturalists have attributed these Bodies to the Effects of a plastic Power in the Earth, and that they are produced and framed after the same Manner as precious Stones, Crystals, and coagulated Salts, by shooting up into divers Figures. What makes for their Opinion is, that in the Earth are found many figured Stones, such as the *Lapides Lyncurii*, *Belemnites*, *Lapides Judaici*, *Trochites*, and others, which have not the least Resemblance to any Shells, Bones, Roots, or Fruits; to salve up which, no other Recourse is to be had, than to the before-mentioned Loss of those Species out of the World.

I cannot but mention, upon this Occasion, what I was told by a very credible Person, viz. That he had seen a Stone resembling a Cockleshell, found in the Stomach of an Ox, which, if it be admitted, there is not the least Doubt, but that the like may be so generated in Quarries and other Places. These two different Opinions have given Occasion to a third, viz. That some of those Shells have been truly petrified, and that others are really Stones formed by some Plastic Power in the Earth, imitating the others in their Shapes and Figures. But as this seem to be rather a Shift than a Dissolution of the Objections to be made against either of the two former Opinions, I am inclinable to adhere to the first, as seeming to me more consonant to the Nature of the Thing, though at the same Time I should be very glad to hear the Objections made against it, more solidly answered than they have been hitherto. The Academical Senate of *Altorff* was composed at that Time of thirteen Professors, three in Divinity, as many in Law, two in Physick, and five in Philosophy, who publish every Year a printed Catalogue of the Lectures they intend to keep the next ensuing Year.

25. September 4. We set out from *Altorff* for *Regenspurgh*, or *Ratisbon*, and passing through *Nienmarkt* and *Heinmaw*, two little walled Towns, came to *Ratisbon* the 5th at Night, by a fair Bridge built here over the *Danube*. This City, which receives its Name from the River *Regen*, which here joins its Current with the *Danube*, is very large and well-built with Stone-houses, the Roofs of which are flat, after the *Italian* Manner. It is well fortified, but the Streets somewhat narrow. As it is an Imperial City, it is under the Government of its own Magistrates; who, as well as the greatest Part of the Inhabitants, are *Lutherans*, though their Bishop is of the *Romish* Religion, the Members of which have some Convents here, and a College of Jesuits. It is chiefly famous for the Imperial Diet, which is usually held here.

September 11. We took Boat for *Vienna*, and passed on the Left-hand of the River, by a Village and stony Castle on the Hill called *Thonastein*, and three Leagues and a half below *Ratisbon*, in Sight of the Castle of *Wert*, seated at the Conflux of the River *Wisent*, and the *Danube*, belonging to the Bishop of *Ratisbon*; we took up our Quarters one German League and a half thence, at *Straubingen*, a handsome wall'd Town, belonging to the Elector of *Bavaria*.

September 12. In the Morning we passed by Pogen, and four Leagues below Stranbingen, under a wooden Bridge laid over the Danube, somewhat lower we saw the small City of Dreckendorf, belonging to the Elector of Bavaria, and having pass'd by the Mouth of the River Iser, and in Sight of Osterhoven on our Left-hand, and the Castle of Hilkersberg on the same Side, we lodged that Night at a little wall'd Bavarian Town called Vilshoven.

September 13. We came to Passau or Passovia, four Leagues distant from Vilshoven, a City considerable for its Strength, Bigness, and noble Buildings, the last of which were very near all consumed by Fire, about nine Months before our Arrival. It is under the Jurisdiction of the Archduke of Inspruck, situate at the Confluence of the Rivers In and the Danube, over the first of which is a Bridge to the Town of Instadt. Below Passau, the Danube being streightned by Hills and Rocks on both Sides, begins to run with a much swifter Stream than before; seven Leagues below Passau, passing by the Castle of Newhouse, we took up our Lodgings at the Village of Asb, on the right Side of the River.

26. September 14. Passing through an open Country on both Sides, for four Leagues together, we came to Lintz, a City neatly built after the Italian Manner, with a square spacious Piazza, adorned with two noble Fountains, the Imperial Palace standing upon a rising Ground, from whence you have a fair Prospect of the Danube and adjacent Country. Three Leagues below it we passed by a very fine Village called Matbause, and in Sight of the City of Intz, seated on our Right-hand upon the River Ens, seven Leagues below Lintz, the Country begins to be hilly again on both Sides of the Danube, near the Castle of the Prince of Lichtenstein, by a Village called Greine; a little below which Place we passed a Kind of Cataract, the Current being nearly enclosed between the Rocks on both Sides, and render'd boisterous by those under Water; and something lower a Whirlpool is made there by the jetting out of Rocks into the River. Afterwards, passing by a small Town called Ips, we lodged that Night at the Village of Morpatch, about eleven German Leagues from Lintz.

September 15. Early in the Morning we passed in Sight of the rich Convent called Melk, on our Right-hand, and about six Leagues further the Seat of Count Dietrichstein on our Left, within Sight of the rich Abby of Ketwein, famous for its stony Situation, and the brave Resistance it made against the Swedes. Nine Leagues from our last Night's Lodging, we passed under a wooden Bridge, near the City of Stein, not far from whence we came to Krembs, a very handsome, strong, well-built City, seated at the Foot of a Hill. From hence, being an open Country, the Channel of the River began to be much broader. Six Leagues below Krembs, we passed by a small City called Deuln, and in Sight of the Castle of Greitenstein, situate upon a Hill, at some Distance from the River, on the Left-hand, and we saw also the City of Cornburgh. Here, and afterwards in other Places, we saw Abundance of Mills in Boats, the Wheels lying betwixt two Boats, placed at a convenient Distance one from another; so that the Stream being by Degrees streightned between the Boats, forces the Wheel to turn. One of the Boats is with Chains, or strong Cables, fastened to the Bank. Within a League and a half of Vienna, we passed by the noble and rich Abby called Cloyster Newburg, with a little wall'd Town of the same Name belonging to it; and having by the Swiftness of the Current made nineteen German Leagues that Day, arrived at Vienna, the Capital of Austria, and now the Capital of the Empire.

This City, which, in Proportion to its Bigness, is the most populous we had seen yet in our Travels, is the ordinary Residence of the Emperor, seated upon the Danube, though it receives its Name from the River Wien, which below it, viz. on the East-side, falls into the former. The Body of the City is not above four or five English Miles in Compass, but the Suburbs are very spacious, some of the Houses of which were lately pulled down, upon the Approach of the Turks towards

Presburgh (not above forty English Miles from thence) after the taking of Newbeusel. Vienna has a most regular Fortification, the Wall of Earth, but very high and thick, faced with Bricks, strengthened by a broad and deep Ditch, and defended by many Half-moons and Horn-works. The Houses are lofty and well-built, with flat Roofs, after the Italian Way: The Markets very well furnished with Provisions, but the Streets none of the broadest. The Emperor's Palace, the Cathedral, and other publick Buildings, are very magnificent. The Emperor himself (Leopold) is low of Stature, of a very dark Complexion, black Hair, and thin visaged, with a thick hanging Under-lip, not unlike his Effigies on his Coin. In the Market we first met here with the Fruit of *Sorbus legitima*, with Tortoises, for Six-pence a-piece, found here in muddy Places; and here we also saw the *Silurus*, or *Sheat-fish*, the biggest of all fresh Water Fish I ever saw, some of them weighing near an hundred Pounds.

27. September 24. We took Coach for Venice, and lodged that Night at a great Village called Trayskerk, four Leagues thence; by the Way we saw great Store of *Absinthium Austriacum tenuifolium*, Claus.

The 24th, after we had travel'd four Leagues, we came to Newstadt, (*Neapolis Austriaca*) a pretty strong square Town, well built, but of no great Extent; having a fair Market-place, and very regular Streets. At three of the Corners it is defended by so many Bastions, but on the fourth it has a Castle or Citadel. Near this Place I met with the *Asperula cerulea*. After we had travel'd two Leagues beyond Newstadt, we began to enter among the Hills, and lodged that Night at Glacknitz, four Leagues from Newstadt.

The 26th, We had scarce made two Leagues, when coming to the Village of Shadwin, our Coachman hired ten Oxen (which were ready at hand for that Purpose) to draw the Coach up the steep Hills, which are the common Boundaries betwixt Austria and Stiria. After we had travel'd for some Time among the Hills, we pass'd through Mertzsuchlag, a small City seated upon the River Muercz (where we saw many Mills) and afterwards through Langenwang and Kriegla, each of which have a Castle built on Hills. We cross'd the River near the last, and passing through a pleasant Valley surrounded with woody Mountains, lodged that Night at the Village of Kimberg, six long German Leagues from Glocknitz.

The 27th, We continued our Journey through the same Valley, through the Valley of Kapsberg, in Sight of several Villages, Castles, and Country-Seats upon the Sides of the Hills, and at three Leagues End came to the City call'd Pruck en der Mure, i. e. Pons Mura, a neat Place, defended by a Wall, having a spacious Market-place: The Inhabitants are mostly concerned in Iron-work. Here we pass'd the River Mure twice, and after we had left Lewben, pass'd over a Hill, and so following the Course of the River among the Mountains, lodged that Night at the Village called St. Michael. Here it was we saw many Men and Women with large Tumours hanging down under their Chins and Throats, some of which were single, some double, call'd in Latin, *Bronchocoele*, and by some English the *Bavarian Pokes*. This, it seems, is a Disease natural, and of old belonging to the Alpine Inhabitants: *Quis tumidum guttur miretur in Alpibus?* Though the Grisons inhabiting the highest Parts of these Mountains, are either not at all, or at least not near so much subject to this Distemper. Some attribute the Source of this Evil to the Snow-water which comes from the Alps; others to the virulent mercurial Particles which are mix'd with these Waters; but as this Distemper is not frequent among other Nations inhabiting mountainous Countries, where the Snow lies as long as here, nay, where their Waters are nothing but melted Snow, neither among the Hungarians and Transylvanians, (where they abound in Minerals, and especially in Mercury) we had better suspend our Judgment, till some ingenious Physician, residing in those Countries, shall assign us the true Cause and Cure of this Distemper. We also saw more Idiots and delirious Persons here than any where else, which

I attributed chiefly to the venomous and malignant mercurial Vapours, which will, beyond all Question, affect the Brains and Nerves; as is obvious in Goldsmiths, Gilders, Miners and Painters; though they generally attribute this to the Use of Snow-water, and of the vast Quantity of Cabbage, which is their daily Food here.

The 28th, We continued our Journey for three Leagues along the River *Mure* to *Knittelfeld*, a small City, and then passing through a Valley in Sight of many Noblemens Seats and Castles, lodged that Night at the Village of *St. Georgio*, upon the *Mure*, four Leagues from *Knittelfeld*. The 29th, We continued our Journey along the River *Mure*, through the same Valley, as far as *Newmarket* four Leagues from *St. Georgio*, and following the Tract of another River, which near *Volckmarck* falls into the River *Drave*, we passed through *Freisach*, a considerable City in those Parts, seated in a little Valley betwixt high Hills, and after a League's travelling further, lodged at *Heirt* in *Carinthia*.

The 30th, For three German Leagues after, we travell'd still through rocky Valleys as far as *St. Veit*, where the Emperor has a Mint: Three Leagues further we came to *Vilkircken*, a Town of Note, but quite ruined by an accidental Fire three Years before. *October* the 1st, We passed over rugged Rocks, and Mountains all along the Lake *Ostfukersee*, at the further End of which Count *Dietrichstein* has a strong Castle built upon a Hill. After that, passing through a pleasant Valley, we cross'd the River *Drave*, which begins to be navigable here, and washes the Walls of *Villach*, a Town of Note in this Country, three Leagues from *Vilkirck*. At some Distance from *Villach*, we pass'd the River *Guile*, which joins its Current with the *Drave*. Hence we travelled again over very rocky Mountains to *Orlesteiana*, where we lodged that Night.

October the 2d, We travell'd on for two Leagues through the Mountains to *Klein Tarvis*, and thence to the River *Timent*, which exonerates itself into the *Adriatick-Sea*, and took up our Quarters that Night at *Pontieba*, the last Place in the Emperor's Territories, Part of it being subject to the Emperor, from whence it is called *Pontieba Imperiale*, as that Part which belongs to the *Venetians* is thence called *Pontieba Veneta*; here we were obliged to take a Bill of Health. Between this Place and *Klein Tarvis* observing several Herds of Goats following the Goat-herds like Dogs, it put us in Mind of what our Saviour says, *And he goeth before his Sheep, and they follow him, for they know his Voice*; which proves that the same was usual in those Days in *Judea*. *October* the 3d, we passed the River *Timent* by a Bridge, which here parts *Carinthia* from *Friuli*. About a German League thence, we came to a small Fort, called *Clausen*, where they stopped us till we delivered our Bill of Health. As we travell'd on along the River, we saw many Timber Trees floating down the Stream, which being fell'd in the *Alps*, are brought to the next Rivulet or Brook, and when the next strong Rain Shower falls, forced down into the greater Rivers. We passed the same Day through *Vensonga*, a pretty little City, and lodged that Night at the Village of *Hospitaletto*, and so entred *Italy*.

The Circumstances of this worthy Gentleman, at the Time of his going Abroad, were of a Nature that qualified him to enter into such Enquiries, and to make such Sort of Observations as are most worthy of a Reader's Attention, as being most likely to convey to him the Advantages of Travelling, without the Fatigue of it. Mr. Ray was in the Flower of his Age; he had reaped all the Advantages of a learned and general Education. He had seen the greatest Part of his own Country before he went into foreign Parts, and the sole Reason of his going thither, was, for his own Improvement. It is very natural, therefore, to expect from such a Man, Remarks and Reflections, very different from those of other Travellers; and the Reader will find, that his Expectations in this Respect are fully answered. All his Remarks are curious and important, most of his Reflections are very sensible and judicious; he did not

dwell on the Superficies of Things, but went to the Bottom. He knew before he went Abroad, all that was worth knowing of the Countries he visited from Books, and he made it his Business to prepare the Materials for his Enquiries, before he came to the Places where they were to be made; so that we find him sometimes commending and sometimes correcting the Authors that he had read; which enable us to judge of other Books as well as his own, as it also enabled him to bring together, in a very narrow Compass, an infinite Number of curious and learned Observations. It is indeed true, that this gives an Air of Singularity to his Writings, which differences them extremely from most other Books of like Titles; but this is so far from being any Way prejudicial to, that in the Opinion of the best Judges, it adds greatly to the Merit of his Performance.

Another Advantage Mr. Ray had beyond most Travellers, which was derived from the Company in which he travelled; and in Order to place this in a proper Light, it becomes necessary for us to say somewhat of his Fellow-Travellers. *Francis Willoughby*, Esq; Ancestor to the present Lord *Middleton*, was a Gentleman no less distinguished by his eminent Virtues and Knowledge, in all Degrees of Learning, than by his Descent from an ancient and honourable Family, and his Possession of a large hereditary Estate. He was from his Childhood addicted to Study, and when he came to the Use of Reason was so great a Husband of his Time, that he suffered no Opportunities of improving himself, to slip unemployed; and though he had a Tincture of most other Sciences, yet those that were the chief Objects of his Affections were the Mathematicks and natural Philosophy. In order to cultivate these, he undertook this Journey with Mr. Ray, in which he kept his Pencil continually in his Hand, and drew with great Exactness whatever offered itself to his View, worthy of Observation. His accurate History of Birds, his noble Specimen of the History of Fishes, both of which were published after his Decease, by the Care of his learned Friend, are the lasting Monuments of his Fame and Learning, together with Abundance of curious and learned Essays that are to be met with in the *Philosophical Transactions*; and these will appear to us the more extraordinary, when we reflect that he died but a young Man, on the 3d of *July*, 1672, at the Age of Thirty seven. As to Mr. *Skippon*, afterwards Sir *Philip Skippon*, who was also a Companion with Mr. Ray in these Travels, we shall have Occasion to mention him more particularly, when we come to speak of his Journey through *Spain*, and therefore it is only requisite to observe here, that his Talents, his Industry, and his Accuracy, were not inferior to those of his Companions; from whence we may safely collect, that though these Gentlemen had each of them his particular View, to which he chiefly attended, yet their Conversation contributed not a little to help each of their Enquiries, and enabled them to push their Discoveries much farther than they could have done, if they had travelled alone, or if they had travelled in Company, where, while some were engag'd in serious and solid Studies, others had pursued only sensual Pleasures, or trivial Amusements.

It must be acknowledged, that many Passages in this Section, and many more in the succeeding Sections, relate to Places already mentioned and described, and therefore it may seem somewhat unnecessary, more especially considering how much we are straitned for Room, to suffer these Repetitions. But to this, several Answers may be made, as for Instance: There is such a Connection runs through the whole of Mr. Ray's Travels, that the Reader will very easily discern there was no Choice left for us to make, but whether we would receive or reject all; and he will certainly see good Reason to think that he had been very ill treated, if the latter had been our Resolution. It must be also observed, that his Observations are of a very different Nature from those of *Misson* or *Burnet*, more especially as we have taken Care to leave out a few Passages, which it was impossible should not be the same in Re-

lations respecting the same Places; so that by this Means, Repetitions are for the most part avoided, at the same time that the Connection, necessary for understanding Mr. Ray's Narrative of his Travels, is maintained throughout. *Lastly*, it contributes not a little to the Variety and Entertainment, as well as the Utility and Instruction of a Work like this, to bring together as great a Diversity of Travels as is possible, because as the old Proverb says, *Many Men, many Minds*. One Traveller makes his Remarks in one Manner, another in another; one shews himself an Antiquary, another is an Historian, a third a Critic, a fourth a Politician, a fifth a Philosopher; and in reading their several Remarks, we profit by them all. Besides, it ought to be remembered, that as Travellers differ in their Notions, so Readers vary also in their Sentiments of Things. Such as have a View to traverse these Countries themselves, cannot avoid setting a high Value upon *Misson's* Manner of Writing; such as have a Taste for History and Politicks, must be charmed with *Burnet's* Method; and those again, who are in Love with philosophick Enquiries, moral Reflections, and Discoveries that are

useful to Society, will very probably prefer the Accounts given by Mr. Ray, to *Misson* and *Burnet* both. General Readers who grasp at all, will receive Satisfaction from comparing these different Methods, and find in Variety, what they would have missed, if we had given them the very best Relation that could have been selected, and that in its utmost Extent. It was our Business to gratify the Desires of every Reader, and this alone is a sufficient Apology for the Method that is here taken. A Library of Voyages and Travels implies that such Method should be taken, and it always has been, and shall be our Study to fulfil the Title of this Work, to make it as far as we can all that we have promised, so as to leave no Room for objecting, that we have been sparing in our Pains to accomplish what we proposed, and to comply with the Expectations of the Publick, which in all Cases is unjust, and in ours would be highly ingrateful, considering the kind Reception we have hitherto met with, and which as it encourages, so it lays us under an Obligation to use our Endeavours at least, to deserve it.

SECTION VI.

The TRAVELS of the Reverend Mr. JOHN RAY, through the Dominions of the State of *Venice*, *Lombardy*, *Tuscany*, the Kingdom of *Naples*, the Islands of *Sicily* and *Malta*, the Ecclesiastical State, the Bishoprick of *Trent*, the Country of the *Grisons*, *Switzerland*, &c.

Interspersed throughout with Historical, Political, Philosophical, Physical, and Moral Reflections, together with an Account of Abundance of Curiosities seen and examined in the Course of the Author's Voyages and Travels, and many other entertaining and instructive Particulars.

1. An Introductory Account of what is to be expected from the following Section.
2. Observations on the Situation, Extent, Number of People, Revenues, &c. of Venice.
3. Some curious Remarks on the Government of that Republick.
4. Curiosities of different Kinds seen by the Author there, with a very distinct and particular Account of the Art of making Venice Soap.
5. A succinct Description of Padua, and of the Hot Baths at Abona.
6. An Account of Vicenza, and of the chief Commodities in the Country round it.
7. The Cave of Custoza described, together with the Manner of making Venti-ducts.
8. The City of Verona, and the Country about it described.
9. Some very curious Remarks on the State of Mantua.
10. Ferrara and Bologna described, with an Account of the Country and Trade.
11. Some Remarks on the Dutchy of Modena, and of the reigning Family.
12. The Cities of Reggio, Parma, and Placentia, described, with many useful Remarks.
13. An Account of Brescia, Bergamo, and of the Country about those Cities.
14. Remarks upon Milan, and the Curiosities the Author saw there.
15. A Description of Turin, and of the Country of Piedmont.
16. A very large and accurate Description of the City and Republick of Genoa.
17. The Author's Journey from thence to Leghorn, including a Description of the principal Places in the Grand Dutchy of Tuscany.
18. The Author's Voyage to Naples, giving an Account of that City and Kingdom.
19. A Description of the principal Places in the Island of Sicily.
20. The Author's Voyage from thence to the Island of Malta, and a Description of that Place, its principal Commodities and Manufactures.
21. An Account of the City of Valetta, of the Knights of Malta, together with various Remarks on the Country and Inhabitants.
22. The Author's Return to, and farther Observations in, the Island of Sicily.
23. His Voyage from thence to Naples, with some curious Remarks on the different Provinces of that Kingdom through which he passed.
24. A Description of Florence, with some historical Notes as to the Family, Power, and Revenues of the Grand Dukes of Tuscany.
25. The Author's Journey from Florence to Rome.
26. His Observations on the principal Edifices in that famous Capital.
27. A succinct Description of the Place, and of the Country adjacent.
28. The Author's Journey from thence to Ancona, with Remarks upon such Places as he passed through in his Way.
29. An Account of his Journey continued from Ancona to Trent.
30. A Description of that City, with the Copy of a remarkable Inscription relating to the last General Council held there.
31. Several Remarks of our Author on the Country, Produce, and Manufactures of Italy, and on the Disposition, Manners and Customs of its Inhabitants.
32. Observations on the Swiss-Cantons, and on the City of Geneva.
33. Conclusion of this Section, and Remarks.

THE Design of this Section is to extract so much of Mr. Ray's Travels through *Italy*, as may inform the Reader, in many Particulars, that were either omitted by, or did not occur to the Authors whose Works have been already inserted, as also to enlarge the Accounts already given, with the Descriptions of the Kingdoms of *Naples*, the Islands of *Sicily* and *Malta*, and many other Places thro' which he passed, and which were not mentioned by the former Writers. The Reader will also observe, that in regard to the Curiosities of Art and Nature which are mentioned in these Travels, they are more closely and thoroughly examined than in those of *Misson*, *Burnet*, or indeed any other; because they were what these Gentlemen particularly sought after, and perfectly understood; neither may it be improper to take Notice, that in Consequence of many useful Discoveries made by them in their Travels, and communicated to their Countrymen after their Return, several useful Trades were set up, and new Manufactures introduced in this Kingdom. It were to be wished, that the same beneficent and publick Spirit was more common among modern Travellers, and that they would accustom themselves to think of bringing home some valuable Invention, in Return for great Sums of Money spent in their Travels, and which must be considered as intirely thrown away, by such as carry their Views no higher than bare Amusement. But let us now return to our Author, and continue the Story of his Travels as near as may be in his own Words.

October 4, Quitting the Mountains, we entred the Plains of *Friuli*, passing by *Limonia*, situated at the Foot of the Mountains, and some Leagues further through *St. Daniele*; after which we forded the River *Timent* in several Places, though in Time of Rain, or when the melted Snow comes down from the Mountains, it is of a considerable Breadth. The first Time we passed the River we came to *Spilemberg*, seated upon a Cliff, where we saw Cloisters under the Houses on both Sides of the Streets (a thing common in *Lombardy*) and after ten *Italian* Miles travelling, took up our Lodgings in the Village of *St. Avogio*.

October 5, We travell'd for ten Miles to a walled Town call'd *Saribe*, encompass'd by the River *Livenza*, which divides itself into two Branches. We travelled for two *German* Leagues, and lodged at *Conegliano*, a small City, seated on a Ridge of a Hill. Whilst we travelled in *Italy*, we met rarely with any wheaten Bread, that which we used, being made of *Sorghum*, a certain Grain, the Blade of which grows seven or eight Foot high, of the thickness of a Finger, bearing a large Pannicle on the Top, the Seed being bigger than Wheat, of a dusky Colour.

October 6. A *German* League from hence we ferried over the River *Anaxus* (*Piave*) and ten *Italian* Miles further came to the large and famous City of *Treviso*, the Capital of the Province call'd *Marca Trevisana*. Hence we continued our Journey through a fertile Country to *Mestre*, a small Place, seated near the *Lagunes*, or Flats about *Venice*, which are dry at low, but covered with Water at high Tide. From whence we pass'd in a Boat to *Venice*. Throughout the greatest Part of *Friuli*, the *Marca Trevisana*, and *Lombardy*, we saw the Corn-fields planted with Trees as thick as our Orchards, against each Tree a Vine, the Branches of which draw from Tree to Tree in Rows, and make a kind of a Hedge; their Soil being so rich, that it suffices for the Production of Corn and Grapes, the Trees not giving the least Hindrance to the Corn, either by their Droppings or Shadow, because little Rain falls here in the Summer, and the Leaves keep off the scorching Heat of the Sun, which notwithstanding this suffices to bring it to Maturity. This part of *Italy* has for its Beauty and amazing Fertility, justly deserved the Name of the *Garden of Europe*.

2. The famous City of *Venice* is built upon several little Islands in the middle of Shallows, surrounded by the Sea, called by them *Lagunes*. These *Lagunes* are separated from the Gulph of *Venice* by a certain Land-

bank (which they call the *Lido*) about thirty-eight or forty Miles in Extent, and resembling the Space contained in a bent Bow, supposing the first to be the Continent, and the String the *Lido*. *Venice* itself is at an equal Distance of five Miles from each: The *Lido* serves as a Fence against the Violence of the Sea, and has seven Inlets or small Harbours, two only being capable of receiving Vessels of any great Burthen, viz. Those of *Malamocco* and *Lio*. Not far from the *Lagunes* most of the considerable Rivers of *Italy* discharge themselves into the Gulph, viz. *Padus* the *Po*, *Atthesis* or *Adige*, *Meduacus major* or *Brenta*, *Meduacus minor*, or *Bacchilione*, *Tiliaventum* or *Tajamento*, *Liquentia* or *Livenza*, *Silis* or *Sile*, *Anassus* or *Piave*; and these carrying along with them a vast Quantity of Earth, may in Time fill up the *Lagune*; for *Gianotti* tells us, that in ancient times the City of *Venice* was ten Miles from the Continent *Oriago* (*Ora lacus*) then lying upon the Shoar of the *Lagune*, which is now five Miles from *Fusina*, where they take Boat for *Venice*. The first Origin of *Venice* may be traced as far as the Irruption of the *Huns* into *Italy*, under *Attila*, when many of the best Families fled for Shelter into these Islands, and at last erected here a noble City. Certain it is, that this City has maintained its Sovereignty these 1200 Years, though it be not strengthened by any Fortification, but what the Sea affords it, no great Ships being able to approach nearer than the Harbour of *Malamocco*; those Inlets where small Vessels may pass, being defended by strong Forts; besides, the Channels are so difficult to pass, that none but their own Pilots dare venture to navigate through them. The Circumference of *Venice* (taking in the *Giudecha*) is of about eight *Italian* Miles, being divided into two Parts by the grand Canal, which passes through the middle of it in the Form of the Letter S. Each Side is subdivided into three Wards, called by them *Sestieri*, viz. *Castello*, *St. Marco*, and *Canarejo*, on one Side, and *San Paolo*, *Santa Croce* and *Dorso duro* on the other Side. In the whole it contains 70 or 72 Parishes, and 67 Convents, according to a Survey taken in the Year 1581. according to which there were then in the City, of Noblemen 1843, Women 1659, Boys 1420, Girls 1230: Of common Citizens, Men 2117, Women 1936, Boys 1708, Girls 1418: Servants 3732, Maids 5753: Of Artisans, Men 32887, Women 31617, Boys 22765, Girls 18227: Of Beggars, Men 75, Women 112, Monks 945, Nuns 2508, Priests 516, Poor of the Hospital 1290, Jews 1043. The Sum total of which amounts to 134,871. *Sanfovino* makes the Number of Souls in his Time to have been 180,000 in which I suppose he comprehends the Suburb of *Murano* and some other small Islands. Some of our modern Writers have increased this Number to 300,000, but without much Probability, nothing being more common than to magnify the Number of Inhabitants of great Cities; thus I have heard say frequently, that in *Paris* there is a Million and a half of People, whereas there is scarce half a Million. The whole City is divided into many Islands, by small Channels, thro' which you convey yourself and Goods by Boats from one Place to another, there being no Use of Carts, Horses, Coaches, Litters, or Asses, except that they employ now and then Porters in the Alleys, which run a-cross the City for the Passage on Foot, for Conveniency of which 450 Bridges are built cross the Channels of one Arch each, and most of Stone. The Bridge call'd *Ponte di Rialto*, is built over the grand Canal, excels all the rest. The Number of Boats for the Convenience of Carriage in the Canal, some make amount to 10,000, some swell them to 12,000, some to 15,000. The Buildings here are generally lofty and beautiful, especially those along the grand Canal, and the Noblemen's Palaces, which though not very spacious, yet are very handsomely contrived; they all stand upon Piles of Wood, like the Houses of *Amsterdam*. The Arsenal of *Venice* has above two Miles in Circumference, containing a great Store of all Manner of warlike Provisions, 20000 Pieces of great and small Cannon, and Arms for 250,000 Men. Here they build and lay up their Gallies (of which, as they say, they have 200) and

and among the rest the *Bucintauri*, in which the Duke of Venice every Year espouses the Sea at three Miles distance from the City, by casting into it a Ring, with these Words, *I espouse thee in Token of perpetual Dominion*. In this Arsenal are maintained at the Charge of the Publick, 1550 Workmen of all Sorts, such as Shipwrights, Carpenters, Smiths, &c.

This City, according to its Epithet, *Venice the Rich*, once surpassed in Wealth all the Cities of Europe, till the Passage to the *East Indies* by the Cape of *Good Hope* was discovered, at which Time they were not the sole Masters of the *East India* Trade only, but were also in Possession of all *Lombardy* and *Friuli*, of *Istria* and *Dalmatia*, on the Continent, besides the Isles of *Cyprus* and *Candia*, *Zant*, *Cephalonia*, *Corfu*, and several other Isles in the *Archipelago*: But since the Loss of that Trade, and their heavy Wars with the *Turks*, (in which they lost *Cyprus* and *Candia*) their publick Treasure has been much exhausted, yet the Inhabitants, who have never been subject to any Ravages or Change of Government, are very rich, and the Government remains still in Possession of the following Dominions, viz. 1. the *Dogado*, in which is the City of Venice. 2. The City and Territories of *Padua*. 3. Of *Vicenza*. 4. Of *Verona*. 5. Of *Brescia*. 6. Of *Bergamo*. 7. Of *Crema*. 8. *Marca Trevisana*, under which are comprehended the Territories and Cities of *Feltre* and *Belluno*. 9. *Friuli*. 10. *Istria*. 11. The Territory of *Rovigo*, formerly belonging to the Duke of *Ferrara*; the whole extending 250 Miles in Length, and 125 in Breadth. Out of Italy they are possessed of Part of *Dalmatia*, the Islands of *Zant*, *Cephalonia*, and *Corfu*, beside others of less Note. We were credibly informed, that the ordinary annual Revenue of the whole Republick amounted to 5,320,000 *Venetian Ducats*, one of their Ducats, being somewhat less than a *French Crown*: Of which Venice produces 1,400,000 yearly, *Brescia* 1,000,000, *Bergamo* 140,000, *Padua* 140,000, *Vicenza* 200,000, *Verona* 230,000, *Bergamo* 140,000, *Crema* 100,000, *Rovigo* 70,000, *Istria* 150,000, *Il Friuli* 100,000, *La Marca Trevisana* 190,000, *Gli Stati di Mare* 450,000, *La Zecca* 150,000.

Venice abounds in Provisions of all Sorts, especially Fish and Water-fowl, and excepting fresh Water, which must be brought from the Land, and their rain Water they preserve in Cisterns. The Air of Venice is very sharp in Winter by its Vicinity to the *Alps*. This City is famous for the best Treacle, for Paper, Turpentine, Needle-work Laces, Soap, and above all, for the best Drinking and Looking-glasses; these are made at *Murano*, a Town of three Miles in Circuit, in an Isle about a Mile distant from Venice.

Women of any Fashion are kept in great Restraint here, seldom appearing abroad, except it be at Church, when they are sure to have an old Woman for their Guardian. Their Daughters are put at seven or eight Years of Age into some Nunnery, where they are educated, and seldom stir from thence till they are married.

3. The Government is *Aristocratical* in respect to the whole, the common People having not the least Share in the Government, but in reference to the Nobility may be called *Democratical*, every one pretending to his Share in it, the *Doge* or *Duke* being no more than an empty Title, without any princely Authority. The whole Administration of the Government is in the Great Council, the Senate, or Council of *Pregadi*, the College, the Council of Ten, and the *Signoria*; besides several other Magistrates for the Administration of Justice; all which, together with their Method of chusing by Lot, and other Ways of transacting publick Affairs, are particularly described by *Contarini*, *Giarotti*, and *Sanfovino*. The Procurators of *St. Mark*, though not to be number'd among those who have the Administration of the Republick, yet are in great Reputation in this City, this Dignity continuing for Life, and since its first Establishment, there having been but few Dukes who were not first Procurators of *St. Mark*. In ancient Times there was but one Procurator of *St. Mark*, whose Business was to provide for the Church of *St. Mark*, and the Treasure belonging to it, which encreasing by De-

grees, one more was added, and *A. D.* 1270, a third, and not long after a fourth, till their Number was increased to six, and afterwards in 1423 to nine, and in 1509 to fifteen.

4. Here we saw, first, the little *Diabolus in Carcere*, as some call it, being no more than an *Incunula*, or Glass Bubble, put into a Cylindrical Glass Tube full of Water, the Bubble having, in the heavier End of it, a little Hole of such a Poise, as just to keep it swimming upon the Water; the Glass-tube being stop'd at one End, they clap their Hand to the Mouth of the Tube, and so pressing down the Air upon the Superficies of the Water, the same presses upon the Air in the Bubble, which giving Way, makes Room for the Water to enter through the Hole in the Bubble, which becoming heavier, sinks to the Bottom, but upon the Removal of the Hand, the Air in the Bubble, by its elastick Power expanding itself, forces out the Water, and ascends again; so, that in proportioning the Force, they can make it descend or ascend, as much or as little as they please. For the further Elucidation of which, I refer to Dr. *Cornelius* of *Naples*. *Progymnasmatum Physica*, in his Epistle *de Circumpulsione Platonica*. Among other Curiosities, we saw here a Boy, who by bending his Head betwixt his Legs to the Ground, charged his Belly with Wind, and afterwards discharged it at Pleasure. A certain noble *Venetian* also shewed us a fulminating Powder, not much inferior to the *Aurum fulminans*, of which he gave us the following Receipt. *R. Salt of Tartar one Part, of common Brimstone two Parts, and Saltpetre three Parts, beat them fine and mix them well*: This Powder put into an iron Vessel or Pan, and held over the Fire, as soon as it melts, will explode with almost as much Noise as the fulminating Powder of Gold.

The same Gentleman introduced us to a Place where we saw the whole Process of making Venice Soap, which is accounted as good as *Castile Soap*. The whole Composition is made of Oil of Olives, and a certain Lye; the last they make thus: Take of the Ashes of the Herb *Kali*, known in England by the Name of *Beriglia*, two thirds; of *Kelp*, i. e. the Ashes of the ordinary Seawrack, one third; these beaten with a Mallet into small Pieces, and well mingled, are ground to a Powder in a Mill, not unlike our Cyder Mills, and being sifted afterwards, they mix some slacked Lime with the Powder, and make it up into Pellets, which they put into Troughs, and pounding Sea-water upon it, (fresh Water would do as well) makes the *Lixivium* or Lye. The Cauldrons wherein they boil their Soap are very large, the Bottoms of Copper, but the Side made of Stone, bound about with iron Hoops, and enclosed in a wooden Case. One third Part of those Cauldrons they fill with Oil, and the remaining Part with the Lye, then putting Fire under it, let it boil continually till the Oil be all boiled away, still filling up the Defect of the Lye as it boils away; by which Means Part of the Oil, uniting itself with the Salt of the Lye, rises up to the Top in Form of a Scum, which condensing by the Coolness of the Air, produces that which we call Soap. The Trial they make of the Strength of the *Lixivium* is, when an Egg will swim in it. The Crust or Soap they take from the Surface of the Liquor, they spread upon a Floor, whereon Lime Dust is strewed (to hinder the Soap from sticking to it) then smooth it, and let it dry in a Bed of about the Thickness of a good Brick. This, when dry'd, they cut in lesser Pieces, and having cleansed them by paring the adhering Impurities, seal them with a Seal.

N. B. That *Beriglia* alone would make the Soap too soft, as the *Kelp* alone would render it too brittle. The green Colour (of which the Germans are very fond) is given by putting a certain Quantity of Juice of Beet into the Cauldron, with the Oil and Lye.

5. *Padua*, watered by the two Rivers *Brenta* and *Bacchilio*, is of great Antiquity, and if we credit *Livy*, who was born here, owes its Foundation to *Antenor*, after the Destruction of *Troy*, which is also confirmed, not only by *Virgil*, but also by *Martial*, when he addresses himself to *Valerius Flaccus*, a Poet, and Native of *Padua*, in these Words, *Antenorei spes & alumne laris*. Notwithstanding which, some will have the City of

Altinum

Altinum to be founded by *Antenor*, and *Padua* by *Patavius*, a King of *Veneti*. This City, after having born its Share in the Devastations made by the *Huns* and *Lombards*, and having obtained its Liberty under the Emperor *Otho I.* was governed by its own Magistrates, till *Ezzellinus* the Tyrant, and not many Years after the *Carraresi* lorded it over them, and at last, in 1405, fell under the *Venetian* Jurisdiction. It is surrounded by two Walls, the first is called to this Day *Antenor's* Wall, though of a far later Structure, being about three Miles in Circumference, the outward comprehending, with all its Fortifications and Ditches, a Compass of six Miles, built by the *Venetians*, at the Time of the League of *Cambray*, as may be seen by the *Latin* Inscription over the Gate of *All-Saints*.

Hanc antiquissimam Urbem literarum omnium Asylum cujus agrum fertilitatis semen natura esse voluit, Antenor condidit: Senatus autem Venetus his belli propugnaculis ornavit, Leonardo Lauredano Duce Venetorum invictissimo, cujus Principatus varias Fortunæ vices excipiens quam gloriose superavit.

However, this City is neither rich nor populous, in any Proportion to its Bigness, containing, according to my Opinion, not above thirty thousand Souls, though some say, thirty eight thousand. There is a large and fertile Plain belonging to this City, so that their Bread is both very cheap and good, according to the *Italian* Proverb, that *Bread of Padua, Wine of Vicenza, Tripe of Treviso, and Courtezans of Venice, are the best in their Kind*. No Trees are allowed to be planted within a Mile of its Fortifications, the Ground which they call the *Waste*, being preserved for Corn; for as there is little Ground near this Place for Pasturage, Milk is excessive dear here. For the Use of the Poor, they make Bread of *Indian* Wheat, and of *Sorgum*.

It has several goodly publick Structures, as, 1. The *Palazzo della Ragione*, or Town-hall, where the Courts of Justice are kept, being two hundred and fifty six Foot long, and eighty six broad, unto which you ascend by many Steps, having Shops underneath it; some will have this to be the largest Room in *Europe*, tho', according to our Eye-sight, we thought it not quite so big as *Westminster-Hall*. 2. The publick Schools. 3. The Church of *St. Anthony*. 4. The Church of *St. Justina*, with the Convent of *Benedictines*. 5. The Palace of the *Arena* or Amphitheater. 6. The Magazine of Corn and Ammunition. 7. The *Ponte Molino*, where there are about thirty Mills together upon the River *Brenta*. 8. The Palace of the *Capitano*. 9. *Antenor's* Tomb, as they would make us believe, for the particular Description of which, I refer to *Schottus* and others. There is one remarkable Building here near the *Domo*, called *Mons Pietatis*, where they tell you a Stock of Money of forty thousand Crowns is kept for the Use of such poor People as have Occasion to borrow upon Pawns, for which, if the Sum be small, they pay no Interest, if it be considerable, they allow only Five per Cent. which defrays the Charges of the Clerks, and other Attendance, the Overplus, if any, being distributed among the Poor, the Bank always remaining entire. The like Foundations are in many other Cities of *Italy*.

But what renders this City most famous is its University, which acknowledges the Emperor *Frederick II.* for its Founder, *Anno 1220*, for a compleat Account of which, I will recommend the *Gymnasium Patavinum* of *Thomassinus*. Such is the outrageous Temper of the Students here, that no Inhabitant or Stranger dare appear in the Streets in the Night-time, which if they happen to do, and meet with a Troop of those Nocturnal Vagabonds, they cry to them, Who goes there? and if they answer, they bid them turn back, which if they do not instantly, they must expect to be saluted with their Pistols they carry with them; nay, Nothing is more common, than if two Parties of those Students happen to meet, they retire behind the Posts of the Portico's or Cloisters, which are on both Sides, and so let fly one at another.

The Physick Garden is well stored with Simples, but its Fame is chiefly owing to those excellent Men which have had the Management of it, as *Aloysius Mundella*,

Aloysius Anguillara, Melchior Guilandinus, Jacobus Antonius Cortusus, Prosper Alpinus, and Joannes Veslingius.

The Government of *Padua* is administer'd by a *Podestà* or Major, and a *Capitano*, the first for Civil, the second for Military Affairs. They are both sent by the *Venetians*.

6. From *Padua* we took a Turn to *Albano*, anciently *Apona*, five Miles hence, to view the hot Springs there which arising in a rocky Hillock, consisting of a porous Stone, furnish such plenty of Water, that one of them drives an overshot Mill; and by the Porosity of the Rock and the Salt it contains, washes off certain small Particles of the Stone, which by Degrees it lets fall again, and precipitates to the Bottom of the Channels through which it runs, so that they pick Abundance of Stone of a dark grey Colour off the Mill-Wheel every Month. The Water is so hot, that in one of those Springs the Inhabitants scald their Hogs to get off the Hair, being full of white Salt, which coagulates upon the Surface of the Water. The Waters of *Albano* are used only for Bathing.

February, 3. We continued our Journey to *Vicenza*, a City not quite so big, but more populous than *Padua*, its Compass being no more than four Miles, but containing between thirty and forty thousand Souls. It is seated upon the River *Bacchilio*, and watered by the *Rero* or *Eretenus*, as also by two Rivulets called *Asticello* and *Seriola*, but is of no great Strength, being surrounded only by a Brick Wall. It is inhabited by Nobility and Gentry, of which there are said to be above two hundred Families here. I will not pretend to give an exact Account of the several Changes of their Government, referring my self as to this Point to *Schottus* and *Leander Albertus*. I will only add, that after they had recovered their Liberty, they submitted voluntarily to the Protection of the *Venetians*, which is the Reason they enjoy greater Privileges than any of the neighbouring Cities. The Theatre of the Academy, called the *Olympic*, is a very neat Structure, the Inhabitants live chiefly by Silk-worms, and winding, twisting, and dying of Silks. Their Wines hereabouts are both rich and agreeable, especially what they call *Dolce & Piccante*.

7. Hence we travelled six Miles to the famous Cave of *Custoza*, being six hundred and fifty Perches, or four thousand Foot long, and four hundred and ninety Perches, or three thousand Foot broad, and about three Miles in Circumference. The whole seems to be Nothing else but a Cave left from the Digging of Stones, as *Trissinus* has very well observed, it being certain, that the ancient Buildings of *Padua* and *Vicenza* are of the same Stone, and the Roof of this Cave is at Distances sometimes greater, and sometimes lesser, supported by above one thousand huge Pillars of the Quarry, of three Perches square; besides, that to this Day, you see great square Pieces of Stone cut round about, and the Tracks of Cart Wheels, whereas there has been no Cart there in the Memory of Man. We saw great Numbers of Bats clinging to the Roof and Sides of the Cave, and some standing Waters, with a Kind of Fish, or rather Insect, in them, called by them *Squillæ Venetianæ*, though they properly were the same called by the Naturalists *Pulices marini*, or *aquatici*, i. e. *Sea-flees*, or *Water-flees*.

In the same Village we had also a Sight of the famous Ventiduct belonging to a Nobleman of *Vicenza*, contrived for the Coolness of his Palace during the Heat of the Summer: To effect which, Channels are cut thro' the Rocks, from a spacious high-roof'd Grotto to the Palace, so that when they intend to let in the cool Air, they shut up the Gate at the Cave, and by opening a Door at the End of the Channel, convey the *Fresco* into the Rooms of the Palace, each of which has a Conduit or Hole to receive it.

8. From *Vicenza* we went to *Verona*, seated upon the River *Atbesis* or *Adige*, which being very broad here, has a Stone Bridge built over it, reckoned among the fairest of *Europe*, besides three lesser ones. Its Circumference (without the Suburbs) is seven Miles, and is very populous and strong both by Nature and Art, being defended by good Bastions, Towers, and deep Ditches water'd by the *Adige*, besides which, it is strength-

ned by three Forts. We saw here, among other Things, the Collection of Rarities of an Apothecary, one *Ma-pheus Cusanus*, consisting of many *Aegyptian* Idols, petrified Shells, Coins and Medals, and among the last, a *Maximilian* and *Dioclesian*, with this Inscription on the Reverse, *Veronæ Amphitheatrum*.

Another we saw of *Muscardo*, a Gentleman of *Verona*, who had Abundance of Lachrymal Urns and Lamps, Shells and Fruits petrified, Ores and Gems, but especially of *Roman* Medals, among which he shewed us an *Otho* of Gold, telling us at the same Time, that those of Brass were all spurious. But a Description of this Collection being already published in *Italian*, I will not insist upon the further Particulars thereof, or of the *Museum* of *Mario Sala*, an Apothecary here, which contains only certain Remnants of the Collection of *Calceolari*, published long ago.

The Amphitheatre of *Verona* is a Structure worth a curious Traveller's Observation, being both stately and spacious, and in outward Appearance, not inferior for Beauty or Capaciousness to that of *Titus* at *Rome*. Of the outward Wall is left only a small Piece, from whence you may make an Estimate of the whole. But the Remainder of the other Buildings is kept in very good Repair; the *Arena* being thirty four Perches (each of which is something more than six Foot) long, and twenty two and an half broad, surrounded by forty two Rows of Stones Benches, raised above one another in the Nature of Steps, capable of containing twenty three thousand Persons. For the more ample Description of which, I will refer my self to *Schottus*, *Torellus Saraina*, and *Lipsius*. This City, as well as *Padua* and *Vicenza*, after many Changes of Government, was at last forced to submit to the *Venetians*. Here are excellent White-wines, especially that they call *Garganico*. The Air is very serene and healthy, but sharp in the Winter, from the Vicinity of the Mountains, among which *Baldus* has got the greatest Reputation, not so much for the Variety of the Simples that grow there (for the *Alps* are not inferior in that Point) but chiefly by the Industry of the *Paduan* Herbalists, who, but especially *John Pona*, an Apothecary here, have, in Respect to them, obliged the World with a perfect Catalogue. Near *Verona* is the Lake *Lago di Garda*, (*Lacus Benacus*) which affords great Quantities of Fish, but especially Trouts, some of which were a Foot long.

9. We travelled from *Verona* to *Mantua*, *February* the 9th, being twenty four Miles, through several good Villages, but not any Towns of Note. Six Miles on this Side of *Mantua*, we saw the Duke's Palace at *Marmirola*, a neat Structure, and well furnished with Pictures, and adorned with Statues: This City it self is very ancient, and strong by Situation, being seated in the Middle of a Lake, and well fortified. It is about four Miles in Extent, but not populous in Proportion, containing scarce fifty thousand Souls; it has no less than eight Gates. A little Way from this City is a Country Seat belonging to the Duke called *Pelazzo del Te*, wherein you see a square Room, the Roof arched in the Nature of a Cupola, called the *Gyants-hall*, in which, if two Persons stand in the opposite Corners, one having his Ear to the Wall, may hear what the other whispers, with his Face to the Corner; which he that stands in the Middle, or in the Corner of the same Side of the Room, shall not. They told us the Duke of *Parma* had such another Contrivance in his Palace of *Caprarola*, but our Whispering-place in the Cathedral of *Gloucester*, is of a different Nature. *Virgil*, the great *Latin* Poet, was born at *Andes* (now *Petula*) a Village near *Mantua*. Here are two Academies of *Virtuosi*, called the *Accesi* and *Timidi*. This City, after many Changes of Government, was at last brought under Subjection in 1328, by *Lewis Gonzaga*, by the Favour of the common People, from whom the present Dukes descended, this Title being conferred upon *Frederick Gonzaga* in 1530, by the Emperor *Sigismund IV*. The Revenue of the Duke is about 400,000 Crowns a Year; but as the Expences of the Dukes have exceeded their Incomes, they are much indebted to the *Venetians*. The common Peo-

ple have this peculiar Custom, that their Children have an equal Share in their Parents Estates, especially such as are personal: A Widow, after the Death of her Husband, takes her Dowry back; but if she dies first, the same is divided Share and Share alike among her Children: If she dies without Issue, one half of her Dowry falls to her Husband, the other to her next Kin. If a Woman has Children by a former Husband, and marries another, and has likewise Children by him, one half of her Dowry goes to the Children of the first Marriage, the other to those of the second.

Taking Boat here for *Ferrara*, we passed by the Way of the Lake into the Channel of the River *Min-cio*, which coming out of the *Lago di Garda*, near a strong Fort of the *Venetians* called *Peschiera*, and coming to *Mantua*, spreads itself into a Lake of five Miles in Length, and at sixteen Miles End, coming to a Bridge and Sluice at a Place called *Governo*, entered the River *Po*, and passing down the Stream, came by *Ostia*, ten Miles from *Governo*, and ten Miles farther by *Massa*, both on the Left-hand, and seven Miles lower to *Stellata*, a large Village belonging to the Pope: Eight Miles lower we came to *Il Ponte*, where leaving the *Po*, we passed through an artificial Channel of four Miles long to the very Gates of *Ferrara*, a City considerable both for its Bigness and Strength, it being reputed, for its Bigness, the strongest in all *Italy*, being not only defended by strong Fortifications, and a deep Ditch, but seated also in a fenny Plain. It was formerly under the Dominion of its own Dukes, but now under the papal Jurisdiction. From hence we went by Boats towards *Bologna*, and having shifted our Boat seventeen Miles from *Ferrara*, at a Place called *Mal-Albergo*, reached another Channel, viz. *Rhenus Bononiensis*, and passing through nine Locks, arrived at *Bologna*, distant by Water from *Ferrara* forty five Miles, the greatest Part of the Country between those two Places being fenny, not unlike the Isle of *Ely* in *England*.

The City of *Bologna* itself is seven or eight Miles in Circumference, of a rotund Figure, the Houses not very lofty, but adorned with fair Portico's, on each Side of them, to the Streets. Many of their Houses, though not promising much on the Out-side, yet being very neat and convenient within: Its Inhabitants are computed to be eighty thousand Souls. The Sauages, Wash-balls, and little Dogs of *Bologna*, are famous all over *Italy* and other Parts. Their chief Trade is in Silk, and they have the most convenient Engines for winding and twisting of it, that I ever saw. The University of *Bologna*, for its Antiquity, may compare with any in *Europe*, being chiefly famous for the Study of the Law, though it has a great Number of Professors also in other Faculties, as may be seen by their annual printed Catalogue of such Lectures, as each of them is to keep the following Year. Here we had the Opportunity of seeing the ancient Exercise of Tilt-ing, still practised here in the Carnival Time: Those who enter the Lifts are mounted on Horseback, and armed Cap-a-pee, adorned with Plumes and Scarfs, with Launces in their Hands, with which they run at one another a full Gallop, aiming at a particular Part of the Body; he that hits nearest to it carrying the Prize. We saw several Launces broken, but no body was either hurt or dismounted.

Dr. *Ovidio Montalbano*, one of the Professors here, shewed us the *Museum* of *Aldrovandus*, left as a Legacy to this City, and kept in the Cardinal Legate's Palace. What delighted us most, were ten Volumes of the Pictures of Plants, and six more of Birds, Fishes, and other Beasts, drawn in Water Colours. The same Person also introduced us to *Jacobus Zenoni*, an Apothecary, and very curious Herbalist, who, among other Rarities, shewed us three Pieces of Rock Crystal, with some Drops of Water, enclosed in the Middle of them; as might plainly be discovered by the Motion of the Crystals.

The same Day we visited the famous Chymist *Gioseppe Bucemi*, who shew'd us the Effects of the *Phosphorus*, a Composition, which if exposed for some time to the

the Air, and afterwards put in a dark Place, will appear like a burning Coal for some time, till by Degrees its Light slackens and quite vanishes at last, till exposed again to the Air. The crude Stone which he shew'd us was like a kind of Sparre, which as he told us, acquired this Quality by being calcined in a small Furnace, the pieces of Stone being laid upon an Iron Grate over a Wood-Fire; but whatever he told us, we could not make some of those Stones, which he sold us, shine, though we calcined them exactly according to his Directions. The *Phosphorus* does by Degrees entirely lose its shining Quality, as we found by Experience, in those we brought along with us.

11. February 22. We continued our Journey towards *Modena*, by the Way of *Castel Franco*, a strong Castle, belonging to the Pope, upon the Frontiers of *Modena*, about twenty Miles distant from *Bologna*, a Place of no great Extent, but very populous, being the Dukes usual Residence, and tolerably well fortified with a thick Wall, a broad Ditch, and some Outworks. In this Place, as well as *Padua*, *Bologna*, and other Places of *Lombardy*, we observed the Houses well built of Brick, but not high, and the Streets cloistred on both Sides, which seems to intimate, that this was the Manner of Building of the *Goths* or *Lombards*, who settled in those Parts. The Duke's Palace is no large Structure, but very neat within, the Rooms being richly gilt, and adorn'd with Hangings, and Pictures of the best Masters. What most delighted us was the Chamber of Rarities, Jewels, ancient and modern Coins and Medals, ancient and modern Entaglia's, curious Pieces of turn'd Works, dried Plants pasted upon Boards whitened with Cerus; and a very fine Collection of Designs of the best Painters. We saw also a human Head petrified; a Hen's Egg, having the Figure of the Sun on one Side; Moss included in a piece of Crystal; Silver in another; and a Fly in a piece of Amber, &c. The ordinary Revenues of the Duke of *Modena*, are computed to 350,000 Crowns per Annum, his Expences not amounting to above half the Sum. About twenty eight Miles from *Modena*, near *Paiuli* Castle, issues out of a Mountain, a Spring of *Petroleum*; and in another Mountain call'd *Monte Nicani*, are found Abundance of petrefied Cockles and other Shells.

12. February 24. We set out from *Modena* for *Parma*, and at seven Miles, having forded the River *Serchio*, and pass'd by a small, but strong Town called *Rubiera*, on the Left-hand, after a Journey of eight Miles further, came to the City of *Reggio*, of equal Bigness and Strength with *Modena*, and belonging to the same Duke, whose Title is Duke of *Modena* and *Reggio*. This last being built more at Length than the former, makes a fairer Shew at a Distance, having one long and one broad Street. Here are very good Sculptors and Artizans in carving of Ivory and Wood, for which this Town is celebrated throughout *Italy*. Ten Miles further, passing through a long Bridge over the River *Lenza*, we entered the Territories of *Parma*, and five Miles more, brought us to the Gates of the City of *Parma*, which exceeds *Modena* in Bigness, having broad Streets, but no Portico's.

February 26, In our Way to *Placenza*, we ferried at six Miles distance from *Parma*, over the River *Taro*, and nine Miles farther, came to a Town call'd *St. Domin*, and eight Miles farther, came to a little Town called *Fiorenzuola*, near which, passing the River *Arta*, we came, after twelve Miles travelling, to *Placenza*. This City is well fortified, and defended by a strong Castle; in Bigness it is equal to *Parma*, but its Buildings not so fair. The Dukes Revenues are computed to be 400,000 Crowns per Annum, though some say 500,000; he being, besides *Parma*, and *Placenza*, Master of the Dukedom of *Castro*, and the Country of *Ronciglione*. The 27th, We took Horse for *Crema*, and passing through *Castigno* in the *Milanese*, and two Miles further ferrying over the River *Adda*, and two Miles thence the River *Serio* (which falls into the *Adda*) we came to *Crema*, a Frontier City, belonging to the *Venetians*, about thirteen Miles from *Placenza*, of no large Ex-

tent, but well fortified; its Situation being in a Plain near the River *Serio*.

The 29th, We continued our Journey, and passing through *Osanengo*, three Miles from *Crema*, and by the Castle of *Romanengo*, belonging to the *Spaniards*, came to *Sincin*, a considerable Place in the *Milanese*: Not far hence we ferried over the River *Oy* (*Ollius*) and two Miles further, rode close by a small Town call'd *L'orzi nuovi*, but well fortified, under the *Venetian* Jurisdiction. Two Miles further we pass'd a great Village called *L'orzi Vecchi*, and several others of Note, and so came to *Brescia*, which is thirty Miles from *Crema*. The Country hereabouts was well planted with Flax, very populous, and the Fields fenced with Hedges like our *English* Enclosures.

13. The City of *Brescia*, is not altogether so big as *Verona*, but better inhabited, its Streets being regular and spacious, with Bricks set Edgeways on both Sides (as the Cities in *Holland* are) as are also the Streets of *Parma*, *Placenza* and *Crema*. It has a double Wall, the exterior of which is very strong, and encompass'd with a good Ditch, besides a Castle standing on a rocky Hill, which both defends and commands the Town. The Mountains hereabouts afford very good Iron and Copper Ore, and the Inhabitants are great Masters in Iron Works, but especially in making of Guns, which are in high Esteem all over *Italy*; as is also the Cheese of *Brescia*. As they abound in fruitful Valleys, so their Markets are well stored with Provisions. The Territories of this City extend in Length, from *Moso* near *Mantua* to *Dialengo*, in the upper End of *Val Canonica*, one hundred Miles, and in Breadth, from *Lago di Garda* to *L'orzi nuovi* fifty Miles, being full of Towns and large Villages. This City, like many others of *Italy*, has undergone many Changes of Government during the intestine Broils of the two famous Factions of the *Guelphs* and *Gibellines*; after which, it fell to the Dukes of *Milan*, till in 1426. they submitted to the Protection of the *Venetians*. On the Sides of the Hill where the Castle stands, we found Serpent Stones, or *Cornua Ammonis*, and other petrified Shells. March the 2d. We continued our Journey through the Villages of *Hospitaletta*, *Cokai* and *Palazzuolo*, the last of which is seated upon the Banks on both Sides of the River *Ollio*.

As we were travelling on to *Bergamo*, we had a full View of the *Alps*. This City is considerable both for its Size and Strength, being situated on the Side of a Hill, encompass'd by strong Walls and a broad Ditch, but without Water: The Castle, though none of the biggest, yet is very strong by Situation. Without the Walls are five large Suburbs, call'd *St. Leonardo*, at the Bottom of the Hill, inhabited chiefly by Merchants, the Suburbs of *St. Anthony*, *St. Catherine*, *St. Thomas*, and that of *St. Godard*. In the Church of the *Austin* Friars, we saw the Monument of *Ambrose Calepine*, the Author of the famous Dictionary. Over his Cell in the Cloister was a *Latin* Inscription, intimating, That he was a Native of *Bergamo*, and a Monk of this Convent, and that he died here, in 1511, in the 71st Year of his Age. This City has also been subject to Changes: They first submitted to the *Venetians*, in 1428; but were in 1509, forced to acknowledge the Sovereignty of the *French*, after they had made themselves Masters of *Milan*, but these being expelled three Years after, it remained under the Jurisdiction of the then Duke of *Milan*, *Maximilian Sforza*, from whom it revolted soon after to the *Venetians*, but was forced to return to its former Obedience, till at last the *Venetians* got once more in Possession of it, in 1516. and have remained Masters of it ever since. They are governed by a Major, a military Commander, Chamberlain, and Governor of the Castle sent hither from *Venice*. *Bergamo* is of so great a Reputation among the *Italians*, that by Way of Proverb they say, *If Bergamo stood in a Plain, it would be a fairer City than Milan*. From hence we went on Horseback to *Calonica*, a Village seated upon the River *Adda*, in the *Milanese*, whence we went by Water to *Milan*.

14. This City, which is one of the four Cities of the first Rank in *Italy*, (*Rome*, *Venice* and *Naples*, being the

the other three) is also firnamed *la Grande*, from its Bigness, having ten Miles in Circumference, and of a circular Figure. It contains eleven Collegiate Churches, seventy one Parishes, thirty Monasteries for Monks, thirty six for Nuns, eight of regular Canons, the Number of Inhabitants are said to be 300,000, but this last is somewhat too large. Provisions are here so cheap and plentiful, that the *Italians* have made it a Proverb, *That they eat well only at Milan*. The Cathedral here challenges the second Place after that of *St. Peter's* at *Rome*, both for Bigness and Beauty; being 250 Cubits long, and 130 broad, and of a proportionable Height; but the *Grand Hospital* justly claims the Preference before all others in *Europe*, for its magnificent Structure and Bigness. Among other Courts, it has a Square surrounded with a double Portico, one below, the other above Stairs. Its Revenues are yearly 50000 Crowns, out of which are maintained 4000 poor and infirm Persons. The Monasteries and Churches here are beautified with many Pictures and Statues of the best Masters, and adorned with excessive rich Church Ornaments, for which I will refer myself to *Schottus*, and others. The *Bibliotheca Ambrosiana*, founded by Cardinal *Borromeo*, is a noble Edifice, filled with excellent Books, unto which Strangers as well as the Inhabitants, have a free Access. But the College call'd *Hermatheneum*, is a truly noble Building, the Court being adorned with a double Row of Cloisters, one above the other, with double Pillars each; the lower of the *Ionic*, the upper of the *Tuscan* Order.

The Citadel of *Milan*, either for its Bigness or Strength, may also compare with any in *Europe*. The ancient Castle has been twice enlarged, first by the *French*, who taking in a considerable Piece of Ground, encompass'd it with a very thick and high Wall, and a deep Ditch; from hence you have a fair Prospect of the whole City and adjacent Country, as well as those Fortifications added by the *Spaniards*, being of a Pentagonal Figure, with a Bastion at each Angle, and a Half-moon between every two Bastions. *Schottus* says, that the Compass of the whole Fortifications (not including the Trenches) is 1600 Paces. We were told, that within the Castle, they have a Water-mill driven by a Spring, which arises within the Circumference of the Castle.

March 6. We saw the Collection of Rarities of *Manfredas Septalius*, Son to *Ludovicus Septalius*, the famous Physician, and among other Things, divers Looking-glasses, which by natural Reflection multiplied the Object almost infinitely. A plain Glass, with spherical Protuberances, which represented the Objects as often multiplied as there were Protuberances, and another Looking-glass of the same Kind; several concave Burning-glasses of Metal; several *Automata* and Clocks, among which, two of a cylindrical Figure, moved without Weight or Spring, only by being placed upon an inclining Plain; so that their Motion proceeded from their own Weight; besides many other Curiosities both natural and artificial; for the Description of which, I will refer my Reader to the Catalogue thereof, published by the Owner himself. There are great Artists in this City in working and engraving Crystals, and other Glasses and Stones. Their Way of Polishing is performed by a Brass Wheel, upon which the Powder *Smiris*, mix'd with Water, is put; and to smooth it, they use the Powder of *Sasse-mort*, or Rotten-stone, as they call it, which is a heavy Pebble Stone, which by lying in the Water, dies by Degrees, first degenerating into a light Pumice, and at last crumbling to Dust. They told us for a Truth, that most Stones, by lying long in the Water, will die in this Manner, except the clear pellucid Pebbles.

March 10. We began our Journey towards *Turin*, along the Bank of the River *Navilio*, and leaving *Biagrasa*, a small Town, to our Left, we lodged at *Bufalora*, twenty two Miles from *Milan*. The 11th, we continued our Journey over *Novara*, a strong Place belonging to the *Spaniards*, to *Vercelli*, under the Duke of *Savoy's* Jurisdiction; a large Place, but neither strong nor populous. The 12th, we travelled eighteen Miles,

as far as *Sian*; and the 13th, being stop'd by the Floods, were constrained to stay at eight Miles Length, at *Chivas*; and the 14th, passing by many Waters, and after we had ferried over at *Orco* and *Stura*, arrived at *Turin*.

15. This City, known to the Ancients by the Name of *Augusta Taurinorum*, and seated upon the River *Po*, is of no great Extent, but very populous, and the ordinary Residence of the Dukes of *Savoy*. The old Buildings are but very indifferent, but one new Street, and several other Houses of late Date, are very handsome and uniform. The Piazza is in the Midst of the Street, being a large Square, with a lofty Cloister on each Side: And at one End of it another Piazza, fronting the Duke's Palace, which is not yet finished. The Citadel has five Bastions. Here we met with some of the Protestants of the Valleys of *Lucern* and *Angrona*, who had lately obtained Liberty of Conscience from the Duke. They told us, that being about fifteen thousand Souls, they inhabited fourteen or fifteen Villages only, their fighting Men (who amounted not to above two thousand, being divided into fourteen Companies) under as many Captains, and that they had killed above five hundred of the Duke's People in the last War, with the Loss only of forty or fifty of their own. They are the only Protestants in *Italy*, having maintained the Purity of their Religion for above these twelve hundred Years. Here is also an University, which challenges the first Introduction of Printing into *Italy*. As the plain Country about *Turin* is very fruitful, so all Provisions are very plentiful and cheap here; it being certain, that *Piemont*, for Plenty of Corn, Cattle, Wine, Fruit, Hemp, and Flax, may compare with the best in *Italy*; and the Inhabitants apply themselves more to Husbandry than Traffick; which according to *Leti's* Observations, makes them live generally well, though none are excessive rich. The Duke's Revenue, if we may believe the same Author, amounts to 1,800,000 Crowns; of which *Piemont* alone produces 1,400,000. His Possessions in *Italy* are, besides the Principality of *Piemont*, the two Marquisates of *Saluzzes* and *Asti*, the Dukedom of *Aosta*, and the Countries of *Nizza* and *Vercelli*. There are three very handsome Palaces belonging to the Duke near the City, called the *Venere*, *Millesiore*, and *Valentine*. The first Invention of oil'd Cloth is attributed to *Giacomo Marigi*, a Citizen of *Turin*.

March 17. Having provided ourselves with a good Guide, we set out from *Turin* for *Genoa*, where we arrived in three Days after. Not above a Mile below *Turin* we cross'd the *Po* (which begins to be navigable here) by a Bridge; and after a Mile's Travelling along the River, we ascended the Hills, under which the River runs, and these are of a very difficult Ascent.

16. Mar. 18. We proceeded on our Journey as far as *Novi*, a pretty large Town under the *Genoese*, twenty seven *Piedmont* Miles from *Aste*; I think they may well pass for thirty five *English*. About four Miles from *Aste*, upon the Bank of the River *Tanar*, (which is there very high) and on the Sands, under the Bank, we found great Variety of petrified Shells, as *Oysters*, *Scallops*, *Cockles*, &c. as also those *Tubili striati*, called by some *Antales*, which Seignior *Rosacco*, a Mountebank in *Venice*, first shewed us; *Belemnites*, and other rare Sorts of Stones. In the Corn Fields, we passed through, we observ'd, *Ornithogalum luteum*, C. B. in great Plenty, now in Flower. This Day we passed by a large Village called *Non*, and another, which had formerly been walled, called *Felizan*, then *Alexandria*, a large Town upon the River *Tanar*, of more Strength than Beauty, the Buildings both publick and private being generally but mean. It was so called in Honour of Pope *Alexander III.* because in his Time it was peopled by the *Milanese*, whose City was then almost quite destroyed and made desolate by the Emperor *Frederick Barbarossa*, for siding with the Pope against him. The River (which seemed to me as large as the *Po*, at *Turin*) divides the City into two Parts, which are joined by a fair Brick Bridge. In our Passage through the Town, we took Notice of a triumphal Arch, erected to *Philip IV.* King of *Spain*, upon his Marriage.

19. We

19. We rode from *Novi* to *Genoa*, thirty Miles all over Mountains. About Six Miles from *Novi*, we passed through a handsome little walled Town called *Gavi*, where there is a strong Castle on a Hill over the Town; and about six Miles further onward, another elegant and well built Town called *Voltasio*. From hence we ascended continually for about seven or eight Miles, till we came to the Top of a very high Hill, from whence we had a Prospect of *Genoa* and the Sea. Then we descended constantly till we came to the City. In all this Way, we met with and overtook Mules and Asses going to and returning from *Genoa*, to the Number of five or six hundred or more.

March 20. We viewed *Genoa*, which for the Building of it, is certainly the most stately, and according to its Epithet, *superb*, City in all *Italy*. The Houses are generally stately, scarce a mean House to be seen in Town. The new Street answers the Fame that goeth of it. It is but short, consisting of eight or ten Palaces built of Marble, very sumptuous and magnificent; the meanest of them (as *Cluverius* saith) being able to receive and lodge the greatest Prince and his Retinue. The only Deformity of this City, is the Narrowness of the Streets unanswerable to the Tallness of the Houses; and yet they are made so on Purpose, partly to save Ground, which here is precious, and partly to keep off the scorching Beams of the Sun in Summer time, for the Conveniency of walking Cool, for which Reason I have observed many of the ancient Towns of *Italy* and *Gallia Narbonensis*, to have their Streets made very narrow. This City lies under the Mountains, exposed to the South, so that it needs must be very hot in Summer, as witness the Orange and Olive-Trees, which grow so plentifully here, that they can afford those Fruits at easy Rates, and drive therewith a great Trade; furnishing with Oranges, *Florence* and a good Part of *Tuscany*, and sometimes sending them into *England*. It is built in Form of a Theatre or Crescent, encompassed with a double Wall toward the Land. The exterior or new Wall of a great Height and Thickness, passes over the Tops of Mountains, and takes in a great Deal of void Ground. The famous new Mole, which now makes this a secure Harbour is said to have cost as much as the new Wall. For a Work of that Nature, I believe it is not to be paralleled in the whole World. The Manners of the Inhabitants are not answerable to the Beauty of their Houses, they being noted among their own Countrymen the *Italians*, for proud, unfaithful, revengeful, uncivil to Strangers, and horribly exacting. There goeth a Proverbial Saying of *Genoa*, that it hath *Montagne senza Alberi, Mare senza Pesce, Huomini senza Fede, & Donne senza vergogna*, that is, *Mountains without Trees, a Sea without Fish, Men without Faith, and Women without Shame*. The Number of the Inhabitants must needs be great, they having lost in the last great Plague, as we were credibly informed, to the Number of 80,000 Souls. The chief Trade of the Town is Silks and Velvets; they make also pretty turned Works of Coral.

The Government of it, according to the new Laws made by the Pope's Legate, and the Emperors, and King of *Spain's* Ambassadors, not long after the Time of *Andreas Doria*, is thus settled. There is, 1. A Duke, who continues in Office two Years. 2. Two *Collegia*, one of *Governatori* as they term them, the other of *Procuratori*. The *Governatori* twelve, the *Procuratori* eight, all elected, besides those that of Course come in for their Lives. 3. A greater Council of 400. 4. A lesser Council of 100. 5. A Seminary for the two *Collegia* of 120. The two *Collegia* of *Governatori* and *Procuratori* are, as it were, the chief Senate or Privy-Council, or House of Lords; and are chosen twice a Year, viz. about the middle of *June*, and about the middle of *December*, after this Manner. All the *Seminarium* of 120, have their Names, together with their Surnames, and Fathers Names, written in little Scrolls of Parchment, and put into an Iron Box, which is kept very securely under many Locks. When the Time of Election comes, this Box is brought forth before the Duke,

the two *Collegia*, and the lesser Council. Then a Boy, who must be under ten Years of Age, puts his Hand into the Box, and draws out five Scrolls, which are read, and the three first if they be capable, are *Governatori*, the two last *Procuratori*. If a Man be 100 Miles off the City, he is incapable of being elected for that Time. Likewise two of the same Family cannot be *Procuratori* or *Governatori* together. Therefore, if the two first that are drawn out, or the two second be of the same Family, the first is *Governator*, and the second *Procurator*; if the two last be of the same Family, the first drawn out is a *Procurator*, and the second is returned into the Box again, and the Boy draws out another. So that every six Months, five are chosen into the *Collegia*, and five go out, and every one stays in Office two Years. In the *Collegium Procuratorum* besides the eight, are all those who have been Dukes, and are gone out of Office, who (*modo bene se gesserint*) continue *Procuratori* during their Lives. To supply or make up the *Seminarium* 120 every Year; in the Stead of those who are dead, made incapable, or chosen into the two *Collegia*, the lesser Council chuses a double Number, all which must have three Suffrages of five; and out of these, the greater Council choose half by the major Vote. For choosing the Councils both greater and lesser, the lesser Council in Presence of the Duke, and two *Collegia*, choose thirty Electors, (all which must be of the Nobility) by three Suffrages of five. These thirty choose both the greater and lesser Council, but the lesser out of the Number of the greater, by a like Proportion of Suffrages. The greater Council is assembled upon important Occasions, and with the Duke and two *Collegia* make the supreme Power. The lesser Council takes Care of the lesser and ordinary Concerns of the City and Commonwealth. Those who are capable of being chosen into the greater Council, must be twenty five Years of Age, only the thirty Electors may, if they please, or see it expedient, choose to the Number of Sixty, who are but twenty two Years old. Of the lesser Council, the one half must be thirty Years of Age, the others at least twenty seven, excepting Doctors of Law and Physick, who, if they be well qualified, may be chosen two Years younger. Those who are capable of being chosen into the *Seminarium* must be forty Years of Age.

The Choice of the Duke is in this Manner: The Great Council being assembled, there are put into an Urn ten golden Balls, marked with ten several Letters; one of these being drawn out, is shewn to the Conservators of the Laws, who thereupon put into another Urn standing by the Duke's Throne, fifty golden Balls marked with the same Letter, and fifty silver Balls; these being shaken together, the lesser Council of One hundred, excluding the two *Collegia*, draw out each Man a Ball. He that draws out a golden Ball, shews it to the *Censors* who sit by, and presently writes in a Scroll of Paper the Name of him whom he thinks fit to nominate for Duke, and goes out of the Council. When all the golden Balls are drawn out, the two *Collegia* bring them into Order, and count them over, and if the Number of the Nominated amount to twenty, then they are propounded to the greater Council, who out of them, by major Vote, chuse fifteen. Out of these fifteen the lesser Council chuse six by three Suffrages of five. Out of these six again, by major Vote, the greater Council chuse the Duke. These Suffrages are all occult, that is given by putting of Balls into Ballotting Boxes. If in the greater Council for any Person the negative and affirmative Suffrages are equal, then five by Lot are to be put out of the Council, and the rest to ballot again. Many other Provisions there are in Case of Equality or Disagreement, &c. Nothing can be propounded in Council but by the Duke, who, during the Time of his Regency, lives in the Palace, and hath, according to *Sanjovinus*, a Guard of five hundred *Switzers*. The Office of St. George is, as far as I understand it, nothing but a Company of Bankers, who lend Money to the Commonwealth, for which they are allowed so much *per Cent.* and have assigned to them the publick Gabels and other Revenues; and for

further Security have *Corfica* engaged to them. This Company chuse yearly out of their own Number eight Protectors, who are to take Care of, and manage the Affairs of all the Creditors. Into this Bank Strangers usually put in Money, and so become of the Company, for which they receive yearly Interest proportionable to the Improvement made of the whole Stock of Monies then in Bank. The publick Revenue of this State is said by some to be 1,200,000 Crowns *per Annum*, and yet scarce sufficient to defray the publick Expences. There are many private Persons here very rich. The Republick is thought to be able to raise an Army of 30,000 Men, and to set out to Sea twelve Gallies and twenty Ships of War. They hold good Correspondence with all Christian Princes and States, excepting the Duke of Savoy, by reason of his Pretence to the City of *Savona*.

17. April 2, We passed in a Boat from *Genoa* to *Porto Venere*, and thence cross'd the Bay of *Spezzia* to *Lerici*, where taking Post-horses, we rode to *Sarzana*, a strong Frontier Town belonging to the *Genoese*, and lodged that Night at *Massa*, a small City, but dignified with the Title of a Principality, the Duke being likewise Lord of *Carrara*. His chief Revenues come from the Marble Quarries: He is of the *Genoese* Family of the *Cybo's*.

April 3, We travelled through a boggy Valley near the Foot of the Mountains, a kind of a desolate Country, as far as *Lucca*.

Lucca contains not above three Miles in Circuit, but very populous for its Bigness, the Ease of the Government drawing thither abundance of People. Its Situation is very pleasant, in a delightful Valley; and its Fortifications and Out-works strong, and kept in good Repair. The Buildings are fair, and their Churches, though not very large, yet neat and well kept. The Inhabitants, both of the City and Country, very courteous, and so careful to preserve their Liberty, that they omit nothing which they think may contribute to maintain it. Their Women here are not kept so strict as in other Parts of *Italy*, being allowed to walk abroad with a reasonable Share of Freedom: They are generally handsome enough, and in their Dress affect to follow the *French*. The Administration of the Government is by the Great Council of one hundred and sixty, chosen every Year from among the Nobility, (the rest having no Share therein) these must be twenty five Years old at least; nine *Antiani*, and a *Gonfaloniere*; these last are chosen a-new every two Months, and are stiled the *Signioria*, the *Gonfaloniere* being their Head, but no more than by his Title. The City is divided into three Wards, called *Terzieri*, each of which has its Arms or Banner, called *Gonfalone*, whence the Name *Gonfaloniere*: On the Corners of each Street these Arms are painted, with the Name of the Ward it belongs to, and what Bulwark they are to defend, in case of a sudden Attack. The Council chuses three *Antiani* out of each of those Wards. Their Revenue is computed at 100,000 Crowns yearly. The best Olives in *Italy*, grow hereabouts.

The City of *Pisa*, formerly a rich and populous Commonwealth, is, since its coming under the *Florentine* Yoak, become poor and almost desolate, notwithstanding all the Endeavours of the Great Dukes of *Florence*, who have erected an University, founded an Order of Knighthood, and built an Exchange there, for the Encouragement of the Inhabitants. Its Situation, which is in a fenny Ground, upon the River *Arno*, renders its Air very unwholesome and obnoxious to Strangers. What we thought worth our peculiar Observation here, were, 1. St. Stephen's Church, dedicated to the Order of that Name, founded here by *Cosmo*, the first Great Duke of *Tuscany*. 2. The College for Students in Law and Philosophy (formerly the House of *Bartolus*) founded by the Great Duke *Ferdinand* in 1596. 3. The Cathedral, being a most magnificent Structure of Marble, the Doors of Brass, curiously engraven, a double Isle on each Side of the Nave, and two Rows of Marble Pillars, beautified with stately Altars, and select Pieces of Painting, the Sides hung with red Velvet, and the Roof richly gilded.

On each Side of the high Altar, you see a Picture, and under each of them an Inscription, giving a short Account of two notable Adventures of this City, which are expressed there.

I. *Templum hoc, ut auctæ potentie ac religionis insigne monumentum posteris extaret, Pisanis ex Saracenorum spoliis captâ Panormo ædificatum, ac Sanctorum reliquiis e Palestina usque advectis auctum, Gelasius II. P. M. solennè pompa consecravit, An. Dom. M.C.XIX.*

II. *Pascale II. P. M. autore, Pisani classe 300 triremium Petro Arch. Pis. Duce Baleares Insulas, profligatis Saracenis in ditionem redigunt, Christianoque nomini adjungunt captaque regia Conjuge ac filio præclaram victoriam illustri pioque triumpho exornarunt A. D. 1115.*

4. The *Baptisterium*, in the Center of which you see a very noble Font of Marble, into which, like a Cistern, the Water runs continually; the Pulpit is also of Marble, with most curious carved Work. 5. The *Campo Santo*, or Burying-place, being an oblong Square enclosed with a broad Portico, well painted, and paved with Grave-stones: The Earth which makes up this Churchyard, is said to be brought from the Holy Land, and to consume Bodies in forty eight Hours. 6. The Steeple, a round Tower, of a great Height, seeming to encline so much to one Side, as if it were ready to fall, which some attribute to the Contrivance of the Builder, others to a Defect in the Building. 7. The *Aquæduct*, which conveys the Water from the Mountains for five Miles into the City, by 5000 Arches, being begun by *Cosmo* and finished by *Ferdinand* I. great Dukes of *Florence*: This Water for its Goodness, is carried in Flasks to *Leghorn*. 8. The Physick-Garden, then but slenderly provided with Plants.

We took Boat here for *Leghorn* (the *Portus Liburnus* of the Ancients) about twelve Miles hence. This Town is not very stately nor large, the Houses being but low, yet uniform, and the Streets regular, with a large Piazza in the middle: It is strongly fortified on the Land side, and since the Great Duke has made it a free Port, much encreased in Traffick and Riches: Its convenient Situation for the Levant Trade having drawn thither great Numbers of Strangers, and especially *Jews*, of the last of which there are computed to be above 5000. Before it was so well inhabited, it was reputed a very unhealthy Place, by Reason of its Situation in a fenny Level, without Mountain, or as much as a Hillock within five Miles of it, but since that time, the Multitude of Fires, and the Industry of the Inhabitants, have, by draining those Marshy Grounds, rendered the Air as agreeable here, as in most Parts of *Italy*.

The Harbour within the Mole is but small, but this Defect is compensated by the Goodness of the Road, where there is safe Anchorage for Ships. Near the Harbour stands the magnificent Statue of the Great Duke *Ferdinand* I. the Pedestal of which is sustained by four Brass Statues of chained Slaves, of a gigantic Stature. The Great Dukes often reside here in Lent, for the great Plenty and Cheapness of Fish, though all other Provisions are here at a dear Rate. We saw many Workmen employed in filling of *Marking-stones*, call'd in *Latin*, *Lapis galactites* & *morochibus*, by the *Italians*, *Pietra Lattaria*; they are found at *Monte negro*, fives Miles from *Leghorn*; of the Dust and Filings of which Stone they make Powder for Hair.

We embarked at *Leghorn*, aboard a *Dutch* Vessel, bound for *Naples*, but the Wind being very variable, we spent five Days in this Voyage. Our Master told us, that it was a general Observation here, for the Wind to blow East in the Forenoon from the Land, and in the Afternoon West from the Sea. We also made this Observation, that the Wind generally was quite laid with Sun-set, and we had but little about Sun-rising. In our Return from *Messina* to *Naples*, and thence to *Leghorn*, we found the Wind contrary, for the most Part, which according to the Seamens Saying, is commonly so here in the Summer. We further observed, that

that the Wind followed the Course of the Sun, it proving generally pretty well for us in the Morning, but in the Afternoon against us, the Land being to the East of us, which confirmed what our Captain had told us. He also assured us, that when they are to make a Voyage from *Holland* to the *West-Indies*, they sail up as high on the South of *Afric*, as the Place whither they are bound in the *West-Indies* lies; and then steer their Course Westward, the Wind blowing constantly from the East, and the Sea running the same Way; whereas, when they return, they go round the Bay of *Mexico*, far to the North, and so pass over to *Europe*; which if true, much strengthens the Opinion of the Diurnal Motion of the Earth.

18. The lovely City of *Naples*, extends in Form of a Cresent along the Sea-side, under the Hills, resembling in Form, that of *Genoa*, except that it is much larger, and more populous; for, though the Circumference of its Walls, exceeds not above seven *Italian Miles*, yet it has very spacious Suburbs. The Houses here are generally lofty Structures, of Stone, flat roofed, and covered with a certain Plaster, which keeps out the Rain to Admiration. Its Situation is so far to the South, and that under Hills, would make the Heat excessive here, were it not for the constant Breezes of Wind about Noon, which so cool the Air, that, except two or three Days, we found the Weather temperate enough, even at our Return, which was in *June*, when it rain'd very hard three several times, though they look'd upon it as extraordinary: For want of Rain, they have a Way of cooling the Streets every Day, by drawing through them a Tun, with Water, in a Cart, which has many Holes in it. The Dialect of the common People here, is far different from the *Tuscane*, and not very intelligible. Provisions, but especially Fruit, is very cheap here, and among the rest, we saw the *Cucurbita anguina*, *Cucumis anguinus*, *Mala insana*, and *Limoncelle*, sold in the Market. All the *Neapolitans*, and generally the *Italians*, drink their Wine and Water snowed, by putting the Vessels in which the Wine is, into another full of Snow or Ice, which is the Reason, that it is not only sold in Stalls all over the Town, but they carry also small Barrels, with Snow Water on their Backs, crying, *Snowed or Iced Water to be sold*.

Beltramus tells us, there are 160 Religious Houses of all Sorts in *Naples*, viz. 121 for Monks, and 39 for Women, which maintain 12421 Persons. This City is defended, or rather bridled, by four Castles, viz. by the *Castle d' Ovo*, built on a Rock in the Sea, with an artificial Causeway leading to it; the *Castle St. Elmo*, seated on a Hill above the City; *Castle Novo*, for the Security of the Harbour and Galleys, which lie near it; and the *Torrione di Carmine*, being only a Tower belonging to a Convent of the *Carmelites*, but famous for its having served as a Retreat to the Rebels, under *Maffaniello*.

Naples is famous for the Beauty of its Churches, which are generally sumptuous, some of them not only paved with Marble, but also the Walls covered with it. Of all Things that ever I saw of this Nature, I never met with any that exceeds the Convent of the *Carthusians*, adjoining to the Castle of *St. Elmo*, having a spacious square Court, with the finest Cloister round it that ever was seen. The Pillars, as well as the Pavement of the *Portico's*, are of Marble of several Colours, so curiously wrought and polished, and so neatly kept, that it cannot but surprize those that behold it. The Granary of *Naples* is also worth the Observation of a curious Traveller, both for its Extent and Conveniences: They told us that there was generally laid up as much Corn, as would suffice the whole City for several Years, in Case of Necessity; and that the Bakers of *Naples* are obliged to buy 25000 *Tomoli* (Bushels) of Corn out of it every Month, at a certain Rate, which indeed enhances the Price of Bread, but makes Room for the laying up of new Corn, which is every Day turned in the Store-house, by a great Number of Men kept for that Purpose.

The whole Kingdom of *Naples* is divided into twelve Provinces; the Nobility are distinguished into five

Seggi or Societies, viz. of *Capua*, *Nido*, *Montagna*, *Porta*, and *Porta nova*; composed of 87 Princes, 122 Dukes, 159 Marqueffes, and seven Earls. It has in all 20 Archbishopricks, and 122 Bishopricks (to 30 of which the King of *Spain* only nominates;) and 148 Cities. (1) The Province of *Terra di lavoro*, (the ancient *Campania felix*) has fourteen Cities, among which *Capua*, *Gaeta*, *Pozzuoli*, *Aquino* and *Aversa*, are the Chief. (2) *Principato Citra*, containing eighteen Cities; among them, *Campagna*, *Capri*, in the Isle *Capree*, famous for the Retirement of *Tiberius Caesar*, *Cappaccia*, *Laurino*, &c. (3) *Principato ultra*, which has fourteen Cities, as, *Benevento*, *Avellino*, *St. Angelo de Lombardi*, *Monte marino*, &c. (4) *Basilicata*, containing eleven Cities, as, *Lavello*, *Polycastro*, *Venosa*, *Monte pelofo*, &c. (5) *Calabria Citra*, which has 12, as, *Mantea*, *Paola*, *Montalto*, *St. Marco*, &c. (6) *Calabria Ultra*, sixteen, as, *Reggio*, (the Ancients *Rhegium*) *Belicastro*, *Montilene*, *Melito*, *Nicoterra*, &c. (7) *Terra d' Otranto*, fourteen, as, *Gallipoli*, *Brindisi*, *Otranto* (the ancient *Hydruntum*) *Castro*, &c. (8) *Terra di Bari*, sixteen, as, *Andria*, *Barletta*, a very strong Place, *Biseglia*, *Polignano* or *Putignano*. (9) *Abruzzo Citra*, has five only, viz. *Chieti*, *Sulmona*, *Benevento*, *Borrelle*, and *Ortona*. (10) *Abruzzo Ultra*, has also no more than five, viz. *Aquila*, *Atri*, *Campoli*, *Civita di Peuna*, and *Teramo*. (11) *Contado di Molisi*, has four, *Bojano Guardia*, *Alferes*, *Ifernina*, and *Trivento*. (12) *Capitanata*, contains thirteen, as *Monte St. Angelo*, *Ascoli*, *Lucera*, *Sancto Severo*, *Manfredonia*, &c. Among this great Number of Cities, are many which can't compare with the best Sort of our Villages in *England*.

Hearth-Money is a customary Tax in the Kingdom of *Naples*, each Hearth paying fifteen Carolines (about seven Shillings *English*) to the King, except the *Sclavonians*, who pay but eleven Carolines a Year, the whole Tax, deducting what is to be abated for privileged Places, amounts to 6,554,873 Ducats and six Carolines per Annum. The Tax, with the Feudatories pay yearly, instead of personal Services, amounts to 120568 Ducats, besides several other Excises and Taxes, the whole Revenue then amounting yearly to 2,996,937 Ducats, three Carolines, and fourteen Grains.

We had the Curiosity to visit the Philosophic Academy of *Virtuosi* at one of their Meetings, which was then every *Wednesday*; in the Palace of the noble Marquis *Arena*, a truly courteous and obliging Person; there were not above fifteen or sixteen of the Members present, but triple the Number of other Persons. They shewed an Experiment of the Waters ascending above its Level, in slender Tubes, upon which, after they had discoursed a-while, three of the Society made an Harangue each had studied on Purpose, upon a certain Subject; upon which some Arguments having been raised *pro* and *con*, they concluded the Meeting. I must confess that I was not a little surprized to see such a Company of learned Men, in a Place, where I was of Opinion, they would scarce allow a reasonable Latitude of Judgment; and I must give them their Due, that they were not only well acquainted with the best and most refined Authors of the immediately preceding Age, such as *Galilei Galileo*, *Des Cartes*, *Gassendus*, *Harvey*, *Verulam*, &c. but also with those surviving in the present Age, as *Mr. Boyle*, *Sir George Ent*, *Dr. Gliffon*, *Dr. Willis*, *Dr. Wharton*, *Mr. Hobbs*, *Mr. Hoek*, *Monsieur Pecquet*, &c.

April 24. We went by Water to *Pozzuolo* called by (the Ancients *Puteoli*) where the Country People brought us Abundance of Shells, dry'd *Hippocampi*, ancient Medals and *Entaglia*, nay, painted Glass to sell, which they said, they had raked out of the Sea. Near this Place you see many Arches of Stone reaching a good Way into the Sea, which has given Birth to that Opinion, that these are the Remnants of the Beginning of *Caligula's* Bridge over the Bay, and that from the Extremity of this Pile to *Bajæ*, the rest of the Bridge was made up of Vessels fastned together, and kept by Anchors on both Sides. But to me this seems to be the Ruins of a Mole or Peer, intended for the Security of the Harbour, because upon every Peer, is to be seen

seen a great Stone perforated, and jetting out to tie Vessels to. Certain it is, as well from the Manner of its Arches, as from the Bricks, that it was an ancient Roman Work. From hence we pass'd cross the Gulph to *Bajæ*, to describe the Antiquities of which Place, would require a Volume alone, for which Reason we will refer the Reader to such, both *Latin* and *English* Authors, as have given us a full Description of them. I will content myself with giving you some Account of the Grots or sweating Places, call'd by them *Bagne* (Baths) *de Tritoli*.

This is a strait and long Passage, like a long Entry, the upper Part whereof is so hot, that should a Man walk long upright, he must be stifled by the hot Vapours which fill up the upper Part of this Vault, whereas the lower Part is passable enough, so that every one is obliged to stoop. What I observed chiefly was, that the lower Part of the Vault, as far as it is tolerably cool, was covered on the Sides with a very solid Stone, whereas the upper Part was an unctuous friable Kind of Clay or Plaster; and what is more observable is, that at the very Partition of the Stones and the Clay, on the Sides of the Bath, the Difference of the Degrees of Heat is very perceivable; so that where you find the Clay reach lower, you must rule the Inclination of your Body accordingly. We found a watry Vapour contained in these sulphureous Steams, as was sufficiently manifest from the Drops, which notwithstanding the great Heat, were condensed on the Sides of the Vault.

In our Return from thence, we took a View of the *New Mountain*, called by some *Monte di Cenere*, (Cinder-Mountain) raised by an Earthquake in 1538, September the 29th, its whole Altitude being now about an hundred Foot perpendicular. We were told that it produced Nothing, yet we found *Myrtle*, *Mastick* Trees, and some other Shrubs there. It is composed of a spongy Earth, which makes a great Sound if you stamp hard. By the same Earthquake the *Lacus Lucrinus* was fill'd up with Stones and Earth, and turned into a fenny Meadow. As we were coming back from *Pozzuolo*, we viewed also the Mountain call'd *Solfatara* (anciently *Campi Philegræi*) which burns continually. On the very Top of it is a very large excavated Hole, of an oval Figure, 1500 Foot long, and 1000 broad, where is the Burning; besides which, there are divers other Holes, which convey the Smoke as out of a Furnace. Out of those Vents I gathered a kind of *Flores Sulphuris*, and *Sal Armoniac*, which stuck to the Mouths of those Holes, and thrusting a Sword into them, or any other Iron, you will find it all bedewed with Drops of Water, an evident Sign that there is a considerable Share of Water mixed with those fiery Exhalations; and what confirmed me the more in this Opinion, was, that those *Flores* would not burn or melt, by reason of the heterogenous Particles mixed with them. The Inhabitants have a Way of separating them from the Brimstone, which lies as thick as a Crust all over the Mountain. As you walk, you hear the Earth sound every Step you make, as it were hollow underneath; and what is more, if every Thing be quiet, you may hear the very boiling and bubbling of the Minerals or other Liquors.

About five Miles distant from *Naples*, is the famed Mount *Vesuvius*, where we found the Ground all about the Sides of it covered with Cinders and porous Stones, which had been cast thus far during the Conflagration: We also perceived great Channels, such as are commonly left after strong and sudden Floods, which they told us were the Effects of the Waters, which at the Time of Burning are thrown out of the Mountain. We found some *Acetosa ovilla* near the Top, and a little lower *Collutea scorpioides*, and some Shrubs of *Poplar*. It was very steep getting up to the Top, where is a vast hollow Pit of a Mile in Compass, occasioned by the breaking out of the fiery Substance, at several Times with great Violence. We observed also some small Vents or Passages for the Smoak, but were scarce considerable enough to threaten an Irruption.

We also took a View of the *Grotto di Cane*, or Dog's Cave, near the Lake of *Agnano*: It is both narrow and

short, and (whatever some may have pleased to tell the World) you may go into it, and continue there for a long Time without Prejudice, some of us staying at the further End of it above an Hour; because the Vapour, whether sulphureous or arsenical, ascending not above a Foot from the Ground, which you may perceive plainly by the Heat in your Feet and Legs, so that if you bend your Head towards the Ground, you will be immediately sensible of a Smell like burning Brimstone, which seizing your Head, makes you stagger, and may stifle one. We took a Dog, and holding his Nose down near the Ground, almost killed him; then throwing him into the Lake to recover him, we found him too weak to swim, and so was drowned. We try'd the same Experiment with a Pullet, which was killed immediately; and afterwards with a Frog, which likewise did not live long; and last of all, with a Serpent, which did not hold out above half an Hour. If you hold a Candle below the Part where the Vapours are, it is extinguished immediately. I am of Opinion, that many more such Grots might be digged hereabouts.

As we were going to this Grot, we passed through the artificial Passage or Vault, through Mount *Paufilipus*, performed by one *Cocceius* in fifteen Days. We judged it about half an *English* Mile long, though some will have it as long again. Where it is lowest, which is in the Middle, it is twelve Foot high, and broad enough for two Carts to pass conveniently by one another. As it is so dark in the Middle (no Light coming in but at the two Ends) that no body can see one another, so those that pass through it, cry always *Alla Marina* if they go to the Sea-side, and *Alla montagna* if they go towards the Country; so that each taking the Left Hand, they prevent the running upon one another.

We observed the Fish-boats out at Sea with Lights at one End, to draw the Fish after it, and so they strike them with a Mole-spear.

19. April 29. We continued our Voyage in the same Vessel, that had brought us hither, to *Sicily*, and arrived, May the 2d, at *Messina*: We sailed by the *Æolides* or *Vulcania insulae*, two of which, viz. *Stromboli* and *Vulcano*, still burn; we saw the first all in Flames as we pass'd by in the Night time. It being no easy Matter to make the Mouth of the Streight, by the *Faro* of *Messina*, by Reason of the Current, which is very violent here, sometimes running towards *Calabria*, sometimes towards *Sicily*; our Master was forced to hire a Pilot for ten Pieces of Eight, who conducted us safely through it.

The Harbour of *Messina* itself is very good, being enclosed by the City on one Side, and on the other by a Neck of Land. As the Houses along the Sea-side are loftily built of Stone, they make a noble Show at a Distance, but are but indifferent within, and the Streets narrow and ill paved, which verifies the *Italian* Proverb, *At Messina you have Dust, Fleas, and Whores in Plenty*. This City stands in Competition with *Palermo*, both pretending to the Title of being the *Metropolis* of *Sicily*, which is the Reason that the Viceroy resides eighteen Months in each, during his Government. The *Messinese* boast of great Privileges granted by *Charles V.* the Emperor, and pretend to the Monopoly of Silk, which was indeed formerly vended at *Messina*, but the *Palermitans* having got a considerable Share of that Trade into their own Hands since, this caused great Jealousies between those two Places, which affects the whole Kingdom, some taking Part with one, and some with the other of those Cities. The Inhabitants of *Messina* are none of the most polish'd, haughty in their Conversation, and very prone to Rebellion. The *Spaniards* are in Possession of four Castles in and about the City, and the *Messinese* of as many; for the rest, the City Gates are open at all Times. The Government of this City is administr'd by six Persons, whom they call *Jurats*, four of which are chosen out of the Gentry, and two out of the common Citizens. Their Government is annual, and though the first have the Majority of Votes, yet can they transact Nothing of Moment without

out the Consent of the others ; though the *Spaniards* have taken Care to reduce their Authority into such narrow Bounds, that there is no great Occasion of Contest among them upon that Score.

May 5, We hired a Felucca to carry us to, and bring us back from *Malta*. May 6, We sailed with a brisk Gale as far as *Catanea*, sixty Miles beyond *Messina*, a little Town, having nothing considerable in it, but two or three good Convents. May 7, We made forty Miles to *Syracusa*, and sailed in Sight of *Augusta*, famous for the Goodness of its Wines. The small City of *Syracusa*, in its present State, is only that Part of the ancient *Syracusa*, called *Nicos*, being but indifferently built, and slenderly inhabited, but very well fortified to the Land-side by the Knights Hospitallers, after they had been expelled *Rhodes* by the *Turks*; but *Charles V.* thought it more expedient to bestow a Settlement upon them in the Isle of *Malta*. About two Miles from the present City, you see the Ruins of the ancient *Syracusa*, and among the rest, the Remnants of an admirable and extensive Amphitheatre.

We were also shown the Grot, commonly called *Dionysius's Ear*, being cut out of the Side of a high Clift; it is high roof'd, but not long, and goes a little Winding. In our Return from *Malta*, we took a View of one of the Burying-places, or Catacombs of the Ancients, of which there are several here and in *Malta*. This belonged to *St. Anthony's Church*, and consisted of many vaulted Walks cut out of the Rock, having on each Hand other Vaults at Right-angles with them, the Floors of which were about two Foot higher than the Floor of the main Walk, hewn into Troughs or *Loculi*, wherein they used to deposit their dead Bodies: In some of those were twenty *Loculi*, more or less. At certain Intervals, you come to round Rooms or Halls in the main Walks, where several of them meet together, so that the whole being of a great Extent, might contain many Thousands of dead Bodies.

20. May 8. The Wind being contrary, we were forced to make use of our Oars, and rowed as far as *Capo Passaro*, anciently called *Promontorium Pachynum*, forty Miles distant from *Syracusa*. Upon the utmost Point of Land stands a little Castle, held by a Garrison of about twenty Men: This Castle stands now in a little Island made so by the Force of the Sea, which not long since brake it off from the Land. The Wind being contrary, and blowing a stiff Gale, made the Sea so rough, that we dared not venture out, but were forced to rest here two Nights. May 10, we put to Sea again, but the Wind still continuing contrary, and the Sea very rough, when we were gotten about half Way over the Channel, we were forced to return back again to the *primo terreno* of *Sicily*, viz. the Castle of *Puzallu*. The Greatness of the Waves not permitting us to come ashore there, we rowed six Miles farther South, and put in at a little Cove called the Harbour of *Punto Cerzicolo*. The Weather continuing foul, we were detained here three Days, having no other Shelter but a small Hut or two, which the two Centinels (who stand constantly at this Point, to watch and give Notice to the Country of the coming of *Corfairs*) had set up for themselves to creep into in stormy Weather. We should have been glad of fresh Straw to lie on, having Nothing in our Kennel but old short Straw, so full of Fleas, that we were not able to sleep in it. Our Diet was the Blood and Flesh of Sea Tortoises, that our Seamen took by the Way, and Bread we brought along with us: Wine we got at a House about half a Mile off our Lodging, but when our Bread failed, we were forced to send eight Miles for it and more Fish, for Flesh we could get none.

May 13, The Wind ceasing, we put to Sea again, and had a very good Passage over to *Malta*. By the Way we saw our Seamen take several Tortoises in this Manner: When they espy a Tortoise floating on the Top of the Water, as they can easily do at a good Distance, with as little Noise as they can possibly they bring their Boat up close to him, then they either catch him with their Hands and draw him up into the Boat, or if they cannot get near enough to do so, one leaps

out of the Boat into the Sea, and turns the Tortoise on his Back, and then with Ease drives him before him up to the Boat, the Tortoise being not able to turn or swim away on his Back. They say, (and it is not unlikely) that the Tortoise, while he floats thus upon the Water, sleeps; which is the Reason why they are so still, and make so little Noise in bringing their Boat up to him. One of these Tortoises which they caught, had two great Bunches of those they call *Bernacle-shells* sticking or growing to his Back, and some of them the largest and fairest of that Kind which we have ever seen.

As for that Opinion of a Bird breeding in them, (which some have affirmed with much Confidence, and of which *Michael Meyerus* hath written a whole Book) it is without doubt false and frivolous: The *Bernacles* which are said to be bred in them, being hatch'd of Eggs of their own laying, like other Birds; the *Hollanders*, in their third Voyage to discover the North-east Passage to *Cathaia* and *China*, in 80 Degrees 11 Minutes of Northern Latitude, having found two Islands, in one of which they observed a great Number of these Geese sitting on their Eggs, &c. as *Dr. Johnson* relates out of *Pontanus*. As for these Shells, they are a Kind of *Balanus marinus*, as *Fabius Columna* proves, never coming to be other than what they are, but only growing in Bigness as other Shells do. All the Ground of this Fancy, as I conceive, is because this Fish hath a Bunch of *Cirri* somewhat resembling a Tuft of Feathers, or the Tail of a Bird, which it sometimes puts out into the Water, and draws back again. We were much surprized to find of this Shell-fish in these Seas, so Southerly, and far from the usual Scene of the *Bernacle* Fable.

The Island of *Malta* is twenty Miles long, twelve broad, and sixty Miles in Circuit, distant from the *primo terreno*, or nearest Part of *Sicily* sixty Miles; from the Cape of *Calipia*, anciently called *Promontorium Mercurii*, the nearest Point to the Continent of *Africa*, two hundred Miles, (as divers of the most skilful and experienced Pilots did affirm to *Abela* for an undoubted Truth); from the Cape of *Spartivento* in *Italy*, but one hundred and ninety; so that upon Account of Vicinity, it is rather to be attributed to *Europe* than *Africa*, especially if we allow *Sicily* to have been of old Time united to, and so Part of the Continent. The Reason why others make it a Member of *Africa*, is because the present Inhabitants of the Country speak a Kind of *Moresko* or *Arabick*.

The old City, called *Citta Notabile*, situate about the Middle of the Island, hath 35 Degrees 15 Minutes of Northern Latitude, and the longest Day there is of fourteen Hours fifty two Minutes. I am not ignorant that *Heylin* and others, who reckon this among the Isles of *Africa*, place it nearer the Coast of *Barbary*, assign it less Latitude, and allow the longest Day no more than fourteen Hours; but I do in these and other Particulars, follow the more accurate Observations of *Johannes Franciscus Abela*, a learned Man, and Native of this Island, in his *Malta Illustrata*, written in *Italian*, and published in *Malta*, Anno 1646, in Folio. The whole Island, from the Shallowness of its Soil there, being in few Places above two Foot Depth of Earth before you come to firm Stone; and from the Lowness of its Situation, not much elevated above the Level of the Water, and having no considerable Hill in it, seems to have been in the most ancient Times, nothing else but a great Rock wholly overwhelmed and covered with the Sea; especially if we consider the Multitude of Sea-shells of all Sorts, Sharks-teeth, Vertebres of Thorn-backs, and other Fish-bones petrified found all over the Island, even in the highest Parts of it, and most remote from the Shore. For that these were formed by some plastick Power in the Stone Quarries, being nothing else but the Effects and Productions of Nature sporting herself in Imitation of the Parts and Shells of these Animals, I can hardly be induced to believe.

Nature (which indeed is Nothing else but the ordinary Power of God) not being so wanton and toyish as to form such elegant Figures without further End and Design than her own Pastime and Diversion. But a

very likely Thing it is, that the Sea being shallow above this Rock for some Ages before, it came to be uncovered, there should great Beds of Shell-fish, harbour and breed in so convenient a Place, and the Water leaving them, their Shells remain and petrify. I confess its hard to imagine, how the Carcasses of so many Sharks should come to be lodged here, as by the Multitude of Teeth, that have been for so many Years past, and are still daily digged up, we must needs grant, unless by Chance they remain, of the Heads of such Sharks as were caught and eaten by the Fishermen, who it is likely, after the Discovery of this Rock, frequented here, and made it a Station for Fishing before it came to be thoroughly and fully inhabited.

To this Difficulty, Mr. *Steno* returns answer in these Particulars, 1. That such Sharks or Sea-Dogs, have each of them sixty Teeth and more, and that all the Time they live they breed new Teeth. 2. That the Sea agitated by the Winds, is wont to protrude those Bodies it meets with towards some one Place, and there heap them together. 3. That Sharks swim in great Troops or Shoals, and consequently that the Teeth of many of them, may have been left in one Place. 4. That in the *Malta* Earth, besides these Sharks Teeth, are found also sundry Cockle-shells, so that if the Number of Teeth should incline a Man to ascribe their Production to the Earth, on the other Hand, the Make of the same Teeth, and the Abundance of them in every Animal, and the Earth, like the Bottom of the Sea, and other marine Bodies found in the same Place, do favour the contrary Opinion. The Soil notwithstanding the Rockiness and Shallowness of it, hath been by the Ancients celebrated for Fertility.

*Fertilis est Melite sterili vicina Cosyra
Insula. Ovid. Fast.*

But undeservedly, if we understand it of Corn, for there is not much Wheat sown here, and that we saw upon the Grounds was but thin and slight. And though Barley be their chief Crop, and of which the Country People make their Bread, yet have they not near enough of that to serve the ordinary Uses of the Inhabitants, so that they are forced to fetch most of their Bread Corn out of *Sicily*. The main Commodities which the Island yields, wherewith the Inhabitants drive a good Trade, and enrich themselves are, 1. *Cumin-Seed* which they call *Cumino agro*, or sharp *Cumin*, of which are gathered about three thousand *Cantares* yearly, one *Cantare* being equal to 116 Pound Weight, *English*. 2. *Anise-Seed*, which they call *sweet Cumin*, of which are gathered and transmitted into foreign Parts, 1000 *Cantares* yearly. These Seeds are sold at seven, eight, or nine Crowns the *Cantare*, and we were told that the Year before our being there, [*Anno* 1663.] were vend- ed 7000 *Cantares* of both Sorts. 3. *Cotton-Wool*, called in *Latin*, *Xylone* or *Gossipium*, of which they send Abroad yearly, 14000 *Cantares* in the Husk. They have of late begun to plant *Indigo*, which my Author saith agrees with the Soil, and thrives there very well. He also mentions a Sort of Excrecence, or Moss, or Scurf, which the Rocks about *St. Maria el Aalia*, and other Places on the North-side of the Island, naturally put forth, called by the Country People *Vercella*, which they scrape off with an Iron Instrument, and having washed it with a certain Liquor, and mingled it with other Ingredients, (he tells us not what that Liquor or those Ingredients are) they expose it to the Sun, and use it to die Wool of a Carnation Colour. This kind of Moss called in *Wales*, *Kenkerig*, and in *England*, *Cork*, or *Arcel*, is gathered and used for the same Purpose in *Wales*, and the North of *England*. *Malta* hath been famous of old, for a Breed of little Dogs, called *Catuli Melitei*, the Race whereof is quite extinct, and now their Cats are as much esteemed. The Roses of *Malta* contend for Sweetness with those of *Pestum*, and the Honey with that of *Hybla* or *Hymettus*: so that some suppose this Island had its Name *Melita* from *Mel*, signifying Honey. The Air is clear and healthful, and the People long lived. Not much Rain falls here, yet

sufficient to supply Water to feed their Springs, of which there are several in the high Grounds, or small Hills, about the Middle of the Island. That these Springs proceed from Rain Water only, my Author doth very well prove, because they are found only at the Foot of little Hills, consisting of a certain porous Stone, which the *Maltese* call *Giorgiolena*, or a chalky Earth, which easily imbibes the Rain: And to speak in general, that all Springs and running Waters owe their Rise and Continuance to Rain, seems to me more than probable.

1. Because I never yet saw any Springing of running Waters breaking out, either on the Top of a Hill, or so near the Top, but that there was Earth enough above them to feed such Springs, considering the Condition of high Mountains, which are almost constantly moistened with Clouds, and on which the Sunbeams have but little Force: And yet I have made it part of my Business, in viewing the highest Hills in *England* and *Wales* to examine this particular. Nor have I yet ever observed such springing and running Waters in any Plain, unless there were Hills so near, that one might reasonably conclude they were fed by them. 2. Many Springs quite fail in dry Summers, and generally all abate considerably of their Waters. I am not ignorant that some make a Distinction between failing Springs, and enduring Springs, and would have the former to proceed from Rain, and the latter from the Sea, but I see no sufficient Foundation for such a Distinction, and do think that both the one and the other are to be attributed to Rain, the failing and enduring being to be referred either to the different Quantity and Thickness of Earth, that feeds them, or to the different Quality, the one more quickly, the other more slowly, transmitting the Water, or some such like Accident. 3. In Clay Grounds into which the Water sinks with Difficulty, one shall seldom find any Springs, but in sandy, gravelly, rocky, stony, or other Grounds, into which the Rain can easily make its Way, one seldom fails of them. 4. They who would have Fountains to arise from, and be fed by the Sea, have not as yet given a satisfactory Account of the Ascent of Water to the Tops of Mountains, and its Efflux there.

For though Water will creep up a Filtre above its Level, yet I question, whether to so great an Excess above its *Equilibrium* with the Air, whereas in Pumps, we see it will not rise above two or three and thirty Foot, or if it should, whether it would there run out at the Top of the Filtre, we not having as yet heard of any Experiment that will Countenance such a Thing. For the Ascent and Efflux of Sap in Trees, I suspect may be owing to a higher Principle, than purely Mechanical. As for the *Sabulum Quellem*, or *Arena bulliens* of *Helmont*, I look upon it as an extravagant Conceit of his, and yet some Ground there is to believe, that there is a kind of Earth lying up and down in Veins, which doth like a Filtre, retain the Water, and carry or derive it along, as it lies from Place to Place, till it brings it to the *Superficies* of the Earth, where it runs out. In other Places there are subterraneous Channels, like the Veins in Animals, whereinto the Water soaking into the Earth is gathered, and wherein it runs as above Ground, out of smaller Rivulets into greater Streams, and where one of these Veins open in the *Superficies* of the Earth, there is a Spring greater or lesser, according to the Magnitude of the Vein. Nor need we wonder that Springs should endure the Length of a dry Summer, for in many Sorts of Earth the Water makes its Way but slowly, since we see that in those Troughs or Leches, wherein our Laundresses usually put Ashes, and thereupon Water to make a *Lixivium*, the Water will be often many Hours before it gets all thro' the Ash, and the Lech ceases to drop, and in many Chymical Preparations which are filtred, it is long before the Liquor can free itself, and wholly drain away from the earthy and feculent Part. Some attribute the Original of Fountains, to watry Vapours, elevated by subterraneous Fires, or at least by that generally diffused Heat, which Miners find in the Earth, when they come to fifty or sixty Fathoms under Ground, and condensed by the
Tops

Tops and Sides of the Mountains, as by an Alembick-Head, and so distilling down and breaking out where they find Issue. And in Reason one would think, that generally the deeper one digs in the Earth, the colder one should find it, since the Urinators affirm, that the deeper they dive in the Sea, the colder still they find the Water, and yet were there such subterraneous Heats, they are not so great, as that it is likely they should elevate Vapours so high, through so thick a Coat of Earth, which it must be an intense Heat indeed will carry them through, which Heat none say is found near the Superficies of the Earth.

Mr. Hook's Account, viz. that Salt-Water being heavier than fresh, by Reason of its Preponderancy, it may drive up the fresh as high above the Surface of the Sea, as are the Tops of Mountains, before it comes to an *Equilibrium* with it, it is very ingenious, and would be most likely, where these continued close Channels from the Bottom of the Sea, to the Tops of Mountains not admitting the Air, which I believe will not be found in many Places. What is said about ebbing and flowing Wells, in Confirmation of it adds no Strength, for none of those ebbing and flowing Wells, that I have yet seen, do at all observe the Motion of the Sea, but reciprocate two or three Times, or oftener, every Hour, excepting one on the Coast of South Wales, in a sandy Ground, by the Sea-side, not a Quarter of a Mile from the Water which observes the Tides; but it is no running Water, nor doth it, I believe, arise above the Level of the Sea. I do therefore shrewdly suspect for fabulous, whatever has been written of Wells remote from the Sea, which in their ebbing and flowing observe its Motion. But for a Reason of the ebbing and flowing of these Wells, I must confess I am hitherto at a great Loss. Whereas some say, that Rain sinks not above a Foot or two deep into the Earth; if they understand it of all Earths, it is manifestly false, for that we see in Coal Delphs, and other Mines, in wet Weather the Miners are many Times drowned out, (as they phrase it) though no Water run down into the Mouths of their Pits or Shafts; and in sandy and heathy Grounds in the greatest Rains, little Water runs off the Land, as on *Newmarket-heath*, *Gogmagog Hills*, *Salisbury Plain*, &c. and therefore it must needs sink in: And out of the Mouth of *Pole-Hole*, near *Buxton*, in the *Peak* of *Derby*, and other Caves in the Sides of Mountains, in rainy Seasons, Streams of Water many Times run out, where in dry Weather and Summer-time there are none.

Neither is this Opinion we defend, any more repugnant to the Scripture than the other. For whereas it is said, *Eccles. i. 7. All the Rivers run into the Sea, yet the Sea is not full; unto the Place from whence the Rivers come thither they return again*; we grant it to be most true, nay we think such a Circulation absolutely necessary to the Being of Springs, only we assert it to be performed not under Ground, but above, that is, the Clouds take up Water out of the Sea, and pour it down again upon the Earth, and from Part thereof falling upon, and soaking into the higher Grounds, arise the Springs.

But to return to *Malta*, the Haven is very commodious and secure, divided into two by a little Promontory or Neck of Land, some 1500 Canes long, and 380 broad, upon which the new City is built. Of these two, that on the West side the City, is called simply, and *per Automasiam*, *Marfa*, that is, the Haven, and is in Length 180 Canes or Poles, often Palms, the Cane Roman Measure, and is subdivided into other Creeks or *Sinus's*. That on the East-side, called *Marfa Moschetto*, is as large as the other, in a little Island, within which is the *Lazaretto*; near it Ships that come from infected Places, keep their Quarantine. The new City called *Valetta* is divided into twenty Streets, eight in Length, and twelve in Breadth, all strait, though they be not paved, yet they need it not, the Town being built upon a solid Rock. They want no Uniformity but being level, which the Place being uneven, up Hill and down Hill, will not admit. The Houses are all Stone, flat-roof'd, and covered with Plaister, which is sufficient here, there falling but little Rain; though they be not

high, yet are they neat and pleasant. Upon the Roofs of their Houses in Summer time, the People set their Beds as at *Aleppo*, and sleep in the open Air. The Number of the Inhabitants of all Ages, according to a Survey taken in the Year, 1632. was 10744, the Number of Houses, 1891, which Sum is I believe since that Time much increased. Over the Gate of this City, leading to the Land, called *Porta Reale*, you have an Inscription giving an Account of the first founding and building of it. It is fortified with impregnable Walls and Bulwarks, especially towards the Land, where one would think there are too many, and yet they are still adding more; within the outmost Wall, or between the two Walls and Outworks, they have enclosed a great Space of void Ground, whether with Design to enlarge the City, filling that Space with new built Houses, or to receive the Country People, in Case the Enemy should land upon the Island, I know not. All the Walls and Bulwarks are mined or vaulted underneath, that so, in Case the Besiegers should get upon them, they might be blown up, and rendred uselefs. The Charge of all these Walls, Castles and Fortifications would be intolerable had they not Stone at Hand, and Slaves to work.

This City is well served with all Provisions, there being every Morning, a Market plentifully furnished with Bread, Flesh, Fish, Poultry, Fruits, Herbs, &c. of the best in their several Kinds, and to be bought at easy Rates. The most considerable Buildings in this City, are, 1. The Church of *St. John the Baptist*, Patron of the Order, wherein are many Chapels and Altar-Pieces, richly gilt and adorned. Here lie buried the Grand Masters that have been, since the Order was translated hither, in a Vault under Ground, several of them having in the Church, Monuments with Inscriptions. This Church is not yet quite finished. 2. The Castle of *St. Elmo*, which stood here before this City was built, on the utmost Point of the Promontory, a strong Place, but of no great Capacity. Here we observ'd the like winding Ascent to the Top, without any Steps or Stairs, as in the Tower of *St. Mark*, at *Venice*.

Upon the Top of this Castle is constant Watch and Ward kept. When they descry any Vessel coming toward the Island, be it great or small, they set up a Flag suitable to the Bigness of the Vessel; if two Vessels, two; if three, three; and so on according to their Number; signifying also by the Place, where they set these Flags, from what Quarter, East, West, North or South, such Vessel or Vessels come, so that the City is presently advised what Vessels, and how many are near the Port. In this Castle are imprisoned such Knights as have committed any Misdemeanour, and held in Restraint, longer or lesser Time, or further proceeded against, according to the Degree of their Fault. 3. Before this Castle are the *Granaries*, where the Provisions of Corn for the City are kept. These are nothing but Caves hewn out of the Rock, in the Form of a *Cupola*, or ordinary Bee-hive, having each a narrow Mouth above. They are constantly provided with Corn enough beforehand, to serve the whole City for a Year. They have also Magazines or Stores of Wine, Oil, and all other Necessaries. 4. The *Alberghs* or Halls of the eight several Nations (*Lingue* they call them) of the Order. The Nations are *French*, *Italian*, *German*, *English*, *Provençal*, *Auvergnois*, *Castilian*, and *Arragonian*.

These *Alberghs* are most of them fair Buildings like Colleges, and in each of them, is a publick Hall, wherein the Knights of each Nation dine and sup as many as they please, the others have their Parts or Demensum, sent to their Lodgings, or dispose otherwise of it, as they see good. The Seignior of each Nation is Superior of the *Albergh*, *Grand Prior* of his Nation, of the great Cross, *gran Croce* they term it, and one of the Privy Council to the Great Master. These are distinguished from the rest, by a great white Cross upon their Breasts made of Silk, sewn into their Garments. Here is an *Albergh* for the *English* Nation, or rather a Piece of Ground, inclosed with the Foundation of an *Albergh*,

Albergh, the Walls being scarcely reared up. This Ground we are told, some of the Citizens would have bought and built upon, but the *Grand Master* and Council refused to sell it, not despairing it seems, that one Day our Nation may be reduced again to the Obedience of the *Romish Church*.

5. The *Armory* [*Sala di Arma*] within the Palace of the *Great Master*, consisting of two Rooms; the one (which they call the Hall) the fairest and largest Room, employed for such an Use that we have any where seen; the other much lesser. In both together are kept Arms for 30,000 Men, so intire, clean, bright, and fit for Use, that we were very much taken with the Sight of them. Here are some of those little Drakes, that may be charged behind a Leather Gun, and other Curiosities, the like whereto we have seen in several Armories.

6. The *Hospital* [*Infirmaria*] a fair Building, which they are now enlarging. The Sick Persons are served by the Knights, viz. Such a Number of Knights are appointed to carry them their Meat daily with Cap in Hand, which Thing we saw them do in this Manner. The Meat was all brought into the middle of a great Room, where many of the Sick lay. Then one of the Knights (the Steward I suppose he was) read the Names of the Sick, one by one, out of the Physician's Bill, wherein was prescribed each Sick Persons Diet. As he read a Name, the Cook took his Part whose Name was read, and Dishing it up, delivered it to one of the Knights, who carried it to his Bedside, where stood a Stool covered with a Napkin, having Bread and Salt upon it. This Duty their very Name intimates to belong to them, viz. Knights, i. e. Servants of the Hospital, and therefore we may be excused, if we have been more particular and circumstantial in describing the Manner of it. If any of the Order falls Sick, he is not to stay in a private House, but presently repair hither, where he is most carefully tended, one or two Knights being appointed to be always by him.

The Palace of the *Great Master*, where he hath several Apartments for Winter and Summer. There is also a Stable of good Horses, in which besides Coach-horses and ordinary Saddle-horses, are kept forty or fifty great Horses. A Thing worth the Noting in this Island, where there is a great Scarcity of Horses, that Knights and Persons of Quality, ride upon no better than Asses. The *Slaves-Prison*, a fair square Building, where all the Slaves in the City lodge every Night, so long as the Gallies are Abroad in *Corso*. At the ringing of the *Ave-Mary-Bell*, which is just at Sun-set, they are to repair thither; when the Gallies are at Home, those that belong to private Persons are permitted to lodge in their Masters Houses. The Number of Slaves now in Town, was about 2000 belonging to the Order, and 300 to private Persons, besides those that were Abroad in the Gallies.

Besides this new City, there are three considerable Towns distant from it, only by the Breadth of the Haven. 1. The *Isola* (as they commonly call it) or Town of *Senglea*, with the Fort of *St. Michael*, seated in a *Peninsula*, made by two Creeks, running out of the principal Haven. It contains 994 Houses, and 4050 Souls. For the stout Resistance it made to the *Turks*, in 1565, it obtained the Name of *Citta invitta*. 2. The *Borgo* (as they call it) i. e. *Burgo del Castello à Mare*, built likewise on a little *Lingua* or Neck of Land, between two Creeks of the same Haven, on the utmost Cape whereof stands the Castle of *St. Angelo*, divided, for greater Strength, from the Town by a Ditch of Water cut cross the *Lingua*. This Burgh contains 782 Houses, and 3065 Souls. For its Valour and Fidelity in holding out so resolutely against the *Ottoman Army* besieging it, Anno 1565, it is deservedly honoured with the Title of *Citta vittoriosa*. Between these two Burghs is a secure Harbour, where the Gallies and most of the other Vessels of the City lie, which in Time of Danger is shut up with a great Iron Chain. 3. *Birmula* rather a Suburb of *Senglea* than a distinct Town, it contains 642 Fires, and 2778 Souls.

May 25. We rode out to see some Part of the Country, passing two great Villages (*Casales* they name them) we came to the old City, called anciently *Melita*, after the Name of the Island now *Citta notabile*, a small Place at present, but well fortified, containing no more than 565 Houses, 2620 Souls. It hath been formerly much greater, and incomparably more populous. The new City, as being more conveniently situate, daily drawing away, and withdrawing its Inhabitants. Here they shewed us the Pillar of *St. Paul* (as they call it) where when he stood Preaching (as they fondly believe, or at least would persuade us) his Voice was heard distinctly all over the Island. 2. The *Grot of St. Paul*. Here out of a small Cave is taken that white Earth, called, *Terra di S. Paolo*, and by some *Terra Sigillata Melitenfis*, which they seal, and sell to Strangers, attributing thereto, great Virtues against all Poison and Infections. This Cavern, though there be continually great Quantities of Earth taken out of it, according to their conceited Tradition, retains still the same Dimensions, becoming no greater than it was at first. That *St. Paul* suffered Shipwreck on the Coast of this Island, and wintered here, and not on that other *Melita*, in the *Adriatick Sea*, on the Coast of *Dalmatia*, now called *Meleda*, I think it sufficiently proved and made clear by *Cluverius*, *Abela*, and others; but that upon Occasion of a Viper fastened on his Arm, he changed all the Serpents of the Island into Stones, and endued the Earth with an alexipharmical Quality, to resist and expel Poison, is a superstitious and ungrounded Fancy.

From the old City we rode to the *Great Master's Boschetto*, where he hath a pretty Palace in Form of a Castle, from the Top whereof we had a good Prospect of the Island. Here are a great Number of Gardens and Orchards, well furnished with all Sorts of Fruits and Flowers, good Water-Works, and a Grove of Trees; indeed this Palace wants Nothing for Conveniency or Delight. The Palace is situated upon a little Hill, and the Gardens lie under it in a hollow or Bottom almost compassed about with Rocks. But to speak of the Island: *Malta* hath been inhabited by several Nations, and often changed Masters.

The most ancient Inhabitants are by *Cluverius* taken to have been the *Phœaces* mentioned by *Homer*, who were expelled by the *Phœnicians*. The *Phœnicians* were most of them driven out by the *Græcians*. After this it changed Masters rather than Inhabitants, being first subdued and held by the *Carthaginians*, then for a long Time by the *Romans*: After that the *Goths* came hither, who were driven out by the *Eastern Emperors*: Next the *Saracens* possessed themselves of it. The *Normans* expelled them, and got the Dominion. Then the *Germans* or *Suevi* became Lords of it; then the *French*, then the *Arragonians* and *Spaniards*; and now last of all, the Order of the Knights Hospitallers. The History of all which Changes, if any Man desire to be fully and particularly acquainted with, let him consult *Abela*. In all these Changes, it followed for the most part the Fortune of *Sicily*, as having little Strength to resist any foreign Power invading. It is now so well fortified and manned, that it would prove a very difficult Matter for the greatest Prince or Potentate in the World to take it by Force, having, when it was in far worse Condition than now it is, resisted and baffled the Arms of one of the greatest Emperors the *Turks* ever had. It is very populous, containing between thirty and forty great *Casales* or Villages, some of them above 500 Houses, more like to great Towns than Villages, and twenty six Parish Churches, beside those of *Gozo*.

The Number of Fighting Men was said to be about 25 000, but I believe there are scarce so many, for according to a Survey taken in the Year, 1632, the whole Number of Souls upon the Island, besides the Knights, was about 501,12, of which we cannot reckon much above one fifth Part to be fighting Men. And though since that Time the Number of Inhabitants be much increased, yet I think scarce doubled.

The

The Language of the Natives is a corrupt *Arabick* or *Morefco*, introduced by the *Saracens*, the ancient Language before their coming in, probably having been *Greek*, with a Mixture of *Punick*; whence I think one may reasonably conjecture, that the *Saracens* did either destroy or drive out the former Inhabitants. Howbeit, the People can generally speak *Italian*, there being no other Language but that and *Latin* used in any of the Courts of *Malta*. The *Great Master* of the Order is now Prince and supreme Governor of the whole Island, which with *Gozo* and the adjacent Isles, after the Loss of *Rhodes*, was granted to this Order by the Emperor *Charles V.* in the Year 1530. The Government is managed with that Prudence and Justice, that the Island is now in a very flourishing Condition, the Inhabitants enjoying a great Deal of Freedom and Security, being also in their Carriage and Conversation among themselves, and to Strangers, since the Coming in of the Order, very civil and courteous, however formerly they have been branded for the contrary; so that few Subjects live more happy than they do. The *Great Master*, when he goeth Abroad, is attended by many of the Knights, and two or three Pages, of which he keeps, (as we were told) about twenty four. The Knights of the Order are always uncovered in the Presence of the *Great Master*, excepting those sixteen which are of the *Gran Croce*: They take Place, of what Birth or Quality soever they are, according to their Seniority, from the Time of their Admission, so that there is never any Difficulty or Question about Precedency.

All the Knights are of noble or genteel Extraction, none being capable of Admission, but such as can prove their Nobility for three or four Descents. The *Great Master* wears a black short Gown, with hanging Sleeves, the rest of the Knights are habited as they please at Home, but when they go in *Curso* (as they call it) upon the Gallies, they wear the proper Habit belonging to their Order. The Number of Knights was said to be between 2000 and 3000, of which, for the most Part, the Majority reside in the City, except when the Gallies are Abroad. The Name of the *Great Master*, at our being there, was *Nicholaus Cottoner*, of *Majorca*, and I suppose he is still living, not having since heard of his Death.

About five Miles distant from *Malta* Westward, lies the Island *Gozo*, called by the Ancients *Gaulos*, twelve Miles long, six and a half broad, and about thirty in Circuit. The Soil, like that of *Sicily*, is very deep and fruitful of Wheat and other Grain. This Island is mountainous, yet all cultivated, furnished with Store of fresh Springs. It maintains upon it 3000 Persons, the Number of Houses being about 500. It was much more populous before the *Turkish Armada* most inhumanly wasted it in the Year 1565, carrying away Prisoners 6000 Persons. In the Streight betwixt *Malta* and *Gozo* lies a little Island called *Comino*, anciently, according to *Cluverius*, *Hephastia*, about five Miles in Compass, and well cultivated, for the Defence whereof the *Great Master Wignacourt* caused a Fort to be built, opposite to that on the other Side the Streight in *Gozo*, to secure the Streight, and hinder any Vessels passing between the Islands without Leave.

That there is great Plenty of Shells and Fish-Bones petrified found in *Malta*, I have already intimated. I shall now therefore only Name those which are not at all, or but rarely found with us in *England*. 1. *Glossopetra*, which are nothing but Sharks Teeth of several Shapes and Sizes. These the *Maltese* call *Serpents Tongues*. 2. The Vertebres of Thornbacks, and other cartilaginous Fishes. 3. *Cats-Heads* (as they call them from their Likeness to a little Skull.) 4. *Serpents-Eyes* of several Figures and Colours, the most of them red and like to those they call *Toad-stones*, the exterior Superficies being a Segment of a Sphere and shining, as if it were polished, so that they are commonly set in Rings. I have seen great Lumps or Masses of these cemented together. That the *Toad-stone* is nothing else but the Jaw-Tooth of a Fish called *Lupus marinus*, by *Schonfeldius*, Dr. *Merrit* in his *Pinax* hath

first published to the World, and I doubt not but these have the same or the like Original. 5. *Serpents-Teeth* which are small, oblong, striate Stones, of a polite Superficies, but no certain Figure; whither to refer these as yet, I know not, as neither 6. those they call *Serpents Eggs*, which are somewhat like the former, but not striate with Lines. 7. *Bastons of St. Paul*, [*Baculi Sti. Pauli*,] having their Resemblance of small snagged Sticks. 8. *Petrified Lentils*, because for Colour, Figure and Magnitude, somewhat like to that Pulse. Besides I found among the Stones I bought there, some exactly figured like the Fore-Teeth of a Man, and doubtless many other Sorts by diligent Search might be found, which have not as yet been named or taken Notice of. There are but few Trees growing upon the Island, the greatest Want they have being of Fewel; to supply which Defect, they have of late begun to make Use of Seawreck, to burn in their Ovens, prepared after a certain Manner, invented by a Peasant of *Malta*, for which he is highly commended by *Abela*, as a great Benefactor to his Country.

Here I first noted the Custom of flitting up the Nostrils of Asses, because they being naturally strait or small, suffice not to admit Air enough to serve them when they travel or labour hard in these hot Countries. For the hotter the Country is, the more Air is necessary for Respiration and Refreshment of the Body, there being less of that *Menstruum* which serves to nourish or continue Fire, and consequently the vital Heat of Animals (which hath great Likeness thereto) in hot Air than in cold; whence we see that Fire burns furiously in cold Weather, and but faintly in hot. Whether it be because the Air is thinner in hot Weather and hot Countries, or because the reflected Sun-beams spend and consume a good Part of the forementioned *Menstruum*, or from both these Causes: That the Air is thinner, and consequently the *Menstruum* also more diffused in hot Weather, is clear in Experience. I need mention no other Experiment to demonstrate it than the Air inclosed in the Shank of an ordinary Weather-Glass, which in hot Weather dilates itself, and in Cold contracts very considerably. So then to give an Account of the Raging of Fire in the coldest Weather, we need not have Recourse to the insignificant Term of *Antiperistasis*, the true Reason thereof being the Density of the ambient and contiguous Air, containing Plenty of that *Menstruum* which nourishes the Fire.

I omitted to mention the ancient *Cæmetria*, or subterraneous Burying-places, called *Catacombs*, of which there be many in *Malta*, because of these we have already had occasion to discourse in our Description of *Syracusa* in *Sicily*. That this Island produces or nourishes no Serpent or other venomous Creature the common People affirm; but because I find no Mention hereof in *Abela*, I give little Credit to their Report; should it be true, it would be to me a great Argument that this was not the Island upon which *St. Paul* was cast, when he suffered Shipwreck, but rather that *Melita* beforementioned; upon the Coast of *Dalmatia*, for which there is also some Ground in the Scripture; for that *St. Paul*, upon the Viper fastening on his Hand, did by his Prayers obtain of God, that all the Serpents in *Malta* should be turned into Stones, and the Island for the future wholly free from all venomous Beasts, is a Monkish Fancy grounded upon the forementioned petrified Fish-Bones, which they fondly imagined were some time Parts of Serpents; whereas in other Places where Plenty of such Stones are found, there is no Lack of Serpents. I confess it is difficult to imagine how Serpents should come at first to breed here, if the whole Island were once (as we conceive) a submarine Rock covered with the Sea; and as there is no spontaneous Generation of Animals, as we also believe, because it can be scarce imagined, that any Man should on Purpose bring over Serpents hither, unless perchance to shew them for a Curiosity.

Whether there be venomous Beasts or no, I am sure there are venomous Insects here, the very Biting or Stinging of the Gnats (with which the City is much infested) being more virulent than in other Places. For

my Part, I do not remember that in *England* the Biting of a Gnat did ever cause a Swelling, or leave a Mark behind it in the Skin of my Face, (though I know in some it doth) but there it both raised a Swelling, and left a Mark behind it, that was not out for a Month after. The *Maltese* easily defend themselves from the Annoyance of this Insect, keeping them out of their Beds by large Linen Curtains, lapping over one another. At first we were not aware of the Trouble these Animals were like to give us, and left our Curtains open; but Experience soon taught us to correct this Fault.

22. In our Return from *Malta* to *Messina*, we staid a Day at *Catanea*, and there took Horses and a Guide to bring us up Mount *Ætna* (now call'd *Monte Ghibello*) the Top of which is reckoned thirty Miles from *Catanea*, and is one continued Ascent; the Grounds through which we passed being very fertile, well cultivated and inhabited, the Cinders which are cast out by the Mountain, being instead of Dung, (after it is dissolv'd by the Weather) which fattens and enriches the Soil. We advanced as far as where the Snow lies, which reached all up to the Top; we could go no farther, however we were near enough to observe, that the very Top or Pinnacle of the Mountain, was surrounded with a Ring of Snow, but had no Snow itself.

As to the *Sicilians*, they have not undeservedly the Reputation of being uncivil and rude to Strangers; and the *Banditti* or Highway-men, are so frequent, that there is very unsafe Travelling here; the worst is, that they are not contented with Robbing you of all you have about you, but carry you away into the Mountains, nor set you at Liberty, till you have paid what Ransom they think fit to impose upon you. They have some peculiar Laws and Customs not easily met with in other Places. If you carry above the Value of ten Crowns in Money out of the Country, it is forfeited if found; the best is, that a little Money makes the Custom-house Officer, let Strangers pass unsearch'd. No Calves are permitted to be kill'd in this Island, so that you see no Veal at the Tables of the *Sicilians*, tho' at *Malta* (whither they carry it by Stealth) is enough of it. No body ought to take above the Weight of an Ounce of Silver, without weighing of it. No young Person under Age, must enter or travel in *Sicily*, without peculiar Licence. To carry Pocket-Pistols about one is a capital Crime, though long Guns are not only allowed, but also carried almost by every Body: The Reason of which is, that by the first a Person may be assassinated before he can be upon his Guard.

After our Return to *Messina*, we took Boat, May 27, over the *Fretum*, to take a View of the ancient *Regium*, (*Rbegio*) which now makes but a very mean Appearance, having scarce any Thing to boast of, except some Gardens, which indeed afford them great Plenty of the best Sort of Fruits: Here is also Abundance of Bricks made, being reckoned the best in *Italy* and *Sicily*. They shew'd us a small Fragment of St. Paul's Pillar that burned, and told us so many Stories of it, that we were sooner weary of hearing than they of telling.

May 29. We went in a Boat as far as *Scylla*, to see the Fishing of the Sword-fish: They place certain Fellows on the Cliffs near the Sea-side, (*Huers* our *English* Fishermen call them) these either by a Signal, if they are out of hearing, or else by their Voice, give Notice to the Fishing-boats, whereabout they spy the Fish: These make what Hast they can towards the Place, whither they were directed, and placing one of the Boats Crew on the Top of the Mast (which have little Steps made for that Purpose) he gives, from Time to Time, Direction to those at the Oars, whither to take their Course, according to the different Motions of the Fish. Being come near enough, they strike him with a Harpoon, and the Fish being wounded, swims up and down, till being spent with the Loss of Blood, they draw him into the Boat. The Harpoon Iron is fastned to a Pole, the Point being sharp, with Beards on each Side, like a barbed Arrow, so jointed, that they go easily in, but resist the drawing of them out. The

Messinese looking upon this Fish as a singular Dainty, buy it at the Rate of Sixpence per Pound at first coming in. In *May* and the Beginning of *June*, they are catch'd on the Coast of *Calabria*, and towards the latter End of *June*, come over to the *Sicilian* Coast, and are taken near *Messina* till *August*. As there are no Rocks near the *Faro*, they are obliged to place their *Huers* on the Top of a very high Mast, set up in a large Boat or *Brigantine*.

They have in the Beginning of *June*, a yearly Festival, call'd the *Feast of our Lady of the Letter*, which is celebrated with more than ordinary Solemnity; for a whole Week together, all the Houses being illuminated with Candles, Wax Tapers, Lanthorns, &c. all the Night long. They call it the *Festival of our Lady of the Letter*, because it is celebrated in Memory of a Letter, pretended to be written to them, by the *Virgin Mary* in *Greek*, of which they shew you the *Latin* Copy (the Original being lost) which runs thus.

Maria virgo Joachim filia Dei humillima, Christi Jesu crucifixi mater, ex tribu Juda, stirpe David Messanensis omnibus salutem & Dei patris omnipotentis benedictionem.

Vos omnes fide magna legatos ac nuncios per publicum documentum ad nos misisse constat: Filium nostrum Dei genitum Deum & hominem esse fatemini; & in cœlum post suam resurrectionem ascendisse, Pauli Apostoli electi prædicatione mediante viam veritatis agnoscentes. Ob quod vos & ipsam civitatem benedicimus, cujus perpetuam protectricem nos esse volumus. Anno Filii nostri XII. Indiēt. I. III Nonas Junii, Luna XXVII, Feria V. Ex Hierosolymis Maria virgo quæ supra hoc chirographum approbavit.

23. *June* 6. We took a *Felucca* at *Messina* for *Naples*, and lodged the first Night at a small Town called *Tropia*, in *Calabria*, sixty Miles distant from *Messina*. The 7th, Lodging at *St. Lucido*, we met there also with the wild *Jejube*. The 8th, We took up our Quarters at *Porto Nicolo*, a small Creek near *Scalea*, which is strengthned by a Castle. The 9th, We lodged at *Chiupo*, and the 10th came to *Salerno*, where having quitted our Boat, we staid the 11th. This City, which is dignified with the Title of an Episcopal See, is at present very inconsiderable, having neither University, nor *Schola illustris*, as far as we could learn. The only Thing worth our Observation here, was the Monument of *Hildebrand* (Pope Gregory VII.) who rendred himself famous by introducing Celibacy among the Priests, and his Opposition to the Emperor. This is to be seen in the Cathedral of *St. Matthew*, in the Porch of which you see many *Roman* Grave-stones, with ancient Inscriptions.

The 12th, We travelled from *Salerno* by Land to *Naples*, and pass'd that Day through *La Cava* and *Nocera*, both Episcopal Sees, and *Scafata*, *Torre d'Annunciata*, *Torre di Greco*. The 30th, We embarked at *Naples* for *Leghorn*, and the first Day advanced no farther than five Miles, to *Nisita*, a small Isle in the Mouth of the Bay of *Pozzuolo*; but the second Day reach'd *Sperlonga*, a little short of *Terracina* (anciently *Anxur*) sixty Miles.

The 3d Day, we pass'd in Sight of the *Monte Circello*, (or *Promontorium Circeum*) deriving its Name from the noted Enchantress *Circe*, who, as it is said, dwelt here: The Cape extends a great Way into the Sea. About two Leagues from the Point of this Cape, directly against it, we observed a great Number of certain Insects, very like the *Cicadæ*, such as we never met with before; our Ship's Crew called them *Gronge*. The *Cicada* is commonly in our *English* Schools, rendred by the Word *Grasshopper*, whereas the same is a quite different Insect, of a rounder and shorter Body, sitting upon Trees, and making a much greater Noise than the *Grasshopper*, which ought properly be call'd in *Latin*, *Locusta*. The *Cicadæ* are frequent in the hot Countries, but seldom to be seen on this Side of the *Alps*. We lodged this Night at *Astura*, where we saw the Ruins of

of an ancient Town, and of the Foundations of certain Buildings in the Water. Not far thence, we pass'd the fourth Day, the new Town of *Antio*, and a Mile distant thence, we saw vast Ruins of the old Town, and of a great Mole belonging to the Harbour. We staid this Night at *St. Michael*, a small Town not far from *Ostia*, near the Mouth of the River *Tiber*.

The 5th Day, we sail'd with a fair Gale to *St. Stephano*, not far from *Orbitello*, passing in Sight of *Civita Vecchia*, and *Porto Hercole*, compassing *Monte Argentario*.

The 6th Day, Being overtaken by a *Borasco*, or Storm of Thunder and Lightning, we rowed 18 or 20 Miles to a little Creek, under the Tower of *Calo di Furno*. On the Sea-shore we saw those *Opercula concharum*, which by some Naturalists, are taken for Stones, and called *Umbilici marini*, by the *Italians*, *S. Lucies Eyes*. The 7th Day, We reached the Isle of *Troia*, and the Wind turning against us, we took Shelter in a small Creek near the Tower of *Lo Molino*.

The 8th Day, passing in Sight of *Piombino*, (a City subject to a Prince of the same Name) *Populonia P. Barreto*, *S. Vincentio*, *Castagneto*, and *Vara*, lodged at the Tower of *Castiglione*. The 9th Day, the Sea was very rough, it having blown hard all the Night before, yet we got safely into *Leghorn* by Noon.

24. *Florence*, surnamed *the Fair*, answers its Character by the Beauty of its Buildings, tho', in my Opinion, were it not for the great Number of Stone Palaces (such as the Great Duke's, the *Palazzo de Pitti*, of the *Strozzi*, *Salviati*, and others) *Antwerp*, and divers other Cities in the Low-Countries, might challenge the Precedency in this Point: For though its Streets are well paved with broad Stones, like those of *Luca* and *Cologne* in *Germany*, yet are they very narrow (to keep off the scorching Heat of the Sun) and the Paper Windows much shatter'd in many Places, are no small Disgrace to the Beauty of this City. The River *Arno* runs through the Middle of it, over which are built four Stone Bridges, among which, the *Ponte Vecchio*, or *Old Bridge*, has Goldsmiths Shops on both Sides. Its whole Circumference is said to be six *Italian Miles*; but of this, the Duke's Palace and Gardens take up at least one Sixth, besides some Hundreds of Acres made into Vineyards. It has forty four Parishes, including the twelve Priorates. The Number of Inhabitants is computed by some at Eighty-five thousand Souls, by others Ninety thousand, nay, an Hundred thousand; but in my Opinion they speak too large. We were told, that it had fifty-six Nunneries, and twenty-four Convents of Monks, and 37 Hospitals, one of which, *viz.* the *Orphanotrophium*, has 70,000 Crowns yearly Revenue, and maintains 900 Persons. The chief Strength of this City consists in, its three Castles, among which, that on the South-side has a good Garrison, and an Armory furnished with Arms for 30,000 Men. Another is a Fort in the Great Duke's Gardens. The third we viewed not.

The Churches of *Florence*, if not in all other Respects, at least in Point of Architecture, are most excellent; the Cathedral of *St. Maria Florida* being accounted the most exquisite Piece that ever was made, especially for the Pillars which support the Nave or Body of the Church, which stands at such a Distance one from another, and are so slender, that they do not obscure the Isles, and afford a fair Prospect at once of the whole Church. The Cupola, (the first and the Pattern of all the rest) both for its Compass and Height, exceeds all in *Italy*, except that of *St. Peter's* at *Rome*. The Choir, which is of an octagonal Figure, is under this Cupola. The Walls of the Church are covered on the Outside with Marble, cut into small Pieces, and chequer'd, of divers Colours. Within the Church beyond the Choir, you see four Inscriptions, 1. Concerning the Building of the Church, the Foundation of which was laid in 1280. The 2d, Concerning its Consecration by Pope *Eugene IV.* March 25, 1436. The 3d, Concerning the Union of the *Greek* and *Roman* Churches, under the said Pope *Eugene IV.* in 1438. The 4th, Intimates the Removal of the Body of *St. Zenobius* from *St. Lawrence's* Church hither, by *Archbi-*

shop *Andreas* his Successor. In the same Church I also saw the Monuments of *Marsilius Ficinus*, and of *GiOTTO*, a famous Architect, who first revived Painting in *Italy*, as also of *Philip Brunelleschi*, another noted Architect, who designed the Cupola of this Church and that of *St. Lawrence's*. On the North Wall of this Church is to be seen the Picture of an *English* Knight on Horseback, named *John Acutus*, which makes some think his Name to have been *Sir John Sharpe*, though others would have his Name to be *Sir John Hawkwood*, because *Guicciardin* calls him *Acutus*, and describes him as a great and valiant Captain. Here also you see on a Table, the Picture of the famous *Italian* Poet *Dante*, a Native of *Florence*, but living in Exile, was buried at *Ravenna*.

In the Church of *St. Croce* is to be seen the Monument of that great Man *Michael Angelo Buonarota*, the famous Architect, Sculptor, and Painter; under his Effigies is a Coffin, and under that three Statues sitting, representing Painting, Sculpture, and Architecture.

In the Church of the *Annunciata*, you see the Monument of another great Artist, *John Bologna*, in a Chapel behind the Choir, built by himself.

In the Church of *St. Mark* is the following small Inscription on the Tomb of the famous *Johannes Picus Mirandulanus*;

*Johannes jacit hic Mirandula, cetera norunt
Et Tagus et Ganges, forsitan & Antipodes.*

Ob. An. Sal. MCCCCLXXXIV. vixit An. XXXII.

The Church of *St. Lawrence* contains the Tombs of several of the Great Duke's Family, and to this Church belongs the famous Chapel of *St. Lawrence*, which, when finished, will prove the most magnificent in the World, the Insides of the Walls being laid over with Jasper of several Kinds and Colours, *Agate*, *Lapis Lazuli*, Touch-stone, &c. all neatly polished and inlaid, and wrought into various Figures. This Chapel is an Octagon, the Roof of which is a spacious Cupola: One Side of this Octagon is left void hitherto, being reserved for a most magnificent Altar opposite to the Door, the rest of the Sides being for the Statues and Monuments of such as have been Grand Dukes; the first, beginning on the Left Hand of the Door, being intended for *Alexander*, who was only Duke of *Florence*, was not yet made up; the rest have their respective Names set over their Effigies, each of which stands in a Nich, some of Stone, some of Brass, and underneath a Coffin or Cushion, with a Ducal Crown lying upon it, with the following Inscriptions in this Order:

*Franciscus Mag. Dux Etruriæ II. vixit ann. XLVI.
ob. XIX. Octob. M. D. LXXXVII.*

*Cosmus Mag. Dux Etruriæ II. vixit ann. LV.
ob. XI. Kal. Maii, MDLXXXIV.*

*Ferdinandus Mag. Dux Etrur. III. vixit ann. LX.
ob. VII. Id. Feb. CIO IO CIX.*

*Cosmus Mag. Dux Etrur. IV. vixit ann. XXX.
ob. XXVIII. Feb. CIO IO CXX.*

There is one Side remaining for *Ferdinand II.* the fifth Great Duke, who died since our Departure; the present Great Duke's Name being *Cosmus III.*

Betwixt the Tombs are the Arms of two of the chief Cities under their Jurisdiction. There are so great a Number of Towers, Pillars, Fountains, and Statues of Brass and Stone, and most excellent Pictures, at *Florence*, that I will not pretend to enter upon a particular Description of them here, contenting myself with mentioning only the two *Statuæ Equestres* in Brass, much greater than the Life; one of *Cosmus I.* upon the great Piazza; the other of *Ferdinand I.* in the Piazza of the *Annunciata*; and so proceed to give you a short Account of the Great Duke's Gallery in the Palace, a very handsome Structure, having the Stables under Ground, and above them fair Portico's to walk in; over these, the Shops of all the Artificers that are employed by the Great Duke; above them is that they properly call the Gallery, where in a Walk free for any to come into, you

you see many ancient, and some modern Statues; and on each Side of the Walk, the Pictures of Princes and other great Persons. Here we saw, among the rest, the Pictures of Queen *Elizabeth*, King *James*, Oliver *Cromwell*, and of the before-mentioned *Johannes Accutus*.

The Rarities which we saw were preserved in four Closets, the chief of which were, a very large terrestrial Globe, and a *Sphæra Armillaris* bigger than that; several Stone Tables curiously inlaid with Fragments of precious Stones of various Colours, representing Flowers, Fruits, Birds, Beasts, and Insects, so naturally, that the best Masters of *Europe* could scarce have drawn them more exactly. One of those Tables (the richest I ever saw) was set with many Rubies and Pearls, and valued at 100,000 *Florence Scudi*, (a *Scudi* being somewhat more than an *English Crown*;) several very excellent Cabinets, the best of which being valued at 500,000 *Scudi*, was set with Gems of the first Magnitude; a Pearl of an enormous Size, but not perfectly round; with several Topazes about the Bigness of Walnuts, large Rubies and Emeralds, besides other Stones of less Value, &c. Here also they shewed us the Nail, half of Gold, half Iron, Part of which they pretend was transmuted by *Thurnbaufferus*, an Alchymist of *Basil*, into Gold, but the Iron and Gold was so coarsely join'd, that it easily discovered the Imposture. Besides many ancient *Roman* Idols and Lamps of various Shapes, and Pictures and Statues made by the best Masters.

In the Great Duke's Armory we took Notice of the Armour of many great Persons, and, among the rest, of a Headpiece pretended to have belonged to *Hannibal*, having many *Moresco* Characters on it; *Scanderbeg's* Sword; the Hair of a Horse's Mane seven Yards long, and the Skin of the Horse stuffed up; a long Gun and a Pistol, the Barrels of beaten Gold; several round Bucklers, on one of which was painted a *Medusa's* Head, by *Michael Angelo*, valued at a high Rate; *Italian* Locks for Women; a Thong cut out of the Hide of a Buffalo, 250 Yards long; a great many *Turkish* Arms, &c. The *Argentaria* or Wardrobe contains twelve Cupboards, full of rich Plate; one is fill'd with all Sorts of Vessels of beaten Gold; another has an Altar of Gold, set with Diamonds and other precious Stones, with this Inscription in Capital Letters made up of Rubies, *Cosmus II. Dei gratia magnus Dux Etruriæ ex voto*.

If I should enter upon a Description of the Great Duke's Palace, with its Gardens, Variety of Trees, Fruits, Shrubs, Walks, Fountains, Waterworks, &c. it would require a Treatise by itself; the Choice Plants we took Notice of *in transitu* were, *Dictamnus Creticus*, *Quamoclit Indorum*; *Tragoriganum*; *Stramonium peregrinum* Ger. i. e. *pomo spinoso rotundo*; *Pisum cordatum*, *Balsamina cucumerina*, *Chamærrhiphes*, &c.

In the Duke's *Theriotrophium* we saw a *Lion*, *Tyger*, *Leopard*, *Bear*, *Wolf*, *Porcupine*, *Wild Boar*; the Snout of the last being longer than those of tame Hogs, the Ears not quite so long, of a black Colour, as were the Feet and Tail, the rest of the Body being of a grisly or Iron-grey Colour, which is constantly the same; it being observed, that most of the wild Animals, whether Birds or Beasts, keep the same Colour.

Most of the Palaces of *Florence* are built *à la maniera rustica*, as the *Italians* call it, that is to say, of rough hewn Stones, even protuberating above the Superficies of the Wall: For the rest, this City is in a decaying Condition, in respect, I mean, of what it has been formerly, proceeding partly from the great Declension of their Silk Trade with *France*, as also from the heavy Impositions laid upon them by the Great Duke, who being absolute, receives the tenth of its yearly Value of every House, as well as the tenth of what Lands or Houses are sold; eight *per Cent.* of the Portion of all Women that are married; two *per Cent.* out of every Law-suit, according to the Sum sued for; for every young Heifer that is sold, a Crown; and on all other Provisions, even to the very Eggs, an Excise in Proportion: Nay, he farms the Monopoly of fine Bread (call'd *Pane di Bocca*) to the Baker, who furnishes his Table, and pays 1000 *Scudi* yearly: Besides these

Impositions, as they render the Generality of the Inhabitants poor, (there having not been a new House built in forty Years) so it makes the Prince very powerful, whose ordinary Revenue is computed at one Million and a half, and by some two Millions of Crowns *per Annum*; whereas his annual Expences do not amount to above half the Money, being very thrifty in his Court, keeping his Servants at Board-Wages, and being at a set Rate with his Cook, Baker, &c. one of the chief Maxims of State being to amass great Treasures; for which Reason the late Great Duke would often say of our King *Charles* the First, *That Want of Money ruined him!*

Very few Gentlemen here, but what sell their own Wines by Retail; not within Doors, but by a Hole made in the Cellar-Wall, where they take in and return the Flasks or other Vessels: Instead of a Signpost, they hang out Pieces of broken Flasks at their Palace Gates. Notwithstanding this, they look upon it as a great Disparagement to breed up their Children to the Profession of Physick; but as for Commerce, it is so well look'd upon here, that from the Great Duke himself to those of the lowest Rank, they all apply themselves to it vigorously. Besides that they call the *old State*, comprehending the Territories of *Florence* and *Pisa*, and the *new State*, comprehending the Territory of *Siena*, the Great Duke is Master of part of the Isle of *Elba* (likewise a Fief of *Spain*) part of *Grassignana*, purchas'd from the Marquesses of *Malaspina*; the Earldom of *St. Fiora*, bought of the *Strozzi*; the Marquisate of *Scanzano*, and the Earldom of *Pitigliano* and *Sorano*, once belonging to the *Ursini*; and some other small Places which he holds from the Emperor, as he is Feudatory to the Pope; for *Radicofani* in *Tuscany*, and *Borgo san Sepulchro* in *Umbria*. He has generally the Reputation of maintaining his Fortresses in a better Condition than any other Prince in *Europe*, for the Defence of which he maintains, in Time of Peace, Five thousand Men in constant Pay. The Guard of his Body are *Germans*. They have an odd kind of Race at *Florence*, especially in the Summer time, when a certain Number of the swiftest Horses are let loose, and so run full Speed through one of the Streets, (which thence is call'd *Curso*) without Riders. To make them run, they fasten small Pieces of Leather stuck with Pricks upon their Backs.

The Ecclesiastical Revenue in all the Duke's Territories did, according to a Survey taken thereof 1645, amount to 765000 Crowns *per Annum*.

It is a constant Practice, among the Gentlemen as well as Citizens, of any Note here, to put their Daughters to board in the Nunneries as soon as they come to the eighth or tenth Year of their Age, looking upon this as the cheapest and securest Way to educate them till they are married.

The red *Florence* Wine (deeper than ordinary Claret) is a Wine much esteem'd both in *Italy* and elsewhere; it acquires this deep-red Tincture by the letting it stand longer than ordinary upon the Husks or *Vinacea*, the interior Pulp of the Grape being white.

Sept. 1. We set out again from *Florence* towards *Rome*, and passing through *Castiano*, eight Miles from thence, after we had travelled four Miles further, left the ordinary Road leading to *Siena*, rode through *St. Buco*, to a poor wall'd Town call'd *St. Donato*, sixteen Miles from *Florence*, and fourteen from *Siena*, whither we continued our Journey by the Way of *Castellina di Campi*, and had a Prospect of *Siena* ten Miles before we came at it, the Country hereabouts, as well as all over *Tuscany*, being mountainous and barren. *Siena* (being about four Miles in Compass) is a very fair City, the Piazza of which resembling the Figure of a Cockle-shell, is adorned with stately Buildings: The Cathedral is a most magnificent Structure of Marble, with a most noble Front, and adorned with the Heads of all the Popes, placed in the Wall, round about the Church; some part (*viz.* about the Front part) of this Church is pay'd with Marble inlaid, or rather a most curious Piece of *Mosaick* Work, containing part of the History of the Bible, done by *Micherino Sanese*: If it had been

been finished according to the first Project, it would have exceeded any Thing of that kind in the World; as, the Painting of the Library Walls in this Church, containing the History of *Aeneas Sylvius*, afterwards Pope *Pius II.* half by the Hand of *Peruginus*, and half by *Raphael Urbin*, is one of the best that ever I saw, being as lively now, as if it had been done but a few Days. From the Tower called *Torre di mangio*, we took a full Prospect of the whole City, which is of a triangular Figure, and encloses a great many Gardens and Vineyards within its Walls: It is situate upon a Hill, which, together with the Pavement of the Streets, (which is of Brick set Edgeways, as they do in *Holland*) keeps them very clean, and affords them this further Conveniency, that having good Cellars, they make little Use of Snow or Ice to cool their Drink. There is a Room in the Palace of the *Podesta*, the Roof and Walls whereof are so excellently painted by *Micherino Sanese*, that it is justly valued more than the whole Palace besides. This Place is pretty much frequented by Strangers, for its temperate Situation in the Summer time; and as the Inhabitants speak the *Italian* in its Purity, so they are very obliging to Travelers, and all Manner of Provisions are at a reasonable Rate here.

25. Sept. 23. We left *Siena*, and passing through *Lucignano*, *Buon Convento*, and *Tornieri*, came to *St. Quirico*, (*St. Cyriaci Opidum*) where I met with abundance of Lavender Cotton. Hence we rode unto *Radicoferani*, thirty four Miles from *Siena*, situate upon a high Hill, and provided with a Garrison of three hundred Men, being a well fortified Frontier Town of the Great Duke. In this Day's Journey we saw great Plenty of *Abstinium Romanum*, Cæs. between *St. Quirico* and *Radicoferani*, *Cynara silv.* and two other Species of Thistle, one I guess'd to be *Carduus tormentosus* Lob. the other I knew not; *Acarna flore purpureo-rubente patulo*; *Veronica spicata cærulea*; *Winter Savory*; *Aster luteus* *Linariae folio*; *Colchicum* all over the Pastures.

Sept. 4. We continued our Journey from hence to *Viterbo*, being thirty eight Miles; and we had scarce travelled ten Miles, when we passed over a small River near a Place called *Ponte Argentino*, which on this Side is the common Border of the Pope's and Grand Duke's Territories; and travelling on four Miles further, came to *Aquapendente*, a large old Town, so called from its Situation upon the Top of an Hill, from whence the Water falls down perpendicularly. We observ'd all the Villages and Towns of this Country to be built on Hills, for Coolness Sake: And no sooner were we entered the Ecclesiastical Territories, but we found the Fields full of Trees, intermix'd with pleasant and fruitful Valleys, whereas all that Part of the Great Duke's Country through which we pass'd was very craggy, without Trees, and appear'd to us very barren. From *Aquapendente* we went on to *Lorenzo*, a small Place at the Edge of the Lake of *Bolsena*, (anciently of *Volsinii*) and travelling for five Miles along the Lake, came to *Bolsena*, and thence mounted up to *Monte Fiascone*, where having refresh'd ourselves with that most excellent Wine that grows here, we travell'd for eight Miles, through a fertile Plain to *Viterbo*, a Town very spacious, and well situated, but indifferently built; we observ'd only two or three handsome Fountains, and one Tomb of Pope *John XXI.* in the Dome or Cathedral. The hot Springs hereabouts we had not time to take a View of or enquire about.

From *Viterbo* we travell'd, September 5, through *Roniglione*, (a pretty Place belonging to the State of *Castro*) to *Baccano*, being twenty two Miles. September the 6th, We went forward, travelling that Day sixteen Miles, to *Rome*: We ascended a Mountain not far from *Baccano*, from whence having a large Prospect of the *Campania* of *Rome*, being covered all over with a thick Mist, appeared to us at a Distance like a huge Lake. About three Miles on this Side of *Rome* we saw an ancient Monument they call'd the Sepulchre of *Nero*, the like we had met with before at *Modena*. About a Mile short of *Rome*, passing over the *Tiber* by the *Ponte Mollè*, (the ancient *Pons Milvius*) came upon

the *Via Flaminia*, a well-pav'd straight Way, having on both Sides many Country Houses and Gardens, which brought us to the *Porta del Popolo*, one of the Gates of *Rome*.

26. So many Authors have employed their learned Pains in the Description of *Rome*, both ancient and modern, I shall be very brief in the following Account of it. The Antiquities worth the Observation of the Curious, are chiefly the Ruins and Remainders of *Pagan Temples*, *Theatres* and *Amphitheatres*, *Circi*, *Baths*, *Aquæducts*, *Obelisks*, *Triumphal Arches*, *Pillars*, *Fora*, *Mausolea*, *Statues*, *Altar* and *Grave-stones*, and other Stones, with their Inscriptions; *Medals*, *Entaglias*, or *Gems* engraven with Figures, *Sacrificing Vessels* and *Instruments*, *Sepulchral Urns*, *Lachrymal Urns*, *Ancient Lamps*, *Weights*, *Rings*, &c. Among the ancient Temples, which are still entire, we have remaining some Part of them: 1. The *Pantheon*, commonly call'd *Rotunda*, from its circular Figure, now dedicated to the Virgin *Mary* and *All-Saints*, is 144 Foot high, and as many broad, the Roof being vaulted in Form of a *Cupola*, having no other Light, but that it receives through a round Hole on the Top, of nine Foot Diameter. Its Porch consisted of sixteen tall and massive Pillars of speckled Marble, call'd Oriental Granite, each Pillar having but one Stone, of which there are only thirteen remaining now. Upon the Architrave of this Portico you see these Words insert'd in very large Letters:

M. AGRIPPA L. F. COS. TERTIUM FECIT.

This Temple was covered with Copper, till Pope *Urban* the VIIIth removed it thence, and to appease the Grumbling of the People, order'd the four famous wreath'd Pillars and Canopy of the high Altar in *St. Peter's Church* to be made of it; the *Clavi trabales*, or Nails which fastned the Tiles of the *Portico*, weighing no less than 2800 Pounds, out of which was cast a great Cannon, which is still to be seen in the Castle of *St. Angelo*, with this Inscription, *Ex clavis trabalibus Porticus Agrippæ*, and the Figure of one of those Nails engraven upon it. The whole Body of this Temple remains entire, being despoiled only of its Ornaments and Statues, among which was the famous *Minerva* of *Phidias*. After its first Building, it had seven Steps upwards, which surrounded the whole Structure, whereas now you must descend eleven Steps to go into it; a convincing Proof that a great Part of the ancient *Rome* is involv'd in Rubbish under Ground. Those that shew'd us the Church were very careful to tell us, That the Lintel and Side-posts of the great Door of this Church (which indeed is exceeding large in all its Dimensions) were all of one entire Stone; which we thought fit rather to believe, than to give ourselves the Trouble of examining it. In this Church is to be seen the Tomb of that great Architect and Painter *Raphael Urbin* with an elegant Inscription.

2. *Templum Fortune virilis*, or the Temple of the Moon, as some will have it, but rather of the Sun and Jupiter, now call'd *S. Maria Ægyptiaca*, where the *Armenians* have their Service. 3. The Temple of the Sun, or of *Vesta*, as some affirm, or as others, *Templum Herculis Victoris*, standing not far from the Precedent, viz. by the *Tiber* Side, near the broken Bridge, and is now call'd *La Madonna del Sole*, or *St. Stefano allo carrozze*; a small round Structure, with a Gallery of striate Pillars round about it: It receives its Light like the *Pantheon*, through a Hole on the Top. These two last remain entire. 4. *Templum Dianæ Aventinæ*, now call'd *St. Sabino*, is very large, twelve striate Pillars on each Side, dividing the Nave from the Isles. 5. *Templum Herculis Aventini*, now the Church of *St. Alexius* and *Bonifacius*, near the former, on the Top of Mount *Aventine*. 6. *Templum Jani quadrifrontis*, in the Cow-market. 7. The Temple of *Concord*, or rather its Remains, being only a *Portico* sustained by eight great Marble Pillars of one Stone each, at the Foot of the *Mons Capitolinus*. 8. The Temple of *Saturn*, now *St. Adrian's Church*, the Frontispiece of which is only the Remainder of the ancient Temple; it stands near *Severus's Arch*, at the Foot

of the Capitol. 9. The Temple of *Antonine and Faustina*, now *St. Lorenzo in Miranda*; of this remains entire the Portico, with its Inscription, and some of the Walls built of maffy Stones, the Marble Pillars which support the Portico having a Grain lying one Way, all cleave like Wood. 10. The Temple of *Romulus and Remus*, since dedicated to *St. Cosmo and Damiano*, has scarce any thing remaining of its ancient Structure. 11. *Templum Iſidis & Serapidis ſive Solis & Lune*, now *St. Maria nuova*; the few Ruins remaining of the old Church are behind the Cloyſter, the preſent Church being no Part of it, neither ſtanding in the ſame Place. 12. The Temple of *Peace*, the Founder of which was *Veſpaſian*, exceeded all the other ancient Temples of *Rome* in Bigneſs, as may be ſeen by the Foundation, the Ruins of which may eaſily be diſtinguiſh'd; for the reſt, there are no more than Part of three Arches left ſtanding: The ſtriate Pillar, ſet up before the Church of *St. Maria maggiore*, the greateſt of one entire Stone now in *Rome*, was taken hence, being one of the eight which ſupported the Nave or Body of this Temple. 13. *Templum Jovis Statoris*, three Pillars now to be ſeen in the *Campo Vaccino*, were Part of this Temple. 14. *Templum Jovis tonantis*; of this three Pillars, for the moſt Part under Ground, are ſuppoſed to be Part; on the Architrave whereof are to be ſeen theſe Letters, *ESTITUER*, on the Left Hand of the *Clivus*, as you go from *Severus's Arch* to the Capitol. 15. The Temple of *Faunus*, now called *St. Stefano rotundo*, from its circular Figure: This large Structure is ſuſtained by two concentric Circles of Pillars, the outermoſt Pillars being leſs than the innermoſt, the firſt containing forty four Pillars, and the other exactly half the Number; beſides that, the Pillars of the inner Circle ſtand at the ſame Diſtance from one another as thoſe in the outer. 16. *Templum Herculis Callaici*, now *Galuzo*, of a diagonal Figure, its Roof being a Cupola not much leſs than that of the *Pantheon*; it has two Doors directly oppoſite one to another, and on both Sides betwixt them, eight Niches for Statues. 17. *Templum Bacchi extra portam Piam*, now the Church of *St. Coſtanza*, without the Walls: This is alſo a round Structure, having a concentric Circle of twelve Pillars of a leſs Circumference within. Here you ſee an ancient Monument of *Porphry* reſembling a large Cheſt, having a Stone to cover it; it is curiouſly engraven with Branches of Trees, Boys treading of Grapes, of Birds, &c. In ſeveral Places of the Roof are Pictures of Bunches of Grapes, and other Things belonging to Vintage, but the Freſhneſs of the Colours, and Rudeneſs of the Figures, makes me ſuſpect them to be no *Roman Workmanſhip*. They call this the Monument of *Bacchus*. 18. The Temple of the *Sun*; of this there remains only ſome great Marble Stones in the Garden of the *Columna's*, ſome of them curiouſly engraven. 19. The Temple of *Romulus and Remus*, now dedicated to *St. Theodore*; it is of a circular Figure, into which you deſcend by Steps, like as into the *Pantheon*.

Of the ancient *Roman Theatres* and *Amphitheatres*, there are remaining only ſome ſmall Footſteps of the Amphitheatre of *Statilius Taurus*, near the Church of *St. Croce in Gieruſalemme*, and ſome Part of the Walls of the Theatre of *Marcellus*, upon which the Palace of the *Savelli* is built: But of the Amphitheatre of *Titus*, now called the *Coliſeo*, great Ruins are to be ſeen to this Day, being round without, and of an oval Figure within: It is capable of containing conveniently 85,000 Perſons. Of *Circi*, there are only ſome ſlender Remnants of that of *Antoninus Caracalla*, without the City, and of the *Circus maximus*, of which you may juſt diſcern the Figure. Of the *Circus Agonalis*, (now the *Piazza Navona*) and of the *Circus* of *Nero* in *Campo Vaticano*; as likewiſe of the *Circus Flaminius*, nothing is left but their Names. Of *Roman Baths* very conſiderable Ruins are to be ſeen, viz. thoſe of *Diocleſian*, which had Seats for three thouſand two hundred Perſons to bathe, without ſeeing one another; of *Antoninus Caracalla*, which had ſixteen hundred Seats all of poliſh'd Marble; the *Thermæ* of *Titus*, of *Agrippa* near the *Pantheon*, of *Conſtantine* near *St. Sylv'eſter's*, of *Nero* near *St. Euſtachi's Church*, of *Paulus Æmilius* at the Foot of *Monte*

Cavallo, called, *Magnanapoli*; beſides many others, of which ſcarce any Footſteps are to be ſeen now.

Among the ancient *Aquæducts* of *Rome*, there are only four that have ſomething remaining now, viz. the *Aqua Martia*, conducted thirty ſeven Miles; the *Aqua Claudia*, brought thirty five; and the *Aqua Appia* and *Aqua Virginis*, both brought eight Miles; the laſt of which being repaired by Pope *Nicholas V.* is uſ'd now-a-days, and known by the Name of *Fonte di Trivio*. Beſides theſe, there are two new *Aquæducts* built by late Popes, of which the following Inſcriptions will give you a ſatisſactory Account.

I.

Sixtus V. Pont. max. Picens
Aquam ex Agro Columnæ
Via præneſt. ſiniſtrorſum
Multarum collectione venarum
Ductu ſinuſo à receptaculo
Mill. XX. à Capite XXII.

Adduxit:

Fælicemque de nomine
Ant. Pont. dixit.
Cæpit anno I. abſolvit III.
MDLXXXVII.

II.

Paulus V. Pontifex maximus aquam in agro Braccianenſi ſaluberrimis è fontibus collectam, veteribus aquæ Alſeatine ductibus reſtitutis novisque additis XXXV. ab Urbe millario duxit, Anno Domini MDCXII. Pontificatus ſui ſeptimo.

There are eleven *Obeliſks* remaining, but we took Notice only of nine: 1. That which anciently ſtood in the *Circus maximus*, but being broken, was by *Sixtus V.* ſet handſomely together, and placed upon a fine *Pedeſtal* in the *Piazza* within the Gate called *Porta del Popolo*, having on each Side an Inſcription, and two ancient ones on the oppoſite Sides in the ſame Words.

Imp. Cæſar Divi F.
Augustus
Pontifex maximus
Imp. XII. Coſ. XI. Trib. Pot. XIV.
Ægypto in poteſtatem
Populi Romani redact.
Soli donum dedit.

On the other two Sides are modern Inſcriptions. It is engraved on each Side with three Rows of *Hieroglyphicks*. 2. The *Obeliſk* which now ſtands in the *Piazza* before *St. Peter's Church*, was taken out of the *Circus* of *Caligula* and *Nero*, and at the Charge of Pope *Sixtus V.* placed here, as were alſo thoſe of *St. Maria maggiore* and *St. John Lateran*. This *Obeliſk* is ſeventy two Foot high, beſides the *Pedeſtal*, in all one hundred and eight. It has no *Hieroglyphicks* upon it. Of the Manner of its Removal, a peculiar Treatiſe is written; as the four modern Inſcriptions on the *Pedeſtal*, and the ancient one on the *Obeliſk* itſelf, may be ſeen in *Roma antica & moderna*. 3. That of *St. John Lateran*, having three Rows or Files of *Hieroglyphicks* on each Side of it; this is one hundred and twelve Foot high, beſides the Baſe, where it is nine Foot and an half thick one Way, and eight Foot the other. It is the greateſt *Obeliſk* in *Rome*: From the following Inſcription it appears by whom it was brought to *Rome*, and ſet up.

Fl. Conſtantiſ Aug. Conſtantiſ Aug. F. Obeliſcum à patre loco ſuo motum, diuque Alexandriæ jacentem trecentorum remigum impoſitum navi mirandæ vaſtitatis per mare, Tiberimque magnis molibus Romam conveſtum in circo maximo ponendum curavit S. P. Q. R. D. D.

4. That of *St. Maria maggiore*, without *Hieroglyphicks*, and much leſs than any of the former, was removed hither out of the *Mauſoleum* of *Augustus*. 5. That of the *Piazza Navona*, taken out of the *Circus* of *Caracalla*, by Pope *Innocent X.* It has but one Row of *Hieroglyphicks*, and much leſs than the laſt mentioned; of this
Atbanas.

Athanasius Kircher has written a whole Treatise. 6. That of *St. Mabuto*, near the Jesuits Church, is only a Piece of the Top of an Obelisk, placed upon four rude Stones; it has some Hieroglyphicks. 7. That in the Garden of *Medicis*, is also no more than a Piece of the Top of an Obelisk, full of Hieroglyphicks, placed upon a Base, without an Inscription. 8. That in the Garden of the *Mattei* is but very small, and broken in two Pieces; the uppermost has to the Top Hieroglyphicks, but the lower Piece none. 9. In the Court of the Palace of the Prince of *Palestrina*, you see an Obelisk lying upon the Ground, broken in three Pieces, with Hieroglyphicks; it seems to have been much longer. 10. *Roma antica* makes Mention of an Obelisk standing at the Foot of the Stairs in the Palace of the *Ursini*, in the *Campo di flore*, but we did not see it. 11. We were also credibly informed, that an Obelisk, bigger than any of those erected already at *Rome*, and supposed to be entire, was lying under a Row of Houses in the *Campus martius*.

Among all these Obelisks, those that are engraven with Hieroglyphicks are of the same Kind of Stone, viz. of a hard Marble of a mingled Colour, red and white, which in so many Ages has not undergone the least Alteration by the Weather: Their Figure is taper-wise, lessening by Degrees from the Basis to the Center, yet so as that they don't terminate in a Point; but when they are come to that Degree, as to be too small to have any Hieroglyphicks engraven upon them, the Tops are made in the Form of an obtuse Pyramid. It is the general Opinion, and not without a great deal of Probability, that the Hieroglyphicks upon these Obelisks, from the Bottom to the Top, are by Degrees greater and greater, which makes the uppermost appear of the same Bigness with the lowermost.

Of Triumphal Arches are yet remaining that of *Septimius Severus*, that of *Titus Vespasian*, that of *Constantine* the Great, that erected in Honour of *Antoninus*, *Septimius's* Son, and that of *Gallienus* and *Salonica*, called the Arch of *St. Vito*. We could not find out the Arch in the *Via Flaminia*, called *Arco di Portugallo*, in *Roma antica*, where you may see the Inscriptions and Places of those Arches.

There are four Pillars yet remaining, viz. the *Columna milliaria*, which anciently stood in the *Forum Romanum* in the Center of the City, this being the Mark from whence they used to count their Miles by a certain Stone set up at every Mile's End, this Statue being, toward the Top, marked with the Letter I, of a considerable Bigness, as the second Stone at the first Mile's End was marked with II, and so further; so that *ad secundum lapidem* signified at one Mile's Distance from this Pillar, *ad tertium* two, and so on. It is of no considerable Bigness, and now placed on one Side of the Area of the Capitol. The *Columna rostrata* in the *Forum Romanum*, erected to *C. Duilius*, in Memory of the Victory obtained over the *Carthaginians* at Sea; the old and long Inscription, which was much defaced, is supplied in many Places.

The Column of *Trajan*, of white Marble, which remains standing ever since its first Establishment, being one hundred and twenty eight Foot high, and the Base twelve; within it you ascend to the Top by a Pair of winding Stairs of one hundred and ninety two Steps, having forty four small Windows to give Light; the whole Fabrick is composed of no more than twenty four entire Stones, each Stone having eight Steps. An Helical Area compasses the Pillar from Top to Bottom, in Manner of a Screw, on which are carv'd the Actions of *Trajan* in his Expedition against the *Dacians*. The Pedestal, which was buried under Ground, was laid open again by Pope *Paul III.* and has the following Inscription:

S. P. Q. R.

Imp. Cæsari Divi Nervæ F. Nervæ Trajano Aug. Germ. Dacico, Pont. maximo, Trib. Potest XVI. Imp. VI. Cof. VI. PP. ad declarandum quantæ altitudinis mons & locus tantis operibus sit egestus.

The Column of *Antoninus*, much like the former, is

one hundred and seventy five Foot high, has two hundred and six Steps within, and fifty six small Windows; Being miserably broken and defaced, Pope *Sixtus V.* mended and restored it.

There are but two *Mausolea* remaining, viz. that of *Augustus*, and the Moles of *Adrian*, now called the Castle of *St. Angelo*. Of Altar-stones, Grave-stones, and other Stones with Inscriptions, there is vast Variety all over the City: And of ancient Medals and *Entaglie*, there are dug up daily, which are sold in the Shops and Stalls in the Market-places, and great Numbers of them are preserv'd in the Collections of the *Virtuosi*; where, as well as in the Gardens and Palaces of Persons of Quality, you may see great Quantities of sepulchral Urns of different Shapes and Bigness, some of Stone, others of Earth.

Among the Antiquaries of *Rome*, who have considerable Collections of these before-mentioned Things, as well as of sacrificing Vessels and Instruments, Lachrymal Urns, ancient Lamps, Rings, *Fibulae*, *Tesseræ hospitalitatis*, Weights, &c. *Leonardus Augustinus*, the Pope's Antiquary, and *John Petro Bellori*, deserve to be prefer'd before the rest; that worthy and ingenious Gentleman Cavalier *Carlo Antonio del Pozzo*, shewed us twenty Volumes in Folio, containing the Figures of most of the Antiquities in and about *Rome*, drawn by the Hand with great Exactness; and among the rest, we took Notice of the *Crepundia Veterum*, being Nothing else but little Images of Earth resembling Children, Apes, Hares, &c. found in Urns. Of Weights, we saw some in the Collection of *Leonardus Augustinus*, made of a dark-red Stone well polish'd, of the Shape of a *Holland Cheese*, of divers Magnitudes, marked on one Side with the Number of Ounces or Pounds it contained. Of these Weights, I saw two as big as a large *Holland Cheese*, in the Church of *St. Maria in Cosmedin*, called *Schola Græca*, and two more in the Church of *St. Maria in Trastevere*, of which they have a Tradition, that they used to tie them to the Martyrs Feet, to stretch and torment them. In the last-mentioned Collection, we saw also a Medal, with the Figure of a *Talus* on one Side, and this Inscription on the other; *Qui ludit arrham det quod satis sit*: The *Fritillus*, or Dice-box of the Ancients, like ours; the *Strigiles*, a Medal that used to be hung about the Slaves Necks, having on one Side the Figure of a She-Wolf giving Suck to *Romulus* and *Remus*, and on the other, in three concentrical Circles, these Words, *Tene me ne fugiam, & revoca me in foro Trajani purpuretica ad Pascasium Dominum meum*. A Drinking-glass like a *Priapus*, of which the Poet, *Vitreo bibit ille Priapo*. The ancient Roman Timbrel, not unlike our modern ones.

27. *Rome* is near thirteen Miles in Circumference, but did to us appear not to be so populous as *Venice*, *Milan*, or *Naples*, as comprehending a great deal of waste Ground: The Number of its Inhabitants is generally believed to be 120,000 Souls, without Strangers, of which there are great Numbers here; it extends nowadays below the Hills into the Valley by the River-side, being generally well-built, the Streets streight, and beautified with many Palaces, Monasteries and Churches, of which, they say, there are above three hundred. Provisions are not so cheap here as at *Florence* or *Naples*, yet have they great Plenty of them, and exceeding good, their Beef being not inferior to ours in *England*. Before they kill their Beasts, they hunt them as we do our Bulls. Their sucking Veal they prefer before all of that Kind in *Europe*; and their Kid or *Caprette*, and Pork, is also excellent good Meat; but their Mutton is tough and dry. For tame Fowl they may compare with any Part of *Europe* both in Quantity and Goodness, viz. Hens, Capons, Turkeys, tame Pigeons, &c. Geese they have in no great Plenty, but wild Fowl is very cheap, and that of the best Sort, such as Partridges, of two Kinds, the common and red-legged ones, Woodcocks, Snipes, Duck and Mallard, Wigeon, Teal, Quails, Plover, &c. besides what is sold in the Small-bird Market, of Thrushes, Black-birds, Larks, &c. nay, even Robin-red-breasts, Finches, Wag-

Wagtails, Grays, &c. Besides these before-mention'd, you may see sometimes in the Poulterers Shops, Cranes, Wild-geese, Shelldrakes, *Avosetta*, Water-hens, Berganders, and even such Birds as are not eaten in *England*, as Kites, Buzzards, Spar-hawks, Kestrels, Jays, Magpies and Wood-peckers. Neither are they in any Want of Sea or River Fish, though sold at a dearer Rate than Flesh: Of Fresh-water Fish, Pike, Carp, Tench, Trout, Eels, Barble, Chevin, and Dace, are the most frequent; I don't remember I ever saw a Perch at *Rome*. Of Sea-fish, they have the *Mullus antiquorum*, now *Triglia*, called *Rouge* by the *French*, from its Colour; in *Cornwall* we call them *Surmullet*: *Spiegole*, or the *Lupus marinus*, a Fish not known in *England*, *Orate*, Gilthead; *Cephal*, the *Mugil* of the Ancients, we call it a *Mullet* in *English*; *Sarde*, or the Sprat; Conger or Lamprey; Sole, Plaife, and others of the flat Kind; *Merluzzo*, we call them Hakes; sometimes small Sturgeons, Dog-fish, as also Tuny and Sword-fish.

Wild Boar and other Venison you scarce ever miss in the Market, but their wild Deer (or *Capreole*) is generally very lean: Sometimes you meet also with Porcupine to be sold. Oranges and Lemons are very cheap here, but large Pears and Apples dear, being sold by Weight all over *Italy*. Their Bread is very cheap, good, and light, though they use no Yeast to raise it. Of Wines they have greater Variety than in any other Place of *Italy*; as *Greco*, *Lacrime* of *Naples*, *Languedoc*; Wine of *Syracusa* and *Augusta* in *Sicily*, *Orvietano*, *Jensana*, *Monte Pulciano*, *Monte fiascone*, *Castelli*, *Romano* and *Albano*, more frequently used than all the rest. Most of their Wines are sweet (which they call *Abbccati*) and so strong bodied, that they will bear half Water. Rough Wines they call *Asciuti*, though none of theirs are so harsh as our Clarets, *Florence*, or red Wines, which are also to be had here. Their Olives, though small, are exceedingly good and sweet; of Walnuts, Hazlenuts, and such other Fruits as are frequent among us, great Plenty; but our Apples and Pears excel all the rest for Goodness.

Rome is also noted for various Commodities and Manufactures; as, the best Viol and Lute-strings in *Europe*, perfum'd Gloves, Combs made of Bufflers Horn, Womens Fans, Vitriol, Essences; and as for Musick and Pictures of the best Masters, this City may deservedly challenge the Preference before all other Places in *Europe*. At this Time Cavalier *Barberini* was the most noted and the only excellent Sculptor here, and *Pietro de Cortona* the most eminent Painter.

The *Villa's* or Country-Seats of the Princes and other Persons of Quality of *Rome*, for Flower-Gardens, Groves, cut Hedges of Cypress, *Alaternus*, Laurel, Bay, *Phillerea*, *Laurus tinus*, and other *semper-virent* Plants, close and open Walks, most excellent Orchards of Fruit-trees, Labyrinths, Fountains, Waterworks, Statues, Bird-cages, and other Ornaments, but especially in their Bigness, (some being three or four Miles in Compass) exceed most of the Gardens in *Christendom*; the chief of those, (1.) The *Villa Borghese*, esteem'd the best of all about *Rome*, though inferior in Bigness to the (2.) *Villa Pamphylia*, which lies on the *Janiculum*, without St. *Pancras's* Gate, being four Miles in Compass. (3.) The *Villa Ludovisia*, belonging to Prince *Ludoviso*. (4.) The Pope's Garden, called *Belvedere*, at the Vatican. (5.) The Pope's Garden at *Monte Cavallo*. (6.) The *Villa de Medici*, or the Great Duke's Garden. (7.) The Garden of *Montalto*. (8.) The Garden of the *Mattei*. Each of these have their little Pillars, beautified with most excellent Statues, *bassi relievi*, Pictures and other Curiosities, for the Description of which I refer myself to others; neither will I pretend to enlarge upon their publick Structures, but can't altogether pass by in Silence the Church of St. *Peter*, being in my Opinion, the most sumptuous and magnificent Structure that ever was placed upon the Face of the Earth, exceeding in all its Dimensions the most famous Temples of the Ancients, being 520 Foot long, and 385 broad, which though it be not so long as St. *Paul's* at *London*, yet as it is much broader, so this renders it more regular and proportionable to its Length.

The *Cupola* is of that stupendious Height and Compass (having the same Diameter as that of the *Rotunda*) which sustaining on the Top a very large Lanthorn, encompass'd with great Stone Pillars, this renders it the boldest and most stupendious Piece of Architecture the World ever beheld. The Roof is arch'd and divided into spacious Squares or Panes like Wainscot, the Ribs and transverse Borders terminating those Pannels, being richly gilt, and the *Area* of each Square fill'd up with a large gilt Rose. The oval Portico encompasses a large *Area* before the Church, consisting of four Rows of great Stone Pillars, so close together, that at a Distance they resemble a Grove of large Trees. To be short, the lofty Porch to which you ascend out of this *Area* by twenty four Steps, the covering of some part of the Walls with Marble, finely polish'd, the excellent Statues, magnificent Altars, most curious Pictures, and other Ornaments, render this Church the most majestick and most admirable Pile of Buildings in the Universe.

Whilst we staid at *Rome*, we took a Tour to *Frescati*, twelve *Italian* Miles thence, anciently call'd *Tusculum*, where *Cicero* had a Country-house, of which they shew as yet some Remnants: At present it is famous for three *Villa's*, viz. that of *Borghese*, with its Palace call'd *Mondragone*; the *Villa Aldobrandina* or *Belvedere*, belonging to Prince *Pamphilio*, and the *Villa Ludovisia*; all which for Walks, Groves, Labyrinths, and other Ornaments, may compare with the best near *Rome*; and for Waterfalls and other Waterworks, exceed them. That which pleas'd us most, (having never seen the like before) was the Imitation of a Tempest, with a Storm of Thunder and Rain, which artificial Thunder they call *Girandola*. We also took a View of *Tivoli*, the Ancients *Tibur*, eighteen Miles from *Rome*; how much *Horace* delighted in this Place, is evident out of his Verses. Its Situation is, as well as *Frescati*, on the Brow of a Hill overlooking the *Campania* of *Rome*. Here are to be seen the Ruins of ancient Temples and other Structures, and a remarkable Waterfall of the River *Aniene* or *Teverone*. And the *Villa* of *Este*, for its Gardens, Orchards, Walks, Groves, the *Girandola* and other Waterworks, may compare with those of *Frescati*. Not above five Miles from *Tivoli*, we pass'd over the Sulphur River, the Water whereof we found of a bluish Colour, and nauseous Smell, not unlike to that of our Sulphur Well at *Knaresburgh* in *Yorkshire*; the Channel in which it runs is encrusted with a whitish kind of friable stony Matter, which being congeal'd in many Places in the Shape of Sugar-plumbs, they call *Confeiti de Tivoli*, and sell them in whole Boxes full at *Rome*. About *Frescati* we saw growing wild Abundance of *Styrax arbor*, which we found no where else beyond the Seas.

The *Campania* of *Rome* is generally very fertile, but being marshy, and full of standing Pools, the Unwholsomeness of the Air makes that Country but thinly inhabited. One thing more we observ'd very well worth mentioning during our Stay at *Rome*, viz. that the Water the Servants brought us in frosty Weather to wash our Hands, was so hot, that we thought it had been warm'd on Purpose by the Fire; which Phenomenon having been denied by many of our modern Philosophers, who were not satisfied with the *Antiperistasis* of the Ancients, and yet could not give sufficient Reason for it, we thought fit to be satisfied of the Truth, by making an ocular Inspection into the Fountain itself, the Water whereof we found of an equal Heat with what was brought us. For the rest, the frequent Rains that fall hereabouts make in some Measure Amends for the excessive Drought and Heat of the Summer: And as *Rome* has sufficient to entertain People of all Tempers, so it is a Place well fitted for the Reception of Strangers. As for the Inhabitants, they approach now-adays, in their Furnitures and some of their Manners and Customs, more to the *English* than any of the *Italians* besides. To enlarge here upon the Court of *Rome*, the Ecclesiastical State and Government, with that of their Churches and Ceremonies, &c. as it would require an entire Volume, so without insisting any

any further upon those Particulars, we will proceed in the Account of our Journey.

January 24, 1664. We left *Rome*, and taking our Way towards *Venice* along the *Via Flaminia*, pass'd the *Tiber* again by the *Ponte Molle* (*Pons Milvius*) and at seven Miles Distance from *Rome*, through a small Village called *Prima porta*, which some suppose to have been the ancient Boundary of the City on that Side. From thence we travell'd eight Miles further, to *Castel novo*, where we took up our Lodgings. All this Afternoon we kept along the *Tiber*, upon the *Via Flaminia*, which reaches as far as *Rimini*, and is all along pav'd with broad Flints and Pebbles, having on each Side a Border of Stone, and in that Border, at every second or third Pace, a Stone standing above the Level of the Border. In the Fields, as we pass'd along, we found abundance of Vernal Crocuses in Flower.

Jan. 25. We continued our Journey to *Ariano*, eight Miles, where leaving the *Via Flaminia*, we rode round a high Hill, for nine Miles, to a little Town call'd *Civita Castellana*, now standing on a Hill, not far from whence we had a Prospect of the Duke of *Parma's* Palace of *Caprarola*, which seem'd to be no more than two or three Miles off, but was, as they told us, at least ten or twelve. After we had travel'd four Miles further, we pass'd the *Tiber* a little below *Borgetto*, over a Bridge called *Ponte Felice*, begun by Pope *Sixtus V.* and finished by *Urban VIII.* At a small Distance from the River Side we pass'd under the little Town of *Magliano*, built on the Top of a Hill, and travelling for four Miles along the Bank of the River, came to *Utricoli*, now standing upon a Hill, though the Ruins which remain shew the ancient *Otricoli* to have extended, at least for some Part, to the River. From hence we rode, for five Miles, over mountainous and rocky Ways, and a Mile before we reach'd *Narni*, upon the Brink of a most dreadful Precipice, extending along the River *Nera's* side. *Narni* (the *Nequinum* of the Ancients) has borrowed its Name from the River *Nar*, which passes below that steep Rock, upon the Ridge whereof this City is built: It was formerly a *Roman* Colony, and none of the least considerable ones, but is now very poor and mean. Here you see the Brass Statue erected in Memory of *Gattamelata*, the famous *Venetian* General, on Horseback, who was a Native of this Place. Near it you see the Ruins of vast Stone Arches, which some would have to be the Remnants of a Bridge, others of an Aquæduct over the River from one Mountain to another.

Jan. 26. We travell'd thence through a very delightful and fertile Valley, environ'd with Mountains, and well cultivated, to *Terni*, anciently *Interamna*, from its Situation, a neat little City, in the Piazza of which stands a Church which seems to have been an ancient Temple. About four Miles further is the famous Waterfall from the Lake *di Pie di Luco*. Beyond *Terni*, at the further End of this Valley, and on all the adjacent Hills, we saw whole Forests of Olive-trees, and the Country People busy in gathering them. From *Terni* we pass'd over the Mountains to *Tritura*, and thence descended to *Spoletto*, the Capital of *Umbria*, thence call'd *Ducato Spoletano*: The Walls of this City are of considerable Extent, and the Houses well built: Here are to be seen the Ruins of many ancient Buildings. From hence we pass'd through a most spacious and pleasant Valley, enclos'd with Mountains in the Form of an Amphitheatre, the Valley being planted with Trees and Vines after the Manner of *Lombardy*, and the neighbouring Hills full of little Towns and Houses. About four Miles short of *Foligno*, we pass'd under *Trevi*, a little Town seated on a round Hill. *Foligno* (*Fulginium*) is a very pleasant and handsome Town, famous chiefly for Confectioners and good Sweetmeats. Beyond it, at the Extremity of the Valley of *Spoletto*, we saw such another Plantation of Olive-trees as before.

Jan. 27. We ascended from *Foligno* to a Mountain, by a Way cut out of the Rock, having a terrible Precipice on our left, and below a Valley surrounded with high and steep Hills, into which falls a small River

called *Dale*, which drives some Paper-Mills. After we had thus travell'd four or five Miles, we reach'd the Top of the *Appennine*, the Mountains round about us being covered with Snow: On the Top we came into a small Plain, having a little Lake or Pool near a Village called *Col fiorito*, a very delightful Place in Summer. No sooner had we pass'd this Plain, but we began to descend, and passing through the Village of *Serravalle*, situated at the Entrance of a narrow Valley, fourteen Miles from *Foligno*, we continued our Journey through the Mountains, and lodg'd at *Valcimarra*. Jan. 28. We travelled thro' *Tolentino*, nine Miles from *Valcimarra*, a pretty little Town, famous for the Birth-place of that great Critick, *Franciscus Philelphus*, who was the first Inventer of the Word *Stapes*, for Stirrops, which had before no Word in *Latin*. From hence we rode on ten Miles to *Macerata*, a large and populous City, the Capital of the *Marca Anconitana*, and Residence of the Cardinal Legate. From hence we travel'd thro' *Recanati* to *Loretto*. At *Recanati* we saw a Statue in Brass of the Virgin *Mary* in *basso rilievo*, with a Table having an Inscription upon it giving Thanks to her, that she was pleased to settle her House in the Territory of this City.

Loretto itself is no more than a small City, seated upon a Hill, consisting only of one Street within the Walls, and such another without, which makes the Suburb: The Church and College of the Canons stand at one End of the Street; and before the Church is a small Piazza, having a Cloyster on one Side, where the Canons have their Lodgings. In the Midst of the Piazza you see a very fair Fountain, and just before the Church Door a Brass Statue of *Sixtus V.* in a sitting Posture, with an Inscription, intimating, that it was he who gave a Bishop and the Title of a City to *Loretto*. All the Doors of this Church are of Brass cast, with several Histories upon them. The Church is built in Form of a Cross, with a *Cupola* in the middle, directly under which you see standing, the *Santa Casa* or *holy House*, enclos'd in a Case of white *Parian* Marble, curiously engraven with Figures in *basso rilievo*, representing several Histories, done by the best Sculptors of that Age, the full Description of which may be seen in *Turfelinus's* History. The Walls of the House itself are made of a peculiar kind of Stone (as they would persuade the World) resembling Bricks both in their Colour and Figure, but to be found only about *Nazareth*; which if they could prove to be true, would be the best Argument to verify their Assertion concerning the Transportation of this House from thence; but, in my Opinion, they are real Bricks. But to let the Reader know what Arguments they make use of to persuade the World of the Verity of it, I will here insert the whole Relation as given by themselves, which being translated into thirteen Languages, and hung up in the Church, written on as many Tables, runs thus in *English*.

Ave Domina Angelorum.

The miraculous Origin and Translation of the Church of our Lady of Loretto.

“ The Church of *Loretto* was a Chamber of the
“ blessed Virgin nigh *Jerusalem*, in which she was born
“ and bred, and saluted by the Angel, and therein
“ conceiv'd and brought up her Son *Jesus* to the Age
“ of twelve Years. This Chamber, after the Ascension
“ of our Saviour, was by the Apostles consecrated into
“ a Church, in Honour of the blessed Lady: And St.
“ *Luke* made a Picture to her, likewise extant therein
“ to be seen at this very Day. It was frequented with
“ great Devotion by the People of the Country where
“ it stood, whilst they were Catholics; but when,
“ leaving the Faith of Christ, they follow'd the Sect of
“ *Mahomet*, the Angels took it and carried it into *Sclavonia*,
“ and placed it by a Town call'd *Flumen*, where
“ not being had in due Reverence, they again trans-
“ ported it over the Sea, to a Wood in the Territory of
“ *Recanati*, belonging to a Noblewomen called *Loretta*,
“ from whence it took the Name of our Lady of *Lo-*

“*retto*; and thence again they carried it, by Reason
 “of the many Robberies committed, to a Mountain
 “of two Brothers in the said Territory: And from
 “thence finally, in Respect of their Disagreement
 “about the Gifts and Offerings, to the common High-
 “way not far distant, where it now remains without
 “Foundations, famous for many Signs, Graces and Mira-
 “cles; whereat the Inhabitants of *Recanati*, who often
 “came to see it, much wondering, environ’d it with a
 “strong and thick Wall; yet could no Man tell whence
 “it came originally, till in the Year 1296, the blessed
 “Virgin appear’d in his Sleep to a holy devout Man,
 “to whom she reveal’d it, and he divulg’d it to others
 “of Authority in this Province, who determining
 “forthwith to try the Truth of the Vision, resolv’d to
 “chuse sixteen Men of Credit, who to that Effect
 “should go all together to the City of *Nazareth*, as
 “they did, carrying with them the Measures of this
 “Church, and comparing therewith the Foundation’s
 “Remnant, they found them wholly agreeable; and
 “in a Wall thereby engraven, that it stood there,
 “and had left the Place. Which done, they presently
 “returning back, published the Premises to be true;
 “and from that Time forward it hath been certainly
 “known, that this Church was the Chamber of the
 “Virgin *Mary*: To which Christians began then, and
 “have ever since had a great Devotion, for that in it
 “daily she hath done and doth many and many Mi-
 “racles. One *Frere Paul de Sylva*, an Eremite of great
 “Sanctity, who liv’d in a Cottage nigh unto this
 “Church, whither daily he went to Mattins, said, That
 “for ten Years Space, on the eighth of *September*, two
 “Hours before Day, he saw a Light descend from
 “Heaven upon it, which he said was the blessed Vir-
 “gin, who there shew’d herself on the Feast of her
 “Nativity. In Confirmation of all which, two virtuous
 “Men of the City of *Recanati* divers Times declar’d
 “unto the Prefect of *Terreman*, and Governor of the
 “aforemention’d Church, as followeth: The one, cal-
 “led *Paul Renaiduci*, avouch’d, That his Grandfather
 “saw when the Angels brought it over the Sea, placed
 “it in the aforementioned Wood, and had often visi-
 “ted it there: The other, call’d *Francis Prior*, in like
 “Sort affirm’d, that his Grandfather’s Grandfather be-
 “ing 120 Years old, had also much frequented it
 “in the same Place; and for further Proof that it
 “had been there, he reported, that his Grandfather’s
 “Grandfather had a House nigh unto it, wherein he
 “dwelt; and that in his Time it was carried by the
 “Angels from thence to the Mountain of the two Bro-
 “thers, where they placed it as abovesaid.”

By Order of the Right Re-
 verend Monsignor *Vincent*
Cassal of *Bologna*, Go-
 vernor of this Holy
 Place, under Protection
 of the most Reverend
 Cardinal *Moroni*.

I. *Robert Codrington*, Priest
 of the Society of *Jesus*
 in the Year 1634. have
 faithfully translated the
 Premises out of the *La-
 tin* Original hanging in
 the said Church.

To the Honour of the ever-glorious Virgin.

29. From *Loretto* we travel’d, *Jan.* the 30th, to *An-
 cona*, a populous City much frequented by Merchants,
 by Reason of the Conveniency of its Harbour, which
 formerly was the best in all the Gulph, but is much de-
 cayed of late. Here we took particular Notice of the
 Ruins of the Stones which secur’d the ancient Port,
 where you see that renown’d triumphal Arch of white *Pa-
 rian* Marble, erected to *Trajan* by order of the Senate:
 The Stones are of a vast Bigness.

The *Statua equestris* of *Trajan*, which formerly stood
 on the Top of this Arch, is remov’d thence, and set
 up over the Gate of the Exchange. Here we were
 also entertain’d with a Dish of Shellfish, of a very plea-
 sant Taste, call’d *Pholades* in *Latin*, because they live
 in Holes within a soft kind of Stone, or rather Clay,
 which being found in great Plenty at Sea, if expos’d
 to the Air, becomes in Time a perfect Stone: The

Italians call these Stones *Balle di Sasso*, and the Fish
Ballare or *Dattyli de mare*.

Jan. 31. We continued our Journey along the Sea-
 coast for twenty Miles, to *Sinigaglia*, (anciently *Sena*
Gallica) a small Harbour for Barges, but well fortified.

From hence we still pass’d along the Sea-shore for
 fifteen Miles further to *Fano*, (anciently *Fanum Fortunæ*)
 a large and well fortified City: Here is a triumphal
 Arch erected in Honour of *Augustus*, which being some-
 what broken and defaced, they have in the Wall by
 set a Model of it, as it was entire.

Here was the ancient Temple of *Fortune*, now the
 Church of the *Augustine* Fryars, the Brass Statue of *For-
 tune*, which was there ador’d, standing yet in the Pa-
 lace. The City is govern’d by a Senate, consisting of
 seventy Gentlemen, chang’d every third or fourth Year,
 but the Governor of the Pope directs all Matters of
 Moment. This City is by some accounted the best
 situated of any in *Italy*.

Feb. 1. We continued our Journey seven Miles along
 the Shore to *Pesaro*, a very fine City, with a stately
 Piazza surrounded with fair Buildings, and many Stones
 with ancient Inscriptions. The Harbour is almost
 choak’d up, but the Castle and Fortifications in tolera-
 ble Repair. From hence crossing the Country, we
 pass’d through the Village of *Catolica*, ten Miles
 from *Pesaro*, and from thence along the Sea-shore for
 the most Part, till within two or three Miles of *Rimini*,
 when leaving the Shore, we took the *Via Flaminia*.
 The Buildings of the City of *Rimini* are low, but neat,
 with regular strait Streets. Within the Walls of it,
 we pass’d under a high Stone Arch erected to *Tiberius*,
 or according to *Schottus* to *Augustus Caesar*; the Inscrip-
 tion was much defac’d. In the Piazza they shew’d us
 the Stone on which *Caesar* stood when he made his
 Speech to the Soldiers, when he was preparing to march
 to *Rome*: These modern Inscriptions are engraven
 upon it:

*C. Caesar Dict. Rubicone superato civili bell. commilit.
 suos hic in foro Ar. adlocut.*

*Suggestum hunc vetustate collapsum Coss. Ariminensium
 Novembris & Decembr. MDV. Restit.*

In another Piazza stands a Brass Statue of Pope
Paul V. It being Carnival Time, we saw the Gentlemen
 here diverting themselves with Tilting, but they did not
 run at one another, but at a Puppet of Straw, which
 they call *Bamboccio*.

Feb. 2. We made a small Excursion to *St. Marino*, a
 small City and Commonwealth seated on the Top of
 a very high Hill, about ten Miles from *Rimini*, the
 Inhabitants boasting, That they have maintain’d their
 Liberty uncorrupted for above a 1000 Years. All its
 Territories are included in one Mountain about three
 Miles in Length, and nine or ten in Circumference,
 containing four Villages, viz. *Serravalle*, *Fietano*, *Monte*
Giardino, and *Fiorentino*; about eight Corn-mills upon
 the little River *Canova*, and two Powder-mills. The
 Arms of this petty Commonwealth are, three Towers
 upon a Mountain, with this Motto underneath, *Liber-
 tas perpetua*. The Suburb of *St. Marin* is at the Foot
 of the same Hill, whereupon the City is built; here they
 keep a weekly Market every *Wednesday*, especially for
 Swine, of which sometimes 5000 are sold in a Day,
 paying no more than Sixpence Toll for every Drove,
 whether large or small. Besides these weekly Markets,
 they have four great Fairs every Year, the chief of
 which is on *St. Bartholomew’s* Day, where prodigious
 Quantities of Cattle are sold, to the no small Disgust
 of some of the neighbouring Princes, whose Customs
 are considerably impair’d thereby. At this Fair they
 keep a general Muster of all their Forces. From this
 Suburb up to the City are two Ascents, the one pretty
 easy, and winding about to the furthest Gate, by
 which Coaches may upon an Occasion get up; the
 other leading to the nearer Gate being very steep. The
 City is wall’d on one Side, the other lying at the Brow
 of a Precipice, being defended by three Towers in a
 Row;

Row; and the Hill, even on that Side where the Walls stands, is so steep, that it is inaccessible, except by the Ascents; neither are there any Hills near it, except what are much lower than that whereon the City stands. The Streets of the City are narrow, and their Houses but meanly built; they have two Cloysters within the Walls, one belonging to the Discalceate *Franciscans*, the other to the Nuns of the Order of *St. Clara*, and in the Suburb a Convent of the *Capuchins*; besides that, the *Servite* have a very fair Monastery not above a Mile from the City, which has its own Bishop, and has always a Protector at *Rome*, who at present is Cardinal *Barberini*, whom they sometimes present with some Cheeses and *Muscattella* Wine, which grows very well hereabouts, and is in great Esteem with the *Italian* Nobility. They have no Cows, but Goats and Sheep in Abundance. Their Government is administered by a Council of forty five, which they call *Corpo di Principe*; of these fifteen are Gentlemen, (of which they have about twenty Families) fifteen Artisans and fifteen Countrymen, who continue for their Lives, and when one dies, another is chosen in his Stead, by two thirds of the Votes; in the Place of a Gentleman, a Gentleman, and so with the rest.

Feb. 3. We left *Rimini*, and taking our Way to *Ravenna*, passed that renown'd Bridge over the River *Rimino*, begun by *Augustus*, but brought to Perfection by *Tiberius*, the Stones of which, they say, are join'd together without any Cement: Certain it is, that the Sides of it are of vast Stones as high as the Borders, and of a proportionable Breadth, without any Mortar or Cement betwixt them that I could see: It has a large Inscription, intimating when and by whom it was built. About fifteen Miles from *Rimini* we pass'd through *Cesenatico*, and fifteen Miles further thro' *Cervia*, a poor City, having nothing to boast on but the Title of an Archbishop's See. All the Way from *Cervia*, till within two or three Miles of *Ravenna*, we travell'd near a vast Pinewood on the right Hand of us, call'd *Pigneda*, and, if we may credit *Schottus*, bears Fruit enough to serve all *Italy*. The City of *Ravenna* lies enclos'd betwixt two Rivers, *viz.* the *Bedefis* and *Montone*, one running on one, and the second on the other Side. It is of a great Circumference, but meanly built: It has five Gates, and an old Castle of Brick, and three fair Convents, *viz.* the *Classe*, belonging the *Monachi Classenses*; the second call'd the *Porto*, from its being dedicated to *St. Maria Portuensis*, belonging to the *Canonici regulares Lateranenses*; and the third to the *Benedictine* Monks, dedicated to *St. Vitale*, the Church of the last being a double Octagon, the one concentric to and enclos'd within the other; they say it was built by *Justinian*. These Monks shewed us also two Marble Pillars, adding that the *Venetians* had offer'd their Weight in Silver for them: They were produced at first by an Heap of small Flints or Pebbles united into one Body by a Cement petrefied as hard as the Flints themselves, and capable of Politure, which Cement, it is probable, might be the Sediment of the same Stones mixt with a Fluid, and separated from thence. I have seen the like in the Library at *Zurick*, and at *Verona*, in our Ladies Chapel, in the Garden of Signior *Horatia Giusti*. To the same Convent also belongs the little round Church (call'd the *Rotunda*) of the Virgin *Mary*, a Quarter of a Mile without the City, the Roof whereof being fourteen ordinary Paces in Diameter, yet is made of one Stone, having in the midst a round Hole to let in the Light: Upon the Top of this Church stood in former Ages the Monument of *Theodoricus* a *Gotbick* King, of *Porphyry*, who is suppos'd to have built it; this Monument is as yet to be seen in the Wall of the Monastery of the *Succolanti* or barefooted *Franciscans*, with this Inscription:

Vos hoc Porphyriacum ol. Theodorici Gottor. imp. cineres in Rotunda apice recondens, huc Petro Donato Cæsio Narnien. præfule favente translatus ad perennem memoriam Sapientes Reip. Rav. PP.C. MDLXIII.

This Convent is one of the fairest I met with belonging to this Order; and their Church dedicated to

St. Apollinaris is remarkable, both for the double Row of Marble Pillars brought from *Constantinople* by *Theodoricus*, and the ancient *Mosaick* Work in the Walls. Of the same *Mosaick* Work we saw the Figures of the Archbishops of *Ravenna* in the Cathedral, eleven of them having a Dove standing upon their Heads, being chosen by a Dove alighting upon their Heads, if we will credit *Schottus*. Not far from the Convent of the *Franciscans* you see the Arch erected in Memory of the famous Poet *Dante*, with his Effigies under it, and two Inscriptions in *Latin* Verse underneath, said to have been made by himself, but so slenderly done, that had he not compos'd better in *Italian*, he could scarce have challeng'd a Place among the famous Poets. This City has scarce any Thing to boast of now but its Antiquity, being very ill peopled, ill serv'd with Fish, notwithstanding its Vicinity to the Sea, ill provided with Inns, and worse with Water, which verifies the old Saying of the Poet, *Sit cisterna mihi quam vinea malo Ravennæ*, the Water being all brackish. In this Journey from *Rome* to *Venice* we were very sensible of the Difference in the Air on both Sides of the *Appennine* Mountains, being very warm on the other, whereas on this Side we found it as cold as it is in Winter with us, which that it proceeded not from any Change of Weather, we were sufficiently assur'd of, not only by Enquiry, but also because we found Snow lying in many Places in the low Grounds, which was melted even on the Hills of the other Side: The true Reason of it, I think is the Height of this Ridge of Mountains, which reaching above the lower Region of the Air where the Sun-beams are reflected, hinders the Mixture of the warm Southerly and Western, with the cold Northerly and Eastern Air; and stops the free Passage of the South and West Winds on one Hand, which would carry the warm Vapours into the other Part, as they prevent the cold North and East Winds from tempering the Heat beyond these Mountains; in the same Manner as some Travellers relate of a certain mountainous Ridge in the *East-Indies*, on one Side whereof it is Summer when it is Winter on the other.

Feb. 5. We travelled from *Ravenna* along the Bank of the River *Montone*, till within four or five Miles of *Faenza*, which is twenty long Miles from *Ravenna*. *Faenza* is a little neat City, surrounded with a strong brick Wall, but somewhat out of Repair, it is famous for the best Earthen Ware in *Italy*. On *St. Thomas's* Day yearly all the Gentlemen meet to chuse Magistrates, *viz.* nine Senators and a President whom they stile Prior for every Month, so that they have twelve different Senates throughout the Year. From hence we travell'd ten Miles to *Imola*, half a Mile short of which we ferried over the River *Senio*. *Imola* (*Forum Cornelii*) is not so big as *Faenza*, yet has a fair Piazza with a Cloyster on one Side. From hence we continued our Journey upon the *Via Æmilia* to *Bologna*, *Feb. 6.* Here they have a Way of boiling their Wines, to keep them better than if left cold. The first which they call *Vino Cotto*, appear'd to us much stronger than the other which they call *Vino Crudo*.

Feb. 7. Taking the *Florentine* Procaccio's Boat to *Venice*, we passed through nine *Sostegni* or Locks to *Mal Albergo*, where we shifted our Boat, going down from a higher to a lower Channel, which brought us to *Ferrara*, forty five Miles distant from *Bologna*. From *Ferrara* we were tow'd by a Horse through an artificial Channel as far as *Ponte*, where entering the River *Po*, we chang'd our Boat again, and were row'd down the Stream twenty seven Miles to *Corbola*, where entering the *Venetian* Territories, we were oblig'd once more to change in Order to take a *Venetian* Boat. We had scarce gone two or three Miles further down the *Po*, when striking into a Channel to the Left, we passed a Sluce near *Lo-reo*, and proceeding fifteen Miles further, pass'd near to *Chiozza*, and *Palestrina*, a large Place built among the *Lagune*, standing upon the *Lido*, entering into the *Lagune* at the Haven of *Malamocco*, and arrived at *Venice*, *Feb. 9.* of which we have given an Account already.

March

March 13. We set out from *Venice*, on our Journey to *Geneva*, taking our Way through *Rhætia* and *Switzerland*. To *Mestre* we went seven Miles by Boat, from thence twelve Miles further by Coach to *Treviso*, where taking Horse, we spent two Days and a half in travelling to *Trent*, being eighty Miles. The first Day, after twelve Miles riding, we passed through *C. Franco*, and thence through a fair champaign Country to *Bassano*, a handsome City upon the River *Brenta*, where there are Abundance of Silk-weavers. No sooner were we pass'd *Bassano*, but we came among the Mountains, extending for fourteen Miles along the River-side: We lodg'd that Night at *Pont Sigismund*. The second Day we still kept along the Bank of the River, and about two Miles from *Pont Sigismund*, pass'd thro' a Gate, where we paid the first Duty to the Duke of *Inspruck*. At this Pass we saw, hewn out of the Rock, a small Castle called *Cauolo*, unto which there is no Avenues, both the Soldiers that keep Garrison there, and their Provisions, being drawn up by Ropes and Pullies. It has a Fountain of fresh Water in it, and belongs to the Archduke of *Inspruck*, though the *Venetian* Territories extend four or five Miles beyond it. After having travelled sixteen Miles further, we came to a small Town called *Borgo*: and thirteen Miles more, to a rich and populous Borough called *Berzine*, not above five Miles on this Side *Trent*. Upon the River *Brenta* we saw divers Saw-mills, and Abundance of Timber floating down the Streams; and as soon as we enter'd the Mountains, we found Stoves instead of Chimneys.

30. March 16. We got to *Trent* in very good Time, a little but handsome City, seated upon the River *Athesis* or *Adda*, at the Foot of the Mountains which almost surround it, were it not for the Valley where the River runs. It belongs to the Archduke of *Inspruck*, but the Inhabitants speak *Italian*. On the Front of the Choir is to be seen the following Inscription, giving a short Account of the Council held in this City.

Sacrofanctum postremum Oecumenicum generale Concilium fuit in hac celeberrima civitate celebratum; & quidem sub Papa Paulo III. Anno MDXLV, 13 Decembris pro felice Inchoatione fuit facta Processio generalis per totam Urbem, ab Ecclesia Sanctissimæ Trinitatis ad hanc Ecclesiam Cathedralē, quā finitā primus Cardinalis Præsidens, qui postea fuit Papa Julius III. [prout etiam alter Card. Præsidens fuit Papa Marcellus II. nominatus] in hoc loco eminentiore, tunc magis amplo, ad celebrandum Concilium & Sessiones faciendas deputato, ad altare S. & gloriosissimi Martyris Vigili hujus Ecclesiæ patroni celebravit missam de Spiritu S. Ac reliquis ceremoniis peractis fuerunt sub D. Paulo III. celebratæ octo publicæ Sessiones cum decretis, & aliæ tres ob vastam pestem in hac Urbe grassantem Bononiæ, ubi nihil fuit decretum, Anno MDXLVII. Postea cessante peste & Bellis fuit reductum hoc Concilium, & in hoc eodem loco fuerunt sub Papa Julio III. celebratæ aliæ publicæ sex Sessiones cum Decretis Annis 1551, 1552, quibus interfuerunt tres Serenissimi Principes Ecclesiastici, S. R. I. Electores Archiepiscopi, *Moguntinus*, *Treverensis*, *Coloniensis*, 1 Die Septemb. 1551. hanc urbem ingressi; prout etiam Serenissimus Elector Brandenburgensis duos oratores huc ablegavit. Demum sub Papa Pio IV. Anno 1561 & 1563. fuerunt celebratæ ultimæ novem publicæ Sessiones cum Decretis in Ecclesia S. Mariæ majoris hujus Urbis, istius Ecclesiæ Reverendissimo Capitulo incorporata, sicuti etiam Ecclesia S. Petri. Et nihilominus ad pedes Sanctissimi Crucifixi tum in hoc loco existentis & nunc alio translati pro Decretorum corroboratione semper fuerunt publicata omnia dicti Concilii Decreta. Interfuerant sub dictis summis Pontificibus celebrationi Cardinales Legati 13, inter quos *Christophorus Madrucius*; Non Legati 4, inter quos *Ludovicus Madrucius*: Oratores Principum totius Europæ 29: Patriarchæ 3: Archiepiscopi 33: Inter quos Archiepiscopus *Rossaniensis*, qui postea fuit *Urbanus VII.* nominatus: Episcopi 233: Abbates 18: Generales Ordinum 12:

Theologiæ Doctores 148: Procuratores 18: Officiales Concilii 3: Cantores 9: Notarii 4: Cursores Papæ 2.

Sacrofancto Spiritui S. omnium Conciliorum directori sacratissima Die Pentecostes, Anno 1639. dicatum.

The Inclinations, Manners, and Customs of the Italians.

31. The *Italians* are, by the general Confession of all that write them, ingenious, apprehensive of any thing, and quick-witted. *Barclay*, who is not too favourable to them in the Character he gives them, saith, they have *animum rerum omnium capacem*; and again, that there is Nothing so difficult, *ad quod Italici acuminis præstantia non tollatur*. They are patient and assiduous in any thing they set about or desire to learn, never giving over till they master it, and attain the Perfection of it. They are a still, quiet People, as being naturally melancholly, of a middle Temper, between the fastidious Gravity of the *Spaniard*, and unquiet Levity of the *French*, agreeing very well with the *English*, as the *Scots* are observed to do with the *French*, and *Spaniards* with the *Irish*. They are very faithful and loving to their Friends, mindful of a Courtesy received, and if it lies in their Way or Power, for one good Turn will do you two. This I had from a very intelligent Person, who hath lived and conversed long enough among them to know them thoroughly. *Barclay* himself confesseth, that where they do truly love, *omnia Discrimina habent infra tam humani fœderis Sanctitatem*, understand it of the better Sort; for Shopkeepers and Tradesmen are false and fraudulent enough, and Inn-keepers, Carriers, Watermen and Porters, as in other Places, horribly exacting, if you make not an explicit Bargain with them before-hand, in so much that in many Places the State hath thought it necessary, by publick Bando and Decree, to determine how much Innkeepers shall receive of Travellers for their Dinner, and for their Supper and Lodging. They are not easily provoked, but will bear long with one another, and more with Strangers than their own Countrymen. They are also very careful to avoid all Occasions of Quarrel, not to say or do any thing that may offend any Person, especially not to abuse any one by Jestings or Drollery, which they do not like, nor can easily bear. No People in *Europe* are more scrupulous and exact in observing all the *Punctilio's* of Civility and good Breeding, (*bella Creanza* they call it) only methinks the Epithets they bestow upon mean Persons are somewhat extravagant, not to say ridiculous, as when they stile a Mechanick or common Tradesman, *Signor molto magnifico*, and the like; when they are in Company together, they do not only give every Man his Turn of Speaking, but also attend till he hath done, accounting it a Piece of very ill Breeding to interrupt any Man in his Discourse, as hating to be interrupted themselves; contrary to the Manner of the *French* and *Dutch*, who make no Scruple of interrupting one another, and sometimes talk all together. As careful are they not to whisper privately one to another, when in Company, or to talk in an unknown Language which all the Company understands not. They do also shew their Civility to Strangers in not so much as asking them what Religion they are of, avoiding all unnecessary Disputes about that Subject, which are apt to engender Quarrels; which Thing we could not but take Notice of, because in *France* you shall scarce exchange three Words with any Man before he asks you that Question.

It is not easy for a Stranger to get Acquaintance and Familiarity with the *Italians*, they not much delighting to converse with Strangers as not knowing their Humours and Customs; yet is their Conversation, when gotten, pleasant and agreeable, their Discourse profitable, and Carriage obliging. Most of them, even of the ordinary Sort of People, will discourse intelligently about politick Affairs, and the Government and Interest of their own Country, being much addicted to and delighted in politick Studies and Discourses. Most of them are very covetous of Liberty, especially such Cities as have been formerly Common-wealths, Discourses

or Treatises of that Subject making deep Impressions on their Minds; so that in some Places, not only Books, but also Discourses about former Revolutions, are prohibited. *Barclay* also saith, that they are *gloriosæ Libertatis cupidi, cujus adhuc imaginem vident*. Hence the Princes of *Italy* build so many Castles and Citadels in their Territories, not so much to defend themselves against their Enemies, as to bridle their Subjects, and secure themselves against Tumults and Insurrections. A strange thing it is, that of all the People of *Italy*, the *Neapolitans*, who never tasted the Sweetness of Liberty, nor mended their Condition by their Commotions, but always (as we say) *leap'd out of the Frying-pan into the Fire*, should be the most tumultuous, and given to rebel against their Princes.

Leti tells us of one of those petty subordinate Princes of *Naples*, called *Thomaso Ferrari*, who governed his Subjects, not like Vassals, but with that Sweetness and Gentleness, as if they had been his own Children; yet some of these Fellows taking Arms, came into their Presence, and said to him, *Sir Prince, We are come to drive you out of your Palace, and burn all your Moveables*. Why, (answers the Prince) *Can you find Fault with my Government? Are you aggrieved in any Thing, and it shall be redressed?* No, (replied they) *But because we understand that many of our Countrymen have revolted from their Lords, we also, to shew that we love Revolutions, are resolved to rebel against you*. The *Italians* are greatly delighted in Pictures, Statues, and Musick, from the highest to the lowest of them, and so intemperately fond of these Things, that they will give any Price for a choice Picture or Statue.

Tho' all of them cannot paint or play on Instruments of Musick, yet do they all affect Skill and Judgment in both; and this Knowledge is enough to denominate a Man a *Virtuoso*. Many of them are also curious in collecting ancient Coins and Medals. They are great Admirers of their own Language, and so wholly given to cultivate, polish, and enrich; that, they do in a great Measure neglect the *Latin*, few of them now a Days speaking or writing well therein, but mingling so many *Italian* Idiotisms with it, that you have much ado to understand what they speak or write. As for the *Greek* few or none have any tolerable Skill in it the Study thereof being generally neglected and laid aside. They are very temperate in their Diet, eating a great deal of Sallet, and but little Flesh. Their Wine they drink well diluted with Water, and seldom to any Excess. We saw only one *Italian* drunk for the Space of a Year and half, that we sojourned in *Italy*.

Whether it be, that in hot Countries Men have not so good Stomachs as in Cold, or whether Meat, as being better concocted, nourishes more, or that the *Italians* are out of Principle, Temper or Custom more sober and temperate than other Nations. Their Herbs seemed to me more savory and better concocted than ours. Their Water also was not so crude. But for Flesh, ours, in my Judgment, much excels theirs, being much more succulent and sapid; yet in *Rome* have I eaten Beef not inferior to ours. But I suppose it might be of *German* Oxen; of which (as we were informed) there are many driven thither, and for sucking Veal, the *Romans* (as we have already noted) think theirs preferable to any in the World. The *Italians*, especially those of inferior Quality, are in all Things very sparing and frugal, whether it be because they are so educated and accustom'd, or because the Gabels and Taxes, which they pay to their Governors are so great, that they cannot afford to spend much on themselves, or because, naturally loving their Ease, they had rather live nearly than take much Pains.

The Nobility and great Persons choose rather to spend their Revenues in building fair Palaces, and adorning them with Pictures and Statues; in making stately and spacious Orchards, Gardens and Walks, in keeping Coaches and Horses, and a great Retinue of Servants and Staffier, than in keeping great Houses and plentiful Tables, giving board-Wages to their Servants and Attendants, which, in my Opinion, is the better Way of spending Estates, these Things finding poor People

Employment, so that the Money comes to be distributed among them according to their Industry; whereas the other Way maintain'd in Idleness such Persons for the most part as least deserve Relief, those that are modest and deserving choosing rather (if possible they can) to maintain themselves and their Families by the Labour of their Hands, than hang about great Houses for a Meal's Meat. Besides that, great Housekeeping is very often, not to say always, the Occasion of great Disorder and Intemperance. Were I therefore God's Steward for a great Estate, (for such all rich Men are or ought to be) I should think it more Charity to employ poor People, and give them Money for their Work, than to distribute my Estate among them freely, and suffer them to live in Idleness: I mean such as are able to labour.

The inferior Gentry affect to appear in Publick with as much Splendor as they can, and will deny themselves many Satisfactions at Home, that they may be able to keep a Coach, and therein make the *Tour à la mode* about the Streets of their City every Evening. The *Italians* when they call, speak to, or of one another, use only the Christian Name, as, *Signor Giacomo, Signor Giovanni, &c.* unless it be for Distinction's Sake; so that you may converse among them perchance some Months, before you hear any Man's Surname mentioned. The *Italian* Gentry live for the most part in the Cities, whence it is that the Cities are so splendid and well built, so populous and rich, and the Country so poor and thinly inhabited; yet are the Noblemen's Palaces rather great and stately than commodious for Habitation.

In many Cities the Paper Windows (which are for the most Part tattered and broken) disgrace the Buildings, being unsuitable to their Magnificence. The Houses are generally built of Stone, thick wall'd and high roof'd, which makes them warm in Winter, and cool in Summer, but they contrive them rather for Coolness than Warmth, and therefore they make the Windows large to give them Air enough. Of the Gentry in *Italy*, especially in *Venice*, if there be many Brothers of one House, only one usually marries, and that the eldest if he pleases; if he be not disposed, then any other, as they can agree among themselves, the rest do what they can to greaten him that is married to uphold the Family. The Brothers that marry not keep Concubines or Whores, which, though it be a Sin, yet their Confessors can easily absolve them of it.

In most of the Cities and Towns of *Italy* there are Academies or Societies of *Virtuosi*, who have at set Times their Meetings and Exercises, which are for the most Part Proflusions of Wit and Rhetoric, or Discourses about moral Subjects, curious Questions, and Problems or Paradoxes, sometimes extemporary, sometimes premeditated. These have their Head, whom they call Prince, and a certain Number of Academists who are chosen by Ballotting, but they seldom refuse any that offer themselves to Election. Many of these Academies assume to themselves conceited or fanciful Names, and take a suitable Impress or Coat of Arms; as for Example, the Academists of *Bergamo* call themselves *Eccitati*, and their Impress is the Picture of the Morning. In *Mantua*, the Academists called *Accefi*, have taken for their Emblem, a Looking Glass, reflecting the Sunbeams; those called *Timidi*, a Hare. As for the other Cities of *Italy*; in *Rome* there are three Academies, the *Humoristi*, the *Lyncei* and the *Fantastici*: In *Padua*, three; the *Ricovartia Infiammati* and *Incogniti*: In *Bologna*, three; *Ardenti*, *Indomiti* and one *Innominate*: in *Venice*, two; *Discordanti* and *Gussoni*: In *Naples*, two; *Ardenti* and *Intronati*: In *Luca*, two; *Oscuri* and *Freddi*: In *Florence*, *La Crusca*: In *Sienna*, *Intronati*: In *Genoa*, *Addormentati*: In *Vicenza*, *Olympici*: In *Parma*, *Innominati*: In *Pavia*, *Affidati*: In *Milan*, *Nascosti*: In *Ferrara*, *Elevati*: In *Rimini*, *Adagiata*: In *Cecena*, *Offuscati*: In *Ancona*, *Caliginosi*: In *Fabriano*, *Disunito*: In *Perugia*, *Insensati*, In *Viterbo*, *Ostinati*, in *Brescia*, *Occulti*, in *Faenza*, *Philoponni*: In *Treviso* *Perseveranti*: In *Fermo*, *Raffrontati*: In *Verona*, *Philharmonici*: In *Macerata*, *Catenati*: In *Alessandria*, *Immobili*, In *Urbino*, *Afforditi*.

Most of the *Italians* of any Fashion wear black or dark colour'd Cloaths, and for the Fashion of them follow the *French*, but not too hastily, excepting those Countries which are subject to the King of *Spain*, which use the *Spanish* Habit. As for their Vices, they are chiefly taxed for three. 1. *Revenge*, they thinking it an ignoble and unmannerly Thing to put up or pass by any Injury or Affront. Many Times also they dissemble or conceal their Displeasure and Hatred under Pretence of Friendship, that they may more easily revenge themselves of whom they hate, by poisoning, assassinating, or any other Way; for nothing will satisfy them, but the Death of those who have injured them; and there are Bravo's and Cut-throats ready to murder any Man for a small Piece of Money. Besides, which is worst of all, they are implacable, and by no Means to be trusted, when they say, they pardon. Hence they have a Proverb among them, *Amicitie reconciliat & menestre riscaldat non furono mai grate*. The Women also provoke their Children to revenge the Death of their Fathers, by shewing them the Weapon where-with they were murdered, or Cloaths dip'd in their Blood, or the like; by which Means Feuds between Families are maintained and entailed from Generation to Generation. These are the Qualities for which we usually say an *Englishman* *Italianate* is a Devil incarnate. 2. *Lust*, to which the Inhabitants of hot Countries are, by the Temper of their Bodies, inclined. Hence it is, that all Cities and great Towns do so swarm with Courtezans and Harlots; and, to avoid worse Evils, the State is necessitated to give them publick Toleration and Protection. As for masculine Venery and other Works of Darknes, I shall not charge the *Italians* with them, as not having sufficient Ground so to do, and because, (as *Barclay* saith) *Hæc scelera tenebris damnata & negari facilius à consciis possunt, & ab æmulis fugi*. 3. *Jealousy*, which strangely possesses this People; so that for every little Suspicion they will shut up their Wives in a Chamber, and carry the Key with them, not suffering them to stir Abroad, unless themselves accompany them. To salute an *Italian's* Wife with a Kiss is a stabbing Matter; and to call a Man *Cornuto*, or Cuckold in good Earnest, is the greatest Affront or Disgrace you can put upon him. The married Women in *Italy*, by this Means, have but bad Lives, being for the most Part confined to their Houses, except when they go to Church, and then they have an old Woman attending them; the Doors of their Houses shut up at Dinner and Supper; all Visits and familiar Discourses with Men denied them; neither can they speak or smile without Suspicion. One Reason of this, among others, may be, because the Husbands knowing themselves to be so dishonest and false to their Wives, they presume, that had they Opportunity, they would not be more true to them. And yet for all this Guarding and Circumspection, are not the *Italian* Dames more uncorrupt than the Matrons of other Nations, but find Means to deceive their Husbands, and be dishonest in Spight of Jealousy.

To these I might add *Swearing*, which is so ordinary among all Sorts, the Priests and Monks themselves scarce abstaining from Oaths, that I believe they account it no Sin. It is a general Custom all over *Italy* to sleep an Hour or two after Dinner, in Summer-time; so that from Two of the Clock till Four in the Afternoon, you shall scarce see any body stirring about the Streets of the Cities. Indeed if one sits still it is very hard to keep his Eyes open at that Time. Either this Custom did not prevail when the School of *Salerno* wrote their Physick Precepts, or that Direction *Sit breves aut nullus tibi Somnus meridianus*, was calculated for *England*, to whose King that Book was dedicated. And yet still the *Italian* Physicians advise People, either not to sleep at all after Dinner, or, if they must sleep, to strip off their Cloaths and go to Bed, but only to take a Nod in their Chair sitting.

In many Cities of *Italy* are Hospitals where Pilgrims and poor Travellers are entertained, and have their Diet and Lodging for three Days, if they have Reason

to stay so long, *gratis*, besides a Piece of Money when they go away. There are Hospitals also to receive exposed Children, if I may so term them, that is, without any Exception, that shall be brought and put in at a Grate on Purpose, where, upon ringing a Bell, an Officer comes presently and receives the Child, and asking the Party that brought it, Whether it hath been baptized? carries it to a Nurse to give it Suck, and there it is maintained till it be grown up. The Place where it is put in is so strait, as to admit only Children new born, or very young. This I look upon as a good Institution in great Cities, taking away from Women the Temptation of Murthing their new-born Children, or destroying their Conception in the Womb to hide their Shame. I know what may be objected against it, *viz.* That it emboldens them to play the wanton, having so fair a Way of concealing it, *sed ex malis minimum*. In *Rome*, *Venice*, and some other Cities of *Italy*, they have a Way of exercising Charity, little used among us; several Confraternities of well-disposed Persons raise Sums of Money by a free Contribution among themselves, which they bestow yearly in Portions for the marrying of poor Maids, which else might want Husbands, and be tempted to dishonest Practices to maintain themselves.

This I look upon as well-plac'd Alms, and worthy of Imitation, it being very convenient, and in a Manner necessary, that new-married People should have somewhat to furnish their Houses and begin the World with, and no less fitting that young Persons should be encouraged to marry, as well for multiplying of People, wherein the Strength of the Common-wealth chiefly consists, as for the preventing those Evils to which young and single Persons are strongly tempted and inclined. It is a troublesome Thing to travel with Fire-arms in *Italy*, you being forced in most Cities to leave them at the Gate with the Guard, who give you a Tally or Token; and when you leave the City, you bring your Tally, and receive your Arms. This is done to prevent Assaults and Murders, which are so frequent in many Cities of *Italy*. For this the Great Duke of *Tuscany* is much to be commended, there being no such Murthers and Outrages committed in any of the Cities under his Dominion, as in other Places; so diligent is he in searching out, and severe in punishing Bravo'es, Cut-throats, Assassins, and such Kind of Malefactors. As much might be said for the Pope in the City of *Rome*, but in other Cities in his Territories there is killing enough.

When you depart from any City, you must be sure to take a *Bill of Health* out of the Office that is kept every where for that Purpose, without which you can hardly get to be admitted into another City, especially if it be in the Territory of another Prince or State. If any one comes from an infected or suspected Place, he is forced to keep his *Quarantain* (as they call it) that is, be shut up in the *Lazaretto* or Pest-house forty Days, before he be permitted to come into the City, so scrupulously careful are they to prevent Contagion.

In *Rome*, and other Cities of *Italy*, we have often observed many Labourers that wanted Work standing in the Market-places to be hired, whither People that want Help usually go and bargain with them; which Custom illustrates that Parable of our Saviour, recorded in the Beginning of the Twentieth Chapter of *St. Matthew's* Gospel, wherein the Housholder is said to go out about the third Hour, and see others standing in the Market-place. Verse 8; and in Verse 6, he is said to find others about the eleventh Hour, and to say to them, *why stand ye here all the Day idle?* and Verse 7. they answer, *Because no Man hath hired us*. In *Italy*, and other hot Countries, so soon as they have cut down their Corn, they thresh and winnow it usually, or at least a great Part of it, on a Floor made in the open Air, before they bring it into the House. Hence in the Scripture we read of threshing Floors as open Places without Roof or Cover. Such, I suppose, was that where *Boaz* winnowed Barley, *Ruth* iii. 3. Neither is it any Wonder

der that he should lie there all Night, for at *Aleppo*, and even in *Malta*, in Summer time, they set their Beds upon the Roof of their Houses, and sleep *sub Dio*, in the open Air. One Custom we have in *England*, which (as far as I could observe) is no where used beyond the Seas, and that is, for Children to beg their Parents and Godfathers Blessing upon the Knee. One Custom which prevails generally in foreign Countries, that is but little used in *England*, that is, to salute those that sneeze, by vailing the Bonnet, and praying God to bless, assist, or defend them, &c. There is a kind of Sport or Game much used to this Day by the *Italians*, called, *Gioco di mora*, which seems to have been used by the Ancients, and called *micare Digitis*. It is for the most part between two, who put out just at the same Time each of them, as many Fingers as they please, and also name each of them what Number he thinks fit, and if either of them happens to be the Number of the Fingers, which both of them together threw out, then he that names that Number wins one.

An Account of the Curiosities and Observations in the several Parts of Italy.

In *Lombardy* and other Parts of *Italy*, *Tartufale*, (as they call them) *i. e.* *Tubera Terræ*, a kind of subterraneous Mushroom, which our Herbalists call in *English* *Trubs*, or after the *French* Name *Truffles*, are accounted a choice Dish, held by Naturalists to be incentive of Lust. The best of all are gotten in *Sicily* and thence sent over into *Malta* where they are sold dear. The Way to get them is to turn Swine into a Field where they grow, who find them by the Smell, and root them up out of the Ground; and set one to follow the Swine, and gather them up. *Snails* boiled and served up with Oil and Pepper, put into their Shells are also accounted a good Dish: I am sure they are sold dear at *Venice*, and elsewhere, especially the great whitish or ash-coloured Shell-Snails, which we had not then seen in *England*, but have since found plentifully upon the the Downs near *Darking* in *Surry*; whither, as we were informed by the Honourable *Charles Howard*, Esq; they were brought from beyond Seas by a Gentleman, whose Name has slip'd my Memory, and is worn out in my Papers. But Mr. *Martin Lister* hath found them on the Banks of that hollow Lane, leading from *Puckeridge* to *Ware*. These Snails before Winter, stop up the Mouth or Aperture of their Shells, with a thick hard, white Paste, like a good Lute or Plaister, and are kept all Winter in Barrels or other Vessels, and sold by the Poulterers. The first Place where we met them to be sold in the Market, was *Vienna* in *Austria*, where they imitate the *Italians*, as well in their Diet, as in the Manner of their Buildings.

Frogs are another *Italian* Viand, which we in *England* eat not. These they usually fry, and serve up with Oil. At *Venice* they eat only the Loins and hind Legs, as also at *Florence*, and that upon Fish Days. In some Places of *Lombardy* they eat their whole Bodies, and besides their Frogs are of a larger Size than ordinary. Their Flesh shews white and lovely as they lie in the Markets, skin'd and ready prepared to fry. Howbeit, even there in *Italy*, *Kircher* in his Book *de Peste*, condemns them as as an ambiguous and dangerous Meat, and I think deservedly; wherefore we do well, having Plenty of better Foods wholly to abstain from them. *Land Tortoises* are accounted with them a better Meat than *Sea Tortoises*, and are commonly to be sold in the Markets; they are eaten by those Orders of *Friers*, whose Rule obliges them to abstain from Flesh, as, *Carthusians*, *Carmelites*, &c. They eat also many Sorts of *Shell-fish*, which we either have not, or meddle not with, as, *Purples*, *Periwinkles* of several Sorts, *Patellæ* or Limpets, *Sea Urchins*, which last are to be found every Day in the Markets at *Naples*. They eat also the *Sea Tortoises*, of which the Blood put into the Stomachs, and boiled is the best Part.

Paste made into Strings like Packthreads or Thongs of white Leather, (which if greater they call *Macaroni*, if lesser *Vermicelli*) they cut in Pieces, and put in their Pots, as we do Oatmeal, to make their *Menestra* or

Broth, of much Esteem by the Country People. These boiled and oiled, with a little Cheese scraped upon them, they eat as we do buttered Wheat or Rice. The Making of these is a Trade and Mystery, and in every great Town you shall see several Shops of them. They scrape or grate Cheese upon all their Dishes, even of Flesh, accounting that it gives the Meat a good Relish which to those that are unaccustomed, makes it rather nauseous or loathsome. *Chestnuts* roasted and the Kernels served up with Juice of Lemon and Sugar, are much esteemed, and by some called the *Pistachio's* of *Italy*. At *Bononia* they grind them and make little Cakes of the Flower of them, which, though eaten by the Poor, are no desirable Dainty to a delicate Palate. Roasted Chestnuts are a great Part of the Diet of the poor Peasants in *Italy*; as we have elsewhere noted. They eat all Manner of *Small Birds* as well as the *Germans*, viz. *Wrens*, *Stares*, *Titmice*, *Butcher-birds*, and several great ones, which we touch not in *England*, as, *Magpies*, *Jays*, *Woodpeckers*, *Jackdaws*, &c. Nay we have frequently seen *Kites* and *Hawks* lying on the Poulterers Stalls, as we have already noted in our Description of *Rome*.

They use several Herbs for *Sallets*, which are not yet or have been but lately used in *England*, viz. *Selleri*, which is nothing else but sweet Smallage, the young Shoots whereof, with a little of the Head of the Root cut off, they eat raw with Oil and Pepper; in like Manner they eat Fennel, Artichoke also they eat raw with the same Sauce (the same Part of it that is eaten boiled.) In *Sicily*, at the highest Village upon that Side Mount *Ætna* that we ascended, they gave us to eat for a Sallet, the Stalks of a tall prickly Thistle, bearing a yellow Flower, I suppose it was the *Carduus Chrysanthenus*, Dod. which the Rankness of the Soil had caused to mount up to that Stature; besides, in most of their Sallets they mingle Rockett, *Rachetta* they call it, which to me gives them an odious Taste. *Curl'd Endive* blanch'd is much used beyond Sea, and for a raw Sallet seemed to excel Lettice itself; besides, it hath this Advantage, that it may be kept all Winter. Many Fruits they eat, which we either have not, or eat not in *England*, viz. *Jejubes* sold by the Hucksters while they are yet Green: *Lazarole*, the Fruit of the *Mespilus Aronia*, of a pleasant acid Taste, both Fruit and Tree, and exactly like the common Hawthorn, but bigger. *Services* or *Sorbes* the true, as big as little Pears; those that grow with us are the Fruit of the *Sorbus torminalis*. Green Figs, both white and blue in great Plenty, a most delicate Fruit when fully ripe, comparable for the Taste to the best Marmalade, and which may be eaten freely without Danger of surfeiting. The Husks or Cods of *Carobs*, called in *Latin*, *Siliqua dulcis*, in *Greek*, *negaria*, the Word used, *Luke* xv. 16. and therefore by some supposed to be the Husks the Prodigal is said to have desired to fill his Belly with. Indeed we thought them fitter Meat for Swine than Men, for though they had a sweet Taste, yet afterwards they troubled our Stomachs, and purged us, but they have not upon all Men the like Effect, for the *Italians* and *Spaniards* eat them ordinarily without any such Trouble, *Love-Apples*, *Mad Apples* both raw and pickled: *Water-melons* which they use to eat, to cool and refresh them, and some Physicians allow sick Persons to eat them in Fevers. They are almost as big as Pompions, have a green Rind, and a reddish Pulp, with blackish Seed when ripe; the *Italians* call these *Cucumeri*, whereas Cucumbers they call *Citrulli*. Several Sorts of Gourds, as, *Cucurbita lagenaria*, and *Cucurbita Flexuosa* five *Anguina*, which eats very well build in Pottage, *Cucumis anguinis*, which is more esteem'd, and indeed better tasted than the Cucumber.

The common People both in *Italy* and *Sicily*, eat green chick Pease raw, as our common People do common Pease. In their Deserts and second Courses, they commonly serve up Pine-kernels, and in Time of Year green Almonds, also a kind of Sweet-meat or Confection, made up of Mustard and Sugar, which they call *Italian* Mustard. To cool and refresh their Wines they use generally Snow, where it may easily be had, else

else Ice, which they keep in Conservatories all Summer. Without Snow they that are commonly used to it, do not willingly drink, no not in Winter. In the Kingdom of *Naples* and *Sicily*, they make a Sort of Cheese which they call *Caseo di Cavallo*, i. e. *Horse Cheese*, for what Reason I could not learn. These Cheeses they make up in several Forms, some in the Fashion of a blown Bladder, some in the Fashion of a Cylinder, and some in other Figures. They are neither fat nor strong, yet well tasted, and acceptable to such, as have eaten them a-while. The Pulp or Body of them lies in Flakes, and hath as it were a Grain one Way like Wood. They told us that they were made of Buffalo's Milk, but we believed them not; because we observed not many Buffalo's in those Countries, where there is more of this Cheese made, than of other Sorts.

In *Italy* and other hot Countries their Meat is not only naturally more lean and dry than ours, but they roast it also till it be ready to fall from the Bones, and there be little Juice left in it. Besides, when they roast their Meat, they draw Coals under the Spit, and let the Fat drop on them, the *Nidor* whereof perfumes the Meat, but not to our Gust, who are not used to it, and what they lose in dripping they save in Fewel. Their Roasting differs not much from our Broiling or Carbonading. I speak this of ordinary Inns, and mean People's Houses; in great Houses and Inns it is otherwise.

The *Italians* count not their Hours as we do, from twelve to twelve, beginning at Mid-day and Midnight; but from one to twenty four, beginning their Count at Sun-set, which is a much more troublesome Way; the setting of the Sun being a moveable Point or Term, and they being therefore necessitated to alter and new set their Clocks every Day; whereas, Midday and Midnight being fix'd Points, the Clocks need no setting a-new. As for *Italy* in general, though the *Italians* imagine it to be the best Country in the World, and have a Proverb among them, that *Italy is the Garden of the World*; yet setting aside *Lombardy*, *Campania felix*, and some few other Places, the rest is mountainous and barren enough: The Earth so parched up by the Sun-beams, that it bears no Grass, and (as *Barclay* saith) seldom yieldeth Grain enough for three Years successively, to supply the Necessities and Uses of its Inhabitants, whatever they may boast of the *Itala gleba*. The Reason why the *Italians* are so conceited of their own Country is because they seldom travel Abroad, and so see not the Beauty and Fertility of others.

I might have taken Notice of the vast and incredible Number of religious Houses there are in *Italy*. I have sometimes thought they might in all of both Sexes, amount to eight or ten thousand. Of these the Gentlemen make Advantage for such of their Daughters as either they cannot get Husbands for, or are not able to give Portions to, suitable to their Birth and Quality, they can in one of these Houses for a small Matter, honourably dispose of, and settle for their Lives. The Institution of such Houses as these, whither young Women of Quality, who, for Want of sufficient Fortunes or personal Endowments, cannot easily provide themselves suitable Matches, might retire and find honourable Provision; would perchance be tolerable, yea commendable, were they purged from all Superstition; the Women not admitted too young, and under no Vow of perpetual Chastity, only to leave the House in case they married. But because of the Danger of introducing Monks; I think it more safe for a Christian State, not to permit any such Foundations. Buffles are a common Beast in *Italy*, and they make use of them to draw their Teams, as we do of Oxen; only because they are somewhat fierce and unruly, they are forced to lead them by an Iron Ring, put into their Noses, as our Bear Wards do their Bears. The *Cicadae* before-mentioned. The *Flying Glow-worms*, which are there every where to be seen in Summer-time. These flying or winged Glow-worms, are nothing else but the Males of the common creeping or unmingled Glow-worm. *Tabuis Columna* relates, that *Carolus Ventimiglia*, of *Palermo* in *Sicily*, having out of Curiosity, kept many

unwinged Glow-worms in a Glass, did put in among them a flying one, which presently in his Sight did couple with them one by one, after the Manner of Silk-worms, and that the next Day, the unwinged ones or Females began to lay their Eggs. That the Males are also flying Insects in *England*, though they do but rarely, or not at all shine with us, we are assured by an Eye-witness, who saw them in Conjunction with the common shining unwinged Glow-worm. Here by the Way it may not be amiss to impart to the Reader, a Discovery made by a certain Gentleman, and communicated to me by *Francis Jessop*, Esq; which is, that those reputed Meteors called in Latin *Ignes fatui*, and known in *England* by the conceited Names of *Jack with a Lanthorn*, and *Will with a Wisp*, are nothing else but Swarms of these flying Glow-worms. Which if true, we may give an easy Account of those *Phænomena* of these supposed Fires, viz. their sudden Motion from Place to Place, and leading Travellers that follow them, into Bogs and Precipices. *Scorpions*, which in *Italy* sting not, or at least their Stings are not venomous, as the learned *Franciscus Redi* affirms, though by Experience he found the Stinging of the *African Scorpion* to be mortal, or at least very noxious.

Tarantula's so call'd, because found about *Tarentum*, (though we have seen of them at *Rome*) which are nothing else but a large Sort of Spider, the Biting whereof is esteemed venomous, and thought to put People into phrenetick Fits, enforcing them to dance to certain Tunes of the Musick, by which Means they are cured, long and violent Exercise causing a great Evacuation by Sweat. These Fits they say do also yearly Return, at the same Season the Patient was bitten. But *Dr. Thomas Cornelius*, of *Cozenza*, before-mention'd, a learned Physician and Virtuoso in *Naples*, diligently enquiring into this generally receiv'd, and heretofore unquestion'd Story, that he might satisfy himself and others, whether it were really true in Experience rejects it. *Cimici*, as the *Italians* call them, as the *French*, *Punaise*. We *English* call them Chiches, or Wall-Lice, which are very noisome and troublesome by their Bitings in the Night Time, raising a great Heat and Redness in the Skin. They harbour in the Straw of the Bolsters and Mattraffes, and in the Wood of the Bedsteads, and therefore in some *Nosocomia* or Hospitals for sick Persons, as for Example, at *Genoa* the Bedsteads are all of Iron. This Insect, if it be crush'd or bruis'd, emits a most horrid and loathsome Scent, so that those that are bitten by them, are often in a Doubt, whether it be better to endure the Trouble of their Bitings, or kill them, and suffer their most odious and abominable Stink. We have of these Insects, in some Places of *England*, but not many, neither are they excessively troublesome to us.

32. We departed from *Trent*, intending for *Coira* or *Chur*, in the *Grisons* Country, called in Latin, *Curia Rhetorum*. We rode up the Valley where the River *Athesis* runs, called *Val venosta*, every five Miles passing through a large Village, and one handsome little Town called *Burgo*, and lodged at a small Town called *Brunsole*. We rode through *Bolzan*, a considerable Town, and for Bigness comparable to *Trent*, and ten Miles further *Maran*, a large Town, and lodged at a Village called *Raveland*. We passed through *Latourn*, *Slach*, *Schlanders*, *Maltz*, all Villages and Towns of Note, and last of all *Cleurn*, a pretty great walled Town, and then struck up on the left Hand among the Mountains, to a Village called *Tavers*, where we lodged. We rode on through the Snow to *Monastero*, where the *Grisons* Country begins, and *St. Maria*, a small Terra, and stopp'd at *Gherf*, a Village at the Foot of the high Mountains. In this Country the People use a peculiar Language of their own, which they call *Romansch*, that is, *Lingua Romana*. It seems to be nearer *Spanish* than *Italian*, though distinct from both: Besides their own Language, they generally speak both *Italian* and *Dutch*, so that after we had lost *Italian* in the Vallies, we wondered to find it here among the Hills. Their Wines they bring all out of the *Valtelline* from *Tirano*, about two Days Journey distant. The Country at this Time

Time was all over covered with Snow, so that they are forced to keep their Cattle within Doors for six Months; yet the People said, that thereabouts the Snow did not lie all Summer, no not on the Tops of the highest Mountains. Here we observed, that to draw their Sleds over the Snow, instead of Oxen they made use of Bulls, one Bull drawing a little Sled. About *Tavers* we observed them sowing of Dust upon the Snow, which they told us was to make the Snow melt the sooner: I suppose it was rather for Manure. They use Stoves in all Places, and good Reason they have, the Country being very cold. A great Number of *Chamois* or *Gemps*, [*Rupi capræ*] are taken all over these Countries upon the high Hills, as though the People had not told us, we must needs have gathered, from the Multitude of Horns we saw stuck up in the Houses where we lodged. Bears there are, and Wolves enough, among the high Mountains, but not very many. The Men generally wear Ruffs, and long bushy Beards. All the People (as far as we had Experience, or could judge of them, in that short Stay we made among them) we found to be honest, hearty and civil, and the common Sort very mannerly. Their Houses are built of Stone, and covered with Shingles of Wood, the Walls thick, and the Windows very small, to fence against the Cold. They have no strong Holds or fortified Places among them, nor will they permit any to be erected, having so much Confidence in their own Valour, that they think they need no other Defence: Indeed their Country is such, as one would think, none of their neighbouring Princes should covet, unless for the Security of his own Territories. We passed the Mountain of *Bufalara* in seven or eight Hours. In the Top of the Mountain in the Midway, between *Cherf* and *Zernetz*, is an Inn called *Furno*. From *Zernetz* we rode in the Valley of the higher *Engadine*, through *Zuotz*, a great *Terra*, and two other Villages, and lodged at a little Place called *Ponte*.

32. The *Grisons* are divided into three Leagues, each of these subdivided in *Communities*, which have each several Villages, some more, some less: The *Lega Grisa* has nineteen *Communities*; the *Lega della casa Dio*, twenty-one; the *Lega Dieci Ditture*, ten. Each *Community* has its chief annual Magistrate, (whom in some Places they call *Maestrale*, in some Places *Landman*) and a certain Number of Assessors or Judges, call'd *Truader*, by them. Each Village chuses its Judges by Majority of Votes, every Inhabitant, above the Age of sixteen, having his Suffrage. These Magistrates are chang'd every two Years, but confirm'd every Year, and may be deposed by the People. The executive Power and Management of publick Affairs is lodged in the *Maestrale* or *Landman*, who assembles the *Truader*. Every two Years they have two General Diets, one at *Michaelmas* Day, when they chuse Governors of Places; the second at *St. John Baptist's* Day, when they take an Account of all their Officers. To these Diets each *Community* sends its Commissioners, some one, some two, who are to act according to the Instructions given them. Each League has its Head or Chief; as for Instance, the Burgomaster of *Coira* is always Head of the League *della casa di Dio*. From the Diet lies an Appeal to the *Communities*. The *Grisons* pay no Manner of Taxes; the County of *Chiavenna* and the *Valtoline* in *Italy* are subject to them, whither they sent two Bailiffs before *Pluers* was destroyed by the falling in of an adjacent Mountain; now they send but one to *Chiavenna*; these are called *Commissario's*. The *Valtoline* is divided into six Districts or *Præfecturæ*, each of which has its peculiar Governor sent thither by the *Grisons*; their Names are, *Bormio*, *Tirano*, *Tellio*, *Sondrio*, *Morbegno* and *Travona*. The People of the *Valtoline*, and of the Country of *Chiavenna*, pay no other Taxes but only for the Maintenance of their Governors.

March 24. We left *Ponte*, and travelled over very high Mountains, in very bad Weather, it snowing so exceedingly, that we were scarce able to open our Eyes; yet by the Way we took Notice, that the People living among those cold Mountains were of a more swarthy Complexion than those below. *March 25.* We came to *Coira*, the capital City of the *Grisons*, standing upon

a River which falls into the *Rhine* about half a Mile below it. It is encompass'd with Mountains, except on that Side where the *Rhine* passes through a pleasant Valley of very fine Meadows and Pasture-grounds. The Inhabitants of *Coire* are Protestants, except the Bishop and twenty four Canons, who have no Share in the Government of the Town, the Form of which is much like to that of *Zurich* and *Basil*; the Citizens being divided into five Companies, each of which chuses fourteen Senators, who compose the Great Council of Seventy: The same are chosen commonly again every Year on *St. Martin's* Day. The Lesser Council consists of certain Members of the *Great Council*, viz. five out of each Company chosen every Year, and five Masters of the Companies for the last Year, making up the Number of thirty. This Council, with the Burgomaster regent, (whom they call *Stattvought*) judge in criminal Causes, as Actions of Debt are determined by the five Masters of the Companies, and ten Members of the Council of thirty. But from them an Appeal lies to the lesser Council. The *Grisons* have besides *Coire* two Towns more, viz. *Mayfield* and *Eylandts*: Some of their Communities are *Romanists*, some *Protestants*, but most of the last, the Number of which is computed at 17000 Fighting Men.

March 29. We went from *Coire* to *Walenstadt*, seated upon a small Lake called the *Wallenstatter-Sea*: This, as well as *Sargans*, through which we passed, are *Voghtia's* of the seven Cantons. The 30th, we ferried over the Lake to *Wesen*, and from thence travelled to *Glaris*, one of the thirteen *Swiss Cantons*: Here they shewed us the Horns of the *Ibex*, (which they call *Steinbuck*) not unlike, but somewhat longer than Goats-Horns; they told us, that they were found in *Wallisland*, and the Archbishoprick of *Salzburg* in *Germany*; but of the beforementioned *Rupicapræ* or *Gymfes* and *Mures Alpini majores*, called *Marmottoes*, they have great Plenty, as well as of the *Merula torquata* and *Merula aquatica*; of the *Urogallus*, or Cocks of the Wood, and the *Lagopus* a white Bird like a Partridge, feathered down to the very Claws; but of these they have greater Plenty among the *Grisons*. The Inhabitants of the two Cantons of *Glaris* and *Appenzel* are mixt, two thirds *Protestants* and one third *Romanists*; for the rest, the Difference of the Government of the several *Swiss Cantons* may be reduced under three Heads; the first of those who have no Cities, where the supream Power is lodged in the People, viz. *Uri*, *Swits*, *Underwalden*, *Zug*, *Glaris* and *Appenzel*; the second of those which have Cities, that were subject formerly to Princes, where the Form is Aristocratical, as *Bern*, *Lucern*, *Friburg* and *Solothurn*; the third of those, which have Cities which were always free, where there is a Mixture of both, being divided into certain Companies, by whom the Magistrates are chosen yearly; of this Order are *Zurich*, *Basil* and *Schaffhausen*.

The Canton of *Glaris* is divided into fifteen *Districts*, some of which elect five, others six Counsellors, some more, others less, which make up the Senate or Council of sixty, two Parts whereof are *Protestants*, and the rest *Romanists*. The Sovereignty is lodged in the People, who meet every Year on the last Sunday in *April*, all above sixteen Years of Age having their Votes to chuse by the Majority of Suffrages, 1. The *Landman*. 2. The *Stadhalter*, or his Lieutenant. 3. A Treasurer. 4. A Standard-bearer. 5. The Head Captain, and in Time of War a Lieutenant. 6. The Head Ensign. 7. Three Secretaries. 8. The Apparitor. Each of which has his particular Station and Share allotted in the Government, with such Persons as are joyned with them in Commission, for the further Elucidation of which, I will refer myself to Mr. *Simler* in his *Swiss Republick*.

The Territory of *Glaris* is about twenty four *English* Miles long, the Number of Freemen, of both Religions, about 2500. In the Cantons of *Basil*, *Zurich*, *Bern*, *Lucern*, *Schaffhausen*, *Friburg* and *Solothurn*, the Citizens are only Freemen, the Inhabitants of the open Country being Subjects under the Government of Bailiffs, who in some Places govern two, in others three,

in others six Years. But in those Cantons which have no Cities, each Countryman is a Freeman, as far as they belong to their respective Cantons, for they have also their Subjects govern'd by Bailiffs.

April 1. We travelled from *Glaris* through *Nafels*, and other Villages near the *Lake of Zurich*, and after an Hour's riding ascended a high Mountain, where we found the Ground cover'd with Snow, and the famous Monastery of the *Benedictine* Fryars, call'd *Eynsidle*, where is the Image of our Lady, who has a peculiar Chapel consecrated to her, visited by many Pilgrims. This Abby is under the Jurisdiction of those of *Switz*, unto which Place we came *April* the 2d, being no more than a Village, but comparable to a large Town; its Government is the same with *Glaris*, being divided into six Quarters, each chuses ten Senators, which compose the Senate, consisting of sixty Persons. Their Officers are also the same as at *Glaris*. This Canton, as every one of the rest, sends two *Messi* or Deputies to the general Diet at *Baden*, of which the *Landman* is generally one.

April 3. After we had travelled three Miles along the Lake to *Brunen*, we embark'd for *Altorf*, and having spent three Hours more in our Passage, had a Mile further to *Altorf*, there being no travelling from *Switz* to *Altorf*, unless you will take a Compass of about sixty Miles. It is larger than *Switz*, and has a pretty Church and a Monastery belonging to the *Capuchins*. Here they told us the Story of *William Tell* and the *Lantvogt*; the Statue of the first we saw on the Top of a Pillar, over one of their Fountains, with his Crossbow on his Shoulder, leading his Son by the Hand, and at some Distance a Tower, on which were painted the several Passages of this Story. The Government is the same with *Switz*, the Number of Senators and Manner of Election the same, except that they have a Master of the Artillery, and six Proctors or Councillors besides.

April 4. We return'd to the Lake of *Lucern*, and went by Water within an Hour's travelling of *Stantz*, the chief Village of *Underwalden*, where we lodg'd. Here is a very fair Church, and two Convents, one for the *Capuchins*, and one of Nuns. In this Place, and at *Altorf*, *Switz*, *Lucern*, &c. we saw in the Churchyards, Crosses of Wood and Iron upon the Graves, on some of which hung a little Copper Kettle with holy Water, and many Women coming, with Bunches of Herbs in their Hands, which they dipt in the Kettle, and sprinkled the Water upon the Graves. Such is their Ignorance and Superstition!

This Canton is divided in *Oberwald* and *Underwald*; the capital Village of the first being *Stanner*, as *Stantz* is of the latter. The lower is govern'd by sixty Senators, chosen by eleven Communities, some more, some less. Their Officers and Elections the same as in *Switz* and *Uri*, except that here they change their *Landman* every Year. *Oberwald* has its own *Landman*, Officers, &c. so that they would seem to be two distinct Cantons, were it not that they send but two Deputies to the general Diet at *Baden*.

These three Cantons of *Uri*, *Switz* and *Underwalden* have no Corn fields or Vineyards, but only Pasture-Grounds, being supplied with Wine from *Italy*, which is very dear here; and therefore but little drank. The People are generally very honest and good-natur'd, and keep their Houses very clean, but are much given to eating and drinking, having Plenty of plain Things at small Cost.

April 5. We travelled to *Lucern*, crossing part of the Lake. It is a very handsome City, pleasantly situate upon the Lake of the same Name, and divided in two Parts by a River, which arising from the Lake, is cover'd here with three Bridges, one for Carts and Horses, the other two for Foot-Passengers, covered with a Roof, one being near a Quarter of a Mile long; besides which, it has a fourth Bridge covered like the other, but longer, leading to the Church. The great Church, which stands without the Wall, is a very lofty Structure, over the Western Door of which is the biggest Organ that ever I saw, the Hollow of the greater Pipes being capacious enough for a Man to creep into. They told us, that

their Great Council consisted of an hundred and thirty six, who continue in Office during Life, and when one dies, the rest chuse another in his Place. It has two Presidents, whom they call *Sculteti*, who also continue for Life, but preside in their Turns every other Year. For their Manner of chusing these Senators and other Officers, I will refer myself to *Simler*. All the Inhabitants of the Territories belonging to this City are Subjects, and divided into nineteen or twenty *Presecturæ*, but they pay no more than five *Batz*, or a Hen a Man *per Annum* to the Governor. From *Lucern* we travell'd, *April* the 6th, fifteen Miles to *Zugb*, (*Tugium* in *Latin*) seated at the Side of a small Lake, but it is less by one half than *Lucern*. The Government here is popular, like those of *Uri*, *Switz*, and *Underwalden*; but besides the City, the three Communities of *Eyry*, *Mensingen* and *Baar* have a Share in the Government. Their Magistrates, Officers and Elections the same as in *Uri* and *Switz*. To the General Diet the City sends one, and the three Communities the other Deputy. The Nomination of the *Landvogts* or Governors in the Country belongs once to the City and twice to the Communities.

The Lake of *Zugb* (if you believe the Inhabitants) has greater Variety of Fish than any other of *Switzerland*; those they named to us were, *Eels*, *Carp*, *Perch*, *Trouts*, *Salmons*; which is very strange, by Reason of its great Distance from the Sea; *Esch*, called *Grayling* in English, *Trisea* or the *Eel-pout*, *Pikes*, (of which we saw one weighing thirty Pounds) *White-fish* or *Alberlin*, which is taken also in the Lake of *Bala* in *Merionethshire* in *Wales*, and is call'd there *Guiniad*; and in *Huls-water* near *Perith* in *Cumberland*, and there call'd *Schelly*; *Hafslar*, a Fish I take to be the same with our *Charre* in *Winandenmere* in *Westmorland*, and the *Torgoch* of *North Wales*; *Balla*, *Nase*, (call'd *Nasus* by Naturalists) *Breams*, *Crevises*, &c. and many more. In the shadowy Lakes about *Sant* and *Zug*, we found *Anblatum Cordi*, or *Dentaria apbyllos*. From *Zug* we rode *April* 7. in five Hours to *Zurich*, of which we have given an Account before.

April 13. We travell'd thence four good Leagues to *Mellingen*, a free Town, not far from *Baden*, and passing through *Lenzburg*, lodged at *Arau*, a considerable Town upon the *Aar*, four short Leagues from *Mellingen*. The 14th we pass'd thro' no considerable Place till we came to *Solothurn*, nine Leagues from *Arau*, which, though the Head of a Canton, is not considerable either for its Strength or Bigness. *April 15*, taking a round-about Way out of the ordinary Road to *Geneva*, we took a View of *Bern*, six Hours riding from *Solothurn*, that we might not leave *Switzerland* without seeing it.

Bern is a very handsome City, for though the Houses be not very high, yet they are well built of Stone. The chief Street which is very long, has Cloysters on both Sides; it lies stretched out in Length upon a Hill, resembling a Peninsula, being almost encompassed by the River, that side where it is not being strongly fortified with Bastions and Outworks. The Founder of this City, as also of *Friburg* in *Switzerland*, and of *Friburg* in *Brigow*, was *Berchtoldus* Duke of *Zerin*, unto whom they have erected a Monument in the great Church, one of the neatest Stone Fabricks in all *Switzerland*. The Territories of this City are of such an Extent, as to comprehend one third Part of all the Country of the *Swiss*, being divided into sixty Bailiages, besides four others they have in common with *Friburg*. The *Landvogts* or Bailiffs continue in their Stations for six Years, which makes them very rich without exacting upon the People. They keep here five or six Bears in a Pit, which are often climbing up and down the Fir-Trees that grow in the Pit. The Arms of *Bern* is a Bear, alluding perhaps to their Name, this City being the first that coin'd the Money call'd *Batze*, (signifying a Bear's Paw) from the Figure of a Bear stamp'd upon it, which was afterwards imitated by all the rest of the Cantons.

April 17. We travelled from *Bern* to *Friburg*, a very handsome City and likewise the Head of a Canton; its Situation

Situation is much the same as *Bern*, upon a Hill, almost surrounded with a River, and encompass'd with Hills, except on that Side where it is joined to the Land.

April 18. We travel'd from *Fribourg* through *Maul- ton* to *Lausanna*, a great Town and an University; and April the 19th continued our Journey by the Way of *Morges*, *Rolle* and *Nion*, considerable Towns upon the Lake of *Geneva* and *Verfoy*, a small Place on the Lake near *Geneva*, belonging to the *French*, and came the same Day to *Geneva*, where we staid for three Months.

The Governments of *Solothurn*, *Bern* and *Friburg*, are much the same as that of *Lucern*. In *Solothurn* the Great Council consists of One Hundred and Fifteen, the Lesser of Thirty-five; if one happens to die, the Thirty-four remaining chuse another out of the One Hundred and Fifteen, and his Place is supplied out of the Citizens. In *Bern*, the greater Council is composed of Two Hundred, and the lesser of Forty-two. In *Fribourg* the greater Council is of Two Hundred likewise, and the Lesser of Twenty-four. All these Cities have two *Scouts* or *Consuls*, who rule every other Year each in his Turn. He that desires a more ample Account of the Government of these and all other *Helvetic* Cities, may consult *Simler de Rep. Helvet.* Each of the Protestant Cantons acknowledge a certain Saint for their Patron, whose Image they stamp upon the Reverse of their Money. The Protestant Cantons are, *Zurich*, *Bern*, *Basil*, *Schaffhausen*, and Part of *Glaris* and *Appenzel*. That which breeds frequent intestine Differences among the *Swiss*, is the Business of the common Bailiwicks; for the Popish Cantons, being more in Number than the Protestants, they send Bailiffs to those Places twice to the Protestants once, who are often oppress'd and injured by the Popish Bailiffs, and the *Switzers* being very jealous on both Sides in their Religion, *hinc ille lachrymæ*. On the other Hand, the Protestant Cantons, though fewer in Number, yet are the more powerful: Besides that, their Land is better, very like ours in *England*. The *Romanists* are accounted the better Soldiers, and good Reason they have, being more exercised in War, serving the *Spanish* and *French* Kings, as being of the same Religion. Besides, the *Zurichers*, who anciently had the Reputation for Valour, are now much given to Merchandize, and to accumulate Riches, and so taken off from Martial Studies and Exercises. The *Bernese*, though they have far the greatest and best Territory of all; (so that it is said they can arm as many Men as the Dutchy of *Milan*, send into the Field 100,000 Soldiers, and leave enough at Home to till the Land) yet have they no Reputation for Soldiers: They lost their Credit quite in the late Skirmish with the *Lucernese*, who account them rather *Savoyards* than *Switzers*. All the Cantons of *Switzerland* coin Money, except *Appenzel*, *Underwald* and *Glaris*, of which *Glaris* formerly hath coined, though now it doth not. All the *Switzers* in general are very honest People, kind and civil to Strangers: One may travel their Country securely with a Bag of Gold in his Hand. When we came to our Inns, they would be troubled if we distrusted them so far as to take our Portmanteaus into our Lodging Chambers, and not leave them in the common Dining-Rooms. They keep their Houses very clean and polite, like our Housewives in *England*. For Plants, going from *Zurich* to *Mellingen*, we observed common Goosberry in the Hedges and by the Way-sides very plentifully, and in some Places Barberries. *Sigillum Solomonis* and *Herba Paris* are the most common Plants that grow in this Country in the Woods and Hedges every where; *Anonymus flore Coluteæ* on the Mountains near *Zurich*; from *Aarau* to *Solothurn*, *Helleboraster Maximus* on the Hills Sides, as also *Christophoriana*, not to mention *Fumarica Bulbosa* every where growing in the shady Lanes.

Geneva is pleasantly seated at the lower End of the *Lacus Lemanus*, now called *Geaffer-zee* or the Lake of *Geneva*, upon a Hill-side respecting the Lake; so that from the Lake you have a fair Prospect of the whole

Town. It is divided by the River *Rhodanus* or *Rhofne* into two Parts, which are joined together by two wooden Bridges, one of which hath on each Side a Row of Houses, after the Manner of *London Bridge*, only they are low. The two principal and indeed only considerable Streets in the Town are, the Low Street, *i. e.* *Rue bas*, which runs along by the River and Lake-side, and the High or Great Street, *i. e.* *Rue Grand*, which runs up the Hill. The City is indifferently strong, and they have lately been at great Expences to fortify it, *à la moderna*, with Ramparts and Bastions of Earth. Though it be small, yet it is very populous, being supposed to contain 30,000 Souls. *St. Peter's Church*, formerly the Cathedral, is handsome and well-built; and in it is a stately Monument for the Duke of *Roban*.

The Citizens are very busy and industrious, subsisting chiefly by Trading, the whole Territory of this Republick being not so great as some one Nobleman's Estate in *England* for Extent of Land. All Provisions or Victuals are very plentiful and cheap at *Geneva*, especially Milk, Meats, the neighbouring Mountains feeding Abundance of Cattle. The Tops of *Jura Saleve*, and other high Mountains of *Savoy*, *Dauphine*, and the *Alps*, where they are bare of Wood, put forth very good Grass so soon as the Snow is melted off them, which usually is about or before the Middle of *May*: And then the Country People drive up their Cattle to Pasture, and feed them there for three Months Time. Upon these Hill-tops they have here and there low Sheds or Dairy-houses, which serve the Men to live in, and to make their Butter and Cheese in so long as they keep their Beasts above. The Men I say, for they only ascend up thither, and do all the Dairy Work, leaving their Women to keep House below it, as being too toilsome for them to clamber up such steep Hills. By Reason of these Cottages, it is very convenient Simpling upon the Mountains; for if a Man be hungry or thirsty, he may soon find Relief at one of them. We always found the People very kind and willing to give us such as they had, *viz.* Brown Bread, Milk, Whey, Butter, Curds, &c. for which we could scarce fasten any Money upon them. For the Temper of the Air, in respect of Heat and Cold, *Geneva*, I think, is very like *England*, there being no great Excess of either Extreme. The City is well governed, Vice discountenanced, and the People either really better, or at least more restrained than in other Places, though they do take a Liberty to shoot, and use other Sports and Exercises upon the Lord's Day; yet most of their Ministers disallow it, and preach against it.

33. We shall now take our Leave of these Parts of *Europe*, with the Satisfaction of having given the Reader such Accounts of them as cannot fail, with any reasonable Degree of Attention, to furnish him with just Ideas both of Places and Persons; of the Country of *Italy*, of the principal Cities and remarkable Places therein, and of their Inhabitants. We might, indeed, have given him later Travels, but against these we had several Objections, some of which it may be proper to mention. Modern Travellers commonly visit *Italy* for some particular Purpose; one is an Antiquary, and his Business is to consider Monuments, transcribe Inscriptions, collect Medals, and write tedious Accounts of them. Another has a Taste for Painting, and every City that he passes through, furnishes him with a fine Catalogue of Pictures, and which is no less valuable, an Opportunity of discovering to how great a Degree he is a *Connoisseur* by his Remarks upon it. A third, perhaps, is furiously addicted to the Classics, and his great Point is to shred out by *Virgil*, *Horace*, *Ovid*, &c. and where-ever he comes, gives you their Description instead of his own. A fourth, it may be, is a Politician, and he entertains you with a Recital of the several Families through which every little Principality has passed, before it fell under the Power of the House of *Austria*, the Kings of *Spain*, the Pope, the *Swiss* Cantons, or the State of *Venice*. A Fifth, possibly, may be a *Virtuoso*, and insists entirely upon Curiosities,

so as to render his Book a Collection of Discourses or Dissertations upon a vast Variety of Subjects extremely agreeable to a few, and absolutely useless to all the rest of the World.

I would not be understood to censure these Writers in a dictatorial Manner, or to prejudice my Readers against them; each and all of these Books may be useful, instructive and entertaining; but they are not fit for a Collection, because, if we take one we must take all, in order to render the View complete; and this would swell our Work not only beyond its due, but beyond all Limits; and, after all, answer the Purpose but indifferently: Besides, in most of these modern Books of Travels, you will find continual References to the Authors that we have used, because such Writers are themselves satisfied, that they cannot give better or more exact Descriptions; and this being the Case with respect to those Things that the Generality of Readers desire most to be acquainted with, it follows for this very Reason, such Travels ought to be preferred in a Design of this Nature, and the Treatises of modern Travellers left to the Perusal of such as, from their having a like Taste to this or that Writer, incline not only to read but to study his Performance.

In regard to the principal and general Ends of visiting Foreign Countries, in order to take a View of the most remarkable Places in them, to examine their Situation, Excellencies and Defects, the Nature of the adjacent Territories, and their Produce; to observe the Governments, Number of People, Revenues, the Condition, Inclinations and Manners of the Inhabitants, and to take Notice of the Particulars for which they chiefly distinguish themselves from other Nations; these, as they are the profess'd Intentions of the Authors we have inserted; so it must be allowed, that they have executed them with great Diligence, Fidelity and Spirit. Wherever their different Circumstances, different Qualities and different Manner of Travelling, may be supposed to have given them an Opportunity of making different Observations or Remarks upon different Places, we have been careful to supply the Reader with their several Works; so that all their Discoveries are united in this Body of Travels, with as little Repetition as it is possible.

As for Instance, *Misson*, *Burnet*, and *Ray*, all travelled through *Switzerland*; and yet their Accounts are very different from each other: The first confined himself chiefly to the Road, and describes only the Places through which, in their ordinary Rout to *Italy*, most Travellers must visit. The Second having greater Leisure, and a Mind of another Turn, is less solicitous about Places, and more concerned about Persons; so that from him we receive as clear and distinct Informations, as to the Tempers and Manners, their Notions in Religion and Politicks, as if we had passed as much Time as he did among the *Swiss*. The Third differs from them both, speaks of Places and Persons too, and takes in besides Abundance of Points, that from their Attention to their particular Views had escaped the other two; so that this may be justly reckoned a Kind of Supplement to the other Travels; and, by comparing all three, the Description may be render'd compleat.

Again, As to *Loretto*, and the holy House there, it is mentioned by each of our Travellers, and yet there is little or nothing of Repetition in their Accounts; but there is one Thing very singular in Mr. *Ray's*, that instead of entering into a long Detail of all that he saw and heard there, and from thence remarking upon and pointing out all the Absurdities and Inconsistencies of that extravagant Fable, he contents himself with transcribing, which neither of the other two had done, the authentick Account of honest Father *Codrington* in plain *English*; which furnishes us with such a History of Things, as renders Reflections and Remarks entirely needless. His Travels through *Naples*, *Sicily* and *Malta*, are in respect to those who have gone before, absolutely new, and carry us to the very Frontiers of *Europe* on that Side; and with respect to the last mentioned Island, I very much doubt, whether

there is a better Description extant in any Language. It must be, indeed, acknowledged, that he runs sometimes into very long Digressions upon Points of natural History; and the Reason that I did not lope off these Digressions was, their being of general Use, and serving to illustrate the same Points, where-ever they occur; so that considered in this Light, they are very useful as well as very entertaining.

It was the Design of Mr. *Ray* and his Company to have taken a View of all the Provinces of *France* that lay in their Way to return Home, and to have examined them with the same Diligence and Accuracy as they had already practised in their Travels through *Italy*: But this Scheme of theirs was defeated by the Difference that happen'd between the two Crowns, the *French* having thought fit, in the first *Dutch War* in King *Charles* the Second's Reign, to declare for that Republick against *Great Britain*; and, in Consequence of that Declaration, order'd all the Subjects of the *British* Crown to quit the Territories of *France* within a certain Time. This obliged Mr. *Ray* and his Company to alter their Intention and Manner of Travelling; so that instead of looking into and enquiring after every Thing, they were constrained to make their Journey in the common Way, and to confine their Acquaintance entirely to the publick Houses where they lodged, and the People to whom they applied for Bills of Exchange, and other necessary Purposes, excepting some few Places, of which Mr. *Ray* has left us some Account, and Mr. *Skippon* a larger, which shall follow in the next Chapter.

It may not be amiss to take Notice here, that Mr. *Skippon* kept also a distinct Journal of his Travels thro' the *Low Countries*, *Germany* and *Italy*; but as most of the Particulars in them, is different from what we meet with in Mr. *Ray*, are either honorary or monumental Inscriptions or Accounts of Engines and Machines, we were unwilling to intersperse them with Mr. *Ray's* Observations, because they would not only have lengthen'd this Section beyond due Bounds, but also have afforded the Reader very little that is new, since they are already included in another Collection. But it is now Time to finish these Remarks, in order to open the next Chapter, which relates to the two great Kingdoms of *France* and *Spain*.

But before we come to this, we shall take the Liberty of suggesting, that if modern Travellers through the *Low Countries* would examine the new Manufactures that since these Gentlemen visited them are introduced there, and are exported from thence not only into *Germany* and the North, but also into the several Kingdoms of *Europe* and the Plantations in *America*, dependant upon them, it would be a prodigious Service to this Country. In *Germany* also there are many Enquiries to be made, that would be highly useful and in their Consequences very beneficial in respect to Mines more especially, since we are well assured, that as most of the Discoveries, in relation to the Working them to Advantage, have hitherto been brought from thence, by the Care of the *Crawley* Family, and others interested in Iron Works here; so there are still several Methods practised there, which are not yet known, or at least not generally known to our People.

In *Italy* also there are many Things relating to the Silk Manufacture that deserve to be enquired into, and we may very well guess at the Importance of such Enquiries, by the Reward given to Sir *Thomas Lombe* for bringing over that celebrated Invention, which has been so successfully executed in the Machine erected at *Derby*. But exclusive of the Manufactures, it would be of great Consequence to the Publick, if any Method could be found to open new Markets for Raw Silk; the obtaining which, in the Channel whereby it now comes, stands the Nation in vast Sums; of which, whatever could be saved, would be so much clear Gains, and consequently the general Balance of our Trade would be much more in our Favour.

The Trade of *Naples* and *Sicily* also is very capable of being extended and improved, since it is certain, that the *French* draw very considerable Sums from those Kingdoms

Kingdoms for Commodities and Manufactures which they might receive from us, and though some People entertain a Notion, that since those Countries fell under the Dominion of the House of *Bourbon*, we are put under greater Difficulties in dealing with their Inhabitants; yet it is very certain we have still a great Advantage over the *French*, which might be rendered of higher Consequence than hitherto it has been; I mean, the trading with these People for their own Goods and Manufactures, which, as on the one Hand it would give us the Preference with respect to them, so on the other Hand it would increase the Shipping employed by us in this Part of the World, and likewise enable us to export their Commodities into several Parts of *Europe*, as well as to our Colonies in *America*.

To speak the Truth, travelling with a Commercial View, though so visibly advantageous to us, has hitherto

been very little practised, more especially of late Years; and yet one would think Enquiries of this Nature may prove very satisfactory, and even as entertaining as the looking after fine Statues, the Pictures of great Masters, Medals, Bronzes and other Curiosities; searching after which take up so much of the Time of most of our Travellers. Not that I am by any Means an Enemy to Taste, but that I think in our present Condition, some Respect should also be had to our Interest, and that in Proportion, as our Expences are increased by the Share we take, and are long like to take, in the Affairs of the Continent, so we should contrive, if possible, to make ourselves some Amends, by enlarging and promoting our Commerce, which, whatever Way those Affairs turn, is the only Means by which we can ever be made the better for them.

CHAPTER IV.

Containing TRAVELS through *Spain, France and Navarre*, with Descriptions of the several Provinces and lesser Districts of those great Countries; of the chief Cities and Ports in them, and of the Commodities and Manufactures, for which they are principally famous.

SECTION I.

The Travels of Francis Willoughby, Esq; through the Kingdom of Spain; with Observations on the Climate and Soil, as well as Produce of the Country; Accounts of natural Curiosities, remarkable Inscriptions, principal Commodities and Manufactures, and of the Temper, Genius and Customs of the Spanish Nation. Interspersed with some Remarks by another Hand.

1. An Introductory Account of what is to be expected in the following Section.
2. The Author begins his Journey from the County of Roussillon, and enters the Kingdom of Spain through a very barren and desert Country. A large Description of the Manner of Gathering, as also an Account of the Uses and Value of Coral.
3. The Country of Catalonia described, as also the remarkable Mine of Amethysts, at the Hill of St. Sigminont.
4. Of the Salt Mines both white and red in this Province; and of the famous Dutchy of Cardona.
5. An Account of the Lead-Mines in Catalonia, and of the poor living and wretched Condition of the Inhabitants. The City of Tortosa, the Jasper Mines, and other Things remarkable in the Author's Journey to the Banks of the River Ebro.
6. A curious and copious Account of the City and Kingdom of Valentia; the University there, and of the very low State of Learning therein.
7. An Account of the Sugar Works at Olives and at Gandia, and of the great Fertility of the adjacent Country.
8. Observations made by our Author in his Travels through the Kingdom of Murcia, the Poverty of the Country, and gross Ignorance and Superstition of the People.
9. A Description of the Kingdom and City of Granada, and of the most remarkable Places in its Neighbourhood.
10. The Author proceeds to the famous City of Sevil, an Account of the most remarkable Things there, with two famous Inscriptions to the Honour of Ferdinand the Wise, and the Family of the great Columbus.
11. Of the Country from Sevil to Madrid, including a Description of the City of Cordova, and several other Places.
12. The Author's Arrival at, and Description of Toledo, his Journey from thence to the capital City of Madrid, with an Account of what he saw most remarkable there.
13. His Journey from thence to Burgos, and from that City to the Province of Guipuscoa.
14. An Account of the Principality of Biscay, and a particular Description of the strong Town and Port of St. Sebastian.
15. A very large and entertaining Account of the Disposition, Manners, Customs, Peculiarities, good and bad Qualities, &c. of the Spaniards.
16. Some additional Remarks by another Hand.
17. Conclusion of the Section, and some Observations on the most remarkable Passages therein.

THE great Desire Mr. Willoughby had to travel through and examine such Countries as were least like his own, that his Observations and Remarks might furnish him with a greater Variety, was the Occasion of this Journey into *Spain*, in which he parted from Mr. Ray, and the rest of his Company, and joined with some other *English* Gentlemen who were resolved to make the Tour of that Country. It may not be amiss to inform the Reader, that, from the Time of King *Charles's* Voyage to that Country, while Prince of *Wales*, in Hopes of Marrying the *Infanta*, the *English* Nation had acquired so strong, and so universal a Dislike both to the Country, and to the People, that very few of our Gentlemen that went Abroad, inclined to visit it; so that we had but very indifferent Accounts of what was remarkable there, as may be seen, by consulting the Books of Geography, printed here of an elder Date. After the Restoration

a very different Spirit prevailed, King *Charles* the second, during his Exile, had travelled much, and among other Countries visited this, and frequently discoursed of the Singularities he had seen there, and of the odd Humour and uncouth Disposition of the People. These Discourses of the King's, raised the Curiosity of many, and excited in them a Desire of viewing Places they had otherwise never wished to see, and conversing with People for whom they had long had both an Aversion and Contempt. But besides there were other Reasons that induced Persons of very different Tempers to think at this Time, a Journey through *Spain* might afford Matter of Instruction, as well as Amusement, which was the Case of Mr. Willoughby, who had heard that there were various Mines and Manufactures, as well as a Multitude of natural Curiosities in that Country, which might very well justify the spending a few Months in surveying and committing to Paper, an Account of them,

them for the Improvement of others as well as his own Satisfaction. If the short Time that he spent in his Passage through this Kingdom, did not allow him to search into and after every Thing, in as diligent a Manner and with as much Exactness as he desired; yet it must be allowed, that he has given us a very judicious and accurate Account of all that he saw, so as to afford a true, if not a pleasing Picture of *Spain* and its Inhabitants, at the Time he visited them; the Reading of which will enable us to form a very just Notion of the Places and the People, which is the great End of Travelling, and the highest Advantage that can result from the Perusal of Books of this Kind. I have met with a Copy of these Travels, which formerly belonged to Sir *Philip Skippon*; and in which there are contained some Explanations and Additions, which are here taken in, and consequently render these Travels more curious and valuable. The Necessity of keeping within Bounds, renders it improper to extend this Introduction farther, and therefore we will now proceed without Ceremony to the Travels themselves.

2. *August 31, 1664.* We left *Bagnols* in the County of *Roussillon*, being the last Town belonging to the *French*, and at about three Fourth's of a League's Distance came to a great Stone erected here for a Boundary between *France* and *Spain*, and passing very bad Way among desolate Mountains, after many Hour's riding, we came to *Lansa*, the first Town of the King of *Spain's* Country. All along these Mountains grow *Rosemary*, common *Furze* or *Gorse*, and *Agnus castus* of two Sorts, the one with a carneous, the other with a blue Flower. From *Lansa* we went on the same Day as far as *Cande Creux*, five Leagues or twenty *English* Miles from *Bagnols*. Among these Mountains we met with no Brooks, and scarce any Water. *Sept. 1.* We intended to have seen the Coral Fishing here; but the windy Weather hinder'd us. The Sea must be very calm and smooth, else it is impossible for them to fish for it. It grows downwards (as the Urinators told us) under the hollow Rocks, and not upwards as Trees. I believe rather, that it grows indifferently, either upwards or downwards, according to the Situation of the Rocks. The Engine they make Use of for getting Coral is, a great Cross of Wood with a considerable Weight of Lead fasten'd at the Center, to which also a strong Rope is fixed, and at each Corner there are stout Nets made of small Cord: They go out in little Boats, and let down this Cross; and when they have found a Rock at the Bottom of the Sea, he that manages the Rope, thrusts it into the Hollows, getting in one or two of the Corners; and if there be any Coral, it entangles in the Nets at the End of the Cross, by which it is torn off and brought up. The natural Colour of the Coral, while it is alive and growing to the Rocks, is a pale carneous; but when the Scurf (which answers to the Bark on Trees) is rubbed off, it is red. The Coral, that dies or is broken off from the Rocks, looses that carneous Scurf or Bark in the Sea, and becomes red, though sometimes it gets a greenish white Rust. They say it is fifty Years before it comes to its full Growth; but that, I conceive, is an ungrounded Conjecture; they sometimes, but very rarely, find Branches of three or four Pounds Weight. It rots, dies, grows light, Worm-eaten, and full of Holes like Wood. They all affirmed it to be hard and not soft, as it grows under Water, contrary to the current Tradition of the Ancients, *Mollis fuit herba sub undis*. I believe the outward Scurf or Bark may be soft, it easily crumbling off afterwards, which might give Occasion to the Fable. They told us, that a Piece of Coral having the carneous Scurf upon it (wetted) is just the same as when it is first taken out of the Sea. The best Coral, rude as it is found, is worth a Pistole the Pound, or two or three Pieces of Eight: Polished and wrought into Beads, Bracelets, &c. at *Marseilles* it is sold for thirty, forty, and sometimes sixty Sols, (*i. e.* so many Pence) the Ounce. They find here white Coral also, but very rarely.

To this Account of our Author, the following Particulars may be added

The Opinion of the Ancients was clearly that it was a Plant, but this Notion was afterwards questioned by several very learned and great Men; but at this Time of Day, when Opinions in Matters of this Kind are not so much regarded; we are satisfied from Variety of Experiments, that the old Notion is a Matter of Fact, that it is really a Plant which is petrified, or render'd hard by the Sea-water, that it produces Flowers which are actually visible; that in the Flowers there are seed, though entangled in such a Manner in a thick clammy white Juice as not to be discerned. It does not grow either at the Bottom of the Sea, as *Kircher* thought, or on the Sides of Rocks, as our Author and most learned Men have believed, but at the Top of Rocky Caverns, shooting directly towards the Center of the Earth. It is not true that it has any Root, for it is fixed to the Rock by a thin small Plate, and never spreads itself by darting Fibres upwards, but grows by attracting its proper Nourishment from the Sea-water, though its Pores, which are visible enough, its Seed are carried by the Waves and the thick glutinous Liquor in which it is contained, sticking to the Rock, affords it thereby the Means of growing; but the Structure of it is such, that it cannot grow but vertically in the Manner before-mentioned.

The principal Coral Fisheries are those in the *Persian* Gulph; in the *Red-Sea*, in the *Sicilian* and *Neapolitan* Seas, upon the Coast of *Africa*, upon the Coasts of *Minorca*, *Corfica*, and *Provence*; but it is agreed that no Place yields either better, brighter, or greater Plenty of Coral, than at Cape *Quiers* in *Catalonia*, which is the very Place our Author speaks of: The Time in which they fish for it, is from the Beginning of *April* to the End of *July*. The best Account we have of any Coral Fishery, is that managed by a *French* Company, at a Place called the *Bastion of France*, on the Coast of *Africa*; and as Experience has taught all that are concerned in this Trade, to pursue it in the same Manner, or at least very nearly in the same Manner, one Description will serve as well as many. When we say that these are the principal Coral Fisheries, we do not mean that there may not be others; for we know there are both in the *East Indies* and the *West*, but they are small and inconsiderable in Comparison of those that we have mentioned, in Respect as well to the Coral which is gathered, as to the Quantities that are gathered; and perhaps it might be worth while to consider, why Coral grows plentifully in some Seas, rarely in others, and in many not at all. But at present let us speak of the Manner in which this Commerce is carried on.

The Coral Fishers, or as our Author calls them, *Urinators*, come a little before the Season begins, to the *Bastion of France*, without either Tackle or Tools, without Vessels, and without Money. The first Thing they do is to separate into Crews. The Crew of a Coral Fishing-boat may consist of seven, but it is generally composed of eight. The Patron, or Master of the Boat, the Man that throws the Cross, and six Seamen that manage the Boat and assist in dragging the Machine aboard. Upon applying to the Company, they are furnished with a proper Vessel, which the *French* stile *Satteau*, that is a long sharp Boat with very large Sails, so that they go at a great Rate, and are not easily taken. They are likewise furnished with all Kind of Tackle and Provisions upon Credit. Then they enter into Articles for the Price of the Coral, which is generally fixed at a *French* Crown a Pound, or thereabouts. They likewise engage to sell all that they take at that Rate, upon Pain of corporal Punishment if they are detected in a clandestine Commerce. Thus equip'd, they proceed to Sea, but they are not obliged to deliver their Coral till the Season is over. Then each Boat's Crew brings their Stock on Shore, where it is divided into thirteen equal Parts, of which the Master of the Vessel has four, he that manages the Machine two, and each of the Crew one; the thirteenth Part belongs to the Company, and goes in Discharge of the Equipment. In a good Season, a Boat will bring twenty five hundred Weight of Coral, from whence the Reader may judge of the Profit which attends this Fishery; and if he desires to be informed of the total Value, it is enough

to say, that it is thought a very flourishing Season, when two hundred of these Vessels are employed. The Business of Coral fishing is both laborious and dangerous, it requires great Skill and Dexterity to heave the Crops, and no small Labour and Diligence to get it on board again, besides the great Risk they run from Storms, Accidents in their Fishing and Pyrates, all which taken together, keep the Coral Fishers so poor, that the Company never wants Servants.

As for the Uses of Coral, one may safely reckon three. First, those for which it serves in Physick, and there want not many Writers who have raised these very high, and suggested, that Wonders might be done by Tinctures, Elixirs, Magisteries, and other Preparations of Coral, which in Process of Time, however, have been exploded, and are grown altogether out of Use. But from the Powder and Salt, and some other Medicines more easily made, and of as great Efficacy as the former, since Coral can only operate as a Sweetner, and as an Absorbent, it is still a good Thing in this Respect, and great Quantities of it are continually vend- ed. The second Use it is put to, is for Toys, such as Necklaces, Bracelets, adorning Rock and Shell-Work, and other Purposes of the like Nature. Lastly, it is exported into the most distant Parts of the World, where it is in very high Esteem, particularly in *Persia*, and among the *Tartars*. But the best Market in the World (if it could be got thither) is *Japan*; where it is esteemed beyond all precious Stones whatever, Emeralds, Rubies and Diamonds themselves not excepted; and this for the best Reason in the World, because all these Jewels they have, but Coral they have not. The Coral that is commonly brought to Market is either red or white, the former is employed in Toys, and the latter sold to the Apothecaries; but besides these, there are some Pieces of a flesh Colour, and some Green, but this comes from *America*. When it is wrought into Beads and Necklaces, it sells in the *Levant* for about five Shillings an Ounce, sometimes for more. It has been already observ'd, that large Pieces of Coral are a very great Rarity, and this the famous Mr. *Lemery*, and some other learned Persons ascribe to the Nature of the Plant, but without any kind of Reason, except this may pass for one, that Coral is of a very slow Growth, and that must be allowed to be the true Reason. For Coral requiring many Years to reach a large Size, and the Coral Fishers pursuing their Trade constantly every Season, it must necessarily follow, that scarce any large Coral can be obtained, because they never suffer it to grow. Besides this, as the Coral Fishers are paid by Weight, without any Distinction between great and small Coral, they are not at all solicitous as to the Size, Colour or Quality, but are barely taken up about the Quantity of Coral, that they can take and bring to Market. These seem to be the principal and most material Points that relate to the History of the submarine Plant. It would be equally useful and curious, if we could enter into, and furnish the Reader with as copious, and as distinct Accounts of the other Curiosities that occur in our Author's Travels. Where this is in our Power we shall not fail to do it, but in the mean Time, let us return to his Narration, which we shall again pursue in his own Words.

Near *C. de Creux* upon the Mountains, they find a kind of *Selenitis*, which may be cut or slit into very thin Plates like the common *Muscovy* Glass. Upon the Shore are thrown up *Conchæ venereæ* of several Sorts, and Magnitudes, and other small Shells of Affinity to them, which they call *Porcellane*. These they put in the Juice of Lemons or Citrons, and set them out in an open Bottle all Night. The Dew mingling with the acid Juice, dissolves the Porcellane: This Liquor they use for a Cosmetic. They catch Fish about *C. de Creux* as at *Naples*, by hanging a Firebrand or other Light at the End of the Boat, which intices the Fish into the Boats. This Day we passed by *Roses*, a strong Garrison, *Villa sacra*, and lay at *Figera*.

3. September 2. We passed *Crispia*, *Basalon*, *Argelagues*, and lay at *Castel Foulet*, five Leagues. All the Way we observed Abundance of Pomegranate Trees.

Castel Foulet is a small Garrison. On the 3d we passed by *Aulot*, where we saw a *Bufalore*, of which there are divers in that Town. It is a Hole or Cave, out of which continually issues a cool Air. They keep Bottles of Wine, Fruit, &c. in a little House built over the Cave. The Wine here kept drinks as cool as if it were kept in Ice or Snow. They say that it is the Water running and falling down under the Ground that makes these *Spiracula*, which is not unlikely. They are all on the Left-side of the River, as you go to *Viêt* on the Right. This Day also we passed *Rhoda*, and lay at *Viêt*, seven Leagues. On the 4th we went to the Hill where the Amethysts, or Violet Stones, are found, distant two Leagues from *Viêt*, called *Sigminont*. On the Top of the Hill is an Hermitage and Place of Devotion, where *Sigminont*, a *Burgundian* King, did Penance. The Amethysts are found lower in the Side of the Hills. Viscount *Jacque* is Lord of the Soil, and whoever opens a Mine, pays him a Pistole and a half *per Menssem*. They find the Stones by following a Vein of reddish or black Earth, or a Vein in the Rock so colour'd. They are all hexangular, and pointed like Chrystal. There are of three Sorts, the best are the blackest or deepest Violet; others are also quite white; some, but very rarely, are found tinged with yellow. They sometimes stick a great many together to the Rock, like *Bristol* Diamonds, but those are never good, the best are found loose in the Chinks of the Rock, in a fat, yellowish, or reddish Earth. They scrape out this Earth with long narrow Knives that enter into the Chinks, and then crumble it in Pieces with their Fingers to feel for the Stones. They are afterwards ground and polished upon Leaden Moulds, after the same Manner as Chrystal is. First they use the Dust of *Smiril* or *Emery*, and at last of *Tripoli*. All along the Way to this Hill we saw Abundance of *Arbutus*, and *Rhus Coriariorum*, called *Rbondo*. In this Country they use not Bark of Oak to tan their Leather, as we do, but the Leaves and Branches of this Shrub, which they first bruise with a perpendicular Stone, and then mingle with Water, and heating the Water lukewarm, steep the Skins in it three or four Days. In these Mountains are also found Emeralds, Gold, and other Sorts of Minerals and Stones, but it doth not turn to Account to search for them. Topazes are found in a Lake called the Lake of *Silees*, not far from *St. Colonna*, near *Girona*. They find them upon the Shore of the Lakes. At *Viêt* there is a great Market-place, and a Church at a Convent said to have been built by *Charlemagne*, when he had discomfited the *Saracens*, and driven them out of *Catalonia*. This Night we lodged at *Moia*, having travelled only three Leagues. On the 6th we rode within Sight of *Montferret*, broken at the Top into Rocks, standing like the Teeth of a Saw, from whence it took its Name. There is a Chapel of our Lady, a Place of great Devotion. This Night we lodged at *Casa della Pobla*, a single Inn, five Leagues.

We came to *Cardona*, two Leagues. All the Way as we rode, the Rocks and Stones were full of round Holes, just like those in the Stones at *Ancona*, in which the *Pholades* harbour, and there is no Question but these Holes have been made by some Animal before the Stones were hardened.

4. On the 8th, we viewed the Mountain of Salt, where were three Officers, one to weigh the Salt, another to receive Money, and the third to keep Accounts. The Revenue of this Salt amounts yearly to about 30,000 Pieces of Eight. For every Quintal, that is 104 Pounds, they pay ten Reals. The Salt is hard and transparent, like Chrystal, and when powdered white as Snow. They hew it out with Axes and Mattocks, and make Chaplets, Boxes, &c. of it. They say there is no End of it, but that it reaches to the Center of the Earth. Near the Place where they work, there are two Caves within the Rock of Salt, to the End of one of which they durst never venture. Not far from this there is another Mountain of Salt, where the Salt sticks to the Rocks, and is most of it tinged with red. Of this red Salt they make broad Plates like Tiles, which they call *Ruggiolas*; these they heat before the Fire, but

but never put them into it, and use them to take away Aches, strengthen the Stomach, keep the Feet warm, &c. Well heated on both Sides, they will keep warm for twenty four Hours. Amongst this red Salt there is a kind of *Selenitis* (which some call *Ising-glass*, and the *Italians*, *Gesso*, from the *Latin* Word *Gypsum*, signifying Chalk, because when burnt, it is turned into a white *Calx*) which naturally roches into *parallepipeda*, of the Figure of a Lozenge. Of which Sort of Stones are found in several Places of our Nation. About these Mountains of Salt grows great Plenty of *Halimus* and *Limonium*.

Cardona is a Dukedom, containing three or four Villages besides the Town. The Duke thereof is one of the richest *Grande*s of *Spain*, having three Dukedoms, four Marquises, two Earldoms, &c. The Name of his Family is *Folke*. He lives, for the most Part, at *Madrid*, but sends every three Years a Governor. The King of *Spain* hath nothing at all to do with this City, and the Duke never imposes any Taxes, but enjoys only all the Tithes of the Corn, Wine, &c. There is a Council of Thirty-six, changed every Year, and he that has been of the Council, must wait three Years before he can be chosen again. The last Thing the Council does is, to chuse a new Council for the Year following. This new Council is divided into four Ranks, not equally, but as the old Council shall think fit, and their Names are put into four Boxes; out of every Box a Child takes out one to be Consul. He that is drawn out of the first Box is the first Consul, and so in Order. Near the Town is a Castle, and in the Castle a Tower, said to be built by *Charlemagne*. Every Duke hath an Oath given him by the Consuls, wherein is an Article, that he must reside in the Castle, which is never kept.

5. September 9. We passed through *Kalab*, and lay at a lone Inn a League and a half further, four Leagues and a half distant from *Cardona*. On the 10th we passed through *St. Columba*, *Rocoafort*, and lay at *Sirreal*, five Leagues and a half. Sept. 11. We passed by *Pobla*, a famous ancient Monastery, about two Leagues distant from *Sirreal*. In the Church, there are a great many Monuments. They told us thirteen Queens and eleven Kings lay interred there. Then we passed *Praves*, and lay that Night at *Coulnouvil*, five Leagues. All over *Catalonia* they reckon a League two Hours, and make Account that four *Catalonian* Leagues are equal to six *French*. We heard that there were *Amethysts* also found about *Praves*.

On the 12th, we passed by *Falsot*, two Leagues from *Coulnouvil*, where are a great many Lead Mines. The Ore is very rich, and they melt it just as it is taken out of the Mine, without beating it to Powder. They sell the Ore for forty Reals of *Ardif* the Quintal, a Quintal being 122 Pounds. Five Quintals of Ore usually yield four Quintals of Lead. This Town, and the Mines about it, belong to the Duke of *Cardona*. They told us, that the Vein of Metal lay always *East* and *West*. The best and finest of this Ore they grind to Powder, and thereof make Varnish to lead earthen Pots and Vessels with, sprinkling the Powder upon the Pots. This Night we lay at *Tivisa*, four Leagues. On the 13th we passed *Venu-falet*, *Tivians*, and lodged at *Tortosa*, six Leagues. All along the Way we saw a great deal of *Palma humilis Hispanica non spinosa*. The Fruit grew up in Bunches out of the Ground, like the Berries of *Arum*, and was not much bigger. Those that were ripe were of a reddish Colour, of an oblong Figure, and divided into four Quarters; those that were less ripe were yellowish; the Skin and Pulp very thin, and did but just serve to cover the Stone. It hath the Smell and Taste of Dates. The Stones being broken, are not at all hollow, but have a hard white Kernel or Pearl within them. We observed also Abundance of *Garoffus* (as they call it) *i. e.* *Caroba sive Siliqua dulcis*, the Cods whereof they give their Mules instead of Provender. The *Spanish* Soldiers, at the Siege of *Barcelona*, had nothing but these *Siliqua* and Water to live upon. All over *Catalonia* the People are generally poor. They use neither Glass nor Paper in their Windows, but only Shutters of Wood.

Tortosa is a very poor and desolate Town: There is a Bridge of Boats over the River *Iberus*, now called *Ebro*, in Sight of which we rode all along from *Tivisa* hither. At *Tortosa* they were wont to make Salt-fellers, Mortars, Bowls, Beads, &c. of a Kind of Marble of a mingled Colour, red and yellow, found near the Town, which they call *Jasper*, and of another greenish Marble spotted with black, brought from *Genoa*.

We went to the Jasper Mine, about two Miles from the Town, with one of the chief Workmen. We saw there vast Pillars hewn out and wrought for a Church in *Palermo*. He told us, that all the Veins of Marble, Jasper, &c. went from East to West; that they sawed those Stones to make Tables, &c. with only Water and Sand; that when there was not enough red in the Stone, they made little Holes, and set in red Stones; that the Cement they used for all Stones in *Mosaick* Work, was made of one half Mallich and one half Greek Pitch; that in building, they joined the Stones together with ordinary Lime, but on the Outside they filled up the Chinks with a Cement made of the Powder of the Jasper mingled with Sulphur and *Mangra*; to make it more white they put in more Sulphur; to make it more red, they put in more *Mangra*. The Jasper was hewed out with Chizzles and Hammers, just as Stone in our Stone Pits: It is afterwards polished with *Armoril*, *i. e.* the Powder they use to polish Armour with, and to give it a Lustre, so that one may see his Face in it with the Powder of the Cinders of the best Tin. This Day we set out towards *Valence*, passing *Ebro* by the Bridge of Boats, and lodged at *Galera*, a small Village two Leagues distant from *Tortosa*.

6. Sept. 16. We passed by *Tregera*, whereabouts seemed to be the Ruins of an old *Roman* Way, *Mattheau*, *Salsandail*, and lay at *Lescouvas*, seven Leagues Near *Lescouvas* we found Store of *Oleander* with a red Flower. On the 17th we passed *Cabanos*, *Pobletta*, *Buriol*, *Villareale*, *Annules*, seven Leagues. This Journey we saw a great many Rivers quite dried up, and for above a Month together had scarce any Rain, that little that was always came just from the Sea. On the 18th, we passed *Cbinces*, *Almenara*, *Moulvedere*, *Massa*, *Magril*, *Abalade*, and arrived at *Valence* seven Leagues. Near *Valence* the Country is very populous, and well cultivated; Abundance of Mulberry-trees are planted in Rows all the Fields over. As we passed through the Market-place at *Valence*, all the People houted at us, and threw Parings of Melons, &c. on our Cloaks. It seems they are not used to see Strangers and Travellers there. This was the first Place in *Spain* where we were searched. In this City is an University. I heard a Professor read *Logick*. The Scholars are sufficiently insolent and very disputacious. One of them asked me, *Quid est Ens universale?* and whether I was of *Thomas Aquinas's* Opinion? Another, *Quid est Genus?* None of them understood any Thing of the new Philosophy, or had so much as heard of it: None of the new Books are to be found in any of their Booksellers Shops: In a Word, the University of *Valence* is just where our Universities were an hundred Years ago.

In the Kingdom of *Valence* the King of *Spain* is not absolute; but to impose Taxes, raise Soldiers, &c. he must have the Consent of the three Estates, *i. e.* 1. the Clergy, 2. the Nobility, 3. the Cities and Villages; and if one of these refuse to consent, nothing can be done. These three Estates have six Deputies, two for each, who are changed every third Year. Of the two for the Cities, one is for the City of *Valentia*, and the other for all the rest. Each City chusing a Syndic, one is taken by Lot to be a Deputy. The six Deputies have the Care and Government of the Militia. Upon any urgent Occasion, the Deputies must assemble the three Estates, *i. e.* the chief of the Clergy, the Nobility, and the Syndics of the Cities. The City of *Valence* is governed by Six Jurats or Consuls. They are taken by Lot out of six Urns or Burfes, two out of each: In the first Urn are the Names of all the better Sort of Nobility that have the Title of *Dons*, in the

Second Urn, the Names of all the lower Rank of Nobility that have not the Title of *Dons*; in the Third, the Names of all rich Citizens that are not Gentlemen: They must have at least four hundred Crowns yearly Rent, besides what their Wives bring. Besides these, there is a Rationel and two Syndics changed every third Year, six Advocates for their Lives, and forty Plebeians changed yearly. The City being divided into fifteen Trades or Companies, each Company chuses two, which make thirty; the other ten are chosen, two by the Rationel, and eight by the six Jurats, and two Syndics, each chusing one. Of all these Officers and the Forty Plebeians consists the Senate. But nothing can be done, unless there be Twenty-nine of the Plebeians present at least. There is also, 1. a Judge for criminal Causes, taken by Turns out of the three Urns, and changed yearly. He hath an Advocate to assist him, who is changed yearly, but so that all the Advocates in the City have the Place by Turns: And a *Lieutenant Criminal* taken by Lot out of the Forty Plebeians. 2. A *Mustafa*, who has the Care of all Kind of Victuals, Corn, Weights, Measures, &c. He is taken by Lot out of the three Burfes, as the Criminal Judge is, and hath also a Lieutenant out of the Forty. There is besides, a Judge for Civil Causes, taken out of the three Burfes, who has an Advocate like the Criminal Judge: But he cannot decide Causes of above fifteen Crowns.

The University is govern'd by the Town, who every third Year chuse a *Rector* that must be a Canon. The other Officers are, a Beadle, a Serjeant and a *Puntadore*, who is to take Notice when any Professor fails to read. There are eight *Præpositi* in this University, four for Divinity, two for the Canon Law, and two for the Civil Law, who have each 500 Crowns yearly. There are also four Readers for Philosophy, seven for Physick, one for the Greek Tongue, one for the Hebrew, and two for the Mathematicks. These have but small Stipends; but all their Scholars, who come to hear their Lectures, pay somewhat yearly. If a Professor promote three rich Scholars, that are able to pay the Fees to any Degree, he may promote a Fourth that is poor for nothing. The Degrees are the same with those in our Universities, viz. 1. Batchelor after they have finished a Course in Philosophy; which Degree costs about twelve Crowns. 2. Master of Arts, which costs eighty. 3. Batchelor in Divinity, Law or Physick, which costs sixteen. 4. Doctor, which costs one hundred and fifty. They may be Masters of Arts presently after they are Batchelors, if they will; and in like Manner Doctors. In the Market at *Valence*, and all *Spain* over, they divide Hens and Chickens into Pieces, and sell them by Quarters; they make great Vessels of Goat Skins to put Wine and Oil in; and lesser Bottles, which they call *Boto's*. The Women paint, laying it on so thick, as if one daubed *Minium* upon a Wall. No Garrison nor Soldier here.

7. Sept. 24. We set out from *Valence*, and passing by *Masanessa*, *Cataregi* and *Seille*, and lodged at *Mussafes*, three Leagues. Coming out of *Valence*, we were forced to give Money at three Places to avoid Searching. We passed *Cullera* where we ferried over a great River, called *Xucar*, and lay at *Gandia*. There is a College and an University, as appears by this Inscription upon the Wall of the College. *Sanctus Franciscus à Borgia Dux Gandiæ, 4, Præpositus generalis Societatis Jesu 3, hoc Collegium & hanc Universitatem a fundamentis erexit. A.D. 1546.* At *Cullera* the Wine first began to be sweet, and three Leagues off at *Gandia* the Plantations of Sugar Canes began. 2. Whether the Nature of the Soil that was fit to nourish the Sugar Canes did not also contribute to the Sweetness of the Grapes? At *Gandia* we first found Raisins of the Sun (as they are called in *England*;) in *Spain* they call this kind *Panfas*, and they seem to be the *Duracina* of the Ancients. They are all white, round and have a tougher Skin than other Grapes. They gather them when fully ripe, and dip them in a boiling *Lixivium* of Water and Ashes, just dipping them in, and taking them out again, and then dry them upon Boards in the Sun, taking

them in by Night, or in foul Weather. The Name Raisin comes from *Racemus*. Figs are dried just as they are gathered not being dipp'd in any *Lixivium*.

On the 26th, I went to *Olives* where and at *Gandia*, are the Engines for Sugar Works; the best are at *Olives*. By the Way we saw the Sugar Canes growing in several Places. They are planted in low wet Grounds well mucked and dressed, divided into the Beds or Hillocks and Furrows. They cut the Canes close to the Roots in *November* and *December*, and cutting off the slender Tops, which afford no good Juice, keep them under Ground till *March*, and then prick them into these Hillocks or Beds. Out of every Talea or Cut, shoot four, five or six Canes, which will be ripe the next *December*. The Knots or Joints of the Cane at the Bottom are very close together, scarce an Inch asunder; but upwards the Distance is more, as the Cane grows slenderer. Within is a white Pulp or Pith, full of Sap sweet as Honey. They sell them at *Gandia* to eat, and cutting them into Pieces just in the Middle, between two Knots, suck the Pieces, at both Ends: To make Sugar after Canes are cleansed from the Tops and Leaves, and cut into Pieces they are first bruised, either with a perpendicular Stone, running round as Apples to make Cyder, or Olives to make Oil, or between two Axes strongly capp'd with Iron, horizontally placed, and turned contrary Ways, and then pressed, as Grapes or Olives are. The Juice thus pressed out is boiled in three several Cauldrons one after another. In the third Cauldron it becomes thick and black, and is then put into conical Pots, which at the Bottom have a little Hole stopped only with coarse and foul Sugar; Mr. *Ligon* saith, with Plantain Leaves. These Pots are covered, when full, with a Cake of Paste made of a kind of Earth call'd in *Spanish*, *Gritty*, and found near *Olives*, which is good to take Spots out of Clothes; which Cap or Cover sinks as the Sugar sinks. Mr. *Swift* told me, that the Clay they use with us is Tobacco-Pipe Clay, or very like it, and that the Water in the Clay served to wash down and carry away the *Molasses*, at least the Clay helps the Separation and Precipitation of it. These conical Pots are put into other Pots, into which by the Hole at the *Vertex*, the Juice drains down through the coarse Sugar at the Bottom. It drains so for five or six Months, in which Time the Sugar in the conical Pots grows hard and white, all the Juice being either drunk up by the Lute or run out by the Hole at the *Vertex*. The Juice is boiled again so long as it is good for any thing, but at last it makes only a foul red Sugar, that will never be better. The conical Loaves of Sugar, after they are taken out, are set to drain over the same Pots for fourteen or fifteen Days. To make the Sugar more white they must boil it again, but about one Sixth is lost every Time. A Pound of Sugar of twelve Ounces is sold at *Olives* for three *Sous* and a half, refined for five or six *Sous*. The Sugar Juice is strained through Strainers of Linnen, as it is put out of one Cauldron into another. They take it out of the first and second Cauldrons so soon as it begins to boil, but in the third Cauldron they let it boil till the Scum rises, and then take off only the Scum with a Scummer, and put it into a long Trough to cool, and when it is cool, put it into the conical Pots. One Scum rises after another in the third Cauldron. The Scum when it is taken off is white, but turns to a black Liquor in the Trough. They never refine the Sugar more than three or four Times. They use for the refining of it, Whites of Eggs, putting in two or three Dozen into a Cauldron. They use but one Cauldron for refining. When it is refined it grows white and hard in nine or ten Days. The Juice boiled up is eaten with Bread toasted as Honey; the Juice of the refined Sugar is much better than the first Juice. The Duke of *Gandia* sends Presents of this refined Juice to the Queen of *Spain*. When they refine it they put a little Water into the Cauldrons, to dissolve it the better. But for a more exact Description of the whole Process of the Sugar Works, I refer to *Piso* in his natural History of *Brasil* and *Ligon*, in his Description of *Barbadoes*. The Sugar of *Olives*, is better than the
Sugar

Sugar of *Gandia*. At *Mentria* in *Granada* they also make a great deal of Sugar. About *Valence*, *Gandia*, &c. the Earth is always wrought, and never lies fallow or idle. They reckon five *Raccolta's* or Crops in one Year. 1. Of Mulberry-Leaves for Silk. 2. Wheat and other *European* Grain. 3. *Darfi*, i. e. *Maiz* or *Indian* Wheat. 4. Grapes. 5. Olives, and 6. At *Gandia*, Sugar Canes. After the Wheat is cut they presently sow the *Indian* Wheat. They complained that lately for a great many Years together, they had very bad *Raccolta's*, for Want of Rain, which had almost ruined *Spain*.

8. On the 27th, We passed *Benegana*, and lay at *Chativer*, six Leagues and a half. *Chativer* is an ancient Town of the *Moors*, and was once Head of one of their little Kingdoms. About a League from the Town began a very remarkable Aqueduct made by them. It was just over a River along the Side of a Hill in most Places, not above a yard or two under Ground, and had a great many Funnels like the Tops of Chimnies, to give Vent, and let out of Water when there should be too much. The Tops of these Funnels were made of a red Clay and pebble Stones. The Water came almost to the Top in all of them, but run over in one. On the 28th, we passed in Sight of *Montesa*, a Castle belonging to the Knight of *Montesa*, that wear a red Cross, *Ortemente*, and lodged at *Beebert*, six Leagues. On the 29th, near *Alicant* among the Mountains, there is a very good Breed of Falcons. In the Plains near *Alicant* grows Abundance of *Gramen spartum Plinii sive Sportularum Officinarum*. *J. B. i. e.* Mat-weed, of which the Frails, wherein they put Raisins and other Fruits are made. This in *Spain* they call *Spar*, at *Marseilles*, *Anffe*. The Women hereabout gather Abundance of this, and steep it in Sea-water till it be well softened. Then they dry it, and carry it by Sea to *Marseilles*, where they sell it at eight Crowns the Milliere: Every Milliere consists of ten Pachieres; every Pachiere of one hundred *Manado's* or Handfuls. Of this they make Cables for Ships, Baskets, &c. In this Day's Journey we saw a great many Fountains covered with long Arches to hinder them from being dried up. We passed *Elda*, *Novelda*, *Aspe*, *Clavillente*, *Albitella*, and lay at *Orivola* eleven Leagues.

On the 30th, We came to *Murcia*, four Leagues. Near *Orivola* (which City is an episcopal See) we observed many Turpentine-trees, some with Flower, and some with ripe Berries. Near *Elda* they dig up a Sort of *Selenite*, which they put into Wine to clarify it. About a League from *Orivola* began the Kingdom of *Murcia*; two Leagues from *Orivola*, we were forced to give Money to avoid Searching. *Murcia* which gives Denomination to this Kingdom, is a pitiful and desolate Town. The Fish-Market here is shut up in a Cage or Grate, as at *Genoa*, the People crowding about it, and thrusting in their Baskets as there. October 1. we travelled through a miserable desolate Country to *Mula*, seven Leagues. On the 2d, we passed through *Caravacca*, where they drive a great Trade of making little Crosses of Silver, Brass, Wood, &c. After that Pilgrims, &c. have bought them, they carry them to the Castle to touch them by a famous Cross, which according to their fabulous Legend, descended miraculously from Heaven, which forsooth infuses a wonderful Virtue into them. We lay this Night at a lone House, four Leagues off *Caravacca*, having travelled in all ten Leagues.

On the 3d, We pass'd by *Venta nova*, and came to *Huesca*, eight Leagues. At *Huesca*, we first saw a yellowish White-wine like Sack. The Kingdom of *Granada* began about four Leagues before we came to *Huesca*. The Town of *Huesca* belongs to the Duke of *Alva*. On the 4th, we passed by *Basa*, and rested at *Venta* eight Leagues. We travelled to *Guadix* an episcopal See, and ancient Roman Colony. Upon the Gates we took Notice of this Inscription. *Recepti Colonia Accitana Gemeliensis Provinciae caput prima omnium Hispanicarum fidem, Christi Jesu, rejectis idolis evangelizantibus sanctis Torcato & sociis, Anno Salutis 70. Pontificatus S. Petri, 37. imperii Neronis 13. Urbs Accis patrona suo sanctissimo. D. D. 1593.*

Honorati sunt Amici tui Deus.

9. On the 6th, We travelled to *Granada*, six Leagues distant from *Desinos*, where we lodged the Night before. Here we saw the Castle called *La Lambra*, the Seat of the Kings of *Granada*. Within the Walls of the Castle live Abundance of People, which dare not live in the City for Debt, or other Causes. There is a fair Palace begun by *Charles V.* and yet unfinished; the Outside of it is square, but it is round within, having two Rows of Cloisters, one above another, round about the Court. Adjoining to this is the ancient Palace of the Kings of *Granada*; within there is all the same kind of *Moresco* Work, wrought in Mortar and Stone, with Gold and Painting. The Cloisters are supported by long slender Pillars. In this Palace is an octagonal Chamber, vaulted at the Top with eight Doors, one in every Side. If one stand in one Angle, and whisper to another who stands in the Angle diametrically opposite, the Voice is conveyed, as in the Whispering Place at *Gloucester*: But if you stand in an Angle that is not diametrically opposite, you hear nothing. The Reason of conveying the Voice, is the Vault above, and the Corners being streightned into a very sharp Angle or Channel. In *Granada* are two great Market-Places, one called *Plaza nova*, the other *de villa Rambla*. In the great Church are two Monuments, one for *Ferdinand* and *Isabella*, with this Inscription, *Mahometica secta prostratores Hereticæ prævicaciæ extinctores Fernandus Aragonum & Helisabetha Castillæ, vir & uxor unanimes, Catholici appellati marmoreo clauduntur hoc Tumulo*. The other is of *Philippus I.* and of *Joanna* Daughter and Heir of *Ferdinand* and *Isabella*, without an Inscription. In the River *Daro*, that runs by *Granada*, they find Gold among the Sand. In the Mountains of *Sierra nevada*, near *Granada*, are said to be divers Sorts of Minerals, which are not at all looked after. Near *Motril*, at the *Capo di Gatto*, there is a Mine of *Granates* covered with the Sea. They are pointed as *Amethysts* and *Chrystal*, but the best come from *Africa*; we saw that Day *Monte sacro*, a Place within half a League of the Town, of great Devotion. In *Castile*, *Granada*, &c. the greater Cities have a *Corregidore*, and the lesser an *Alcalde*, who administers Justice, and are appointed and sent by the King to govern the Towns. All over the Kingdom of *Castile* they eat Flesh upon *Saturdays*, and observe only *Fridays*. On the 12th, we left *Granada*, and passing by *Santa Feda*, travelled to *Lotta*, eight Leagues. 13. At *Lotta* we were troubled with Soldiers, that came from the Frontiers of *Portugal*, to take up their Winter Quarters. There had been of this Party 2600, but this Summer at *Alcantara* they were reduced to 900, the rest being slain, or dead of Diseases. We passed this Day by *Archidona*, *Lalameda*, *Laronda*, and lay at *Pedreira*, ten Leagues.

10. On the 14th, We passed by *Offuna*, *la Pobra*, and lay at *Elazabel* ten Leagues. This Country was the best we saw since we came into *Spain*, the Land being for the most Part well planted and cultivated. On the 15th, We passed by *Gandula*, and arrived at *Sevil*, seven Leagues. Between *Gandula* and *Sevil* there are Abundance of Olive-trees. Here we first saw the greater Sort of Olives, which are usually eaten in *England* for a Sallet, called the great *Spanish* Olive; all that we had seen in *Italy* or in *Spain* before, being of the lesser Sort. Here is a brave Aqueduct of Brick, which conveys Water from *Carmona*, six Leagues distant: Under the Arches there are *Stalactites*, as at the Aqueduct of *Pisa*. The Galleons bring nothing Home from the *West-Indies*, but Plate; the Merchant Ships are loaden with Leather, *Cocoa*, Sugar, *Lana di Vigonna*, &c. Of the *Cocoa* Nut, they make *Chocolate*, thus, first they toast the Berries to get off the Husk, then pound the Kernels to Powder, and to every Milao, i. e. three Pound and a half of Powder, they add and mingle, two Pound of Sugar, twelve *Vanilla's*, a little *Pimentone* or *Guiny* Pepper, (which is used by the *Spaniards* only) and a little *Accbiote* to give a Colour; but these two last may be omitted. They melt the Sugar, and then mingle all well together, and work it up either in Rolls or Leaves. *Sevil* hath of late decayed very much, and doth continually Decay more and more, the Trading Part being most removed to *Cales*; the Reason

Reason whereof is, because they pay about twenty-seven *per Cent.* for all Merchandizes at *Sevil*, and but four or five *per Cent.* at *Cales*. The chief Places to be seen in *Sevil* are, 1. The great Church. 2. The King's or Vice-roys Palace. 3. The Archbishop's Palace. 4. The Steeple of the great Church like *St. Mark's* Tower at *Venice*, which you ascend almost to the Top without Stairs, by gently inclining Plains. 5. The *Franciscan* Convent. 6. The *Longba*, where the Merchants meet about the Affairs of the Flote. 7. The Convent of *Notre Dame del Peuple*. 8. The Bridge of Boats over the *Guadalquivir*, i. e. the River *Batis*. The Town on the other Side this River is called *Triana*. 9. The Inquisition or Castle of *Triana*, just over the Bridge. 10. An old Tower called *Torre d'Oro*, where *St. Ferdinand*, that recover'd *Sevil*, kept Money made with Leather. 11. The Aqueduct. 12. The old Palace and Garden of the *Moors*. Near the Bridge, along the River Side, they come every Night with their Coaches, to take the *Fresco*. In the great Church, between two Altars, are three Monuments for *St. Ferdinand* the Wife, his Wife *Beatrice* and his Son *Alphonfus*. The same Epitaph in *Hebrew*, *Arabick*, *Greek* and *Latin*.

Hic jacet illustrissimus Rex Fernandus Castellæ & Toleti Legionis, Gallicæ, Sibillæ, Cordubæ, Murciæ, & Jabeni, qui totam Hispaniam conquirit fidelissimus, veracissimus, constantissimus, justissimus, strenuissimus, devotissimus, liberalissimus, patientissimus, piissimus, humillimus, in timore & servitio Dei efficacissimus; qui contrivit & exterminavit penitus hostium suorum proterviam; qui sublimavit & exaltavit omnes amicos suos, qui civitatem Hispalem, quæ caput est & metropolis totius Hispaniæ de manibus eripuit Paganorum & cultui restituit Christiano, ubi solvens naturæ debitum, ad Dominum transmigravit ultima die Maii, Anno ab incarnatione Domini 1252.

In the same Church is *Ferdinandus Columbus*, the Son of *Christopher Columbus*, buried, with this Epitaph.

A qui jace el mucho magnifico Signor Don Hernando Colon. el quel expleo y gasto toda su vida y facenda en aumento di los Lettras y en juntar y perpetuar en esta ciudad todos los libros di todas las sciencias, qui in su tempo hallo y en ridurlos a quatro libros segun estan a qui senelados. Falle scio en esta ciudad a 12 di Julio 1532. An de su edad 50 an. 10 meses & 14 dies. Fue Hyo del valoroso & memorabile Signor Don Christophoro Colon. primero Admirante, qui descubio las Indias y nuevo mundo en vida di los Catholicos Reys Don Fernando y Donna Isabella di gloriosa memoria a onze de Ottobre dy mill quatrocentos y noventa y dos annos y partio del puerto de Palos a descubrir las contres Carabelas y noventa Personas a tres de Agosto — iuntes — bolbio a Castilla con la vittoria a quatro di Marzo del anno siguiente, y torno despues otras dos vezes a poblar lequale scubrio, y al fin fallecio a Valladolid vente de Maio de mill y quinientos y seys annos, Roged al Sennor por ellos.

Chocolate is sold at *Sevil* for something more than a Piece of Eight the Pound. *Vanillas*, which they mingle with *Cocoa* to make *Chocolate*, for a *Real di Plato*. *Acchiote*, which they mingle with the other Ingredients, to give a Colour, is made of a Kind of red Earth brought from *New Spain*, wrought up into Cakes: It is sold for a *Real di Plato* the Ounce. All the Oil and Wine they have in the *West-Indies* goes from *Spain*, they not being permitted to plant Vines or Olive-trees, that they may always have a Dependence upon *Spain*. At and near *Sevil* we paid two *Reals de Quarto* for a Bed; Bread, Wine, Flesh, and all other Commodities excessive dear, excepting only Olives and Pomegranates, which were better here than in any other Part of *Spain*. There had lately been a great Plague in *Sevil*, which had very much depopulated and impoverished, indeed almost ruined the City.

11. I set out from *Sevil* towards *Madrid*: The first Day we travelled to *Carmona*, where the Aqueduct before-mentioned begins, six Leagues in all; which Way we saw no Houses, but a great many Aloe-trees. We passed *les Fontes*, and lay at *Euia*, a great Town of above 20,000 Inhabitants. Between *Carmona* and *Euia* is a very good Country, with Abundance of Corn and Olive-trees. *Offuna* is within four Leagues of *Euia*,

where the Duke of *Offuna* hath a Palace. We travelled this Day nine Leagues. We passed over the River *Xenil*, that runs into *Guadalquivir*, baited at *Arrostitb*, and lodged at *Cordova*, eight Leagues. About a League from *Cordova* we passed another little River that runs into *Guadalquivir*. Before we entred *Cordova*, we rode over a great Stone Bridge that here crosses the *Guadalquivir*. In the Middle of the Bridge stands a Statue erected to the Angel *Raphael* with this Inscription.

Beatissimo Raphaeli angelorum proceri, custodi suo vigilantissimo, qui ante annos 300 sub Paschale antistite populum peste depopulante se medicum tantæ cladis futurum prædixit, qui subinde anno 1578 venerabili Presbytero Andree de las Roelas S. S. M. M. exuvias evulgavit, & tandem patefecit Corduensium tutelam sibi a Deo demum datam. Quare ut justa gratitudo diu staret S. P. Q. Cordubensis hanc lapideam statuam cautus & pius erexit, multâ procuratione Domini Josephi de Valdacanas & Herera & Domini Gundesalvi de Cea & Rios senatorum pontifice Innocente X. Hispan. rege Philippo IV. episcopo domino fratre Petro de Tapia, prætore domino Alphonso de flores & monte Negro, Anno 1651.

The most considerable Places in *Cordova* are, 1. The Bishop's Palace. 2. The *Cavallerisca*, where the King keeps a great many Horses. 3. The Ruins of *Almansor's* Palace, the last King of the *Moors*. 4. *Plassa di Corridera*. 5. The Church of the *Augustine* Fryers. 6. The great Church, which was anciently a Mosque. It is large, but very low, supported by a great many Rows of Pillars, in a quadrate Order, sixteen Rows one Way, and thirty another. Upon many of the Pillars are *Moors* Heads carved in the Stone, and one or two with Turbants on. In the Middle of this Church is the great Chapel, where are several Bishops interred. In one of the Chapels, that is now dedicated to *St. Peter*, in the *Moors* Time was kept a Thigh of Mohammed; round about the Cornish of this Chapel, and that Part of the Church next it, is an *Arabick* Inscription. The People complain grievously, that *Cordova* is quite ruined and undone by Gabels and Taxes. On the 27th we left *Cordova*, and, after a League or two riding, entred the *Sierra Morena*, a miserable desolate mountainous Country, and lodg'd at a little Village called *Adamus*, six Leagues. On the 28th, we travelled all Day through the *Sierra Morena*, and lay at a Village called *La Conquista*, nine Leagues. 29th; In this Day's Journey we saw Abundance of Galls upon the *Ilices*, which were of like Bigness, Figure, Colour, Consistency, and other Accidents with those that grow upon Oaks. This Day we first met with red Wine again, which they call *Vino tinto*. We got safe out of *Sierra Morena*, and came to *Almedovar del Campo*, a tolerable Borough nine Leagues. About the Middle of *Sierra Morena* are the Bounds of the *Castilia nova* and *Andaluzia*. On the 30th, we passed by *Caraqol*, *Cividadreal*, and lay at *Malagon*, ten Leagues. Between *Malagon* and *Cividadreal*, we passed over the River *Anas*, now called *Guadiana*, which was there but a little Brook. In this Day's Journey we met with a great many great Flocks of Sheep and Goats, going towards the *Sierra Morena* out of *Castile*; it being the Custom all Summer to feed their Sheep upon upon the Mountains of *Castile*, and in Winter in the *Sierra Morena*. On the 31st, we passed by the Ruins of an Aqueduct, about four Leagues from *Malagon*, then *Xvenas*, a good sizeable Village, and lay at *Orgas*, ten Leagues.

12. November 1, We passed through *Toledo*, and lay at *Esquinas*, eleven Leagues. As soon as ever we passed the *Sierra Morena*, we felt a great Change of Weather, the warm Air that comes from *Afric* and the *Mediterranean* Sea being stopped by the Interposition of the Mountains. This Day there was here a hard Frost, and pretty thick Ice. The most considerable Things in *Toledo* are, 1. The Bridge over the *Tagus*, consisting of but two Arches, one great one, and one little one. 2. The Shambles, where notwithstanding the Coldness of the Day, I saw Abundance of Flies; which confutes the Story, that there is but one great Fly there all the Year. 3. The great Church, where there are many Monuments of Bishops, but without Inscriptions: In the

the *Capella Maggior* lie interred two Kings, and in the *Capella de los Res*, four Kings. 4. The King's Palace. 5. The Ruins of a famous Engine to raise up Water to the King's Palace. There is so little of it remaining, that it is impossible thence to find out all the Contrivance and Intrigue of it. Between *Toledo* and *Madrid* the Country is very populous, and the Soil very good. All along the Road, from *Sevil* to *Madrid*, the common Fare is Rabbits, red legg'd Partridges, and Eggs, which are sufficiently dear. We arrived at *Madrid*, six Leagues; near the Town we passed over the River *Xarante*. *Madrid* is very populous, well built with good Brick Houses, many have Glass Windows, which is worth the noting, because you shall scarce see any in all *Spain* besides. The Streets are very foul and nasty. There is one very fair Piazza or Market-place, encompassed round with high and uniform Houses, having five Rows of Balconies one above another, and underneath Portico's or Cloisters quite round. The chief Things to be seen in *Madrid* are, 1. The Prison. 2. The Piazza just now mentioned. 3. The King's Chapel. 4. The Palaces of several Noblemen, as that of the Duke of *Alva*, that of the Duke of *Medina de los Torres*, &c. 5. The King's Palace, where there is the King's *Cavallerisca* and the Queen's *Cavallerisca*. 6. A great Piazza before the Palace, where are Abundance of Coaches always attending. 7. The *English* College of *Theatines*. 8. *El Retiro*, out of the Town, the *Escorial* and *El Pardo*.

13. On the 5th, I set out from *Madrid* for *Port St. Sebastian*. We passed within Sight of the *Escorial* and *El Pardo*, and lay that Night at *St. Augustin*, six Leagues. On the 6th we passed *Butrago*, and lay at *Samoserra*; all the Way a barren, miserable, mountainous Country, eleven Leagues. On the 7th we passed *Frecedille*, and lay at *Aranda*, having crossed the River *Durius* or *Duero*, eleven Leagues. On the 8th we passed *Babalon* and *Lerma*, where is a Convent of *Dominican* Fryers, and a Palace of the Duke of *Lerma's*, and came that Night to *Burgos*, twelve Leagues. The most considerable Things in *Burgos* are, 1. The Bridge over the River *Relarzon*. 2. The Gate at the End of the Bridge, where are the Statues of *Charles V.* of *Janus Calvus*, of *Diego Porcellero*, of *Fernandez Gonfales*, of *Nuncio Pasures*, of *Don Carlote*, all famous Men of *Burgos*. 3. The Market-place. 4. The great Church, in which are a great many Monuments of Bishops and Canons, two great Monuments of *Pedro Fernando di Velasco*, Constable of *Castile*, and his Wife *Mercia di Mendoza* Countess of *Haro*. This Night we lodged at *Quintora Villes*, five Leagues. On the 10th we passed by *Pancorva*, a Place very famous for good Water; *Miranda*, a great Town, where there is a good Bridge over the River *Iberus*, and after that we had passed two other Rivers, *Bais* and *Sadurra*, and lay at *Erminian*, eleven Leagues. At *Miranda* there is a great Market for Wheat.

On the 11th, We travelled to *Vittoria*. Over one of the Gates is the Statue of King *Bamba*, and inscribed in Gold Letters, *Hæc est Vittoria quæ vincit*, four Leagues. *Vittoria* is the chief City of all the Country called *Alaba*. We passed this Day by *Salines*, the first Town of *Guipuscoa*, and lay at *Æscarias*, nine Leagues. In *Guipuscoa* they pay no Taxes or other Duties to the King, without the Consent of the whole Country. The whole District is more commonly called *Provincia* than *Guipuscoa*; it is canton'd out into a great many Corporations and Villages, every one of which sends one, two, or three Representatives to the general Meeting, when there is any publick Business. All Offices are annual, and chosen diversly, according to the differing Customs of the Town. The chief Officer in each Town to determine all civil and criminal Causes is the *Alcalda*, but from him they may appeal to the Governor of the Province, sent by the King every third Year, and from the Governor to the King's Council at *Valladolid*. Next to the *Alcalda* are two *Regidores*, to look after the Prices of all Commodities, a *Bolser* for the Treasury, a *Medino* for the Prison, *Argozils* or Serjeants, &c. They boast that they are the Walls of *Spain*, and therefore have many

Privileges. *Guipuscoa* is under the Bishop of *Pampelona*. In *Guipuscoa* and *Biscay* they have a peculiar Language of their own, and therefore send their Children to School to learn *Spanish* (which, they call *Romance*) as we do ours to learn *Latin*. The Searchers having hindered us, we were forced to travel a great Way in the Night; we were lighted by *Tiafor Teas*, which burnt as well, and gave as good a Light as Torches. When they went out, they tossed them up and down in their Hands, which kindled them again. These *Teas* (so called, doubtless from the *Latin* Word *Tæda*) are very commonly used in this Country, and are nothing else but Bastons of Wood hacked and cleft, (but so as the Pieces hang together) and afterwards soundly dried in an Oven or Chimney. Along the Middle they use to cleave them almost quite asunder. They are made of several Sorts of Wood of *Robla*, i. e. Oak; *Haia*, i. e. *Beach-Tree*, but the best of *Avellana*, i. e. *Hazel*. I wonder much at this, unless they have some Way of preparing the Wood by steeping it in Oil or inflammable Matter. The *Tædæ* of the Ancients were made only of the Trunks of old and sappy Pines.

14. On the 12th, We passed by *Mondragone*, where there is a *Fabrica* of Arms for the King, *Oniate*, *Legaspa*, *Villa real*, and lay at *Villa Franca*, seven Leagues. We left *St. Adrian*, which is the ordinary Road, a little on our Left-hand. This Country is very populous and wooded, all the Hills being covered with Oaks. They use no Ploughs, but turn over the Ground with Tridents of Iron; four or five of them working together, and thrusting in their Tridents all together, turn up a Yard or two of Earth at a Time, which they afterwards dress and level, like Beds in a Garden. The People are something better conditioned than the *Spaniards*, richer and far more populous; 1. Because there is a better Government, and greater Liberty. 2. There is Abundance of Wood and Iron. 3. More Rain than in the other Parts of *Spain*. On the 13th, We passed *Tolosa*, and arrived this Night at *St. Sebastian*, having travelled eight Leagues. The most observable Things in *St. Sebastian* are, 1. The Walls and Guns. 2. A great Convent of *Dominican* Friars, in which there is a famous Pair of Stone Stairs, each Step being of one intire Stone, and supported only on one Side. 3. The Haven. The Government of *St. Sebastian* consists of a great Council of all that have one or more Houses, and are married, but none can bear Office unless he have two Houses; of these there are not above 150 or 200, though the Town be very populous, containing about 24,000 Souls. Once in a Year all the Names of this 150 or 200 are put into an Urn, and a Child takes out eight to be Electors. Every one of these eight chuses his Man. The old Magistrates that are just then going out, divide these eight, that the Electors have chosen, into four Pairs, fitting them as well as they can, v. g. an old Man and a young together, &c. These four Pairs are put into an Urn. The first Pair that are drawn out, are the two *Alcaldas* for that Year, the second Pair the Deputy *Alcaldas*, the third Pair the two *Regidores*, the fourth Pair the two Deputy *Regidores*. In much the same Manner they chuse two Jurats, one Syndick or Attorney-General, one Treasurer, &c. All these Officers make a lesser Senate, but in Businesses of Importance the whole Number meets. There is no Distinction of *Nobiles* and *Plebeii*, but all that are descended from *Guipuscoans* that are married, and have one House, are in a Capacity to be Electors; all that have two Houses to be Magistrates; the Jurats Places are most desired, there being a great many ecclesiastical Preferments belonging to the Town, the Disposition whereof, when they come to be vacant, is in them, who usually bestow them upon their Relations and Friends. Every Winter there are several Whales caught upon this Coast, they coming hither in Winter, and frequenting here, as they do upon the Coast of *Greenland* in Summer. They catch them by striking them with a Harping Iron, after the same Manner as they do Sword-fish upon the Coast of *Calabria* and *Sicily*. Abundance of Cyder made about *St. Sebastian* and *Bayonne*. On the 14th, From *St. Sebastian* I travelled through *Orogna*, *Irim*, on the Left

Hand of which is *Fontarabia*, a strong Fort just on the Frontiers of *Spain*. About half a League from *Irim* is the River that parts *France* and *Spain*. In the middle of this River is an Island where the Kings of *France* and *Spain* met, when *Lewis XIV.* the present King, married *Philip* the IV's Daughter. The Island was divided just in the middle, and a House built, so that at the Table where they sat to eat, the King of *France* sat in *France*, and the King of *Spain* in *Spain*.

15. *Spain* is, in many Places, not to say most, very thin of People, and almost desolate. The Causes are, 1. A bad Religion. 2. The tyrannical Inquisition. 3. The Multitude of Whores. 4. The Barrenness of the Soil. 5. The wretched Laziness of the People, very like the *Irish*, walking slowly, and always cumber'd with a great Cloak and long Sword. 6. The Expulsion of the *Jews* and *Moors*, the first of which were planted there by the Emperor *Adrian*, and the latter by the Caliphs after the Conquest of *Spain*. 7. Wars and Plantations. In all the Towns, especially in the South and West Parts of *Spain*, a great many Ruins of Houses are to be seen. Within a Quarter of a League of a Town you begin to see Ground ploughed, otherwise all a wild Country, and Nothing but Rosemary, *Cistus*, Juniper, Lavender, Broom, *Lentiscus*, &c. growing in the Fields and on the Hills. Little or no Hay any where in *Spain*, they feeding their Mules and Horses with Straw: At least one half of *Spain* is mountainous. The *Spaniards* are not so abstinent as some People take them to be, eating the best they can get, and freely enough, if it be at another Man's Cost, and in Inns never refusing Partridges, Quails, &c. for the Dearness. Laziness and Sloth makes them poor, and Poverty makes them pinch their Bellies and fair hardly.

They seldom mingle Water with their Wine, it being a common Saying among them, *Vino poco et puro*, though all over *Spain* the Wine is very hot and strong. They delight much in *Pimentone*, i. e. *Guiny* Pepper, and mingle it with their Sauces. In roasting of Meat they never use a Dripping-pan, but draw the Coals just under the Meat, which though it be not so cleanly, yet is the quicker and more thrifty Way for saving of Fewel. They tear Rabbits in sunder with their Hands, when they are almost roasted, and stew them in a Pot with Water and *Pimentone*. To toast Bread they throw it upon the Coals. They long and ask for every Thing they see, to avoid which, a Merchant that travelled with me was wont to put something into his Victuals which they did not love. They take Tobacco much in Snuff, and if one take out a Box of Snuff, he must give some to all the Company. The best Person in the Company, at Table, cuts and tears the Meat in Pieces, and gives to every Man his Share. They are most impertinently inquisitive whence you come, whither you go, what Business you have; most horribly rude, insolent, and imperious, uncivil to Strangers, asking them, What do you come into our Country for? We do not go into yours; i. e. this is to be understood of the middle and inferior Sort of People, many of the Gentry being very civil and well bred.

Their Children are the most unmannerly and ill-bred of any in the World. The Sons of *French* Fathers and *Spanish* Women, when they are grown up, often turn their Fathers out of Doors, having many Privileges above them for being born in *Spain*. They are extremely given to Lying; *Almuzzos*, and such Kind of Fellows, not to be believed or trusted in any Thing they promise. They ride altogether upon Mules, and carry their Portmanteaus before them, for fear they should be lost or stolen from behind them; they lie between a high Pommel of the Saddle and an Iron Hook. Instead of Stirrups, Persons of Quality use great Clogs of Wood, of the Shape of Shoes without Heels. They cut away the Mules Hair close to the Skin under the Saddles and Portmanteaus to avoid Gallings. Of this Bastard Breed of Animals, the Males are usually bigger than the Females. 2. Whether the Reason be that they are always bred of a Mare and an He-Aff. They piss very often. 2. Whether the Reason be the Sharpness of their Urine, or the Smallness of their Bladder?

They piss almost always when they go through Water. They shoe them with Shoes a deal broader than their Feet, to prevent, I suppose, the breaking of their Hoofs. Under the Mouths of their Mules of Burthen, they usually hang a Net with Provender in it. These Beasts are better at climbing of Mountains than Horses, have a greater Courage to endure long and hard Travel, and, besides, are maintained at less Charge.

The *Spaniards* seldom ride alone, but stay for a Troppas, as they do for a Caravan in *Arabia*. The common Phrases or Forms of Salutation, when they meet or pass by one another, are, *Guarda Dios vuestros*, i. e. *vous autres*, i. e. God defend you. *Adios*, i. e. Adieu. *Vaga con Dios*, i. e. God go along with you. When they are angry, *Cornuto*, i. e. Cuckold, is the first Word, and sometimes *Cornutissimo*. When they speak to their Mules, or Boys they send of Errands, they say *Anda Cornuto*, i. e. Go, Cuckold. When they refuse a Courtesy or Complement to drink first, go first, or the like, they say, *Nanper vita mea*, i. e. no, by my Life. At any Thing strange or ridiculous, they cry out, *Cuerpo di Dios* or *di Christo*, i. e. Body of God or Body of Christ. When they call to one to make him hear, instead of *Escoutes* in *French*, or *Senti* in *Italian*, they cry, O yes, just as Criers do in *England*. When they put off a Beggar, not giving him an Alms, they say, *Voltes perdonné*, i. e. Good Friend, pardon or excuse me. As for their Religion, the *Spaniards* are the most orthodox and rigid *Romanists* in the World, it being a Saying among them, *Faltando in uno punto a Dios*, i. e. If you leave the Church in one Punctilio; God be with you; you must needs be damned. All over *Spain* there are Abundance of pitiful wooden Crosses set up in the Middle of Heaps of Stone. Under all the Pictures of the Virgin *Mary* is written, *Concebida sin peccado originale*, i. e. conceived without original Sin. At the *Ave Mary* Bell, they all fall down upon their Knees; whereas in other Countries they are contented only to pluck off their Hats. When they have done their Devotions, as also after their Meals, when they take away, and when they go to Bed, they say, *Sia lodato il santissimo Sacramento*, i. e. praised be the most holy Sacrament.

For Fornication and Impurity, they are the worst of all Nations, at least in *Europe*; almost all the Inns in *Andalusia*, *Castile*, *Granada*, *Murcia*, &c. having Whores who dress the Meat, and do all the Business. They are to be hired at a very cheap Rate. It were a Shame to mention their Impudence, Lewdness and immodest Behaviour and Practices. In *Catalonia*, *Guipuscoa*, and some other Places, they are not so bad. They are so lazy, that in their Shops they will say they have not a Commodity, rather than take Pains to look for it, not to be hired to carry a Portmanteau, go of an Errand, &c. but at an excessive Rate. Mercers never tie up any Thing they sell, and if they allow Paper, they only rudely mumble up the Commodities in it. Of their fantastical and ridiculous Pride, and that too in the extreme Poverty, all the World rings. If there be any Employment that you would set them about, which they think themselves too good for, they presently say, Send for a *Frenchman*. Indeed, the *French* do almost all the Work in *Spain*. All the best Shops are kept by *Frenchmen*, the best Workmen in every Kind are *French*, and, I believe, near one Fourth or one Fifth Part of the People in *Spain* are of that Nation. I have heard some Travellers say, that should the King of *France* recall his Subjects out of *Spain*, the *Spaniards* would hazard being all starved to Death.

Bread is very scarce and very dear in many Places of *Spain*, because of the Barrenness of the Soil, and Want of Rain, but chiefly because of the Sloth of the People in letting a great deal of Ground lie untilld, and in not taking the Pains to fetch Corn and Bread from those Places where there is Plenty. So that in a Day's Journey the Price of Bread will be trebled, and in another Day's Journey fall as much again. This Summer there was a Tumult at *Madrid*, the poor People gathering about the King's Palace, cried out, Let the King live, but let the ill Government die; let Exactors die,

die, &c. just as they did at *Naples* under the Rebellion of *Masaniello*. Upon which the King sent to all the Towns about for Bread Corn, and in two or three Days Bread was very plentiful and cheap. All over *Catalonia* Bread is very cheap. The *Spanish* Bread is commended for the best of the World; and well it may be, if, as we have heard, they pick their Wheat Grain by Grain. At my being at *Madrid*, there was an Engineer there, sent by the Emperor, that had invented a Plow, called by the *Spaniards* a *Sembrador*, to sow Corn at equal Distances, and one Grain in a Hole; the Description whereof hath been since published in the *Philosophical Transactions*.

In all Kind of good Learning the *Spaniards* are behind the rest of *Europe*, understanding nothing at all but a little of the old wrangling Philosophy and School Divinity. The People are much discontented all over *Spain*, complaining of Taxes, evil Counsellors, &c. but they have a good Opinion of, and are generally well affected to their King, whose Intentions they say are very good. As for their Habit and Dress, in that they are to be commended that they are constant to the same Fashions, though they be not the most convenient that might be devised. To change for the better, I think it rather commendable than blameworthy; but to change out of meer Levity, or an apish Imitation of others, is foolish and unreasonable.

They wear great Hats with broad Crowns, and the Top broader than the Bottom. Their Hair most commonly, and especially when they travel, they tie up in a Knot behind, and sometimes braid like Women's. Their Bands lie upon black Collars just of the same Bigness, or a little bigger. They are joined to the Collar, and put on Band and Collar together. They wear very much Cambrick Half Shirts, and have their Sleeves open before and behind, both Winter and Summer: They have great Skirts upon their Doublets; their Breeches are very strait and close to their Thighs, and button'd down on each Side, and reach a little lower than the Knee. They wear very slight wrought black Silk Stockings, that the white Linnen Stockings which they wear underneath, may be seen through them. Their Shoes just fit their Feet, very light and thin, with low Heels. Over their Doublets they wear a close Coat or Jerkin, with open Sleeves like the Doublet, and for the most Part with hanging Sleeves, like Childrens, yet never reaching lower than their Skirts, a very long Sword and a short Dagger hanging just behind them; and at last, over all, a Cloak with a great Cape. The Women wear great Fardingales, standing so far out on each Side, that to enter in at an ordinary Door, they are forced to go Sideways; when they go Abroad are covered with a Veil of black, having only a Hole left for one Eye.

The poor People wear Shoes made of Packthread. The most noble Sport in *Spain* is the *Jeu de Tarreau*, or Bull-Fighting, practised at *Valentia*, *Madrid*, &c. At *Madrid*, three times in the Year, where in the Market-Place, a brave Don on Horseback, and a great many Pages on Foot, fight with a wild Bull; when one Bull is killed or much wounded, they turn in another. Seldom but some of the Pages are killed; and with these cruel and bloody Spectacles the People are much delighted, as were the *Romans* of old in the Time of Heathenism.

16. We see very plainly from Mr. *Willoughby's* Account, that *Spain* is not naturally so poor a Country as is commonly imagin'd. The Climate is excellent, the Soil very far from being bad, and what Corn is produced in *Spain* may be truly call'd the best of its kind in *Europe*. The only thing that is wanting is, a right Government, for this would encourage Industry, render the Country more populous, and make the People willing to work hard, in order to fare well. It is highly probable, that the Reader will incline to know what are the principal Faults of this Government, whence it comes to pass that they have subsisted so long, and are like so much longer to subsist, and what might be reasonably expected in Favour of the *Spanish* Nation, if proper Remedies were applied to these Evils.

In the first Place then, with Regard to the Government, the King, though he seems absolute enough, wants Power to take those Steps that may appear necessary for the Good of his Subjects. In *Spain* Forms are not only regarded, but revered as sacred. There is not a single Nobleman in *Spain* but has very great Rights and Privileges in his own Lands; on the other Hand, there are very few of the great Nobility that have not considerable Towns upon their Estates; to which they have granted Immunities; and in Respect to either of these, there can be no Innovation made, though ever so much, or ever so apparently, for the Advantage of the Subjects in general. Thus it appears that there is a great deal of Liberty in *Spain*, and the People are very tenacious of it. The King also has great Power, more especially in the Countries that hold immediately of the Crown; he therefore favours them in Point of Trade, and in other Respects; but the Crown of *Spain* has been so long at an exorbitant Expence, both of Treasure and of Men, that it wants Force to rid itself of old Inconveniencies, at the same time that, from its present Weakness, new ones are continually growing. It must indeed be owned, that the Cortes, or Assembly of the States, might remove many of these Evils, but Princes, if they can avoid it, are unwilling to borrow Powers from their People and Ministers, much more unwilling to have their Management of Power looked into and examined. To secure the Peace of the Kingdom, the Descendants of the *Moors* were banished; this depopulated the Kingdom of *Granada*, then the richest and most fertile Part of *Spain*; and now for want of those industrious People, the most barren. Upon a Mixture of religious and political Principles, the Jews were also driven out, and with them went all Industry in the low Arts of Retailing and Pedlary, as well as in the superior Branches of the mercantile Business. In a Word, to express the Thing as clearly as possible to an *English* Reader, the first Measure was calculated to destroy the Land, and the latter effectually ruined the Money'd Interest.

The plain Remedies for these Mischiefs must be the bringing all the Kingdoms in *Spain* under one Constitution and Form of Laws, as they are subject only to one Prince. The raising Men and Money ought to be restrained to Cases of Necessity, and then it should be done as equally as possible; for when every Body suffers alike, it very seldom happens that any Body complains. Titles of Honour, and the Privileges annexed to them, should be connected with Property, as well as with Descent, which amongst the People, naturally proud, would prove the greater Spur to Industry. The Trade of the new World ought to be laid open to all the Subjects of *Spain*, under Restrictions that may be complied with, and those Restrictions ought not to be relaxed; as it stands at present, this Commerce is so far in the Hands of the Crown, as to hinder it from being beneficial to the People; and yet there is such a universal Corruption reigns amongst the Officers employed by the Crown, that greatly abridges the King's Profits. If Strangers settled in *Spain* had the Means of acquiring Property, and the Privileges that ought to be annexed to Property, Manufactures would rise of themselves, and the Produce of *Spanish* Commodities would remain in *Spain*, whereas now all the Advantages arising from Trade are collected as it were in a Sieve, so that as they come in they appear to be very great, but they speedily leak through, and that to such a Degree that little or nothing is left behind.

The Want of Attention to these plain Maxims has rendered the Government weak and infirm; the pursuing Schemes directly opposite to these Maxims has increased this Weakness into a kind of galloping Consumption, and this has enervated the Monarchy to such a Degree, that without a speedy Reformation, it must crumble to Pieces by its own Weight; and that this is not a Conjecture but a Fact, appears plainly from the miserable State of *St. Domingo*, *Porto Rico*, and other *Spanish* Settlements; but if such a Reformation were to take Place, the Kingdom of *Spain* has in itself vast Resources. There are in it many fine Ports which would

would enable its Inhabitants to carry on an extensive Commerce, and the Means of carrying them on are also in the Hands of the Inhabitants. We will give a few Instances, which at the same Time that they inform, cannot fail of pleasing and entertaining an intelligent Reader.

To begin then with the Wooll. All the World knows that *Spain* produces as good, some, who are well versed in that Commodity, say better, than any in *Europe*; of this the *English* use a vast Quantity, and of late the *French* and *Dutch* a much greater. Their Wine is also a very considerable Article; so long ago as the Year 1690. it appeared by their Custom-house Books, that they exported sixteen thousand Pipes annually from *Malaga*, *Alicant*, *Port St. Mary's*, *Porto Real*, *St. Lucar*, and *Rota*. They make vast Quantities of Oil in the Island of *Majorca*, and in the Country about *Sevil* and *Malaga*. *Castile* Soap is another great Article, and besides this, Pot-Ashes for the Use of Glass-works, and the Whitening of Linnen, a Commodity that deserves Notice.

They have great Quantities of the very best Sort of Salt, of which they sell a great deal at present, but nothing in Comparison of what they might sell. In the Principality of *Biscay*, and in the upper *Navarre*, they have large Quantities of Iron, and that Iron is justly esteemed excellent. From *Bilboa* and *St. Sebastians* they carry on two or three kinds of Fisheries, and these might be extended vastly. We will add to these Articles, that of Fruits, which is very considerable, such as Oranges sour and sweet, Raisins of the Sun, and many others; besides all the Drugs that they derive from the *West-Indies*, which are at once the richest and most saleable, such as, *Cochineal*, *Indigo*, *Vanilla's*, *Jalap*, *Sassa Parilla*, *Jesuits Bark*, &c. The Tobacco Trade, Skins and Hides, and a Multitude of other Things might be added.

All this plainly shows, that if *Spain* is very thin of People, it is entirely owing to Errors in Government, since the Country would have wherewithal to maintain its Inhabitants, if it was ever so populous, and it might be filled with Inhabitants from other Countries, if some idle foolish Customs were taken away; for these Customs make Strangers leave *Spain*, as soon as they have acquired Fortunes in it, which is doubly disadvantageous to the State; first by the Loss of so many Subjects, and next by the great Sums they carry off. We may judge of this from the Balance that is said to arise to *France*, from what is acquired by itinerant Labourers, that go to *Spain* in the Spring, and return before Winter, which has been computed, and not extravagantly neither, at half a Million Sterling; yet such is the Folly of the *Spaniards*, that instead of regretting this Loss, they value themselves upon it, and believe, that in Comparison of the *French*, they are a rich and great People, to whom others willingly submit themselves, for the Sake of getting Bread by them, without considering that these Strangers whom they despise, eat that Bread which they want, and go Home rich into their own Country, while those who call themselves their Masters are left to starve. If this Fact was not evident and undeniable, it would certainly be incredible.

Give me Leave also to observe, that as *Spain* is a very large Country, and composed of Provinces that differ very much from each other in Soil and Climate; so those, who seem to be less happy in these Particulars, are by much the best cultivated, and fullest of Inhabitants: As, for Instance, the *Upper Navarre*, for the Lower belongs to *France*, is very cold and mountainous; yet *Pampeluna*, which is the Capital, is a fair well-built City, and has a good Trade: The People there, and throughout the whole Country, are active, frugal and industrious, civil to Strangers, and generally speaking, free from most of those Vices that are commonly imputed to the *Spaniards*. It is the same Thing in *Biscay*, where, though the Land is also far from being fertile; yet the People are never in Want; their Farms require Labour and Manure; the Owners bestow it cheerfully; and there is more Trade carried on, in Proportion to the Extent of this District, than

in all the Kingdom beside. The People also of *Biscay* and *Navarre* are the best Soldiers, not only as they are robust in their Constitutions, and very hardy, but as they are active, diligent and very capable of bearing Fatigue. The *Biscaneers* also are excellent Seamen; their Barks are well built; they are well victualled, and well manned; they fish for Cods on the *Newfoundland Banks*; they have a Share in the *Greenland Fishery*; and whereas the *Spanish* Seamen in general are slow and awkward, these are as brisk and as capable in every Respect as ours. But in *Valentia*, *Murcia* and *Granada*, Countries that were formerly very rich, and produced vast Quantities of Grain, the Land lies untill'd, and the People are poor and starving, merely because they are idle and will not work. In *Andalusia*, indeed, which may be stiled the Paradise of *Spain*, there is great Plenty, and the Country has a fine Appearance; but even here vast Improvements might be made, if the Inhabitants were more industrious, and did not think four Hours Labour in twenty four an intolerable Fatigue.

That the *Spaniards* have Genius and Parts is certain, and yet both are commonly misapplied; for as our Author observes, they are a Hundred Years behind the rest of *Europe*, in almost all Branches of Literature; not because they want Abilities, but because they are attach'd to their old Notions, and had rather go on in the Paths of their Forefathers, though ever so rugged and uncooth, than dishonour them so far, as to strike out into better Roads that are new. In Poetry, Romances, Novels, and such Kind of Writings, they show a Spirit and an Invention, that is a clear Evidence of their falling short in other Things, merely from Want of Attention and Application: Yet with all this, their Reverence and Regard for Authority, they want not a strong Propensity to Liberty; and though no People in the Universe are more loyal to their Princes, yet they are far from being blind to the Errors in their Administration; which, however, they ascribe constantly to their Ministers, never to themselves. When they meet in the Evenings, as they commonly do in the great Squares of *Madrid*, and other Cities, they discourse very frankly upon all Sorts of Subjects, and spare their Superiors as little as in the freest Countries in *Europe*.

In these little Cabals, the secret History and Policy of *Spain* may be very truly learned, at the same Time that it gives you a very natural Picture of the real Genius and genuine Disposition of the People. The Birth, the Rise, Progress and Summit of every Minister's Fortune, are here fairly discussed; his private Life, as well as his publick Administration, canvassed, and the Consequences of his Mistakes either predicted before they happened, or traced to their true Sources afterwards. It must be owned, that these Politicians are but very low People; a Taylor, perhaps, or a Shoemaker, is one of the most enlightened Members of this Society; but they are strangely mistaken, who shall persuade themselves from thence, that nothing great or sensible passes in these Conversations. The very contrary is strictly true: This Custom has reigned so long in *Spain*, that the whole Nation are become Statesmen, at least, to such a Degree, as to form a right enough Judgment of a Minister's Behaviour in Domestick Concerns; and therefore the famous Conde-Duke de *Olivarez*, had always his Spies amongst them, whose Reports he committed to Writing; and it was against the Charge drawn from them, that he wrote his famous Justification, which is beyond Controversy the best Apology that ever fell from a Minister's Pen. The King, at the Time he wrote it, was strongly inclined to restore him to his Favour, but the Mob Politicians of *Madrid* pronounced him undone; as soon as this excellent Piece appeared: *A Favourite*, said they, *can never rise again, after showing that his Master was in the Wrong to let him fall.*

Now we are upon this Chapter of Politicks, I cannot help adding a Thought of my own, which is this, that the indulging the People of *Spain* in these extraordinary Liberties has been the great Secret by which they

they have been kept constantly loyal, without an armed Force; for the Kings of *Spain* are neither crowned, as other Monarchs are, nor do they keep any Guards: The first they think unnecessary in an hereditary Kingdom; and as for the latter, *Philip* the Third said truly, *that Guards might protect Tyrants, but a just Prince needed no other Guards than his own Subjects.* The People being thus indulged in Freedom of Speech, and making Use of this Freedom openly, never enter into secret Cabals; sometimes, indeed, they assemble in Crowds before the Palace, and represented their Grievances in very round Terms; but they began and ended with this Exclamation, *Let our good King live for ever, but let the wicked Administration go to the Devil.* A little Condescension, and the Redressing a few of the most notorious Grievances, always quieted them so, that their Monarchs have never thought themselves in Danger; and their Ministers know, upon such Occasions, how to purchase Peace upon reasonable Terms. [The Reader is to observe, that all that is here advanced relates to the Old *Spanish* Monarchy under the Kings of the House of *Austria*; for since the Accession of the *Bourbon* Family, the King of *Spain* has not only had Guards, but a very formidable Body of Household Troops. The long War, occasioned by the Accession of the late King *Philip*, gave him an Opportunity of establishing these; and it is not probable that he or his Successors will ever part with them.]

17. We cannot have, for the Time in which they were written, better Accounts than those given us by Mr. *Willoughby*; nor are the Additions less curious, more especially with respect to the Coral Fishery, our former Relations being very little to be depended upon. There was likewise, in the same Book, as large and particular a Detail as to Lead Mines; but the Writing being befaced, it was impossible to pick it out. But there is one Objection to which this Collection would be liable, if we inserted no other Travels but these, *viz.* that they are many Years old; that Things are much changed since, and that People would be glad to know how they look nearer their own Times. In order to guard against this, and at the same Time to supply another Deficiency, which is the Leaving several Provinces untouched, we shall, in the next Section, present the Reader with the Travels of an *English* Gentleman, not only through *Spain*, but *Portugal* also; later in Point of Time by about thirty Years, than those which have been already given, and which are written with great Plainness and Perspicuity. It is, indeed, to be wished, that we had a better Acquaintance with their Author, since this would very probably give us a better Opinion of the Work itself; but as we have not, we must be content to take it the other Way, and esteem the Author for the Sake of his Work, which will appear more pleasant to a modern Reader, as it is writ-

ten in the Language of these Times. We might, indeed, have smoothed those of Mr. *Willoughby*, and render'd them more graceful in the Eyes of many People, by taking them out of their ancient Garb; but against this we had many Reasons.

It seems but just, that a Man, and especially a Man of his Quality, should tell his Tale in his own Language, and after his own Manner; especially if there be nothing in it barbarous or uncouth. It is very far from being an easy Matter to give precisely the Sense of an Author, who writes in our own Tongue, in any other Words than his own; for either we fall short of, or exceed his Ideas; and to be convinced of this, we need only make a Tryal. There is a great Beauty in seeing these Variety of Stiles, which is also heighten'd by its Propriety. In a Treatise of Geography, or even in a History of Voyages, Uniformity is requisite; but it is otherwise in a Collection, and those have been always esteemed most, that have been the exactest in this Respect, such as *Ramusio* in *Italian*, *Thevenot* in *French*, and *Hackluyt* in our own. This last is a very proper Instance, for by comparing him with his Successor *Purchas*, we may easily discern the Inconveniences that attend a finical Nicety, in an Editor who prefers his own Manner of Writing to that of all other Men. The Reverend Author we have last mentioned, consider'd himself, and was consider'd in his own Times as a Wit; that is to say, he had a Humour of playing upon Words, and introducing Burlesque Remarks upon very serious Subjects; which has brought him into Discredit with the present Age, when a chaster and more correct Stile is grown into Fashion.

But though I do not think it expedient, that an Editor should always new cloath his Author; yet I must admit, that there are Cases where this is not only allowable, but necessary; and in those Cases, according to the best of my Judgment, I have never failed using this Freedom. But if there be a Beauty in such Variety of Stiles, there is likewise a very great Utility; for by seeing the different Methods which Travellers make use of, we learn the Excellencies of some, and the Deficiencies of others, and know from thence how to copy the one, or to avoid the other, when it becomes our own Turn to write. But these Reflexions have, perhaps, carried me a little out of my Way, and made the Conclusion of this Section a few Lines longer than it ought to be. The Reader will consider, that all People are fond of talking of their own Trades; and that perhaps Authors are more liable to fall into this Error than others. The best Amends I can make, after confessing my Foible, is to atone for it; and as I have already said all that is necessary to be said of the Person to whom we are indebted for the following Section, we will proceed to it without any Introduction.

SECTION II.

TRAVELS through *Portugal* and *Spain*, with a distinct Description of the principal Cities in both Kingdoms; particularly, *Lisbon*, *Coimbra*, *Porto*, and *Braga*, in the former; *Madrid*, *Valentia*, *Alicant*, &c. in the latter: With a curious and correct Detail of the Curiosities in the *Escorial*, and a succinct Description of the other Royal Palaces of their Catholick Majesties.

By an ENGLISH Gentleman.

1. The Author's Voyage to *Lisbon*, and Thoughts of the Portuguese upon his first Arrival there, with some other Particulars.
2. A distinct Account of the City of *Lisbon*, and the Country adjacent.
3. The City and University of *Coimbra* particularly described, and more especially the famous Convent of

- St. Austin. 4. *A Description of the Town of Aveyro, and the Country about it.* 5. *An Account of the famous City of Porto, and of the noble River upon which it is seated.* 6. *The Author's Journey from thence to Braga, with a View of that City, and of the Towns of Viana and Camena.* 7. *A Description of Valentia (in Portugal) and of the Frontier Country towards Spain.* 8. *An Account of the Spanish Province of Galicia, and of the Towns of Radontella and Ponte Vedra.* 9. *His Return into Portugal, and by another Route back to Lisbon.* 10. *His second Journey into Spain, with a Description of Estremoze and Elvas.* 11. *His Journey through Badajos, Merida, Trukillo or Truxillo, to Toledo.* 12. *The Author's Description of Madrid, and of the Palace of the Buen Retiro.* 13. *An Account of the City and University of Compostella, one of the most famous in Spain.* 14. *The celebrated Palace and Convent of the Escorial described, the Reliques, Riches, and Ornaments enumerated.* 15. *An Account of the Pantheon, or Place of the Royal Sepulchres.* 16. *A View of the old Chapel and Royal Palace of their Catholick Majesties, and a Recapitulation of the remarkable Things in this celebrated Place.* 17. *An Account of Aranjuez, and other Places on the Road.* 18. *A Description of the Town and Castle of Alicant.* 19. *The Manners, Customs, and Behaviour of the Inhabitants of Valentia.* 20. *Some very singular Instances of the Ignorance and Superstition of the Spaniards in general.* 21. *Observations and Remarks upon the foregoing Section.*

I IN the Year 1693, I embarked on board a Merchant-ship for *Portugal*, where we arrived without any Accident but such as are ordinary at Sea, in the River of *Lisbon*, in which City staying several Months, I will give you the best Account I am able of what I observ'd during my Stay.

It is seated on divers Hills, which make the Streets very uneasy and unpleasant; besides, the Dirt and noisome Smells arising from the Filth that runs from their Kitchens (which are all above Stairs) into them, and by Reason of their Narrowness can't be dried by the Sun, makes them so offensive, that no body cares much to pass through them.

Arriving there in *Lent*, I was entertained with the Sight of their monstrous Processions, wherein I observed some of the true Penitents lash themselves with that Severity that they frequently die of it; for which Reason it is that the Priests are obliged to declare to them, That such as procure their Death by this Excess of Folly, are the Occasion of their own Damnation. But among these true Devotees are to be seen many others, hired on Purpose by the Religious Societies, to increase the Number of the Penitents; a Thing so scandalous, that even the foreign Catholicks residing here blush at it, there being scarce any but the most profligate and debauch'd Wretches that will expose themselves to such dangerous Mortifications for Lucre-sake: Among the rest, they had at that Time employed a certain lewd Fellow, who us'd to serve as a Porter to the *English* residing there.

They have a vast Number of Churches and Convents, but few that are magnificent, the *Domo*, or Cathedral itself, being neither large nor handsomely built: Their chief publick Structures are, the Royal Palace, seated upon the River *Tagus*, the Model whereof was designed much larger than it is. It has a Cloyster behind adjoining to it. The Palace of the Archbishop of *Lisbon* is a spacious Structure, with some good Statues upon the Stairs, the only Kind of Furniture the *Portuguese* delight in, there being even in the King's Apartments nothing to be seen but white Walls. Their Houses are generally very high and pretty cool, but the Streets so narrow, that instead of Coaches they are forced to make use of Litters, carried by Mules, which are very strong and large in this Country.

It is an odd Sight to see the *Portuguese*, both young and old, appear with large Spectacles fastened to their Ears in the Streets. Their Diet is generally very moderate, and they seldom or never commit any Excess in Wine: Their predominant Vice is the Conversation of lewd Women, unto which the Heat of the Climate seems to incline them more than Extravagance. The Women paint here very young, and are consequently obliged to follow it as they grow more in Years. The Men are exceeding jealous, and a Suspicion of Incontinency in a Woman puts her in Danger of her Life; hence they are seldom allowed to stir abroad, except when they go to Church on Sundays, Holidays, or their Eves.

The Women of Quality wear their Fardingals here larger than those of *Italy* or *Spain*; they wear Veils to cover their Faces; they look upon it as the greatest Piece of Immodesty to shew their Feet; for which Reason

they wear very long Petticoats, and their Pages or Footmen hold a Piece of Cloth either before or behind them, as they get in or out of their Coaches or Litters, though at the same Time they go both with their Bosom and Shoulders bare. The Men's Habit is a black Coat and a Band of our *Colchester* Bays, which they turn the wrong Side outward in Mourning; this is the general Wear, without any Distinction of Persons or Quality, unto which they are all subject without any Difference, Silver and Gold Laces being expressly forbid among them. The *Inquisition* makes them all appear good Christians, though it is generally believed there are many conceal'd *Jews*, as their swarthy Complexion and fiery revengeful Temper are the Remnants of their *Moorish* Ancestors.

2. The Situation of *Lisbon* upon the River *Tajo* or *Tagus*, makes it a Place of considerable Traffick; for, not to mention their Commerce in the *East Indies* and *Brasil*, they trade with most Nations of *Europe*, but especially with the *English*, who take in Salt there for *Newfoundland*, and bring back to them dry'd Cod; besides that, they exchange many of their Woollen Manufactures for the Wine and Fruits of *Portugal*.

The Extent of the *Tagus* into a great Part of the Country, affords them likewise a most commodious Carriage of their Wines, Oils, Fruits, and other Products of the Country: Their Salt, especially that of *St. Ubes*, is transported into most Parts of *Europe*, and used in vast Quantity in *Sweden*.

They abound in Fish at *Lisbon*, but have some Scarcity of Flesh, especially of Beef and Mutton, the adjacent rocky Mountains affording Food only for Goats; however, their tame Fowl, when well fatted, are very good, and their Pigeons both very large and well tasted.

About *Lisbon* are many Summer-houses, and Gardens well planted with Orange-trees, the agreeable Scent whereof perfumes the Air at a considerable Distance: A Friend of mine had one of these Summer-seats at *Luz*, about four Miles from *Lisbon*, with a well planted, pleasant, walled Garden, of three Acres of Land belonging to it, which among other Advantages, had this Conveniency belonging to it, that we could go thither in a Coach, a Rarity among those craggy Mountains. I spent a great Part of the Summer there.

During my Stay here, I took particular Notice, that even in the hottest Season, we were constantly, toward Evening, refresh'd with a cool Sea-breeze, a Thing I afterwards observ'd in most Places about *Lisbon*.

From this Country-seat I used frequently to take a Walk to the once so much celebrated Nunnery of *Odevalla*, but much restrained of late Years both in its Revenues, and the free Conversation allowed to that Order in some of their Convents.

3. Leaving *Lisbon*, May 6. 1694, I travell'd towards *Porto*, to take a View of the Country on that Side; I pass'd the first Day through a rocky Country to *Sacca Veina*, and thence two Leagues further to *Alucrea*, and in the Afternoon through *Aliandra*, *Villa Franca*, *Povia* and *Cassinora*, where I lodg'd that Night, but

but badly enough; the next Morning early I pursued my Journey through the Villages of *Villa Nova de Remo*, *Ambosia*, and *Castesia*; after Dinner I travell'd on near *Sancta Terrena*, through a plain and most delightful Country, abounding in Wine, Oil and Corn, and so came to *Pausinio*, where I took up my Lodging for that Night; the next Day I continued my Journey in a no less pleasant and delightful Country, over *Campo de Galligong*, (a delicious Plain, abounding in Corn and Olive-trees) through *Alla nerosa*, *Pialva*, and *Jandemasans*, to *Peruchio*, where I lay that Night, and the next Morning over *Arujon*, *Pulga*, *Tobosal*, &c. getting to *Coimbra* that Night, after four Days Journey in a Horrelitter, being none of the quickest in these Countries.

Before I entred the Gates of *Coimbra*, I cross'd the River over a Bridge very remarkable for its Length, as having no less than twenty nine Arches, and its being built upon another Bridge, which is swallow'd up in the Sand, the River being so shallow now that 'tis fear'd it will in Time be quite choak'd up. On this Side of the Bridge stands a Convent and a Nunnery, both belonging to the *Franciscan* Order, the first dedicated to *St. Bartholomew*, the other to *St. Clara*. The City itself is computed to contain about 30,000 Souls, and its Situation is like most of the great Towns of this Country, upon Hills; it has sixteen Colleges and Convents.

The *University* has but two Colleges, viz. those call'd *St. Peter's* and *S. Paul's*, adjoining to each other like one Building. Their Schools make no great Show, though they keep publick Lectures in them in all Sciences; and I was told they had a good Library. I saw a *Fidalgo* (or Gentleman's Son) perform his Exercise for his Degree of *Doctor in Law* in the Hall, which is a handsome large Room, common to both the Colleges, hung about the Walls with the Pictures of the Kings of *Portugal*. As the Number of Students here is computed at no less than five thousand, (because they are admitted as soon as they can well read, and are distributed accordingly in different Classes) so none but the Children of Persons of the best Rank can have their Chambers in the Colleges, the rest being dispos'd in the Town as they best can.

The chief of their Convents is that of *St. Cruz*, being all Noblemen, and of the Order of *St. Austin*. The Church belonging to this Convent is a large Structure, with Altars richly gilt, and adorn'd with Silver Candlesticks of great Value: They preserve here many Relicks, but as they are very shy of shewing them to Strangers, I obtain'd this Favour by the Assistance of an *Irish* Father; they shew'd me the Sword of King *Alphonso*, wherewith he kill'd five *Moorish* Kings; they tell you that King *Sebastian*, when he was just upon going to the Wars in *Barbary*, borrow'd this Sword of the Convent, and that the Sword being lost there, together with the King, they instituted publick Supplications for the Recovery of this Sword, which was one Day found by a Friar upon the high Altar, as he was going to officiate there. But the chief Repository of their Relicks is in a Chapel at the End of the *Dormitory*; here they shew'd a golden Cross set with precious Stones, which (they say) contains a Piece of the true Cross, and used always to be fix'd on the royal Standard in their Wars against the *Moors*; half of one of the Thorns wherewith our Saviour's Head was crown'd; a Bone of *St. Stephen*, another of *St. Austin*, a Finger of one of the Innocents slain by *Herod*, *St. Peter's* Chains with large thick Iron Links, a Bone of *St. Paul*, a Leg-Bone of one of the eleven thousand Virgins sent out of *England* to the *Indies*, to marry and encrease the *Christians* there; an Arm-Bone of *St. Blazius*, a Bone of *St. Sebastian*, the Bones of *Theotoni* in a Silver Chest, the Bones of five Martyrs put to Death by the *Moors* in *Barbary*, whither they were sent to convert them to the *Christian Faith*, likewise in a Silver Chest; a Bone of *St. Lawrence*: Most of these, besides many others, were brought out of *England* immediately after the Dissolution of the Monasteries by King *Henry VIII*. They were so cautious in shewing them, and that at such a Distance, that I could scarce distinguish what they were,

which made me never enquire any further about any such Things as *Relicks* in this Country.

4. After a Stay of three Days I left *Coimbra*, taking my Way towards *Aveyro* through a pleasant Country, though somewhat mountainous and rocky: I found my travelling upon a Mule as tedious as in a Litter, for you go no faster than your Guide, who is on Foot. *Aveyro* is a very handsome Town, with clean and pleasant Streets, govern'd by a Justice, as are most Country Towns here; it has three Convents, of *Dominicans*, *Carmelites*, and the Order of *St. Anthony*; and four Nunneries, of *St. Anthony*, *Franciscans*, *Dominicans*, and *Carmelites*; and four Parish-Churches: Each of the Nunneries contains above a hundred Persons, including Servants; and the whole City about fifteen or sixteen thousand Souls. The Duke of *Aveyro* lives in *Spain*, under Pretence that the Family of *Braganza* has usurp'd the Crown of *Portugal*, so that his Estate being seized upon for the King's Use, his Palace is bestow'd upon the *Carmelite* Nuns. The Town is fenc'd about with a Wall after the *Moorish* Fashion, and has great Plenty of good Fish and Fowl: The River is of such a Depth that Vessels of seventy or eighty Tun may ride safe at Anchor under the Town, to which belong above four thousand Boats, employed for the most part in carrying Dung from thence into the Country, where the Ground is barren, and wants much more manuring than the Soil about *Lisbon*. Much Salt is also made hereabouts, which is carried into the Country, and into *Galicia*.

From *Aveyro* to *Porto* is ten Leagues; the first five I went by Water, for taking Boat at twelve at Night, I came the next Morning to a little Village called *Varr*, whence I travelled the other five on Horse, through a barren Country, to *Porto*, the River of which affords a safe Harbour, being so environ'd with Hills, as to protect Ships against the Violence of any Winds; the Ships may ride under the very Walls of it, which are very high, but at that Time the City was without a Garrison.

5. The City of *Porto* itself is very handsomely built, and the Streets neatly pav'd, though seated upon Hills. On the other Side of the River called *Sarra*, stands a Convent of *Austin Friars*, a spacious Structure, containing about forty five Brothers, who call themselves *Dons*: Their *Dormitory* I found to be two hundred and fifteen Paces long, and five broad. Near it is a Nunnery of *St. Dominick*. Somewhat lower, on this Side of the River, at a Place called *Gaia*, (famous in ancient Times for the Palace of the *Moorish* Kings) is another Convent of twenty eight Friars, of the Order of *S. Antonio*. In the Convent of the *Serra* they shew'd me a pair of Crutches of a lame Child, which was cured by a certain little Image of our Lady in *Basso relievo* in the same Church: The like you see in several other Churches, as also wooden Legs and Arms, nay, sometimes the Pictures of the Persons pretended to be cur'd near the Saints Image that is said to have wrought it.

This City has four Parish-Churches, the Cathedral, which is but small in Comparison of others of that Rank, the Church of *S. Nicholas*, of *S. Vittoria*, and *S. Peter*; they appear'd to me richer and better gilt than those of *Lisbon*: Seven Convents of Friars, viz. the *Franciscans*, *S. John Novo*, *S. Eli*, (dress'd in Purple) the *Dominicans*, *Carmelites*, *Benedictins*, and the *Tanograpes*, an Order following the Discipline of the *Jesuits*, and upon that Score in much Repute here. They have also a College of *Jesuits* and four Nunneries, viz. of *S. Munchecha*, *S. Bento*, *S. Clara*, and the *Recollettes*, an Order peculiar to this Country, and seldom to be met with but in Seaport Towns, being intended for Seamen to bestow their Wives in till their Return; Orphans are likewise educated here till they come to Years of Maturity to chuse either Marriage or a religious Life; Widows are also permitted to enter into this Order after the Decease of their Husbands, provided they vow Chastity for the Future. The whole City is reckon'd to contain fifty thousand Souls, including the Suburbs, in one of which is another Parish-Church dedicated to *S. Alphonso*. It is a Place of vast Trade,

Trade, the River (which supplies them with great Quantities of Provisions, Wines, Oyl, Corn, Fruits, &c. out of the Country for Transportation) having from its Conveniency got the Name of *The Golden River*. The Bar, through which the Ships come in, is a very narrow Passage, with Rocks on both Sides. Over against it, near the Village of *St. John*, is a Fort kept by a small Garrison.

The Episcopal Palace near the Cathedral seem'd to be a magnificent Building, but was not inhabited then, because the Bishop, being at Variance with the Clergy of his Diocese, was at *Lisbon*.

6. From *Porto* I travel'd to *Gamarains*, over steep and rough Hills; it is a pretty neat Town, well built upon a Level of a considerable Compass; it has five Convents of Monks, viz. the *Dominicans*, *Carmelites*, *Capuchins*, *Franciscans*, and *Austin* Fryars; and three Nunneries, *Franciscans*, *Carmelites*, and *Dominicans*, but no more than two Parish-Churches. The whole Place is enclosed by a strong and high Wall, and there are to be seen here the Ruins of a Castle, said to be built for one of the Kings of *Portugal's* Brothers.

From hence I continued my Journey the next Day to *Braga*, the most ancient Archbishoprick of *Portugal*, and which to this Day disputes the Precedency and Primacy with the Archbishop of *Toledo* in *Spain*.

Braga is a spacious City, well wall'd according to the Fashion of this Country. The Cathedral is something bigger than in most other Places in *Portugal*, and strongly built, as are most of their Structures; for they have hereabouts a Kind of very durable tho' coarse Marble, and their Loam very white and fine, and consequently exceeding binding, as may be seen by their old Buildings. In this Church is a Monument of the Duke of *Bayonne*, (a Thing the *Portuguese* do not much regard) who being met upon the Road to this City by a great Number of People to honour his Entry, and dying there soon after, order'd by his Will a considerable Revenue to be employ'd for distributing a certain Allowance to the Poor every Morning in the Cloysters of the Church; adding, That *since he was not able to feast them, he would take Care they should not go without a Breakfast*. The Tomb, which is about a Yard and a half high, stands in the Isle of the Church, being all of Brass, with his Effigies at full Length, which appear'd to have been gilt formerly; the Grates about it hinder'd my reading the Inscription. Not far from the Dome stands the Archiepiscopal Palace, an old Pile of Building, which made but an indifferent Shew on the Outside, being not then inhabited by reason of the Death of the Archbishop.

The next Place I came to in this Journey was *Viana*, one of the pleasantest Towns in *Portugal*, seated on the Sea-side, so that from the Key you may see any Ships that sail along the Coast: It is well paved, the Streets upon a level, with very good Buildings. Its Strength consists only in a small Castle on the Sea side, which commands the Harbour, but they had at that Time a Garrison of a thousand Foot and two Troops of Horse, and in the Castle about thirty-seven Great Guns mounted: There was lately built a Magazine for the King, containing Arms for about twenty thousand Men, and some Accoutrements for Horse. They shew'd us a small low Building within the Precinct of the Castle, said to be built for the Imprisonment of King *Alphonso*. For the rest, this is a Place of pretty good Trade, tho' the River is not navigable far, by reason of the Sands which choak up the Channel.

From this Place I travel'd for three Leagues very pleasantly along the Sea-side to *Camena*, seated in a Plain; and though the Frontier Town on the Borders of *Galicia*, it is of no great Strength, but commonly provided with a good Garrison; there stands, however, upon a Rock near the Entrance of the River, a little Fort, commanding the Passage toward the Harbour, but it was guarded only by six or eight Country-Fellows at that Time, and had not above three or four Guns mounted; within it is the Convent of *St. Anthony*. This Place has some little Trade, two Parish-Churches, two Convents of *Dominicans* and *Franciscans*, and one Nunnery of *Dominicans*.

7. If you intend to go from hence into *Galicia*, you must cross the River, which is the common Boundary between *Spain* and *Portugal* on this Side.

I went from *Camena* to *Villa nova de Silvero*, an ancient Town in the Road betwixt *Camena* and *Valentia*; as it is a Frontier Town, so it hath a Wall after the Manner of this Country, with a Garrison.

Valentia, likewise a Frontier Town, upon the Borders of *Galicia*, advantageously situated for being made a strong Place, but almost without Defence, though so near to *Spain*; it is true, some Works it had, but without Men or Arms to defend them, all the Defence they have being the Fort *Lovelio*, about a Mile from the City, in Opposition to which, the *Spaniards* have one or two on their Side of the River. At this Place the King's Officers make strict Search, whether you carry more Money with you than is allow'd; the same is done on the Borders of *Galicia* by the *Spaniards*, in your Return hither, which they do with Severity enough, unless you make them civil by a little Money. Here you must also give Security for the Return of your Mule.

8. The first *Spanish* Town you come to after you have crossed the River, is *Tine*, an Episcopal Seat, but meanly built, which made me without any Stay continue my Journey to *Vigo*, a Sea-port Town in *Galicia*, seated upon a River, and accounted one of the best Harbours of *Spain*, formerly the Rendezvous of the *Spanish Armada* or Fleet, when they made a much better Figure at Sea than they do now. Here their Galeons, and the *French* Squadron commanded by M. *Chateaurenand*, were destroyed by the *English* and *Dutch*, in the Year 1702. For the rest, the Town is of no considerable Traffick, few inhabiting here but Fishermen, which makes their Houses appear very mean. It is reckon'd among the garrison'd Towns of *Spain*; but this Garrison consists only of sixty Country Fellows, who are summon'd out of the adjacent Country, for the Defence of some slight Works provided with a few Guns, and are changed every Day. It has one large Parish Church, but meanly built, and two Convents, one of Friers, the other of Nuns, both *Franciscans*. About three Leagues down the River you see the Isles of *Bayonne*.

From hence I pass'd for three Leagues down a noble River towards *Ponte Vedra*, lined on both Sides with Hills and pleasant Valleys, and some little Redoubts opposite to one another, for the Defence of the River. As you pass along this River, you see *Raduntella*, a stately Town, built upon the Bank of the River, in the Middle of which is an Island, with a Convent of *Franciscans* upon it, the Gardens of which being planted with Fruit-trees, made a pretty Show at a Distance. At the End of this River you must travel a League and a half by Land before you come to *Ponte Vedra*, thro' very rough and uneven Ways. *Ponte Vedra* is a large but meanly built Town, though the River (which discharges itself into the Sea) affords them some Conveniency for Traffick. The chief Thing worth taking Notice of, is the Church of our Lady, a large Fabrick, and adorn'd on the Inside with some curious Wrought Work on the Ceiling, and the Pillars, which are Marble, a Thing seldom observed in the Churches of *Galicia*. The Front of this Church hath also some very fine *Relievo-work*; among the rest, our blessed Lady on her Death-bed, with the Apostles and some of the ancient Fathers about her.

The Archbishop of *St. Jago's* Palace here is a large Structure, but appear'd much decay'd: It has two Parish Churches and three Convents, two of *Franciscans*, and the third of *Dominican* Fryers, one of Nuns, and a Jesuits College. The Magazine here had also some good Brass Guns, and some Small-arms.

9. *Galicia* appear'd to me a Country very like *Portugal*, as well in respect of the Soil, as of the Manners and Customs of its Inhabitants, who also differ but very little from the *Portuguese*, even in their Habit and Language; and as there is scarce any Footsteps of Industry or Husbandry among them, so you see nothing but Poverty where-ever you turn your self.

The indifferent Usage I met with in all those Places thro' which I pass'd, made me soon alter my Resolution

of going further that Way; so I return'd to *Porto* the same Road I came, but took another Way from *Porto* to *Lisbon*; for, after having pass'd *Aveyro*, instead of going to *Coimbra*, I took the Road of *Fygera*, a small Maritime Town, yet not without some Trade in Salt and Oyl, Ships of about a hundred Tons being able to come up the River hither: They have a Castle with some Guns for their Defence. The Salt is made near this River, and the adjacent Country affords great Abundance of Olives.

Betwixt *Aveyro* and *Fygera* is the Town of *Mira*, much celebrated for vast Store of wild Ducks thereabouts, which they take in a peculiar Manner, without either Nets or Guns, by throwing Sticks at them as they rise and take Wing, which they do with such Dexterity, that they knock down several at a Time.

I pass'd the River near *Fygera* the 25th of *July*, which being on a *Sunday*, and *St. James's Day*, I had scarce travel'd two Miles to *Lavos*, where meeting with an *Irish* Priest, he would fain have engaged me to go about four Leagues with him, to a Chapel dedicated to *St. James*, where (he told me) was a Family which had this Peculiar to itself, that on this Day, when the People of the adjacent Country came to pay their Devotions to the said Saint, and are regaled with a large hot Cake by the Town; any of them can go to the Oven, though never so hot, and turn the Cake without the least Danger; but I thank'd him for his Care, and told him, that having no great Faith in such Matters, he must excuse me, if I did not go so far out of my Way. I came the same Day to *Lazia*, the Seat of a Bishop, whose Palace is a noble Structure: For the rest, the Town is but indifferently built; it hath three Parish-Churches, the Cathedral, *St. Diago*, and *St. Peter's*; the first appear'd to be a large handsome Fabrick, but I did not view the Inside of it: They have four Convents of *Austin* Fryars, *Dominicans*, *Franciscans*, and *Capuchins*, and a Nunnery of *Dominicans*. Near it, upon a very high Hill, you see a Castle belonging to the King, which at a Distance appear'd to be a noble Building.

In my Way from *Lazia* to *Terena* I pass'd by *Batalia*, where is said to be the best-built Church in all *Spain*, perfected by some *English* Workmen; it contains the Sepulchres and Tombs of the *Portuguese* Kings. The Steepness of the Rocks, over which I was forced to pass, together with the Length of the Way, made this the worst Day's Journey I ever had, which made me not get to *Terena* till late at Night; and having fourteen Leagues to *Lisbon*, I set out early in the Morning, and after I had rode two Leagues, embark'd on the River, (sending my Mule by Land) which brought me the same Day to *Lisbon*. I observed a great deal of Poverty in the Country through which I pass'd, the poorer Sort living for the most part upon *Brow* and Water. This *Brow* is a Kind of coarse yellowish Bread, made of a certain *Indian* Corn called *Millio*; certain it is, that many hundred Families live upon this, without ever tasting Meat in all their Life-time. The Country, through which I pass'd, affords scarce any Wood for Timber, the Oaks, which are but few, appearing no bigger than Shrubs here; Olive and Cork-trees they have in Abundance, and I saw some pretty large Groves of Pines.

The Author's Journey from Lisbon to Madrid.

10. I set out, *Sept. 1, 1694*, from *Lisbon* for *Madrid*; I went three Leagues by Water on the other Side of the River to *Allegalego*, whence, continuing my Journey the next Day, I travel'd for eight Leagues through a barren Country to *Vento Novo*, and the next Day by the Way of *Monte Major* (a very good Village) to *Ryolio*, a small ruined Town with an old *Moorish* Castle, which affords a fine Prospect into the adjacent Country. The next Day I travel'd on to *Estreimoze*, a Place noted for Earthen Ware, then garrison'd with eight Companies of Foot, and three Troops of Horse. Thence I went to *Elvas*, the last Frontier Town of the *Portuguese*, bordering upon *Spain* on that Side, a Place of good Strength, and famous for the six Months Siege it sustained against the *Spaniards*, in their last Wars. Near

VOL. II. N° 117.

it is a most noble Aquaduct, three Leagues and a half in Length, and of a vast Height in some Places where the Ground is low; where, for a considerable Way together, there were no less than four Arches built upon one another with vast Expence. Not above two *English* Miles beyond *Elvas* you come to a small River, which being the common Boundary betwixt *Spain* and *Portugal* on that Side, you are no sooner pass'd it, but you come to the *Campo* or *Plain*, where was fought that memorable Battle betwixt the *Spaniards* and *Portuguese* in their last War, with the Loss of seven thousand *Spaniards*; in which Action the *English* had a considerable Share, acting as Auxiliaries on the *Portuguese* Side.

The first Town belonging to the *Spaniards*, on this Side, is *Badajos*, a strong Place, into which you enter over a Bridge of twenty-six Arches. The next Day I travel'd to *Merida*, into which you must pass over a Bridge of above sixty Arches: This Place affords some Entertainment for curious Travellers, as the Ruins of some ancient *Roman* Buildings, a spacious Castle, now turn'd into a Prison, a noble Arch of vast Stones joined without Mortar, the Work of *Julius Caesar*, a curious Pyramid by *Augustus Caesar*, the Remnants of some ancient *Roman* Aquaducts, and another modern one, by which the Water is convey'd into the Town a great Way. From hence I travel'd to *Trukillo*, through a woody and mountainous Country: The Town itself is very well built, with several goodly Structures belonging to Persons of Quality; it has five Parish-Churches, as many Convents of Fryars, and four Nunneries: The Villages upon the Road were most of them very large, but the Dwellings only of Mudd; however, I took Notice by the Way of one spacious and noble Palace belonging to the *Conde de Lopezo*: I lodg'd at *Telaveyra de Royna*, a very handsome Country Town, having eight or nine Parish-Churches, thirteen Convents of Monks, and five Nunneries.

From hence I travel'd five good Leagues out of my Way to take a View of the City of *Toledo*, a magnificent Place, nobly built, and adorn'd with stately Churches, very rich in Plate and Jewels. The Image of our Lady in the Cathedral has a Garment cover'd all over with Pearl and precious Stones of an inestimable Value: The Paintings are answerable to the rest. It is the Metropolis of all *Spain*, and the Archbishoprick is accounted the most considerable for its Revenues in *Christendom*, though that of *Braga* disputes the Priority with it. The *Castilian* Language is spoken here in its Purity, and several great Councils have been held there. The present Archbishop is a Cardinal. The King's Palace or Castle is a spacious Pile of Building, and the Stables belonging to it are capable of containing at least five hundred Horse.

12. *Madrid* is only a Village, but may deservedly be called the largest of that Kind in *Europe*; the Soil round about it is not so mountainous as in *Portugal*, but very fruitful, which agrees best with the slothful Temper of the *Spaniards*. This Place, though the ordinary Residence of the Kings of *Spain*, is not seated in a very wholesome Air, occasioned, questionless, by the adjacent River, which is often dry: This River is a Branch of the *Tagus*, rising near *Toledo*, whence it continues its Course as far as *S. Terence*, fourteen Leagues beyond *Lisbon* in *Portugal*. The Buildings here are generally very good, of Brick, and some of the Streets regular, spacious and noble, but very dirty, nauseous, and full of Filth. Their Churches are for the most Part very fine. The Palace of the *Almirante* of *Castile* is highly remarkable for its excellent Pictures, in the Collection whereof the *Spanish* Lords spare no Cost; among the rest I took Notice of one done by *Titian*, representing *Ixion* embracing the Cloud; it was pawn'd to this Lord for five hundred Dubloons, much less than it was worth.

In the King's Summer-house, a little Way out of the Town, called *Buen Retiro*, I took Notice of many curious Pieces of Painting by *Titian*, *Raphael Urbin*, *Bor-donna*, *Annibal*, and *Vandyke*, but has nothing else remarkable either within or without, being built only of Brick, except that in the Garden you see the Statue of

8 S

King

King *Philip IV.* on Horseback, finely done in Brass, placed on a Marble Pedestal. On the Canals are Pleasure-Boats, and some Summer-houses for the Musicians to divert the King; whilst he takes his Pleasure in these Boats upon the Canals. At the Entrance of the outer Court are the King's Stables, that for the Saddle-horses had at that Time about sixty, chosen out of all Nations; in those for the Coach-horses were three Setts of Black, as many of light Grey, all of *Flanders* Breed, one of dark Grey, and two Setts of very fine Duns, besides six Setts of Mules. Adjoining to these is the Armoury, a spacious handsome Room, fill'd with many curious Suits of Armour, belonging formerly to their Kings: Here they shew you divers Suits, once used by the great *Charles V.* with a Sword presented him by the Pope; his Armour is easily distinguished from others by our Lady's Image he always wore engraved on his Breast-piece; a large polish'd Steel Plate the said Emperor used instead of a Looking-glass when he put on his Armour, and an easy Chair, in which he slept, eat, drank, and dispatch'd Business when in the Camp; several other Suits of *Philip II.* *Philip III.* *Philip IV.* and among the rest, one for the late King *Charles II.* though it is certain he never wore any; it is double gilt, and set with precious Stones: Here you see also the Armour of that warlike Cardinal *Ildefonso*, and several Trophies and Colours taken from the *Turks*.

The outward Court of the Palace is a large Square, with Cloysters on both Sides, the Stables and Armoury fronting the Palace itself; it consists of two Quadrangles, with Cloysters both above and below; one of these Quadrangles is allotted for the King, the other for the Queen's Lodgings, but are not to be seen unless when the Court happens not to be there.

I passed through three or four indifferent Rooms (as far as they would let me go) to see the King at Dinner; the Dining Room was large, but indifferently furnish'd, the Room before it was less, but crufted over on the Walls with fine Jasper and Marble. The King has always twelve Dishes at Dinner, and eight at Supper, serv'd up in as many Silver Plates, and attended by as many Halberdiers, who make every one uncover as the Meat passes by. There is a glorious Appearance at Court every Day, as well of Coaches as a great Number of People, the Reason is, because all the chief Courts of Justice, belonging to the several Provinces under the *Spanish* Dominion are kept in the Palace.

Many of the Streets of *Madrid* have Fountains, but such as have nothing extraordinary in them. The *Placa Major*, where they keep their *Bull-feasts*, is a noble Square. The *Prado* of *S. Hieronimo* is sprinkled every Evening with Water out of the many Fountains placed there for the Conveniency of the Coaches that take the *Tour-a-la-mode* there. Cross the Water the King has another House, call'd *Casa del Campo*, where he refreshes himself sometimes in the Heat of the Summer under the cool shady Walks, the chief Conveniency of this Seat.

13. From *Madrid* I took a Turn to *Alcala de Henares*, or *Compostella*, in Latin *Complutum*, the greatest University (next to *Salamanca*) in *Spain*, founded by Cardinal *Ximenes*. The Buildings of the City itself are none of the best: The University-College, where all publick Exercises are kept, acknowledges the great Cardinal *Ildefonso* for its Founder; the other Colleges are, that of *Madre di Dios*, of *Malca*, the *Trilingue*, the King's College, that of *Mena*, of *Manrique*, of *S. Clement*, of *Lugo*, that of *Arragon*, of *Verdes*, of *S. Ambrose*, of *S. Catharine*, of *S. Dennis*, that of the *Russians*, and *S. George's* College, built and well endow'd by a *Portuguese* Count, for the Use of thirty *Irish* Students; but the Count dying before it was quite brought to Perfection, the King seiz'd on the greatest part of the Revenues, leaving only a slender Allowance for the Maintenance of eight Students, who are obliged by Oath, after seven Years Stay in the College, to preach the Gospel in some of the Northern Parts. There are besides these the Colleges of *S. Peter* and *S. Paul*, and that of the *Grammarians*.

Their Convents of Monks are, those of the Order of *S. Austin*, of *S. Thomas*, *S. Basil*, *S. Bernard*, and that

for the *Complutenses*, the *Carmelites*, the *Oratory*, the *Jesuites*, two of the *Trinitarians*, the *Discalceats*, two of the *Mercenaries*, the *Minims*, the *Agonizants*, the *Austin Friars* *Discalceats*; the Convent of the Angels of *S. Diago*, *S. John de Dios*, and that of *Leon*, besides ten Nunneries. I heard one of their Disputations, and it seem'd very odd to me, that the Respondent, after having repeated the Opponent's Syllogism, did not answer in *Latin*, but in his native Tongue. Just before the high Altar in the Chapel of the University College stands a white Marble Tomb, containing the Body of the beforemention'd Cardinal *Ildefonso*, his Effigies in a cumbent Posture, all excellently done, and encompassed with Brass Grates; *Mahomet's* Lamp, and some *Turkish* Colours taken by him from the *Turks*, are hung up in the same Chapel.

The Cathedral here is a spacious and noble Fabrick, in which (among others) I took Notice of a white Marble Tomb with a *Latin* Inscription, erected to the Memory of *Dr. J. Gonzales*.

This City stood formerly on the other Bank of the River, at the Foot of an high Hill, but being laid desolate by the *Moors*, it was afterwards rebuilt in the Place where it now stands.

Over the Water, on an high Hill, in a little Chapel, they preserve a red Cross, which (they say) was sent down from Heaven and put into the Hand of one of their Kings, as he lay encamped against the *Moors*, who were entirely routed. In the Cathedral they shew you a miraculous Stone, which formerly afforded such Abundance of Oil, that they supplied all the Lamps of the Church with it; but those who look'd after it making a Gain of it, by selling it for other Uses, the Miracle ceased.

14. During my Stay at *Madrid*, I made another Excursion to take a View of the *Escorial*, that Wonder of the World, built by King *Philip II.* pursuant to a Vow he made before the Battle at *St. Quintin* against the *French*, and having obtain'd the Victory, he dedicated the Convent adjoining to the Palace to *S. Lawrence*, (it being his Day when the Battle was fought) and placed in it two hundred Friars of the Order of *S. Jerome*, under a Prior nominated by the King, and a College or Nursery for young Students. It is seated about seven Leagues from *Madrid*, among the Mountains in the Kingdom of *Toledo*, having to the East and West very delightful Plains watered with many Rivulets and Springs. Its Form is a large Square, each Side whereof is 2630 Foot long, with a fine Tower on each Corner; the Materials are a Sort of very hard Stone, spotted with grey; the greatest Part of the Architecture is of the *Dorick* Order, with some of the *Ionick*, *Corinthian*, *Composite* and *Tuscan*: The whole Fabrick is subdivided into four lesser Squares, which have sixteen Gates; the chief Entrance is on the West Side, through three Gates, over which stand the Statues of *S. Lawrence*, the Patron of this Fabrick, and in the Middle the Arms of *Spain*.

The first Quadrangle is two hundred and thirty foot long, and a hundred and twenty six broad: The Front of this inner Court is adorn'd with six Pillars of the *Dorick* Order sixty eight foot high, upon which are placed six Pedestals, and upon them as many Statues of the Kings of the old Testament, viz. *David*, *Solomon*, *Josias*, *Ezekias*, *Jehoshaphat* and *Manasses*, with Crowns of Brass on their Heads weighing a hundred Pound each, and the Scepters (of the same Metal) fifty Pound each; *David's* Harp, likewise of Brass, weighs no less than three hundred seventy five Pounds. Under each of these Kings are the following Inscriptions:

David	Solomon	Ezechias
Operis	Templum	Mundata
Exemplar	Domino	Domo
A Domino	Edificatum	Phase.
Recepit.	Dedicavit	Celebravit.
Josias	Jehoshaphat	Manasses
Volumen	Lucis	Contri
Legis	Ablatis	tus
Domini	Legem	Altare
Invenit.	Propagavit.	D. Instau
		ravit.

You enter into the *Church* by five Arches twenty eight Foot high and fourteen broad; the Length of the *Church* is three hundred sixty four foot, and its Breadth two hundred and thirty; its whole Height, from the Floor to the Cross on the Top of the *Cupola*, is three hundred and thirty foot; the Architecture is of the *Dorick* Order; it has six Isles, two of which make a Cross, the other four meeting into a Square; it has besides this twenty four noble Arches, fifty large Windows, and thirty nine Galleries with Silk Curtains: There are here also no less than twelve noble Crosses of Jasper-stone, set over so many Chapels, and forty Altars, in their peculiar Chapels, beautified with excellent Pictures of the Saints.

The Floor of the Church is pay'd with grey and black Marble, and the Isles are illuminated with a vast Number of large Silver Lamps; the Middle Isle alone has fourteen Balconies of two Yards three Quarters in Length. The grand Chapel is magnificent beyond what can be imagined, its Length is twenty Foot, the Breadth fifty, and the Height an hundred; you ascend into it by the middle Isle, by twelve Steps of the finest Jasper of Fifty three Foot long; the Chapel is parted from the Body of the Church by curiously wrought Rails of Brass gilt; the Paintings are very excellent here, suitable to the rest: It contains four Sorts of Architecture, which are ninety three Foot high, and forty nine broad, the first of the *Dorick* Order with six Pillars, the second of the *Ionick* with as many, the third is *Corinthian*, and the fourth the *Composite*, with two Pillars sustaining the Roof and Arches; they are all of the best Jasper, curiously polish'd, the Bases and Capitols of Brass gilt: In one of the Pillars of the *Dorick* Order is the *Custodia* or Place where the Sacrament is kept; on each Side is an Original of *Perugino* an *Italian*, one representing our Saviour's Birth, the other the Adoration of the three *Eastern* Kings; the four *Evangelists*, in Brass gilt, stand on the Sides of the Pillars: In the *Ionick* Order is painted S. *Lawrence's* Martyrdom, by the same *Perugino*: On the Sides are two Originals, one of Christ tied to a Pillar to be scourg'd, the other representing Christ bearing the Cross, by *Frederico Zuccherò*, and four Statues of Brass of as many ancient Fathers of the Church: In the *Corinthian* Order you see the Assumption of our Lady, and on the Sides the Resurrection, and the Descent of the Holy Ghost, all Originals, painted by the same Hand: Between two Pyramids are two brazen Statues of S. *Andrew*, and S. *James* the Patron of *Spain*; the *Composite* Order has but two Pillars, and in the Middle of them our Saviour on the Cross, S. *Peter* and S. *Paul* on the Inside, and the Virgin *Mary* and S. *John* on the Outsides; they are all four of Brass, gilt, and thirteen Foot high each.

The *Custodia* or Box wherein the Sacrament is kept, is of a round Figure, made of various Stones; its Height is sixteen Foot, and its Diameter seven and a half, supported by eight Columns of *Diaspore*, imitating the Rainbow in their various Colours; they say, that this Stone is not to be wrought but by Diamonds, and that the Workmanship of this cost eighty thousand Ducats. Over the *Custodia* you see the Statues of the twelve Apostles, and at the Top the Resurrection of our Saviour. You enter into this Chapel (called the *Segrario*) by two Doors of Jasper, one on each Side, and ascend to the Altar by ten Steps of the same Stone, which also furnishes the Materials for the Floor; it has its Light through a curious Crystal Window on the East side with Iron Bars gilt; it is beautified with Pictures representing the Mystery of the Eucharist, with a Rainbow and many Angels over it. On the right Side of the Altar you see five Statues in Brass upon their Knees, of the Emperor *Charles V.* his Daughter, and two of his Sisters; on the other Side are placed the Arms of *Spain*, with five Statues underneath corresponding to the others, viz. one of King *Philip II.* of his Queen *Anne*, of two of his former Wives, and of his Son *Charles*. Under this Altar is the *Pantheon* or Burial-place of the Kings of *Spain* of the *Austrian* Family, of which more hereafter. This Church has re-

ceiv'd much additional Beauty by the excellent Paintings of the sacred History by the rare Hand of *Luquesto* an *Italian*.

15. Among their Relicks (of which, they say, they have something of every Saint) they shew some of the Hair of our Saviour and the blessed Virgin, as also some of their wearing Apparel, some Thorns of his Crown, and one of the Nails wherewith he was nail'd to the Cross, some Remnants of his purple Habit, divers Relicks of St. *John* the Baptist, of the Apostles, Martyrs, and the entire Body of S. *Lawrence*, the Head of S. *Jerome*, and the Heads of several other Saints. They tell you, that they have no less than five hundred and fifty *Pixes* and *Chalices* of Gold, Silver and Chrystal, among which they shew one said to have been offered to our Saviour by one of the three Eastern Kings. In the Middle of the Isle is the *Choir*, fronting the Chapel, its Length is ninety six Feet, its Breadth fifty six, its Height forty eight, the Floor cover'd with the same Marble as the Church, and the Walls painted with the Martyrdom of S. *Lawrence* and S. *Jerome*, the first by *Romulo*, the last by the just mention'd *Luquesto*, who has also painted the Glories of Heaven on the Top: It is illuminated by a Chrystal Branch of twenty eight Lights, the Present of the late King *Charles II.* and has two Orders of Seats curiously wrought with precious Wood: On each Side is an Organ, with cross Galleries gilt, and in the Church are six more, one of Silver, the Gift of *Charles* the Fifth.

The Sacristy is a hundred and eight Foot long, and thirty broad, the Pavement of Marble of divers Colours, and the Cieling and Walls painted with the best Originals (thirty four in Number) of sacred History, the Gift of *Philip IV.* by the greatest Masters in that Art, viz. *Titian*, *Raphael Urbin*, *Paulo Veronese*, *Tintoret*, *Andrea del Sarto*, *de Bordonon*, *Guido Bolognese*, *Annibal*, *Caracche*, *Van Dike*, and others. Near the Sacristy you descend by Steps of the best Marble into the *Pantheon*, containing the Sepulchres of the Kings of *Spain* of the *Austrian* Family, being esteem'd the finest Piece of this kind in *Europe*. Over one of the Gates, (which are of Brass gilt) underneath the Arms of *Spain*, you see upon a black Marble this Inscription in golden Letters:

D. O. M.

Locus Sacer mortalitatis exuvils

Catholicorum Regum.

A Restauratore Vitæ, cujus Aræ Max.

Austriaca adhuc pietate subjacent.

Optatam Diem expectantium.

Quam post suam sedem sibi & suis

Carolus Caesarum Max. in votis habuit,

Philippus Ildus Regum Prudentissimus elegit,

Philippus IIIus verè pius inchoavit,

Philippus IVus

Clementia, Constantia, Religione Magn. Auxit,

Ornavit, absolvit; M. D. C. LIV.

The Arms of *Spain*, cut in precious Stone and richly gilt, are placed here between two Statues of Brass gilt, one representing the Fall of Man the other the Hope of a Resurrection. This Door brings you by the beforemention'd Steps of the finest Jasper and Marble into the *Pantheon*, which is overcrusted with the same, and most artificially polished; its Form is round without, and octagonal within, in each of the Squares being repositied the Urns for the Royal Bodies, four in each Square; there were then in all twenty six of these Urns, of grey Marble, supported by four Lion's Paws of Brass gilt; of the same Metal there is an oval Figure in the middle of each of these Urns, containing the Names of such royal Persons as are interr'd there, in black Letters. In the Square fronting the Door stands the Altar, and upon it a large Cross of Brass gilt, fixed within another of black Marble, of which also the whole Altar is compos'd, except that it has some curious Ornaments of the choicest *Porphyry*: On each Side of the said Cross stands a Pillar of

of green *Genoua* Marble, with brass Bases and Capitols gilt. On the Gospel-side of the Altar lie inter'd the Bodies of *Charles V.* *Philip II.* *Philip III.* and *Philip IV.* and on the other Side such of their Queens as brought them forth Issue, such as die without being not admitted to be buried here, but in another Sepulchre allotted for the Branches of the Royal Family. The *Pantheon* is enlightened by a curious Branch of Brass gilt, with twenty four Lights; the Floor is cover'd with the same Stone as the Walls, and wrought into the Figure of Stars.

The Convent has no fewer than five Cloysters, the biggest being no less than eight hundred Foot square, painted all about with the Life, Death, Resurrection and Ascension of our Saviour. The old Chapel affords three excellent Pieces, that of *St. Lawrence* on the Gridiron in the Middle, and on both Sides the Offering of the three Eastern Kings, and Christ's Sepulchre, both by *Titian*, besides divers other Originals of sacred History of the best Masters: They boast here of one of the Innocents Bodies entire, of one of the Waterpots in which Christ turn'd Water into Wine at the Wedding of *Canaan*, and of one of the Bars of the Gridiron on which *St. Lawrence* was broil'd; but these are not to be seen by Hereticks. In the Refectory you see a celebrated Piece, by *Titian*, of the Lord's Supper, brought hither from *England* during the Exile of King *Charles II.* and pawn'd for 15,000 *l.* Sterling.

I had no Opportunity of seeing the Royal Palace, which is not very large, and was told it contain'd little of Moment except the Paintings; but the Library must be own'd a noble lofty Structure, two hundred Foot long and thirty six high, the Stalls of the Books (which are all letter'd on the Back) being of Cedar and other precious foreign Woods: it has seven Pillars of the *Dorick* Order, the Floor is cover'd with white and grey Marble, and the Ceiling with curious Paintings representing the Arts and Sciences, and the most celebrated Authors, by *Perugino*; but those Histories of Arts and Sciences you see under the Cornishes, are of the excellent Hand of *Bartholomew Carducho*. In the Middle of the same Room stand seven Tables of Jasper and Marble, and two of *Porphyry*, with Globes and Spheres placed upon them. They preserve also some ancient Medals and Writings on the Bark of Trees; their most valuable Manuscripts are, *De Baptismo Puerorum* of *St. Austin's* own Writing, a Piece of *St. Chrysostom*, *Apocalypsis de Sancto Amadeo*, four Books writ by *St. Theresa*, a Letter of *St. Vincent*, the Original of *St. Lewis Beltram* of the Conception of the Virgin *Mary*, with divers other Pieces of *St. Gregory*, *St. Anastase*, and *St. Chrysostom*.

The most excellent Paintings on the Ceiling of the Church, and over the great Stairs, by that great modern Artist *Luca Giordano* a *Neapolitan*, and but lately finish'd at the late King's Expence, are no small Addition to the Beauty and Glory of this stupendious Fabrick, which I was told contain'd, with every Thing belonging to it, above thirty-six Leagues in Circuit; certain it is that there belong to this Structure fifteen Cloysters, eleven Courts, twenty-five Fountains, thirteen Statues of Stone, and thirty eight of Brass gilt; the Number of original and other choice Pictures is computed at 1602, besides 540 more on the Walls; the Copies of Landships, Fruits, &c. are not to be number'd: It has besides this nine Refectories, five Infirmaries, two fine Apartments for the Reception of Strangers, and nine Kitchens; it was twenty-four Years before it was finished, and cost King *Philip II.* six Millions wanting only two thousand Ducats, unto which adding the Charge of the *Pantheon* and other additional Buildings, and the Reparations made after the Fire happen'd in 1671, the whole Charge has been computed at no less than eight Millions of Ducats. I have nothing to add to the Description of this wonderful Piece, except the curious Walk of double Rows of Elm-trees, leading from the little Town below to this Royal Foundation.

17. I left *Madrid*, Dec. 3, 1694, and lodg'd the first Night at *Valdemore*, whence I turn'd somewhat out of the Road the next Day to go to *Aranjuez*, moved

with a Curiosity to view the King's Palace there, the Situation of which among Woodlands (a Rarity scarce ever to be met with in this Country) put me in Mind of my native Country *England*. For the rest, the House is but ordinary for a Royal Palace, the Gardens and Walks not very large, yet better contriv'd than any I ever saw either in *Spain* or *Portugal*; here are many excellent Statues and Fountains, brought hither from all Parts by the Emperor *Charles V.* and those that are more modern are very good ones; the great Number of these Statues, of Brass and Marble, together with the pleasant Fountains all along the shady Walks and Arbours of large Elms, and some Oak and Ash, (great Rarities here as well as in *Portugal*) render this Place very delightful, its Situation being between two Hills, upon the very Banks of the River *Tagus*, from whence some Walks run up the Hills for a League together, yet the Air is esteemed not extraordinary healthful. Here the King keeps his best Male Asses for Breeding.

I lodged the next Night at *Ocanno*, a Place noted for the best *Castile-Soap*, and the following Night at *Corral de Almoguer*. As the Road betwixt *Madrid* and *Alicant* is passably good for a Coach, so the Country is generally fertile in Corn, Oil and Wines, and the rocky Parts produce Abundance of Rosemary, Thyme, and such-like Sweet-herbs, wherewith they feed their Sheep and Goats. The next Place I came to was *Albarzete*, noted for good Knives, Daggers, and Scissars; notwithstanding this the extream Poverty of the Country-People, and consequently the ill Accommodation one meets with upon the Road, (where you are oftentimes destitute of Provender for your Horses, a Bed, nay, Bread and Wine) renders Travelling very difficult and tedious in *Spain*; however, I got at last safe to *Alicant*, the 13th of *December*, after a Journey of ten Days in a Calash.

18. The Town of *Alicant* is pleasantly seated betwixt Hills along the Sea side, where there is a continual Passage of Ships bound to or from the *Mediterranean*; it suffered much in the late War with the *French*, who with three Bomb-Vessels threw in about 4700 Bombs, and destroy'd six hundred Houses; they told it as a great Miracle, that above three hundred of the *French* Bombs fell upon the Cathedral dedicated to *St. Nicholas*, of which one only pierced through the Roof, whereas the whole Miracle was only to be attributed to the strong *Cupola's* and *Arches* which cover it. The *French* bombarded the Town with incredible Dexterity, throwing their Bombs even over the Castle, that stands a good Way above the Town, upon so high an Hill, that I had enough to do to get up to it, though when I came there I found nothing worth the Trouble I had taken, except a fine Prospect, the whole *Spanish* Garrison consisting of only five or six Guards, and perhaps as many Guns. *Alicant* is of no Strength, and the People so unfit to defend it, that at the Time of the *French* Bombardment they all retir'd into the Mountains, not excepting the Officers themselves, and had certainly deserted the Place, had not one Mr. *Newland*, an *English* Merchant, ply'd the *French* with two Guns from the Mole, and by his Example encourag'd some of them not to leave the Place to the *French*.

19. The Gentlemen here of *Valentia*, both in their Dress and Actions, much more imitate the *French* than the *Castilians*; they are of a hasty, vain and base Temper, and so bigotted to their foolish Niceties, or *Spanish Punctilio's*, that upon a very slender Occasion they will either murder one another themselves, or hire others to do it, there being many of that Sort of Mercenaries in this Country, who will sacrifice any Man for a few Pieces of Eight, which they commonly perform by Shooting. These Murthers produce sometimes no small Disorders, the Friends of the murder'd Party thinking themselves oblig'd to revenge his Death, go in strong Parties, some a hundred in a Body, arm'd each with five Guns, (one Fussee, and four lesser ones in the Girdle) and so going into the Field, surprize one another wherever they can, it being their Principle not to attack their Enemy but upon a manifest Advantage; I was told there were

at that time two such Parties in the Mountains of forty on a Side each, and I was credibly inform'd, that not long ago two such-like Fellows were executed at *Valentia*, who confess'd that one of them had murdered thirty three Persons, and the other no less than seventy seven. The Government of the Kingdom of *Valentia* is administred by a *Viceroy*, but the Town of *Alicant* has its peculiar *Governor*, who commands also the Garrison when they have any, all their standing Forces thereabouts consisting in a few Troops of Horse, and some Foot Militia, for the Defence of the Coast.

The City contains betwixt thirty and forty thousand Communicants; their Civil Administration is by a Justice, like our Mayors, and some Aldermen; it has six Convents of religious Men, viz. the *Jesuites*, *Dominicans*, *Austin Friars*, *Carmelites*, *Franciscans*, and *Capuchins*; two Nunneries, the *Monges de la Sangue* and *Capuchins*; and as many Parish Churches, *S. Nicholas* and *S. Mary's*. For the rest, *Spain* is at present in a very low Condition, through the weak Administration of the Queen-Mother, the King's Want of Education, and the Feuds among the *Grandees*, which has depriv'd them of all their former Strength both by Sea and Land, for Want of Money, Provisions, and all other Things requisite for the Maintenance of a Fleet and Army; and what is worse, without any future Prospect of having these Things redress'd. It is true, the King's Revenues are very great, but being anticipated, little of them comes into the King's Coffers; for the *Spanish Indies* are computed to amount to ten Millions a Year in their Revenues to the Crown, and their Seaport Towns must needs bring in considerable Customs, were it not that the Officers are both remiss and corrupted in their Places.

20. About half a League from *Alicant* is a famous Convent of Nuns, whither there is a great Resort of Pilgrims, to pay their Devotions to the *Sancta Faz* or *Holy Face* kept in this Nunnery; among these are especially many Seamen, who when they leave *Alicant*, frequently make a Vow of performing their Devotions here after their safe Return, which they perform barefooted after a prosperous Voyage. The Story of this *Holy Face* runs thus:

Our Saviour going to his Crucifixion, a certain Woman call'd *Veronica*, who was just then moulding Dough, and had a Napkin girt about her, coming out of her House at the Noise of the People, and seeing our Saviour's Face all dropping with Blood and Sweat, took the folded Napkin and so wiped his Face, the Impression whereof remained upon the three Folds; these the Church has preserv'd as holy Relicks, one whereof (they say) is at *St. Peter's* at *Rome*, the other in a Convent near *Malaga*, and the third here, which (they say) came hither over Sea, and landing in *Valentia*, upon the Confines of two Parishes, a great Contest arose which of them it belong'd to; to decide this Difference it was agreed to blind a certain Person, who should walk for some time with the *Sancta Faz* thereabouts, and that those should be Masters of it in whose Precinct he happened to drop it; which was done accordingly, and it happening to fall in this Place, a Convent and Church was founded for its Preservation. Its Virtue was the first time experienced in a great Drought, when being carry'd in Procession, it rain'd immediately, and that in great Abundance. By Permission of one of the Fathers I had Liberty given me to look upon it a second time, as near as the Glass in which it is enclos'd would allow of, and found it rather to resemble the Face of a Child, than a Man of that Age, as our blessed Saviour, at the Time of his Suffering, which made me look upon the whole as fabulous; and I remember, a certain *Italian Painter* seeing it, did not stick to say, *It was the worst Daubing he ever saw*. Once a Year, viz. the 17th of *March*, there is a great Feast celebrated at *Alicant* in Memory of this *Holy Face*, when 'tis brought into the City, upon which Occasion great Rejoycings are to be seen every where, and the Night generally concludes with Bonfires and a fine Firework. During my Stay at *Alicant*, I had the Oppor-

tunity of seeing divers of their Processions, and among the rest, that on *Corpus Christi Day*, one of the most celebrated in those Parts: The first Pageant represented the History of *Adam* and *Eve*, how the Serpent entic'd her, how they eat the forbidden Fruit, and were threatened by the Angel with a naked Sword: The next, *Abraham's* Sacrifice of his Son *Isaac*, acted by living Persons, who (as we were told) were Fishermens' Children, and had their Lessons taught by the Priests, and their Pay from the Town for their acting. These Pageants are made upon Waggon, with Boards laid upon them, both the Stages and Actors being thus drawn by Men along the Streets; these were followed by certain Giants, to personate the *Gentiles*, after whom came a Serpent representing Temptation, and after this a Dragon with his Mouth wide open, to represent Hunger: Next to these came the several Companies of Tradesmen with their Banners; then the *Capuchins*, *Carmelites*, *Austin Friars*, and *Franciscans*, each carrying the Image of the Founder of their Order, and that of the Virgin *Mary*, splendidly attir'd; then followed some Morris-dancers, and after them some Churchmen of Note, and a few little Children dress'd up like Angels, strewing Flowers before the Bishop, who walk'd under a Canopy, carrying the Host.

21. We have in this Section a very good Supplement to the last, for the Author, who travelled only for his Pleasure, and by Way of Diversion from the Fatigues of Business, enters into no deep political Speculations, but keeps pretty much to the Surface of Things, and tells us in what Light they appeared to him, at the Time of his Passage. What he says of *Portugal* is certainly very just, and we have good Reason to believe that Things are not much mended there at this Day. Yet this Country is justly esteemed the finest Part of *Spain*, if it be considered as having belonged to it, both in earlier Times, and little more than one hundred Years ago. It lies very conveniently for Health, for Pleasure and Commerce, along the Sea-side, several large navigable Rivers running through, and emptying themselves into the Ocean in its several Provinces, and thereby making many, and some of them excellent Ports, at the same Time that the Trade through the Country is by the same Means much facilitated.

The Kingdom of *Portugal* may boast of as fine a Climate, as almost any Country in *Europe*, for though from its Southern Situation it is very hot, yet this is so tempered by Breezes from the Sea, as not only to become very tolerable, but also very pleasant. It may also boast of as much Variety as almost any Country, for the Northern Provinces are mountainous, and this renders them cool and wholesome, though less fruitful than the plain and flat Country about *Lisbon*; and here, as well as in *Spain*, it has been remarked that these Provinces are more populous and better cultivated than where the Soil is more indulgent, which renders the People vicious and lazy, consequently indigent, and in a wretched Condition. In the former Part of this Volume we have treated so largely of *Brazil*, and in our first Volume said so much of the Rise and Progress of the Naval Power of *Portugal*, the Empire she once had in the *East-Indies*, the Manner in which it declined, and the very low State to which it is at present reduced, that there is no Necessity of adding any Thing on those Subjects here. But it may not be amiss to observe, that, how paradoxical soever it may seem, yet there is good Reason to doubt, whether the Diamond and Gold Mines that have been discovered of late Years in *Brazil*, have been so very advantageous to this Country as is generally supposed.

To explain this Notion it will be sufficient to hint to the Reader, that, independent of its Plantations, *Portugal* is very far from being a poor Country, or destitute of the Means of carrying on a very extensive Commerce. The Proportion in Extent between the Kingdoms of *Spain* and *Portugal* is, upon a fair Computation, thought to be as six to one, and yet it is believed that the Commodities and Manufactures are very nearly equal, that is to say, though *Portugal* is but a

sixth Part as big as *Spain* yet the Produce of the former is equal to that of the latter. This consists chiefly in Wool, Wine, Oyl, Oranges, Lemons, Raisins, Figs, and other kinds of Fruit, with various other Commodities of less Value. There is likewise in *Portugal* a very rich Silver Mine, by good Judges esteemed the best in *Europe*, from whence there has been sometimes drawn three hundred thousand Pounds Sterling a Year. Yet with all these Advantages, and though there appears to be a vast Trade at *Lisbon*, *Porto*, and other Places, the Advantages which the Inhabitants derive therefrom, are very far from being so considerable as might be expected. The great, indeed almost the sole Cause of this is, their having little or no Turn to Trade themselves; so that, as in *Spain*, the whole is in a good Manner managed by Foreigners.

Immediately after the Accession of the House of *Bragança* to the Throne, it fell almost intirely into the Hands of the *French*, and what little escaped them, was managed by the *Italians*. But the Crown of *France* affecting to treat the late King of *Portugal* with great Haughtiness, that Prince, who was a Man of Spirit and of Parts, took such Measures as threw the Commerce of his Kingdom into other Hands, and upon the *French* King's prohibiting *Brazil* Tobacco and Sugar, he prohibited, in his Turn, most of the *French* Commodities and Manufactures. About the same Time he set up Silk Looms in *Lisbon*, and other Places, which destroyed the Trade of the *Genoese*, *Venetians* and *Florentines*. The *Dutch* became then Masters of this Trade, in which also we had some small Share; which increasing by Degrees, and the late War about the *Spanish* Succession giving fair Occasion to a closer Correspondence between the two Nations, we soon rivall'd, and at last surpass'd the *Dutch*.

But how this Trade stands at present, is a Question I am not well able to determine: Certain it is, that we seem to have still a Superiority over all other Nations, and employ in it a great Number of Ships that export vast Quantities of our own Manufactures. On the other Hand, we import also prodigious Quantities of theirs; and though from Time to Time considerable Sums in Gold come over from thence, which looks as if the Balance was still greatly in our Favour; yet there want not some Suspensions, that a considerable Part of this Treasure arises not from the *Portuguese* Trade, but from the Balance of our Trade with *Holland*, which is paid us in *Portuguese* Gold by the *Dutch*; and, if there be any Truth in this, it alters the Case greatly. But however, let that Matter be as it will, two very important Deductions may be made from thence; the first is, that from their not carrying on Trade in their own Bottoms, the *Portuguese* are immense Losers notwithstanding the vast Cargoes they bring Home annually from *Brazil*; the other is, that the *British* Nation are great Gainers by the Balance of their Trade, whether that Balance arises from the *Dutch* or the *Portuguese*; so that on the Whole we see, that the surest Mark of a flourishing Trade is the Number of Ships employed; for while Navigation increases, Trade increases; and, whenever it declines, Commerce must decline with it.

Our Author's Reflections upon what he saw in his Travels through *Spain*, are very pertinent and natural; and he appears to have represented the Country, the Towns and the Inhabitants, with the utmost Candour and Veracity. It is certain, that he saw *Spain* in the very worst State she ever was, or indeed any Country could be in, which was towards the Close of the Reign

of *Charles II.* when her Councils were weak and distracted, her Treasures exhausted, her People impoverished and distressed, her Armies consumed, and her Armada's, from being the Terror, become the Contempt of all *Europe*. It will appear very strange for a Man to advance it seriously; yet I must confess it is my own Opinion, that the War, occasioned by the *Spanish* Succession, notwithstanding all the Inconveniences that attended it, rather helped than hurt the *Spanish* Affairs. The Nation, at the Time of the Death of *Charles II.* was in a Kind of Lethargy; and though this Accident threw her into violent Convulsions; yet even these were Signs of Life, and in that Light favourable Symptoms. Had there been a Reign or two more of those sleepy Monarchs, their vast Dominions in *Europe*, *Asia* and *America* must have been broke to Pieces; whereas, notwithstanding the War, they remain tolerably whole.

It is indeed true, that their Country became the Scene of Action, which it could not be without suffering from it; but, on the other Hand, this very Circumstance brought great Sums of Money into it, and kept a great Part of their *American* Treasure at Home, Things unknown in *Spain* for two Ages before. It may, indeed, be said, and said with Truth, that a very large Part of the Treasure that arrived from *New Spain*, came into the *French* King's Coffers: But even this was no Detriment to the *Spaniards*, if the Thing be consider'd in its true Light; for, in the first Place, none of these Treasures could have been received, if they had not been escorted by *French* Ships of War; and, in the next, *France* employ'd those Sums, and more, in Supporting the Interest of *Spain*; so that the Nation lost nothing thereby, but was rather helped.

What proves to a Demonstration, that this is not merely a Conjecture, or a political Notion plausibly defended is this, that after the War was entirely over, and the late King *Philip* fixed upon the Throne, both his Armies and his Fleets were in a much better Condition than *Spain* had seen any for a whole Age before; which enabled him to attempt, and would have enabled him to have reunited *Sicily* and *Sardinia* to his Crown, if the *British* Fleet had not interposed and crushed his new-raised Naval Force in the *Streights of Messina*. A very great Stroke, this was esteemed, by those who consider'd it barely as a Victory at Sea; but to Men of another Cast of Mind, who meditate the Revolutions of Power, and the Mutations of Empire, it appeared in a much stronger Light, as it frustrated the Schemes of Cardinal *Alberoni*, and compelled his Master to part with a Minister, whose Genius was capable of restoring the Forces of that Monarchy, and rendering *Spain* almost as terrible under the Government of the peaceable and pious *Philip V.* as it had been under the ambitious and politick *Philip II.*

Since that Time *Spain* has been govern'd by a Kind of second Rate *Genii*, under the Influence of a female Spirit, restless, ambitious, and at the same Time avaritious and intriguing; so that the People are almost in their old Condition; and while they are flatter'd with the Hopes of conquering Principalities Abroad, and giving Laws to *Europe*, they are sinking under the Weight of a weak and arbitrary Government, into Slavery, Poverty, and Distress at Home. If any Thing can save them, it must be a Peace, when King *Ferdinand* the Sixth will find himself in a Condition to act according to his own Inclinations, which are said to be entirely *Spanish*; and that his Desire of settling the Infant Don *Philip* in *Italy*, arises chiefly from their being a Sea between that Country and *Spain*.

SECTION III.

The TRAVELS of *Philip Skippon*, Esq; afterwards *Sir Philip Skippon*, and the Reverend Mr. *John Ray*, through the best Part of the Kingdom of *France*; interspersed with a great Variety of historical, political, philosophical and mechanical Remarks and Observations.

Collected from the JOURNALS of those ingenious Persons.

1. *An Introductory Account of Sir Philip Skippon, and of the Subject of this Section. Their Departure from the Territories of Geneva, and their Arrival in those of France.*
2. *An elegant and exact Description of the City of Lyons, particularly of the Cathedral Church of St. John, the famous Clock there, and the Cabinet of Curiosities belonging to Mr. Servier.*
3. *Their Journey to and Description of the ancient City of Grenoble, and of the most remarkable Things therein.*
4. *A very curious and circumstantial Relation of the Grand Chartreuse, and of the Manner in which the Monks live there.*
5. *Their Journey from Grenoble to Orange, with an Account of the principal Places they met with, and of the Face of the Country between those two Cities.*
6. *The City of Orange particularly described, in the State it was then in under the Minority of the late King William the Third.*
7. *Their Journey from Orange to Avignon: A Description of this last-mentioned City, and of the most remarkable Edifices therein.*
8. *The Country between Avignon and Nîmes described. A full Account of this City, and of the Antiquities there.*
9. *An Account of the City of Montpellier, and the Observations of our Travellers there. The History of the Manufacture of Verdigrease. The Art of Bleaching Wax.*
10. *A particular Description of the Confectio Alkermes. The Method of making Oil from Olives. The Burning Fountain at Peroul.*
11. *Their Excursion from Montpellier to Frontignan. The Method of making Raisins of the Sun, and other Raisins.*
12. *Their Travels along the Sea-Coast, with an Account of what they observed most remarkable in their Journey.*
13. *Another Journey of theirs, with some Account of the great Cities of Marseilles and Toulon. The Method of Planting and Curing Capers.*
14. *Their Journey from Lyons to Paris, and a short Account of the principal Places they passed through upon the Road.*
15. *A Description of Paris by Mr. Skippon, interspersed with many curious Particulars.*
16. *Remarks upon the French Nation, and a particular Account of a very singular Transaction during the Protectorate of Oliver Cromwell.*
17. *The State and Revenue of the Clergy of France.*
18. *Mr. Skippon's Return to England.*
19. *Observations upon the foregoing Section.*
